MEA11 Aeroskills Training Package

Release: 1.0

CONTENTS

MEA11 Aeroskills Training Package.....	15
Imprint page.....	16
MEA11 Summary Mapping.....	17
Preliminary information.....	65
Training Package Overview.....	65
Australian Qualifications Framework	69
Competency Standards	74
Assessment Guidelines.....	79
Introduction to MEA11	93
MEA11 Qualification Pathways.....	95
MEA11 Qualifications	109
MEA11 Skill Sets Information.....	110
MEA11 Employability Skills.....	117
MEA11 Units of competency	119
Appendix 1: Cross-reference to CASA Licensing Syllabus	135
Appendix 2: Glossary of Terms and Definitions	186
MEA20411 Certificate II in Aeroskills.....	197
MEA20511 Certificate II in Aircraft Line Maintenance	203
MEA20611 Certificate II in Aircraft Surface Finishing.....	209
MEA30111 Certificate III in Aircraft Surface Finishing.....	214
MEA30211 Certificate III in Aeroskills (Mechatronics)	221
MEA30311 Certificate III in Aircraft Life Support and Furnishing.....	231
MEA40611 Certificate IV in Aeroskills (Avionics).....	241
MEA40711 Certificate IV in Aeroskills (Mechanical).....	255
MEA40911 Certificate IV in Aircraft Surface Finishing.....	271
MEA41011 Certificate IV in Aeroskills (Mechatronics).....	279
MEA41111 Certificate IV in Aircraft Life Support and Furnishing	294
MEA41211 Certificate IV in Aeroskills (Armament).....	305
MEA41311 Certificate IV in Aeroskills (Structures).....	312
MEA50111 Diploma of Aeroskills (Avionics).....	320
MEA50211 Diploma of Aeroskills (Mechanical)	328
MEA50311 Diploma of Aviation Maintenance Management (Avionics)	340
MEA50411 Diploma of Aviation Maintenance Management (Mechanical).....	347
MEA50511 Diploma of Aeroskills (Non-Destructive Testing).....	354
MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics).....	363
MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical)	372
MEA60311 Advanced Diploma of Aviation Non-Destructive Testing.....	381
MEASS00166 Electrical component repair/overhaul.....	392
MEASS00200 Mechanical and electro-mechanical instrument component repair/overhaul	394
MEASS00081 Aircraft display, control and distribution system component repair/overhaul.....	396
MEASS00203 Oxygen system component repair/overhaul	398
MEASS00084 Aircraft radio frequency communication and navigation system component repair/overhaul.....	400
MEASS00083 Aircraft pulse system component repair/overhaul	402
MEASS00078 Aircraft audio and visual system and reproducer repair/overhaul.....	404
MEASS00179 Hydraulic system component repair/overhaul	406
MEASS00167 Electro-hydraulic component repair/overhaul	408
MEASS00205 Pneumatic system component repair/overhaul.....	410

MEASS00169 Electro-pneumatic component repair/overhaul.....	412
MEASS00173 Fuel system component repair/overhaul	414
MEASS00174 Gas turbine engine air inlet and compressor module/comonent repair/overhaul.....	416
MEASS00176 Gas turbine engine combustion section module/component repair/overhaul	418
MEASS00177 Gas turbine engine turbine and exhaust module/component repair/overhaul	420
MEASS00175 Gas turbine engine ancillary section module/component repair/overhaul	422
MEASS00204 Piston engine repair/overhaul	424
MEASS00214 Propeller repair/overhaul	426
MEASS00230 Rotary wing dynamic component repair/overhaul.....	428
MEASS00201 Mechanical system component repair/overhaul	430
MEASS00155 Composite structure maintenance.....	432
MEASS00159 Electrical - B1.1 Licence Exclusions E1 and E4 Removal.....	434
MEASS00160 Electrical - B1.1 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft with gas turbine engine	436
MEASS00162 Electrical - B1.2, B1.3 or B1.4 Licence Exclusions E1 and E4 Removal....	438
MEASS00161 Electrical - B1.2 or B1.4 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft or helicopters).....	440
MEASS00164 Electrical - B2 Licence Exclusions E1 and E4 Removal.....	442
MEASS00165 Electrical - B2 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft or helicopters).....	444
MEASS00137 Airframe - B1.1 Licence Exclusion E2 Removal.....	446
MEASS00138 Airframe - B1.1 Licence Exclusion E2 Removal (when competencies are being gained on light aircraft with gas turbine engine).....	449
MEASS00143 Airframe - B1.2 Licence Exclusion E2 Removal.....	451
MEASS00144 Airframe - B1.2 Licence Exclusion E2 Removal (when competencies are being gained on basic light aircraft)	453
MEASS00146 Airframe - B1.3 and B1.4 Licence Exclusion E2 Removal.....	455
MEASS00147 Airframe - B1.4 Licence Exclusion E2 Removal (when competencies are being gained on basic helicopters).....	458
MEASS00206 Power Plant - B1.1 Licence Exclusion E3 Removal	460
MEASS00207 Power Plant - B1.2 Licence Exclusion E3 Removal	462
MEASS00208 Power Plant - B1.2 Licence Exclusion E3 Removal (when competencies are being gained on basic light aircraft)	464
MEASS00209 Power Plant - B1.3 Licence Exclusion E3 Removal	466
MEASS00210 Power Plant - B1.4 Licence Exclusion E3 Removal	468
MEASS00211 Power Plant - B1.4 Licence Exclusion E3 Removal (when competencies are being gained on basic helicopters).....	470
MEASS00181 Instrument - B1 Licence Exclusions E5 and E7 Removal.....	472
MEASS00182 Instrument - B1.2 and B1.4 Licence Exclusions E5 and E7 Removal (when competencies are being gained on basic light aircraft or helicopters).....	474
MEASS00188 Instrument - B2 Licence Exclusions E5 and E7 Removal.....	476
MEASS00189 Instrument and Radio - B1 Licence Exclusion E6 Removal	478
MEASS00190 Instrument and Radio - B1.2 and B1.4 Licence Exclusion E6 Removal (when competencies are being gained on basic light aircraft or helicopters)	480
MEASS00191 Instrument and Radio - B2 Licence Exclusion E6 Removal	482
MEASS00192 Instrument and Radio - B2 Licence Exclusion E6 Removal (non-type rated aircraft and helicopters only).....	485
MEASS00215 Radio - B1 Licence Exclusion E8 Removal.....	487
MEASS00216 Radio - B1.2 and B1.4 Licence Exclusion E8 Removal (when competencies are being gained on basic light aircraft or helicopters)	489
MEASS00227 Radio - B2 Licence Exclusion E8 Removal.....	491

MEASS00228 Radio - B2 Licence Exclusion E8 Removal (when competencies are being gained on non-type rated aircraft and helicopters)	493
MEASS00133 Airframe - B1 Licence Exclusion E9 and E43 Removal.....	495
MEASS00127 Airframe - B1 Licence Exclusion E10 Removal.....	496
MEASS00217 Radio - B2 Licence Exclusion E11 Removal.....	497
MEASS00148 Airframe/Engine - B1.1 and B1.2 Licence Exclusion E12 Removal.....	499
MEASS00128 Airframe - B1 Licence Exclusion E13 Removal.....	501
MEASS00129 Airframe - B1 Licence Exclusion E14 Removal.....	503
MEASS00134 Airframe - B1.1 and B1.3 Licence Exclusion E15 Removal	505
MEASS00135 Airframe - B1.1 Licence Exclusion E15 Removal.....	507
MEASS00136 Airframe - B1.1 Licence Exclusion E16 Removal.....	509
MEASS00141 Airframe - B1.2 Licence Exclusion E16 Removal.....	511
MEASS00218 Radio - B2 Licence Exclusion E18 Removal.....	513
MEASS00219 Radio - B2 Licence Exclusion E19 Removal.....	515
MEASS00220 Radio - B2 Licence Exclusion E20 Removal.....	517
MEASS00221 Radio - B2 Licence Exclusion E21 Removal.....	519
MEASS00222 Radio - B2 Licence Exclusion E22 Removal.....	521
MEASS00223 Radio - B2 Licence Exclusion E23 Removal.....	523
MEASS00224 Radio - B2 Licence Exclusion E24 Removal.....	525
MEASS00225 Radio - B2 Licence Exclusion E25 Removal.....	527
MEASS00226 Radio - B2 Licence Exclusion E26 Removal.....	529
MEASS00183 Instrument - B2 Licence Exclusion E27 Removal.....	531
MEASS00184 Instrument - B2 Licence Exclusion E28 Removal.....	533
MEASS00185 Instrument - B2 Licence Exclusion E29 Removal.....	535
MEASS00186 Instrument - B2 Licence Exclusion E30 Removal.....	537
MEASS00187 Instrument - B2 Licence Exclusion E31 Removal.....	539
MEASS00163 Electrical - B2 Licence Exclusion E32 Removal	541
MEASS00170 Engine - B1.2 or B1.4 Licence Exclusions E33 and E38 Removal.....	543
MEASS00157 Electical/Instrument/Radio - B2 Licence Exclusion E34 Removal.....	545
MEASS00139 Airframe - B1.1 or B1.2 Licence Exclusion E35 Removal.....	547
MEASS00171 Engine - B1.2 or B1.4 Licence Exclusions E36 and E37 Removal.....	549
MEASS00172 Engine - B1.2 or B1.4 Licence Exclusions E36 and E37 Removal (when competencies are being gained on basic light aircraft or helicopters).....	551
MEASS00140 Airframe - B1.1 or B1.3 Licence Exclusions E39 Removal	553
MEASS00145 Airframe - B1.2 or B1.4 Licence Exclusion E39 Removal (when competencies are being gained on basic light aircraft or helicopters).....	555
MEASS00130 Airframe - B1 Licence Exclusion E40 Removal.....	557
MEASS00131 Airframe - B1 Licence Exclusion E41 Removal.....	559
MEASS00132 Airframe - B1 Licence Exclusion E42 Removal.....	561
MEASS00158 Electrical - B1 Licence Exclusion E44 Removal	563
MEASS00082 Aircraft egress system maintenance	565
MEASS00180 In-flight entertainment system maintenance	567
MEASS00153 Borescope inspection approval.....	569
MEASS00080 Aircraft composite structure repair/modification using hot and cold bonding.....	570
MEASS00079 Aircraft composite structure repair/modification using cold bonding only	572
MEASS00106 Aircraft welding using the gas welding process - aluminium alloys.....	574
MEASS00110 Aircraft welding using the gas welding process - magnesium alloys	577
MEASS00107 Aircraft welding using the gas welding process - carbon and low alloy steels	580
MEASS00109 Aircraft welding using the gas welding process - corrosion and heat resisting steels	583
MEASS00111 Aircraft welding using the gas welding process - nickel alloys.....	586
MEASS00108 Aircraft welding using the gas welding process - copper based alloys	589

MEASS00112 Aircraft welding using the gas welding process - titanium alloys	592
MEASS00087 Aircraft welding using the braze welding process - aluminium alloys	595
MEASS00091 Aircraft welding using the braze welding process - magnesium alloys	597
MEASS00088 Aircraft welding using the braze welding process - carbon and low alloy steels	599
MEASS00090 Aircraft welding using the braze welding process - corrosion and heat resisting steels	601
MEASS00092 Aircraft welding using the braze welding process - nickel alloys.....	603
MEASS00089 Aircraft welding using the braze welding process - copper based alloys...	605
MEASS00093 Aircraft welding using the braze welding process - titanium alloys.....	607
MEASS00094 Aircraft welding using the gas metal arc welding process - aluminium alloys	609
MEASS00098 Aircraft welding using the gas metal arc welding process - magnesium alloys.....	612
MEASS00095 Aircraft welding using the gas metal arc welding process - carbon and low alloy steels.....	615
MEASS00097 Aircraft welding using the gas metal arc welding process - corrosion and heat resisting steels	618
MEASS00099 Aircraft welding using the gas metal arc welding process - nickel alloys..	621
MEASS00096 Aircraft welding using the gas metal arc welding process - copper based alloys.....	624
MEASS00100 Aircraft welding using the gas metal arc welding process - titanium alloys	627
MEASS00101 Aircraft welding using the gas tungsten arc welding process - aluminium alloys.....	630
MEASS00104 Aircraft welding using the gas tungsten arc welding process - magnesium alloys.....	633
MEASS00102 Aircraft welding using the gas tungsten arc welding process - carbon and low alloys steels	636
MEASS00103 Aircraft welding using the gas tungsten arc welding process - corrosion and heat resisting steels	639
MEASS00105 Aircraft welding using the gas tungsten arc welding process - nickel alloys	642
MEASS00120 Aircraft welding using the plasma arc welding process - aluminium alloys	645
MEASS00124 Aircraft welding using the plasma arc welding process - magnesium alloys	648
MEASS00121 Aircraft welding using the plasma arc welding process - carbon and low alloy steels.....	651
MEASS00123 Aircraft welding using the plasma arc welding process - corrosion and heat resisting steels	654
MEASS00125 Aircraft welding using the plasma arc welding process - nickel alloys	657
MEASS00122 Aircraft welding using the plasma arc welding process - copper based alloys	660
MEASS00126 Aircraft welding using the plasma arc welding process - titanium alloys	663
MEASS00113 Aircraft welding using the manual metal arc welding process - aluminium alloys.....	666
MEASS00117 Aircraft welding using the manual metal arc welding process - magnesium alloys.....	669
MEASS00114 Aircraft welding using the manual metal arc welding process - carbon and low alloy steels	672
MEASS00116 Aircraft welding using the manual metal arc welding process - corrosion and heat resisting steels.....	675
MEASS00118 Aircraft welding using the manual metal arc welding process - nickel alloys	678
MEASS00115 Aircraft welding using the manual metal arc welding process - copper based alloys.....	681
MEASS00119 Aircraft welding using the manual metal arc welding process - titanium alloys.....	684
MEASS00193 Liquid penetrant inspection approval for aerospace	687

MEASS00199 Magnetic particle inspection approval for aerospace	689
MEASS00156 Eddy current inspection approval for aerospace	691
MEASS00231 Ultrasonic inspection approval for aerospace.....	693
MEASS00229 Radiographic inspection approval for aerospace	695
MEASS00152 Basic visual liquid dye penetrant inspection approval for aerospace.....	698
MEASS00150 Basic magnetic particle inspection approval for aerospace	700
MEASS00149 Basic eddy current inspection approval for aerospace	702
MEASS00232 Ultrasonic thickness testing inspection approval for aerospace.....	704
MEASS00151 Basic radiographic inspection approval for aerospace	706
MEASS00168 Electroplate aeronautical product component parts	708
MEASS00213 Produce anodised film on aluminium alloy components.....	710
MEASS00202 Metal spray aeronautical product component parts.....	712
MEASS00194 Machine aeronautical product component parts (general).....	714
MEASS00178 Grind aeronautical product component parts.....	716
MEASS00212 Precision jig boring of aeronautical product component parts	718
MEASS00154 Complex milling of aeronautical product component parts.....	720
MEASS00195 Machine aeronautical product component parts using horizontal and/or vertical boring machines	722
MEASS00196 Machine aeronautical product component parts using NC/CNC machines	724
MEASS00197 Machine aeronautical product components using NC/CNC machining centres	726
MEASS00198 Machine plastic aeronautical product component parts.....	728
MEASS00077 Aeronautical product component parts - metal spinning lathe operations	730
MEASS00086 Aircraft tyre retreading (basic).....	732
MEASS00085 Aircraft tyre retreading (advanced).....	734
MEA101B Interpret occupational health and safety practices in aviation maintenance..	736
MEA103B Plan and organise aviation maintenance work activities.....	743
MEA105C Apply quality standards applicable to aviation maintenance processes.....	749
MEA107B Interpret and use aviation maintenance industry manuals and specifications	754
MEA108B Complete aviation maintenance industry documentation.....	760
MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	766
MEA111C Perform administrative processes to prepare for certification of civil aircraft maintenance.....	774
MEA112B Plan and implement civil aircraft maintenance activities	781
MEA113C Supervise civil aircraft maintenance activities and manage human resources in the workplace.....	790
MEA114A Certify aeronautical product maintenance.....	802
MEA115A Plan and implement aeronautical product maintenance activities.....	809
MEA116B Apply occupational health and safety procedures at supervisor level in aviation maintenance.....	816
MEA117A Apply self in the aviation maintenance environment.....	826
MEA118A Conduct self in the aviation maintenance environment.....	832
MEA119B Perform administrative processes to prepare for certification of civil aircraft A level line maintenance	838
MEA120B Manage an aviation maintenance quality system.....	845
MEA121B Manage aircraft/aeronautical product configuration	851
MEA122B Manage aircraft/equipment system performance testing.....	857
MEA123B Manage aviation maintenance work environment policy and practices.....	863
MEA124B Coordinate change programs in the aviation maintenance environment.....	870
MEA125B Develop aviation maintenance personnel.....	877
MEA126B Manage aircraft maintenance activities.....	884

MEA127B Provide technical advice in the maintenance and management of aircraft and aeronautical product.....	891
MEA128B Provide engineering advice in the modification, maintenance and management of aircraft systems.....	899
MEA129A Investigate technical aspects of aviation occurrences	906
MEA130A Manage deployed/detached aviation maintenance activities.....	911
MEA131B Manage the custody, transfer and disposal of aircraft, aeronautical product and support equipment.....	918
MEA132A Manage budgetary resources in the aviation maintenance environment	924
MEA133B Communicate aviation technical and maintenance management knowledge	931
MEA134B Establish, maintain and evaluate the organisation's occupational health and safety system.....	937
MEA135A Use computers in aviation maintenance -related integrated logistic support activities.....	947
MEA136A Assess aviation maintenance spares and manage repairable items	953
MEA137A Write aviation technical publications	960
MEA138B Perform aviation technical publication management activities.....	967
MEA139A Perform aviation maintenance -related integrated logistic support management activities.....	973
MEA140A Supervise aviation maintenance teams and perform maintenance quality inspections	979
MEA141B Manage risk in aviation maintenance	988
MEA142B Manage self in the aviation maintenance environment.....	994
MEA143B Develop and manage maintenance error management programs.....	1003
MEA145A Conversion from allied trades for employment in aviation maintenance workshops.....	1009
MEA146A Prepare and manage aviation maintenance organisation budgets and financial plans	1018
MEA201B Remove and install miscellaneous aircraft electrical hardware/components	1027
MEA202C Remove and install basic aircraft electrical system components.....	1034
MEA203C Remove and install advanced aircraft electrical system components.....	1042
MEA204C Remove and install basic aircraft instrument system components.....	1051
MEA205C Remove and install advanced aircraft instrument system components.....	1059
MEA206C Remove and install aircraft basic radio communication and navigation system components.....	1068
MEA207C Remove and install aircraft electronic system components	1074
MEA208C Remove and install aircraft pressurisation control system components	1081
MEA209C Remove and install aircraft oxygen system components.....	1086
MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components	1092
MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components.....	1101
MEA212C Inspect, test and troubleshoot basic aircraft instrument systems and components.....	1110
MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems.....	1119
MEA214C Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components.....	1128
MEA215C Inspect, test and troubleshoot advanced aircraft communications systems and components.....	1135
MEA216C Inspect, test and troubleshoot instrument landing systems and components	1142
MEA217C Inspect, test and troubleshoot fixed wing autopilot systems and components	1148
MEA218C Inspect, test and troubleshoot rotary wing autopilot systems and components	1154
MEA219C Inspect, test and troubleshoot aircraft pressurisation control systems and components.....	1160

MEA220C Inspect, test and troubleshoot aircraft primary radar systems and components	1167
MEA221C Inspect, test and troubleshoot aircraft secondary radar systems and components	1173
MEA222C Inspect, test and troubleshoot aircraft oxygen systems and components	1180
MEA223D Inspect aircraft electrical systems and components	1188
MEA224C Inspect aircraft instrument systems and components	1195
MEA225C Inspect fixed wing aircraft automatic flight control systems and components	1203
MEA226D Inspect aircraft electronic systems and components	1208
MEA227D Test and troubleshoot aircraft electrical systems and components	1216
MEA228D Test and troubleshoot aircraft instrument systems and components	1224
MEA229D Test and troubleshoot aircraft radio frequency navigation and communications systems and components	1231
MEA230C Test and troubleshoot fixed wing aircraft automatic flight control systems and components	1239
MEA231C Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components	1246
MEA232C Test and troubleshoot aircraft pulse systems and components	1253
MEA233C Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components	1260
MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components	1266
MEA235B Perform advanced troubleshooting in aircraft avionic maintenance	1272
MEA238B Perform routine removal and installation of miscellaneous aircraft electrical hardware components	1280
MEA239B Fabricate aircraft electrical looms and harnesses	1287
MEA240B Use electrical test equipment to perform basic electrical tests	1294
MEA241C Perform aircraft weight and balance calculations as a result of modifications	1300
MEA246C Fabricate and/or repair aircraft electrical hardware or parts	1304
MEA252B Test, align and troubleshoot aircraft synchro and servo system components	1309
MEA260B Use electrical test equipment	1315
MEA261C Use electronic test equipment	1320
MEA262B Modify/repair aircraft component single layer printed circuit boards	1326
MEA263B Modify/repair aircraft component multi-layer printed circuit boards	1334
MEA264A Remove and install aircraft electrical_avionic components during line maintenance	1342
MEA265A Remove and install general aircraft electrical hardware	1349
MEA270A Lay out avionic systems	1356
MEA271A Lay out avionic flight management systems	1363
MEA272B Apply basic scientific principles and techniques in avionic engineering situations	1371
MEA273A Select and test avionic engineering materials	1381
MEA274A Maintain basic light aircraft electrical systems and components	1392
MEA275A Maintain basic light aircraft instrument systems and components	1402
MEA276A Maintain basic aircraft communication and radio navigation systems and components	1412
MEA277A Maintain twin engine aircraft electrical systems and components	1421
MEA278A Inspect, test and troubleshoot instrument display systems and components	1431
MEA279A Inspect, test and troubleshoot full authority digital engine control systems	1438
MEA280A Inspect, test and troubleshoot flight management systems and components	1445
MEA281A Maintain light aircraft AC powered instrument systems and components	1452
MEA282A Repair or overhaul aircraft pulse system components	1462
MEA283A Repair or overhaul aircraft display, control and distribution system components	1470

MEA284A Repair or overhaul aircraft instrument system components	1479
MEA285A Repair or overhaul aircraft radio frequency communication and navigation system components	1487
MEA286A Repair or overhaul aircraft electrical/electro-mechanical components	1495
MEA287A Repair or overhaul aircraft oxygen system components	1504
MEA288A Repair or overhaul aircraft audio and visual systems and reproducers	1511
MEA289A Maintain basic light aircraft avionic systems and components	1520
MEA290A Fit avionic modification sheet metal components	1530
MEA291A Inspect, test and troubleshoot fixed wing single axis autopilot systems and components	1536
MEA301C Perform aircraft flight servicing	1542
MEA302C Remove and install aircraft hydro-mechanical and landing gear system components	1550
MEA303D Remove and install pneumatic system components	1558
MEA304C Remove and install non-pressurised aircraft structural and non-structural components	1564
MEA305C Remove and install aircraft fixed wing flight control system components ...	1571
MEA306C Remove and install engines and engine system components	1577
MEA307C Remove and install propeller systems and components	1584
MEA308C Remove and install rotary wing rotor and flight control system components	1591
MEA309C Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	1600
MEA310C Inspect, test and troubleshoot aircraft pneumatic systems and components	1609
MEA311D Inspect and repair/modify aircraft structures	1617
MEA312C Inspect, test and troubleshoot aircraft fixed wing flight control systems and components	1627
MEA313C Inspect, test and troubleshoot piston engine systems and components	1636
MEA314C Inspect, test and troubleshoot gas turbine engine systems and components	1644
MEA315C Inspect, test and troubleshoot propeller systems and components	1652
MEA316C Inspect, test and troubleshoot rotary wing rotor and control systems and components	1660
MEA317C Remove and install pressurised aircraft structural and non-structural components	1668
MEA318C Inspect aircraft hydro-mechanical, mechanical, gaseous and landing systems and components	1675
MEA319C Inspect gas turbine engine systems and components	1683
MEA320C Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components	1690
MEA321C Test and troubleshoot aircraft fixed wing flight control systems and components	1700
MEA322C Test and troubleshoot gas turbine engine systems and components	1707
MEA323B Perform advanced troubleshooting in aircraft mechanical maintenance	1714
MEA325B Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications	1722
MEA327B Fabricate and/or repair aircraft mechanical components or parts	1727
MEA328C Maintain and/or repair aircraft mechanical components or parts	1734
MEA329B Dismantle, inspect, maintain and assemble aircraft basic hydraulic and pneumatic components or parts	1742
MEA330B Dismantle, inspect, maintain and assemble aircraft non-primary structural removable components or parts and internal fittings	1750
MEA331B Dismantle, inspect, maintain and assemble aircraft gas turbine engine components or parts	1758

ME A332B Dismantle, inspect, maintain and assemble aircraft mechanical components or parts	1766
ME A333B Dismantle, inspect, maintain and assemble aircraft piston engine components or parts	1774
ME A339C Inspect, repair and maintain aircraft structures	1782
ME A340A Lay out and set up aircraft systems.....	1791
ME A341A Apply basic aircraft design characteristics.....	1799
ME A342A Apply basic aircraft power plant design characteristics	1806
ME A343B Remove and install avionic system components.....	1811
ME A344A Remove and install aircraft components	1817
ME A345A Perform scheduled line maintenance activities on gas turbine engine fixed wing aircraft.....	1825
ME A346A Perform scheduled line maintenance activities on gas turbine engine rotary wing aircraft	1833
ME A347A Perform scheduled line maintenance activities on piston engine fixed wing aircraft.....	1841
ME A348A Perform scheduled line maintenance activities on piston engine rotary wing aircraft.....	1849
ME A349B Apply basic scientific principles and techniques in aeronautical engineering situations.....	1857
ME A350A Select and test aeronautical engineering materials	1867
ME A351A Maintain airframe systems of basic light fixed wing aircraft	1878
ME A352A Maintain basic rotary wing aircraft systems	1888
ME A353A Maintain basic light aircraft engines and propellers	1900
ME A354A Maintain light aircraft pneumatic systems.....	1911
ME A355A Maintain light aircraft air cycle air conditioning systems	1920
ME A356A Maintain light piston engine aircraft pressurisation systems.....	1928
ME A357A Inspect, test and repair aircraft fabric surfaces	1937
ME A358A Re-cover aircraft fabric surfaces.....	1944
ME A359A Inspect and repair aircraft wooden structures	1949
ME A360A Maintain aircraft diesel engines.....	1956
ME A361A Maintain aircraft two stroke petrol engines	1965
ME A362A Maintain aircraft vapour cycle air conditioning systems.....	1975
ME A363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft	1985
ME A364A Maintain and/or repair small aircraft mechanical components or parts	1997
ME A365A Assess structural repair/modification requirements and evaluate structural repairs and modifications	2006
ME A366A Perform borescope inspections.....	2014
ME A367A Repair/modify aircraft composite structure using cold bonding.....	2021
ME A368A Shot peen aircraft components.....	2027
ME A380A Repair and/or overhaul aircraft hydraulic system components.....	2032
ME A381A Repair and/or overhaul aircraft pneumatic system components	2040
ME A382A Repair and/or overhaul aircraft fuel system components	2048
ME A383A Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules.....	2056
ME A384A Repair and/or overhaul gas turbine engine combustion section components and/or modules	2064
ME A385A Repair and/or overhaul gas turbine engine turbine and exhaust section components.....	2072
ME A386A Repair and/or overhaul gas turbine engine ancillary section components.....	2081
ME A387A Test gas turbine engines and engine modules after overhaul or repair	2089
ME A388A Repair and/or overhaul piston engines.....	2096

MEA389A Repair and/or overhaul propellers	2103
MEA390A Repair and/or overhaul rotary wing dynamic components	2111
MEA391A Repair and/or overhaul aircraft mechanical system components	2119
MEA401C Inspect aircraft structures.....	2127
MEA405B Repair/modify aircraft composite material structure/components	2134
MEA406B Repair/modify aircraft non-primary structural sheetmetal components	2141
MEA407B Repair/modify aircraft non-primary structural non-metallic components	2148
MEA410C Maintain aircraft structure/components	2156
MEA411A Remove surface coatings from aircraft or aircraft components	2161
MEA412A Pre-treat aluminium alloy surfaces	2169
MEA413A Seal aircraft and aircraft component structural seams	2177
MEA414A Remove light corrosion from aircraft	2184
MEA415A Paint aircraft surfaces.....	2192
MEA416A Apply aircraft identification markings, graphics and decals	2200
MEA417A Apply specialty coatings to aircraft	2208
MEA418A Perform basic repair of aircraft internal fittings during line maintenance	2216
MEA419A Inspect and repair_modify aircraft cabin_cockpit non-primary structure components	2223
MEA420A Fabricate basic structural components for aircraft	2231
MEA421A Fabricate advanced structural components for aircraft	2238
MEA422A Repair/modify aircraft metal structure	2245
MEA423A Aircraft structure major disassembly and reassembly	2251
MEA424A Evaluate aircraft non-destructive tests.....	2259
MEA430A Gas weld aircraft components.....	2266
MEA431A Braze weld aircraft components.....	2272
MEA432A Weld aircraft components using the gas tungsten arc welding process.....	2278
MEA433A Weld aircraft components using the gas metal arc welding process	2283
MEA434A Weld aircraft components using the plasma arc welding process.....	2288
MEA435A Weld aircraft components using the manual metal arc welding process.....	2293
MEA501A Maintain and fit anti-G suits.....	2298
MEA502A Maintain and fit helmets	2306
MEA503A Maintain and fit immersion suits	2315
MEA504A Maintain and fit oxygen masks	2324
MEA505A Maintain and pack parachutes.....	2333
MEA506A Maintain and pack survival inflatable life rafts and escape slides	2342
MEA507A Maintain, pack and fit survival inflatable buoyancy vests	2352
MEA508A Maintain, install and remove restraint systems	2361
MEA509A Manufacture, repair and alter aircraft related fabric components.....	2369
MEA510A Maintain seat and pod electrical and electronic systems	2379
MEA511A Operate and maintain sewing machines and overlockers	2387
MEA601A Maintain aircraft egress systems.....	2396
MEA602A Remove and install aircraft stores management system components	2404
MEA603A Remove and install aircraft stores suspension systems and components	2412
MEA604A Inspect, test and troubleshoot aircraft stores management systems and components	2420
MEA605A Inspect, test and troubleshoot aircraft stores suspension systems and components	2429
AURV229749A Prepare spray painting materials and equipment.....	2438
AURV231208A Carry out trimming of vehicle components	2449
AURV231268A Select and apply trim/fabric materials and determine attachment methods.....	2460
AURV231368A Select and apply trim/fabric adhesives	2470
AURV329603DA Apply air dry and polyurethane enamel refinishing materials	2480
LMFSF2001B Cut single layer fabrics	2490

LMFSF2002B Machine sew materials	2497
LMFUP3012B Apply marine sewing and installation techniques.....	2506
LMTTF2008A Use adhesives.....	2514
MEM05004C Perform routine oxy acetylene welding.....	2522
MEM05006C Perform brazing and or silver soldering.....	2529
MEM05007C Perform manual heating and thermal cutting.....	2536
MEM05012C Perform routine manual metal arc welding	2543
MEM05015D Weld using manual metal arc welding process.....	2550
MEM05016C Perform advanced welding using manual metal arc welding process.....	2559
MEM05017D Weld using gas metal arc welding process	2566
MEM05018C Perform advanced welding using gas metal arc welding process	2575
MEM05019D Weld using gas tungsten arc welding process.....	2582
MEM05020C Perform advanced welding using gas tungsten arc welding process.....	2591
MEM05022C Perform advanced welding using oxy acetylene welding process	2598
MEM05026C Apply welding principles	2606
MEM05043B Perform welds to code standards using gas metal arc welding process ...	2615
MEM05044B Perform welds to code standards using gas tungsten arc welding process	2623
MEM05046B Perform welds to code standards using manual metal arc welding process	2631
MEM05049B Perform routine gas tungsten arc welding	2639
MEM05050B Perform routine gas metal arc welding	2646
MEM05051A Select welding processes	2653
MEM05052A Apply safe welding practices.....	2660
MEM07001B Perform operational maintenance of machines/equipment	2670
MEM07002B Perform precision shaping/planing/slotting operations	2676
MEM07005C Perform general machining	2684
MEM07006C Perform lathe operations	2694
MEM07007C Perform milling operations.....	2703
MEM07008D Perform grinding operations	2712
MEM07009B Perform precision jig boring operations	2721
MEM07010B Perform tool and cutter grinding operations	2728
MEM07011B Perform complex milling operations	2735
MEM07012B Perform complex grinding operations	2742
MEM07013B Perform machining operations using horizontal and/or vertical boring machines.....	2749
MEM07015B Set computer controlled machines/processes	2756
MEM07016C Set and edit computer controlled machines/processes.....	2764
MEM07018C Write basic NC/CNC programs.....	2773
MEM07019C Program NC/CNC machining centre	2782
MEM07020C Program multiple spindle and/or multiple axis NC/CNC machining centre	2790
MEM07021B Perform complex lathe operations	2799
MEM07022C Program CNC wire cut machines	2807
MEM07024B Operate and monitor machine/process	2816
MEM07028B Operate computer controlled machines/processes.....	2824
MEM07030C Perform metal spinning lathe operations (basic).....	2832
MEM07031C Perform metal spinning lathe operations (complex)	2840
MEM07032B Use workshop machines for basic operations	2847
MEM08001B Perform wire, jig and barrel load/unload work	2854
MEM08002C Pre-treat work for subsequent surface coating	2861
MEM08003C Perform electroplating operations	2868
MEM08004B Finish work using wet, dry and vapour deposition methods	2875
MEM08006B Produce clear and/or coloured and/or sealed anodised films on aluminium	2883
MEM08012B Prepare surfaces by abrasive blasting (basic)	2890
MEM08013B Prepare surfaces by abrasive blasting (advanced).....	2897

MEM08016B Control blast coating by-products, materials and emissions	2904
MEM08018B Electroplate engineering coatings	2911
MEM09002B Interpret technical drawing	2919
MEM09003B Prepare basic engineering drawing	2926
MEM09009C Create 2D drawings using computer aided design system.....	2934
MEM11011B Undertake manual handling	2943
MEM12001B Use comparison and basic measuring devices	2950
MEM12003B Perform precision mechanical measurement	2956
MEM12005B Calibrate measuring equipment.....	2964
MEM12023A Perform engineering measurements	2972
MEM12024A Perform computations.....	2980
MEM13003B Work safely with industrial chemicals and materials.....	2988
MEM13013B Work safely with ionizing radiation.....	2996
MEM15004B Perform inspection	3006
MEM15010B Perform laboratory procedures	3013
MEM15017B Use and maintain reference standards	3021
MEM16002C Conduct formal interviews and negotiations.....	3030
MEM16006A Organise and communicate information.....	3037
MEM16010A Write reports.....	3044
MEM17002B Conduct workplace assessment.....	3052
MEM18001C Use hand tools	3061
MEM18002B Use power tools/hand held operations.....	3068
MEM24001B Perform basic penetrant testing.....	3075
MEM24002B Perform penetrant testing.....	3084
MEM24003B Perform basic magnetic particle testing.....	3092
MEM24004B Perform magnetic particle testing.....	3100
MEM24005B Perform basic eddy current testing.....	3109
MEM24006B Perform eddy current testing.....	3117
MEM24007B Perform ultrasonic thickness testing.....	3126
MEM24008B Perform ultrasonic testing	3135
MEM24009B Perform basic radiographic testing.....	3144
MEM24010B Perform radiographic testing.....	3153
MEM24011B Establish non-destructive tests.....	3163
MEM24012C Apply metallurgy principles	3172
MEM30007A Select common engineering materials	3181
MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment.....	3190
MSAENV272B Participate in environmentally sustainable work practices	3197
MSAENV472B Implement and monitor environmentally sustainable work practices ..	3206
MSAENV672B Develop workplace policy and procedures for environmental sustainability	3216
PMBPROD262B Operate tyre curing equipment	3225
PMBPROD263B Operate retread curing equipment.....	3233
PMBPROD264C Check recycle wash process	3241
PMBPROD265C Operate portable vulcanising equipment	3248
PMBPROD266B Prepare tyre casings for retreading.....	3256
PMBPROD324B Inspect tyres for retreading.....	3264
PMBPROD325B Lay on tyre retreads.....	3271
PMBPROD326B Inspect tyres.....	3279
PSPMNGT610A Manage public sector financial resources	3287
PUADEFEO101D Work safely with explosive ordnance	3297
PUADEFEO501D Conduct explosive ordnance inspection.....	3306
TAEASS401B Plan assessment activities and processes.....	3314
TAEASS402B Assess competence	3323

TAEASS403B Participate in assessment validation3332
TAEASS502B Design and develop assessment tools.....3338
TAEDEL301A Provide work skill instruction3347
TAEDEL402A Plan, organise and facilitate learning in the workplace.....3357
TAEDES401A Design and develop learning programs3367

MEA11 Aeroskills Training Package

Modification History

The version details of this endorsed Training Package are in the table below.

Version	Release Date	Comments
Version 1	25 January 2012	Primary release

Imprint page

[2011] Commonwealth of Australia.

MEA11 Summary Mapping

Mapping of Qualifications - MEA11v1 to MEA07v3

MEA11v1 qualification code and title		MEA07v3	Comment in relation to the previous versions of the Training Package
MEA20411	Certificate II in Aeroskills	MEA20410	Unit codes updated as required - equivalent
MEA20511	Certificate II in Aircraft Line Maintenance	MEA20510	Unit codes updated as required - equivalent
MEA20611	Certificate II in Aircraft Surface Finishing	MEA20610	Unit codes updated as required - equivalent
MEA30111	Certificate III in Aircraft Surface Finishing	MEA30110	Unit codes updated as required - equivalent
MEA30211	Certificate III in Aeroskills (Mechatronics)	New qualification	
MEA30311	Certificate III in Aircraft Life Support and Furnishing	MEA30310	Unit codes updated as required - equivalent
MEA40611	Certificate IV in Aeroskills (Avionics)	MEA40610	Unit codes updated as required - equivalent
MEA40711	Certificate IV in Aeroskills (Mechanical)	MEA40710	Additional electives for component workshop training pathway and unit codes updated as required - equivalent
		MEA40810	Replaced by MEM41311

MEA40911	Certificate IV in Aircraft Surface Finishing	MEA40910	Unit codes updated as required - equivalent
MEA41011	Certificate IV in Aeroskills (Mechatronics)	New qualification	
MEA41111	Certificate IV in Aircraft Life Support and Furnishing	MEA41109	Unit codes updated as required - equivalent
MEA41211	Certificate IV in Aeroskills (Armament)	MEA41210	Unit codes updated as required - equivalent
MEA41311	Certificate IV in Aeroskills (Structures)	MEA40810	A number of mandatory units were restructured and an elective cold bonding unit added - qualifications not equivalent
MEA50111	Diploma of Aeroskills (Avionics)	MEA50110	Unit codes updated as required - equivalent
MEA50211	Diploma of Aeroskills (Mechanical)	MEA50210	Unit codes updated as required - equivalent
MEA50311	Diploma of Aviation Maintenance Management (Avionics)	MEA50310	Unit codes updated as required, entry requirements clarified - equivalent
MEA50411	Diploma of Aviation Maintenance Management (Mechanical)	MEA50410	Unit codes updated as required, entry requirements clarified - equivalent
MEA50511	Diploma of Aeroskills (Non-Destructive Testing)	New qualification	
MEA60111	Advanced Diploma of Aviation Maintenance Management (Avionics)	MEA60110	Unit codes updated as required and elective imported financial management units replaced by MEA146A - equivalent
MEA60211	Advanced Diploma of Aviation Maintenance Management (Mechanical)	MEA60210	Unit codes updated as required and elective imported financial management units replaced by MEA146A - equivalent
MEA60311	Advanced Diploma of Aviation Non-Destructive Testing	New qualification	

Mapping of Units of Competency - MEA11v1 to MEA07v3

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
MEA101B Interpret occupational health and safety practices in aviation maintenance		Unchanged	Nil
MEA103B Plan and organise aviation maintenance work activities		Unchanged	MEA101B MEA105C MEA107B MEA108B
MEA105C Apply quality standards applicable to aviation maintenance processes	MEA105B Apply quality standards applicable to aviation maintenance processes	Additional knowledge requirements regarding inspection – units are equivalent	MEA101B MEA107B
MEA107B Interpret and use aviation maintenance industry manuals and specifications		Unchanged	Nil
MEA108B Complete aviation maintenance industry documentation		Unchanged	MEA105C
MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance		Unchanged	MEA105C MEA108B
MEA111C Perform administrative processes to prepare for certification of civil aircraft maintenance	MEA111B Perform administrative processes to prepare for certification of civil aircraft maintenance	Revised references to CASRs – units are equivalent	All Certificate IV in Aeroskills (Avionics) or (Mechanical) units applicable to the CASA B1 or B2 Licence

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
MEA112B Plan and implement civil aircraft maintenance activities		Unchanged	All Certificate IV in Aeroskills (Avionics) or (Mechanical) units applicable to the CASA B1 or B2 Licence
MEA113C Supervise civil aircraft maintenance activities and manage human resources in the workplace		Unchanged	All Certificate IV in Aeroskills (Avionics) or (Mechanical) units applicable to the CASA B1 or B2 Licence
MEA114A Certify aeronautical product maintenance		Unchanged	Nil
MEA115A Plan and implement aeronautical product maintenance activities		Unchanged	Nil
MEA116B Apply occupational health and safety procedures at supervisor level in aviation maintenance		Unchanged	Nil
MEA117A Apply self in the aviation maintenance environment		Unchanged	Nil
MEA118A Conduct self in the aviation maintenance environment		Unchanged	Nil
MEA119B Perform administrative processes to prepare for certification of civil aircraft A level line		Unchanged	All Certificate II in Aircraft Line Maintenance units applicable to the CASA A Licence

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
maintenance			
MEA120B Manage an aviation maintenance quality system		Unchanged	Nil
MEA121B Manage aircraft/aeronautical product configuration		Unchanged	Nil
MEA122B Manage aircraft/equipment system performance testing		Unchanged	MEA126B
MEA123B Manage aviation maintenance work environment policy and practices		Unchanged	Nil
MEA124B Coordinate change programs in the aviation maintenance environment		Unchanged	Nil
MEA125B Develop aviation maintenance personnel		Unchanged	Nil
MEA126B Manage aircraft maintenance activities		Unchanged	Nil
MEA127B Provide technical advice in the maintenance and management of aircraft and aeronautical product		Unchanged	MEA349B MEA350A Or MEA272B MEA273A
MEA128B Provide engineering advice in the modification,		Unchanged	MEA349B MEA350A

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
maintenance and management of aircraft systems			Or MEA272B MEA273A
MEA129A Investigate technical aspects of aviation occurrences		Unchanged	Nil
MEA130A Manage deployed/detached aviation maintenance activities		Unchanged	Nil
MEA131B Manage the custody, transfer and disposal of aircraft, aeronautical product and support equipment		Unchanged	Nil
MEA132A Manage budgetary resources in the aviation maintenance environment		Unchanged	Nil
MEA133B Communicate aviation technical and maintenance management knowledge		Unchanged	Nil
MEA134B Establish, maintain and evaluate the organisation's occupational health and safety system		Unchanged	Nil
MEA135A Use computers in aviation maintenance-related integrated logistic support activities		Unchanged	Nil
MEA136A Assess		Unchanged	MEA135A

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
aviation maintenance spares and manage repairable items			
MEA137A Write aviation technical publications		Unchanged	MEA135A
MEA138B Perform aviation technical publication management activities		Unchanged	MEA137A
MEA139A Perform aviation maintenance – related integrated logistic support management activities		Unchanged	Nil
MEA140A Supervise aviation maintenance teams and perform maintenance quality inspections		Unchanged	Maintenance Quality Inspector or Independent Inspector in the ADF Regulatory environment
MEA141B Manage risk in aviation maintenance		Unchanged	Nil
MEA142B Manage self in the aviation maintenance environment		Unchanged	Nil
MEA143B Develop and manage maintenance error management programs		Unchanged	Nil
MEA145A Conversion from allied trades for employment in aviation maintenance workshops		Unchanged	MEA108B

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
MEA146A Prepare and manage aviation maintenance organisation budgets and financial plans		New Unit	
MEA201B Remove and install miscellaneous aircraft electrical hardware/components		Unchanged	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA202C Remove and install basic aircraft electrical system components		Unchanged	MEA201B
MEA203C Remove and install advanced aircraft electrical system components		Unchanged	MEA201B
MEA204C Remove and install basic aircraft instrument system components		Unchanged	MEA201B
MEA205C Remove and install advanced aircraft instrument system components		Unchanged	MEA201B
MEA206C Remove and install aircraft basic radio communication and navigation system components		Unchanged	MEA201B
MEA207C Remove and install aircraft electronic		Unchanged	MEA201B

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
system components			
MEA208C Remove and install aircraft pressurisation control system components		Unchanged	MEA201B
MEA209C Remove and install aircraft oxygen system components		Unchanged	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components		Unchanged	MEA202C MEA246C
MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components		Unchanged	MEA203C MEA246C
MEA212C Inspect, test and troubleshoot basic aircraft instrument systems and components		Unchanged	MEA204C MEA246C
MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems		Unchanged	MEA205C MEA246C
MEA214C Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components		Unchanged	MEA206C MEA246C

ME A11 Unit code and title	ME A07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
ME A215C Inspect, test and troubleshoot advanced aircraft communications systems and components		Unchanged	ME A206C ME A246C
ME A216C Inspect, test and troubleshoot instrument landing systems and components		Unchanged	ME A206C ME A207C ME A246C
ME A217C Inspect, test and troubleshoot fixed wing autopilot systems and components		Unchanged	ME A207C ME A246C
ME A218C Inspect, test and troubleshoot rotary wing autopilot systems and components		Unchanged	ME A207C ME A246C
ME A219C Inspect, test and troubleshoot aircraft pressurisation control systems and components		Unchanged	ME A208C ME A246C
ME A220C Inspect, test and troubleshoot aircraft primary radar systems and components		Unchanged	ME A207C ME A246C
ME A221C Inspect, test and troubleshoot aircraft secondary radar systems and components		Unchanged	ME A207C ME A246C
ME A222C Inspect, test and troubleshoot aircraft oxygen systems and components		Unchanged	ME A209C
ME A223D Inspect aircraft electrical	ME A223C Inspect aircraft electrical systems	Knowledge statements expanded – units	ME A203C ME A246C

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
systems and components	and components	are equivalent	
MEA224C Inspect aircraft instrument systems and components	MEA224B Inspect aircraft instrument systems and components	Knowledge statements expanded – units are equivalent	MEA205C MEA246C
MEA225C Inspect fixed wing aircraft automatic flight control systems and components	MEA225B Inspect fixed wing aircraft automatic flight control systems and components	Knowledge statements expanded – units are equivalent	MEA207C MEA246C
MEA226D Inspect aircraft electronic systems and components	MEA226C Inspect aircraft electronic systems and components	Knowledge statements expanded – units are equivalent	MEA207C MEA246C
MEA227D Test and troubleshoot aircraft electrical systems and components	MEA227C Test and troubleshoot aircraft electrical systems and components	Knowledge statements expanded – units are equivalent	MEA223D
MEA228D Test and troubleshoot aircraft instrument systems and components	MEA228C Test and troubleshoot aircraft instrument systems and components	Knowledge statements expanded – units are equivalent	MEA224C MEA226D
MEA229D Test and troubleshoot aircraft radio frequency navigation and communications systems and components	MEA229C Test and troubleshoot aircraft radio frequency navigation and communications systems and components	Knowledge statements expanded – units are equivalent	MEA226D
MEA230C Test and troubleshoot fixed wing aircraft automatic flight control systems and components	MEA230B Test and troubleshoot fixed wing aircraft automatic flight control systems and components	Knowledge statements expanded – units are equivalent	MEA225C MEA246C
MEA231C Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems	MEA231B Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems	Knowledge statements expanded – units are equivalent	MEA207C MEA246C

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
and components	and components		
MEA232C Test and troubleshoot aircraft pulse systems and components	MEA232B Test and troubleshoot aircraft pulse systems and components	Knowledge statements expanded – units are equivalent	MEA226D MEA246C
MEA233C Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components		Unchanged	MEA207C MEA246C
MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components		Unchanged	MEA206C MEA207C MEA246C
MEA235B Perform advanced troubleshooting in aircraft avionic maintenance		Unchanged	All Certificate IV in Aeroskills (Avionics) or (Mechanical) units applicable to the CASA B2 Licence
MEA238B Perform routine removal and installation of miscellaneous aircraft electrical hardware/components		Unchanged	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA239B Fabricate aircraft electrical looms and harnesses		Unchanged	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA240B Use electrical test equipment to		Unchanged	MEA101B

MEA11 Unit code and title	MEA07v3 Unit code and title	Relationship to previous version	Prerequisite/ Co-requisite units (Check unit for details)
perform basic electrical tests			MEA103B MEA105C MEA107B MEA108B MEA109B
MEA241C Perform aircraft weight and balance calculations as a result of modifications	MEA241B Perform aircraft weight and balance calculations as a result of modifications	References to CASR requirements updated – units are equivalent	All Certificate IV in Aeroskills (Avionics) or (Mechanical) units applicable to the CASA B2 Licence
MEA246C Fabricate and/or repair aircraft electrical hardware or parts		Unchanged	MEA201B MEA260B
MEA252B Test, align and troubleshoot aircraft synchro and servo system components		Unchanged	MEA201B MEA260B MEA261C
MEA260B Use electrical test equipment		Unchanged	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B

MEM30007A Select common engineering materials	Unchanged	From MEM05 Metal and Engineering Training Package – current unit – not contextualised	
MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment	Unchanged	From MEM05 Metal and Engineering Training Package – current unit – not contextualised	
MSAENV272B Participate in environmentally sustainable work	Unchanged	From MSA07 Manufacturing Training Package – current unit – not	

practices		contextualised	
MSAENV472B Implement and monitor environmentally sustainable work practices	Unchanged	From MSA07 Manufacturing Training Package – current unit – not contextualised	
MSAENV672B Develop workplace policy and procedures for environmental sustainability	Unchanged	From MSA07 Manufacturing Training Package – current unit – not contextualised	
PSPMNGT610A Manage public sector financial resources	Unchanged	From PSP04 Public Sector Training Package – current unit – not contextualised	
PUADEFEO101D Work safely with explosive ordnance	Unchanged	From PUA00 Public Safety Training Package – current unit – not contextualised	
PUADEFEO501D Conduct explosive ordnance inspection	Unchanged	From PUA00 Public Safety Training Package – current unit – not contextualised	
TAEDEL301A Provide work skill instruction	New to MEA11	From TAE10 Training and Education Training Package – current unit – not contextualised	
TAEDEL402A Plan, organise and facilitate learning in the workplace	New to MEA11	From TAE10 Training and Education Training Package – current unit – not contextualised	
TAEASS401B Plan assessment activities and processes	New to MEA11	From TAE10 Training and Education Training Package – current unit – not contextualised	
TAEASS402B Assess competence	New to MEA11	From TAE10 Training and Education Training Package – current unit – not contextualised	
TAEASS403B Participate in assessment validation	New to MEA11	From TAE10 Training and Education Training Package – current unit – not	

		contextualised	
TAEASS502B Design and develop assessment tools	New to MEA11	From TAE10 Training and Education Training Package – current unit – not contextualised	
TAEDES401A Design and develop learning programs	New to MEA11	From TAE10 Training and Education Training Package – current unit – not contextualised	

Units not carried forward from MEA07v3 to MEA11v1

Unit	Comment
MEA402B Fabricate aircraft structural components	Replaced by MEA420A and MEA421A
MEA403B Repair/modify aircraft structure	Replaced by MEA422A
MEA404B Disassemble and reassemble aircraft structure for major repair or modification	Replaced by MEA423A
BSBMGT503A Prepare budgets and financial plans	Replaced by MEA146A
BSBMGT504A Manage budgets and financial plans	Replaced by MEA146A

Preliminary information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 1 – check whether this is the latest version by going to Training.gov.au (www.training.gov.au) and locating information about the Training Package. Alternatively, contact Manufacturing Skills Australia www.mskills.com.au to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Package's national code (which remains the same during its period of endorsement).

Explanation of the review date

The review date (shown on the title page and in the footer of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

Training Package Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Skills Standards Council (NSSC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils (ISCs) or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

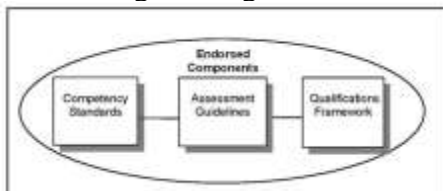

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NSSC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the 'packaging rules'. The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, and with the code always before the title.

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example, *MEA11*. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example, *MEA20411*. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are not used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of up to 12 characters, normally a mixture of uppercase letters and numbers, as in *MEA101B*;
- the first three characters signify the Training Package – *MEA Aeroskills Training Package* – in the above example, and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An ‘A’ at the end of the code indicates that this is the original unit of competency. ‘B’, or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words 'in' for Certificates I to IV, and 'of' for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example, Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

MEA40711 Certificate IV in Aeroskills (Mechanical)

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

MEA112B Plan and implement civil aircraft maintenance activities

Australian Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the AQF Implementation Handbook.

http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...

- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate in ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the AQF Implementation Handbook and the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Statement of Attainment

A Statement of Attainment is issued by a RTO when an individual has completed one or more units of competency from nationally recognised qualification(s)/course(s). Issuance of Statements of Attainment must comply with the advice provided in the current AQF Implementation Handbook and the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The AQF Implementation Handbook provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas
- demonstrate basic practical skills, such as the use of relevant tools
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas
- apply a defined range of skills
- apply known solutions to a limited range of predictable problems
- perform a range of tasks where choice between a limited range of options is required
- assess and record information from varied sources
- take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team coordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature. Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and coordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team coordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.

Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.

Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills
- initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts
- generate and evaluate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts

- demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.

Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.

Further specialisation within a systematic and coherent body of knowledge.

Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.

The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills
- initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts
- generate and evaluate complex ideas through the analysis of information and concepts at an abstract level
- demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts
- demonstrate full responsibility and accountability for personal outputs
- demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Qualification Pathways

For more information about qualifications and pathways contact Manufacturing Skills Australia (MSA) www.mskills.com.au

Competency Standards

What is competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of units of competency by RTOs

Registered Training Organisations (RTOs) may contextualise units of competency in this endorsed Training Package to reflect required local outcomes. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this Training Package must be within the bounds of the following advice:

- RTOs must not remove or add to the number and content of elements and performance criteria.
- RTOs can include specific industry terminology in the range statement.
- Any amendments and additions to the range statement made by RTOs must not diminish the breadth of application of the competency, or reduce its portability.
- RTOs may add detail to the evidence guide in areas such as the critical aspects of evidence or required resources and infrastructure—but only where these expand the breadth of the competency and do not limit its use.

Components of units of competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills

This sub-section contains a statement that the unit contains Employability skills.

Prerequisite Units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the Unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency Field (Optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of Competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance Criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required Skills and Knowledge

The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range Statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence Guide

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment;

- relationships with the assessment of any other units of competency;
- suitable methodologies for conducting assessment including the potential for workplace simulation;
- resource implications, for example access to particular equipment, infrastructure or situations;
- how consistency in performance can be assessed over time, various contexts and with a range of evidence; and
- the required underpinning knowledge and skills.

Employability Skills in Units of Competency

The detail and application of Employability Skills facets will vary according to the job role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

How Employability Skills relate to the Key Competencies

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

Employability Skills Mayer Key Competencies

Communication	Communicating ideas and information
Teamwork	Working with others and in teams
Problem solving	Solving problems Using mathematical ideas and techniques
Initiative and enterprise	
Planning and organising	Collecting, analysing and organising information Planning and organising activities
Self-management	
Learning	
Technology	Using technology

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

Explicitly embedding Employability Skills in units of competency

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

Sample unit of competency components showing Employability Skills

The following table shows the sequence of a unit of competency, and each cell contains text taken from a range of units. It provides examples of where and how various Employability Skills could be embedded in each component.

Please note that in the example, the bracketed Employability Skills are provided for clarification only and would not be present in units of competency within this Training Package.

Unit Title	Give formal presentations and take part in meetings (<i>Communication</i>)
Unit Descriptor	This unit covers the skills and knowledge required to promote the use and implementation of innovative work practices to effect change (<i>Initiative and enterprise</i>)
Element	Proactively resolve issues (<i>Problem solving</i>)
Performance Criteria	Information is organised in a format suitable for analysis and dissemination in accordance with organisational requirements (<i>Planning and organising</i>)
Range Statement	Software applications may include email, internet, word processing, spreadsheet, database or accounting packages (<i>Technology</i>)
Required Skills and Knowledge	Modify activities depending on differing workplace contexts, risk situations and environments (<i>Learning</i>) Work collaboratively with others during a fire emergency (<i>Teamwork</i>) Instructions, procedures and other information relevant the maintenance

of vessel and port security (*Communication*)

Evidence of having worked constructively with a wide range of community groups and stakeholders to solve problems and adapt or design new solutions to meet identified needs in crime prevention. In particular, evidence must be obtained on the ability to:

Evidence Guide

- assess response options to identified crime-prevention needs and determine the optimal action to be implemented
- in consultation with relevant others, design an initiative to address identified issues (*Initiative and enterprise*)

Employability Skills Summaries and units of competency

An Employability Skills Summary exists for each qualification. Summaries include broad advice on industry expectations with regard to Employability Skills at the qualification level. Summaries should be used by trainers and assessors to assist in identifying the Employability Skills requirements contained within units of competency.

Assessment Guidelines

Section 1

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements, licensing and registration requirements, and assessment pathways.

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:

- benchmarks for assessment
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF.

Benchmarks for Assessment

The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Principles of Assessment

All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:

- validity
- reliability
- flexibility
- fairness
- sufficiency.

These principles must be addressed in the:

- design, establishment and management of the assessment system for this Training Package
- development of assessment tools
- the conduct of assessment.

Validity

Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:

- a) assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance
- b) assessment of knowledge and skills must be integrated with their practical application
- c) judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency.

Reliability

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

Flexibility

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

Fairness

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

Sufficiency

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

Rules of Evidence

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.

Valid

Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

Sufficient

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

Current

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

Authentic

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.

Section 2

Assessment Requirements of the Australian Quality Training Framework

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 Essential Standards for Registration.

The AQTF 2010 Essential Standards for Initial and Continuing Registration can be downloaded from <www.training.com.au>.

The following points summarise the assessment requirements.

Registration of Training Organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 Essential Standards for Initial and Continuing Registration, Standard 1.

Assessor Competency Requirements

Each person involved in training and assessment must be competent for the functions they perform. See the AQTF 2010 Essential Standards for Initial and Continuing Registration, Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 Users' Guide to the Essential Standards for Registration – Appendix 2.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Recording Assessment Outcomes

Each TO must manage records to ensure their accuracy and integrity. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Issuing AQF qualifications and Statement of Attainment

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/course(s). See the AQTF and the edition of the AQF Implementation Handbook—available on the AQF Council website <www.aqf.edu.au>

Section 3

Licensing/Registration Requirements

This section provides information on licensing/registration requirements for this Training Package, with the following important disclaimer.

Licensing and registration requirements that apply to specific industries, and VET, vary between each state and territory, and can regularly change. The developers of this Training Package consider that the licensing/registration requirements described in this section apply to RTOs, assessors or candidates with respect to this Training Package. While reasonable care has been taken in its preparation, the developers of this Training Package and the Department cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis. Contact the relevant state or territory department(s) to check if the licensing/registration requirements described below still apply, and to check if there are any others with which you must comply. For further information contact the Civil Aviation Safety Authority (CASA) in accordance with the advice provided below.

1) Advice to contact CASA for authoritative information on licensing requirements

Selected units of competency and qualifications in this Training Package have been designed to satisfy CASA requirements for Licensed Aircraft Maintenance Engineers specified in Civil Aviation Safety Regulation Part 66.

Training programs will allow entry to optional licensing pathways leading to both trade recognition and preparation for CASA licensing. These programs will be conducted by Registered Training Organisations which will also have complementary CASA approval as maintenance training organisations under Civil Aviation Safety Regulation Part 147. Authoritative information on licensing, current and proposed compliance requirements can be obtained from CASA on telephone 131 757 or at www.casa.gov.au.

2) Requirements for Assessors

In order to conduct assessment for statutory licensing or other industry registration requirements, assessors must meet the requirements outlined in the following chart, in addition to the AQTF requirements.

Licence/Registration	Jurisdiction	Requirements
A1 A2 A3 A4 B1.1 B1.2 B1.3 B1.4	Commonwealth	Assessors must have been appointed by a Maintenance Training Organisation that is operating under the provisions of Civil Aviation Safety Regulation Part 147.

B2		
----	--	--

3) Requirements for RTOs

Selected units of competency and qualifications in this Training Package provide the basis for a range of statutory licensing and industry registration arrangements. To satisfy these licensing and registration arrangements, RTOs must meet the additional requirements detailed in the following chart.

Licence/Registration	Jurisdiction	Requirements
A1 A2 A3 A4 B1.1 B1.2 B1.3 B1.4 B2	Commonwealth	RTOs delivering training leading to the grant of an Aircraft Maintenance Engineer Licence must be Maintenance Training Organisations operating under the provisions of Civil Aviation Safety Regulation Part 147. Underpinning skills and knowledge must fully cover the Civil Aviation Safety Regulation Part 66 licensing topics as listed by licence and unit of competency in Appendix 1 to this Training Package.

4) Requirements for Candidates

Individuals being assessed under statutory licensing and industry registration systems must comply with training and experience requirements additional to the minimum requirements identified in this Training Package. These additional requirements are specified in Civil Aviation Safety Regulation Part 66 and include:

- For an A Licence, attainment of all units of competency specified in Section 2 for MEA20511 Certificate II in Aircraft Line Maintenance with elective units selected according to the licence (A1, A2, A3 or A4) sought
- For a B1 Licence, attainment of all units of competency specified in Section 2 for MEA50211 Diploma of Aeroskills (Mechanical) with elective units selected according to the licence (B1.1, B1.2, B1.3 or B1.4) sought
- For a B2 Licence, attainment of all units of competency specified in Section 2 for MEA50111 Diploma of Aeroskills (Avionics)
- In all cases, one of the requirements to demonstrate eligibility will be the presentation of a Log of Industrial Experience and Achievement in which experience and attainment of units of competency have been correctly certified.

Where units of competency have been attained other than through an RTO that is also a Maintenance Training Organisation under Civil Aviation Safety Regulation Part 147 and a licence is being sought, the individual will be required to undergo an RPL assessment conducted by a Maintenance Training Organisation.

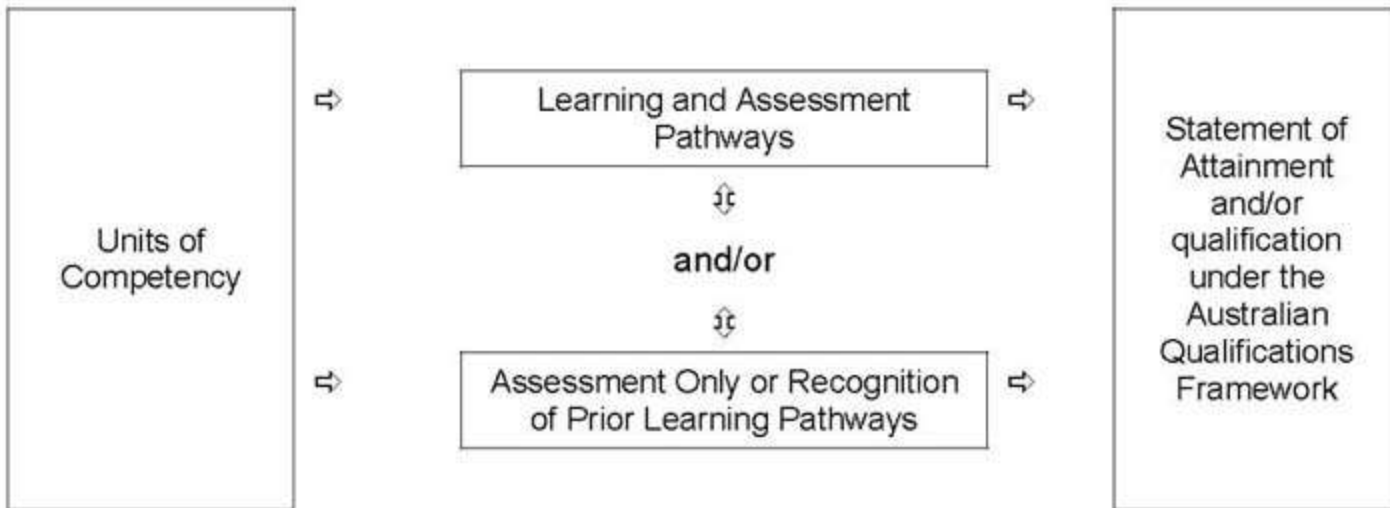

Section 4

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, or a recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held – the critical issue is that the candidate is competent, not how the competency was acquired. Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package, the AQTF and, where relevant, the Australian Qualifications Framework.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with evidence being collected and feedback provided to the candidate at any time throughout the learning and assessment process. Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Credit Pathways

Credit is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were acquired, provided that the learning is relevant to the unit of competency outcomes.

Recognition of Prior Learning

Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of RPL provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;
- people returning to the workplace; and
- people with disabilities or injuries requiring a change in career.

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.

Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:

- questioning (oral or written)
- consideration of a portfolio and review of contents
- consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification component
- mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
- observation of performance, and
- participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a RPL pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

Credit Transfer

Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.

This process involves education institutions:

- mapping, comparing and evaluating the extent to which the defined learning outcomes and assessment requirements of the individual components of one qualification are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification

- making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
- setting out the agreed credit outcomes in a documented arrangement or agreement, and
- publicising the arrangement/agreement and credit available.

Combination of Pathways

Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Section 5

Assessor Requirements

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2010 Essential Standards for Registration follows:

1.4 Training and assessment are conducted by trainers and assessors who:

- have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and
- have the relevant vocational competencies at least to the level being delivered or assessed, and
- can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and
- continue to develop their Vocational Education and Training (VET) knowledge and skills as well as their industry currency and trainer/assessor competence.

* See AQTF 2010 Users' Guide to the Essential Standards for Registration – Appendix 2

Section 6

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgements about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register <www.ntis.gov.au>.

Developing Assessment Tools

When developing their own assessment tools, assessors must ensure that the tools:

- are benchmarked against the relevant unit or units of competency;
- are reviewed as part of the validation of assessment strategies required under the AQTF; and
- meet the assessment requirements expressed in the AQTF 2010 Essential Standards for Initial and Continuing Registration.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

Language, Literacy and Numeracy

The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

Section 7

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory Assessment Requirements

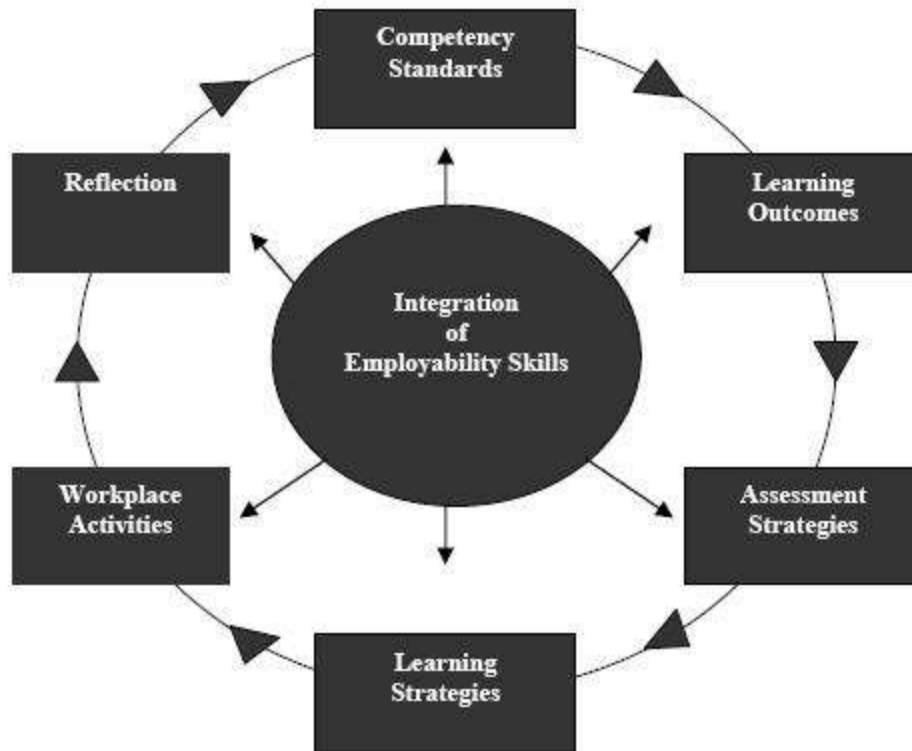

Assessments must meet the criteria set out in the AQTF 2010 Essential Standards for Initial and Continuing Registration. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 Essential Standards for Initial and Continuing Registration are as follows:

1.5 Assessment, including Recognition of Prior Learning (RPL):

- meets the requirements of the relevant Training Package or accredited course
- is conducted in accordance with the principles of assessment and the rules of evidence
- meets workplace and, where relevant, regulatory requirements
- is systematically validated.

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such, they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

The NQC has endorsed a model for assessing and reporting Employability Skills, which contains further suggestions about good practice strategies in teaching, assessing, learning and reporting Employability Skills. The model is available from <<http://www.training.com.au/>>. The endorsed approach includes learners downloading qualification specific Employability Skills Summaries for Training Package qualifications from an online repository at <<http://employabilityskills.training.com.au>>

For more information on Employability Skills in Manufacturing Skills Australia (MSA) Training Packages go to the MSA website at www.mskills.com.au.

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from <http://employabilityskills.training.com.au> "

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable Adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability. Under the Disability Standards for Education 2005, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While 'reasonable adjustment' and 'unjustifiable hardship' are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship. The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. Go to <http://www.deewr.gov.au/tpdh/Pages/home.aspx> .

Further Sources of Information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Assessment Resources

RTOs are at the forefront of vocational education and training (VET) in Australia. They translate the needs of industry into relevant, quality, client-focussed training and assessment. RTOs should strive for innovation in VET teaching and learning practices and develop highly flexible approaches to assessment which take cognisance of specific needs of learners, in order to improve delivery and outcomes of training.

Resources can be purchased or accessed from:

- TVET Australia – provides an integrated service to enable users of the national training system to identify and acquire training materials, identify copyright requirements and enter licenses for use of that material consistent with the scope and direction of the NQC.

Introduction to MEA11

Introduction to the MEA11 Aeroskills Training Package Version 1

The MEA11 Aeroskills Training Package replaces the MEA07v3 Aeroskills Training Package. Changes to the Training Package include:

- introduction of the MEA50511 Diploma of Aeroskills (Non-Destructive Testing) and the MEA60311 Advanced Diploma of Aviation Non-Destructive Testing
- introduction of units of competency required for compliance with regulations relating to aircraft welding
- introduction of a MEA30211 Certificate III in Aeroskills (Mechatronics) and a MEA41011 Certificate IV in Aeroskills (Mechatronics) to cover the maintenance of small aircraft and to provide a transitional pathway over the period to 2015 from the CASA CAR 31 licensing system to a competency-based system similar to that covered in CASR Part 66 for the large aircraft B1 and B2 licences
- inclusion of additional electives in the MEA40711 Certificate IV in Aeroskills (Mechanical) to increase flexibility in the component workshop stream
- revision of a number of Structures units and the introduction of a composites cold bonding unit in line with stakeholder input
- updating and standardisation of a number of existing units
- acronyms and definition of terms have been consolidated into the new Appendix 2 Glossary of terms used in units of competency.

The draft MEA11 Aeroskills Training Package has been processed through the standard Manufacturing Skills Australia (MSA) processes involving quality and equity reviews, review by State and Territory Training Authorities (STAs) and by the Aerospace Education and Training Reference Group.

Introduction to the industry

The Australian Aerospace Industry Aviation Maintenance Sector

The MEA11 Aeroskills Training Package covers the Aviation Maintenance Sector of the Australian Aerospace Industry. This sector covers maintenance performed on aircraft and their components in support of both civil and military aviation by a workforce of about 15,000 civilian and ADF personnel.

On the civil side, the workforce ranges from airlines employing large numbers of maintenance personnel to medium and small general aviation organisations that may employ as few as two or three individuals. In both the airline and general aviation areas there are third party maintenance organisations that support aircraft operators on a contractual basis. Again, these organisations vary in size from hundreds of maintenance personnel down to organisations with fewer than 10 personnel. Some maintenance organisations maintain both aircraft and their components while others maintain either complete aircraft or a range of aircraft components.

Military aviation consists of the three Services of the ADF where maintenance work is performed by uniformed personnel, plus a large network of contractors with civilian workforces that perform the deeper maintenance of most aircraft types and contractors also perform most component maintenance. The defence contractors are typically large aerospace organisations, or subsidiaries thereof. Many have a number of contracts and operate from a number of sites that may be geographically remote from one another.

Those involved in the maintenance of civil aircraft work under an extensive range of regulations that are aimed at ensuring a high level of flight safety and rely on licensed and specifically authorised individuals for the certification of maintenance. Those involved in the maintenance of State (military) aircraft and their components operate under a range of ADF regulations and standards that are also aimed at ensuring a high level of flight safety. Under the ADF system the certification of maintenance is based on task authorisation and levels of maintenance quality inspection. In both cases, the level of regulation relates to the old adage in aviation maintenance that ‘in the air you can’t get out and fix something that has gone wrong and seemingly minor maintenance errors can have catastrophic consequences’.

The importance of safe and efficient aviation services to the national economy cannot be overstated.

Aviation is of considerable importance in the use of often complex and very expensive equipment for the rapid transportation of people and cargo, in the provision of aerial work services to agriculture and in fire fighting. Military aviation is of considerable importance to national defence, and in the provision of services to the community at times of natural disaster.

Aviation maintenance is thus a key national industry sector. It is diverse, highly technical and uses advanced technologies. It operates in a multi-billion dollar capital equipment environment and high quality and maximum safety requirements and standards are critical.

Structure of the Aerospace Industry Competency Standards

Within this Training Package the units of competency are divided into two types:

- Common units – these indicate competencies that apply across the majority of MEA11 Aeroskills Training Package qualifications at one or more levels of qualification. These units may or may not be core units, depending on the individual packaging rules.
- Technical stream units – these are either core or elective units that relate to individual technical streams and related qualifications. Units may be core in one qualification and elective in another because of regulatory and licensing requirements.

The unit numbering system is as follows:

- Common unit numbers begin with '1', e.g. MEA101B
- Avionics technical stream units begin with '2,' e.g. MEA201B
- Mechanical technical stream units begin with '3', e.g. MEA301B
- Structures technical stream units begin with '4', e.g. MEA401C
- Aircraft Life Support and Furnishing units begin with '5', e.g. MEA501A
- Armament units begin with '6', e.g. MEA601A.
-

MEA11 Qualification Pathways

The Aeroskills Training Package Qualifications

The MEA11 Aeroskills Training Package Version 1 includes national qualifications at Certificate II, Certificate III, Certificate IV, Diploma and Advanced Diploma levels. The Training Package provides national qualification outcomes based on recognition of competency achievement as specified under the Competency Standards section of this Training Package. These qualifications can be accessed through traineeship and apprenticeship pathways, or through other pathways that do not involve a contract of training, such as recognition of prior learning.

Packaging units of competency for a qualification

Qualifications may be achieved in a number of ways, but regardless of how they are attained, they must be based on the achievement of a package of competency standards.

Each qualification is made up of core and elective units drawn from common, technical stream and imported units:

- the mandatory core of common, technical stream and imported units for each qualification ensure the integrity of the qualification and effective alignment with CASA and ADF regulatory requirements
- the ability to select from a range of elective units that may be packaged into alternate training pathways provides flexibility and, where applicable, a means of alignment with regulatory requirements in areas such as licensing sub-sets in the CASA system and task authorisation in the ADF system.

The units of competency to be achieved for each qualification have been determined in consultation with industry and the Regulators (CASA and the ADF). Any RTO issuing a qualification will need to comply with this framework. However, RTOs are encouraged to offer flexible learning delivery formats to suit industry needs (what is taught, how, when, where delivered etc).

People with experience in related industries, such as Manufacturing, Engineering, Automotive and Electrotechnology, may be able to achieve competence in component workshop units from the Aerospace Industry Competency Standards with limited levels of 'gap' training and experience. This process is facilitated through a common 'conversion' unit of competency (MEA145A) relating to specific component workshop employment areas.

Certificate II Aeroskills qualifications

The MEA11 Aeroskills Training Package includes the following qualifications at Certificate II level:

- MEA20411 Certificate II in Aeroskills
- MEA20511 Certificate II in Aircraft Line Maintenance
- MEA20611 Certificate II in Aircraft Surface Finishing.

MEA20411 Certificate II in Aeroskills

The MEA20411 Certificate II in Aeroskills articulates with, and provides credit towards, the Aeroskills Training Package 'trade' qualifications at AQF Certificate IV level with common units given full recognition at the higher level. The elective units may provide partial credit towards related higher level units as people progress from AQF level II to the higher qualification. The relationship between the AQF level II and AQF level IV elective units is as follows:

MEA20411 units of competency	Related AQF IV units of competency
MEA238B Perform routine removal and installation of miscellaneous aircraft electrical hardware/components	MEA201B Remove and install miscellaneous aircraft electrical hardware/components
MEA239B Fabricate aircraft electrical looms and harnesses	MEA246C Fabricate and/or repair aircraft electrical hardware or parts
MEA240B Use electrical test equipment to perform basic electrical tests	MEA260B Use electrical test equipment
MEA329B Dismantle, inspect, maintain and assemble aircraft basic hydraulic and pneumatic components or parts	MEA380A Repair and/or overhaul aircraft hydraulic system components MEA381A Repair and/or overhaul aircraft pneumatic system components MEA382A Repair and/or overhaul aircraft fuel system components
MEA330B Dismantle, inspect, maintain and assemble aircraft non-primary structural removable components or parts and internal fittings	MEA328C Maintain and/or repair aircraft mechanical components or parts
MEA331B Dismantle, inspect, maintain and assemble aircraft gas turbine engine components or parts	MEA383A Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules MEA384A Repair and/or overhaul gas turbine engine combustion section components and/or modules MEA385A Repair and/or overhaul gas turbine

	engine turbine and exhaust section components MEA386A Repair and/or overhaul gas turbine engine ancillary section components
MEA332B Dismantle, inspect, maintain and assemble aircraft mechanical components or parts	MEA328C Maintain and/or repair aircraft mechanical components or parts
MEA333B Dismantle, inspect, maintain and assemble aircraft piston engine components or parts	MEA388A Repair and/or overhaul piston engines
MEA406B Repair/modify aircraft non-primary structural sheetmetal components	MEA423A Repair/modify aircraft metal structure
MEA407B Repair/modify aircraft non-primary structural non-metallic components	MEA405B Repair/modify aircraft composite material structure/components

The MEA20411 Certificate II in Aeroskills has a set of packaging rules that provide multiple pathways in three technical areas of Avionics, Mechanical and Structures. This design promotes the achievement of a multi-skilled qualification that can directly lead to the three established aircraft ‘trade’ areas and provide the maximum credit transfer.

The qualification has been designed to allow maximum flexibility to enable enterprises to choose the most appropriate pathway/s for their needs. The technical focus and application of the qualification achieved by each learner can be easily determined through reference to the Log of Industrial Experience and Achievement.

To achieve a MEA20411 Certificate II in Aeroskills, both common and elective units must be completed. The technical units are presented in ways such that the qualification will have a dominant technical area (a primary area of Avionic, Mechanical or Structures) and a complementary supporting component (the ‘minor’ component).

The ‘major’ and ‘minor’ components of the qualification must be drawn from different technical areas.

Common technical units (major component) + technical unit (minor component) = MEA20411 Certificate II in Aeroskills units

MEA20511 Certificate II in Aircraft Line Maintenance

This qualification was developed to meet CASA requirements for the grant of an Aircraft Maintenance Engineer A Licence (A1, A2, A3 or A4) in accordance with Civil Aviation Safety Regulation (CASR) Part 66, and with transitional arrangements under CAO 100.66, in accordance with which maintenance authorities equivalent to the A licences may be granted. The qualification requirements must be met also in accordance with the requirements of CAO 100.66 pending the issue of CASR Part 66, including full coverage of CASA syllabus requirements as listed in Appendix 1. Training delivery is also required to be in accordance with CASR Part 147.

Because of the need to comply with licensing requirements there is no flexibility in the selection of units, other than for the purpose of meeting the specified requirements for the grant of an A1, A2, A3 or A4 licence.

Advice to contact CASA for authoritative information on licensing requirements

This Aeroskills Training Package publication provides advisory information based on discussions with CASA, including their anticipated future requirements. All possible care has been taken in the preparation of this material however persons should not rely solely on this publication on matters involving CASA's current or proposed licensing requirements or arrangements.

Precise information on licensing, current and proposed compliance requirements can be obtained from CASA on telephone 131 757 or at www.casa.gov.au.

The MEA20511 Certificate II in Aircraft Line Maintenance articulates with, and provides credit towards, the Aeroskills Training Package 'trade' qualifications at AQF Certificate IV level, with common units given full recognition at the higher level. The elective units may be credited as follows:

MEA20511 elective units	Possible credit
MEA240B Use electrical test equipment to perform basic electrical tests	Partial towards MEA260B Use electrical test equipment
MEA264A Remove and install aircraft electrical/avionic components during line maintenance	Partial towards MEA202C Remove and install basic aircraft electrical system components and MEA203C Remove and install advanced aircraft electrical system components
MEA265A Remove and install general aircraft electrical hardware	Partial towards MEA201B Remove and install miscellaneous aircraft electrical hardware/components
MEA344A Remove and install aircraft components	Partial towards MEA302C Remove and install aircraft hydro mechanical and landing gear system components
MEA345A Perform scheduled line maintenance activities on gas turbine engine fixed wing aircraft	Full credit for MEA301C Perform aircraft flight servicing

MEA346A Perform scheduled line maintenance activities on gas turbine engine rotary wing aircraft	
MEA347A Perform scheduled line maintenance activities on piston engine fixed wing aircraft	
MEA348A Perform scheduled line maintenance activities on piston engine rotary wing aircraft	
MEA418A Perform basic repair of aircraft internal fittings during line maintenance	Partial towards MEA339C Inspect, repair and maintain aircraft structures

MEA20611 Certificate II in Aircraft Surface Finishing

This qualification was developed to meet industry and ADF requirements for qualifications and competencies to cover the surface finishing of aircraft and aircraft components. There is a limited degree of flexibility in the selection of units to cover a range of multi-skilling activities required by industry organisations.

The MEA20611 Certificate II in Aircraft Surface Finishing articulates with, and provides credit towards, the surface finishing qualifications at AQF Certificate III and IV levels. In addition, the core common units provide credit towards other MEA11 Aeroskills Training Package qualifications at AQF Certificate III, IV and Diploma levels, and the electives that provide multi-skilling would provide significant credit towards other MEA11 Aeroskills Training Package qualifications at AQF Certificate II level. The elective units may be credited as follows:

MEA20611 elective units	Possible credit
MEA330B Dismantle, inspect, maintain and assemble aircraft non-primary structural removable components or parts and internal fittings	Full credit towards MEA20411 Certificate II in Aeroskills
MEA406B Repair/modify aircraft non-primary structural sheetmetal components	Full credit towards MEA20411 Certificate II in Aeroskills
MEA407B Repair/modify aircraft non-primary structural non-metallic components	Full credit towards MEA20411 Certificate II in Aeroskills

Certificate III Aeroskills qualifications

There are three qualifications at Certificate III in the MEA11 Aeroskills Training Package Version 1. They are:

- MEA30111 Certificate III in Aircraft Surface Finishing
- MEA30211 Certificate III in Aeroskills (Mechatronics)
- MEA30311 Certificate III in Aircraft Life Support and Furnishing.

MEA30111 Certificate III in Aircraft Surface Finishing

A number of industry organisations and the ADF train and employ aircraft surface finishers. In some cases these individuals are trained from entry level and in other cases they are recruited and converted from automotive spray painting to aircraft surface finishing. The combination of competencies in surface finishing tasks and the level of multi-skilling required by the relevant organisations resulted in MEA30111 Certificate III in Aircraft Surface Finishing.

The MEA30111 Certificate III in Aircraft Surface Finishing articulates with, and provides credit towards, the surface finishing qualification at AQF Certificate IV level. In addition, the common units and unit MEA401C Inspect aircraft structures would provide significant credit towards other MEA11 Aeroskills Training Package qualifications at AQF Certificate IV level.

MEA30211 Certificate III in Aeroskills (Mechatronics)

The MEA30211 Certificate III in Aeroskills (Mechatronics) is introduced with MEA11 Aeroskills Training Package to cover maintenance of small aircraft within the General Aviation industry sector by non-licensed individuals. It may also be of use as a first Aeroskills qualification for individuals transitioning from an allied trade to employment on small aircraft maintenance. The core common, technical stream and imported units provide credit towards other Aeroskills qualifications at AQF Certificate IV and, in some cases, at Diploma level. There is a wide choice of elective technical stream units that are intended to meet the needs of the full range of General Aviation maintenance organisations and will also provide credits towards Aeroskills qualifications at AQF Certificate IV and, in some cases, Diploma levels. With an appropriate choice of electives this qualification fully articulates with MEA41011 Certificate IV in Aeroskills (Mechatronics).

MEA30311 Certificate III in Aircraft Life Support and Furnishing

The MEA30311 Certificate III in Aircraft Life Support and Furnishing is based on the PUA31706 Certificate III in Public Safety (Aviation Life Support Maintenance) which was to be deleted from that Training Package after MEA07 Version 2 was implemented. RTOs were expected to transfer within 12 months from release date of MEA07v2.

In developing the qualification for the MEA11 Aeroskills Training Package there was extensive consultation with the ADF (for whom PUA31706 was developed), and with the civil aviation maintenance industry which resulted in the coverage of aircraft furnishing maintenance being increased. The qualification now covers the maintenance of aircrew equipment (such as helmets, oxygen masks, Anti-G suits and immersion suits), parachutes, survival vests for aircrew and passengers, life rafts, aircraft internal fittings and soft furnishings. In the case of soft furnishings, both fabrication and maintenance is covered. Multi-skilling is also provided for in the inspection and repair of non-structural metallic and non-metallic components, and for limited maintenance of electrical and electronic systems and components in passenger seats and pods.

The MEA30311 Certificate III in Aircraft Life Support and Furnishing fully articulates towards the MEA41111 Certificate IV in Aircraft Life Support and Furnishing. It also includes a number of common units of competency that are common to other qualifications at AQF Certificate III and Certificate IV levels. The relationship between the units required for this qualification and those applicable to the PUA31706 Certificate III in Public Safety (Aviation Life Support Maintenance) is as follows:

MEA30311 units	PUA31706 units
MEA101B Interpret occupational health and safety practices in aviation maintenance	Same (alternative of BSBCMN211A Participate in workplace safety procedures provides partial coverage)
MEA103B Plan and organise aviation maintenance work activities	Same
MEA105C Apply quality standards applicable to aviation maintenance processes	MEA105B Apply quality standards applicable to aviation maintenance processes
MEA107B Interpret and use aviation maintenance industry manuals and specifications	Same
MEA108B Complete aviation maintenance industry documentation	Same
MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	Same
MEA118A Conduct self in the aviation maintenance environment	Covered in part by each of PUADFEQ001A Work with equity and diversity, PUACOM001B Communicate in the workplace, PUATEA001A Work in a team
MEA240B Use electrical test equipment to perform basic electrical tests	
MEA304C Remove and install non-pressurised aircraft structural and non-structural components	
MEA317C Remove and install pressurised aircraft structural and non-structural components	
MEA411A Remove surface coatings from aircraft or aircraft components	

MEA412A Pre-treat aluminium alloy surfaces	
MEA414A Remove light corrosion	
MEA416A Apply aircraft identification markings, graphics and decals	
MEA419A Inspect and repair/modify aircraft cabin/cockpit non-primary structure components	
MEA501A Maintain and fit anti-G suits	Equivalent to PUADEFLS001A
MEA502A Maintain and fit helmets	Equivalent to PUADEFLS002A
MEA503A Maintain and fit immersion suits	Equivalent to PUADEFLS003A
MEA504A Maintain and fit oxygen masks	Equivalent to PUADEFLS004A
MEA505A Maintain and pack parachutes	Equivalent to PUADEFLS005A
MEA506A Maintain and pack survival inflatable life rafts and escape slides	Equivalent to PUADEFLS006A
MEA507A Maintain, pack and fit survival inflatable buoyancy vests	Equivalent to PUADEFLS007A
MEA508A Maintain, install and remove restraint systems	Equivalent to PUADEFLS008A
MEA509A Manufacture, repair and alter aircraft related fabric components	Equivalent to PUADEFLS009A
MEA510A Maintain seat and pod electrical and electronic systems	
MEA511A Operate and maintain sewing machines and overlockers	Equivalent to LMTPRTF05CA
AURV231208A Carry out trimming of vehicle components	
AURV231268A Select and apply trim/fabric materials and determine attachment methods	Equivalent to AUR31268B Select and apply trim/fabric materials
AURV231368A Select and apply trim/fabric adhesives	Part covered by LMTPRTF09BA Use adhesives - 2

LMFSF2001B Cut single layer fabrics	Same
LMFSF2002B Machine sew materials	Same
LMFUP3012B Apply marine sewing and installation techniques	Same
LMTTF2008A Use adhesives	Equivalent to LMTPRTF09BA Use adhesives - 2
MEM12001B Use comparison and basic measuring devices	Same as MEM12.1B Use comparison and basic measuring devices
PUADEFEO101D Work safely with explosive ordnance	Same
PUADEFEO501D Conduct explosive ordnance inspection	Same

Certificate IV Aeroskills qualifications

The MEA11 Aeroskills Training Package includes seven Certificate IV qualifications:

- MEA40611 Certificate IV in Aeroskills (Avionics)
- MEA40711 Certificate IV in Aeroskills (Mechanical)
- MEA40911 Certificate IV in Aircraft Surface Finishing
- MEA41011 Certificate IV in Aeroskills (Mechatronics)
- MEA41111 Certificate IV in Aircraft Life Support and Furnishing
- MEA41211 Certificate IV in Aeroskills (Armament)
- MEA41311 Certificate IV in Aeroskills (Structures).

Certificate IV qualifications outcomes

The Certificate IV qualifications in Aeroskills contained in the MEA11 Aeroskills Training Package Version 1 specify competencies required for trade-level outcomes in maintenance, repair and overhaul for the aerospace engineering industry. They have been structured to produce a competent base-level aerospace engineering technician; the level expected on completion of an aerospace apprenticeship in Avionics, Mechanical, Mechatronics, Structures or Armament streams, or following training beyond trade-level in Aircraft Surface Finishing or in Aircraft Life Support and Furnishing. Traineeship pathways are also included, enabling the greatest possible access to careers in the aerospace industry.

Credit transfer and articulation

Details of credit transfer and articulation from AQF Certificate II and III levels to Certificate IV have already been provided. Where credit cannot be allocated on a whole unit basis, the relationship with Certificate IV level units will be clearly mapped and identified in separate documentation at a later date. In addition, from MEA11 Aeroskills Training Package Version 1 there is guidance information for assessment in units of competency where experience associated with another unit may be used also as evidence for the unit being assessed. This will assist learners, enterprises and RTOs in realising the greatest possible efficiencies in terms of learning and skills acquisition.

A separate mapping exercise to document the level of credit transfer available from, and to, competencies under other related industry Training Packages, such as MEM05 Metal and Engineering, UEE07 Electrotechnology and AUR05 Automotive Industry Retail, Service and Repair, towards the Aeroskills Certificate IV qualifications has resulted in the development of a common 'conversion' unit.

The Certificate IV qualifications articulate with, and provide credit towards, the qualifications at AQF Diploma and Advanced Diploma levels. This provides avenues towards meeting the full CASA requirements for the grant of B1 and B2 licences, and to prepare individuals to work in maintenance management and maintenance-related integrated logistic support (ILS) activities within both the ADF and CASA regulatory environments.

The MEA41211 Certificate IV in Aeroskills (Armament) is somewhat different since, at present, training is available only to trainees who have enlisted in the RAAF and ongoing career development involves, in part, the attainment of additional qualifications from the PUA00 Public Safety Training Package that cover weapons and explosive ordnance.

Certificate IV structure and packaging rules

Each Certificate IV qualification is comprised of core and elective units. Electives may be grouped according to industry and regulatory need.

The core consists of common units, mandatory technical stream units required for regulatory compliance and mandatory imported units.

Elective units consist of common, technical stream and imported units that may be grouped to meet defined industry or specific regulatory requirements as described in each qualification. Elective units provide the greatest possible degree of flexibility to the extent permitted by regulatory compliance.

Meeting CASA regulatory requirements

Revised CASA maintenance regulations applicable to the maintenance of large aircraft, such as those operated by the airlines, came into force in the middle of 2011. The applicable regulations are CASR Parts 42, 66, 145 and 147. Maintenance of small aircraft over the period 2011 to 2015 will continue to be covered by the existing CAR 30 and 31, with an extended Part 42 and the other regulations being applied to General Aviation after that time. Units of competency and qualification pathways required to support compliance with these regulations have been introduced into the MEA11 Aeroskills Training Package, primarily at Diploma and Advanced Diploma levels with regard to large aircraft maintenance.

As stated, new regulations will not be applied to General Aviation until after 2015 and a revised system of licensing is still to be finalised. However, beyond 2015 the pathway to licence will be via the attainment of MEA11 Aeroskills Training Package units of competency and a qualification at Certificate IV level which is expected to be attained primarily through an apprenticeship. To have individuals able to be licensed through this approach from 2015/2016 onwards requires the introduction of a qualification in MEA11 Aeroskills Training Package Version 1. Accordingly, MEA41011 Certificate IV in Aeroskills (Mechatronics) is introduced to operate in tandem with the CASA Basic Examinations and Schedule of Experience (required by CAR 31) through to 2015. If necessary, qualification pathways will be revised once the final form of small aircraft maintenance certification licensing has been determined.

Diploma level Aeroskills qualifications

The MEA11 Aeroskills Training Package includes five Diploma level qualifications:

- MEA50111 Diploma of Aeroskills (Avionics)
- MEA50211 Diploma of Aeroskills (Mechanical)
- MEA50311 Diploma of Aviation Maintenance Management (Avionics)
- MEA50411 Diploma of Aviation Maintenance Management (Mechanical)
- MEA50511 Diploma of Aeroskills (Non-Destructive Testing).

The Diplomas of Aeroskills in the avionic and mechanical fields provide competency pathways which cover a combination of Certificate IV and 'beyond trade' Diploma-level competencies that together fully meet proposed CASA licensing requirements for the B1 (MEA50211 refers) and B2 (MEA50111 refers) licences that may be granted under CASR Part 66. Individuals who obtain one of these Diplomas under the training provisions of CASR Part 147 and having met the CASR Part 66 licensing syllabus requirements, as shown in Appendix 1, will have met the specified criteria for the grant of the applicable licence.

The two Diplomas of Aviation Maintenance Management provide para-professional qualifications that meet aviation maintenance industry needs for junior maintenance managers and for employment in maintenance-related ILS activities within either the ADF or CASA regulatory systems.

The MEA50511 Diploma of Aeroskills (Non-Destructive Testing) is a qualification that provides for full qualification at AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2.

Credit transfer and articulation

The Certificate IV qualifications in Aeroskills in Avionics and Mechanical (MEA40611 and MEA40711) articulate with or provide substantial credit towards the four Diploma level qualifications MEA50111 Diploma of Aeroskills (Avionics), MEA50211 Diploma of Aeroskills (Mechanical), MEA50311 Diploma of Aviation Maintenance Management (Avionics) and MEA50411 Diploma of Aviation Maintenance Management (Mechanical). The MEA41011 Certificate IV in Aeroskills (Mechatronics) also provides significant credit towards these Diplomas.

The MEA41311 Certificate IV in Aeroskills (Structures), MEA40911 Certificate IV in Aircraft Surface Finishing and MEA41111 Certificate IV in Aircraft Life Support and Furnishing qualifications do not articulate with the Diplomas, but individuals with one of those qualifications would be entitled to credit for a number of common units of competency. All of the Certificate IV qualifications provide a limited number of credits towards the MEA50511 Diploma of Aeroskills (Non-Destructive Testing).

Qualification structure – flexibility

In the case of the Diplomas of Aeroskills in the Avionic and Mechanical fields, flexibility is limited by the requirement to precisely meet the specified licensing criteria of CASR Part 66. However, in the case of the Diplomas of Aviation Maintenance Management there is considerable flexibility so that organisations and individuals can tailor the qualification to employment areas, such as:

- maintenance team leaders in either the ADF or CASA regulatory environment
- employment within CASR Part 42 continuing airworthiness management organisations
- specialist employment in maintenance-related ILS areas in the ADF regulatory environment.

Training and qualifications pathways including Apprenticeships

The Diploma qualifications can be accessed through apprenticeship pathways, through a traineeship or through later post-graduate study. In the case of the Diplomas of Aviation Maintenance Management the qualifications could also be accessed through direct entry onto a course run by an RTO. These qualifications may also be achieved through a process of recognition of prior learning.

Details of indicative training pathways (or competency profiles) will be made available for use by enterprises, RTOs, NACs etc. as part of the non-endorsed Training Package information. These pathways cover different job types including options providing licensing preparation. However, it is stressed that they are intended for illustrative purposes and should not be viewed as limiting. A diagram showing the various pathways to all qualifications in the MEA11 Aeroskills Training Package may be found at the end of this section.

Structure and packaging rules

The Diplomas of Aeroskills in the avionic and mechanical fields provide competency pathways which include specified embedded ‘trade’ competency units meeting requirements for Certificate IV plus ‘beyond trade’ licensing requirements which combine to fully meet CASA requirements for issue of particular maintenance engineer licences as specified under CASR Part 66.

Each Diploma qualification (avionics or mechanical) is comprised of core units of competency (common to all licence streams) and specified elective stream units specific to a given licence. Both core and elective streams include both Certificate IV and additional ‘beyond trade’ obligatory units supporting achievement of the particular maintenance engineer licence sought.

The structure of each qualification can be represented in a generic form as follows:

Specified Certificate IV	+	Specified licensing	=	Diploma of Aeroskills
-------------------------------------	---	--------------------------------	---	----------------------------------

requirements**requirements**

The two Diplomas of Aviation Maintenance Management consist of a number of common para-professional units that apply to both qualifications, plus some that are chosen according to the intended area of employment. In addition, there are a number of imported elective para-professional engineering units. Also provided are a number of preliminary units that must be attained where the individual is not articulating from MEA40611 Certificate IV in Aeroskills (Avionics) or MEA40711 Certificate IV in Aeroskills (Mechanical).

The structure of each qualification can be represented in a generic form as follows:

$$\begin{array}{ccccccc}
 \text{Preliminary} & & \text{Applicable} & & \text{Elective} & & \text{Diploma of} \\
 \text{units} & & \text{common units} & & \text{engineering} & & \text{Aviation} \\
 \text{(if required)} & + & & + & \text{units} & = & \text{Maintenance} \\
 & & & & & & \text{Management}
 \end{array}$$

The MEA50511 Diploma of Aeroskills (Non-Destructive Testing) is structured to provide qualification to *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2* in the following NDT methods:

- penetrant
- magnetic particle
- eddy current
- ultrasonic
- radiographic.

Units are also included to provide competency in compliance with regulatory requirements regarding the certification and reporting of test results.

Advanced Diploma level Aeroskills qualifications

The MEA11 Aeroskills Training Package includes three Advanced Diploma level qualifications:

- MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics)
- MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical)
- MEA60311 Advanced Diploma of Aviation Non-Destructive Testing.

The qualifications in maintenance management provide competencies required to work at the higher para-professional and maintenance manager levels in civil aviation maintenance organisations operating under both the CASA and the ADF airworthiness regulatory systems, and within the ADF. Through selection of elective units within the framework of the packaging rules for each qualification individuals and organisations can adapt the qualifications for employment as managers within aviation maintenance organisations, or as managers within engineering support organisations dealing with aspects of ILS and within continuing airworthiness management organisations.

The qualification in NDT enables individuals to meet the requirements for *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 3*.

Credit transfer and articulation

There are articulation pathways to the MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics) from the following three qualifications:

- MEA50111 Diploma of Aeroskills (Avionics)
- MEA50311 Diploma of Aviation Maintenance Management (Avionics)
- MEA40611 Certificate IV in Aeroskills (Avionics).

Similarly, there are articulation pathways to MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical) from:

- MEA50211 Diploma of Aeroskills (Mechanical)
- MEA50411 Diploma of Aviation Maintenance Management (Mechanical)
- MEA40711 Certificate IV in Aeroskills (Mechanical).

In the case of MEA60311 Advanced Diploma of Aviation Non-Destructive Testing there is an articulation pathway from the MEA50511 Diploma of Aeroskills (Non-Destructive Testing).

Qualification structure – flexibility

Through appropriate selection of elective units the two Advanced Diplomas of Aviation Maintenance Management can be adapted to prepare individuals for employment in maintenance organisation positions, such as Accountable Manager, Senior Maintenance Manager, Maintenance Manager and designated management positions in continuing airworthiness management organisations, or as managers of a range of activities in engineering support organisations, such as spares assessing management, repairable item management and aviation maintenance publication management.

In the case of the MEA60311 Advanced Diploma of Aviation Non-Destructive Testing flexibility is limited by the need to align with the required qualifications and employment areas specified in *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* for Level 3 personnel.

Training and qualification pathways

The Advanced Diploma qualifications in Maintenance Management can be accessed through training provided by an RTO that articulates from either Diploma of Aviation Maintenance Management, either Diploma of Aeroskills or from an applicable Certificate IV in Aeroskills. A direct entry pathway is not available because of regulatory requirements associated with the areas of employment relevant to the qualifications. The qualifications may also be attained either wholly or in part through a process of recognition of prior learning.

The MEA60311 Advanced Diploma of Aviation Non-Destructive Testing must be accessed through a training pathway that complies with *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* for authorisation at Level 3.

Structure and packaging rules

The two Advanced Diplomas of Aviation Maintenance Management consist of a number of common para-professional units that apply to both qualifications, plus some that are chosen according to the intended area of employment. In addition, there are a number of imported elective para-professional engineering units that are in either aeronautical or avionic specialist streams.

The MEA60311 Advanced Diploma of Aviation Non-Destructive Testing consists of common units relating to aircraft maintenance, units required to attain competence in all NDT methods covered by *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* plus units required to provide competency in training development, delivery and assessment. There is also a limited range of electives that relate to the regulatory environment in which the individual is employed.

MEA11 Qualifications

List of all qualifications in MEA11

Qualification code	Title
MEA20411	Certificate II in Aeroskills
MEA20511	Certificate II in Aircraft Line Maintenance
MEA20611	Certificate II in Aircraft Surface Finishing
MEA30111	Certificate III in Aircraft Surface Finishing
MEA30211	Certificate III in Aeroskills (Mechatronics)
MEA30311	Certificate III in Aircraft Life Support and Furnishing
MEA40611	Certificate IV in Aeroskills (Avionics)
MEA40711	Certificate IV in Aeroskills (Mechanical)
MEA40911	Certificate IV in Aircraft Surface Finishing
MEA41011	Certificate IV in Aeroskills (Mechatronics)
MEA41111	Certificate IV in Aircraft Life Support and Furnishing
MEA41211	Certificate IV in Aeroskills (Armament)
MEA41311	Certificate IV in Aeroskills (Structures)
MEA50111	Diploma of Aeroskills (Avionics)
MEA50211	Diploma of Aeroskills (Mechanical)

Qualification code	Title
MEA50311	Diploma of Aviation Maintenance Management (Avionics)
MEA50411	Diploma of Aviation Maintenance Management (Mechanical)
MEA50511	Diploma of Aeroskills (Non-Destructive Testing)
MEA60111	Advanced Diploma of Aviation Maintenance Management (Avionics)
MEA60211	Advanced Diploma of Aviation Maintenance Management (Mechanical)
MEA60311	Advanced Diploma of Aviation Non-Destructive Testing

MEA11 Skill Sets Information

MEA11 Skill Sets

The MEA11v1 Skill Sets are in eight groups that relate to their purpose, as follows:

- Group 1 contains Skill Sets applicable to individuals with relevant allied trade Certificate III or Certificate IV qualifications that provide competencies required for employment in aviation component maintenance workshops operating under either the CASA or the ADF regulatory systems.
- Group 2 contains Skill Sets that specify CASA requirements for the removal of exclusions from B1 and B2 aircraft maintenance engineer licences.
- Group 3 contains Skill Sets that specify CASA requirements for the grant of maintenance authorisations to individuals working in CASR Part 145 maintenance organisations.
- Group 4 contains Skill Sets for Aircraft welding authorisations.
- Group 5 contains Skill Sets for NDT authorisations.
- Group 6 contains Skill Sets for aircraft component electroplating authorisations.
- Group 7 contains Skill Sets for aircraft machining authorisations.
- Group 8 contains Skill Sets for Aircraft tyre retreading authorisations.

Group 1 – Skill Sets for Employment in Aviation Maintenance Workshops

The Skill Sets in this group have been developed as a means of qualifying individuals from allied trades to work in specific areas of aircraft component repair and overhaul. They could also be used to qualify individuals with Aeroskills AME qualifications to work on component repair and overhaul. Allied trades are as follows:

- Allied trades related to avionic and electrical component work are electro-technology, telecommunications and automotive. A metals and engineering background may also qualify where competencies held and work experience is in the electrical and/or electronic fields.

- Allied trades related to mechanical component work are automotive and metals and engineering where competencies held and work experience is in mechanical maintenance fields.

Many of the units of competency listed in the Skill Sets have the following common core Aeroskills units as prerequisites:

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance.

Much of the general content in these units is also covered by units that will be held by individuals in allied trades. To facilitate the movement of such individuals to aviation component workshop employment the parts of these units that are peculiar to Aeroskills have been identified and have been included in MEA145A Conversion from allied trades for employment in aviation maintenance workshops which is listed in each Skill Set. Through attainment of MEA145A individuals may be deemed to be competent in each of the listed common core units.

Avionics

- Electrical component repair/overhaul
- Mechanical and electro-mechanical instrument component repair/overhaul
- Aircraft display, control and distribution system component repair/overhaul
- Oxygen system component repair/overhaul
- Aircraft radio frequency communication and navigation system component repair/overhaul
- Aircraft pulse system component repair/overhaul
- Aircraft audio and visual system and reproducer repair/overhaul

Mechanical

- Hydraulic system component repair/overhaul
- Electro-hydraulic component repair/overhaul
- Pneumatic system component repair/overhaul
- Electro-pneumatic component repair/overhaul
- Fuel system component repair/overhaul
- Gas turbine engine air inlet and compressor module/component repair/overhaul
- Gas turbine engine combustion section module/component repair/overhaul
- Gas turbine engine turbine and exhaust module/component repair/overhaul
- Gas turbine engine ancillary section module/component repair/overhaul
- Piston engine repair/overhaul
- Propeller repair/overhaul
- Rotary wing dynamic component repair/overhaul
- Mechanical system component repair/overhaul
- Composite structure maintenance

Group 2 - Skill Sets for Removal of B1 and B2 Licence Exclusions

In the process of transitioning from the CAR 31 aircraft maintenance engineer licensing system to the new CASR Part 66 system many existing CAR 31 licence holders will be granted a B1 or B2 licence with a range of exclusions.

To provide a mechanism for the removal of these exclusions, the Skill Sets in this group have been developed in consultation with CASA. For the purpose of exclusion removal, they must be delivered by RTOs that also hold Maintenance Training Organisation status under CASR Part 147.

CASA has also issued Airworthiness Advisory Circular AAC 9-66 in which it has been specified that CASA regards the grant of a B1 or B2 licence as signifying that all competencies relating to the specific licence privileges granted are held by the individual.

Under these provisions, all holders of a B1 licence may be deemed to hold the following units of competency:

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
- MEA301B Perform aircraft flight servicing.

All holders of a B2 licence may be deemed to hold the following units of competency:

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
- MEA201B Remove and install miscellaneous aircraft electrical hardware/components
- MEA246C Fabricate and/or repair aircraft electrical hardware or parts
- MEA260B Use electrical test equipment.

For this reason, the above units are not listed against the Skill Sets where they are specified as prerequisites for listed units.

Where any RPL action is required with regard to any of the units of competency listed in the Skill Sets in this group, RTOs are encouraged to undertake an efficient RPL assessment (in line with CASA guidance in AAC9-66) to determine required gap training (if any) in order to provide an integrated learning program for the units in the applicable Skill Set.

- Electrical – B1.1 Licence Exclusions E1 and E4 Removal
- Electrical – B1.1 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft with gas turbine engine)
- Electrical – B1.2, B1.3 or B1.4 Licence Exclusions E1 and E4 Removal

- Electrical – B1.2 or B1.4 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Electrical – B2 Licence Exclusions E1 and E4 Removal
- Electrical – B2 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Airframe – B1.1 Licence Exclusion E2 Removal
- Airframe – B1.1 Licence Exclusion E2 Removal (when competencies are being gained on basic light aircraft with gas turbine engine)
- Airframe – B1.2 Licence Exclusion E2 Removal
- Airframe – B1.2 Licence Exclusion E2 Removal (when competencies are being gained on basic light aircraft)
- Airframe – B1.3 and B1.4 Licence Exclusion E2 Removal
- Airframe – B1.4 Licence Exclusion E2 Removal (when competencies are being gained on basic helicopters)
- Power Plant – B1.1 Licence Exclusion E3 Removal
- Power Plant – B1.2 Licence Exclusion E3 Removal
- Power Plant – B1.2 Licence Exclusion E3 Removal (when competencies are being gained on basic light aircraft)
- Power Plant – B1.3 Licence Exclusion E3 Removal
- Power Plant – B1.4 Licence Exclusion E3 Removal
- Power Plant – B1.4 Licence Exclusion E3 Removal (when competencies are being gained on basic helicopters)
- Instrument – B1 Licence Exclusions E5 and E7 Removal
- Instrument – B1.2 and B1.4 Licence Exclusions E5 and E7 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Instrument – B2 Licence Exclusions E5 and E7 Removal
- Instrument and Radio – B1 Licence Exclusion E6 Removal
- Instrument and Radio – B1.2 and B1.4 Licence Exclusion E6 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Instrument and Radio – B2 Licence Exclusion E6 Removal
- Instrument and Radio – B2 Licence Exclusion E6 Removal (non-type rated aircraft and helicopters only)
- Radio – B1 Licence Exclusion E8 Removal
- Radio – B1.2 and B1.4 Licence Exclusion E8 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Radio – B2 Licence Exclusion E8 Removal
- Radio – B2 Licence Exclusion E8 Removal (when competencies are being gained on non-type rated aircraft and helicopters)
- Airframe – B1 Licence Exclusion E9 and E43 Removal
- Airframe – B1 Licence Exclusion E10 Removal
- Radio – B2 Licence Exclusion E11 Removal
- Airframe/Engine – B1.1 and B1.2 Licence Exclusion E12 Removal
- Airframe – B1 Licence Exclusion E13 Removal
- Airframe – B1 Licence Exclusion E14 Removal
- Airframe – B1.1 and B1.3 Licence Exclusion E15 Removal
- Airframe – B1.1 Licence Exclusion E15 Removal
- Airframe – B1.1 Licence Exclusion E16 Removal
- Airframe – B1.2 Licence Exclusion E16 Removal

- Radio – B2 Licence Exclusion E18 Removal
- Radio – B2 Licence Exclusion E19 Removal
- Radio – B2 Licence Exclusion E20 Removal
- Radio – B2 Licence Exclusion E21 Removal
- Radio – B2 Licence Exclusion E22 Removal
- Radio – B2 Licence Exclusion E23 Removal
- Radio – B2 Licence Exclusion E24 Removal
- Radio – B2 Licence Exclusion E25 Removal
- Radio – B2 Licence Exclusion E26 Removal
- Instrument – B2 Licence Exclusion E27 Removal
- Instrument – B2 Licence Exclusion E28 Removal
- Instrument – B2 Licence Exclusion E29 Removal
- Instrument – B2 Licence Exclusion E30 Removal
- Instrument – B2 Licence Exclusion E31 Removal
- Electrical – B2 Licence Exclusion E32 Removal
- Engine – B1.2 or B1.4 Licence Exclusions E33 and E38 Removal
- Electrical/Instrument/Radio – B2 Licence Exclusion E34 Removal
- Airframe – B1.1 or B1.2 Licence Exclusion E35 Removal
- Engine – B1.2 or B1.4 Licence Exclusions E36 and E37 Removal
- Engine – B1.2 or B1.4 Licence Exclusions E36 and E37 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Airframe – B1.1 or B1.3 Licence Exclusions E39 Removal
- Airframe – B1.2 or B1.4 Licence Exclusion E39 Removal (when competencies are being gained on basic light aircraft or helicopters)
- Airframe – B1 Licences Exclusions E40 Removal
- Airframe - B1 Licences Exclusions E41 Removal
- Airframe – B1 Licences Exclusions E42 Removal
- Electrical – B1 Licences Exclusion E44 Removal

Group 3 – Skill Sets for Individual Maintenance Authorisations

- Aircraft egress system maintenance
- In-flight entertainment system maintenance
- Borescope inspection approval
- Aircraft composite structure repair/modification using hot and cold bonding
- Aircraft composite structure repair/modification using cold bonding only

Group 4 - Skill Sets for Aircraft Welding Authorisations

There is a Skill Set for each of the relevant aircraft welding processes in each parent metal group. An individual can meet Regulatory requirements for approvals by meeting the requirements and being given a Statement of Attainment for the specific Skill Set that covers the welding method and the relevant parent metal group.

The Skill Sets provide for the required welding skills to be delivered through the applicable MEM code welding units (except for plasma arc welding where it has been necessary to base the skill development on the MEM Gas Tungsten Arc Welding code welding unit). The listed MEA welding units cover the test pieces that must be completed and tested for aircraft welding approval. Also included in the Skill Sets are common MEA units that relate to aircraft OHS, publications, documentation, work practices and quality processes.

- Aircraft welding using the gas welding process – aluminium alloys
- Aircraft welding using the gas welding process – magnesium alloys
- Aircraft welding using the gas welding process – carbon and low alloy steels
- Aircraft welding using the gas welding process – corrosion and heat resisting steels
- Aircraft welding using the gas welding process – nickel alloys
- Aircraft welding using the gas welding process – copper based alloys
- Aircraft welding using the gas welding process – titanium alloys
- Aircraft welding using the braze welding process - aluminium alloys
- Aircraft welding using the braze welding process - magnesium alloys
- Aircraft welding using the braze welding process - carbon and low alloy steels
- Aircraft welding using the braze welding process - corrosion and heat resisting steels
- Aircraft welding using the braze welding process - nickel alloys
- Aircraft welding using the braze welding process - copper based alloys
- Aircraft welding using the braze welding process - titanium alloys
- Aircraft welding using the gas metal arc welding process - aluminium alloys
- Aircraft welding using the gas metal arc welding process - magnesium alloys
- Aircraft welding using the gas metal arc welding process - carbon and low alloy steels
- Aircraft welding using the gas metal arc welding process - corrosion and heat resisting steels
- Aircraft welding using the gas metal arc welding process - nickel alloys
- Aircraft welding using the gas metal arc welding process - copper based alloys
- Aircraft welding using the gas metal arc welding process - titanium alloys
- Aircraft welding using the gas tungsten arc welding process - aluminium alloys
- Aircraft welding using the gas tungsten arc welding process - magnesium alloys
- Aircraft welding using the gas tungsten arc welding process - carbon and low alloy steels
- Aircraft welding using the gas tungsten arc welding process - corrosion and heat resisting steels
- Aircraft welding using the gas tungsten arc welding process - nickel alloys
- Aircraft welding using the plasma arc welding process - aluminium alloys
- Aircraft welding using the plasma arc welding process - magnesium alloys
- Aircraft welding using the plasma arc welding process - carbon and low alloy steels
- Aircraft welding using the plasma arc welding process - corrosion and heat resisting steels
- Aircraft welding using the plasma arc welding process - nickel alloys
- Aircraft welding using the plasma arc welding process - copper based alloys
- Aircraft welding using the plasma arc welding process - titanium alloys
- Aircraft welding using the manual metal arc welding process - aluminium alloys
- Aircraft welding using the manual metal arc welding process - magnesium alloys
- Aircraft welding using the manual metal arc welding process - carbon and low alloy steels
- Aircraft welding using the manual metal arc welding process - corrosion and heat resisting steels
- Aircraft welding using the manual metal arc welding process - nickel alloys

- Aircraft welding using the manual metal arc welding process - copper based alloys
- Aircraft welding using the manual metal arc welding process - titanium alloys

Group 5 - Skill Sets for NDT Authorisations

There is a Skill Set for each of the relevant NDT methods at AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2 and at a basic level. An individual can meet Regulatory requirements for approvals by meeting the requirements and being given a statement of attainment for the specific Skill Set that covers the relevant NDT method.

- Liquid penetrant inspection approval for aerospace
- Magnetic particle inspection approval for aerospace
- Eddy current inspection approval for aerospace
- Ultrasonic inspection approval for aerospace
- Radiographic inspection approval for aerospace
- Basic visual liquid dye penetrant inspection approval for aerospace
- Basic magnetic particle inspection approval for aerospace
- Basic eddy current inspection approval for aerospace
- Ultrasonic thickness testing inspection approval for aerospace
- Basic radiographic inspection approval for aerospace

Group 6 - Skill Sets for Aircraft Component Electroplating Authorisations

An individual can meet Regulatory requirements for approvals by meeting the requirements and being given a statement of attainment for the specific Skill Set that covers the applicable electroplating, anodising or metal spraying operation.

- Electroplate aeronautical product component parts
- Produce anodised film on aluminium alloy components
- Metal spray aeronautical product component parts

Group 7 - Skill Sets for Aircraft Machining Authorisations

An individual can meet Regulatory requirements for approvals by meeting the requirements and being given a statement of attainment for the specific Skill Set that covers the applicable machining operation.

- Machine aeronautical product component parts (general)
- Grind aeronautical product component parts
- Precision jig boring of aeronautical product component parts
- Complex milling of aeronautical product component parts
- Machine aeronautical product component parts using horizontal and/or vertical boring machines
- Machine aeronautical product component parts using NC/CNC machines
- Machine aeronautical product component parts using NC/CNC machining centres
- Machine plastic aeronautical product component parts
- Aeronautical product component parts – metal spinning lathe operations

Group 8 - Skill Sets for Aircraft Tyre Retreading Authorisations

An individual can meet Regulatory requirements for approvals by meeting the requirements and being given a statement of attainment for the specific Skill Set that covers the applicable aircraft tyre retreading operation.

- Aircraft tyre retreading (basic)
- Aircraft tyre retreading (advanced)
-

MEA11 Employability Skills

Industry Requirements for Employability Skills

Aviation maintenance involves dealing with a wide range of technology in a highly regulated environment and consistently working to high standards in order to ensure flight safety. There is therefore a particular emphasis on all areas of employability skills. For example, communication skills are vital to being able to operate in a highly regulated environment with extensive work involving recording and reporting, environments and problem solving across a range of technologies is vital. Also, with ongoing mandatory training associated with many types of aircraft a high level of personal commitment to learning is essential.

Examples from this Training Package of Employability Skills embedded within unit components

Unit component	Example of embedded Employability Skill
Unit Title	Test and troubleshoot aircraft electrical systems and components (<i>problem solving and technology</i>)
Unit Descriptor	It covers the competencies required to correctly interpret and apply CASA airworthiness and certification requirements during aircraft maintenance (<i>communication</i>)
Element	Identify task requirements (<i>planning and organising</i>)
Performance Criteria	Work individually or as a team member to complete maintenance tasks in a timely manner and in accordance with enterprise procedures and requirements (<i>communication, teamwork, initiative and enterprise and self-management</i>)
Range Statement	Troubleshooting involves the use of fault finding charts or similar, to line replacement level (<i>communication and problem solving</i>)
Required Skills and Knowledge	Applying logic processes, taking and interpreting electrical measurements, using test equipment and appropriate wiring diagrams and manuals to isolate electrical system

Unit component	Example of embedded Employability Skill
	malfunctions of the above components and systems (<i>problem solving, communication and technology</i>)
Evidence Guide	A person who demonstrates competency in this unit must be able to demonstrate initiative, effectively manage their own workload and contribute to the ongoing development of their skills, knowledge and competencies in the applicable field of aviation maintenance (<i>initiative and enterprise, self-management and learning</i>)

MEA11 Units of competency

List of all units within MEA11

Unit code	Unit title
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA111C	Perform administrative processes to prepare for certification of civil aircraft maintenance
MEA112B	Plan and implement civil aircraft maintenance activities
MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace
MEA114A	Certify aeronautical product maintenance
MEA115A	Plan and implement aeronautical product maintenance activities
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance
MEA117A	Apply self in the aviation maintenance environment
MEA118A	Conduct self in the aviation maintenance environment
MEA119A	Perform administrative processes to prepare for certification of civil aircraft A level line maintenance
MEA120B	Manage an aviation maintenance quality system
MEA121B	Manage aircraft/aeronautical product configuration
MEA122B	Manage aircraft/equipment system performance testing
MEA123B	Manage aviation maintenance work environment policy and practices

Unit code	Unit title
MEA124B	Coordinate change programs in the aviation maintenance environment
MEA125B	Develop aviation maintenance personnel
MEA126B	Manage aircraft maintenance activities
MEA127B	Provide technical advice in the maintenance and management of aircraft and aeronautical product
MEA128B	Provide engineering advice in the modification, maintenance and management of aircraft systems
MEA129A	Investigate technical aspects of aviation occurrences
MEA130A	Manage deployed/detached aviation maintenance activities
MEA131B	Manage the custody, transfer and disposal of aircraft, aeronautical product and support equipment
MEA132A	Manage budgetary resources in the aviation maintenance environment
MEA133B	Communicate aviation technical and maintenance management knowledge
MEA134B	Establish, maintain and evaluate the organisation's occupational health and safety system
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities
MEA136A	Assess aviation maintenance spares and manage repairable items
MEA137A	Write aviation technical publications
MEA138B	Perform aviation technical publication management activities
MEA139A	Perform aviation maintenance – related integrated logistic support management activities
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections
MEA141B	Manage risk in aviation maintenance
MEA142B	Manage self in the aviation maintenance environment
MEA143B	Develop and manage maintenance error management programs

Unit code	Unit title
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEA146A	Prepare and manage aviation maintenance organisation budgets and financial plans
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA202C	Remove and install basic aircraft electrical system components
MEA203C	Remove and install advanced aircraft electrical system components
MEA204C	Remove and install basic aircraft instrument system components
MEA205C	Remove and install advanced aircraft instrument system components
MEA206C	Remove and install aircraft basic radio communication and navigation system components
MEA207C	Remove and install aircraft electronic system components
MEA208C	Remove and install aircraft pressurisation control system components
MEA209C	Remove and install aircraft oxygen system components
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components
MEA211C	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA212C	Inspect, test and troubleshoot basic aircraft instrument systems and components
MEA213C	Inspect, test and troubleshoot advanced aircraft instrument systems
MEA214C	Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components
MEA215C	Inspect, test and troubleshoot advanced aircraft communications systems and components
MEA216C	Inspect, test and troubleshoot instrument landing systems and components
MEA217C	Inspect, test and troubleshoot fixed wing autopilot systems and components
MEA218C	Inspect, test and troubleshoot rotary wing autopilot systems and components
MEA219C	Inspect, test and troubleshoot aircraft pressurisation control systems and

Unit code	Unit title
	components
MEA220C	Inspect, test and troubleshoot aircraft primary radar systems and components
MEA221C	Inspect, test and troubleshoot aircraft secondary radar systems and components
MEA222C	Inspect, test and troubleshoot aircraft oxygen systems and components
MEA223D	Inspect aircraft electrical systems and components
MEA224C	Inspect aircraft instrument systems and components
MEA225C	Inspect fixed wing aircraft automatic flight control systems and components
MEA226D	Inspect aircraft electronic systems and components
MEA227D	Test and troubleshoot aircraft electrical systems and components
MEA228D	Test and troubleshoot aircraft instrument systems and components
MEA229D	Test and troubleshoot aircraft radio frequency navigation and communications systems and components
MEA230C	Test and troubleshoot fixed wing aircraft automatic flight control systems and components
MEA231C	Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components
MEA232C	Test and troubleshoot aircraft pulse systems and components
MEA233C	Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components
MEA234C	Inspect, test and troubleshoot aircraft global navigation systems and components
MEA235B	Perform advanced troubleshooting in aircraft avionic maintenance
MEA238B	Perform routine removal and installation of miscellaneous aircraft electrical hardware/components
MEA239B	Fabricate aircraft electrical looms and harnesses
MEA240B	Use electrical test equipment to perform basic electrical tests
MEA241C	Perform aircraft weight and balance calculations as a result of modifications
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts

Unit code	Unit title
MEA252B	Test, align and troubleshoot aircraft synchro and servo system components
MEA260B	Use electrical test equipment
MEA261C	Use electronic test equipment
MEA262B	Modify/repair aircraft component single layer printed circuit boards
MEA263B	Modify/repair aircraft component multi-layer printed circuit boards
MEA264A	Remove and install aircraft electrical/avionic components during line maintenance
MEA265A	Remove and install general aircraft electrical hardware
MEA270A	Lay out avionic systems
MEA271A	Lay out avionic flight management systems
MEA272B	Apply basic scientific principles and techniques in avionic engineering situations
MEA273A	Select and test avionic engineering materials
MEA274A	Maintain basic light aircraft electrical systems and components
MEA275A	Maintain basic light aircraft instrument systems and components
MEA276A	Maintain basic aircraft communication and radio navigation systems and components
MEA277A	Maintain twin engine aircraft electrical systems and components
MEA278A	Inspect, test and troubleshoot instrument display systems and components
MEA279A	Inspect, test and troubleshoot full authority digital engine control systems
MEA280A	Inspect, test and troubleshoot flight management systems and components
MEA281A	Maintain light aircraft AC powered instrument systems and components
MEA282A	Repair or overhaul aircraft pulse system components
MEA283A	Repair or overhaul aircraft display, control and distribution system components
MEA284A	Repair or overhaul aircraft instrument system components
MEA285A	Repair or overhaul aircraft radio frequency communication and navigation

Unit code	Unit title
	system components
MEA286A	Repair or overhaul aircraft electrical/electro-mechanical components
MEA287A	Repair or overhaul aircraft oxygen system components
MEA288A	Repair or overhaul aircraft audio and visual systems and reproducers
MEA289A	Maintain basic light aircraft avionic systems and components
MEA290A	Fit avionic modification sheetmetal components
MEA291A	Inspect, test and troubleshoot fixed wing single axis autopilot systems and components
MEA301C	Perform aircraft flight servicing
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components
MEA303D	Remove and install aircraft pneumatic system components
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components
MEA305C	Remove and install aircraft fixed wing flight control system components
MEA306C	Remove and install engines and engine system components
MEA307C	Remove and install propeller systems and components
MEA308C	Remove and install rotary wing rotor and flight control system components
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components
MEA311D	Inspect and repair/modify aircraft structures
MEA312C	Inspect, test and troubleshoot aircraft fixed wing flight control systems and components
MEA313C	Inspect, test and troubleshoot piston engine systems and components
MEA314C	Inspect, test and troubleshoot gas turbine engine systems and components
MEA315C	Inspect, test and troubleshoot propeller systems and components

Unit code	Unit title
MEA316C	Inspect, test and troubleshoot rotary wing rotor and control systems and components
MEA317C	Remove and install pressurised aircraft structural and non-structural components
MEA318C	Inspect aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA319C	Inspect gas turbine engine systems and components
MEA320C	Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA321C	Test and troubleshoot aircraft fixed wing flight control systems and components
MEA322C	Test and troubleshoot gas turbine engine systems and components
MEA323B	Perform advanced troubleshooting in aircraft mechanical maintenance
MEA325B	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications
MEA327B	Fabricate and/or repair aircraft mechanical components or parts
MEA328C	Maintain and/or repair aircraft mechanical components or parts
MEA329B	Dismantle, inspect, maintain and assemble aircraft basic hydraulic and pneumatic components or parts
MEA330B	Dismantle, inspect, maintain and assemble aircraft non-primary structural removable components or parts and internal fittings
MEA331B	Dismantle, inspect, maintain and assemble aircraft gas turbine engine components or parts
MEA332B	Dismantle, inspect, maintain and assemble aircraft mechanical components or parts
MEA333B	Dismantle, inspect, maintain and assemble aircraft piston engine components or parts
MEA339C	Inspect, repair and maintain aircraft structures
MEA340A	Lay out and set up aircraft systems
MEA341A	Apply basic aircraft design characteristics

Unit code	Unit title
MEA342A	Apply basic aircraft power plant design characteristics
MEA343B	Remove and install avionic system components
MEA344A	Remove and install aircraft components
MEA345A	Perform scheduled line maintenance activities on gas turbine engine fixed wing aircraft
MEA346A	Perform scheduled line maintenance activities on gas turbine engine rotary wing aircraft
MEA347A	Perform scheduled line maintenance activities on piston engine fixed wing aircraft
MEA348A	Perform scheduled line maintenance activities on piston engine rotary wing aircraft
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations
MEA350A	Select and test aeronautical engineering materials
MEA351A	Maintain airframe systems of basic light fixed wing aircraft
MEA352A	Maintain basic rotary wing aircraft systems
MEA353A	Maintain basic light aircraft engines and propellers
MEA354A	Maintain light aircraft pneumatic systems
MEA355A	Maintain light aircraft air cycle air conditioning systems
MEA356A	Maintain light piston engine aircraft pressurisation systems
MEA357A	Inspect, test and repair aircraft fabric surfaces
MEA358A	Re-cover aircraft fabric surfaces
MEA359A	Inspect and repair aircraft wooden structures
MEA360A	Maintain aircraft diesel engines
MEA361A	Maintain aircraft two stroke petrol engines
MEA362A	Maintain aircraft vapour cycle air conditioning systems

Unit code	Unit title
MEA363B	Inspect, repair and maintain structures and related components of non-pressurised small aircraft
MEA364A	Maintain and/or repair small aircraft mechanical components or parts
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications
MEA366A	Perform borescope inspections
MEA367A	Repair/modify aircraft composite structure using cold bonding
MEA368A	Shot peen aircraft components
MEA380A	Repair and/or overhaul aircraft hydraulic system components
MEA381A	Repair and/or overhaul aircraft pneumatic system components
MEA382A	Repair and/or overhaul aircraft fuel system components
MEA383A	Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules
MEA384A	Repair and/or overhaul gas turbine engine combustion section components and/or modules
MEA385A	Repair and/or overhaul gas turbine engine turbine and exhaust section components
MEA386A	Repair and/or overhaul gas turbine engine ancillary section components
MEA387A	Test gas turbine engines and engine modules after overhaul or repair
MEA388A	Repair and/or overhaul piston engines
MEA389A	Repair and/or overhaul propellers
MEA390A	Repair and/or overhaul rotary wing dynamic components
MEA391A	Repair and/or overhaul aircraft mechanical system components
MEA401C	Inspect aircraft structures
MEA405B	Repair/modify aircraft composite material structure/components
MEA406B	Repair/modify aircraft non-primary structural sheetmetal components

Unit code	Unit title
MEA407B	Repair/modify aircraft non-primary structural non-metallic components
MEA410C	Maintain aircraft structure/components
MEA411A	Remove surface coatings from aircraft or aircraft components
MEA412A	Pre-treat aluminium alloy surfaces
MEA413A	Seal aircraft and aircraft component structural seams
MEA414A	Remove light corrosion from aircraft
MEA415A	Paint aircraft surfaces
MEA416A	Apply aircraft identification markings, graphics and decals
MEA417A	Apply specialty coatings to aircraft
MEA418A	Perform basic repair of aircraft internal fittings during line maintenance
MEA419A	Inspect and repair/modify aircraft cabin/cockpit non-primary structure components
MEA420A	Fabricate basic structural components for aircraft
MEA421A	Fabricate advanced structural components for aircraft
MEA422A	Repair/modify aircraft metal structure
MEA423A	Aircraft structure major disassembly and reassembly
MEA424A	Evaluate aircraft non-destructive tests
MEA430A	Gas weld aircraft components
MEA431A	Braze weld aircraft components
MEA432A	Weld aircraft components using the gas tungsten arc welding process
MEA433A	Weld aircraft components using the gas metal arc welding process
MEA434A	Weld aircraft components using the plasma arc welding process
MEA435A	Weld aircraft components using the manual metal arc welding process
MEA501A	Maintain and fit anti-G suits

Unit code	Unit title
MEA502A	Maintain and fit helmets
MEA503A	Maintain and fit immersion suits
MEA504A	Maintain and fit oxygen masks
MEA505A	Maintain and pack parachutes
MEA506A	Maintain and pack survival inflatable life rafts and escape slides
MEA507A	Maintain, pack and fit survival inflatable buoyancy vests
MEA508A	Maintain, install and remove restraint systems
MEA509A	Manufacture, repair and alter aircraft related fabric components
MEA510A	Maintain seat and pod electrical and electronic systems
MEA511A	Operate and maintain sewing machines and overlockers
MEA601A	Maintain aircraft egress systems
MEA602A	Remove and install aircraft stores management system components
MEA603A	Remove and install aircraft stores suspension systems and components
MEA604A	Inspect, test and troubleshoot aircraft stores management systems and components
MEA605A	Inspect, test and troubleshoot aircraft stores suspension systems and components

Imported units of competency

Unit code	Unit title
AURV229749A	Prepare spray painting materials and equipment
AURV231208A	Carry out trimming of vehicle components
AURV231268A	Select and apply trim/fabric materials and determine attachment methods
AURV231368A	Select and apply trim/fabric adhesives
AURV329603DA	Apply air dry and polyurethane enamel refinishing material
LMFSF2001B	Cut single layer fabrics

Unit code	Unit title
LMFSF2002B	Machine sew materials
LMFUP3012B	Apply marine sewing and installation techniques
LMTTF2008A	Use adhesives
MEM05004C	Perform routine oxy acetylene welding
MEM05006C	Perform brazing and/or silver soldering
MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05015D	Weld using manual metal arc welding process
MEM05016C	Perform advanced welding using manual metal arc welding process
MEM05017D	Weld using gas metal arc welding process
MEM05018C	Perform advanced welding using gas metal arc welding process
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05043B	Perform welds to code standards using gas metal arc welding process
MEM05044B	Perform welds to code standards using gas tungsten arc welding process
MEM05046B	Perform welds to code standards using manual metal arc welding process
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM08012B	Prepare surfaces by abrasive blasting (basic)
MEM08013B	Prepare surfaces by abrasive blasting (advanced)

Unit code	Unit title
MEM08016B	Conduct blast coating by-products, materials and emissions
MEM09002B	Interpret technical drawing
MEM09003B	Prepare basic engineering drawing
MEM09009C	Create 2D drawings using computer aided design systems
MEM11011B	Undertake manual handling
MEM12001B	Use comparison and basic measuring devices
MEM12003B	Perform precision mechanical measurement
MEM12005B	Calibrate measuring equipment
MEM12023A	Perform engineering measurement
MEM13003B	Work safely with industrial chemicals and materials
MEM13013B	Work safely with ionising radiation
MEM15010B	Perform laboratory procedures
MEM15017B	Use and maintain reference standards
MEM16002C	Conduct formal interviews and negotiations
MEM16010A	Write reports
MEM17002B	Conduct workplace assessment
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEM24001B	Perform basic penetrant testing
MEM24002B	Perform penetrant testing
MEM24003B	Perform basic magnetic particle testing
MEM24004B	Perform magnetic particle testing
MEM24005B	Perform basic eddy current testing
MEM24006B	Perform eddy current testing

Unit code	Unit title
MEM24007B	Perform ultrasonic thickness testing
MEM24008B	Perform ultrasonic testing
MEM24009B	Perform basic radiographic testing
MEM24010B	Perform radiographic testing
MEM24011B	Establish non-destructive tests
MEM24012C	Apply metallurgy principles
MEM30007A	Select common engineering materials
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment
PSPMNGT610A	Manage public sector financial resources
PUADEFEO101D	Work safely with explosive ordnance
PUADEFEO501D	Conduct explosive ordnance inspection
MSAENV272B	Participate in environmentally sustainable work practices
MSAENV472B	Implement and monitor environmentally sustainable work practices
MSAENV672B	Develop workplace policy and procedures for environmental sustainability
TAEDEL301A	Provide work skill instruction
TAEDEL402A	Plan, organise and facilitate learning in the workplace
TAEASS401B	Plan assessment activities and processes
TAEASS402B	Assess competence
TAEASS403B	Participate in assessment validation
TAEASS502B	Design and develop assessment tools
TAEDES401A	Design and develop learning programs

Additional Imported Units for MEA11v1

The units listed below are required for the additional Skill Sets added to meet CASA requirements. They have no applicability to any qualification and none of them have been contextualised.

Unit code	Unit title
MEM07001B	Perform operational maintenance of machines equipment
MEM07002B	Perform precision shaping/planning/slotting operations
MEM07005C	Perform general machining
MEM07006C	Perform lathe operations
MEM07007C	Perform milling operations
MEM07008D	Perform grinding operations
MEM07009B	Perform precision jig boring operations
MEM07010B	Perform tool and cutter grinding operations
MEM07011B	Perform complex milling operations
MEM07012B	Perform complex grinding operations
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines
MEM07015B	Set computer controlled machines/processes
MEM07016C	Set and edit computer controlled machines/processes
MEM07018C	Write basic NC/CNC programs
MEM07019C	Program NC/CNC machine centre
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre
MEM07021B	Perform complex lathe operations
MEM07022C	Program CNC wire cut machine
MEM07024B	Operate and monitor machine processes
MEM07028B	Operate computer controlled machine processes
MEM07030C	Perform metal spinning lathe operations (basic)

MEM07031C	Perform metal spinning lathe operations (complex)
MEM07032B	Use workshop machines for basic operations
MEM08001B	Perform wire, jig and barrel load unload work
MEM08002C	Pre-treat work for subsequent surface coating
MEM08003C	Perform electroplating operations
MEM08004B	Finish work using wet, dry and vapour deposition methods
MEM08006B	Produce clear and/or coloured and/or sealed anodised film on aluminium
MEM08018B	Electroplate engineering coatings
MEM12024A	Perform computations
MEM15004B	Perform inspection
MEM16006A	Organise and communicate information
PMBPROD262B	Operate tyre curing equipment
PMBPROD263B	Operate tyre retread curing equipment
PMBPROD264C	Check recycle wash process
PMBPROD265C	Operate portable vulcanising equipment
PMBPROD266B	Prepare tyre casing for retreading
PMBPROD324B	Inspect tyres for retreading
PMBPROD325B	Lay on tyre retreads
PMBPROD326B	Inspect tyres

Appendix 1: Cross-reference to CASA Licensing Syllabus

Appendix 1: Cross Reference to CASA Licensing Syllabus

For the purpose of establishing parity with the licensing system of the European Aviation Safety Authority (EASA) the Civil Aviation Safety Authority (CASA) includes in CAO 100.66 and in the proposed Civil Aviation Safety Regulation Part 66 a licensing examination syllabus. Where individuals are seeking the grant of an Aircraft Maintenance Engineer Licence (or interim maintenance authority under the transitional arrangements of CAO 100.66) in Categories A, B1 or B2 it must be demonstrated that the knowledge requirements of the syllabus were fully covered in the underpinning knowledge applicable to the units of competency relevant to the licence sought.

In this Appendix there is a table for each A and B1 Licence, and for the B2 Licence (or the equivalent maintenance authorities) in which syllabus modules and topics applicable to each licence are listed, along with the units of competency that are expected to provide the required knowledge. RTOs operating as Maintenance Training Organisations under Civil Aviation Safety Regulation Part 147 (or CAO 100.66 during the transitional period) are required to ensure that the modules and topics are fully covered in the off-job training applicable to each listed unit of competency.

Refer also to Licensing/Registration Requirements in Section 3, Assessment Guidelines.

Alignment between CASA Licensing Syllabus and Aeroskills Units of Competency – A1 Licence

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
Module 1 Mathematics	MEA345A
Module 2 Physics	MEA345A
Module 3 Electrical Fundamentals	
3.1 Electron Theory	MEA265A
3.2 Static Electricity and Conduction	MEA265A
3.3 Electrical Terminology	MEA265A
3.4 Generation of Electricity	MEA265A
3.5 DC Sources of Electricity	MEA265A
3.6 DC Circuits	Not required
3.7 Resistance/Resistor	Not required
3.8 Power	Not required

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
3.9 Capacitance/Capacitor	Not required
3.10 Magnetism	Not required
3.11 Inductance/Inductor	Not required
3.12 DC Motor/Generator Theory	Not required
3.13 AC Theory	MEA264A
3.14 Resistive, Capacitive and Inductive Circuits	Not required
3.15 Transformers	Not required
3.16 Filters	Not required
3.17 AC Generators	Not required
3.18 AC Motors	Not required
Module 4 Electronic Fundamentals	
4.1 Semiconductors	Not required
4.2 Printed Circuit Boards	Not required
4.3 Servomechanisms	Not required
Module 5 Digital Techniques Electronic Instrument Systems	
5.1 Electronic Instrument Systems	MEA345A
5.2 Numbering Systems	Not required
5.3 Data Conversion	Not required
5.4 Data Buses	Not required
5.5 Logic Circuits	Not required
5.6 Basic Computer Structure	MEA345A
5.7 Microprocessors	Not required
5.8 Integrated Circuits	Not required

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
5.9 Multiplexing	Not required
5.10 Fibre Optics	Not required
5.11 Electronic Displays	Not required
5.12 Electrostatic Sensitive Devices	MEA264A
5.13 Software Management Control	Not required
5.14 Electromagnetic Environment	Not required
5.15 Typical Electronic/Digital Aircraft Systems	Not required
Module 6 Materials and Handling	
6.1 Aircraft Materials – Ferrous	MEA109B
6.2 Aircraft Materials – Non-Ferrous	MEA109B
6.3 Aircraft Materials – Composite and Non-Metallic	MEA418A
6.4 Corrosion	MEA345A
6.5 Fasteners	MEA109B
6.6 Pipes and Unions	MEA109B
6.7 Springs	MEA109B
6.8 Bearings	MEA344A
6.9 Transmissions	MEA344A, MEA345A
6.10 Control Cables	MEA109B
6.11 Electrical Cables and Connectors	MEA265A
Module 7 Maintenance Practices	
7.1 Safety Practices – Aircraft and Workshop	MEA101B
7.2 Workshop Practices	MEA107B, MEA109B
7.3 Tools	MEA109B, MEA240B

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
7.4 Avionic General Test Equipment	Not required
7.5 Engineering Drawings, Diagrams and Standards	MEA107B
7.6 Fits and Clearances	MEA107B, MEA109B
7.7 Electrical cables and Connectors	MEA265A
7.8 Riveting	MEA418A
7.9 Pipes and Hoses	MEA344A, MEA345A
7.10 Springs	MEA344A
7.11 Bearings	MEA344A
7.12 Transmissions	MEA344A, MEA345A
7.13 Control Cables	MEA345A
7.14 Material Handling	Not required
7.15 Welding, Brazing, Soldering and Bonding	Not required
7.16 Aircraft Weight and Balance	Not required
7.17 Aircraft Handling and Storage	MEA345A
7.18 Disassembly, Inspection, Repair and Assembly Techniques	MEA345A
7.19 Abnormal Events	MEA119A
7.20 Maintenance Procedures	MEA119A, MEA345A
Module 8 Basic Aerodynamics	
8.1 Physics of the Atmosphere	MEA345A
8.2 Aerodynamics	MEA345A
8.3 Theory of Flight	MEA345A
8.4 Flight Stability and Dynamics	MEA345A
Module 9 Human Factors	MEA103B

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
Module 10 Aviation Legislation	MEA119A
Module 11 Aeroplane Aerodynamics, Structure and Systems	
11.1 Theory of Flight	MEA345A
11.2 Airframe Structures – General concepts	MEA345A
11.3 Airframe Structures – Aeroplanes	MEA345A
11.4 Air Conditioning and Cabin Pressurisation	MEA345A
11.5 Instruments/Avionic Systems	MEA264A
11.6 Electrical Power	MEA264A
11.7 Equipment and Furnishings	MEA264A, MEA344A, MEA345A
11.8 Fire Protection	MEA345A
11.9 Flight Controls	MEA345A
11.10 Fuel Systems	MEA345A
11.11 Hydraulic Power	MEA345A
11.12 Ice and Rain Protection	MEA345A
11.13 Landing Gear	MEA344A, MEA345A
11.14 Lights	MEA264A
11.15 Oxygen	MEA345A
11.16 Pneumatic/Vacuum	MEA345A
11.17 Water/Waste	MEA344A, MEA345A
11.18 On-Board Maintenance Systems	MEA345A
11.19 Integrated modular avionics	MEA264A
11.20 Cabin intercommunication data systems	MEA264A
11.21 Cabin network services	MEA264A

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
11.22 Information systems such as air traffic and information management systems and network server systems	MEA264A
Module 15 Gas Turbine Engine	
15.1 Fundamentals	MEA345A
15.2 Engine Performance	Not required
15.3 Inlet	MEA345A
15.4 Compressors	MEA345A
15.5 Combustion Section	MEA345A
15.6 Turbine Section	MEA345A
15.7 Exhaust	MEA345A
15.8 Bearings and Seals	Not required
15.9 Lubricants and Fuels	MEA345A
15.10 Lubrication Systems	MEA345A
15.11 Fuel Systems	MEA345A
15.12 Air Systems	MEA345A
15.13 Starting and Ignition Systems	MEA345A
15.14 Engine Indication Systems	MEA345A
15.15 Power Augmentation Systems	Not required
15.16 Turbo Prop Engines	MEA345A
15.17 Turbo-Shaft Engines	MEA345A
15.18 Auxiliary Power Units	MEA345A
15.19 Power plant Installation	MEA345A
15.20 Fire Protection Systems	MEA345A

Syllabus Reference A1 Licence	Units of Competency Providing Full Coverage
15.21 Engine Monitoring and Ground Operation	MEA345A
15.22 Engine Storage and Preservation	Not required
Module 17 Propeller	
17.1 Fundamentals	MEA345A
17.2 Propeller Construction	MEA345A
17.3 Propeller Pitch Control	MEA345A
17.4 Propeller Synchronising	Not required
17.5 Propeller Ice Protection	MEA345A
17.6 Propeller Maintenance	MEA345A
17.7 Propeller Storage and Preservation	MEA345A

Alignment between CASA Licensing Syllabus and Aeroskills Units of Competency – A2 Licence

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
Module 1 Mathematics	MEA347A
Module 2 Physics	MEA347A
Module 3 Electrical Fundamentals	
3.1 Electron Theory	MEA265A
3.2 Static Electricity and Conduction	MEA265A
3.3 Electrical Terminology	MEA265A
3.4 Generation of Electricity	MEA265A
3.5 DC Sources of Electricity	MEA265A
3.6 DC Circuits	Not required
3.7 Resistance/Resistor	Not required

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
3.8 Power	Not required
3.9 Capacitance/Capacitor	Not required
3.10 Magnetism	Not required
3.11 Inductance/Inductor	Not required
3.12 DC Motor/Generator Theory	Not required
3.13 AC Theory	MEA264A
3.14 Resistive, Capacitive and Inductive Circuits	Not required
3.15 Transformers	Not required
3.16 Filters	Not required
3.17 AC Generators	Not required
3.18 AC Motors	Not required
Module 4 Electronic Fundamentals	
4.1 Semiconductors	Not required
4.2 Printed Circuit Boards	Not required
4.3 Sevomechanisms	Not required
Module 5 Digital Techniques Electronic Instrument Systems	
5.1 Electronic Instrument Systems	MEA347A
5.2 Numbering Systems	Not required
5.3 Data Conversion	Not required
5.4 Data Buses	Not required
5.5 Logic Circuits	Not required
5.6 Basic Computer Structure	MEA347A
5.7 Microprocessors	Not required

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
5.8 Integrated Circuits	Not required
5.9 Multiplexing	Not required
5.10 Fibre Optics	Not required
5.11 Electronic Displays	Not required
5.12 Electrostatic Sensitive Devices	MEA264A
5.13 Software Management Control	Not required
5.14 Electromagnetic Environment	Not required
5.15 Typical Electronic/Digital Aircraft Systems	Not required
Module 6 Materials and Handling	
6.1 Aircraft Materials – Ferrous	MEA109B
6.2 Aircraft Materials – Non-Ferrous	MEA109B
6.3 Aircraft Materials – Composite and Non-Metallic	MEA418A
6.4 Corrosion	MEA347A
6.5 Fasteners	MEA109B
6.6 Pipes and Unions	MEA109B
6.7 Springs	MEA109B
6.8 Bearings	MEA347A
6.9 Transmissions	MEA344A, MEA347A
6.10 Control Cables	MEA109B
6.11 Electrical Cables and Connectors	MEA265A
Module 7 Maintenance Practices	
7.1 Safety Practices – Aircraft and Workshop	MEA101B
7.2 Workshop Practices	MEA107B, MEA109B

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
7.3 Tools	MEA109B, MEA240B
7.4 Avionic General Test Equipment	Not required
7.5 Engineering Drawings, Diagrams and Standards	MEA107B
7.6 Fits and Clearances	MEA107B, MEA109B
7.7 Electrical cables and Connectors	MEA265A
7.8 Riveting	MEA418A
7.9 Pipes and Hoses	MEA344A, MEA347A
7.10 Springs	MEA344A
7.11 Bearings	MEA344A
7.12 Transmissions	MEA344A, MEA347A
7.13 Control Cables	MEA347A
7.14 Material Handling	Not required
7.15 Welding, Brazing, Soldering and Bonding	Not required
7.16 Aircraft Weight and Balance	Not required
7.17 Aircraft Handling and Storage	MEA347A
7.18 Disassembly, Inspection, Repair and Assembly Techniques	MEA347A
7.19 Abnormal Events	MEA119A
7.20 Maintenance Procedures	MEA119A, MEA347A
Module 8 Basic Aerodynamics	
8.1 Physics of the Atmosphere	MEA347A
8.2 Aerodynamics	MEA347A
8.3 Theory of Flight	MEA347A
8.4 Flight Stability and Dynamics	MEA347A

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
Module 9 Human Factors	MEA103B
Module 10 Aviation Legislation	MEA119A
Module 11 Aeroplane Aerodynamics, Structure and Systems	
11.1 Theory of Flight	MEA347A
11.2 Airframe Structures – General concepts	MEA347A
11.3 Airframe Structures – Aeroplanes	MEA347A
11.4 Air Conditioning and Cabin Pressurisation	MEA347A
11.5 Instruments/Avionic Systems	MEA264A
11.6 Electrical Power	MEA264A
11.7 Equipment and Furnishings	MEA264A, MEA344A, MEA347A
11.8 Fire Protection	MEA347A
11.9 Flight Controls	MEA347A
11.10 Fuel Systems	MEA347A
11.11 Hydraulic Power	MEA347A
11.12 Ice and Rain Protection	MEA347A
11.13 Landing Gear	MEA344A, MEA347A
11.14 Lights	MEA264A, MEA347A
11.15 Oxygen	MEA347A
11.16 Pneumatic/Vacuum	MEA347A
11.17 Water/Waste	MEA344A, MEA347A
11.18 On Board Maintenance Systems	MEA347A
11.19 Integrated modular avionics	MEA264A
11.20 Cabin intercommunication data systems	MEA264A

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
11.21 Cabin network services	MEA264A
11.22 Information systems such as air traffic and information management systems and network server systems	MEA264A
Module 16 Piston Engine	
16.1 Fundamentals	MEA347A
16.2 Engine Performance	MEA347A
16.3 Engine Construction	MEA347A
16.4 Engine Fuel Systems	MEA347A
16.5 Starting and ignition system	MEA347A
16.6 Induction, Exhaust and Cooling Systems	MEA347A
16.7 Supercharging/Turbocharging	MEA347A
16.8 Lubricants and Fuels	MEA347A
16.9 Lubrication Systems	MEA347A
16.10 Engine Indication Systems	MEA347A
16.11 Power plant Installation	MEA347A
16.12 Engine Monitoring and Ground Operation	MEA347A
16.13 Engine Storage and Preservation	Not required
Module 17 Propeller	
17.1 Fundamentals	MEA347A
17.2 Propeller Construction	MEA347A
17.3 Propeller Pitch Control	MEA347A
17.4 Propeller Synchronising	Not required
17.5 Propeller Ice Protection	MEA347A

Syllabus Reference A2 Licence	Units of Competency Providing Full Coverage
17.6 Propeller Maintenance	MEA347A
17.7 Propeller Storage and Preservation	MEA347A

Alignment between CASA Licensing Syllabus and Aeroskills Units of Competency – A3 Licence

Syllabus Reference A3 Licence	Units of Competency Providing Full Coverage
Module 1 Mathematics	MEA346A
Module 2 Physics	MEA346A
Module 3 Electrical Fundamentals	
3.1 Electron Theory	MEA265A
3.2 Static Electricity and Conduction	MEA265A
3.3 Electrical Terminology	MEA265A
3.4 Generation of Electricity	MEA265A
3.5 DC Sources of Electricity	MEA265A
3.6 DC Circuits	Not required
3.7 Resistance/Resistor	Not required
3.8 Power	Not required
3.9 Capacitance/Capacitor	Not required
3.10 Magnetism	Not required
3.11 Inductance/Inductor	Not required
3.12 DC Motor/Generator Theory	Not required
3.13 AC Theory	MEA264A
3.14 Resistive, Capacitive and Inductive Circuits	Not required
3.15 Transformers	Not required

Syllabus Reference A3 Licence	Units of Competency Providing Full Coverage
3.16 Filters	Not required
3.17 AC Generators	Not required
3.18 AC Motors	Not required
Module 4 Electronic Fundamentals	
4.1 Semiconductors	Not required
4.2 Printed Circuit Boards	Not required
4.3 Servomechanisms	Not required
Module 5 Digital Techniques Electronic Instrument Systems	
5.1 Electronic Instrument Systems	MEA346A
5.2 Numbering Systems	Not required
5.3 Data Conversion	Not required
5.4 Data Buses	Not required
5.5 Logic Circuits	Not required
5.6 Basic Computer Structure	MEA346A
5.7 Microprocessors	Not required
5.8 Integrated Circuits	Not required
5.9 Multiplexing	Not required
5.10 Fibre Optics	Not required
5.11 Electronic Displays	Not required
5.12 Electrostatic Sensitive Devices	MEA264A
5.13 Software Management Control	Not required
5.14 Electromagnetic Environment	Not required
Typical Electronic/Digital Aircraft Systems	Not required

Syllabus Reference A3 Licence	Units of Competency Providing Full Coverage
Module 6 Materials and Handling	
6.1 Aircraft Materials – Ferrous	MEA109B
6.2 Aircraft Materials – Non-Ferrous	MEA109B
6.3 Aircraft Materials – Composite and Non-Metallic	MEA418A
6.4 Corrosion	MEA346A
6.5 Fasteners	MEA109B
6.6 Pipes and Unions	MEA109B
6.7 Springs	MEA109B
6.8 Bearings	MEA344A
6.9 Transmissions	MEA344A, MEA346A
6.10 Control Cables	MEA109B
6.11 Electrical Cables and Connectors	MEA265A
Module 7 Maintenance Practices	
7.1 Safety Practices – Aircraft and Workshop	MEA101B
7.2 Workshop Practices	MEA107B, MEA109B
7.3 Tools	MEA109B, MEA240B
7.4 Avionic General Test Equipment	Not required
7.5 Engineering Drawings, Diagrams and Standards	MEA107B
7.6 Fits and Clearances	MEA107B, MEA109B
7.7 Electrical cables and Connectors	MEA265A
7.8 Riveting	MEA418A
7.9 Pipes and Hoses	MEA344A, MEA346A
7.10 Springs	MEA344A

Syllabus Reference A3 Licence	Units of Competency Providing Full Coverage
7.11 Bearings	MEA344A
7.12 Transmissions	MEA344A, MEA346A
7.13 Control Cables	MEA346A
7.14 Material Handling	Not required
7.15 Welding, Brazing, Soldering and Bonding	Not required
7.16 Aircraft Weight and Balance	Not required
7.17 Aircraft Handling and Storage	MEA346A
7.18 Disassembly, Inspection, Repair and Assembly Techniques	MEA346A
7.19 Abnormal Events	MEA119A
7.20 Maintenance Procedures	MEA119A, MEA346A
Module 8 Basic Aerodynamics	
8.1 Physics of the Atmosphere	MEA346A
8.2 Aerodynamics	MEA346A
8.3 Theory of Flight	MEA346A
8.4 Flight Stability and Dynamics	MEA346A
Module 9 Human Factors	MEA103B
Module 10 Aviation Legislation	MEA119A
Module 12 Helicopter Aerodynamics, Structure and Systems	
12.1 Theory of Flight – Rotary Wing Aerodynamics	MEA346A
12.2 Flight control Systems	MEA346A
12.3 Blade Tracking and Vibration Analysis	MEA346A
12.4 Transmission	MEA346A

Syllabus Reference A3 Licence	Units of Competency Providing Full Coverage
12.5 Airframe Structures	MEA346A
12.6 Air Conditioning	MEA346A
12.7 Instruments/Avionic Systems	MEA264A
12.8 Electrical Power	MEA264A
12.9 Equipment and Furnishings	MEA264A, MEA344A, MEA346A
12.10 Fire Protection	MEA346A
12.11 Fuel Systems	MEA346A
12.12 Hydraulic Power	MEA346A
12.13 Ice and Rain Protection	MEA346A
12.14 Landing Gear	MEA344A, MEA346A
12.15 Lights	MEA264A
12.16 Pneumatic/Vacuum	MEA346A
12.17 Integrated modular avionics	MEA264A
12.18 On Board Maintenance Systems	MEA346A
12.19 Information systems such as air traffic and information management systems and network server systems	MEA264A
Module 15 Gas Turbine Engine	
15.1 Fundamentals	MEA346A
15.2 Engine Performance	Not required
15.3 Inlet	MEA346A
15.4 Compressors	MEA346A
15.5 Combustion Section	MEA346A
15.6 Turbine Section	MEA346A

Syllabus Reference A3 Licence	Units of Competency Providing Full Coverage
15.7 Exhaust	MEA346A
15.8 Bearings and Seals	Not required
15.9 Lubricants and Fuels	MEA346A
15.10 Lubrication Systems	MEA346A
15.11 Fuel Systems	MEA346A
15.12 Air Systems	MEA346A
15.13 Starting and Ignition Systems	MEA346A
15.14 Engine Indication Systems	MEA346A
15.15 Power Augmentation Systems	Not required
15.16 Turbo Prop Engines	MEA346A
15.17 Turbo-Shaft Engines	MEA346A
15.18 Auxiliary Power Units	MEA346A
15.19 Power plant Installation	MEA346A
15.20 Fire Protection Systems	MEA346A
15.21 Engine Monitoring and Ground Operation	MEA346A
15.22 Engine Storage and Preservation	Not required

Alignment between CASA Licensing Syllabus and Aeroskills Units of Competency – A4 Licence

Syllabus Reference A4 Licence	Units of Competency Providing Full Coverage
Module 1 Mathematics	MEA348A
Module 2 Physics	MEA348A
Module 3 Electrical Fundamentals	
3.1 Electron Theory	MEA265A

Syllabus Reference A4 Licence	Units of Competency Providing Full Coverage
3.2 Static Electricity and Conduction	MEA265A
3.3 Electrical Terminology	MEA265A
3.4 Generation of Electricity	MEA265A
3.5 DC Sources of Electricity	MEA265A
3.6 DC Circuits	Not required
3.7 Resistance/Resistor	Not required
3.8 Power	Not required
3.9 Capacitance/Capacitor	Not required
3.10 Magnetism	Not required
3.11 Inductance/Inductor	Not required
3.12 DC Motor/Generator Theory	Not required
3.13 AC Theory	MEA264A
3.14 Resistive, Capacitive and Inductive Circuits	Not required
3.15 Transformers	Not required
3.16 Filters	Not required
3.17 AC Generators	Not required
3.18 AC Motors	Not required
Module 4 Electronic Fundamentals	
4.1 Semiconductors	Not required
4.2 Printed Circuit Boards	Not required
4.3 Servomechanisms	Not required
Module 5 Digital Techniques Electronic Instrument Systems	
5.1 Electronic Instrument Systems	MEA348A

Syllabus Reference A4 Licence	Units of Competency Providing Full Coverage
5.2 Numbering Systems	Not required
5.3 Data Conversion	Not required
5.4 Data Buses	Not required
5.5 Logic Circuits	Not required
5.6 Basic Computer Structure	MEA348A
5.7 Microprocessors	Not required
5.8 Integrated Circuits	Not required
5.9 Multiplexing	Not required
5.10 Fibre Optics	Not required
5.11 Electronic Displays	Not required
5.12 Electrostatic Sensitive Devices	MEA264A
5.13 Software Management Control	Not required
5.14 Electromagnetic Environment	Not required
Typical Electronic/Digital Aircraft Systems	Not required
Module 6 Materials and Handling	
6.1 Aircraft Materials – Ferrous	MEA109B
6.2 Aircraft Materials – Non-Ferrous	MEA109B
6.3 Aircraft Materials – Composite and Non-Metallic	MEA418A
6.4 Corrosion	MEA348A
6.5 Fasteners	MEA109B
6.6 Pipes and Unions	MEA109B
6.7 Springs	MEA109B
6.8 Bearings	MEA344A

Syllabus Reference A4 Licence	Units of Competency Providing Full Coverage
6.9 Transmissions	MEA344A, MEA348A
6.10 Control Cables	MEA109B
6.11 Electrical Cables and Connectors	MEA265A
Module 7 Maintenance Practices	
7.1 Safety Practices – Aircraft and Workshop	MEA101B
7.2 Workshop Practices	MEA107B, MEA109B
7.3 Tools	MEA109B, MEA240B
7.4 Avionic General Test Equipment	Not required
7.5 Engineering Drawings, Diagrams and Standards	MEA107B
7.6 Fits and Clearances	MEA107B, MEA109B
7.7 Electrical cables and Connectors	MEA265A
7.8 Riveting	MEA418A
7.9 Pipes and Hoses	MEA344A, MEA348A
7.10 Springs	MEA344A
7.11 Bearings	MEA344A
7.12 Transmissions	MEA344A, MEA348A
7.13 Control Cables	MEA348A
7.14 Material Handling	Not required
7.15 Welding, Brazing, Soldering and Bonding	Not required
7.16 Aircraft Weight and Balance	Not required
7.17 Aircraft Handling and Storage	MEA348A
7.18 Disassembly, Inspection, Repair and Assembly Techniques	MEA348A
7.19 Abnormal Events	MEA119A

Syllabus Reference A4 Licence	Units of Competency Providing Full Coverage
7.20 Maintenance Procedures	MEA119A, MEA348A
Module 8 Basic Aerodynamics	
8.1 Physics of the Atmosphere	MEA348A
8.2 Aerodynamics	MEA348A
8.3 Theory of Flight	MEA348A
8.4 Flight Stability and Dynamics	MEA348A
Module 9 Human Factors	MEA103B
Module 10 Aviation Legislation	MEA119A
Module 12 Helicopter Aerodynamics, Structure and Systems	
12.1 Theory of Flight – Rotary Wing Aerodynamics	MEA348A
12.2 Flight control Systems	MEA348A
12.3 Blade Tracking and Vibration Analysis	MEA348A
12.4 Transmission	MEA348A
12.5 Airframe Structures	MEA348A
12.6 Air Conditioning	MEA348A
12.7 Instruments/Avionic Systems	MEA348A
12.8 Electrical Power	MEA264A
12.9 Equipment and Furnishings	MEA264A, MEA344A, MEA348A
12.10 Fire Protection	MEA348A
12.11 Fuel Systems	MEA348A
12.12 Hydraulic Power	MEA348A
12.13 Ice and Rain Protection	MEA348A

Syllabus Reference A4 Licence	Units of Competency Providing Full Coverage
12.14 Landing Gear	MEA344A, MEA348A
12.15 Lights	MEA264A, MEA348A
12.16 Pneumatic/Vacuum	MEA348A
12.17 Integrated modular avionics	MEA264A
12.18 On Board Maintenance Systems	MEA348A
12.19 Information systems such as air traffic and information management systems and network server systems	MEA264A
Module 16 Piston Engine	
16.1 Fundamentals	MEA348A
16.2 Engine Performance	MEA348A
16.3 Engine Construction	MEA348A
16.4 Engine Fuel System	MEA348A
16.5 Starting and Ignition Systems	MEA348A
16.6 Induction, Exhaust and Cooling Systems	MEA348A
16.7 Supercharging/Turbocharging	MEA348A
16.8 Lubricants and Fuels	MEA348A
16.9 Lubrication Systems	MEA348A
16.10 Engine Indication Systems	MEA348A
16.11 Power plant Installation	MEA348A
16.12 Engine Monitoring and Ground Operation	MEA348A
16.13 Engine Storage and Preservation	Not required

Alignment between CASA Licensing Syllabus and Aeroskills Units of Competency – B1.1 Licence

Syllabus Reference B1.1 Licence	Units of Competency Providing Full Coverage

3.1 Electron Theory	MEA201B
3.2 Static Electricity and Conduction	MEA201B
3.3 Electrical Terminology	MEA201B

Syllabus Reference B1.3 Licence	Units of Competency Providing Full Coverage
3.4 Generation of Electricity	MEA201B
3.5 DC Sources of Electricity	MEA201B
3.6 DC Circuits	MEA201B
3.7 Resistance/Resistor	MEA201B
3.8 Power	MEA201B
3.9 Capacitance/Capacitor	MEA201B
3.10 Magnetism	MEA201B
3.11 Inductance/Inductor	MEA201B
3.12 DC Motor/Generator Theory	MEA203C
3.13 AC Theory	MEA203C
3.14 Resistive, Capacitive and Inductive Circuits	MEA203C
3.15 Transformers	MEA203C
3.16 Filters	MEA203C
3.17 AC Generators	MEA203C
3.18 AC Motors	MEA203C
Module 4 Electronic Fundamentals	
4.1 Semiconductors	MEA343B
4.2 Printed Circuit Boards	MEA343B
4.3 Servomechanisms	MEA343B
Module 5 Digital Techniques Electronic Instrument Systems	
5.1 Electronic Instrument Systems	MEA343B
5.2 Numbering Systems	MEA343B
5.3 Data Conversion	MEA343B

Syllabus Reference B1.3 Licence	Units of Competency Providing Full Coverage
5.4 Data Buses	MEA343B
5.5 Logic Circuits	MEA343B
5.6 Basic Computer Structure	MEA343B
5.7 Microprocessors	Not required
5.8 Integrated Circuits	Not required
5.9 Multiplexing	Not required
5.10 Fibre Optics	MEA343B
5.11 Electronic Displays	MEA343B
5.12 Electrostatic Sensitive Devices	MEA343B
5.13 Software Management Control	MEA343B
5.14 Electromagnetic Environment	MEA343B
Typical Electronic/Digital Aircraft Systems	MEA343B
Module 6 Materials and Handling	
6.1 Aircraft Materials – Ferrous	MEA109B
6.2 Aircraft Materials – Non-Ferrous	MEA109B
6.3 Aircraft Materials – Composite and Non-Metallic	MEA339C
6.4 Corrosion	MEA339C
6.5 Fasteners	MEA109B
6.6 Pipes and Unions	MEA109B
6.7 Springs	MEA109B
6.8 Bearings	MEA302C
6.9 Transmissions	MEA306C
6.10 Control Cables	MEA109B

Syllabus Reference B1.3 Licence	Units of Competency Providing Full Coverage
6.11 Electrical Cables and Connectors	MEA201B, MEA246C
Module 7 Maintenance Practices	
7.1 Safety Practices – Aircraft and Workshop	MEA101B
7.2 Workshop Practices	MEA107B, MEA109B
7.3 Tools	MEA109B, MEA260B
7.4 Avionic General Test Equipment	MEA260B
7.5 Engineering Drawings, Diagrams and Standards	MEA107B
7.6 Fits and Clearances	MEA107B, MEA109B
7.7 Electrical cables and Connectors	MEA246C
7.8 Riveting	MEA339C
7.9 Pipes and Hoses	MEA302C, MEA303D, MEA328C
7.10 Springs	MEA309C, MEA328C
7.11 Bearings	MEA309C, MEA319C
7.12 Transmissions	MEA309C, MEA316C
7.13 Control Cables	MEA316C, MEA328C
7.14 Material Handling	MEA339C
7.15 Welding, Brazing, Soldering and Bonding	MEA201B, MEA339C, MEA365A
7.16 Aircraft Weight and Balance	MEA325B
7.17 Aircraft Handling and Storage	MEA301C
7.18 Disassembly, Inspection, Repair and Assembly Techniques	MEA309C, MEA322C, MEA323B, MEA328C, MEA339C, MEA365A
7.19 Abnormal Events	MEA112B
7.20 Maintenance Procedures	MEA112B
Module 8 Basic Aerodynamics	

Syllabus Reference B1.3 Licence	Units of Competency Providing Full Coverage
8.1 Physics of the Atmosphere	MEA316C, MEA322C
8.2 Aerodynamics	MEA316C
8.3 Theory of Flight	MEA316C
8.4 Flight Stability and Dynamics	MEA316C
Module 9 Human Factors	MEA103B, MEA113B
Module 10 Aviation Legislation	MEA111C
Module 12 Helicopter Aerodynamics, Structures and Systems	
12.1 Theory of Flight – Rotary Wing Aerodynamics	MEA316C
12.2 Flight Control Systems	MEA316C
12.3 Blade Tracking and Vibration Analysis	MEA316C
12.4 Transmissions	MEA316C
12.5 Airframe Structures	MEA304C, MEA339C
12.6 Air Conditioning	MEA310C
12.7 Instruments/Avionic Systems	MEA343B
12.8 Electrical Power	MEA223D, MEA301C
12.9 Equipment and Furnishings	MEA304C
12.10 Fire Protection	MEA223D, MEA318C
12.11 Fuel Systems	MEA223D, MEA301C, MEA309C
12.12 Hydraulic Power	MEA223D, MEA309C
12.13 Ice and Rain Protection	MEA223D, MEA310C
12.14 Landing Gear	MEA223D, MEA309C
12.15 Lights	MEA223D

Syllabus Reference B1.3 Licence	Units of Competency Providing Full Coverage
12.16 Pneumatic/Vacuum	MEA223D, MEA310C
12.17 Integrated modular avionics	MEA343B
12.18 On Board Maintenance Systems	MEA343B
12.19 Information systems such as air traffic and information management systems and network server systems	MEA343B
Module 15 Gas Turbine Engine	
15.1 Fundamentals	MEA322C
15.2 Engine Performance	MEA322C
15.3 Inlet	MEA223D, MEA322C
15.4 Compressors	MEA322C
15.5 Combustion Section	MEA322C
15.6 Turbine Section	MEA322C
15.7 Exhaust	MEA322C
15.8 Bearings and Seals	MEA322C
15.9 Lubricants and Fuels	MEA301C
15.10 Lubrication Systems	MEA322C
15.11 Fuel Systems	MEA223D, MEA322C
15.12 Air Systems	MEA223D, MEA322C
15.13 Starting and Ignition Systems	MEA223D, MEA322C
15.14 Engine Indication Systems	MEA322C, MEA343B
15.15 Power Augmentation Systems	MEA322C
15.16 Turbo Prop Engines	MEA223D, MEA322C
15.17 Turbo-Shaft Engines	MEA223D, MEA322C

Syllabus Reference B1.3 Licence	Units of Competency Providing Full Coverage
15.18 Auxiliary Power Units	MEA223D, MEA322C
15.19 Power plant Installation	MEA203C, MEA306C
15.20 Fire Protection Systems	MEA223D, MEA310C
15.21 Engine Monitoring and Ground Operation	MEA322C, MEA323B
15.22 Engine Storage and Preservation	MEA306C

Alignment between CASA Licensing Syllabus and Aeroskills Units of Competency – B1.4 Licence

Syllabus Reference B1.4 Licence	Units of Competency Providing Full Coverage
Module 1 Mathematics	MEA201B
Module 2 Physics	MEA201B

14.1 Turbine Engines	MEA227D, MEA224C
14.2 Engine Indicating Systems	MEA224C

Appendix 2: Glossary of Terms and Definitions

Acronyms

A	
AC	Advisory Circular or Alternating current
ACAS	Aircraft collision avoidance system
ACARS	Aircraft communications addressing and reporting system
AD	Airworthiness Directive
ADF	Australian Defence Force or Automatic direction finder
AFCS	Automatic flight control system
AH	Artificial horizon
AHRS	Attitude and heading reference system
AM	Amplitude modulated
AMO	Approved Maintenance Organisation (CASA) or Authorised Maintenance Organisation (ADF)
APU	Auxiliary power unit
AQF	Australian Qualification Framework
ARINC	Aeronautical Radio Incorporated (avionic data bus)
ASI	Airspeed indicator
ATA	Air Transport Association
ATC	Air traffic control
ATSB	Australian Transport Safety Bureau
B	
BCF	Bromochlorodifluoromethane (fire extinguisher)

C	
CAMO	Continuing airworthiness management organisation
CASA	Civil Aviation Safety Authority
CASR	Civil Aviation Safety Regulation
CAIR	Confidential aviation incident report
CAR	Civil Aviation Regulation
CG	Centre of gravity
CRO	Cathode ray oscilloscope
CRT	Cathode ray tube
CVR	Cockpit voice recorder
D	
DC	Direct current
DG	Directional gyro
DME	Distance measuring equipment
DRABC	Danger, Respond, Airway, Breathing, Circulation
DTP	Desk top publishing

E	
ECAM	Electronic central aircraft monitor system
EFIS	Electronic flight instrument system
EICAS	Engine indicating and crew alerting system
ELT	Emergency location transmitter
EPA	Environmental Protection Agency
EROPS	Extended Range Operations
F	
FADEC	Full authority digital engine control
FDR	Flight data recorder
FLIR	Forward-looking infra-red
FM	Frequency modulated
FMS	Flight management system
FMCS	Flight management computer system
FOD	Foreign Object Damage
FRP	Fibre reinforced plastic
G	
GPS	Global positioning system
GPWS	Ground proximity warning system
GNS	Global navigation system

H	
HEIU	High energy ignition unit
HF	High frequency
HUD	Head-up display
I	
IAS	Indicated airspeed
ILS	Integrated logistic support or instrument landing system
INS	Inertial navigation system
J	

K	

L	
LCR	Inductance, capacitance and resistance (type of electrical circuit)
LDBO	Liquid dry breathing oxygen
LRU	Line replaceable unit
LSA	Logistic support analysis

M	
MCS	Maintenance control section
MDR	Major defect report
MEL	Minimum equipment list
MRB	Maintenance Review Board
MTO	Maintenance Training Organisation (CASR Part 147)
MQI	Maintenance Quality Inspector (ADF airworthiness system)
MSDS	Material safety data sheet
MSG	Maintenance Standards Group
N	
NDT	Non-destructive testing
O	
OAT	Outside air temperature
P	
PCB	Printed circuit board
PCT	Practical consolidation of training
PCU	Passenger control unit
PPE	Personal protective equipment
Q	

R	
RADALT	Radio altimeter
RAM	Reliability, availability and maintainability
RF	Radio frequency
RTO	Registered Training Organisation
S	
SATCOM	Satellite communications
SDR	Service difficulty report
SMS	Stores management system
SSS	Stores suspension system
T	
TACAN	Tactical Aerial Navigation
TAMM	Technical Airworthiness Maintenance Manual (AAP 7001.053)
TAS	True airspeed
TRU	Transformer rectifier unit
U	
UHF	Ultra high frequency

V	
VCR	Video cassette recorder
VHF	Very high frequency
VOR	Very high frequency omni-directional range
VSI	Vertical speed indicator
W	

X	

Y	

Z	

Definitions

Term	Definition
Aeroskills Education and Training Reference Group (part of MSA)	<p>The Aerospace industry body providing advice on training and skill needs for aircraft engineering maintenance and manufacture.</p> <p>The Reference Group is part of the Manufacturing Skills Council which operates as MSA.</p>
Analyse	The ability to break down material into component parts, explain relationships between parts and to recognise the organisational principles involved.
Application	The ability to use learned material in new and concrete situations, the application of rules, methods, concepts, principles, laws, theories and skills.
Apprentice/trainee	Any person who is undertaking off-job training courses and/or completing on-job competency standards.
Approved aerospace assessor	A person who is authorised by the particular RTO to assess whether an individual has achieved all of the specified competency requirements for attainment of Aeroskills Training Package units of competency.
Assessment by simulation	<p>Where system or component reliability on some types of aircraft or equipment has resulted in few opportunities to develop competency on-job assessment may be carried out through task simulation, with the circumstances defined as follows:</p> <ul style="list-style-type: none"> • In an off-job training situation, competency assessment under simulated conditions may be carried out where simulated aircraft maintenance trainers are available, or where training aid aircraft or components are adequate for the development and demonstration of competency. • In a maintenance workplace, competency assessment under simulated conditions may be carried out where a candidate has attained competency in the majority of units relevant to the qualification being sought; sufficient to demonstrate a broad application of basic trade skills and theory. Under such circumstances the candidate could be required to assemble required manuals and documentation and then describe in detail to the assessor how the task would be performed so as to satisfy the prescribed conditions of assessment for the unit of competency.
Classify	To be able to sort and place into groups having common

	characteristics.
Comprehension	The ability to grasp the meaning of material: translating material from one form to another: by interpreting material (explaining or summarising); predicting consequences or effects.
Component	Any self-contained part, combination of parts, sub-assemblies or units, which perform a distinctive function necessary to the operation of a system.
Construct	To draw, make, design, assemble, prepare or build.
Defect	Any confirmed abnormal condition of an item whether or not this could ultimately result in a failure.
Demonstrate	To perform a set of procedures with or without verbal explanation.
Describe	To supply a verbal account (orally or in writing) that gives the essential categories, properties or relationships.
Equipment	Equipment (including test equipment) required to support the maintenance or manufacture of aircraft or aircraft components. Specific application may be further defined by reference to relevant illustrated tool and equipment manuals. Ground support equipment would refer to items, such as trestles, ladders, docking stands, slings and lifting booms, and so on, and a range of high access mobile equipment.
Fabricate/assemble	To take raw stock and make detailed parts by a variety of methods, such as cutting, bending, attaching, and so on. It may be applied to metal and composite structures, electrical parts, and so on.
Generic skill	The fundamental, non-trade specific, skills which are transferable to enable a person to perform a wide variety of similar or related tasks. For example, the 'generic skill' of using a screwdriver implies that the apprentice/trainee can use a range of screwdrivers to perform a variety of tasks.
Industry practice(s)	Procedures and specifications which are generally applicable in aircraft maintenance activities, as specified by standard practice manuals and accepted industry requirements.
Industry standard	Specification or pre-determined procedure or outcome defined by aircraft, component or equipment manufacturers, or regulatory authorities. It may be in the form of manuals, service bulletins, special instruction, civil aviation orders or regulations.
Inspect	To examine or check a system assembly, component or part by visual or physical means, for the purpose of identifying defects or

	limits.
Licensed Aircraft Maintenance Engineer	<p>The LAME holds a licence issued by CASA allowing him/her to certify or sign for aircraft maintenance as covered by the licence. The LAME certifies (within the limits of the licence) that maintenance, testing or inspection has been carried out to approved data and that the aircraft is airworthy and still meets its type design standard.</p> <p>CASA's new licensing requirements mean that (from a notified date and allowing for transition steps as specified in CAO 100.66) persons will have to complete specified vocational competency pathways prior to applying to CASA for issue of the particular licence sought.</p>
Line replaceable unit	A unit (component) that can be readily changed on an aircraft during line maintenance operations.
Maintenance (scheduled)	That maintenance performed at defined intervals to retain a system, component or part in a serviceable condition by systematic inspection, detection, replacement of worn-out items, adjustment, calibration, cleaning, and so on.
Maintenance (unscheduled)	That maintenance performed to restore a system, component or part to a satisfactory condition by providing correction of a known or suspected malfunction and/or defect.
Manual	A document or publication that provides data relative to a special subject or equipment. Information covered by manuals may include aircraft maintenance, component maintenance, fault isolation, structural repair, system schematics, wiring, weight and balance, illustrated parts catalogues, tools and equipment.
Modify	Change or alter through re-work and/or through the installation or removal of an assembly, component or part.
Overhaul	The work necessary to return an aircraft component back to a zero time condition. In this context, overhaul generally refers to 'off-aircraft' workshop activities.
Part	One piece, or two or more pieces joined together which are not normally subject to disassembly without destruction of designed use.
Procedure	A step-by-step sequence of events or actions, which may also include a process.
Process	To make, alter or finish aircraft parts by bonding, metal spraying, brush cadmium plating, brush alodine, anodising, (flap, rotor and shot) peening, grit blasting, cold hole working, perma and cable

	swaging, electroplating, heat treatment, photo-etching, welding/machining, and so on.
Regulatory authority	Any organisation or department which has a responsibility for establishing and monitoring adherence to procedures, specifications or standards within the aerospace industry, either nationally or internationally, where applicable.
Remove/install	To take off or attach a sub-assembly, component or part from, or to a larger assembly. It may include assemblies, sub-assemblies, components or equipment.
Repair	To make a failed, damaged or worn component or part serviceable by dismantling assessing serviceability, modifying, rectifying, replacing piece parts and reassembling.
Rig	Adjust to a specified position or condition.
Supervision (of an apprentice/trainee)	<p><u>Direct</u>: working under direct supervision means an apprentice/trainee receives detailed instruction on the tasks to be performed, is subject to progress checks as to those tasks, and has those tasks reviewed on completion.</p> <p><u>Routine</u>: the task was performed with the apprentice/trainee working independently and only standard inspection requirements or guidance was performed during the task. With this level of supervision, the apprentice/trainee may have been under constant observation during the performance of the task. However, he/she did not require a level of interaction above that of a tradesperson undertaking the same task. Additionally, all associated sub-tasks (paperwork, tool control, and so on) were completed.</p>
System	A combination of interrelated assemblies, components or parts arranged to perform a specific function.
Test	To test and/or function (operate) an assembly, component or part to make sure that it agrees with the applicable specifications. In this definition, testing provides a way in which adjustment and/or troubleshooting/diagnosis can occur.
Troubleshoot/fault diagnosis	To locate and determine the reason for a fault in a system, component or part by means of a systematic checking or analysis.
Tune/adjust/calibrate	Correct or alter a system, circuit, components or indicator to provide a specified outcome or condition.

MEA20411 Certificate II in Aeroskills

Modification History

Unit codes updated as required - equivalent

Description

This qualification may be of use to employees of aviation maintenance workshops who are required to perform repair and overhaul tasks on a limited range of aircraft electrical, hydraulic, pneumatic, electro-hydraulic and electro-pneumatic components, or who perform simple repairs on a limited range of structural components.

Units of competency that comprise this qualification are a mix of common units that apply to all technical employment streams covered by the MEA11 Aeroskills Training Package (core units) and technical stream units that are specific to a technical employment stream (elective units).

The qualification provides significant credits towards higher level Aeroskills Certificates.

Pathways Information

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Seeking guidance and describing clearly faults, problems and spares requirements • Negotiating with team members regarding timing and progress of work activities • Understanding and interpreting procedures, instructions and maintenance publications • Completing maintenance documentation and component tags • Reading drawings relating to maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with supervisors, qualified persons providing guidance and other team members who may be of different ages, gender, race, religion and political persuasion • Working effectively as a member of a team and gaining the trust and support of other team members
Problem solving	<ul style="list-style-type: none"> • With qualified person guidance identifying problems and developing practical solutions to maintenance problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to obtain and apply dimensional and tolerance data and to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback during competency development and job performance • Evaluating under guidance ideas that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards and adapting competencies to the performance of a range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective

	introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes with supervisors and with qualified persons providing guidance
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of guidance required and the level of supervision exercised by supervisors • Identifying career paths beyond Certificate II, especially with regard to on-aircraft as an aircraft maintenance engineer or component repair and overhaul in workshops
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through expansion of the range of tasks and through organisational continuation training • Adapting competencies to accommodate new ideas and techniques • Using feedback from qualified persons and supervisors to identify ways in which competence can be improved
Technology	<ul style="list-style-type: none"> • Maintaining components and component parts that are within the scope of competencies and selecting applicable tools and equipment • Storing and caring for components, component parts, tools and support equipment • Using test equipment that is within the scope of competencies held • Amending print-based maintenance publications • Using computers and microfiche to obtain maintenance data and using computers to complete documentation

Packaging Rules

To be awarded the MEA20411 Certificate II in Aeroskills, competency must be demonstrated in one of:

- Avionic: **twelve (12)** units consisting of **eight (8)** Core units plus **three (3)** units from Elective Group A and **one (1)** unit from either Group B or Group C
- Mechanical: **twelve (12)** units consisting of **eight (8)** Core units plus **three (3)** units from Elective Group B and **one (1)** unit from either of Groups A and C
- Structures: **eleven (11)** units consisting of **eight (8)** Core units plus **two (2)** units from Elective Group C and **one (1)** unit from either of Groups A and B.

Core units of competency

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA117A	Apply self in the aviation maintenance environment	Nil
MSAENV272 B	Participate in environmentally sustainable work practices	Nil

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
MEA238B	Perform routine removal and installation of miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Unit code	Unit title	Prerequisites
MEA239B	Fabricate aircraft electrical looms and harnesses	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA240B	Use electrical test equipment to perform basic electrical tests	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Group B

Unit code	Unit title	Prerequisites
MEA329B	Dismantle, inspect, maintain and assemble aircraft basic hydraulic and pneumatic components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA330B	Dismantle, inspect, maintain and assemble aircraft non-primary structural removable components or parts and internal fittings	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA331B	Dismantle, inspect, maintain and assemble aircraft gas turbine engine components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA332B	Dismantle, inspect, maintain and assemble aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA333B	Dismantle, inspect, maintain and assemble aircraft piston engine components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Group C

Unit code	Unit title	Prerequisites
MEA406B	Repair/modify aircraft non-primary structural sheetmetal components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA407B	Repair/modify aircraft non-primary structural non-metallic components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

MEA20511 Certificate II in Aircraft Line Maintenance

Modification History

Unit codes updated as required - equivalent

Description

This qualification is applicable to employees of airlines and other operators of piston, jet and turbo-propeller aircraft and helicopters who are required to hold a CASA A Licence to perform and certify a range of specified maintenance tasks that can be performed with the aircraft on a flight line or at the departure gate. On completion of the required maintenance tasks the individual is authorised to release the aircraft to service.

The qualification satisfies CASA requirements for the grant, under CASR Part 66, of an Aircraft Maintenance Engineer A Licence when:

- the skills and knowledge requirements align with CASA syllabus requirements described under 'Licensing' in the Assessment Guidelines and in Appendix 1
- training has been delivered in accordance with the requirements of CASR Part 147.

The units of competency that comprise this qualification consist of a mix of:

- common units that are applicable to all of the employment streams covered by the MEA11 Aeroskills Training Package or are of an administrative nature relating to the CASA A Licence
- a combination of Avionic, Mechanical and Structures Technical Stream units that apply to the range of tasks performed by the holders of CASA A Licences.

This qualification provides a number of credits towards higher level Aeroskills Certificates and towards the Diploma of Aeroskills (Mechanical) which is required for the grant of a CASA B1 licence.

Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors • Identifying career paths beyond Certificate II, especially with regard to progression to an applicable B1 Licence
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through type training and organisational continuation training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors to identify ways in which competence can be improved
Technology	<ul style="list-style-type: none"> • Maintaining aircraft within the scope of the CASA A Licence and selecting applicable tools and support equipment • Storing and caring for components, tools and support equipment • Using test equipment that is within the scope of the CASA A Licence • Amending print-based maintenance publications • Using on-board maintenance systems to identify maintenance requirements • Using computers and microfiche to obtain maintenance data and using computers to complete documentation

Packaging Rules

To be awarded the MEA20511 Certificate II in Aircraft Line Maintenance, competency must be demonstrated in **fifteen (15)** units of competency, as follows:

- **fourteen (14)** Core units made up of common, imported and technical stream units
- **one (1)** unit from Elective Group A, chosen according to the CASA A licence that is being sought.

Core units of competency

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA117A	Apply self in the aviation maintenance environment	Nil
MEA119B	Perform administrative processes to prepare for certification of civil aircraft A level line maintenance	All Certificate II units relevant to the applicable A Licence
MEA240B	Use electrical test equipment to perform basic electrical tests	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA264A	Remove and install aircraft electrical/avionic components during line maintenance	MEA265A
MEA265A	Remove and install general aircraft electrical hardware	MEA101B, MEA103B,

Unit code	Unit title	Prerequisites
		MEA105C, MEA107B, MEA108B, MEA109B
MEA344A	Remove and install aircraft components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA418A	Perform basic repair of aircraft internal fittings during line maintenance	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MSAENV272 B	Participate in environmentally sustainable work practices	Nil

Elective units Group A

Unit code	Unit title	Prerequisites	Unit applicability
MEA345A	Perform scheduled line maintenance activities on gas turbine engine fixed wing aircraft	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Mandatory where A1 Licence is sought
MEA346A	Perform scheduled line maintenance activities on gas turbine engine rotary wing aircraft	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Mandatory where A3 Licence is sought
MEA347A	Perform scheduled line maintenance activities on piston engine fixed wing aircraft	MEA101B MEA103B MEA105C	Mandatory where A2 Licence is sought

MEA20611 Certificate II in Aircraft Surface Finishing

Modification History

Unit codes updated as required - equivalent

Description

This qualification would be applicable to employees of aircraft maintenance organisations or specialist aircraft surface finishing organisations who are involved in the stripping of old finishes and in the preparation of aircraft and aircraft component surfaces for the application of paint and other specialist surface finishes. A limited range of component removal and installation tasks related to surface finishing tasks may also be performed.

Units of competency that comprise this qualification are a mix of common units that are applicable to all employment streams at the Certificate II level plus a number of structures technical stream units that relate to aircraft surface finishing and minor repairs, plus a mechanical technical stream unit that provides optional multi-skilling.

The qualification provides a significant number of credits towards Surface Finishing qualifications at Certificate III and IV levels. The common units also provide credit towards other Aeroskills qualifications and the elective units would count towards a MEA20411 Certificate II in Aeroskills.

MEA30111 Certificate III in Aircraft Surface Finishing

Modification History

Unit codes updated as required - equivalent

Description

This qualification may apply to employees of aircraft maintenance organisations, or of specialist aircraft surface finishing organisations who are required to prepare the surfaces of aircraft and aircraft components for the application of surface finishes, apply paint, specialist finishes and decals or stencils. Also required is the application of aircraft registration markings, national markings and organisational logos.

The units of competency that comprise this qualification are a mix of:

- common units that apply to all Aeroskills specialist streams at Certificate III and IV levels
- structures technical stream units relating to aircraft surface finishing
- imported automotive units relating to the application of paint finishes.

This qualification fully articulates with MEA40911 Certificate IV in Aircraft Surface Finishing and the Common units provide a number of credits towards other Aeroskills qualifications at Certificate III and IV levels.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from specialist personnel and technical representatives • Negotiating with other team members or supervisors regarding timing and progress of work activities and access to sections of the aircraft, or to equipment • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Completing maintenance documentation • Reading drawings relating to surface finishing schemes and maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting other team members with tasks and providing advice on work processes
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to apply finishing schemes and to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from peers and supervisors • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes

	<ul style="list-style-type: none"> • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with supervisors and other team members • Monitoring the time taken to complete tasks against team requirements or targets provided by supervisors • Collecting, analysing and organising information relating to assigned tasks and confirming the purpose and required work outcomes • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors and peers to identify ways in which competence can be improved • Mentoring new or more junior personnel • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating PPE and surface finishing equipment and ground support equipment and troubleshooting equipment faults • Testing the performance and calibration of surface finishing equipment • Storing and caring for surface finishing equipment, PPE and support equipment • Amending various forms of maintenance data

	<ul style="list-style-type: none">• Using computers and microfiche to obtain maintenance data and using computers to complete documentation
--	---

Packaging Rules

To be awarded the MEA30111 Certificate III in Aircraft Surface Finishing, competency must be demonstrated in **seventeen (17)** Core units of competency. Units must be chosen as specified under the conditions set out below.

There are no elective units for this qualification.

Core units – Common and imported

Take all **eight (8)** of the common and imported core units listed below.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MSAENV272B	Participate in environmentally sustainable work practices	Nil

Core units – Technical and imported

Plus, the **nine (9)** core technical stream and imported units listed below.

Unit Code	Unit Title	Prerequisites
MEA411A	Remove surface coatings from aircraft or aircraft components	MEA101B, MEA103B, MEA105C,

Unit Code	Unit Title	Prerequisites
		MEA107B, MEA108B, MEA109B
MEA412A	Pre-treat aluminium alloy surfaces	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA413A	Seal aircraft and aircraft component structural seams	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA414A	Remove light corrosion from aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA415A	Paint aircraft surfaces	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA416A	Apply aircraft identification markings, graphics and decals	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA417A	Apply specialty coatings to aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
AURV229749A	Prepare spray painting materials and equipment	Nil
AURV329603D A	Apply air dry and polyurethane enamel refinishing materials	Nil

Custom Content Section

MEA30211 Certificate III in Aeroskills (Mechatronics)

Modification History

New qualification

Description

This qualification may apply to individuals employed within the General Aviation industry sector on the maintenance of small aircraft who are not seeking direct progression to a CASA B1.2 Aircraft Maintenance Engineer licence limited to basic small aircraft maintenance. It may also be of use as a first Aeroskills qualification for individuals transitioning from an allied trade to employment on small aircraft maintenance.

Individuals who intend to seek the grant of a licence in the future should consider the requirements for MEA41011 Certificate IV in Aeroskills (Mechatronics) when selecting elective units of competency for this qualification.

Depending on the choice of elective units, this qualification articulates with MEA41011 Certificate IV in Aeroskills (Mechatronics) and a number of units also provide credits towards other qualifications at AQF Certificate IV and Diploma levels.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from specialist personnel and technical representatives • Negotiating with other team members or supervisors regarding timing and progress of work activities and access to sections of the aircraft, or to equipment • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Completing maintenance documentation • Reading drawings relating to modifications and maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting other team members with tasks and providing advice on work processes
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to apply tolerances and limits, and to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from peers and supervisors • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes

	<ul style="list-style-type: none"> • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with supervisors and other team members • Monitoring the time taken to complete tasks against team requirements or targets provided by supervisors • Collecting, analysing and organising information relating to assigned tasks and confirming the purpose and required work outcomes • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors and peers to identify ways in which competence can be improved • Mentoring new or more junior personnel • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults • Maintaining aircraft systems, components and test stands • Performance testing of aircraft systems and engines • Storing and caring for components, parts, tools, test equipment and support equipment

	<ul style="list-style-type: none">• Amending various forms of maintenance data• Using computers and microfiche to obtain maintenance data and using computers to complete documentation
--	--

Packaging Rules

To be awarded the MEA30211 Certificate III in Aeroskills (Mechatronics), competency must be demonstrated in **nineteen (19)** units of competency, as follows:

- **fourteen (14)** Core units consisting of common, technical stream and imported units
- **five (5)** Elective units drawn from the technical stream units listed in Group A while observing the unit selection guidelines.

Core units of competency

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B, MEA260B
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA301C	Perform aircraft flight servicing	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

MEA363B	Inspect, repair and maintain structures and related components of non-pressurised small aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA364A	Maintain and/or repair small aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MSAENV272 B	Participate in environmentally sustainable work practices	Nil

Elective units Group A

Select **five (5)** units while observing the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA202C	Remove and install basic aircraft electrical system components	MEA201B	Required for electrical retractable undercarriage maintenance – do not take with MEA274A
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components	MEA202C MEA246C	Required for electrical retractable undercarriage maintenance – do not take with MEA274A
MEA274A	Maintain basic light aircraft electrical systems and components	MEA246C	Required for 100 hourly inspection on basic light aircraft or helicopters
MEA275A	Maintain basic light aircraft instrument systems and components	MEA246C	Required for 100 hourly inspection on basic light aircraft or helicopters
MEA276A	Maintain basic light aircraft communication and radio navigation systems	MEA246C	Required for 100 hourly inspection on basic light aircraft or helicopters
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components	MEA101B MEA103B MEA105C MEA107B	Required for hydraulic retractable undercarriage maintenance

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA108B MEA109B	
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components	MEA302C	Do not take with MEA317C – MEA363B provides credits towards this unit
MEA306C	Remove and install engines and engine system components	MEA302C	Applicable to piston and gas turbine engines
MEA307C	Remove and install propeller systems and components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Required for variable pitch propellers
MEA308C	Remove and install rotary wing rotor and flight control system components	MEA302C	Required for helicopters with powered flight controls – count as 2 units - do not take with MEA352A
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	MEA302C	Required for hydraulic retractable undercarriage maintenance
MEA311D	Inspect and repair/modify aircraft structures	MEA304C or MEA317C	MEA363B provides credit towards this unit – count as 2 units
MEA313C	Inspect, test and troubleshoot piston engine systems and components	MEA306C	Required for supercharged and turbocharged engines
MEA314C	Inspect, test and troubleshoot gas turbine engine systems and components	MEA306C	Required for gas turbine engines
MEA315C	Inspect, test and troubleshoot propeller systems and	MEA307C	Required for variable pitch propellers

Unit code	Unit title	Prerequisites	Unit selection guidelines
	components		
MEA316C	Inspect, test and troubleshoot rotary wing rotor and control systems and components	MEA308C	Required for helicopters with powered flight controls – count as 2 units – do not take with MEA352A
MEA351A	Maintain airframe systems of basic light fixed wing aircraft	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Required for 100 hourly inspection on basic light aircraft
MEA352A	Maintain basic rotary wing aircraft systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Required for 100 hourly inspection on basic helicopters
MEA353A	Maintain basic light aircraft engines and propellers	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Required for 100 hourly inspection on basic light aircraft or helicopters
MEA354A	Maintain light aircraft pneumatic systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA355A	Maintain light aircraft air cycle	MEA201B	

Unit code	Unit title	Prerequisites	Unit selection guidelines
	air conditioning systems	MEA246C	
MEA356A	Maintain light piston engine aircraft pressurisation systems	MEA201B MEA246C	
MEA357A	Inspect, test and repair aircraft fabric surfaces	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA359A	Inspect and repair aircraft wooden structures	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA360A	Maintain aircraft diesel engines	MEA353A	
MEA361A	Maintain aircraft two stroke petrol engines	MEA353A	
MEA362A	Maintain aircraft vapour cycle air conditioning systems	MEA201B MEA246C	
MEA367A	Repair/modify aircraft composite structure using cold bonding	MEA401C or MEA339C or MEA363B	Do not take with MEA405B
MEA405B	Repair/modify aircraft composite material structure/components	MEA401C Note that MEA363B is equivalent to this unit	Required for repairs to composite primary and secondary structure

MEA30311 Certificate III in Aircraft Life Support and Furnishing

Modification History

Unit codes updated as required - equivalent

Description

This qualification may be applicable to members of the ADF and to employees of aircraft maintenance organisations who are maintaining aircraft and personal life support equipment and aircraft furnishings.

The qualification consists of a number of common units plus mandatory and elective technical stream units including a number of imported units dealing with explosive ordnance (pyrotechnics) safety and inspection, and with sewing, trimming and use of fabric adhesives. The qualification articulates with MEA41111 Certificate IV in Aircraft Life Support and Furnishing and the common units and the elective Avionic, Mechanical and Structures Technical Stream units provide a number of credits towards other Aeroskills Certificates at Certificate II, III and IV levels.

MEA40611 Certificate IV in Aeroskills (Avionics)

Modification History

Unit codes updated as required - equivalent

Description

This qualification may apply to employees of civil aviation maintenance organisations or to members of the ADF who perform scheduled inspections, fault diagnosis and repair, and modification of aircraft electrical, instrument and radio systems and system components.

The qualification defines the exit from an apprenticeship and may apply to either aircraft maintenance performed on flight lines/ramps and in hangars, or to avionic component repair and overhaul performed in workshops. These outcomes are defined in two streams:

- aircraft maintenance stream
- component maintenance workshop stream.

The qualification consists of:

- common units that apply to all Aeroskills specialist streams at Certificate III and IV levels
- avionic technical stream units relating to either aircraft avionic system and component maintenance or to component repair and overhaul
- one mechanical technical stream unit that is applicable to the aircraft maintenance stream.

Because of the wide application of this qualification there is considerable flexibility in the selection of technical stream units and individuals should be mindful of their future career aspirations when selecting units for, in particular, the aircraft maintenance stream. Provided that the correct elective units are selected, the qualification articulates with the MEA50111 Diploma of Aeroskills (Avionics) which qualifies individuals for the grant by CASA of a B2 Aircraft Maintenance Engineer Licence.

The qualification also provides credits towards the MEA50311 Diploma of Aviation Maintenance Management (Avionics) and the MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics).

Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-the-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors and peers to identify ways in which competence can be improved • Mentoring new or more junior personnel • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment and troubleshooting faults • Using on-board maintenance systems and using maintenance-related software

	<ul style="list-style-type: none">• Operating automatic test stations• Testing the performance and calibration of components and test stations• Storing and caring for components, parts, tools, test equipment and support equipment• Amending various forms of maintenance data• Using computers and microfiche to obtain maintenance data and using computers to complete documentation
--	--

Packaging Rules

To be awarded the MEA40611 Certificate IV in Aeroskills (Avionics) competency must be demonstrated in:

- **Aircraft Maintenance Stream**

- **eleven (11)** Core units consisting of common, imported and some avionic technical stream units
- **thirteen (13)** Elective technical stream units chosen from Group A
- Total: **twenty four (24)** units.

OR

- **Component Maintenance Workshop Stream**

- **twelve (12)** Core units consisting of common, imported and avionic technical stream units
- **three (3)** Elective technical stream units chosen from Group B
- Total: **fifteen (15)** units.

Core units (Aircraft Maintenance Stream)

Complete all **eleven (11)** mandatory common, technical stream and imported units listed below.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B

Unit code	Unit title	Prerequisites
		MEA108B, MEA109B
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B, MEA260B
MEA260B	Use electrical test equipment	MEA101B, MEA103B MEA105C, MEA107B MEA108B, MEA109B
MSAENV272 B	Participate in environmentally sustainable work practices	Nil

Core units (Component Maintenance Workshop Stream)

Complete all **twelve (12)** mandatory common, technical stream and imported units listed below.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B MEA105C, MEA107B MEA108B, MEA109B
MEA246C	Fabricate and/or repair aircraft electrical hardware	MEA201B, MEA260B

Unit code	Unit title	Prerequisites
	or parts	
MEA260B	Use electrical test equipment	MEA101B, MEA103B MEA105C, MEA107B MEA108B, MEA109B
MEA261C	Use electronic test equipment	MEA101B, MEA103B MEA105C, MEA107B MEA108B, MEA109B
MSAENV272 B	Participate in environmentally sustainable work practices	Nil

Elective units

Group A (Aircraft Maintenance Stream)

Choose **thirteen (13)** of the technical stream units listed below while observing the unit selection guidelines in column four.

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
MEA202C	Remove and install basic aircraft electrical system components	MEA201B	Do not take with MEA203C
MEA203C	Remove and install advanced aircraft electrical system components	MEA201B	Do not take with MEA202C
MEA204C	Remove and install basic aircraft instrument system components	MEA201B	Do not take with MEA205C
MEA205C	Remove and install advanced aircraft instrument system components	MEA201B	Do not take with MEA204C
MEA206C	Remove and install aircraft basic radio communication and navigation system components	MEA201B	Elective
MEA207C	Remove and install aircraft electronic system components	MEA201B	Elective

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
MEA208C	Remove and install aircraft pressurisation control system components	MEA201B	Elective
MEA209C	Remove and install aircraft oxygen system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components	MEA202C MEA246C	Do not take with MEA211C or with MEA223C and MEA227D
MEA211C	Inspect, test and troubleshoot advanced aircraft electrical systems and components	MEA203C MEA246C	Do not take with MEA210C or with MEA223D and MEA227D
MEA212C	Inspect, test and troubleshoot basic aircraft instrument systems and components	MEA204C MEA246C	Do not take with MEA213C or with MEA224C and MEA228D
MEA213C	Inspect, test and troubleshoot advanced aircraft instrument systems	MEA205C MEA246C	Do not take with MEA212C or with MEA224C and MEA228D
MEA214C	Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components	MEA206C MEA246C	Do not take with MEA226D and MEA229D
MEA215C	Inspect, test and troubleshoot advanced aircraft communications systems and components	MEA206C MEA246C	Do not take with MEA226D and MEA229D
MEA216C	Inspect, test and troubleshoot instrument landing systems and components	MEA206C MEA207C MEA246C	Do not take with MEA226D and MEA229D
MEA217C	Inspect, test and troubleshoot fixed wing autopilot systems and components	MEA207C MEA246C	Take instead of MEA225B and MEA230C if only maintaining 3 axis autopilot

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
			system
MEA218C	Inspect, test and troubleshoot rotary wing autopilot systems and components	MEA207C MEA246C	Take instead of MEA231C if only maintaining an autopilot system
MEA219C	Inspect, test and troubleshoot aircraft pressurisation control systems and components	MEA208C MEA246C	Do not take with MEA224C and MEA228D
MEA220C	Inspect, test and troubleshoot aircraft primary radar systems and components	MEA207C MEA246C	Do not take with MEA226D and MEA232C
MEA221C	Inspect, test and troubleshoot aircraft secondary radar systems and components	MEA207C MEA246C	Do not take with MEA226D and MEA232C
MEA222C	Inspect, test and troubleshoot aircraft oxygen systems and components	MEA209C	Elective
MEA223D	Inspect aircraft electrical systems and components	MEA203C MEA246C	Do not take with MEA210C or MEA211C
MEA224C	Inspect aircraft instrument systems and components	MEA205C MEA246C	Do not take with MEA212C or MEA213C
MEA225C	Inspect fixed wing aircraft automatic flight control systems and components	MEA207C MEA246C	Do not take with MEA217C
MEA226D	Inspect aircraft electronic systems and components	MEA207C MEA246C	Do not take with MEA213C, MEA214C or MEA15C
MEA227D	Test and troubleshoot aircraft electrical systems and components	MEA223D	Do not take with MEA211C
MEA228D	Test and troubleshoot aircraft instrument systems and components	MEA224C MEA226D	Do not take with MEA212C or MEA213C
MEA229D	Test and troubleshoot aircraft radio frequency navigation and	MEA226D	Do not take with MEA214C, MEA215C or MEA216C

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
	communications systems and components		
MEA230C	Test and troubleshoot fixed wing aircraft automatic flight control systems and components	MEA225C MEA246C	Do not take with MEA217C
MEA231C	Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components	MEA207C MEA246C	Do not take with MEA218C
MEA232C	Test and troubleshoot aircraft pulse systems and components	MEA226D MEA246C	Do not take with MEA220C or MEA221C
MEA233C	Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components	MEA207C MEA246C	Do not take with MEA226D and MEA228D
MEA234C	Inspect, test and troubleshoot aircraft global navigation systems and components	MEA206C MEA207C MEA246C	Do not take with MEA226D and MEA229D
MEA261C	Use electronic test equipment	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective
MEA262B	Modify/repair single layer printed circuit boards	MEA260B MEA261C	Do not take with MEA263B
MEA263B	Modify/repair multi-layer printed circuit boards	MEA260B MEA261C	Do not take with MEA262B
MEA274A	Maintain basic light aircraft electrical systems and components	MEA246C	Do not take with MEA202C, MEA203C, MEA210C, MEA211C – applicable only to basic light aircraft
MEA275A	Maintain basic light aircraft instrument systems and	MEA246C	Do not take with MEA204C, MEA205C, MEA212C or MEA213C – applicable only

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
	components		to basic light aircraft
MEA276A	Maintain basic aircraft communication and radio navigation systems and components	MEA246C	Do not take with MEA206C, MEA214C, MEA289A – applicable only to basic light aircraft
MEA277A	Maintain twin engine aircraft electrical systems and components	MEA210C	Do not take with MEA211C
MEA278A	Inspect, test and troubleshoot instrument display systems and components	MEA207C, MEA246C	Do not take with MEA226D, MEA228D
MEA279A	Inspect, test and troubleshoot full authority digital engine control systems	MEA207C, MEA246C	Do not take with MEA230C
MEA280A	Inspect, test and troubleshoot flight management systems and components	MEA207C, MEA246C	Elective
MEA281A	Maintain light aircraft AC powered instrument systems and components	MEA246C	Do not take with MEA213C
MEA289A	Maintain basic light aircraft avionic systems and components	MEA246C	Do not take with MEA206C, MEA214C or MEA276A – applicable only to basic light aircraft
MEA290A	Fit avionic modification sheetmetal components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective - applicable only to small aircraft maintenance
MEA291A	Inspect, test and troubleshoot fixed wing single axis autopilot systems and components	MEA207C, MEA246C	Do not take with MEA217C
MEA301C	Perform aircraft flight servicing	MEA101B MEA103B	Elective

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
		MEA105C MEA107B MEA108B MEA109B	

Group B (Component Maintenance Workshop Stream)

Choose at least **three (3)** of the Avionic technical stream units listed below while observing the unit selection guidelines in column four.

Unit code	Unit title	Prerequisite or co-requisite	Unit selection guidelines
MEA252B	Test, align and troubleshoot synchro and servo system components	MEA201B MEA260B MEA261C	Elective
MEA262B	Modify/repair single layer printed circuit boards	MEA260B MEA261C	Do not take with MEA263B
MEA263B	Modify/repair multi-layer printed circuit boards	MEA260B MEA261C	Do not take with MEA262B
MEA282A	Repair or overhaul aircraft pulse system components	MEA260B MEA261C	Elective
MEA283A	Repair or overhaul aircraft display, control and distribution system components	MEA260B MEA261C	Elective
MEA284A	Repair or overhaul aircraft instrument system components	MEA260B MEA261C	Elective
MEA285A	Repair or overhaul aircraft radio frequency communication and navigation system components	MEA260B MEA261C	Elective
MEA286A	Repair or overhaul aircraft electrical/electro-mechanical components	MEA201B MEA260B	Elective
MEA287A	Repair or overhaul aircraft	MEA101B	Elective

	oxygen system components	MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA288A	Repair or overhaul aircraft audio and visual systems and reproducers	MEA260B MEA261C	Elective

MEA40711 Certificate IV in Aeroskills (Mechanical)

Modification History

Additional electives for component workshop training pathway. Unit codes updated as required - equivalent

Description

This qualification may apply to employees of civil aviation maintenance organisations or to members of the ADF who perform scheduled inspections, fault diagnosis and repair, and modification of airframes and airframe mechanical, hydraulic and pneumatic systems and components, and of aircraft engines and (where applicable) propellers.

The qualification defines the exit from an apprenticeship and may apply to either aircraft maintenance performed on flight lines/ramps and in hangars, or to airframe and engine component repair and overhaul performed in workshops. These outcomes are defined in two streams:

- aircraft maintenance stream
- component maintenance workshop stream.

The qualification consists of:

- common units that apply to all Aeroskills specialist streams at AQF Certificate III and IV levels
- mechanical and structures technical stream units relating to airframe and engine system and component maintenance
- mechanical technical stream units and a small number of avionic stream units that are applicable to the aircraft component maintenance workshop stream.

Because of the wide application of this qualification there is considerable flexibility in the selection of technical stream units and individuals should be mindful of their future career aspirations when selecting units for, in particular, the aircraft maintenance stream. Provided that the correct elective units are selected, the qualification articulates with the MEA50211 Diploma of Aeroskills (Mechanical) which qualifies individuals for the grant by CASA of a B1 Aircraft Maintenance Engineer Licence.

The qualification also provides credits towards the MEA50411 Diploma of Aviation Maintenance Management (Mechanical) and the MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical).

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from specialist personnel and technical representatives • Providing guidance to others and clearly describing faults, problems and spares requirements • Negotiating with other team members or supervisors regarding timing and progress of work activities and access to sections of the aircraft, or to equipment • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Completing maintenance documentation and component tags • Interpreting wiring diagrams and system schematics, and reading drawings relating to maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting other team members with tasks and providing advice on work processes and troubleshooting
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance and to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from peers and supervisors

	<ul style="list-style-type: none"> • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with supervisors and other team members • Monitoring the time taken to complete tasks against team requirements or targets provided by supervisors • Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators, such as the extent of oversight exercised by supervisors • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-the-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors and peers to identify ways in which competence can be improved • Mentoring new or more junior personnel • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults • Using on-board maintenance systems and using maintenance-related software

	<ul style="list-style-type: none">• Maintaining aircraft systems, components and test stands• Performance testing of aircraft systems and engines• Storing and caring for components, parts, tools, test equipment and support equipment• Amending various forms of maintenance data• Using computers and microfiche to obtain maintenance data and using computers to complete documentation
--	---

Packaging Rules

To be awarded the MEA40711 Certificate IV in Aeroskills (Mechanical), competency must be demonstrated in:

- **Aircraft Maintenance Stream**

- Core common and imported units: **eight (8)** units
- Elective technical stream units from Group A: **thirteen (13)** units
- Total: **twenty one (21)** units.

OR

- **Component Maintenance Workshop Stream**

- Core common and imported units: **eight (8)** units
- Elective technical stream units from Groups B and C: **six (6)** units
- Total: **fourteen (14)** units.

Core units of competency (common to both streams)

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MSAENV272 B	Participate in environmentally sustainable work practices	Nil

Elective units

Group A (Aircraft Maintenance Stream)

Choose **thirteen (13)** of the elective mechanical and structures technical stream units listed below while observing the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B MEA260B	
MEA260B	Use electrical test equipment	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA301C	Perform aircraft flight servicing	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA303D	Remove and install aircraft pneumatic system components	MEA101B MEA103B MEA105C MEA107B	

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA108B MEA109B	
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components	MEA302C	Do not take with MEA317C
MEA305C	Remove and install aircraft fixed wing flight control system components	MEA302C	
MEA306C	Remove and install engines and engine system components	MEA302C	
MEA307C	Remove and install propeller systems and components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA308C	Remove and install rotary wing rotor and flight control system components	MEA302C	Alternate to both MEA305C and MEA307C – count as two units
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	MEA302C	Do not take with MEA318C and MEA320C
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components	MEA303D	Do not take with MEA318C and MEA320C
MEA311D	Inspect and repair/modify aircraft structures	MEA304C or MEA317C	Do not take with MEA339C or both MEA401C and MEA410C – count as 3 units
MEA312C	Inspect, test and troubleshoot aircraft fixed wing flight control	MEA305C	Do not take with MEA318C and

Unit code	Unit title	Prerequisites	Unit selection guidelines
	systems and components		MEA321C
MEA313C	Inspect, test and troubleshoot piston engine systems and components	MEA306C	
MEA314C	Inspect, test and troubleshoot gas turbine engine systems and components	MEA306C	Do not take with MEA319C and MEA322C
MEA315C	Inspect, test and troubleshoot propeller systems and components	MEA307C	
MEA316C	Inspect, test and troubleshoot rotary wing rotor and control systems and components	MEA308C	Alternative to both of MEA312C and MEA315C – count as two units
MEA317C	Remove and install pressurised aircraft structural and non-structural components	MEA302C MEA303D	Do not take with MEA304C
MEA318C	Inspect aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components	MEA302C MEA303D MEM305C	Do not take with MEA309C or MEA310C
MEA319C	Inspect gas turbine engine systems and components	MEA306C	Do not take with MEA314C
MEA320C	Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components	MEA318C	Do not take with MEA309C or MEA310C
MEA321C	Test and troubleshoot aircraft fixed wing flight control systems and components	MEA318C	Do not take with MEA312C
MEA322C	Test and troubleshoot gas turbine engine systems and components	MEA319C	Do not take with MEA314C
MEA327B	Fabricate and/or repair aircraft mechanical components or parts	MEA101B	Do not take with MEA328C

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA328C	Maintain and/or repair aircraft mechanical components or parts	MEA302C MEA303D	Do not take with MEA327B
MEA339C	Inspect, repair and maintain aircraft structures	MEA304C or MEA317C	Do not take with MEA311D or MEA401C and MEA410C – count as 2 units
MEA351A	Maintain airframe systems of basic light fixed wing aircraft	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Applicable only to basic light aircraft maintenance
MEA352A	Maintain basic rotary wing aircraft systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Applicable only to basic helicopter maintenance
MEA353A	Maintain basic light aircraft engines and propellers	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Applicable only to basic light aircraft and basic helicopter maintenance

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA354A	Maintain light aircraft pneumatic systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Applicable only to small aircraft maintenance
MEA355A	Maintain light aircraft air cycle air conditioning systems	MEA201B MEA246C	Applicable only to small aircraft maintenance
MEA356A	Maintain light piston engine aircraft pressurisation systems	MEA201B MEA246C	Applicable only to small aircraft maintenance
MEA357A	Inspect, test and repair aircraft fabric surfaces	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA358A	Re-cover aircraft fabric surfaces	MEA357A	
MEA359A	Inspect and repair aircraft wooden structures	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA360A	Maintain aircraft diesel engines	MEA353A	
MEA361A	Maintain aircraft two stroke petrol engines	MEA353A	
MEA362A	Maintain aircraft vapour cycle air conditioning systems	MEA201B MEA246C	
MEA363B	Inspect, repair and maintain structures and related components	MEA101B	Do not take with MEA304C, 311C or

Unit code	Unit title	Prerequisites	Unit selection guidelines
	of non-pressurised small aircraft	MEA103B MEA105C MEA107B MEA108B MEA109B	339B – applicable only to small aircraft – count as two units
MEA364A	Maintain and/or repair small aircraft mechanical components or parts	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Do not take with MEA328C – applicable only to small aircraft
MEA366A	Perform borescope inspections	MEA313C or MEA314C or MEA322C or MEA387A or MEA388A	Additional unit where CASA borescope inspection authority required
MEA401C	Inspect aircraft structures	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Do not take with MEA311D or MEA339C
MEA410C	Maintain aircraft structure/components	MEA401C	Do not take with MEA311D or MEA339C

Groups B and C (Component Workshop Stream)

Choose at least **three (3)** of the elective technical stream units listed in Group B and make up to a total of **six (6)** units with units from Group C.

Group B

Unit code	Unit title	Prerequisites
MEA380A	Repair and/or overhaul aircraft hydraulic system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA381A	Repair and/or overhaul aircraft pneumatic system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA382A	Repair and/or overhaul aircraft fuel system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA383A	Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA384A	Repair and/or overhaul gas turbine engine combustion section components and/or modules	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B

MEA385A	Repair and/or overhaul gas turbine engine turbine and exhaust section components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA386A	Repair and/or overhaul gas turbine engine ancillary section components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA387A	Test gas turbine engines and engine modules after overhaul or repair	MEA383A MEA384A MEA385A MEA386A
MEA388A	Repair and/or overhaul piston engines	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA389A	Repair and/or overhaul propellers	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA390A	Repair and/or overhaul rotary wing dynamic components	MEA101B MEA103B MEA105C

		MEA107B MEA108B MEA109B
MEA391A	Repair and/or overhaul aircraft mechanical system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B

Group C

Unit code	Unit title	Prerequisites
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B MEA260B
MEA260B	Use electrical test equipment	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B
MEA368A	Shot peen aircraft components	MEA101B MEA103B MEA105C MEA107B MEA108B

		MEA109B
MEM24002 B	Perform penetrant testing	MEM18001C MEM24012C
MEM24004 B	Perform magnetic particle testing	MEM18001C MEM24012C
MEM24012 C	Apply metallurgy principles	Nil

MEA40911 Certificate IV in Aircraft Surface Finishing

Modification History

Unit codes updated as required - equivalent

Description

The qualification may apply to employees of aircraft repair and overhaul organisations or members of the ADF engaged in either the supervision of aircraft surface finishing activities or working in an environment where a significant degree of multi-skilling is required in component removal and installation and/or the performance of a specified range of repair tasks.

The qualification consists of:

- common and imported units that apply to all Aeroskills specialist streams at Certificate III and IV levels
- mandatory surface finishing technical stream and imported units that also apply at Certificate III level
- elective units to be selected according to employment need from listed common units, mechanical and structures technical stream units and an imported unit.

The qualification also provides credits towards the MEA50411 Diploma of Aviation Maintenance Management (Mechanical) and the MEA60111 Advanced Diploma of Aviation Maintenance Management (Mechanical). A limited number of credits are also provided towards the MEA50211 Diploma of Aeroskills (Mechanical).

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from specialist personnel and technical representatives • Negotiating with other team members or supervisors regarding timing and progress of work activities and access to sections of the aircraft, or to equipment • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Completing maintenance documentation • Reading drawings relating to surface finishing schemes and maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and applying a range of strategies to develop practical solutions to problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve individual and team-related problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to apply finishing schemes and

	to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> Adapting to new situations that arise as a consequence of regulatory changes, revised maintenance data, practices and procedures Varying work practices and behaviour as a result of performance feedback from peers and supervisors Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes Applying human factors to avoid maintenance errors and maintain quality standards Identifying and analysing alternative approaches to managing workplace issues and problems Adapting competencies to the performance of a wide range of maintenance tasks Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> Clarifying task objectives and required outcomes through discussion with supervisors and other team members Monitoring the time taken to complete tasks against team requirements or targets provided by supervisors Collecting, analysing and organising information relating to assigned tasks and confirming the purpose and required work outcomes Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements Allocating personnel and resources to tasks
Self-management	<ul style="list-style-type: none"> Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training Adapting competencies to accommodate new ideas and techniques Using feedback from supervisors and peers to identify ways in

	<p>which competence can be improved</p> <ul style="list-style-type: none"> • Mentoring new or more junior personnel • Interpreting units of competency and applying them to attainment of identified career goals
<p>Technology</p>	<ul style="list-style-type: none"> • Operating PPE and surface finishing equipment and ground support equipment and troubleshooting equipment faults • Testing the performance and calibration of surface finishing equipment • Storing and caring for surface finishing equipment, PPE and support equipment • Amending various forms of maintenance data • Using computers and microfiche to obtain maintenance data and using computers to complete documentation

Packaging Rules

To be awarded the ME40911 Certificate IV in Aircraft Surface Finishing, competency must be demonstrated in **twenty one (21)** units of competency. These units must be chosen as specified under the following conditions:

- **seventeen (17)** Core units consisting of common, technical stream and imported units
- **four (4)** Elective units chosen from the technical stream and imported units in Group A.

Core units

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA411A	Remove surface coatings from aircraft or aircraft components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA412A	Pre-treat aluminium alloy surfaces	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA413A	Seal aircraft and aircraft component structural seams	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA414A	Remove light corrosion from aircraft	MEA101B, MEA103B, MEA105C, MEA107B,

Unit code	Unit title	Prerequisites
		MEA108B, MEA109B
MEA415A	Paint aircraft surfaces	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B AURV229749A AURV329603DA
MEA416A	Apply aircraft identification markings, graphics and decals	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA417A	Apply specialty coatings to aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
AURV229749A	Prepare spray painting materials and equipment	Nil
AURV329603DA	Apply air dry and polyurethane enamel refinishing materials	Nil
MSAENV472B	Implement and monitor environmentally sustainable work practices	Nil

Elective units Group A

At least **four (4)** of the following units selected in accordance with the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace	Completion of applicable Certificate IV units	
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance		Must be taken if MEA113C or MEA140A selected
MEA140A	Supervise maintenance teams and perform maintenance quality inspections (this unit applicable to the ADF)	Appointment as an Independent Inspector or Maintenance Quality	

Unit code	Unit title	Prerequisites	Unit selection guidelines
	regulatory environment)	Inspector	
MEA240B	Use electrical test equipment to perform basic electrical tests	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Take with MEA305C
MEA305C	Remove and install aircraft fixed wing flight control system components	MEA302C	
MEA401C	Inspect aircraft structures	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA405B	Repair/modify aircraft composite material structure/components	MEA401C	
MEM08012B	Prepare surfaces by abrasive blasting (basic)	MEM08016B MEM13003B	
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	MEM08012B MEM08016B MEM13003B	
MEM08016B	Control blast coating	MEM13003B	

Unit code	Unit title	Prerequisites	Unit selection guidelines
	by-products, materials and emissions		
MEM13003B	Work safely with industrial chemicals and materials

MEA41011 Certificate IV in Aeroskills (Mechatronics)

Modification History

New qualification

Description

This is a competency-based training means of complying with small aircraft maintenance certification licensing requirements during the four year period 2011 to 2015 while the CAR 31 Basic Examination/Schedule of Experience avenue to licensing for small aircraft maintenance certification remains in operation. It should be noted that this qualification alone will not qualify individuals for the grant of a licence and successful completion of the Basic Examinations will still be required. However, it provides a sound foundation that would complement the examination requirements and would facilitate their completion during an apprenticeship.

Changes may be made to the qualification once a final decision is taken on the form of small aircraft maintenance certification licensing to ensure that it is able to become the pathway to licence after 2015.

The qualification applies to individuals involved in the maintenance of small aircraft within the General Aviation industry sector and should not be regarded as a pathway to the grant of a B1 or B2 licence for regular public transport aircraft maintained by a CASR Part 145 MTO. The pathways to these licences are the MEA50211 Diploma of Aeroskills (Mechanical) for the B1 or the MEA50111 Diploma of Aeroskills (Avionics) for the B2. A number of units in this qualification would provide credits towards those qualifications and towards other qualifications at AQF Certificate IV, Diploma and Advanced Diploma levels.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel, aircrew and specialists regarding maintenance problems • Talking to senior managers and aircraft owners/operators about maintenance needs and problems • Providing guidance to others and describing clearly faults, problems and spares requirements • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions and completing maintenance documentation and component tags • Interpreting wiring diagrams and system schematics, and reading drawings relating to maintenance activities • Using computers to obtain maintenance data, complete documentation and correspond using email • Networking with other maintenance managers and with maintenance controllers
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting other team members with tasks and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Providing mentoring and performance feedback • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Assisting with the resolution of complex problems • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the

	<p>limits permitted by regulatory and organisational guidelines</p> <ul style="list-style-type: none"> • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance and to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, operational circumstances, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with managers and team members • Planning the use of resources and allocating personnel and resources to tasks • Monitoring the time taken to complete tasks against team requirements or targets provided by management • Assessing work requirements for quotations • Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes • Identifying contingency situations and taking action to resolve problems • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors

	<ul style="list-style-type: none"> • Identifying career paths and training opportunities that will assist in attaining career goals
<p>Learning</p>	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from managers and peers to identify ways in which competence can be improved • Mentoring and providing on-job training and induction training to team members • Interpreting units of competency and applying them to attainment of identified career goals
<p>Technology</p>	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults • Using on-board maintenance systems and using maintenance-related software • Testing the performance of aircraft systems and engines • Maintaining aircraft systems and components • Storing and caring for components, parts, tools, test equipment and support equipment • Amending various forms of maintenance data • Using computers and microfiche to obtain maintenance data and using computers to complete documentation

Packaging Rules

To be awarded the MEA41011 Certificate IV in Aeroskills (Mechatronics) competency must be demonstrated in **twenty seven (27)** units of competency, as follows:

- **Sixteen (16)** Core common, technical stream and imported units that are applicable to all B1 and B2 licences that are limited by exclusions to release to service of basic small aircraft
- **Eleven (11)** Elective Group A technical stream units where a limited B1.1 licence is sought
- **Eight (8)** Elective Group B technical stream units where a limited B1.2 licence is sought
- **Nine (9)** Elective Group C technical stream units where a limited B1.3 licence is sought
- **Eight (8)** Elective Group D technical stream units where a limited B1.4 licence is sought
- **Nine (9)** Elective Group E technical stream units where a limited B2 licence is sought
- Elective Group F technical stream units chosen according to the requirements of the aircraft types being maintained to bring the total unit count to twenty seven (27).

Core units of competency

All **sixteen (16)** units must be taken if a B1 or B2 licence applicable to basic small aircraft maintenance is being sought.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA111C	Perform administrative processes to prepare for certification of civil aircraft maintenance	All applicable Certificate IV units
MEA112B	Plan and implement civil aircraft maintenance activities	All applicable Certificate IV units

MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace	All applicable Certificate IV units
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B, MEA260B
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA301C	Perform aircraft flight servicing	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MSAENV472 B	Implement and monitor environmentally sustainable work practices	Nil

Elective units Group A

All **eleven (11)** units must be taken if a B1.1 licence applicable to basic small aircraft maintenance is being sought.

Unit code	Unit title	Prerequisites
MEA274A	Maintain basic light aircraft electrical systems and components	MEA246C
MEA275A	Maintain basic light aircraft instrument systems and components	MEA246C
MEA276A	Maintain basic light aircraft communication and radio navigation systems and components	MEA246C
MEA306C	Remove and install engines and engine system components	MEA302C

MEA307C	Remove and install propeller systems and components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA314C	Inspect, test and troubleshoot gas turbine engine systems and components	MEA306C
MEA315C	Inspect, test and troubleshoot propeller systems and components	MEA307C
MEA351A	Maintain airframe systems of basic light fixed wing aircraft	MEA101B, MEA 03B, MEA105C, MEA107B, MEA108B, MEA109B
MEA363B	Inspect, repair and maintain structures and related components of non-pressurised small aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA364A	Maintain and/or repair small aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications	All Certificate IV units listed for applicable licence

Elective units Group B

All **eight (8)** units must be taken if a B1.2 licence applicable to basic small aircraft maintenance is being sought.

Unit code	Unit title	Prerequisites
MEA274A	Maintain basic light aircraft electrical systems and components	MEA246C
MEA275A	Maintain basic light aircraft instrument systems and components	MEA246C
MEA276A	Maintain basic light aircraft communication and radio navigation systems and components	MEA246C
MEA351A	Maintain airframe systems of basic light fixed wing aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA353A	Maintain basic light aircraft engines and	MEA101B, MEA103B,

	propellers	MEA105C, MEA107B, MEA108B, MEA109B
MEA363B	Inspect, repair and maintain structures and related components of non-pressurised small aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA364A	Maintain and/or repair small aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications	All Certificate IV units listed for applicable licence

Elective units Group C

All **nine (9)** units must be taken if a B1.3 licence applicable to basic small aircraft maintenance is being sought.

Unit code	Unit title	Prerequisites
MEA274A	Maintain basic light aircraft electrical systems and components	MEA246C
MEA275A	Maintain basic light aircraft instrument systems and components	MEA246C
MEA276A	Maintain basic light aircraft communication and radio navigation systems and components	MEA246C
MEA306C	Remove and install engines and engine system components	MEA302C
MEA314C	Inspect, test and troubleshoot gas turbine engine systems and components	MEA306C
MEA352A	Maintain basic rotary wing aircraft systems	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA363B	Inspect, repair and maintain structures and related components of non-pressurised small aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA364A	Maintain and/or repair small aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B,

		MEA108B, MEA109B
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications	All Certificate IV units listed below for applicable licence

Elective units Group D

All **eight (8)** units must be taken if a B1.4 licence applicable to basic small aircraft maintenance is being sought.

Unit code	Unit title	Prerequisites
MEA274A	Maintain basic light aircraft electrical systems and components	MEA246C
MEA275A	Maintain basic light aircraft instrument systems and components	MEA246C
MEA276A	Maintain basic light aircraft communication and radio navigation systems and components	MEA246C
MEA352A	Maintain basic rotary wing aircraft systems	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA353A	Maintain basic light aircraft engines and propellers	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA363B	Inspect, repair and maintain structures and related components of non-pressurised small aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA364A	Maintain and/or repair small aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications	All Certificate IV units listed for applicable licence

Elective units Group E

All **nine (9)** units must be taken if a B2 licence applicable to basic small aircraft maintenance is being sought.

Unit code	Unit title	Prerequisites
MEA202C	Remove and install basic aircraft electrical system components	MEA201B
MEA204C	Remove and install basic aircraft instrument system components	MEA201B
MEA207C	Remove and install aircraft electronic system components	MEA201B
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components	MEA202C, MEA246C
MEA212C	Inspect, test and troubleshoot basic aircraft instrument systems and components	MEA204C, MEA246C
MEA289A	Maintain basic light aircraft avionic systems and components	MEA246C
MEA290A	Fit avionic modification sheetmetal components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA291A	Inspect, test and troubleshoot fixed wing single axis autopilot systems and components (Refer to Group F – MEA217B may be taken instead of this unit)	MEA207C, MEA246C
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Elective units Group F

Except for the B1.1 licence, take two (2) or three (3) of the listed units as required by the aircraft types being maintained and the unit selection guidelines in column four to bring the total unit count to twenty seven (27).

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA202C	Remove and install basic aircraft electrical system components	MEA201B	Applicable to electrical retractable undercarriage
MEA206C	Remove and install aircraft basic radio communication and	MEA201B	Includes HF radio

Unit code	Unit title	Prerequisites	Unit selection guidelines
	navigation system components		
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components	MEA202C MEA246C	Applicable to electrical retractable undercarriage
MEA214C	Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components	MEA206C MEA246C	Includes HF radio
MEA216C	Inspect, test and troubleshoot instrument landing systems and components	MEA206C MEA207C MEA246C	Required for ILS
MEA217C	Inspect, test and troubleshoot fixed wing autopilot systems and components	MEA207C MEA246C	Required for 3 axis autopilot system – may be taken instead of Group E unit MEA291A
MEA218C	Inspect, test and troubleshoot rotary wing autopilot systems and components	MEA207C MEA246C	Required for helicopter autopilot system
MEA220C	Inspect, test and troubleshoot aircraft primary radar systems and components	MEA207C MEA246C	Applicable to weather radar
MEA221C	Inspect, test and troubleshoot aircraft secondary radar systems and components	MEA207C MEA246C	Covers RADALT, DME, Doppler and ACAS
MEA277A	Maintain twin engine aircraft electrical systems and components	MEA210C	Mandatory for maintenance of light twin piston engine aircraft
MEA278A	Inspect, test and troubleshoot instrument display systems and components	MEA207C MEA246C	Applicable to electronic display systems
MEA279A	Inspect, test and troubleshoot piston engine full authority digital engine control systems	MEA207C MEA246C	Required for FADEC system maintenance
MEA302C	Remove and install aircraft	MEA101B	Applicable to hydraulic

Unit code	Unit title	Prerequisites	Unit selection guidelines
	hydro-mechanical and landing gear system components	MEA103B MEA105C MEA107B MEA108B MEA109B	retractable undercarriage and systems with engine driven pump
MEA306C	Remove and install engines and engine system components	MEA302C	Applicable to piston and gas turbine engines
MEA307C	Remove and install propeller systems and components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Covers variable pitch and constant speed propellers
MEA308C	Remove and install rotary wing rotor and flight control system components	MEA302C	Applicable if helicopter has powered flight controls
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	MEA302C	Applicable to hydraulic retractable undercarriage and systems with engine driven pump
MEA313C	Inspect, test and troubleshoot piston engine systems and components	MEA306C (may be deemed to be covered if MEA353A is held)	Covers turbo and supercharged engines
MEA314C	Inspect, test and troubleshoot gas turbine engine systems and components	MEA306C	For gas turbine engine maintenance
MEA315C	Inspect, test and troubleshoot propeller systems and components	MEA307C	Covers variable pitch and constant speed propellers
MEA316C	Inspect, test and troubleshoot rotary wing rotor and control systems and components	MEA308C	Applicable if helicopter has powered flight controls

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA325B	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications	All applicable Certificate IV units	Elective
MEA351A	Maintain airframe systems of basic light fixed wing aircraft	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective if not required by choice of Group A to E
MEA352A	Maintain basic rotary wing aircraft systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective if not required by choice of Group A to E
MEA353A	Maintain basic light aircraft engines and propellers	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective if not required by choice of Group A to E
MEA354A	Maintain light aircraft pneumatic systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective
MEA355A	Maintain light aircraft air cycle air conditioning systems	MEA201B MEA246C	Elective

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA356A	Maintain light piston engine aircraft pressurisation systems	MEA201B MEA246C	Elective
MEA357A	Inspect, test and repair aircraft fabric surfaces	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Required for aircraft with fabric surfaces
MEA358A	Re-cover aircraft fabric surfaces	MEA357A	Elective
MEA359A	Inspect and repair aircraft wooden structures	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Required for aircraft with wooden structure
MEA360A	Maintain aircraft diesel engines	MEA353A	Required for aircraft types with two or four stroke diesel engines
MEA361A	Maintain aircraft two stroke petrol engines	MEA353A	Required for aircraft types with two stroke petrol engines
MEA362A	Maintain aircraft vapour cycle air conditioning systems	MEA201B MEA246C	Elective
MEA367A	Repair/modify aircraft composite structure using cold bonding	MEA401C or MEA339C or MEA363B	Required for repairs to composite primary or secondary structure using cold bonding only
MEA405B	Repair/modify aircraft composite material structure/components	MEA401C (may be deemed to be covered if MEA363B is held)	Required for repairs to composite primary or secondary structure using hot or cold bonding

MEA41111 Certificate IV in Aircraft Life Support and Furnishing

Modification History

Unit codes updated as required - equivalent

Description

This qualification may apply to members of the ADF and to employees of civil aviation maintenance organisations who work at supervisor or team leader levels on the maintenance of aircraft and personal life support equipment and on the fabrication and maintenance of aircraft furnishings.

The qualification consists of:

- mandatory common units that apply to all Aeroskills qualifications at Certificate III and IV levels and elective common units that relate to the regulatory system within which individuals are employed
- elective technical stream units and imported units.

The qualification provides a number of credits towards other Aeroskills qualifications at Certificate III and IV levels and a limited number of credits towards a Diploma or Advanced Diploma of Aviation Maintenance Management.

Pathways Information

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from specialist personnel and technical representatives • Negotiating with other team members or supervisors regarding timing and progress of work activities and access to sections of the aircraft, or to equipment • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Completing maintenance documentation • Reading drawings relating to aircraft life support and furnishing and maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and applying a range of strategies to develop practical solutions to problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve individual and team-related problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to apply finishing schemes and

	to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from peers and supervisors • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Identifying and analysing alternative approaches to managing workplace issues and problems • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with supervisors and other team members • Monitoring the time taken to complete tasks against team requirements or targets provided by supervisors • Collecting, analysing and organising information relating to assigned tasks and confirming the purpose and required work outcomes • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements • Allocating personnel and resources to tasks
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors and peers to identify ways in

	<p>which competence can be improved</p> <ul style="list-style-type: none">• Mentoring new or more junior personnel• Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none">• Operating PPE and life support and furnishing equipment and ground support equipment and troubleshooting equipment faults• Testing the performance and calibration of life support and furnishing equipment• Storing and caring for life support and furnishing equipment, PPE and support equipment• Amending various forms of maintenance data• Using computers and microfiche to obtain maintenance data and using computers to complete documentation

Packaging Rules

To be awarded the MEA41111 Certificate IV in Aircraft Life Support and Furnishing, competency must be demonstrated in **twenty six (26)** units of competency, as follows:

- **ten (10)** Core common and imported units
- **one (1)** Elective unit from the common units listed in Group A
- **fifteen (15)** Elective units from the technical stream and imported units listed in Group B.

Core units of competency

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA115A	Plan and implement aeronautical product maintenance activities	Nil
MEA116B	Apply occupational health and safety procedures at supervisor level	Nil
MEA118A	Conduct self in the aviation maintenance environment	Nil
MSAENV472B	Implement and monitor environmentally sustainable work practices	Nil

Elective units

Group A

At least **one (1)** of the following two units chosen in accordance with the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA114A	Certify aeronautical product maintenance		Applicable to those working under CASA Airworthiness Regulations
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections		Applicable to those working under ADF Airworthiness Regulations

Group B

Complete **fifteen (15)** of the technical stream and imported units listed below, selected in accordance with the prerequisites in column three and the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA240B	Use electrical test equipment to perform basic electrical tests	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components	MEA302C	Elective – do not take with MEA317C
MEA317C	Remove and install pressurised aircraft structural and non-structural components	MEA302C MEA303D	Elective – do not take with MEA304C
MEA411A	Remove surface coatings from aircraft or aircraft components	MEA101B MEA103B MEA105C	Elective

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA107B MEA108B MEA109B	
MEA412A	Pre-treat aluminium alloy surfaces	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective
MEA414A	Remove light corrosion from aircraft	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective – do not take with MEA419A
MEA416A	Apply aircraft identification markings, graphics and decals	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective
MEA419A	Repair/modify aircraft cabin/cockpit non-primary structure components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	Elective – do not take with MEA414A
MEA501A	Maintain and fit anti-G suits	MEA101B MEA103B MEA105C	Elective

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA107B MEA108B MEA109B MEA118A MEA511A LMFSF2002B	
MEA502A	Maintain and fit helmets	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B MEA118A MEA240B	Elective
MEA503A	Maintain and fit immersion suits	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B MEA118A LMTTF2008A	Elective
MEA504A	Maintain and fit oxygen masks	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B MEA118A MEA240B	Elective
MEA505A	Maintain and pack parachutes	MEA101B MEA103B	Elective

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA105C MEA107B MEA108B MEA109B MEA118A MEA511A LMFSF2002B	
MEA506A	Maintain and pack survival inflatable life rafts and escape slides	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B MEA118A	Elective
MEA507A	Maintain, pack and fit survival inflatable buoyancy vests	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B MEA118A	Elective
MEA508A	Maintain, install and remove restraint systems	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B MEA511A LMFSF2002B	Elective
MEA509A	Manufacture, repair and alter aircraft related fabric components	MEA101B MEA103B MEA105C	Elective

Unit code	Unit title	Prerequisites	Unit selection guidelines
		MEA107B MEA108B MEA109B MEA118A MEA511A LMFSF2002B	
MEA510A	Maintain seat and pod electrical and electronic systems	MEA240B	Elective
MEA511A	Operate and maintain sewing machines and overlockers	Nil	Elective
AURV231208A	Carry out trimming of vehicle components	Nil	Elective – do not take with LMFUP3012B
AURV231268A	Select and apply trim/fabric materials and determine attachment methods	Nil	Elective
AURV231368A	Select and apply trim/fabric adhesives	Nil	Elective - do not take with LMTTF2008A
LMFSF2001B	Cut single layer fabrics	Nil	Elective
LMFSF2002B	Machine sew materials	Nil	Elective
LMFUP3012B	Apply marine sewing and installation techniques	Nil	Elective – do not take with AURV231208A
LMTTF2008A	Use adhesives	Nil	Elective – do not take with AURV231368A
MEM12001B	Use comparison and basic measuring devices	Nil	Mandatory
PUADEFEO101D	Work safely with explosive ordnance	Nil	Elective
PUADEFEO501D	Conduct explosive ordnance inspection	Nil	Elective

MEA41211 Certificate IV in Aeroskills (Armament)

Modification History

Unit codes updated as required - equivalent

Description

This qualification may apply to members of the ADF who perform scheduled inspections, fault diagnosis and repair, and modification of aircraft egress, stores management and stores suspension systems and system components. It should be noted that employment in this field also involves the attainment of a range of competencies in the explosive ordnance field. The explosive ordnance units of competency are included in the PUA00 Public Safety Training Package and are not included in this qualification.

The qualification defines the exit from training and may apply to aircraft maintenance performed on flight lines and in hangars.

The qualification consists of:

- common units that apply to all Aeroskills specialist streams at Certificate III and IV levels
- avionic technical stream units relating to aircraft system and component maintenance
- one mechanical technical stream unit
- armament technical stream units.

The qualification provides a number of credits towards other Aeroskills Certificate IV qualifications and towards the MEA50311 Diploma of Aviation Maintenance Management (Avionics) and the MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics).

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding work and organisational instructions • Understanding input from specialist personnel and technical representatives • Providing guidance to others and describing clearly faults, problems and spares requirements • Negotiating with other team members or supervisors regarding timing and progress of work activities and access to sections of the aircraft or to equipment • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Completing maintenance documentation and component tags • Interpreting wiring diagrams and system schematics, and reading drawings relating to maintenance activities • Using computers to obtain maintenance data and complete documentation • Networking with other team members regarding work planning and execution
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting other team members with tasks and providing advice on work processes and troubleshooting
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by maintenance data • Proposing solutions to problems as modifications or amendments to specified maintenance processes • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance and to convert values between systems of measurement
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from peers and supervisors

	<ul style="list-style-type: none"> • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with supervisors and other team members • Monitoring the time taken to complete tasks against team requirements or targets provided by supervisors • Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills with the aid of the self-assessment work sheets in the Log of Industrial Experience and Achievement and preparing for competency assessments • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and monitoring performance using indicators such as the extent of oversight exercised by supervisors • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-the-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from supervisors and peers to identify ways in which competence can be improved • Mentoring new or more junior personnel • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft stores management and suspension systems, test equipment and ground support equipment and troubleshooting faults • Maintaining and changing configuration of aircraft stores management and suspension systems including the safe handling

	<p>of components containing explosive ordnance</p> <ul style="list-style-type: none">• Maintaining aircraft egress systems and components, including arming and disarming of egress systems• Using on-board maintenance systems and using maintenance-related software• Testing the performance and calibration of components• Storing and caring for components, parts, tools, test equipment and support equipment• Amending various forms of maintenance data• Using computers and microfiche to obtain maintenance data and using computers to complete documentation
--	--

Packaging Rules

To be awarded the MEA41211 Certificate IV in Aeroskills (Armament), competency must be demonstrated in **twenty two (22)** Core units of competency, consisting of:

- **eight (8)** Common and imported units
- **fourteen (14)** Technical stream units.

There are no elective units of competency for this qualification.

Core units of competency

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA203C	Remove and install advanced aircraft electrical system components	MEA201B
MEA211C	Inspect, test and troubleshoot advanced aircraft electrical systems and components	MEA203C, MEA246C
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B, MEA260B

Unit code	Unit title	Prerequisites
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA261C	Use electronic test equipment	MEA101B, MEA 103B, MEA105C, MEA107B, MEA108B, MEA 109B
MEA262B	Modify/repair single layer printed circuit boards	MEA260B, MEA261C
MEA301C	Perform aircraft flight servicing	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA601A	Maintain aircraft egress systems	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B, PUADEFEO101D
MEA602A	Remove and install aircraft stores management system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B, PUADEFEO101D
MEA603A	Remove and install aircraft stores suspension systems and components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108A, MEA109B, PUADEFEO101D
MEA604A	Inspect, test and troubleshoot aircraft stores management systems and components	MEA602A
MEA605A	Inspect, test and troubleshoot aircraft stores suspension systems and components	MEA603A
MSAENV272B	Participate in environmentally sustainable work practices	Nil
PUADEFEO101D	Work safely with explosive ordnance	Nil

MEA41311 Certificate IV in Aeroskills (Structures)

Modification History

A number of mandatory units restructured and an elective cold bonding unit added. Replaces MEA40810 - not equivalent

Description

This qualification may apply to employees of civil aviation maintenance organisations or to members of the ADF who are engaged in the repair and modification of aircraft structures. The qualification defines the exit from apprenticeship and may apply to work performed in hangars on the structure of complete aircraft and to work performed in workshops on structural components. It replaces MEA40810 Certificate IV in Aeroskills (Structures).

The training pathways provide for work on both metal and composite structures. In some cases, primarily in the General Aviation sector, individuals may be also required to work on aircraft with wooden structures and/or fabric coverings. The applicable competencies are covered in the units MEA357A Inspect, test and repair aircraft fabric surfaces, MEA358A Re-cover aircraft fabric surfaces and MEA359A Inspect and repair aircraft wooden structures.

The qualification consists of:

- Common and imported units that apply to all Aeroskills specialist streams at AQF Certificate III and IV levels
- Mandatory and elective mechanical technical stream units that provide a required degree of multi-skilling
- Mandatory structures technical stream units.

The qualification also provides credits towards the MEA50411 Diploma of Aviation Maintenance Management (Mechanical) and the MEA60111 Advanced Diploma of Aviation Maintenance Management (Mechanical). A limited number of credits are also provided towards the MEA50211 Diploma of Aeroskills (Mechanical).

--	--

Packaging Rules

To be awarded the MEA41311 Certificate IV in Aeroskills (Structures), competency must be demonstrated in **nineteen (19)** units of competency. These units must be chosen as follows:

- **sixteen (16)** Core units consisting of common, imported and technical stream units
- **three (3)** Elective technical stream units from Group A.

Core units of competency

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA303D	Remove and install aircraft pneumatic system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA327B	Fabricate and/or repair aircraft mechanical components or parts	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA401C	Inspect aircraft structures	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Unit code	Unit title	Prerequisites
MEA420A	Fabricate basic structural components for aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA421A	Fabricate advanced structural components for aircraft	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA422A	Repair/modify aircraft metal structure	MEA401C
MEA423A	Aircraft structure major disassembly and reassembly	MEA401C
MSAENV272B	Participate in environmentally sustainable work practices	Nil

Elective units Group A

Select **three (3)** units while observing the unit selection guidelines in Column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components	MEA302C	Take this unit or MEA317C
MEA305C	Remove and install aircraft fixed wing flight control system components	MEA302C	Take this unit or MEA308C
MEA308C	Remove and install rotary wing rotor and flight control system components	MEA302C	Alternate to MEA305C
MEA317C	Remove and install pressurised aircraft structural and non-structural components	MEA302C MEA303D	Alternate to MEA304C
MEA367A	Repair/modify aircraft composite structure using cold bonding	MEA401C or MEA339C or MEA363B	Take this unit or MEA405B
MEA405B	Repair/modify aircraft composite material	MEA401C	Alternate to MEA367A

Unit code	Unit title	Prerequisites	Unit selection guidelines
	structure/components

MEA50111 Diploma of Aeroskills (Avionics)

Modification History

Unit codes updated as required - equivalent

Description

This qualification applies to individuals seeking the grant of a CASA B2 Aircraft Maintenance Engineer Licence covering the supervision, performance and certification of avionic maintenance on aircraft that are type-rated by CASA for maintenance purposes.

The qualification satisfies CASA requirements for the grant, under CASR Part 66, of Aircraft Maintenance Engineer Licence B2 when the skills and knowledge requirements align with CASA syllabus requirements under 'Licensing' in the Assessment Guidelines and in Appendix 1, and training has been delivered in accordance with the requirements of CASR Part 147. It consists of:

- common and technical stream units required at Certificate IV level in the aircraft maintenance stream
- additional diploma level common and imported units that cover supervisor level OHS competency plus competencies required by CASA for the exercise of licence privileges
- Diploma level avionic technical stream units covering advanced fault diagnosis and aircraft weight and balance calculation.

Credits are also provided towards the MEA50311 Diploma of Aviation Maintenance Management (Avionics) and the MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics).

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding complex directions from senior managers • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel, aircrew and specialists regarding maintenance problems • Talking to senior managers about maintenance and maintenance management problems and making presentations • Providing guidance to others and describing clearly faults, problems and spares requirements • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions and completing maintenance documentation and component tags • Writing reports and proposals as required by regulations and organisational procedures • Interpreting organisational charts, wiring diagrams and system schematics, reading drawings relating to maintenance activities and interpreting fault diagnosis guides and logic charts • Using computers to obtain maintenance data and complete documentation and correspond using email • Networking with other maintenance managers and with maintenance controllers
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by

	<p>maintenance data and to maintenance management problems</p> <ul style="list-style-type: none"> • Proposing solutions to problems as repair schemes, modifications or as amendments to specified maintenance processes • Assisting with the resolution of complex problems as a team effort • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with legislative, regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance, to convert values between systems of measurement, to calculate weight and balance and to develop management solutions to problems
<p>Initiative and enterprise</p>	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, personnel management changes, operational circumstances, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to initiate, support and participate in the effective introduction of new work practices
<p>Planning and organising</p>	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with managers and team members • Planning the use of resources and allocating personnel and resources to tasks • Monitoring the time taken to complete tasks against team requirements or targets provided by management • Assessing work requirements for quotations • Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes • Identifying contingency situations and taking action to resolve problems • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements

Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills when assisting team members with complex tasks and when proposing modifications, repair schemes or changes to maintenance practices • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and application of legislation, regulations, policy and procedures to achieve required outcomes and build confidence in own ideas and vision • Effectively manage personal work priorities and professional development • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from subordinates, peers and managers to identify ways in which competence can be improved • Mentoring and providing on-job training and induction training to team members • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults • Using on-board maintenance systems and using maintenance-related software • Maintaining aircraft systems, components and test stands • Performance testing of aircraft systems and engines • Storing and caring for components, parts, tools, test equipment and support equipment • Complying with requirements to complete maintenance records, develop and revise maintenance data and propose amendments to technical publications • Amending various forms of maintenance data • Using computers and microfiche to obtain maintenance data and using computers to complete records, reports and documentation

Packaging Rules

To be awarded the MEA50111 Diploma of Aeroskills (Avionics), competency must be demonstrated in **thirty one (31) or thirty two (32)** units of competency, depending on the choice of elective specialist units. These units consist of:

- **eight (8)** Core Diploma level (CASA licensing) units
- **twenty two (22)** Core common and technical stream units from Certificate IV that are mandatory for a CASA B2 licence
- either Elective Group A (two units) or Group B (one unit)

Core units of competency

Complete all **eight (8)** of the Diploma level common, imported and avionic technical stream units listed below.

Unit code	Unit title	Prerequisites
MEA111C	Perform administrative processes to prepare for the certification of civil aircraft maintenance	All Cert IV units listed below
MEA112B	Plan and implement civil aircraft maintenance activities	All Cert IV units listed below
MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace	All Cert IV units listed below
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MEA235B	Perform advanced troubleshooting in aircraft avionic maintenance	All Cert IV units listed below
MEA241C	Perform aircraft weight and balance calculations as a result of modifications	All Cert IV units listed below
MSAENV472 B	Implement and monitor environmentally sustainable work practices	Nil

Plus the **twenty two (22)** Certificate IV common and avionic/mechanical technical stream units listed below.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA203C	Remove and install advanced aircraft electrical system components	MEA201B
MEA205C	Remove and install advanced aircraft instrument system components	MEA201B
MEA206C	Remove and install aircraft basic radio communication and navigation system components	MEA201B
MEA207C	Remove and install aircraft electronic system components	MEA201B
MEA223D	Inspect aircraft electrical systems and components	MEA203C, MEA246C
MEA224C	Inspect aircraft instrument systems and components	MEA205C, MEA246C
MEA226D	Inspect aircraft electronic systems and components	MEA207C, MEA246C

Unit code	Unit title	Prerequisites
MEA227D	Test and troubleshoot aircraft electrical systems and components	MEA223D
MEA228D	Test and troubleshoot aircraft instrument systems and components	MEA224C, MEA226D
MEA229D	Test and troubleshoot aircraft radio frequency navigation and communications systems and components	MEA226D
MEA232C	Test and troubleshoot aircraft pulse systems and components	MEA226D, MEA246C
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B, MEA260B
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA301C	Perform aircraft flight servicing	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Elective units

Plus specialist elective units from Group A or Group B as defined below.

Group A

Unit code	Unit title	Prerequisites
MEA225C	Inspect fixed wing aircraft automatic flight control systems and components	MEA207C, MEA246C
MEA230C	Test and troubleshoot fixed wing aircraft automatic flight control systems and components	MEA225C, MEA246C

Group B

Unit code	Unit title	Prerequisites
MEA231C	Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components	MEA207C, MEA246C

Custom Content Section

MEA50211 Diploma of Aeroskills (Mechanical)

Modification History

Unit codes updated as required - equivalent

Description

This qualification applies to individuals seeking the grant of a CASA B1 Aircraft Maintenance Engineer Licence covering the supervision, performance and certification of airframe, engine, electrical and structural maintenance on aircraft that are type-rated by CASA for maintenance purposes.

The requirement for the awarding of MEA50211 Diploma of Aeroskills (Mechanical) is demonstrated competency in listed competency units under the conditions set out below. The listed units also satisfy CASA requirements for the grant, under CASR Part 66, of Aircraft Maintenance Engineer B1 Licences in sub-categories B1.1, 1.2, 1.3 and 1.4 when the skills and knowledge requirements align with CASA syllabus requirements in under 'Licensing' in the Assessment Guidelines and in Appendix 1, and training has been delivered in accordance with the requirements of CASR Part 147.

It consists of:

- common and technical stream units required at Certificate IV level in the aircraft maintenance stream with electives determined by the desired licence sub-category
- additional Diploma level common units that cover supervisor level OHS competency plus competencies required by CASA for the exercise of licence privileges
- Diploma level mechanical technical stream units covering advanced fault diagnosis and aircraft weighing and weight and balance calculation.

The qualification also provides credits towards the MEA50411 Diploma of Aviation Maintenance Management (Mechanical) and the MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical).

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding complex directions from senior managers • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel, aircrew and specialists regarding maintenance problems • Talking to senior managers about maintenance and maintenance management problems and making presentations • Providing guidance to others and describing clearly faults, problems and spares requirements • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions and completing maintenance documentation and component tags • Writing reports and proposals as required by regulations and organisational procedures • Interpreting organisational charts, wiring diagrams and system schematics, reading drawings relating to maintenance activities and interpreting fault diagnosis guides and logic charts • Using computers to obtain maintenance data and complete documentation and correspond using email • Networking with other maintenance managers and with maintenance controllers
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by

	<p>maintenance data and to maintenance management problems</p> <ul style="list-style-type: none"> • Proposing solutions to problems as repair schemes, modifications or as amendments to specified maintenance processes • Assisting with the resolution of complex problems as a team effort • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with legislative, regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance, to convert values between systems of measurement, to calculate weight and balance and to develop management solutions to problems
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, personnel management changes, operational circumstances, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to initiate, support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with managers and team members • Planning the use of resources and allocating personnel and resources to tasks • Monitoring the time taken to complete tasks against team requirements or targets provided by management • Assessing work requirements for quotations • Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes • Identifying contingency situations and taking action to resolve problems • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements

Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills when assisting team members with complex tasks and when proposing modifications, repair schemes or changes to maintenance practices • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and application of legislation, regulations, policy and procedures to achieve required outcomes and build confidence in own ideas and vision • Effectively manage personal work priorities and professional development • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from subordinates, peers and managers to identify ways in which competence can be improved • Mentoring and providing on-job training and induction training to team members • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults • Using on-board maintenance systems and using maintenance-related software • Maintaining aircraft systems, components and test stands • Performance testing of aircraft systems and engines • Storing and caring for components, parts, tools, test equipment and support equipment • Complying with requirements to complete maintenance records, develop and revise maintenance data and propose amendments to technical publications • Amending various forms of maintenance data • Using computers and microfiche to obtain maintenance data and using computers to complete records, reports and documentation

Packaging Rules

To be awarded the MEA50211 Diploma of Aeroskills (Mechanical), competency must be demonstrated in **thirty six (36) to forty two (42)** units, chosen as described below.

All B1 licence sub-categories require the following **twenty eight (28) or twenty nine (29)** units:

- **ten (10)** Core Diploma level (CASA licensing) common, technical stream and imported units
- **seventeen (17)** Core Certificate IV common and technical stream units
- elective technical stream units in either Group A (one unit) or Group B (two units).

Depending on the CASA B1 licence sub-category being sought, **an additional eight (8) to thirteen (13)** units are required, up to a **maximum of forty two (42)** units for the qualification. All units must be chosen as specified under the conditions set out below:

Group C Elective technical stream units required by CASA for a B1.1 licence – **11 or 13 units**

Group D Elective technical stream units required by CASA for a B1.2 licence – **12 units**

Group E Elective technical stream units required by CASA for a B1.3 licence – **9 units**

Group F Elective technical stream units required by CASA for a B1.4 licence – **8 units**

Core units of competency

Complete the **ten (10)** Diploma level common and mechanical technical stream units listed below.

Unit code	Unit title	Prerequisites
MEA111C	Perform administrative processes to prepare for the certification of civil aircraft maintenance	All Cert IV units listed below for applicable licence
MEA112B	Plan and implement civil aircraft maintenance activities	All Cert IV units listed below for applicable licence
MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace	All Cert IV units listed below for applicable licence
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MEA323B	Perform advanced troubleshooting in aircraft	All Cert IV units listed below for applicable

Unit code	Unit title	Prerequisites
	mechanical maintenance	licence
MEA325B	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications	All Cert IV units listed below for applicable licence
MEA343B	Remove and install avionic system components	MEA211C or MEA227D
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications	All Cert IV units listed below for applicable licence
MSAENV472 B	Implement and monitor environmentally sustainable work practices	Nil

Plus the following **seventeen (17)** Core Certificate IV common and avionic/mechanical technical stream units listed below which are mandatory for all B1 licence sub-categories.

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA118A	Conduct self in the aviation maintenance environment	Nil
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B

Unit code	Unit title	Prerequisites
MEA203C	Remove and install advanced aircraft electrical system components	MEA201B
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts	MEA201B, MEA260B
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA301C	Perform aircraft flight servicing	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA 109B
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA303D	Remove and install aircraft pneumatic system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA306C	Remove and install engines and engine system components	MEA302C
MEA328C	Maintain and/or repair aircraft mechanical components or parts	MEA302C, MEA303D
MEA339C	Inspect, repair and maintain aircraft structures	MEA304C or MEA317C

Elective units

Plus either Group A or Group B for all B1 licence sub-categories.

Group A

Unit code	Unit title	Prerequisite or co-requisite units
MEA211C	Inspect, test and troubleshoot advanced aircraft electrical systems and components	MEA203C, MEA246C

Group B

Unit code	Unit title	Prerequisite or co-requisite units
MEA223D	Inspect aircraft electrical systems and components	MEA203C, MEA246C
MEA227D	Test and troubleshoot aircraft electrical systems and components	MEA223D

Plus units that are mandatory CASA requirements for individual licence sub-categories B1.1, B1.2, B1.3 and B1.4.

Group C

To meet the criteria for the grant of a B1.1 Licence complete **eleven (11) or thirteen (13)** units listed below as specified in the unit selection guidelines in column four.

Unit code	Unit title	Prerequisite or co-requisite units	Unit selection guidance
MEA208C	Remove and install pressurisation control system components	MEA201B	
MEA209C	Remove and install aircraft oxygen system components	MEA101B MEA103B MEA105C MEA107B MEA108B MEA109B	
MEA219C	Inspect, test and troubleshoot pressurisation control systems and components	MEA208C MEA246C	
MEA222C	Inspect, test and troubleshoot aircraft oxygen systems and components	MEA209C	
MEA305C	Remove and install aircraft fixed wing flight control system components	MEA302C	
MEA307C	Remove and install propeller systems and components	MEA101B MEA103B	Mandatory for B1.1 where the rating sought

Unit code	Unit title	Prerequisite or co-requisite units	Unit selection guidance
		MEA105C MEA107B MEA108B MEA109B	includes propellers
MEA315C	Inspect, test and troubleshoot propeller systems and components	MEA307C	Mandatory unit for B1.1 where the rating sought includes propellers
MEA317C	Remove and install pressurised aircraft structural and non-structural components	MEA302C MEA303D	
MEA318C	Inspect aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components	MEA302C MEA303D and MEA305C	
MEA319C	Inspect gas turbine engine systems and components	MEA306C	
MEA320C	Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components	MEA318C	
MEA321C	Test and troubleshoot aircraft fixed wing flight control systems and components	MEA318C	
MEA322C	Test and troubleshoot gas turbine engine systems and components	MEA319C	

Group D

To meet the criteria for the grant of a B1.2 Licence complete **twelve (12)** units listed below.

Unit code	Unit title	Prerequisite or co-requisite units
-----------	------------	------------------------------------

Unit code	Unit title	Prerequisite or co-requisite units
MEA208C	Remove and install pressurisation control system components	MEA201B
MEA209C	Remove and install aircraft oxygen system components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA219C	Inspect, test and troubleshoot pressurisation control systems and components	MEA208C, 246C
MEA222C	Inspect, test and troubleshoot aircraft oxygen systems and components	MEA209C
MEA305C	Remove and install aircraft fixed wing flight control system components	MEA302C
MEA307C	Remove and install propeller systems and components	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	MEA302C
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components	MEA303D
MEA312C	Inspect, test and troubleshoot aircraft fixed wing flight control systems and components	MEA305C
MEA313C	Inspect, test and troubleshoot piston engine systems and components	MEA306C
MEA315C	Inspect, test and troubleshoot propeller systems and components	MEA307C
MEA317C	Remove and install pressurised aircraft structural and non-structural components	MEA302C, MEA303D

Group E

To meet the criteria for the grant of a B1.3 Licence complete **nine (9)** units listed below (noting that MEA308C and MEA316C each count as two units).

Unit code	Unit title	Prerequisite or co-requisite units
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components	MEA302C
MEA308C	Remove and install rotary wing rotor and flight control system components	MEA302C
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	MEA302C
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components	MEA303D
MEA316C	Inspect, test and troubleshoot rotary wing rotor and control systems and components	MEA308C
MEA319C	Inspect gas turbine engine systems and components	MEA306C
MEA322C	Test and troubleshoot gas turbine engine systems and components	MEA319C

Group F

To meet the criteria for the grant of a B1.4 Licence complete **eight (8)** units listed below (noting that MEA308C and 316C each count as two units).

Unit code	Unit title	Prerequisite or co-requisite units
MEA304C	Remove and install non-pressurised aircraft structural and non-structural components	MEA302C
MEA308C	Remove and install rotary wing rotor and flight control system components	MEA302C
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components	MEA302C
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components	MEA303D
MEA313C	Inspect, test and troubleshoot piston engine systems and components	MEA306C

Unit code	Unit title	Prerequisite or co-requisite units
MEA316C	Inspect, test and troubleshoot rotary wing rotor and control systems and components	MEA308C

MEA50311 Diploma of Aviation Maintenance Management (Avionics)

Modification History

Unit codes updated as required. Entry requirements clarified - equivalent

Description

This qualification may be of use to individuals employed in aviation maintenance management fields in both the civil and ADF regulatory environments in jobs such as avionic maintenance team leaders, maintenance planners, spares assessors, repairable item managers and technical authors. It must be emphasised that many of the maintenance management positions applicable to the qualification have additional experience requirements specified in airworthiness regulations and only a limited range of employment opportunities may be available to those who do not have extensive prior aviation maintenance experience. For this reason the qualification has entry requirements.

The qualification consists of:

- ten (10) core units that provide competencies applicable to aviation maintenance managers
- one (1) elective unit chosen according to employment need

Credit is provided towards the MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics).

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Individuals seeking this qualification must meet at least one of the following entry criteria:

- at least five years current aviation mechanical maintenance experience
- Maintenance Engineer Licence (Mechanical) issued by CASA
- Certificate IV in Aeroskills (Avionics).

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding complex directions from senior managers • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel, aircrew and specialists regarding maintenance problems • Talking to senior managers about maintenance and maintenance management problems and making presentations • Providing guidance to others and clearly describing faults, problems and spares requirements • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Negotiating with potential suppliers of items of aeronautical product, piece parts and consumables • Negotiating with clients regarding the drafting of technical publications and maintenance data • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions and completing maintenance documentation and component tags • Writing reports and proposals as required by regulations and organisational procedures • Interpreting organisational charts, wiring diagrams and system schematics, reading drawings relating to maintenance activities and interpreting fault diagnosis guides and logic charts • Using computers to obtain maintenance and maintenance management data, complete documentation and correspond using email • Networking with other maintenance managers and with others involved in maintenance-related integrated logistic support activities
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to team members or colleagues and senior managers and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback

	<ul style="list-style-type: none"> • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by maintenance data and to maintenance management problems • Proposing solutions to problems as repair schemes, modifications or as amendments to specified maintenance processes • Assisting with the resolution of complex problems as a team effort • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with legislative, regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance, to convert values between systems of measurement, to calculate weight and balance, to develop management solutions to problems, and in performing integrated logistic support procedures
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, personnel management changes, operational circumstances, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Contributing to a process of continuous improvement and a willingness to initiate, support and participate in the effective introduction of new work practices

	<ul style="list-style-type: none"> Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes Identifying contingency situations and taking action to resolve problems Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones Assessing personal knowledge and skills when assisting team members with complex tasks and when proposing modifications, repair schemes or changes to maintenance practices Actively seeking opportunities to develop competencies and to apply them across a range of tasks and application of legislation, regulations, policy and procedures to achieve required outcomes and build confidence in own ideas and vision Effectively manage personal work priorities and professional development Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-the-job training Adapting competencies to accommodate new ideas and techniques Using feedback from subordinates, peers and managers to identify ways in which competence can be improved Mentoring and providing on-the-job training and induction training to team members Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults Using on-board maintenance systems and using maintenance-related software Maintaining aircraft systems, components and test stands Performance testing of aircraft systems and engines Storing and caring for components, parts, tools, test equipment and support equipment Complying with requirements to complete maintenance records, develop and revise maintenance data and propose amendments to technical publications Amending various forms of maintenance data Using computers and microfiche to obtain maintenance data and

	using computers to complete records, reports and documentation
--	--

Packaging Rules

To be awarded the MEA50311 Diploma of Aviation Maintenance Management (Avionics), competency must be demonstrated in a total of **eleven (11)** units of competency.

All units must be chosen as specified under the conditions set out below:

- **ten (10)** Core Diploma level common, engineering and imported units
- **one (1)** Elective Diploma level common unit from Group A.

Core units of competency

Complete the following **five (5)** common Diploma units, **four (4)** para-professional engineering units and **one (1)** imported sustainability unit listed below.

Unit code	Unit title	Prerequisites
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA121B	Manage aircraft/aeronautical product configuration	Nil
MEA133B	Communicate aviation technical and maintenance knowledge	Nil
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MEA272B	Apply basic scientific principles and techniques in avionic engineering situations	Nil
MEA273A	Select and test avionic engineering materials	Nil
MEM30007A	Select common engineering materials	Nil
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	Nil
MSAENV472 B	Implement and monitor environmentally sustainable work practices	Nil

Elective units Group A

Plus **one (1)** of the following elective common units selected in accordance with the guidance provided in column four.

Unit code	Unit title	Prerequisites	Unit selection guidance
MEA136A	Assess aviation maintenance spares and manage repairable items	MEA135A	Elective – for spares assessors and repairable item managers
MEA137A	Write aviation technical publications	MEA135A	Elective – for aviation technical authors
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections	Nil	Elective – for supervisors within the ADF regulatory system

To be awarded the MEA50411 Diploma of Aviation Maintenance Management (Mechanical), competency must be demonstrated in a total of **eleven (11)** units of competency.

All units must be chosen as specified under the conditions set out below:

- **ten (10)** Core Diploma level common, engineering and imported units
- **one (1)** Elective Diploma level common unit from Group A.

Core units of competency

Complete the following **five (5)** common Diploma units, **four (4)** para-professional engineering units and **one (1)** imported sustainability unit listed below.

Unit code	Unit title	Prerequisites
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA121B	Manage aircraft/aeronautical product configuration	Nil
MEA133B	Communicate aviation technical and maintenance knowledge	Nil
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations	Nil
MEA350A	Select and test aeronautical engineering materials	Nil
MEM30007A	Select common engineering materials	Nil
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	Nil
MSAENV472 B	Implement and monitor environmentally sustainable work practices	Nil

Elective units Group A

Plus **one (1)** of the following elective common units selected in accordance with the guidance in column four.

Unit code	Unit title	Prerequisites	Unit selection guidance
MEA136A	Assess aviation maintenance spares and manage repairable items	MEA135A	Elective – for spares assessors and repairable item managers
MEA137A	Write aviation technical publications	MEA135A	Elective – for aviation technical authors
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections	Nil	Elective – for supervisors within the ADF regulatory system

Custom Content Section

Not applicable.

MEA50511 Diploma of Aeroskills (Non-Destructive Testing)

Modification History

Unit codes updated as required. Imported financial management elective unit replaced by MEA146A - equivalent

Description

This qualification applies to individuals who perform non-destructive testing (NDT) on aircraft and aircraft components in accordance with *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* at Level 2 and in compliance with the regulatory requirements of CASA and the ADF.

The requirement for the awarding of MEA50511 Diploma of Aeroskills (Non-Destructive Testing) is demonstrated competency in listed units of competency under the conditions set out below. It consists of Core units plus applicable units from Electives Group A.

Core units are as follows:

- Preliminary common and technical stream units for individuals who do not have a Certificate IV in Aeroskills
- Mandatory units consisting of:
 - common and technical stream units that relate to the aviation maintenance environment
 - technical stream and imported units relating to the NDT work environment
 - imported units that specifically cover the competencies required to perform each relevant NDT technique to the standard specified in *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* for Level 2 personnel.

Elective Group A units consist of:

- Common units specific to either CASA or ADF regulatory requirements
- Technical stream and imported units that are applicable to various areas of employment in the NDT field.

The qualification also provides credits towards the MEA50411 Diploma of Aviation Maintenance Management (Mechanical), the MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical) and the MEA60311 Advanced Diploma of Aviation Non-Destructive Testing.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Individuals seeking this qualification must meet one of the following entry criteria:

- Certificate IV in Aeroskills
- Aircraft Maintenance Engineer Licence issued by CASA
- Attainment of the following **nine (9)** Aeroskills units of competency:

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA340A	Lay out and set up aircraft systems	MEA101B, MEA107B, MEA109B
MEA341A	Apply basic aircraft design characteristics	MEA101B, MEA107B, MEA109B
MEA342A	Apply basic aircraft power plant design characteristics	MEA101B, MEA107B, MEA109B

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding complex directions from senior managers • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel and specialists regarding NDT requirements • Talking to senior managers about NDT tasks and requirements and making presentations • Providing guidance to others and describing clearly faults found during NDT • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions and completing maintenance documentation and component tags • Writing reports and proposals as required by regulations and organisational procedures • Interpreting organisational charts, wiring diagrams and system schematics, reading drawings relating to NDT activities and interpreting specific NDT procedures • Using computers to obtain maintenance data and complete documentation and correspond using email • Networking with other maintenance managers and with maintenance controllers
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to supervisors and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems requiring NDT

	<ul style="list-style-type: none"> Proposing solutions to problems associated with the development and application of NDT processes Assisting with the resolution of complex problems as a team effort Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines Responding to emergencies or accidents in accordance with legislative, regulatory and organisational requirements Using mathematical techniques to relate test results to system or component performance, to convert values between systems of measurement, to calculate weight and balance and to develop management solutions to problems
Initiative and enterprise	<ul style="list-style-type: none"> Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, personnel management changes, operational circumstances, revised NDT data, practices and procedures Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes Applying human factors to avoid maintenance errors and maintain quality standards Adapting competencies to the performance of a wide range of maintenance tasks Contributing to a process of continuous improvement and a willingness to initiate, support and participate in the effective introduction of new work practices
Planning and organising	<ul style="list-style-type: none"> Clarifying task objectives and required outcomes through discussion with managers and team members Planning the use of resources and allocating personnel and resources to tasks Monitoring the time taken to complete tasks against team requirements or targets provided by management Assessing work requirements for quotations Collecting, analysing and organising information relating to assigned NDT tasks and confirming the purpose and required work outcomes Identifying contingency situations and taking action to resolve problems Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements
Self-management	<ul style="list-style-type: none"> Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones

	<ul style="list-style-type: none"> • Assessing personal knowledge and skills when assisting team members with NDT tasks and when proposing new or modified NDT procedures • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and application of legislation, regulations, policy and procedures to achieve required outcomes and build confidence in own ideas and vision • Effectively manage personal work priorities and professional development • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from subordinates, peers and managers to identify ways in which competence can be improved • Mentoring and providing on-job training and induction training to team members • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating and maintaining NDT equipment and reference standards • Performing NDT procedures on aircraft and aircraft components • Storing and caring for components, parts, tools, test equipment and support equipment • Complying with requirements to complete maintenance records, develop and revise maintenance data and propose amendments to technical publications • Amending various forms of maintenance data • Using computers and microfiche to obtain maintenance data and using computers to complete records, reports and documentation

Packaging Rules

To be awarded the MEA50511 Diploma of Aeroskills (Non-Destructive Testing) competency must be demonstrated in **twenty seven (27)** units, chosen as described below.

Core units of competency

Complete the following **twenty four (24)** core units.

Unit code	Unit title	Prerequisites
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA133B	Communicate aviation technical and maintenance management knowledge	Nil
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA261C	Use electronic test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA424A	Evaluate aircraft non-destructive tests	MEA109B, MEA133B, MEM13013B, MEM16010A, MEM24002B, MEM24004B, MEM24006B, MEM24008B, MEM24010B, MEM24012C
MEM09002B	Interpret technical drawing	Nil
MEM09003B	Prepare basic engineering drawing	MEM09002B
MEM11011B	Undertake manual handling	Nil
MEM12003B	Perform precision mechanical measurement	MEM12023A

		(see Note 1)
MEM12005B	Calibrate measuring equipment	MEM12002B (see Note 2) MEM12023A (see Note 1)
MEM13013B	Work safely with ionising radiation	Nil
MEM15017B	Use and maintain reference standards	MEM11011B MEM12003B MEM12004B (see Note 2) MEM12005B MEM12023A (see Note 1) MEM18001C (see Note 1) MEM18002B (see Note 1)
MEM16010A	Write reports	MEM14005A (see Note 3)
MEM24002B	Perform penetrant testing	MEM18001C (see Note 1) MEM24012C
MEM24004B	Perform magnetic particle testing	MEM18001C (see Note 1) MEM24012C
MEM24006B	Perform eddy current testing	MEM18001C (see Note 1) MEM24012C
MEM24008B	Perform ultrasonic testing	MEM18001C (see Note 1) MEM24012C
MEM24010B	Perform radiographic testing	MEM13013B

		MEM18001C (see Note 1) MEM24012C
MEM24012C	Apply metallurgy principles	Nil
MEM30007A	Select common engineering materials	Nil
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	Nil
MSAENV472 B	Implement and monitor environmentally sustainable work practices	Nil

Notes

- MEA109B is equivalent to MEM12023A, MEM18001C and MEM18002B
- MEA260B and MEA261C are together equivalent to MEM12002B and MEM12004B
- MEA103B is equivalent to MEM14005A

Elective units Group A

Complete **three (3)** units chosen in accordance with the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA112B	Plan and implement civil aircraft maintenance activities	All relevant technical units	mandatory for CASA regulatory system
MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace	All relevant technical units	mandatory for CASA regulatory system
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections	Nil	mandatory for ADF regulatory system
MEM15010B	Perform laboratory procedures	Nil	
MEM17002B	Conduct workplace assessment	Nil	
TAEDEL301	Provide work skill instruction	Nil

MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics)

Modification History

Unit codes updated as required. Imported financial management elective unit replaced by MEA146A - equivalent

Description

This qualification may be of use to individuals employed in managerial positions in both the civil and ADF regulatory environments in the fields of avionic maintenance management and Integrated Logistic Support (ILS). It should also be noted that most of the maintenance management positions applicable to this qualification have airworthiness regulatory requirements regarding aviation maintenance experience. There is therefore no direct entry pathway to the qualification.

The qualification consists of:

- twenty five (25) common units and two (2) imported units, seventeen (17) of which are elective, that provide general competencies applicable to aviation maintenance managers
- four (4) para-professional avionic engineering units.

With regard to the employability skills, due to the high proportion of electives required by this qualification, the industry/enterprise requirements described for each employability skill are representative of the aviation maintenance industry in general and may not reflect specific job roles. Learning and assessment strategies for this qualification should be based on the requirements of the units of competency for this qualification.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Individuals seeking this qualification must meet at least one of the following criteria:

- at least five years current avionic maintenance experience
- Maintenance Engineer Licence (Avionics) issued by CASA
- Certificate IV in Aeroskills (Avionics)
- Diploma of Aviation Maintenance Management (Avionics).

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding complex directions from senior managers • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel, aircrew and specialists regarding maintenance problems • Talking to senior managers about maintenance and maintenance management problems and making presentations • Providing guidance to others and clearly describing faults, problems and spares requirements • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Negotiating with potential suppliers of items of aeronautical product, piece parts and consumables • Negotiating with clients regarding the drafting of technical publications and maintenance data • Negotiating with senior managers regarding issues, such as activity timelines and budgetary matters • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions, such as maintenance orders and compilation of maintenance documentation • Writing reports and proposals as required by regulations and organisational procedures • Interpreting organisational charts, wiring diagrams and system schematics, reading drawings relating to maintenance activities and interpreting fault diagnosis guides and logic charts • Using computers to obtain maintenance and maintenance management data, complete documentation and correspond using email • Networking with other maintenance managers and with others involved in maintenance-related integrated logistic support activities
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to team members or colleagues and senior managers and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Matching team member skills and authorisations to the task and adapting to contingencies

	<ul style="list-style-type: none"> • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
<p>Problem solving</p>	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems not fully covered by maintenance data and to maintenance management problems • Proposing solutions to problems as repair schemes, modifications or as amendments to specified maintenance processes • Assisting with the resolution of complex problems as a team effort • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with legislative, regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance, to convert values between systems of measurement, to calculate weight and balance, to develop management solutions to problems, and in performing integrated logistic support procedures
<p>Initiative and enterprise</p>	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, personnel management changes, operational circumstances, revised maintenance data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in modifications or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of maintenance tasks • Managing a process of innovation and continuous improvement and a willingness to initiate, support and participate in the effective introduction of new work practices • Assessing risks and taking action to achieve a recognised benefit or advantage to the organisation as a consequence of revised processes and procedures

	<ul style="list-style-type: none"> • Evaluating software requirements and hardware enhancements
Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with managers and team members • Planning the use of resources and allocating personnel and resources to tasks • Monitoring the time taken to complete tasks against team requirements or targets provided by management • Assessing work requirements for quotations • Collecting, analysing and organising information relating to assigned maintenance tasks and confirming the purpose and required work outcomes • Identifying contingency situations and taking action to resolve problems • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements • Analysing customer requirements and organisational work capacity • Developing, managing and evaluating aircraft and component maintenance strategies and plans • Establishing clear task goals and deliverables • Reviewing or developing budgets and managing financial resources • Surveying and assessing organisational and customer needs
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills when assisting team members with complex tasks and when proposing modifications, repair schemes, changes to maintenance practices or in managing integrated logistic support activities • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and application of legislation, regulations, policy and procedures to achieve required outcomes and build confidence in own ideas and vision • Effectively manage personal work priorities and professional development • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-the-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from subordinates, peers and managers to identify ways in which competence can be improved • Mentoring and providing on-the-job training and induction

	<p>training to team members</p> <ul style="list-style-type: none"> • Interpreting units of competency and applying them to attainment of identified career goals
Technology	<ul style="list-style-type: none"> • Operating aircraft and avionic systems, test equipment and ground support equipment, ground running engines and troubleshooting faults • Using on-board maintenance systems and using maintenance-related software • Maintaining aircraft systems, components and test stands • Performance testing of aircraft systems and engines • Storing and caring for components, parts, tools, test equipment and support equipment • Complying with requirements to complete maintenance records, develop and revise maintenance data and propose amendments to technical publications • Amending various forms of maintenance data • Using computers and microfiche to obtain maintenance data and using computers to complete records, reports and documentation

Packaging Rules

To be awarded the MEA60111 Advanced Diploma of Aviation Maintenance Management (Avionics), competency must be demonstrated in a total of **nineteen (19)** units of competency, as described below.

- If a Diploma of Aviation Maintenance Management (Avionics) has been attained, **nine (9)** of the required units will be already held and the number of additional units required is **ten (10)**.
- In all other cases the number of units required is **nineteen (19)**.

All units must be chosen as specified under the conditions set out below:

- **fifteen (15)** Core units consisting of engineering, common and imported units
- **four (4)** Elective units chosen from the common and imported units in Group A.

Core units of competency

The **four (4)** para-professional engineering units listed below are mandatory for those who do not have a Diploma of Aviation Maintenance Management (Avionics).

Unit code	Unit title	Prerequisites
MEA272B	Apply basic scientific principles and techniques in avionic engineering situations	Nil
MEA273A	Select and test avionic engineering materials	Nil
MEM30007A	Select common engineering materials	Nil
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	Nil

Complete the **eleven (11)** Advanced Diploma/Diploma common and imported units listed below (those with a Diploma of Aviation Maintenance Management (Avionics) will already have MEA121B, MEA133B, MEA135A and MEA142B).

Unit code	Unit title	Prerequisites
MEA120B	Manage an aviation maintenance quality system	Nil
MEA121B	Manage aircraft/aeronautical product configuration	Nil
MEA123B	Manage aviation maintenance work environment	Nil

Unit code	Unit title	Prerequisites
	policy and practices	
MEA124B	Coordinate change programs in the aviation maintenance environment	Nil
MEA125B	Develop aviation maintenance personnel	Nil
MEA133B	Communicate aviation technical and maintenance knowledge	Nil
MEA134B	Establish, maintain and evaluate the organisation's occupational health and safety system	Nil
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities	Nil
MEA141B	Manage risk in aviation maintenance	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	Nil

Elective units Group A

Plus **four (4)** of the elective Advanced Diploma/Diploma common and imported units listed below (those with a Diploma of Aviation Maintenance Management (Avionics) will already have one (1) of MEA136A, MEA137B and MEA140A). Units should be selected using the guidance in column four.

Unit code	Unit title	Prerequisites	Unit selection guidance
MEA115A	Plan and implement aeronautical product maintenance activities	Nil	
MEA122B	Manage aircraft/equipment system performance testing	MEA126B	
MEA126B	Manage aircraft maintenance activities	Nil	
MEA127B	Provide technical advice in the maintenance and management	MEA272B	Applicable to the CASA regulatory environment

Unit code	Unit title	Prerequisites	Unit selection guidance
	of aircraft and aeronautical product	MEA273A	
MEA128B	Provide engineering advice in the modification, maintenance and management of aircraft systems	MEA272B MEA273A	Applicable to the ADF regulatory environment
MEA129A	Investigate technical aspects of aviation occurrences	Nil	Applicable to the ADF regulatory environment
MEA130A	Manage deployed/detached aviation maintenance activities	Nil	Applicable to the ADF regulatory environment
MEA131B	Manage the custody, transfer and disposal of aircraft, aeronautical product and support equipment	Nil	
MEA132A	Manage budgetary resources in the aviation maintenance environment	Nil	MEA146A or PSPMNGT610A may be taken instead of this unit
MEA136A	Assess aviation maintenance spares and manage repairable items	MEA135A	
MEA137A	Write aviation technical publications	MEA135A	
MEA138B	Perform aviation technical publication management activities	MEA137A	
MEA139A	Perform aviation maintenance-related integrated logistic support activities	Nil	
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections	Nil	For supervisors within the ADF regulatory system
MEA143B	Develop and manage maintenance error management programs	Nil	Applicable to the CASA regulatory environment

Unit code	Unit title	Prerequisites	Unit selection guidance
MEA146A	Prepare and manage aviation maintenance organisation budgets and financial plans	Nil	Alternative to MEA132A and to PSPMNGT610A
PSPMNGT610A	Manage public sector financial resources	Nil	Alternative to MEA132A and to MEA146A

Packaging Rules

To be awarded the MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical), competency must be demonstrated in a total of **nineteen (19)** units of competency, as described below.

- If the Diploma of Aviation Maintenance Management (Mechanical) has been achieved, the number of units required is **ten (10)**.
- In all other cases, the number of units required is **nineteen (19)**.

All units must be chosen as specified under the conditions set out below:

- **fifteen (15)** Core units consisting of engineering, common and imported units
- **four (4)** Elective units chosen from the common and imported units in Group A.

Core units of competency

The **four (4)** para-professional engineering units listed below are mandatory for those who do not have Diploma of Aviation Maintenance Management (Mechanical).

Unit code	Unit title	Prerequisites
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations	Nil
MEA350A	Select and test aeronautical engineering materials	Nil
MEM30007A	Select common engineering materials	Nil
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	Nil

Complete the **eleven (11)** Advanced Diploma/Diploma common units listed below (those with Diploma of Aviation Maintenance Management (Mechanical) will already have MEA121B, MEA133B, MEA135B and MEA142B).

Unit code	Unit title	Prerequisites
MEA120B	Manage an aviation maintenance quality system	Nil
MEA121B	Manage aircraft/aeronautical product configuration	Nil
MEA123B	Manage aviation maintenance work environment policy and practices	Nil
MEA124B	Coordinate change programs in the aviation	Nil

Unit code	Unit title	Prerequisites
	maintenance environment	
MEA125B	Develop aviation maintenance personnel	Nil
MEA133B	Communicate aviation technical and maintenance knowledge	Nil
MEA134B	Establish, maintain and evaluate the organisation's occupational health and safety system	Nil
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities	Nil
MEA141B	Manage risk in aviation maintenance	Nil
MEA142B	Manage self in the aviation maintenance environment	Nil
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	Nil

Elective units Group A

Take **four (4)** of the elective Advanced Diploma/Diploma common units listed below (those with Diploma of Aviation Maintenance Management (Mechanical) will already have **one (1)** of MEA136B, MEA137A and MEA140A). Units should be selected using the guidance in column four.

Unit code	Unit title	Prerequisites	Unit selection guidance
MEA115A	Plan and implement aeronautical product maintenance activities	Nil	
MEA122B	Manage aircraft/equipment system performance testing	MEA126B	
MEA126B	Manage aircraft maintenance activities	Nil	
MEA127B	Provide technical advice in the maintenance and management of aircraft and aeronautical product	MEA349A MEA350A	Applicable to the CASA regulatory environment
MEA128B	Provide engineering advice in the modification, maintenance and	MEA349A, MEA350A	Applicable to the ADF regulatory environment

Unit code	Unit title	Prerequisites	Unit selection guidance
	management of aircraft systems		
MEA129A	Investigate technical aspects of aviation occurrences	Nil	Applicable to the ADF regulatory environment
MEA130A	Manage deployed/detached aviation maintenance activities	Nil	Applicable to the ADF regulatory environment
MEA131B	Manage the custody, transfer and disposal of aircraft, aeronautical product and support equipment	Nil	
MEA132A	Manage budgetary resources in the aviation maintenance environment	Nil	MEA146A or PSPMNGT610A may be taken instead of this unit
MEA136A	Assess aviation maintenance spares and manage repairable items	MEA135A	
MEA137A	Write aviation maintenance technical publications	MEA135A	
MEA138B	Perform aviation technical publication management activities	MEA137A	
MEA139A	Perform aviation maintenance-related integrated logistic support management activities	Nil	
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections	Nil	For supervisors within the ADF regulatory system
MEA143B	Develop and manage maintenance error management programs	Nil	Applicable to the CASA regulatory environment
MEA146A	Prepare and manage aviation maintenance organisation budgets and financial plans	Nil	Alternative to MEA132A and to PSPMNGT610A
PSPMNGT610A	Manage public sector financial resources	Nil	Alternative to MEA132A and BSBMGT504A

Custom Content Section

MEA60311 Advanced Diploma of Aviation Non-Destructive Testing

Modification History

New qualification

Description

This qualification applies to individuals who perform aircraft and aircraft component non-destructive testing (NDT), develop NDT techniques and provide training in NDT in accordance with *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* at Level 3. The qualification also meets the regulatory requirements of CASA and the ADF.

The requirement for the awarding of MEA60311 Advanced Diploma of Aviation Non-Destructive Testing is demonstrated competency in listed units of competency under the conditions set out below. It consists of core units and electives chosen from Electives Group A.

Core units include:

- common and technical stream units that relate to the aviation maintenance environment
- technical stream and imported units relating to the NDT work environment
- imported units that specifically cover the competencies required to perform each relevant NDT technique to the standard specified in *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* for Level 2 and 3 personnel
- imported units that cover competencies in the development, delivery and assessment of training.

Electives Group A units consisting of:

- Common units specific to either CASA or ADF regulatory requirements
- Technical stream and imported units that are applicable to various areas of employment in the NDT field at *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* Level 3.

Individuals who have a Certificate IV in Aeroskills and/or the MEA50511 Diploma of Aeroskills (Non-Destructive Testing) will already have a significant number of credits towards this qualification.

The qualification also provides credits towards the MEA60211 Advanced Diploma of Aviation Maintenance Management (Mechanical).

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Individuals seeking this qualification must meet one of the following entry criteria:

- MEA50511 Diploma of Aeroskills (Non-Destructive Testing)
- Certificate IV in Aeroskills
- Aircraft Maintenance Engineer Licence issued by CASA
- Attainment of the following nine (9) Aeroskills units of competency:

Unit code	Unit title	Prerequisites
MEA101B	Interpret occupational health and safety practices in aviation maintenance	Nil
MEA103B	Plan and organise aviation maintenance work activities	MEA101B, MEA105C, MEA107B, MEA108B
MEA105C	Apply quality standards applicable to aviation maintenance processes	MEA101B, MEA107B
MEA107B	Interpret and use aviation maintenance industry manuals and specifications	Nil
MEA108B	Complete aviation maintenance industry documentation	MEA105C
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance	MEA105C, MEA108B
MEA340A	Lay out and set up aircraft systems	MEA101B, MEA107B, MEA109B
MEA341A	Apply basic aircraft design characteristics	MEA101B, MEA107B, MEA109B
MEA342A	Apply basic aircraft power plant design characteristics	MEA101B, MEA107B, MEA109B

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Understanding complex directions from senior managers • Understanding input from professional engineers, specialist personnel and technical representatives • Liaising with maintenance personnel and specialists regarding NDT problems and applications • Talking to senior managers about NDT tasks and requirements and making presentations • Providing guidance to others and describing clearly faults found during NDT and the application of NDT procedures • Negotiating with team members, senior managers and aircraft owners/operators regarding timing and progress of work activities • Negotiating with potential suppliers of NDT equipment, piece parts and consumables • Negotiating with clients regarding the drafting of technical publications and NDT data • Negotiating with senior managers regarding issues such as activity timelines and budgetary matters • Understanding and interpreting regulations, procedures, instructions and maintenance publications • Giving written instructions such as NDT procedures, maintenance orders and compilation of maintenance documentation • Writing reports and proposals as required by regulations and organisational procedures • Interpreting organisational charts, wiring diagrams and system schematics, reading drawings relating to NDT activities and interpreting specific NDT procedures • Using computers to obtain maintenance and maintenance management data, complete documentation and correspond using email • Networking with other maintenance managers and with others involved in maintenance-related integrated logistic support activities
Teamwork	<ul style="list-style-type: none"> • Performing tasks as an individual while being responsive to team members or colleagues and senior managers and allowing for relevant human factors • Working effectively with others who may be of different ages, gender, race, religion and political persuasion • Assisting team members with task definition and providing advice on work processes and troubleshooting • Matching team member skills and authorisations to the task and

	<p>adapting to contingencies</p> <ul style="list-style-type: none"> • Providing leadership and development of team commitment and dynamics • Monitoring and assessing team performance and providing mentoring and performance feedback • Gaining the trust and confidence of team members and resolving conflict within the team • Providing team members with the opportunity for ongoing competency development
Problem solving	<ul style="list-style-type: none"> • Identifying problems in a timely manner and developing practical solutions to maintenance problems requiring NDT • Proposing solutions to problems associated with the development and application of NDT processes • Assisting with the resolution of complex problems as a team effort • Constantly reviewing problem solving skills and ability to effectively apply competencies to solve problems within the limits permitted by regulatory and organisational guidelines • Responding to emergencies or accidents in accordance with legislative, regulatory and organisational requirements • Using mathematical techniques to relate test results to system or component performance, to convert values between systems of measurement, to calculate weight and balance, to develop management solutions to problems, and in performing integrated logistic support procedures
Initiative and enterprise	<ul style="list-style-type: none"> • Adapting to new situations that arise as a consequence of regulatory changes, technology, contractual requirements, personnel management changes, operational circumstances, revised NDT data, practices and procedures • Varying work practices and behaviour as a result of performance feedback from subordinates, peers and managers • Evaluating ideas to ensure that technical and regulatory aspects have been fully covered before proposing action that may result in new or revised NDT procedures or changes to work processes • Applying human factors to avoid maintenance errors and maintain quality standards • Adapting competencies to the performance of a wide range of NDT tasks • Managing a process of innovation and continuous improvement and a willingness to initiate, support and participate in the effective introduction of new work practices • Assessing risks and taking action to achieve a recognised benefit or advantage to the organisation as a consequence of revised processes and procedures • Evaluating software requirements and hardware enhancements

Planning and organising	<ul style="list-style-type: none"> • Clarifying task objectives and required outcomes through discussion with managers and team members • Planning the use of resources and allocating personnel and resources to tasks • Monitoring the time taken to complete tasks against team requirements or targets provided by management • Assessing work requirements for quotations • Collecting, analysing and organising information relating to assigned NDT tasks and confirming the purpose and required work outcomes • Identifying contingency situations and taking action to resolve problems • Identifying the extent of impact on assigned work of changes in procedures, work instructions or regulatory requirements • Analysing customer requirements and organisational work capacity • Developing, managing and evaluating aircraft and component NDT strategies and plans • Establishing clear task goals and deliverables • Reviewing or developing budgets and managing financial resources • Surveying and assessing organisational and customer needs
Self-management	<ul style="list-style-type: none"> • Accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones • Assessing personal knowledge and skills when assisting team members with NDT tasks and when developing new or modified NDT procedures • Actively seeking opportunities to develop competencies and to apply them across a range of tasks and application of legislation, regulations, policy and procedures to achieve required outcomes and build confidence in own ideas and vision • Effectively manage personal work priorities and professional development • Identifying career paths and training opportunities that will assist in attaining career goals
Learning	<ul style="list-style-type: none"> • Taking advantage of learning opportunities that arise through training courses provided by the organisation or external providers and through mentoring and on-job training • Adapting competencies to accommodate new ideas and techniques • Using feedback from subordinates, peers and managers to identify ways in which competence can be improved • Mentoring and providing on-job training and induction training to team members • Interpreting units of competency and applying them to

	attainment of identified career goals
Technology	<ul style="list-style-type: none">• Operating and maintaining NDT equipment and reference standards• Performing NDT procedures on aircraft and aircraft components• Developing and documenting NDT techniques• Storing and caring for components, parts, tools, test equipment and support equipment• Complying with requirements to complete maintenance records, develop and revise maintenance data and propose amendments to technical publications• Amending various forms of maintenance data• Using computers and microfiche to obtain maintenance data and using computers to complete records, reports and documentation

Packaging Rules

To be awarded the MEA60311 Advanced Diploma of Aviation Non-Destructive Testing, competency must be demonstrated in **thirty eight (38)** units.

Core units of competency

Complete the following **thirty four (34)** core units.

Unit code	Unit title	Prerequisites
MEA116B	Apply occupational health and safety procedures at supervisor level in aviation maintenance	Nil
MEA120B	Manage an aviation maintenance quality system	Nil
MEA133B	Communicate aviation technical and maintenance management knowledge	Nil
MEA134B	Establish, maintain and evaluate the organisation's occupational health and safety system	Nil
MEA135A	Use computers in aviation maintenance-related integrated logistic support activities	Nil
MEA137A	Write aviation technical publications	MEA135A
MEA138B	Perform aviation technical publication management activities	MEA137A
MEA142B	Manage self in the aviation maintenance environment	Nil
MEA260B	Use electrical test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA261C	Use electronic test equipment	MEA101B, MEA103B, MEA105C, MEA107B, MEA108B, MEA109B
MEA349B	Apply basic scientific principles and techniques in aeronautical engineering situations	Nil
MEA350A	Select and test aeronautical engineering	Nil

	materials	
MEA424A	Evaluate aircraft non-destructive tests	MEA109B, MEA133B, MEM13013B, MEM16010A, MEM24002B, MEM24004B, MEM24006B, MEM24008B MEM24010B, MEM24012C
MEM09002B	Interpret technical drawing	Nil
MEM09003B	Prepare basic engineering drawing	MEM09002B
MEM12003B	Perform precision mechanical measurement	MEM12023A (see Note 1)
MEM13013B	Work safely with ionising radiation	
MEM15017B	Use and maintain reference standards	MEM11011B MEM12003B MEM12004B (see Note 2) MEM12005B MEM12023A (see Note 1) MEM18001C (see Note 1) MEM18002B (see Note 1)
MEM16010A	Write reports	MEM14005A (see Note 4)
MEM24002B	Perform penetrant testing	MEM18001C (see Note 1) MEM24012C
MEM24004B	Perform magnetic particle testing	MEM18001C (see Note 1) MEM24012C

MEM24006B	Perform eddy current testing	MEM18001C (see Note 1) MEM24012C
MEM24008B	Perform ultrasonic testing	MEM18001C (see Note 1) MEM24012C
MEM24010B	Perform radiographic testing	MEM13013B MEM18001C (see Note 1) MEM24012C
MEM24011B	Establish non-destructive tests	MEM13013B MEM16010A (see Note 3) MEM18001C MEM24002B MEM24004B MEM24006B MEM24008B MEM24010B MEM24012C
MEM24012C	Apply metallurgy principles	Nil
MEM30007A	Select common engineering materials	Nil
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment	Nil
MSAENV672 B	Develop workplace policy and procedures for environmental sustainability	Nil
TAEDEL402A	Plan, organise and facilitate learning in the workplace	Nil
TAEASS401B	Plan assessment activities and processes	Nil
TAEASS402B	Assess competence	Nil

TAEASS403B	Participate in assessment validation	Nil
TAEASS502B	Design and develop assessment tools	Nil

Notes

- MEA109B is equivalent to MEM12023A, 18001C and 18002B
- MEA260B and MEA261C are together equivalent to MEM12004B
- MEA137A is equivalent to MEM16010A
- MEA103B is equivalent to MEM14005A

Elective units Group A

Complete **four (4)** units chosen in accordance with the unit selection guidelines in column four.

Unit code	Unit title	Prerequisites	Unit selection guidelines
MEA112B	Plan and implement civil aircraft maintenance activities	All relevant technical units	mandatory for CASA regulatory system
MEA113C	Supervise civil aircraft maintenance activities and manage human resources in the workplace	All relevant technical units	mandatory for CASA regulatory system
MEA123B	Manage aviation maintenance work environment policy and practices	Nil	
MEA140A	Supervise aviation maintenance teams and perform maintenance quality inspections	Nil	Mandatory for ADF regulatory system
MEM09009C	Create 2D drawings using computer aided design systems	MEM09002B MEM16008A	
MEM15010B	Perform laboratory procedures	Nil	
MEM16002C	Conduct formal interviews and negotiations	Nil	
TAEDDES401 A	Design and develop learning programs	Nil

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment
MEA261C	Use electronic test equipment
MEA262B	Modify/repair single layer printed circuit boards
MEA286A	Repair or overhaul aircraft electrical/electro-mechanical components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on electrical component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on electrical component repair and overhaul.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- MEA108B Complete aviation maintenance industry documentation
- MEA145A Conversion from allied trades for employment in aviation maintenance workshops
- MEA385A Repair and/or overhaul gas turbine engine turbine and exhaust section components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on gas turbine engine turbine and exhaust module/component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on gas turbine engine turbine and exhaust module/component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00175 Gas turbine engine ancillary section module/component repair/overhaul

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEA386A	Repair and/or overhaul gas turbine engine ancillary section components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on gas turbine engine ancillary section module/component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on gas turbine engine ancillary section module/component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00204 Piston engine repair/overhaul

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|---------|--|
| MEA108B | Complete aviation maintenance industry documentation |
| MEA145A | Conversion from allied trades for employment in aviation maintenance workshops |
| MEA388A | Repair and/or overhaul piston engines |

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on aircraft piston engine repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on piston engine repair and overhaul.

Custom Content Section

Not applicable.

MEASS00214 Propeller repair/overhaul

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|---------|--|
| MEA108B | Complete aviation maintenance industry documentation |
| MEA145A | Conversion from allied trades for employment in aviation maintenance workshops |
| MEA389A | Repair and/or overhaul propellers |

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on propeller repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on propeller repair and overhaul.

Custom Content Section

Not applicable.

MEASS00230 Rotary wing dynamic component repair/overhaul

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|---------|--|
| MEA108B | Complete aviation maintenance industry documentation |
| MEA145A | Conversion from allied trades for employment in aviation maintenance workshops |
| MEA390A | Repair and/or overhaul rotary wing dynamic components |

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on rotary wing dynamic component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on rotary wing dynamic component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00201 Mechanical system component repair/overhaul

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|---------|--|
| MEA108B | Complete aviation maintenance industry documentation |
| MEA145A | Conversion from allied trades for employment in aviation maintenance workshops |
| MEA391A | Repair and/or overhaul aircraft mechanical system components |

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on mechanical system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on mechanical system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00155 Composite structure maintenance

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Structures).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA401C	Inspect aircraft structures
MEA405B	Repair/modify aircraft composite material structure/components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on composite structural component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform maintenance on aircraft composite structures.

Custom Content Section

Not applicable.

MEASS00159 Electrical - B1.1 Licence Exclusions E1 and E4 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA203C	Remove and install advanced aircraft electrical systems and components
MEA223D	Inspect aircraft electrical systems and components
MEA227D	Test and troubleshoot aircraft electrical systems and components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment

Target Group

Holders of CASA B1.1 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before undergoing specific type training in electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.1 licence.

Custom Content Section

Not applicable.

MEASS00160 Electrical - B1.1 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft with gas turbine engine)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- MEA201B Remove and install miscellaneous aircraft electrical hardware/components
- MEA274A Maintain basic light aircraft electrical systems and components
- MEA246C Fabricate and/or repair aircraft electrical hardware or parts
- MEA260B Use electrical test equipment

Target Group

Holders of CASA B1.1 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft (with gas turbine engine) electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.1 licence for basic light aircraft (with gas turbine engine) maintenance.

Custom Content Section

Not applicable.

MEASS00162 Electrical - B1.2, B1.3 or B1.4 Licence Exclusions E1 and E4 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA203C	Remove and install advanced aircraft electrical systems and components
MEA211C	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment

Target Group

Holders of CASA B1.2, 1.3 or B1.4 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify electrical system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.2, B1.3 or B1.4 licence.

Custom Content Section

Not applicable.

MEASS00161 Electrical - B1.2 or B1.4 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft or helicopters)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment
MEA274A	Maintain basic light aircraft electrical systems and components

Target Group

Holders of CASA B1.2 or B1.4 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft and basic helicopter electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.2 or B1.4 licence for basic light aircraft and basic helicopter maintenance.

Custom Content Section

Not applicable.

MEASS00164 Electrical - B2 Licence Exclusions E1 and E4 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA203C Remove and install advanced aircraft electrical systems and components

MEA223D Inspect aircraft electrical systems and components

MEA227D Test and troubleshoot aircraft electrical systems and components

Target Group

Holders of CASA B2 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before undergoing specific type training in electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00165 Electrical - B2 Licence Exclusions E1 and E4 Removal (when competencies are being gained on basic light aircraft or helicopters)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|---------|---|
| MEA202C | Remove and install basic aircraft electrical systems and components |
| MEA210C | Inspect, test and troubleshoot basic aircraft electrical systems and components |

Target Group

Holders of CASA B2 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft and basic helicopter electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B2 licence for basic light aircraft and basic helicopter maintenance.

MEASS00137 Airframe - B1.1 Licence Exclusion E2 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components
MEA303D	Remove and install aircraft pneumatic system components
MEA305C	Remove and install aircraft fixed wing flight control system components
MEA317C	Remove and install pressurised aircraft structural and non-structural components
MEA318C	Inspect aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA320C	Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA321C	Test and troubleshoot aircraft fixed wing flight control systems and components
MEA323B	Perform advanced troubleshooting in aircraft mechanical maintenance
MEA325B	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications
MEA328C	Maintain and/or repair aircraft mechanical components or parts
MEA339C	Inspect, repair and maintain aircraft structures
MEA365A	Assess structural repair/modification requirements and evaluate structural repairs and modifications

Target Group

Holders of CASA B1.1 licences endorsed with an airframe exclusion E2 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before undergoing specific type training in airframe systems/structure.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E2 from a CASR Part 66 B1.1 licence.

Custom Content Section

Not applicable.

MEASS00138 Airframe - B1.1 Licence Exclusion E2 Removal (when competencies are being gained on light aircraft with gas turbine engine)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|---------|--|
| MEA351A | Maintain airframe systems of basic light fixed wing aircraft |
| MEA363B | Inspect, repair and maintain structure and related components of non-pressurised small aircraft |
| MEA364A | Maintain and/or repair small aircraft mechanical components or parts |
| MEA365A | Assess structural repair/modification requirements and evaluate structural repairs and modifications |

Target Group

Holders of CASA B1.1 licences endorsed with an airframe exclusion E2 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft airframe systems and structure.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E2 from a CASR Part 66 B1.1 licence for maintenance of basic light aircraft with gas turbine engines.

MEASS00206 Power Plant - B1.1 Licence Exclusion E3 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA306C	Remove and install engines and engine system components
MEA307C	Remove and install propeller systems and components (applicable only where licence type ratings sought include propeller driven aircraft)
MEA315C	Inspect, test and troubleshoot propeller systems and components (applicable only where licence ratings sought include propeller driven aircraft)
MEA319C	Inspect gas turbine engine systems and components
MEA322C	Test and troubleshoot gas turbine engine systems and components
MEA323B	Perform advanced troubleshooting in aircraft mechanical maintenance

Target Group

Holders of CASA B1.1 licences endorsed with a power plant exclusion E3 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before undergoing specific power plant type training.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of power plant exclusion E3 from a CASR Part 66 B1.1 licence.

MEA205C	Remove and install advanced aircraft instrument system components
MEA207C	Remove and install aircraft electronic system components
MEA224C	Inspect aircraft instrument systems and components
MEA225C	Inspect fixed wing aircraft automatic flight control systems and components
MEA226D	Inspect aircraft electronic systems and components
MEA228D	Test and troubleshoot aircraft instrument systems and components
MEA230C	Test and troubleshoot fixed wing aircraft automatic flight control systems and components
MEA231C	Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components (<i>may be taken instead of MEA225C and MEA230C where ratings sought are entirely helicopter</i>)
MEA235B	Perform advanced troubleshooting in aircraft avionic maintenance

Target Group

Holders of CASA B2 licences endorsed with instrument E5 and/or E7 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before undergoing specific type training in instrument-related avionic systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusions E5 and/or E7 from a CASR Part 66 B2 licence.

MEASS00189 Instrument and Radio - B1 Licence Exclusion E6 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA203C	Remove and install advanced aircraft electrical systems and components
MEA211C	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment
MEA343B	Remove and install avionic system components

Target Group

Holders of CASA B1 licences endorsed with an instrument and radio E6 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before undergoing specific type training in instrument-related avionic systems or before being able to certify maintenance in the case of non-rated aircraft types.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of instrument and radio exclusion E6 from all CASR Part 66 B1 licences.

Custom Content Section

MEA217C Inspect, test and troubleshoot fixed wing autopilot systems and components

Or, if helicopter systems are being maintained:

MEA218C Inspect, test and troubleshoot rotary wing autopilot systems and components

Target Group

Holders of CASA B2 licences endorsed with instrument E28 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify multi-axis autopilot system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E28 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00185 Instrument - B2 Licence Exclusion E29 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA205C Remove and install advanced aircraft instrument system components

MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems

Target Group

Holders of CASA B2 licences endorsed with instrument E29 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify remote indicating compass system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E29 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00186 Instrument - B2 Licence Exclusion E30 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207C	Remove and install aircraft electronic system components
MEA233C	Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components

Target Group

Holders of CASA B2 licences endorsed with instrument E30 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify inertial navigation and reference system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E30 from a CASR Part 66 B2 licence

Custom Content Section

Not applicable.

MEASS00187 Instrument - B2 Licence Exclusion E31 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA208C	Remove and install aircraft pressurisation control system components
MEA219C	Inspect, test and troubleshoot aircraft pressurisation control systems and components

Target Group

Holders of CASA B2 licences endorsed with instrument E31 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify pressurisation system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E31 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00163 Electrical - B2 Licence Exclusion E32 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA202C	Remove and install basic aircraft electrical systems and components
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components
MEA277A	Maintain twin engine aircraft electrical systems and components

Target Group

Holders of CASA B2 licences endorsed with electrical E32 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify maintenance of multi-generator power systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical exclusion E32 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00170 Engine - B1.2 or B1.4 Licence Exclusions E33 and E38 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA306C Remove and install engines and engine system components

MEA313C Inspect, test and troubleshoot piston engine systems and components

Target Group

Holders of CASA B1.2 or B1.4 licences endorsed with engine E33 or E38 exclusions who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify supercharging and/or turbocharging system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of engine exclusions E33 or E38 from a CASR Part 66 B1.2 or B1.4 licence.

Custom Content Section

Not applicable.

MEASS00157 Electical/Instrument/Radio - B2 Licence Exclusion E34 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207C Remove and install aircraft electronic system components

And any one of

MEA227D Test and troubleshoot aircraft electrical systems and components

MEA228D Test and troubleshoot aircraft instrument systems and components

MEA229D Test and troubleshoot aircraft radio frequency navigation and communications systems and components

MEA230C Test and troubleshoot fixed wing aircraft automatic flight control systems and components

MEA231C Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components

MEA232C Test and troubleshoot aircraft pulse systems and components

MEA278A Inspect, test and troubleshoot instrument display systems and components

Target Group

Holders of CASA B2 licences endorsed with electrical/instrument/radio E34 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify maintenance of digital electronic systems.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical/instrument/radio exclusion E34 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00139 Airframe - B1.1 or B1.2 Licence Exclusion E35 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA317C	Remove and install pressurised aircraft structural and non-structural components
MEA339C	Inspect, repair and maintain aircraft structures

Target Group

Holders of CASA B1.1 or B1.2 licences endorsed with airframe E35 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify pressurised structure maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E35 from a CASR Part 66 B1.1 or B1.2 licence.

Custom Content Section

Not applicable.

MEASS00171 Engine - B1.2 or B1.4 Licence Exclusions E36 and E37 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA306C Remove and install engines and engine system components

MEA313C Inspect, test and troubleshoot piston engine systems and components

Target Group

Holders of CASA B1.2 or B1.4 licences endorsed with engine E36 or E37 exclusions who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify carburettor or fuel injection system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of engine exclusion E36 or E37 from a CASR Part 66 B1.2 or B1.4 licence.

Custom Content Section

Not applicable.

MEASS00172 Engine - B1.2 or B1.4 Licence Exclusions E36 and E37 Removal (when competencies are being gained on basic light aircraft or helicopters)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA353A Maintain basic light aircraft engines and propellers

Target Group

Holders of CASA B1.2 or B1.4 licences endorsed with engine E36 or E37 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify carburettor or fuel injection system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of engine exclusion E36 or E37 from a CASR Part 66 B1.2 or B1.4 licence.

Custom Content Section

Not applicable.

MEASS00140 Airframe - B1.1 or B1.3 Licence Exclusions E39 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA303D	Remove and install aircraft pneumatic system components
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components

Target Group

Holders of CASA B1.1 or B1.3 licences endorsed with airframe E39 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify airframe ice protection system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E39 from a CASR Part 66 B1.1 or B1.3 licence.

Custom Content Section

Not applicable.

MEASS00145 Airframe - B1.2 or B1.4 Licence Exclusion E39 Removal (when competencies are being gained on basic light aircraft or helicopters)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA354A Maintain light aircraft pneumatic systems

Target Group

Holders of CASA B1.2 or B1.4 licences endorsed with airframe E39 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package unit of competency that must be attained before being able to certify airframe ice protection system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E39 from a CASR Part 66 B1.2 or B1.4 licence.

Custom Content Section

Not applicable.

MEASS00130 Airframe - B1 Licence Exclusion E40 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA303D	Remove and install aircraft pneumatic system components
MEA310C	Inspect, test and troubleshoot aircraft pneumatic systems and components

Target Group

Holders of CASA B1 licences endorsed with airframe E40 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify airframe fire protection system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E40 from a CASR Part 66 B1 licence.

Custom Content Section

Not applicable.

MEASS00131 Airframe - B1 Licence Exclusion E41 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA209C	Remove and install aircraft oxygen system components
MEA222C	Inspect, test and troubleshoot aircraft oxygen systems and components

Target Group

Holders of CASA B1 licences endorsed with airframe E41 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify oxygen system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E41 from a CASR Part 66 B1 licence.

Custom Content Section

Not applicable.

MEASS00132 Airframe - B1 Licence Exclusion E42 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA202C	Remove and install basic aircraft electrical systems and components
MEA210C	Inspect, test and troubleshoot basic aircraft electrical systems and components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment
MEA302C	Remove and install aircraft hydro-mechanical and landing gear system components
MEA309C	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components

Target Group

Holders of CASA B1 licences endorsed with airframe E42 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify landing gear retraction system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E42 from a CASR Part 66 B1 licence.

Custom Content Section

Not applicable.

MEASS00158 Electrical - B1 Licence Exclusion E44 Removal

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA246C	Fabricate and/or repair aircraft electrical hardware or parts
MEA260B	Use electrical test equipment

Target Group

Holders of CASA B1 licences endorsed with electrical E44 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA11 Aeroskills Training Package units of competency that must be attained before being able to certify repairs to wiring.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the removal of electrical exclusion E44 from a CASR Part 66 B1 licence.

Custom Content Section

Not applicable.

MEASS00082 Aircraft egress system maintenance

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Armament).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA601A	Maintain aircraft egress systems
PUADEFEO101D	Work safely with explosive ordnance

Target Group

Individuals who wish to gain approval to maintain egress systems that contain explosive ordnance that are fitted to civil registered aircraft, such as Warbirds.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform maintenance on aircraft egress systems that contain explosive ordnance.

Custom Content Section

Not applicable.

MEASS00180 In-flight entertainment system maintenance

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Certificate II in Aircraft Line Maintenance.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA264A	Remove and install aircraft electrical/avionic components during line maintenance
MEA265A	Remove and install general aircraft electrical hardware

Target Group

Individuals who are required to maintain aircraft in-flight entertainment systems (IFE).

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA, when combined with applicable IFE equipment vendor training, for the grant of an approval to perform maintenance on IFE.

Custom Content Section

Not applicable.

MEASS00153 Borescope inspection approval

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers this unit as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Refer to pathways information.

Skill Set Requirements

MEA366A Perform borescope inspections

Target Group

Qualified Aircraft Maintenance Engineers seeking approval to perform borescope inspections on aircraft engines.

Suggested words for Statement of Attainment

This competency from the MEA11 Aeroskills Training Package meets the requirements of CASA for the grant of an approval to perform borescope inspections on aircraft engines.

Custom Content Section

Not applicable.

MEASS00080 Aircraft composite structure repair/modification using hot and cold bonding

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Mechanical) and (Mechatronics) and of a Diploma of Aeroskills (Mechanical).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA401C Inspect aircraft structures

or

MEA339C Inspect, repair and maintain aircraft structures

or

MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft

MEA405B Repair/modify aircraft composite material structure/components

Target Group

Individuals with Certificate IV in Aeroskills (Mechanical) or holders of B1 Maintenance Certification Licences who require an approval to repair or modify aircraft composite structure using hot and/or cold bonding.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform repairs and modifications on aircraft composite structures using hot and/or cold bonding.

Custom Content Section

Not applicable.

MEASS00079 Aircraft composite structure repair/modification using cold bonding only

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Mechanical) and (Mechatronics).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA401C Inspect aircraft structures

or

MEA339C Inspect, repair and maintain aircraft structures

or

MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft

MEA367A Repair/modify aircraft composite structure using cold bonding

Target Group

Individuals with Certificate IV in Aeroskills (Mechanical) or holders of B1 Maintenance Certification Licences who require an approval to repair or modify aircraft composite structure using cold bonding only.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform repairs and modifications on aircraft composite structures using cold bonding only.

Custom Content Section

Not applicable.

MEASS00106 Aircraft welding using the gas welding process - aluminium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the gas welding process. The competency elements of MEA430A must be attained using the aluminium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld aluminium alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00110 Aircraft welding using the gas welding process - magnesium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloys using the gas welding process. The competency elements of MEA430A must be attained using the magnesium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld magnesium alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00107 Aircraft welding using the gas welding process - carbon and low alloy steels

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of carbon and low alloy steels using the gas welding process. The competency elements of MEA430A must be attained using the carbon steel and low alloy steel parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld carbon and low alloy steel aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld carbon and low alloy steels using the gas welding process.

Custom Content Section

Not applicable.

MEASS00109 Aircraft welding using the gas welding process - corrosion and heat resisting steels

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of corrosion and heat resisting steel using the gas welding process. The competency elements of MEA430A must be attained using the corrosion and heat resisting steel parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld corrosion and heat resisting steel aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld corrosion and heat resisting steels using the gas welding process.

MEASS00111 Aircraft welding using the gas welding process - nickel alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of nickel alloys using the gas welding process. The competency elements of MEA430A must be attained using the nickel alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld nickel alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld nickel alloys using the gas welding process.

Custom Content Section

MEASS00108 Aircraft welding using the gas welding process - copper based alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of copper based alloys using the gas welding process. The competency elements of MEA430A must be attained using the copper based alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld copper based alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld copper based alloys using the gas welding process.

Custom Content Section

MEASS00112 Aircraft welding using the gas welding process - titanium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of titanium alloys using the gas welding process. The competency elements of MEA430A must be attained using the titanium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA430A	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld titanium alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld titanium alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00087 Aircraft welding using the braze welding process - aluminium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the braze welding process. The competency elements of MEA431A must be attained using the aluminium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA431A	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the braze welding process.

Custom Content Section

Not applicable.

MEASS00091 Aircraft welding using the braze welding process - magnesium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloys using the braze welding process. The competency elements of MEA431A must be attained using the magnesium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA431A	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld magnesium alloy aircraft components using the braze welding process.

Custom Content Section

Not applicable.

MEASS00088 Aircraft welding using the braze welding process - carbon and low alloy steels

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of carbon and low alloy steel using the braze welding process. The competency elements of MEA431A must be attained using the carbon steel and low alloy steel parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA431A	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld carbon and low alloy steel aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld carbon and low alloy steel aircraft components using the braze welding process.

MEA432A	Weld aircraft components using the gas tungsten arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld corrosion and heat resisting steel aircraft components using the gas tungsten arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld corrosion and heat resisting steel aircraft components using the gas tungsten arc welding process.

Custom Content Section

Not applicable.

MEASS00105 Aircraft welding using the gas tungsten arc welding process - nickel alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of nickel alloy using the gas tungsten arc welding process. The competency elements of MEA432A must be attained using the nickel alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA432A	Weld aircraft components using the gas tungsten arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld nickel alloy aircraft components using the gas tungsten arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld nickel alloy aircraft components using the gas tungsten arc welding process.

Custom Content Section

Not applicable.

MEASS00120 Aircraft welding using the plasma arc welding process - aluminium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the plasma arc welding process. The competency elements of MEA434A must be attained using the aluminium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA434A	Weld aircraft components using the plasma arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the plasma arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the plasma arc welding process.

Custom Content Section

Not applicable.

MEASS00124 Aircraft welding using the plasma arc welding process - magnesium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloy using the plasma arc welding process. The competency elements of MEA434A must be attained using the magnesium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA434A	Weld aircraft components using the plasma arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the plasma arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld magnesium alloy aircraft components using the plasma arc welding process.

Custom Content Section

Not applicable.

MEASS00121 Aircraft welding using the plasma arc welding process - carbon and low alloy steels

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of carbon and low alloy steel using the plasma arc welding process. The competency elements of MEA434A must be attained using the carbon steel and low alloy steel parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA434A	Weld aircraft components using the plasma arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld carbon and low alloy steel aircraft components using the plasma arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld carbon and low alloy steel aircraft components using the plasma arc welding process.

MEASS00126 Aircraft welding using the plasma arc welding process - titanium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of titanium alloy using the plasma arc welding process. The competency elements of MEA434A must be attained using the titanium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA434A	Weld aircraft components using the plasma arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld titanium alloy aircraft components using the plasma arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld titanium alloy aircraft components using the plasma arc welding process.

MEASS00113 Aircraft welding using the manual metal arc welding process - aluminium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the manual metal arc welding process. The competency elements of MEA435A must be attained using the aluminium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05015D	Weld using manual metal arc welding process
MEM05016C	Perform advanced welding using manual metal arc welding process
MEM05026C	Apply welding principles
MEM05046B	Perform welds to code standards using manual metal arc welding process
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA435A	Weld aircraft components using the manual metal arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the manual metal arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the manual metal arc welding process.

MEASS00119 Aircraft welding using the manual metal arc welding process - titanium alloys

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of titanium alloy using the manual metal arc welding process. The competency elements of MEA435A must be attained using the titanium alloy parent metal group as listed in the Range Statement.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05015D	Weld using manual metal arc welding process
MEM05016C	Perform advanced welding using manual metal arc welding process
MEM05026C	Apply welding principles
MEM05046B	Perform welds to code standards using manual metal arc welding process
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA435A	Weld aircraft components using the manual metal arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld titanium alloy aircraft components using the manual metal arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld titanium alloy aircraft components using the manual metal arc welding process.

Custom Content Section

MEASS00193 Liquid penetrant inspection approval for aerospace

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the MEM05 Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24002B
MEM24002B	Perform penetrant testing
MEM24012C	Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform liquid penetrant inspection of aircraft structure and items of aeronautical product at *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2*.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform liquid penetrant inspections on aircraft structure and items of aeronautical product at *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2*.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the MEM05 Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24004B
MEM24004B	Perform magnetic particle testing
MEM24012C	Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform magnetic particle inspection of aircraft structure and items of aeronautical product at AS 3669-2006 *Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2*.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform magnetic particle inspections on aircraft structure and items of aeronautical product at AS 3669-2006 *Non-destructive testing – Qualification and approval of personnel – Aerospace Level 2*.

MEASS00152 Basic visual liquid dye penetrant inspection approval for aerospace

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The MEA11 Aeroskills Training Package offers these units as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24001B
MEM24001B	Perform basic penetrant testing

Target Group

Qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform basic visual liquid dye penetrant inspection of aircraft structure and items of aeronautical product.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform basic visual liquid dye penetrant inspections on aircraft structure and items of aeronautical product.

MEASS00168 Electroplate aeronautical product component parts

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07001B	Perform operational maintenance of machines equipment
MEM08001B	Perform wire, jig and barrel load unload work
MEM08003C	Perform electroplating operations
MEM08018B	Electroplate engineering coatings
MEM13003B	Work safely with industrial chemicals and materials
MEM18001C	Use hand tools
MEM15004B	Perform inspection

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to electroplate aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on the electroplating of aeronautical product component parts.

Not applicable.

MEASS00213 Produce anodised film on aluminium alloy components

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM08002C	Pre-treat work for subsequent surface coating
MEM08006B	Produce clear and/or coloured and/or sealed anodised film on aluminium

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to produce anodised film on aluminium alloy components.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on the production of anodised film on aluminium alloy components.

Custom Content Section

Not applicable.

MEASS00202 Metal spray aeronautical product component parts

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM08002C	Pre-treat work for subsequent surface coating
MEM08004B	Finish work using wet, dry and vapour deposition methods
MEM13003B	Work safely with industrial chemicals and materials

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform metal spraying operations.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on metal spraying operations.

Custom Content Section

Not applicable.

MEASS00194 Machine aeronautical product component parts (general)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07002B	Perform precision shaping/planning/slotting operations
MEM07005C	Perform general machining
MEM07006C	Perform lathe operations
MEM07007C	Perform milling operations
MEM07021B	Perform complex lathe operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform general machining of aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on general machining of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00178 Grind aeronautical product component parts

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07008D	Perform grinding operations
MEM07010B	Perform tool and cutter grinding operations
MEM07012B	Perform complex grinding operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform grinding operations on aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on grinding of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00212 Precision jig boring of aeronautical product component parts

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07007C	Perform milling operations
MEM07009B	Perform precision jig boring operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform precision jig boring of aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on general machining of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00154 Complex milling of aeronautical product component parts

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07007C	Perform milling operations
MEM07011B	Perform complex milling operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM12024A	Perform computations
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform complex milling operations on aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on complex milling of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00195 Machine aeronautical product component parts using horizontal and/or vertical boring machines

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform machining of aeronautical product component parts using horizontal and/or vertical boring machines.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of aeronautical product component parts using horizontal and/or vertical boring machines.

Custom Content Section

Not applicable.

MEASS00196 Machine aeronautical product component parts using NC/CNC machines

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07015B	Set computer controlled machines/processes
MEM07016C	Set and edit computer controlled machines/processes
MEM07018C	Write basic NC/CNC programs
MEM07022C	Program CNC wire cut machine
MEM07024B	Operate and monitor machine processes
MEM07028B	Operate computer controlled machine processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to machine aeronautical product component parts using NC/CNC machines.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of aeronautical product component parts using NC/CNC machines.

Custom Content Section

Not applicable.

MEASS00197 Machine aeronautical product components using NC/CNC machining centres

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07015B	Set computer controlled machines/processes
MEM07016C	Set and edit computer controlled machines/processes
MEM07018C	Write basic NC/CNC programs
MEM07019C	Program NC/CNC machine centre
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre
MEM07024B	Operate and monitor machine processes
MEM07028B	Operate computer controlled machine processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to machine aeronautical product component parts using NC/CNC machining centres.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of aeronautical product component parts using NC/CNC machines.

Custom Content Section

Not applicable.

MEASS00198 Machine plastic aeronautical product component parts

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07001B	Perform operational maintenance of machines equipment
MEM07024B	Operate and monitor machine processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM16006A	Organise and communicate information
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to machine plastic (including composite) aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of plastic (including composite) aeronautical product component parts.

MEASS00077 Aeronautical product component parts - metal spinning lathe operations

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
MEM07030C	Perform metal spinning lathe operations (basic)
MEM07031C	Perform metal spinning lathe operations (complex)
MEM07032B	Use workshop machines for basic operations
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform metal spinning lathe operations on aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on metal spinning lathe operations on aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00086 Aircraft tyre retreading (basic)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

PMBPROD262B	Operate tyre curing equipment
PMBPROD263B	Operate tyre retread curing equipment
PMBPROD264C	Check recycle wash process
PMBPROD265C	Operate portable vulcanising equipment
PMBPROD266B	Prepare tyre casing for retreading

Target Group

Individuals who are employed in CASR Part 145 AMOs and require approval to prepare tyres for retreading and operate aircraft tyre retreading equipment.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of individuals in aircraft tyre retreading, including preparation of tyres and operation of retreading equipment.

Custom Content Section

Not applicable.

MEASS00085 Aircraft tyre retreading (advanced)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108B	Complete aviation maintenance industry documentation
MEA145A	Conversion from allied trades for employment in aviation maintenance workshops
PMBPROD324B	Inspect tyres for retreading
PMBPROD325B	Lay on tyre retreads
PMBPROD326B	Inspect tyres

Target Group

Individuals with applicable trade qualifications who are employed in CASR Part 145 AMOs and require approval to select tyres for retreading, set up retreading equipment and inspect tyres for serviceability following retreat.

Suggested words for Statement of Attainment

These competencies from the MEA11 Aeroskills Training Package meet the requirements for employment of trade qualified individuals in aircraft tyre inspection before and after retreading, and in setting up retreading equipment.

Custom Content Section

Not applicable.

MEA101B Interpret occupational health and safety practices in aviation maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers the competencies required to comply with occupational health and safety (OHS) regulations and work safely in aircraft maintenance areas and incorporates the requirements of NOHSC:7025(1998) Generic Competency A. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of OHS practices relevant to aviation maintenance workplaces in order to ensure own safety and that of others in the workplace.

Applications include the performance of maintenance activities on fixed or rotary wing aircraft on the flight line or tarmac, in the hanger, including during functional testing of systems and in the workshop environment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>

|--|--|
| <p>1. Interpret safe work practices</p> | <p>1.1. <i>Relevant regulatory and enterprise policies and procedures</i> that identify the <i>requirements for conduct of safe work</i> are interpreted and understood</p> <p>1.2. Workplace housekeeping measures are identified in accordance with standard enterprise procedures</p> <p>1.3. Use of <i>personal protective equipment</i> and clothing is identified and understood and maintenance measures are interpreted and understood according to regulatory and enterprise procedures</p> <p>1.4. Safety signs and symbols are interpreted and understood, and their directions observed in accordance with enterprise and safety requirements</p> |
| <p>2. Interpret reporting procedures for workplace hazards</p> | <p>2.1. Workplace hazards are correctly identified and reporting procedures interpreted and understood according to standard enterprise procedures</p> |
| <p>3. Interpret emergency procedures</p> | <p>3.1. Method of contacting the appropriate personnel and emergency services in the event of an accident is appropriate to enterprise requirements</p> <p>3.2. Emergency and evacuation procedures are interpreted and understood to ensure safe conduct of personnel according to enterprise procedures</p> <p>3.3. Use of emergency equipment is correctly identified to comply with regulatory or enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- correctly interpreting OHS regulations, instructions and procedures relevant to the range of applications listed in the Range Statement
- recognising and adhering to aerospace industry signage, including aircraft systems plumbing markings
- recognising and reporting to designated personnel hazardous situations in the workplace
- risk assessment and control
- selecting appropriate protective clothing for the maintenance activity being undertaken
- correct interpretation of enterprise and regulatory emergency procedures
- correct identification and operation of enterprise/industry specific workplace emergency equipment
- application of first aid procedures, such as DRABC

Required knowledge

Look for evidence that confirms knowledge of:

- the applicable sources of OHS requirements and procedures and their application in workplace situations as listed in the Range Statement
- how to recognise and report hazardous situations in the workplace
- methods of risk assessment and control
- the preferred order of ways to control risks (known as the hierarchy of control)
- work operations to control risks, e.g. permit to work systems, such as confined space entry and isolation procedures
- how to determine requirements for personal protective equipment associated with maintenance activities
- the correct selection and use of workplace emergency equipment
- action to be taken in emergency situations
- first aid procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly interpret and apply all relevant OHS procedures and standard processes in the aviation maintenance environment.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>This unit must be related in its assessment and application to all other units. The relationship between general workplace OHS requirements, as included in enterprise procedures, and the relevant federal and/or state and territory legislation must be clearly linked.</p> <p>Evidence of knowledge and skills associated with the application of OHS standards is required to supplement evidence of ability to interpret and apply specific safe practices in the workplace.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency under routine supervision on at least one item against each Group 1 to 10 (Groups 11 and 12 must also be included if applicable to the enterprise) as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry. The relationship between general workplace OHS requirements, as included in enterprise procedures, and the relevant federal and/or state and territory legislation must be clearly linked.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Should a demonstration of skill application be necessary, the candidate must have access to all necessary tools, equipment, materials and relevant documentation. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Requirements for conduct of safe work</p>	<p>The requirements for conduct of safe work may cover:</p> <ol style="list-style-type: none"> 1. Applying general duty of care under OHS legislation and common law 2. Fluid and gas high and low pressure systems, including fluid handling (for example, hydraulic fluids, lubricants, compressed air, nitrogen and oxygen) 3. Fuelling/defuelling and working on fuel systems, including confined space entry 4. Using and handling chemicals, including solvents, battery acids 5. Electrical systems, outlets and leads 6. Noise hazard areas and aircraft safety zones 7. Aircraft handling, towing, jacking, ground equipment operation and signage 8. Personal protection 9. First aid 10. Housekeeping and cleaning, waste disposal and FOD prevention practices and procedures 11. Aircraft strobe lighting 12. Ionising, non-ionising radiation equipment
<p>Application</p>	<p>Application of this unit of competency relates to all aviation maintenance workplace environments</p>
<p>Relevant regulatory and enterprise policies and procedures</p>	<p>Relevant regulatory and enterprise policies and procedures may be found in:</p> <ul style="list-style-type: none"> • Commonwealth, State and Territory OHS Acts, regulations and codes of practice, including regulations and codes of practice relating to hazards present in the workplace or industry • organisational safety manuals that specify provisions

	<p>relating to roles and responsibilities of health and safety representatives and/or OHS committees and provisions relating to OHS issue resolution</p> <ul style="list-style-type: none"> • maintenance organisation manual • procedures manuals • work instructions • relevant Defence Instructions • Civil Aviation Safety Regulations
Personal protective equipment and clothing requirements	<p>Personal protective equipment and clothing requirements may be found in:</p> <ul style="list-style-type: none"> • MSDS • safety manual • procedures manual • maintenance manual • work instructions • relevant defence instructions
Workplace hazards	<p>Workplace hazards are correctly identified through:</p> <ul style="list-style-type: none"> • checking equipment or the work area before work commences and during work • workplace inspections • housekeeping

Unit Sector(s)

Aviation maintenance

Competency field

Not applicable

Co-requisite units

Not applicable

MEA103B Plan and organise aviation maintenance work activities

Modification History

Minor formatting and editorial changes made. Prerequisite unit version updated.

Unit Descriptor

This unit of competency is applicable to all Aeroskills maintenance training pathways. It covers the competencies required for planning and organising individual and group work activities. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of work planning and organising principles that are applied within the framework of defined single or multiple aviation maintenance tasks that involve more than one individual.

Applications include flight line/tarmac, hangar and workshop maintenance tasks.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance practices
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Identify task requirements
 - 1.1.Task requirements are determined or confirmed, and clarified to ensure correct interpretation of specifications or requirements
2. Plan steps to complete task
 - 2.1.Task is interpreted and relevant steps are identified to ensure efficient conduct of work to meet specifications in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 2.2.Steps are planned in conjunction with the work of other personnel to allow achievement of practical outcomes, in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 2.3.Human factors are allowed for in planning of steps
3. Organise work
 - 3.1.Work activity is organised with other involved personnel, allowing for relevant human factors and using relevant communication processes to ensure safe and appropriate sequencing of tasks
 - 3.2.All necessary documentation related to job planning and progress is completed, and recorded in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- the interpretation of information relating to the work activity from a range of industry manuals, industry and enterprise regulations and industry documentation
- consideration of OHS regulations/precautions specific to the work activity and others working in the vicinity of the planned work activity, particularly with regard to electricity, gases (especially oxygen), oils and chemicals
- the use of MSDS
- the application of human factors in planning maintenance activities

Required knowledge

Look for evidence that confirms knowledge of:

- the impact of human factors on the safe and effective performance of maintenance on aircraft and aircraft components
- MSDS
- the types of servicings performed on aircraft, i.e. scheduled and unscheduled maintenance activities, and their impact on planning aviation work activity
- aircraft reference numbering systems as an aid to organising effective work activity in terms of related tasks and inspection/servicing zones

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able plan and organise work activities involving more than one person in the case of single and multiple tasks while allowing for human factors and observing all relevant OHS procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The relationship between broader planning and organising requirements and service specific procedures must be clearly linked.</p> <p>Evidence of underlying knowledge and skills associated with the general application of planning and organising while allowing for relevant human factors and OHS requirements is required to supplement evidence of ability to integrate these processes in conjunction with other personnel in the workplace.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on single and multiple tasks involving more than one person. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent industry .</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering planning and organising situations applicable in the aircraft maintenance environment.</p> <p>This unit must be related in its assessment and application to all other units, particularly those that apply to the actual maintenance of aircraft.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application

Application of this unit may relate to:

- scheduled or unscheduled maintenance
- team-related activities
- single or multiple tasks

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA105C Apply quality standards applicable to aviation maintenance processes

Modification History

Additional knowledge requirements regarding inspection - units are equivalent.

Unit Descriptor

This unit of competency is applicable to all Aeroskills Maintenance training pathways. It covers the competencies required to correctly apply quality standards applicable to the maintenance of aircraft and aircraft components, either individually, or as a member of a team. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of quality standards in the performance of aviation maintenance activities.

Applications include flight line/tarmac, hangar and workshop maintenance tasks.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B Interpret occupational health and safety practices in aviation maintenance

MEA107B Interpret and use aviation maintenance industry manuals and specifications

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|---------------------------------|---|
| 1 Interpret quality standards | <p>1.1 Standards or specifications set out in maintenance documents and process specifications are identified and interpreted</p> <p>1.2 Enterprise quality requirements are identified and confirmed</p> |
| 2 Apply quality standards | <p>2.1 Standards are applied appropriately for individual and team-related activities</p> <p>2.2 Defects within the quality system are detected and reported in accordance with standard procedures</p> <p>2.3 Documentation is handled and completed accurately and clearly to enable information to be easily read or interpreted</p> |
| 3 Interpret quality improvement | <p>3.1 Performance monitoring measures are identified to ensure product or service standards are maintained or improved</p> |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- typical quality systems and their operation in the workplace
- workplace quality documentation such as quality manuals, procedures manuals, work instructions and worksheets
- the relationship between the quality system and OHS requirements, such as workplace hazard reporting
- the relationship between the quality system and identification systems for aircraft hardware, materials and components
- the role of inspection in maintaining aircraft continuing airworthiness and reliability, including ageing aircraft inspection requirements
- how inspection programs are derived and developed
- individual and organisational responsibility associated with 'on condition' maintenance
- inspection terminology and standards of inspection with regard to the quality system
- identifying potential areas for inspection process improvement as a quality system activity

Look for evidence that confirms skills in:

- the application of workplace hazard reporting and identification procedures
- interpretation and application of information from a range of industry manuals, in particular, amendment status block information, amendment procedures, specification/modification leaflet applicability and changes to drawings
- the correct identification of aircraft hardware, materials and components by marking, part number, size and shape
- being able to differentiate the elements which constitute the system and able to identify processes, workplace regulations and ISO 9000 compliant documentation and specifications within the workplace environment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to interpret and apply quality systems in the workplace and interface quality requirement with OHS procedures and identification systems for aircraft hardware, materials and components.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The relationship between broader quality standards requirements and service specific procedures must be clearly linked. It is essential that actual and potential defects within the quality system are considered, together with ongoing abnormalities of equipment or systems as they affect the quality system.</p> <p>Evidence of underlying knowledge and skills associated with the general application of quality standards is required to supplement evidence of ability to integrate these processes in conjunction with other personnel in the workplace.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision in both single and multiple tasks involving more than one person. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the application of quality standards in situations within the aircraft maintenance environment.</p> <p>This unit must be related in its assessment and application to all other units.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none">• scheduled or unscheduled maintenance• team-related activities• single or multiple tasks

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1. Identify and access industry manuals, specifications and drawings | 1.1. <i>Appropriate manuals</i> are identified and accessed for the type of aircraft or component to be maintained
1.2. Amendment status is clearly established to ensure the correct specifications and procedures are applied |
| 2. Interpret information | 2.1. Relevant chapter or section of manual or drawing is located in relation to the work to be carried out
2.2. Information is interpreted and procedures to be followed are accurately determined |
| 3. Apply information | 3.1. Work steps are correctly identified in accordance with manual or specification procedures
3.2. All correct sequencing and adjustments are interpreted in accordance with information contained in industry manuals or specifications |
| 4. Amend manuals, specifications or drawings | 4.1. Manual, specification or drawing changes and/or amendments are incorporated and documented correctly in accordance with <i>statutory regulations and/or enterprise procedures</i> |
| 5. Store manuals, specifications or drawings | 5.1. Manuals, specifications or drawings are stored appropriately to ensure prevention of damage, ready access and updating of information, when required, in accordance with regulatory and/or enterprise procedures |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- accessing and interpreting information from industry manuals, including paper-based, microfiche or computer-based media, relating to work activities, including determination of manual amendment status, knowledge of manual structures and locating relevant information/instructions for work activity
- amending industry manuals to reflect current/approved amendment status
- identifying and interpreting information from drawings and diagrams in aircraft maintenance manuals, including component scaling, section, assembly, location, drawing applicability and amendment status from the title block
- correct handling and storage of drawings, manuals and industry media, i.e. microfiche and digital formats
- calculating allowable dimension variations on a component from information in drawing title blocks and drawings
- calculating dimensions from drawings for the purpose of manufacturing aircraft components and hardware

Required knowledge

Look for evidence that confirms knowledge of:

- the types of industry manuals used in aviation maintenance and types of media
- requirements for custody and upkeep of industry manuals
- techniques for obtaining and applying data contained in industry manuals

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly interpret the information in industry manuals and specifications and apply that information during the performance of aviation maintenance tasks.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The transferability of general manual interpretation and use in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices must be clearly established.</p> <p>Evidence of underlying knowledge and skills associated with the interpretation and use of manuals is required to supplement understanding of the structure and regulatory requirements associated with the aircraft maintenance environment in this area.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on at least one manual from each of Groups 1, 2 and 3 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry .</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the interpretation and use of Enterprise Aviation manuals, aircraft publications, process sheets, specifications and drawings applicable to the aircraft maintenance environment.</p> <p>This unit must be linked in its assessment and application to those that apply to the actual maintenance of aircraft.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Types of manual</p>	<p>Appropriate manuals may include:</p> <ol style="list-style-type: none"> 1. Aircraft publications, maintenance instruction manuals, process specifications, servicing or service bulletins or structural repair manuals 2. Tooling or equipment manuals, manufacturer's manuals, standard practices, enterprise aviation regulations and publications 3. Illustrated parts catalogues, aircraft wiring manuals or drawings
<p>Statutory regulations and/or enterprise procedures</p>	<p>Statutory regulations and/or enterprise procedures may include:</p> <ul style="list-style-type: none"> • civil aviation regulations or civil aviation safety regulations • applicable defence regulations and instructions • maintenance organisation manual • standing instructions
<p>Application</p>	<p>Application of this unit may relate to both on-aircraft and workshop-related activities in the aircraft maintenance environment</p>

Unit Sector(s)

Aviation maintenance

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---------------------------------------|--|
| 1. Interpret documentation | <p>1.1. <i>Documentation</i> requirements are determined and accessed, where necessary, from relevant sources in accordance with regulatory and enterprise procedures</p> <p>1.2. Information contained in existing documentation is interpreted correctly and, where necessary, requirements carried out in accordance with <i>regulatory and enterprise procedures</i></p> |
| 2. Complete documentation | <p>2.1. Information requirements for new documentation or updating of existing documentation are determined to allow for accurate completion of records</p> <p>2.2. Documentation is completed accurately and clearly to enable information to be easily read or interpreted</p> |
| 3. Store and distribute documentation | <p>3.1. All procedures for storing and distributing documentation are followed to ensure ready access when required in accordance with regulatory and enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- identification and accurate completion of industry documentation associated with aircraft/aircraft component maintenance, repair, overhaul and modification activities, industry regulatory reports and OHS hazard reporting formats
- handling industry documentation appropriately to ensure that records are accurately processed, forwarded and/or stored as required by industry and enterprise regulations

Required knowledge

Look for evidence that confirms knowledge of:

- maintenance practice terminology and the associated relationship with industry documentation, i.e. scheduled and unscheduled servicing, aircraft/component lifting, i.e. on condition, life expired, throwaway, repair and overhaul

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly complete and process maintenance documentation applicable to maintenance tasks that are being performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that information generated in the process of completing paperwork is in a form which is acceptable to the workplace environment and regulatory requirements in accordance with the relevant aircraft publications/maintenance regulations/orders and standards and practices.</p> <p>Evidence of underlying knowledge and skills associated with the interpretation and completion of paperwork is required to supplement evidence of appropriate levels of literacy and numeracy, associated with presenting clear and concise information.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one type of documentation from each of Groups 1 and 2 from the Range Statement.</p> <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry .</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the interpretation, use and completion of aircraft maintenance documentation in the maintenance environment in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices.</p> <p>This unit must be linked in its assessment and application to those that apply to the actual maintenance of aircraft.</p>

MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Modification History

Minor formatting and editorial changes made. Prerequisite unit version updated.

Unit Descriptor

This unit of competency is applicable to all Aeroskills Maintenance training pathways. It covers the competencies required to perform basic hand skills, apply standard trade practices and fundamentals relevant to the maintenance of aircraft and aircraft components. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

Application of the Unit

This unit requires application of basic hand skills and standard trade practices in the maintenance of aircraft and aircraft components.

Applications include the use of hand and power tools, and the selection and use of aircraft hardware.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA105C Apply quality standards applicable to aviation maintenance processes

MEA108B Complete aviation maintenance industry documentation

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Assess task requirements
 - 1.1. Available information from relevant documentation and/or other sources, including communication with other personnel, is interpreted and assessed to determine the task and tooling requirements
2. Select tools and/or equipment
 - 2.1. Hand and/or power tools or equipment are selected for appropriate application to the required task
 - 2.2. All tools and/or equipment to be used are checked for condition or calibration, where necessary
 - 2.3. Unsafe or faulty tools or equipment are identified and marked for repair according to enterprise procedures
3. Use tools and/or equipment
 - 3.1. Tools and/or equipment are used according to standard practices to ensure the correct outcome is produced
 - 3.2. Tools and/or equipment use is carried out without damage to components or tooling in a safe and efficient manner
 - 3.3. Operational maintenance of tools or equipment is undertaken according to standard workshop procedures
4. Store tools and/ or equipment
 - 4.1. Tools and/or equipment are stored safely and securely in accordance with enterprise procedures
5. Apply standard trade practices
 - 5.1. Simple items are manufactured using basic engineering hand skills
 - 5.2. Common types of aircraft attachment hardware are correctly selected and used
 - 5.3. Common types of safety locking devices and fasteners are correctly selected and used
 - 5.4. Aircraft components, devices and hardware are lockwired in the correct manner, using the appropriate wire gauge
 - 5.5. Common types of aircraft connectors and plumbing are accurately assembled or connected

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- the correct identification, inspection of, application, use and storage of general and purpose specific hand tools (i.e. spanners, screwdrivers, pliers, hammers, cutting devices, files, punches, drills and marking out tools) that may be found in an aircraft engineering workshop or hangar
- the correct identification, inspection of (including calibration), application, use and storage of precision measuring tools (i.e. micrometers, vernier instruments, feeler gauges, go/no-go gauges) that may be found in an aircraft engineering workshop or hangar. Reading instrument scales must be clearly demonstrated during application of instruments to ensure compliance with specifications
- the correct identification, inspection of, application, operation and storage/servicing of portable and fixed power and machine tools (i.e. drills, presses, grinders, shears, pan breaks) that may be found in an aircraft engineering workshop or hangar
- identification, inspection and use of lubrication equipment
- determination of correct lubricants for specified applications
- identification of common ferrous and non-ferrous aircraft materials
- identification of common aircraft composite and non-metallic materials (other than wood)
- identification of aircraft hardware by markings, part numbers, size, shape and material
- the installation of aircraft hardware using standard practices/techniques to ensure safe security and includes:
 - minimum thread engagement
 - split pinning
 - lockwiring
 - application of locking compounds
 - locking tabs, spring washers
 - lock nuts
- the installation of aircraft hardware using tightening, torquing and tensioning techniques. Calculating setting, reading scales and setting up of torque wrench and/or tensioning devices must be clearly demonstrated before application of wrench or device
- identification of various types of aircraft rigid and flexible plumbing and their connectors
- identification of aircraft control cables and related cable system hardware

Required knowledge

Look for evidence that confirms knowledge of:

- types of standard aircraft hardware and methods of identification, including bolts,

- nuts, washers, pins (cotter, tapered), and fasteners (rivets and camlocs)
- materials from which hardware is manufactured and its applications, including plain, corrosion resistant and temperature/heat resistant
- types of safety locking devices and their application
- common ferrous and non-ferrous aircraft materials, heat treatment and testing
- characteristics and properties of common composite and non-metallic materials other than wood
- types of aircraft cable, turnbuckles, end fittings, tensiometers, pulleys and cable system components, aircraft flexible control systems
- types and characteristics of lubricants
- types and uses of lubrication equipment
- fits and clearances
- hand and power tool storage and maintenance requirements
- tool calibration requirements
- OHS requirements relation to the use of hand and power tools

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use aviation maintenance hand and power tools to lay out and fabricate simple items, correctly assemble items and apply safety locking devices.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>This unit must be linked in its assessment and application to those units that apply to actual maintenance of aircraft. It is essential that all OHS requirements are met and understood.</p> <p>Evidence of knowledge about how tools and equipment are selected, used and maintained is essential. The ability to manipulate tools and equipment correctly in the performance of tasks is necessary to demonstrate transferability of hand skills across a variety of applications.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on the tasks listed in Groups 1 to 4 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, using tools and equipment specified by aircraft manuals as well as general purpose tools and test equipment found in most routine situations. It is expected that the person operating these tools and equipment would be able to demonstrate a broad application of their skills.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Application of competency	<p>The competency applies to the selection and use of hand and power tools and equipment associated with on-aircraft or workshop related activities in the aircraft maintenance environment that involve:</p> <ol style="list-style-type: none"> 1. Laying out and fabricating simple items from common aircraft materials 2. Assembling items using a representative range of common types of aircraft attachment hardware for which relevant fits and clearances, appropriate safety locking devices and fasteners, including lockwire, are correctly selected and applied 3. Assembling/connecting a range of common aircraft connectors and plumbing, applying safety locking devices, where applicable 4. Assembling/connecting aircraft control cables and applying safety locking devices, where applicable
The use of tools and equipment	The use of tools and equipment includes the related manipulative skills required to perform maintenance
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA111C Perform administrative processes to prepare for certification of civil aircraft maintenance

Modification History

Revised references to CASRs - equivalent to previous unit.

Unit Descriptor

This is one of the units of competency that must be attained to progress from Aircraft Maintenance Engineer to the grant of a maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines. It covers the competencies required to correctly interpret and apply CASA airworthiness and certification requirements during aircraft maintenance.

The skills and knowledge covered by the units of competency at Certificate IV level listed in the MEA11 Aeroskills Training Package for the qualification leading to the applicable maintenance certification licence sought are prerequisite to the attainment of the elements of competency specified in this unit. This includes full coverage of the CASR Part 66 Avionics or Mechanical Syllabus subjects/topics listed in the Assessment Guidelines (Appendix 1).

Application of the Unit

This unit requires application of legislative and regulatory requirements relating to the certification of aviation maintenance.

Applications include all maintenance tasks that require certification by a Licensed Aircraft Maintenance Engineer.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|---|
| 1 Determine the registration status of an aircraft | 1.1 Registration status is determined in accordance with CASR Part 47

1.2 The person responsible for airworthiness and maintenance control is identified |
| 2 Determine eligibility to certify the completion of aircraft maintenance activities | 2.1 Eligibility to certify in terms of licence privileges is established in accordance with CASR Parts 42, 145 and 66

2.2 Eligibility to certify in terms of the AMO Class/Rating is established in accordance with CASR Part 145 and Part 42 Sub-Part F |
| 3 Prepare for return of aircraft to service | 3.1 Completion of all scheduled and unscheduled maintenance activities is coordinated in accordance with CASR Parts 42 145, 66 and the approved maintenance program

3.2 The requirement for a maintenance test flight is determined

3.3 Documentation is prepared for return of aircraft to service in accordance with CASR Part 42 and/or 145 and the approved maintenance program |
| 4 Compile and process maintenance documentation and reports | 4.1 Maintenance documentation is raised and compiled for certification

4.2 Configuration management procedures are applied

4.3 Maintenance-related reports are compiled and processed

4.4 Technical communication activities, both oral and written, are performed |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- Airworthiness Directive requirements under CASR 39
- Maintainers' Responsibilities under CASR Parts 42, 66 and 145
- Aircraft Registration and Markings under CASR 45– 47
- Aviation Maintenance Personnel Licensing Requirements under CASR 66
- Continuing Airworthiness Requirements under CASR Part 42.
- Maintenance Organisations Requirements under CASR 42 Sub-Part F and 145
- Design Organisations under CASR Part 21 Sub-Part J
- Maintenance Training Organisations under CASR 147
- Requirements associated with refuelling, taxiing, use of radios and engine running

Look for evidence that confirms skills in:

- describing and applying the requirements applicable to the privileges of their authority
- application of Airworthiness Directive Requirements under CASR 39
- application of Maintainers' Responsibilities under CASR Parts 42, 66 and 145
- compliance with CASR 45 Sub-Part D
- application of Aviation Maintenance Personnel Licensing Requirements under CASR 66
- application of requirements related to conduct and issue of maintenance certifications and Certificates of Release to Service for the aircraft or aeronautical product under CASR 42, 66 and 145
- refuelling, taxiing, use of radios and engine running
- demonstrating a familiarity with requirements related to the tasks and functions they may perform
- demonstration of literacy and oral expression skills required for clear written and oral communication
-
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply, without error, legislative and regulatory requirements relating to the certification of aviation maintenance.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that airworthiness compliance requirements are interpreted and fully applied without error. Evidence is required of underlying knowledge and skills associated with the application of airworthiness

	<p>legislation and compliance requirements, along with evidence of appropriate levels of literacy and oral expression associated with presenting clear and concise information.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision without intervention on a range of tasks fully representative of Groups 1 to 18 in the Range Statement. The body of evidence for this unit may be collected and logged during simulated activities at the CASR Part 147 MTO and/or performance during supervised workplace activities, such as PCT assessments.</p> <p>Knowledge must also be demonstrated of the concept of airworthiness that underpins the legislative framework and compliance requirements.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment under supervision but without intervention for the purpose of Journal entries, and/or by use of simulated activities in a CASR Part 147 MTO, covering the interpretation and application of airworthiness control and certification requirements.</p>
<p>Method of assessment</p>	<p>This unit must be linked in its assessment and application to those that apply to the exercise of Aircraft Maintenance Engineer Licence or Aviation Maintenance Specialist privileges in the actual maintenance of aircraft.</p>
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note

Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide

Application

The competency applies to the certification of aircraft maintenance activities, including:

1. Scheduled maintenance
2. Unscheduled maintenance
3. Configuration changes
4. Modification incorporation
5. Repairs

In performing Tasks 1 to 5, knowledge is to be applied with regard to airworthiness regulatory systems and Australian legislation, and the application of compliance requirements in the performance, recording and certification of maintenance activities, as follows:

6. International and national regulatory bodies and recognition agreements, including bilateral agreements
7. Australian airworthiness regulatory bodies and the legislative framework
8. The basis of airworthiness certification and determination of non-conformity
9. Procedures for release of aircraft to service following maintenance, including the determination of the requirement for a maintenance test flight
10. Procedures for certification of scheduled and unscheduled maintenance activities
11. Procedures for certification of the incorporation of modifications
12. Procedures for certifying the completion of repairs
13. Determining and applying configuration management procedures, including the weighing of aircraft and the determination of the centre of gravity

	<ul style="list-style-type: none">14. Compiling and processing service difficulty reports15. Compiling and processing technical investigation reports16. Compiling and processing condition reports17. Orally communicating on technical and airworthiness compliance topics18. Communicating in writing on technical and airworthiness compliance issues

Elements and Performance Criteria

- | | |
|--|---|
| 1. Plan aircraft maintenance activities | <p>1.1. Maintenance requirements are determined from applicable sources</p> <p>1.2. Maintenance tasks are analysed and prioritised</p> <p>1.3. Resource requirements are identified and allocated to ensure the timely and efficient completion of maintenance tasks</p> <p>1.4. Maintenance tasks to be performed are recorded in a maintenance schedule in accordance with enterprise policy and procedures</p> |
| 2. Implement aircraft maintenance activities | <p>2.1. Roles and responsibilities of maintenance personnel are communicated and agreed</p> <p>2.2. Resources and equipment required to perform maintenance tasks are identified and arranged</p> <p>2.3. Regular liaison with maintenance personnel is maintained to ensure scheduled/unscheduled tasks are being completed and continuity is maintained</p> <p>2.4. Management/stakeholders are provided with regular updates on maintenance progress, as required</p> <p>2.5. Maintenance activities are monitored to ensure compliance with prescribed instructions, policy, procedures and/or regulatory requirements</p> <p>2.6. Advice and assistance with maintenance activities is provided, as required</p> <p>2.7. Maintenance problems are resolved in accordance with the approved maintenance data</p> <p>2.8. Proposed changes to the maintenance schedule are processed and negotiated with management/stakeholders</p> |
| 3. Evaluate and report maintenance outcomes | <p>3.1. Final maintenance outcomes are evaluated against the schedule in accordance with enterprise policy and procedures</p> <p>3.2. Maintenance reports are collated, evaluated and forwarded to appropriate management personnel in accordance with enterprise policy and procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- application of the procedures for the identification of specific maintenance requirements through the review of:
 - maintenance releases
 - manufacturers' maintenance manuals and servicing schedules
 - computer maintenance data systems
 - service bulletins
 - modification incorporation instructions
 - repair instructions
 - feedback from maintenance personnel and aircrew via Technical Logs or approved maintenance documentation
- Aircraft Maintenance Organisation (AMO) internal work instructions or directives
- Airworthiness Directives (AD)
- basic project planning techniques, including planning chart development, timing, prioritising, resourcing, monitoring, performance measurement and evaluation of maintenance tasks
- financial and inventory management as an element of task planning
- the basic function, components, operation and interrelationship of all aircraft systems for the initial rating sought
- problem solving techniques and troubleshooting procedures
- damage assessment philosophies and procedures, particularly with regard to corrosion damage
- cost control during maintenance, including cost-effectiveness considerations for different repair types
- philosophies and considerations in repair versus replacement options
- the application of quality management systems in aircraft maintenance
- enterprise and regulatory requirements for undertaking, recording and reporting maintenance activities, including relevant OHS requirements and the use of PPE

Required knowledge

Look for evidence that confirms knowledge of:

- methods of determining and specifying maintenance requirements (MRB, MSG, EROPS, RVSM, Maintenance Programs, Minimum Equipment List, reliability, ATA codes)
- the procedures for the identification of specific maintenance requirements through the review of:
 - maintenance releases
 - manufacturers' maintenance manuals and servicing schedules
 - computer maintenance data systems

- service bulletins
- modification incorporation instructions
- repair instructions
- feedback from maintenance personnel and aircrew via Technical Logs or approved maintenance documentation
- AMO internal work instructions or directives
- AD
- the regulations governing aircraft maintenance coordination
- basic project planning techniques, including planning chart development, timing, prioritising, resourcing, monitoring, performance measurement and evaluation of maintenance tasks
- financial and inventory management as an element of task planning
- the basic function, components, operation and interrelationship of all aircraft systems for the initial rating sought
- problem solving techniques and troubleshooting procedures
- damage assessment philosophies and procedures, particularly with regard to corrosion damage
- cost control during maintenance, including cost-effectiveness considerations for different repair types
- philosophies and considerations in repair versus replacement options
- the application of quality management systems in aircraft maintenance
- enterprise and regulatory requirements for undertaking, recording and reporting maintenance activities, including relevant OHS requirements and the use of PPE

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to plan and implement aviation maintenance activities and evaluate and report on the outcome of the activities while complying with all relevant legislative and regulatory requirements.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that maintenance requirements are fully identified and that all applicable aspects of planning and implementation are identified and applied to meet organisational priorities and minimise workplace disruptions.</p> <p>Evidence is required of underlying knowledge and skills in the planning and implementation of maintenance activities, and in the associated compliance with airworthiness regulatory requirements.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved on a task representative of Groups 1 to 7 in the Range Statement. This shall be established via simulated activities at the CASR Part 147 MTO and performance during supervised workplace activities.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed under supervision without intervention in the work environment, and/or by use of simulated activities in a CASR Part 147 Maintenance Training Organisation (MTO), covering the full range of maintenance planning and implementation.</p>
<p>Method of assessment</p>	<p>This unit must be linked in its assessment and application to those that apply to the exercise of Aircraft Maintenance Engineer Licence or Aircraft Maintenance Specialist Certificate privileges in the actual maintenance of aircraft.</p>
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Maintenance requirements	<p>1. Maintenance requirements may be determined from any or all of:</p> <ul style="list-style-type: none"> • maintenance releases • manufacturers' maintenance manuals and servicing schedules • computer maintenance data systems • service bulletins • modification incorporation instructions • repair instructions • feedback from maintenance personnel and aircrew via Technical Logs or approved maintenance documentation • Aircraft Maintenance Organisation (AMO) internal work instructions or directives • Airworthiness Directives (ADs)
Resource requirements	<p>2. Resource requirements may include:</p> <ul style="list-style-type: none"> • required numbers of personnel and their availability • personnel qualifications, experience and authorisations • the availability of the resources listed in Group 3
Resources and equipment required to perform maintenance tasks	<p>3. Resources and equipment required to perform maintenance tasks may include:</p> <ul style="list-style-type: none"> • personnel • spares • lubricants • consumables • tools • special equipment • PPE • associated equipment, including various items of ground support equipment

Regular updates	4. Regular updates may include: <ul style="list-style-type: none"> • both written and verbal reports, including notes, work sheets, status reports, briefs and individual directives
Prescribed instructions, policy, procedures and/or regulatory requirements	5. Prescribed instructions, policy, procedures and/or regulatory requirements may include: <ul style="list-style-type: none"> • manufacturers operating and maintenance manuals • CASA-approved enterprise operation manuals • quality procedures and work instructions • OHS policies and instructions, including MSDS • management directives.
Advice and assistance in maintenance activities	6. Advice and assistance in maintenance activities may include: <ul style="list-style-type: none"> • fault diagnosis procedures • troubleshooting • damage assessment • assessment of repair cost effectiveness • assessment of replacement options • technical services advice or directives
Maintenance problems	7. Maintenance problems may include: <ul style="list-style-type: none"> • lack of resources • unanticipated breakdowns or faults • changes in priorities
Application	The competency applies to the planning and implementation of aircraft maintenance activities, including: <ul style="list-style-type: none"> • scheduled maintenance • unscheduled maintenance • configuration changes • modification incorporation • repair

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	---

Elements and Performance Criteria

1. Plan maintenance for teams
 - 1.1. Maintenance tasks are identified and interpreted from available *maintenance data or schedules* in accordance with enterprise procedures
 - 1.2. Workload is organised in order of priority taking into consideration, where applicable, mandatory and optional maintenance tasks
 - 1.3. Timeframes are taken into consideration when prioritising maintenance tasks
 - 1.4. **Required resources** are obtained to facilitate planned maintenance tasks
2. Implement maintenance for teams
 - 2.1. Maintenance tasks are allocated to appropriate team members with consideration of individual's experience and qualifications
 - 2.2. Personnel are clearly briefed on their responsibility and function in the team
 - 2.3. Team members are correctly authorised to operate the required items of ground support equipment
 - 2.4. Team members are instructed to observe occupational health and safety requirements and all safety hazards are promptly identified and addressed
3. Provide guidance
 - 3.1. **Guidance** is provided to staff, appropriate to the maintenance task and individual's experience. This includes the communication of relevant maintenance data and procedures. Guidance is readily available, in person, as appropriate to the maintenance task
 - 3.2. Guidance is provided in determining the cause of difficult faults or faults not covered in maintenance manual fault diagnosis guides
4. Monitor maintenance quality
 - 4.1. Activities are checked and personnel are guided to ensure that maintenance is performed in accordance with the applicable documentation, policies and procedures
 - 4.2. Completed work including stages of maintenance are inspected for serviceability and prepared for certification on applicable documentation
5. Perform human resource management activities at the supervisor level
 - 5.1. **Human factors affecting job performance** are identified and responded to
 - 5.2. **The possibility of maintenance errors is minimised**
 - 5.3. Sound teamwork is maintained through an awareness of contributing factors
 - 5.4. Sound **employment relations** are maintained
6. Perform workplace training tasks
 - 6.1. **On-job training** is delivered
 - 6.2. The Supervisor's Verification portion of the Workplace

History Sheets (Section 3) of the Log of Industrial Experience and Achievement is completed

6.3. Expert witness verification of competency for Maintenance Training Organisation (MTO) workplace assessors is provided, when required

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- planning and implementing team maintenance activities
- applying all relevant OHS procedures
- observing human factors in team maintenance activities
- providing guidance to team members
- human resource management at team level

Required knowledge

Look for evidence that confirms knowledge of:

- applicable state/territory and Commonwealth OHS regulations, and enterprise OHS instructions
- the correct use of applicable items of PPE
- the requirement for Confined Space Entry Permits and related training
- applicable MSDS
- ATA 113 Specification for Maintenance Human Factors Guidelines, and the following human factor elements:
 - general factors, including:
 - weaknesses in task design and support
 - motivation and attitudes, task demands and limitations in performance
 - cooperative work, communication and leadership
 - allocation of resources, workload, work conditions, double standards
 - aspects relating to the task, including:
 - physical and mental work
 - features of the task which limit efficiency or safety performance, including constraints, such as signing-off and shift changeover, time pressures, information sources, troubleshooting methods, tools and equipment
 - task performance levels: skill-based, rule-based and knowledge-based; and the limitations encountered in each category
 - complex and inter-related aircraft systems
 - limitations of individual performance, including:
 - the sources and effects of fatigue, detection and countermeasures
 - vision and lighting
 - hearing and noise
 - memory, short and long term
 - claustrophobia and acrophobia
 - the influence of external factors, including:
 - maintainability of aircraft

- guidance availability
- social environment
- physical environment, including the effects of extremes of heat and cold, and countermeasures (e.g. limited periods of exposure), noise and fumes, motion and vibration
 - the causes of variability in human performance, including:
- effects of arousal
- limitations of perception
- limitations of memory, and management of these
- limitations of decision-making
- limitations of motor-functioning
- information processing
 - factors that degrade performance, including:
- risk motivation
- individual differences (e.g. depth of training and experience)
- health
- alcohol and drugs
 - errors in maintenance tasks, including:
- omissions, incorrect installation and wrong parts
- assumptions
- error management by minimisation, capture and tolerance
 - human factors within groups, including:
- the distinction between groups and teams; coordination and synergy
- types of groups: horizontal (same level of personnel) and vertical (different functions) composition
- group characteristics; reducing overall task time; coordination
- team characteristics; performance exceeds sum of individual performances
- factors which lead to effective working in groups and teams: interaction, participation, open communication, clear expectations, shared leadership and self-assessment
- team building
- communication: the process and feedback
 - organisational aspects, including:
- functions and dysfunctionality
- double standards: professionalism, procedures and time pressure
- organisational culture, professional culture and work-group culture, and peer pressure
 - violation of regulations, procedures and processes, including:
- organisational failure: latent failure, error-provoking conditions and unsafe acts
- organisational learning
- maintenance error management program

- the MEA11 Aeroskills Training Package, including relevant competency units and training pathways
- the Log of Industrial Experience and Achievement, including:
 - purpose of the Log
 - its structure and content
 - responsibility for making entries therein
 - responsibility for the certification of entries
- the role of CASR Part 147 MTOs in the training and competency assessment process, and of the role of supervisors in assisting workplace competency assessors

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to supervise maintenance activities, provide guidance/on-job training and manage human resources at team level while complying with all relevant legislative and regulatory requirements.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that maintenance requirements are fully identified and that all applicable aspects of supervision, supervisor level human resource management and involvement in workplace training and competency assessment are identified and applied.</p> <p>Evidence is required of underlying knowledge and skills in the supervision of maintenance activities, and in the associated compliance with airworthiness regulatory requirements. The ability must be demonstrated to apply supervisor level human resource management processes during supervision activities, deliver workplace training, and to record experience and evidence for competency assessment associated with completion of the Log of Industrial Experience and Achievement.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision, without intervention on a maintenance supervision task that includes Groups 1 to 7 in the Range Statement. This shall be established via simulated activities at the CASR Part 147 MTO and performance during supervised workplace activities.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed under supervision, without intervention in the work environment, and/or by use of approved simulated activities in a CASR Part 147 MTO, covering the full range of maintenance supervision, supervisor level human resource management and assistance with workplace training and competency assessment, as provided for in the Range Statement.</p>
<p>Method of assessment</p>	<p>This unit must be linked in its assessment and application to those that apply to the exercise of Aircraft Maintenance Engineer Licence, Aircraft Maintenance</p>

	Specialist Certificate or Aircraft Maintenance Technician privileges in the actual maintenance of aircraft.
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Maintenance data or schedules</p>	<p>1. Maintenance data or schedules may include:</p> <ul style="list-style-type: none"> • maintenance records • manufacturers' maintenance manuals and servicing schedules • computer maintenance data systems • service bulletins • airworthiness directives • modification incorporation instructions • repair instructions • observations and feedback from maintenance personnel and aircrew via Technical Log entries • AMO internal work instructions or directives.
<p>Required resources</p>	<p>2. Required resources may include:</p> <ul style="list-style-type: none"> • personnel • spares • lubricants • consumables • tools • special equipment • PPE • associated equipment including various items of ground support equipment • considerations regarding resources may also include: <ul style="list-style-type: none"> • required numbers of personnel and their availability • personnel qualifications, experience and authorisations • availability of the listed resources
<p>Guidance in maintenance activities</p>	<p>3. Guidance in maintenance activities may include:</p> <ul style="list-style-type: none"> • fault diagnosis procedures • troubleshooting

	<ul style="list-style-type: none"> • damage assessment • assessment of repair cost effectiveness • assessment of replacement options
Human factors affecting job performance	<p>4. Human factors affecting job performance may include:</p> <ul style="list-style-type: none"> • individual health and disability • social psychology • time pressure and workload • the physical work environment
The possibility of maintenance errors may be minimised	<p>5. The possibility of maintenance errors may be minimised through:</p> <ul style="list-style-type: none"> • varying the extent of supervision according to the nature of the task and work conditions • allowance for qualification and experience levels within the team • allowance for human error and 'Murphy's Law' ('If something can go wrong, it will')
Employment relations at supervisor level	<p>6. Employment relations at supervisor level may include:</p> <ul style="list-style-type: none"> • resolution or referral to management of complaints and difficulties • resolution of conflict within the team • absence of team members from the job • maintenance of discipline in the performance of maintenance tasks • allowance for cultural diversity within the team • knowledge of relevant sections of industrial awards, enterprise agreements, and conditions of employment and service that apply to the particular workplace

Unit Sector(s)

Supervision of aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA114A Certify aeronautical product maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency must be attained by individuals working in CASR Part 42 Sub-Part F and Part 145 maintenance organisations who are authorised to return items of aeronautical product to service after the completion of maintenance. It covers the competencies required to correctly interpret and apply CASA airworthiness and certification requirements during aircraft component maintenance.

The units of competency that are specified by the maintenance organisation for the repair, overhaul or modification of the item of aeronautical product being certified for return to service are co-requisites to this unit.

Application of the Unit

This unit requires application of legislative and regulatory requirements relating to the certification of aviation maintenance.

Applications include all aeronautical product maintenance tasks that require certification following completion of maintenance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1. Comply with airworthiness regulations | <ul style="list-style-type: none"> 1.1. The status of aircraft components and component parts is determined 1.2. Eligibility to certify the completion of maintenance activities is determined 1.3. Item of aeronautical product is released to service 1.4. Maintenance documentation required for certification is raised and compiled 1.5. Configuration management procedures are applied 1.6. Maintenance-related reports are compiled and processed 1.7. Technical communication activities, both oral and written, are performed |
|--|--|

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- describing and applying the requirements applicable to the privileges of their authority
- application of Airworthiness Directive requirements under CASR Part 39
- application of Aviation Maintenance Personnel Licensing Requirements under CASR Part 66
- application of requirements related to conduct and certification of maintenance under CASR Part 145 and CASR Part 42 Subpart F
- demonstrating a familiarity with requirements related to the tasks and functions they may perform
- demonstration of literacy and oral expression skills required for clear written and oral communication

Required knowledge

Look for evidence that confirms knowledge of:

- Airworthiness Directive requirements under CASR Part 39
- Maintainers' Responsibilities under CASR Parts 66, 145 and 42 Subpart F
- Aviation Maintenance Personnel Licensing Requirements under CASR Part 66
- Maintenance Organisations Requirements under CASR Part 145 and 42 Subpart F
- Design Organisations under CASR Part 21J
- Maintenance Training Organisations under CASR Part 147

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply without error legislative and regulatory requirements relating to the certification of aeronautical product maintenance.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that airworthiness compliance requirements are interpreted and fully applied without error.</p> <p>Evidence is required of underlying knowledge and skills associated with the application of airworthiness legislation and compliance requirements, along with evidence of appropriate levels of literacy and oral expression associated with presenting clear and concise information.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision without intervention on a range of tasks fully representative of Groups 1 to 18 in the Range Statement. The body of evidence for this unit may be collected and logged during simulated activities at the CASR Part 147 MTO and/or performance during supervised workplace activities.</p> <p>Knowledge must also be demonstrated of the concept of airworthiness that underpins the legislative framework and compliance requirements.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment under supervision but without intervention for the purpose of Journal entries, and/or by use of simulated activities in a CASR Part 147 MTO, covering the interpretation and application of airworthiness control and certification requirements.</p>
<p>Method of assessment</p>	<p>This unit must be linked in its assessment and application to those that apply to the performance of maintenance on the applicable items of aeronautical product.</p>
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
-------------	--

Application	<p>The competency applies to the certification of aircraft maintenance activities, including:</p> <ol style="list-style-type: none"> 1. Scheduled maintenance 2. Unscheduled maintenance 3. Configuration changes 4. Modification incorporation 5. Repairs <p>In performing Tasks 1 to 5, knowledge is to be applied with regard to airworthiness regulatory systems and Australian legislation, and the application of compliance requirements in the performance, recording and certification of maintenance activities, as follows:</p> <ol style="list-style-type: none"> 6. International and national regulatory bodies and recognition agreements, including bilateral agreements 7. Australian airworthiness regulatory bodies and the legislative framework 8. The basis of airworthiness certification and determination of non-conformity 9. Procedures for release of aeronautical product to service following maintenance 10. Procedures for certification of scheduled and unscheduled maintenance activities 11. Procedures for certification of the incorporation of modifications 12. Procedures for certifying the completion of repairs 13. Determining and applying configuration management procedures 14. Compiling and processing service difficulty reports 15. Compiling and processing technical investigation
--------------------	--

	reports 16. Compiling and processing condition reports 17. Orally communicating on technical and airworthiness compliance topics 18. Communicating in writing on technical and airworthiness compliance issues

Elements and Performance Criteria

- | | |
|--|--|
| 1. Plan aeronautical product maintenance activities | <p>1.1. Maintenance requirements are determined from <i>applicable sources</i></p> <p>1.2. Maintenance tasks are analysed and prioritised</p> <p>1.3. Resource requirements are identified and allocated to ensure the timely and efficient completion of maintenance tasks</p> <p>1.4. Maintenance tasks to be performed are recorded in accordance with <i>enterprise policy and procedures</i></p> |
| 2. Implement aeronautical product maintenance activities | <p>2.1. Roles and responsibilities of maintenance personnel are communicated and agreed</p> <p>2.2. Resources and equipment required to perform maintenance tasks are identified and arranged</p> <p>2.3. Regular liaison with maintenance personnel is maintained to ensure that tasks are being completed and continuity is maintained</p> <p>2.4. Management/stakeholders are provided with regular updates on maintenance progress</p> <p>2.5. Maintenance activities are monitored to ensure compliance with prescribed instructions, policy, procedures and/or <i>regulatory requirements</i></p> <p>2.6. Advice and assistance with maintenance activities is provided, as required</p> <p>2.7. Maintenance problems are resolved in accordance with the applicable maintenance documentation</p> |
| 3. Evaluate and report maintenance outcomes | <p>3.1. Final maintenance outcomes are evaluated against the applicable maintenance documentation in accordance with enterprise policy and procedures</p> <p>3.2. Maintenance reports are collated, evaluated and forwarded to appropriate management personnel in accordance with regulatory requirements, enterprise policy and procedures</p> <p>3.3. Required maintenance release documentation is packaged with items of aeronautical product that are being released to service</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- planning
- problem solving
- management of personnel and resources
- application of regulations, policies and procedures, including OHS

Required knowledge

Look for evidence that confirms knowledge of:

- basic project planning techniques
- problem solving techniques
- basic function and theory of operation of applicable items of aeronautical product
- troubleshooting procedures, including test station operation
- cost-effectiveness considerations for different repair types
- philosophies and considerations in repair vs replacement options
- enterprise and regulatory requirements for undertaking, recording and reporting maintenance activities
- OHS legislation
- equity, fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to plan aeronautical product maintenance, manage a workshop performing the maintenance and evaluate and report appropriately the maintenance outcomes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Maintenance requirements	Maintenance requirements may include: <ul style="list-style-type: none"> • overhaul • repair • configuration changes • modification incorporation • defect investigation
Applicable data sources	Applicable sources may include: <ul style="list-style-type: none"> • component unserviceability details • manufacturers' maintenance manuals • computer maintenance data systems • service bulletins • modification incorporation instructions • repair instructions • management directives
Resource requirements	Resource requirements may include: <ul style="list-style-type: none"> • required numbers of personnel and their availability • personnel qualifications, experience and authorisations • spares • consumables • special equipment, including component test stations • ground support equipment • PPE • technical data
Enterprise policy and procedures	Enterprise policy and procedures may be specified in: <ul style="list-style-type: none"> • maintenance organisation manual • organisational policy manuals • procedures manuals • quality manuals • safety manuals

	<ul style="list-style-type: none"> • defence instructions and standards • standing instructions
Regular updates	<p>Regular updates may be:</p> <ul style="list-style-type: none"> • written or verbal, including notes, work sheets, status reports, briefs and individual directives
Regulatory requirements	<p>Regulatory requirements may be found in:</p> <ul style="list-style-type: none"> • Civil Aviation Regulations or Civil Aviation Safety Regulations • AAP 7001.053 Technical Airworthiness Maintenance Manual

MEA116B Apply occupational health and safety procedures at supervisor level in aviation maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of all training pathways at Diploma level, and at Certificate IV level where the training pathway leads to the responsibility for maintenance supervision. It covers the competencies required to implement and monitor the organisation's health and safety policies, procedures and programs in aviation maintenance work areas to achieve and maintain occupational health and safety (OHS) standards. The unit is based on the National Guidelines for integrating OHS competencies into national industry competency standards (NOHSC: 7025, 1998) and applies to the supervision of all aviation maintenance activities.

Application of the Unit

This unit requires application of OHS Acts, regulations, codes of practice and enterprise OHS procedures during the supervision of all aviation maintenance activities.

Applications include supervision of aviation maintenance activities performed on aircraft and in workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Provide information to the work group about OHS and the organisation's OHS policies, procedures and programs
 - 1.1. Relevant provisions of *OHS legislation and codes of practice* are accurately and clearly explained to the work group
 - 1.2. *Information on the organisation's OHS policies, procedures and programs* is provided in a readily accessible manner and is accurately and clearly explained to the work group
 - 1.3. Information about identified hazards and the outcomes of risk assessment and risk control procedures is regularly provided and is accurately and clearly explained to the work group
2. Implement and monitor participative arrangements for the management of OHS
 - 2.1. Organisational procedures for *consultation over OHS issues* are implemented and monitored to ensure that all members of the work group have the opportunity to contribute
 - 2.2. Issues raised through consultation are dealt with and resolved promptly or referred to the appropriate personnel for resolution in accordance with workplace procedures for issue resolution
 - 2.3. The outcomes of consultation over OHS issues are promptly made known to the work group
3. Implement and monitor the organisation's procedures for identifying hazards and assessing risks
 - 3.1. *Existing and potential hazards* in the work areas are identified and reported so that risk assessment and *risk control procedures* can be applied
4. Implement and monitor the organisation's procedures for dealing with hazardous events
 - 4.1. Work procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures
 - 4.2. Existing risk control measures are monitored and results reported regularly in accordance with workplace procedures
 - 4.3. Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control and reported to designated personnel
 - 4.4. Inadequacies in resource allocation for implementation of risk control measures are identified and reported to designated personnel
5. Implement the organisation's procedures for dealing with hazardous events
 - 5.1. Workplace *procedures for dealing with hazardous events* are implemented whenever necessary to ensure that prompt control action is taken
 - 5.2. *Hazardous events* are investigated to identify their cause in accordance with investigation procedures
 - 5.3. Control measures to prevent recurrence and minimise

- risks of hazardous events are implemented based on the hierarchy of control if within scope of responsibilities and competencies or alternatively referred to designated personnel for implementation
6. Implement and monitor the organisation's procedures for providing OHS training
- 6.1. **OHS training** needs are identified accurately, specifying gaps between OHS competencies required and those held by work group members
- 6.2. Arrangements are made for fulfilling identified OHS training needs in both on and off-the-job training programs in consultation with relevant parties
7. Implement and monitor the organisation's procedures for maintaining OHS records
- 7.1. **OHS health and safety records** for work area are accurately and legibly completed in accordance with workplace requirements for OHS records and legal requirements for the maintenance of records of occupational injury and disease
- 7.2. Aggregate information from the area's OHS records is used to identify hazards and monitor risk control procedures within work area according to organisational procedures and within scope of responsibilities and competencies

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- analysing the entire work environment in the area of responsibility in order to identify hazards, assess risks and judge when intervention to control risks is necessary
- analysing relevant workplace data, such as incident or environmental monitoring data, to identify hazards, assess risks and evaluate the effectiveness of risk control measures
- assessing the resources needed to apply different risk control measures and make recommendations to management on that basis

Required knowledge

Look for evidence that confirms knowledge of:

- the provisions of OHS Acts, regulations and codes of practice relevant to the workplace, including legal responsibilities of employers, employees and other parties with legal responsibilities
- principles and practices of effective OHS management
- hazard identification and control in the workplace
- organisational OHS management systems, policies and procedures that support organisational compliance with legal requirements
- the impact on OHS management of workforce characteristics and composition
- the relevance of OHS management to other organisational systems, policies and procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply OHS Acts, regulations, codes of practice and enterprise OHS procedures during the supervision of aviation maintenance activities.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The demonstrated ability to apply the elements and performance criteria of this Unit in conjunction with other Units relating to the supervision of aviation maintenance activities is critical.</p> <p>Assessors must be satisfied that evidence has been provided of:</p> <ul style="list-style-type: none"> • knowledge, consistent with the elements of competence, of all applicable OHS Acts, regulations and codes of practice • understanding of, and ability to apply, risk management procedures by undertaking hazard identification, risk assessment and risk control in accordance with the hierarchy of control • knowledge of how characteristics of the workforce impact on the management of OHS, and an ability to apply that understanding in the supervision of aviation maintenance activities.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed through a combination of workplace (or a realistic simulation) and off-the-job assessment. The context of assessment should ensure that evidence relating to the contingency management component of competency can be collected. Evidence must include observation in the workplace as well as off-the job techniques, such as interviews and simulations. Conditions for simulations should accurately simulate the range of circumstances (especially with regard to a realistic range of emergencies and hazardous events) that the individual could be expected to deal with in the workplace and allow for discussion. The individual must be given access to:</p> <ul style="list-style-type: none"> • relevant OHS Acts, regulations and codes of practice • enterprise OHS policies and procedures • personal protective equipment • relevant work areas for identification of hazards and

	<p>control measures</p> <p>The assessor should have recognised expertise in managing OHS in an aviation maintenance environment or work in an assessment team with such a person.</p>
Method of assessment	<p>To ensure that the contingency management component (ability to deal with irregularities and breakdowns) of competency is adequately assessed, evidence needs to be gathered across a range of work procedures and in a range of workplace circumstances. This could be either in an actual workplace or in a simulation of realistic workplace conditions. Techniques for assessment could include:</p> <ul style="list-style-type: none">• observation• simulation• case studies• interviews• written tests• workplace projects.
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Application</p>	<p>This unit of competency applies to supervisors working within both the CASA and the ADF regulatory systems.</p> <p>This unit is to be applied in combination with all other units in the Diploma of Aeroskills and the Diploma of Aviation Maintenance Management that relate to the supervision of aviation maintenance activities. It also applies to Certificate IV training pathways that lead to supervisory employment.</p>
<p>OHS legislation and codes of practice</p>	<p>OHS legislation and codes of practice may include:</p> <ul style="list-style-type: none"> • State/Territory/Commonwealth OHS Acts, regulations and codes of practice, including general duty of care under OHS legislation and common law • relevant defence instructions • civil aviation safety regulations • requirements for the maintenance and confidentiality of records of occupational injury and disease • provisions relating to health and safety representatives and/or OHS committees • provisions relating to OHS issue resolution
<p>The organisation's OHS policies, procedures and programs</p>	<p>The organisation's OHS policies, procedures and programs may be included in:</p> <ul style="list-style-type: none"> • safety manuals • maintenance organisation manual • standing instructions • procedures manuals • work instructions
<p>Information</p>	<p>Information may include information:</p> <ul style="list-style-type: none"> • for the induction of new maintenance personnel • about the nature of work, tasks and procedures • to assist in work tasks • as part of providing direct supervision • to communicate organisational safety requirements and procedures • for consultation with health and safety representatives

	and OHS committees
Consultation over OHS issues	<p>Consultation over OHS issues may include participative arrangements for:</p> <ul style="list-style-type: none"> • formal and informal meetings which include OHS • OHS committees • other committees such as consultative, planning and purchasing • health and safety representatives • suggestions, requests, reports and concerns put forward by employees to management
Existing and potential hazards and risk	<p>Existing and potential hazards may be identified and risk assessed through activities such as:</p> <ul style="list-style-type: none"> • audits • workplace inspections • housekeeping • checking work area and/or equipment before and during work • job and work system assessment • reviews of OHS records, including registers of hazardous substances, dangerous goods, and so on • maintenance of plant and equipment • provision of supplies and equipment, e.g. review of MSDS and manufacturer/supplier information • identifying employee concerns
Risk control procedures	<p>Risk control procedures may include actions such as:</p> <ul style="list-style-type: none"> • measures to remove the cause of a risk at its source • application of the hierarchy of control: <ul style="list-style-type: none"> • elimination of risk • engineering controls • administrative controls • PPE • consultation with maintenance personnel and their representatives
Procedures for dealing with hazardous events	<p>Procedures for dealing with hazardous events may include:</p> <ul style="list-style-type: none"> • evacuation • chemical containment • first aid • accident/incident reporting and investigation
Hazardous events	<p>Hazardous events may include:</p>

	<ul style="list-style-type: none"> • accidents • fires and explosions • emergencies, e.g. fuel or chemical spills • bomb scares • violent incidents
OHS training	<p>OHS training may include:</p> <ul style="list-style-type: none"> • induction training • specific hazard training • specific task or equipment training • emergency and evacuation training • training as part of broader programs, such as equipment operation
OHS records	<p>OHS records may include:</p> <ul style="list-style-type: none"> • OHS audit and inspection reports • health surveillance and workplace environmental monitoring reports • records of instruction and training • manufacturers and suppliers information, including MSDS and dangerous goods storage lists • hazardous substances registers • maintenance and testing reports • workers compensation and rehabilitation records • first aid/medical post records

Unit Sector(s)

Supervision of aviation maintenance

MEA117A Apply self in the aviation maintenance environment

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit is part of all Certificate II training pathways. It covers the competencies required to work ethically and effectively in the maintenance of aircraft and aircraft components at Certificate II level while contributing to the development of the individual's own capabilities.

Application of the Unit

This unit requires application of competencies relating to ethical behaviour, effective work performance and skills development relating to aviation maintenance.

Applications include all aspects of aircraft and aircraft component maintenance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Manage self
 - 1.1. Responsibility for own workload is accepted
 - 1.2. Work is undertaken individually or as a team member to complete maintenance tasks in a timely manner and in accordance with enterprise procedures and requirements
 - 1.3. Initiative is exercised in liaison with colleagues in identifying and analysing alternative approaches to resolving workplace issues and problems
 - 1.4. Performance feedback from others is used to improve work performance
 - 1.5. Organisational structure, career paths and eligibility criteria are identified
 - 1.6. Awareness is maintained of the effects of fatigue, drugs and alcohol on performance
2. Work effectively with others
 - 2.1. Effective *communication skills* are applied
 - 2.2. Others are dealt with ethically and principles of diversity applied
 - 2.3. The trust and confidence of others is developed and maintained at all levels of the organisation
3. Participate in the process of change and innovation
 - 3.1. Work is undertaken with others to implement change in the workplace
 - 3.2. Opportunities for product and service enhancement are identified and proposed to supervisors
4. Contribute to development of own skills
 - 4.1. Competency standards relevant to current employment are identified and applied
 - 4.2. Competency standards required for desired career path progression are identified and action is initiated through enterprise procedures to facilitate their attainment
 - 4.3. New ideas and techniques are accepted and time and effort invested in learning new skills
 - 4.4. Performance feedback is used to identify and develop ways to improve competence

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- applying principles of equity and diversity
- managing own work performance
- interfacing effectively with others
- applying legislation, regulations and organisational policies and procedures relevant to role and workplace
- contributing to own knowledge, skills and competency development

Required knowledge

Look for evidence that confirms knowledge of:

- human factors
- the application within the workplace of legislative requirements and principles regarding equal opportunity, equity and diversity
- Aeroskills Training Package and relevant pathways to qualifications and their application within the enterprise
- problem solving principles
- constant improvement principles and procedures
- enterprise procedures for proposing modifications or changes in work procedures
- change management

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to effectively manage their own workload and contribute to the ongoing development of their skills, knowledge and competencies in the applicable field of aviation maintenance.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Competency in this unit underpins competency in other aspects of the workplace role of employees at Certificate II level. It may be appropriate to assess parts of this unit in conjunction with units relating to the performance of maintenance activities.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job an appropriate simulation must be used where the range of conditions reflects realistic workplace situations.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of all Certificate III and IV level training pathways. It covers the competencies required to perform work ethically and efficiently in the maintenance of aircraft and aircraft components at Certificate IV level while contributing to the development of the individual's own capabilities.

Application of the Unit

This unit requires application of competencies relating to ethical behaviour, self-management and skills development relating to aviation maintenance.

Applications include all aspects of aircraft and aircraft component maintenance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | |
|--|---|
| 1. Manage self | <ul style="list-style-type: none"> 1.1. Responsibility for own workload is assessed, prioritised and accepted 1.2. Work is undertaken individually or as a team member to complete maintenance tasks in a timely manner and in accordance with enterprise procedures and requirements 1.3. Independence and initiative are demonstrated in identifying and solving problems 1.4. Initiative is exercised in liaison with colleagues in identifying and analysing alternative approaches to resolving workplace issues and problems 1.5. Own skills and knowledge are evaluated and monitored and confidence is built in own capability, ideas and vision 1.6. Performance feedback from others is used to improve work performance 1.7. Organisational structure, career paths and eligibility criteria are identified 1.8. Awareness is maintained of the effects of fatigue, drugs and alcohol on performance |
| 2. Work effectively with others | <ul style="list-style-type: none"> 2.1. Effective <i>communication skills</i> are applied 2.2. Others are dealt with ethically and principles of diversity applied 2.3. The trust and confidence of others is developed and maintained at all levels of the organisation 2.4. Guidance is provided to other team members as required regarding skills application and maintenance processes 2.5. Advantages, disadvantages and consequences of ideas are identified and considered |
| 3. Participate in the process of change and innovation | <ul style="list-style-type: none"> 3.1. Work is undertaken with others to implement change in the workplace 3.2. Opportunities for product and service enhancement and options for achieving the desired result are identified and proposed in accordance with enterprise procedures |
| 4. Contribute to development of own skills | <ul style="list-style-type: none"> 4.1. Competency standards relevant to current employment are identified and applied 4.2. Competency standards required for desired career path progression are identified and action is initiated through enterprise procedures to facilitate their attainment 4.3. Problem solving skills are reviewed for further development 4.4. Own personal knowledge and skills are assessed and learning opportunities are accessed as required to fill gaps and enhance skills 4.5. New ideas and techniques are accepted and time and effort |

invested in learning new skills
4.6. Performance feedback is used to identify and develop ways to improve competence

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- applying principles of equity and diversity
- managing own work performance
- interfacing effectively with others
- applying legislation, regulations and organisational policies and procedures relevant to role and workplace
- contributing to own knowledge, skills and competency development

Required knowledge

Look for evidence that confirms knowledge of:

- human factors
- the application within the workplace of legislative requirements and principles regarding equal opportunity, equity and diversity
- Aeroskills Training Package and relevant pathways to qualifications and their application within the enterprise
- problem solving principles
- constant improvement principles and procedures
- enterprise procedures for proposing modifications or changes in work procedures
- change management

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to demonstrate initiative, effectively manage their own workload and contribute to the ongoing development of their skills, knowledge and competencies in the applicable field of aviation maintenance.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Competency in this unit underpins competency in other aspects of the workplace role of employees at Certificate III or IV levels. It may be appropriate to assess parts of this unit in conjunction with units relating to aircraft or component maintenance activities.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

MEA119B Perform administrative processes to prepare for certification of civil aircraft A level line maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This is one of the units of competency that must be attained to progress from Aircraft Maintenance Engineer to the grant of an Aircraft Maintenance Engineer A Licence under CASR Part 66. It covers the competencies required to correctly interpret and apply CASA airworthiness and certification requirements during aircraft line maintenance tasks within the scope of the A Licence privileges.

The skills and knowledge covered by the units of competency listed in the MEA11 Aeroskills Training Package for the MEA20511 Certificate II in Aircraft Line Maintenance are prerequisite to the attainment of the elements of competency specified in this unit. This includes full coverage of the CASR Part 66 Avionics or Mechanical Syllabus subjects/topics as listed in the Assessment Guidelines.

Application of the Unit

This unit requires application of legislative and regulatory requirements relating to the certification of aviation maintenance within the scope of the A Licence.

Applications include all maintenance tasks that require certification by an Aircraft Maintenance Engineer who holds an A Licence.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

--	---

Elements and Performance Criteria

- | | |
|--|---|
| <p>1. Determine eligibility to certify the completion of aircraft maintenance activities</p> | <p>1.1. Eligibility to certify line maintenance activities in terms of licence privileges is established in accordance with CASR Parts M, 145 and 66</p> |
| <p>2. Prepare for return of aircraft to service</p> | <p>2.1. Allocated line maintenance activities are completed in accordance with CASR Parts M 145, 66 and the approved maintenance program</p> <p>2.2. Documentation is prepared for return of aircraft to service in accordance with CASR Part M and/or 145 and the approved maintenance program</p> |
| <p>3. Compile and process maintenance documentation and reports</p> | <p>3.1. Maintenance documentation is raised and compiled for certification</p> <p>3.2. Configuration management procedures are applied</p> <p>3.3. Maintenance related reports are compiled and processed</p> <p>3.4. Technical communication activities, both oral and written, are performed</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- describing and applying the requirements applicable to the privileges of their authority
- application of Airworthiness Directive Requirements under CASR 39
- application of Maintainers' Responsibilities under CASR Part M
- compliance with CASA 45 Sub-part D
- application of Aviation Maintenance Personnel Licensing Requirements under CASR 66
- application of requirements related to conduct and certification of maintenance under CASR 145
- demonstrating a familiarity with requirements related to the tasks and functions they may perform
- demonstration of literacy and oral expression skills required for clear written and oral communication

Required knowledge

Look for evidence that confirms knowledge of:

- Airworthiness Directive Requirements under CASR 39
- Maintainers' Responsibilities under CASR Parts M, 66 and 145
- Aviation Maintenance Personnel Licensing Requirements under CASR 66
- Maintenance Requirements under the applicable CASR operational Parts
- Maintenance Organisations Requirements under CASR 145

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply without error legislative and regulatory requirements relating to the certification of aviation line maintenance activities that are within the scope of the A Licence privileges.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that airworthiness compliance requirements are interpreted and fully applied without error.</p> <p>Evidence is required of underlying knowledge and skills associated with the application of airworthiness legislation and compliance requirements, along with evidence of appropriate levels of literacy and oral expression associated with presenting clear and concise information.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision without intervention on a range of tasks fully representative of Groups 1 to 13 in the Range Statement. The body of evidence for this unit may be collected and logged during simulated activities at the CASR Part 147 MTO and/or performance during supervised workplace activities.</p> <p>Knowledge must also be demonstrated of the concept of airworthiness that underpins the legislative framework and compliance requirements.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment under supervision but without intervention for the purpose of Journal entries, and/or by use of simulated activities in a CASR Part 147 MTO, covering the interpretation and application of airworthiness control and certification requirements.</p> <p>This unit must be linked in its assessment and application to those that apply to the exercise of Aircraft Maintenance Engineer A Licence privileges in the actual maintenance of aircraft.</p>
<p>Method of assessment</p>	

Guidance information for assessment

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Manage aircraft/aeronautical product configuration
 - 1.1. Aircraft and aeronautical product ***maintenance configuration*** is maintained in accordance with ***applicable maintenance documentation***
 - 1.2. ***Aircraft configuration*** is changed and maintained to meet established role requirements in accordance with ***airworthiness regulations and organisational policy and procedures***
 - 1.3. Modifications to aircraft and aeronautical product are carried out in accordance with airworthiness regulations and organisational policy and procedures
 - 1.4. Aeronautical product is ***authenticated*** and checked for serviceability in accordance with airworthiness regulations and organisational policy and procedures
 - 1.5. Locally manufactured components are produced to authorised specifications and technical drawings
 - 1.6. Aircraft weight and balance is maintained and validated in accordance with regulatory requirements and organisational policy and procedures
 - 1.7. Revised weight and balance data is provided for revision of aircraft loading systems
2. Manage maintenance records and documentation
 - 2.1. ***Maintenance reports and documentation*** are compiled and despatched in accordance with regulatory requirements and organisational policy and procedures
 - 2.2. ***Maintenance records and associated documentation*** are maintained in accordance with organisational policy and procedures
 - 2.3. Deficiencies in documentation are remedied in accordance with organisational policy and procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- management
- auditing
- documentation of maintenance activities

Required knowledge

Look for evidence that confirms knowledge of:

- modification documentation and recording
- weight and balance documentation and recording
- role/alternate mission changes and related maintenance actions
- deviations
- local manufacture of components
- procedures for determining authenticity of components
- cannibalisation procedures

Unit Descriptor

This unit of competency is part of the Aeroskills Advanced Diploma training pathways. It covers planning and implementing work practices and work environment policy and practices in an aviation maintenance environment in accordance with regulatory requirements.

Application of the Unit

This unit requires application of knowledge of relevant regulations and organisational policy and procedures in planning, developing and implementing work practices.

Applications include aviation maintenance workshops, aircraft hangars and flight lines.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Plan work practices and policies
 - 1.1. Work practices and policies are planned which emphasise the safety and wellbeing of others and comply with **legislation, rules and regulations**
 - 1.2. Guidance from appropriate authorities is sought, where necessary
 - 1.3. Plans are prepared for the implementation of corrective action to remedy identified deficiencies
 - 1.4. Learning programs are planned to provide personnel with the knowledge and skills required to maintain a safe working environment
2. Control the development and implementation of work practices
 - 2.1. **Work practices** are developed and implemented within OHS requirements and industrial agreement provisions
 - 2.2. Employment conditions are interpreted and applied in the work context
 - 2.3. Employees are informed of their obligations and rights under legislation and the organisation's conditions of employment
 - 2.4. Quality standards required by regulations and instructions are maintained in industry/enterprise work practices
 - 2.5. Work practices are adequately communicated to all aviation personnel and performance difficulties are identified
3. Implement work environment policy and practices
 - 3.1. Responsibility for implementing policies and practices for a clean, safe and healthy **work environment** is delegated to appropriate personnel in accordance with regulatory requirements and organisational policy and procedures
 - 3.2. Appropriate reporting systems practices are modified to incorporate improvements in maintaining a safe, clean and healthy work environment
 - 3.3. Work practices and procedures are modified on the basis of incident analysis statistics to reduce/eliminate the causative factors
4. Conduct investigations into injuries and related claims
 - 4.1. Injury reports and associated claims investigations are initiated in the shortest possible time after an incident in accordance with legislative, regulatory and organisational requirements
 - 4.2. Injury and claim statistics are analysed to determine causes and prevent recurrence

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- ability to analyse the working environment and develop appropriate work practices
- complying with relevant legislation, rules and regulations
- ability to manage the work environment through delegation of responsibilities to appropriate personnel

Required knowledge

Look for evidence that confirms knowledge of:

- OHS legislation at Commonwealth and state/territory levels
- enterprise and organisational level OHS policies, rules and procedures
- airworthiness regulations and associated documentation relating to workplaces and work practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to develop, establish and manage work environment policies and practices.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Legislation, rules and regulations	Legislation, rules and regulations may include: <ul style="list-style-type: none"> • Commonwealth and state/territory OHS legislation • AAP 7001.053 Technical Airworthiness Maintenance Manual • defence instructions and standards • standing instructions • safety manuals • work procedures • work instructions • CASRs, Manuals of Standards and associated Acceptable Means of Compliance and Guidance Material • maintenance organisation expositions • continuing airworthiness management organisation expositions
Work practices	Work practices apply to: <ul style="list-style-type: none"> • plant and machinery • all personnel present in work areas
Aspects of the work environment	Aspects of the work environment may include: <ul style="list-style-type: none"> • lighting • noise • atmospheric contamination • physical hazards • chemical materials • enclosed spaces

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | |
|---|---|
| 1. Mediate in and settle grievances and disputes | <ul style="list-style-type: none"> 1.1. Problem solving issue resolution procedures are conducted in accordance with <i>relevant policy and procedures</i> 1.2. <i>Grievances and disputes</i> are managed in a timely and respectful manner 1.3. Grievances and disputes are managed to optimise the likelihood of a favourable outcome for all parties 1.4. Individual's rights and obligations are respected and communicated in a clear and concise manner 1.5. Interviews and meetings are conducted in a participative and consultative manner 1.6. Outcomes of proceedings are recorded, stored and made available to authorised personnel in accordance with organisational policy and procedures |
| 2. Motivate team towards achieving quality output | <ul style="list-style-type: none"> 2.1. Team members needs and wants are recognised and where possible incorporated into work assignments consistent with their level of responsibility 2.2. The team's achievements are promoted and rewarded in a way that openly acknowledges the importance of team members' contributions |
| 3. Control allocation of tasks to teams and individuals | <ul style="list-style-type: none"> 3.1. Tasks are allocated to teams and individuals to take into account the needs of the organisation's operational requirements, individual/team goals, development needs, and individual strengths, <i>qualifications and authorisations</i> 3.2. Prompt corrective action is taken in response to actual or potential significant deviations from plans |
| 4. Evaluate and report individual performance | <ul style="list-style-type: none"> 4.1. Performance expectations based on an individual's situation and work requirements are identified and agreed 4.2. Individual performance is reviewed on an ongoing basis against performance expectation 4.3. Reporting on individual performance is in accordance with the organisation's policies and procedures 4.4. Feedback is provided in a constructive manner 4.5. Performance issues that cannot be rectified or addressed are referred to appropriate personnel according to the organisation's policies and procedures |
| 5. Coordinate individual training | <ul style="list-style-type: none"> 5.1. Individual training requirements are identified to meet the needs of the individual and the organisation 5.2. Individual training is delivered 5.3. Opportunities for individuals to develop and apply competencies on the job are facilitated |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- negotiation and dispute resolution
- performance appraisal
- interpersonal communication
- interviewing
- planning
- application of requirements regarding matching of allocated jobs with qualification and task authorisations

Required knowledge

Look for evidence that confirms knowledge of:

- relevant government legislation
- Civil Aviation Regulations (CARs) and Advisory Circulars (ACs)
- CASRs, Manuals of Standards and associated Acceptable Means of Compliance and Guidance Material
- maintenance organisation expositions
- continuing airworthiness management organisation expositions
- relevant defence regulations and instructions
- maintenance organisation manuals
- OHS legislation
- organisational safety manuals
- organisational policy and procedures manuals
- organisational performance appraisal reporting requirements
- personnel development principles and practices
- equity and diversity
- fraud and ethics

Maintenance program effectiveness is reviewed and analysed</p> <p>2.9. Proposed changes to the maintenance program are identified, investigated and negotiated with management/stakeholders</p> |
| 3. Evaluate and report maintenance outcomes | <p>3.1. Final maintenance outcomes are evaluated against the program in accordance with organisational policy and procedures</p> <p>3.2. Maintenance reports are collated, evaluated and forwarded to appropriate authorities in accordance with organisational policy and procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using documentation and relevant regulations to determine maintenance and reporting requirements
- using MSDS to determine handling precautions and PPE requirements
- application of OHS requirements
- planning
- communicating
- questioning
- fault diagnosis techniques

Required knowledge

Look for evidence that confirms knowledge of:

- sources of information relating to scheduled and unscheduled maintenance activities and configuration change requirements
- basic project planning techniques, including timing, prioritising, resourcing, monitoring and evaluation of maintenance tasks
- techniques for mapping maintenance activities and recording progress
- the aircraft and systems being maintained
- fault diagnosis and troubleshooting procedures, damage assessment philosophies and procedures, cost-effectiveness considerations for different repair types, philosophies and considerations in repair versus replacement options
- applicable regulations, organisational policy and procedures manuals, maintenance manuals and instructions
- MSDS
- OHS, equity, fraud and ethics

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Develop an aircraft maintenance program and minimum equipment list
 - 1.1. The requirements for an aircraft maintenance program are determined from ***relevant regulations and organisational policies and procedures***
 - 1.2. An applicable maintenance program is identified or is drafted in accordance with regulatory guidelines
 - 1.3. The proposed maintenance program is submitted for approval
 - 1.4. The requirement for a minimum equipment list is determined from relevant regulations and organisational policies and procedures
 - 1.5. A minimum equipment list is compiled and submitted for approval in accordance with relevant regulations and organisational policies and procedures
2. Develop a continuing airworthiness management organisation exposition
 - 2.1. The need for a continuing airworthiness management organisation exposition is determined from relevant regulations
 - 2.2. A continuing airworthiness management organisation exposition is drafted and submitted for approval in accordance with organisational policies and procedures
3. Develop a maintenance organisation exposition
 - 3.1. The requirement for a maintenance organisation exposition is determined from relevant regulations
 - 3.2. A maintenance organisation exposition is drafted in accordance with regulatory guidelines and organisational policies and procedures
4. Provide mechanical advice in aircraft maintenance
 - 4.1. ***Independent technical input*** is provided with regard to ***aircraft structure*** and ***mechanical systems/components***
 - 4.2. Knowledge of aircraft structures and ***specialist input*** is utilised to determine airworthiness
 - 4.3. Knowledge of aircraft mechanical systems/components and specialist input is utilised to determine airworthiness
5. Provide avionic advice in aircraft maintenance
 - 5.1. Independent technical input is provided with regard to ***avionic systems/components***
 - 5.2. Knowledge of avionic systems/components and specialist input is utilised to determine airworthiness
6. Evaluate and review aircraft maintenance and management system elements
 - 6.1. ***Aircraft operation and maintenance trends*** are monitored
 - 6.2. Maintenance ***management system elements*** are reviewed against trends and amendments are proposed in accordance with regulatory requirements, organisational policies and procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- written and oral communication
- using regulations, policies and procedures to set up maintenance control and management systems
- effective use of trend data and specialist advice to determine airworthiness and propose variations to maintenance schedules, repairs and modifications

Required knowledge

Look for evidence that confirms knowledge of:

- CARs and CASRs relating to aircraft/aeronautical product maintenance and maintenance control
- organisational policies and procedures relating to aircraft/aeronautical product maintenance and maintenance control
- aircraft structure
- mechanical systems and components
- aircraft power plants
- avionic systems and components
- OHS, equity, fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to set up maintenance control and management systems and provide advice on maintenance, modification and repair of aircraft, their systems and items of aeronautical product. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>

Management system elements	<p>Management system elements may include:</p> <ul style="list-style-type: none"> • aircraft maintenance program • minimum equipment list • continuing airworthiness management organisation exposition • maintenance organisation expositions

Unit Sector(s)

Aviation maintenance management

Competency field

Co-requisite units

Not applicable

MEA128B Provide engineering advice in the modification, maintenance and management of aircraft systems

Modification History

Minor formatting and editorial changes made. Prerequisite code versions updated.

Unit Descriptor

This unit of competency is part of the Aeroskills Advanced Diploma training pathways. It covers the provision of engineering advice in the defence airworthiness environment on mechanical and avionics systems. The advice is provided in relation to the modification, repair, maintenance and management of aircraft and associated mechanical and avionic systems.

Application of the Unit

This unit requires application of engineering knowledge to provide advice on the need for modifications, repairs and maintenance requirements within the airworthiness jurisdiction of the ADF.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA349B Apply basic scientific principles and techniques in aeronautical engineering situations

AND

MEA350A Select and test aeronautical engineering materials

OR

MEA272B Apply basic scientific principles and techniques in avionic engineering situations

AND

MEA273A Select and test avionic engineering materials

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Provide mechanical systems advice
 - 1.1. *Independent technical input* in the maintenance, repair and modification design relating to *aircraft mechanical systems* and structures is provided when requested by maintenance personnel, senior maintenance managers and higher technical authorities
 - 1.2. Aircraft mechanical systems knowledge is utilised to determine aircraft airworthiness
 - 1.3. Knowledge of *aircraft structures* is utilised to determine aircraft airworthiness.
2. Provide avionic systems advice
 - 2.1. Independent technical input in the maintenance and modification design for aircraft avionic systems is provided when requested by maintenance personnel, senior maintenance managers and higher technical authorities
 - 2.2. *Aircraft avionic systems* knowledge is utilised to determine aircraft airworthiness
3. Conduct/advise an aircraft recovery
 - 3.1. Battle/incident damage and operational capability of an aircraft is evaluated
 - 3.2. Repair methods and/or limits are determined
 - 3.3. An aircraft recovery is planned

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral and written communication
- management
- damage assessment, including repair scheme development and/or extension
- development of modification proposals
- review of maintenance requirements
- OHS, equity, fraud and ethics

Required knowledge

Look for evidence that confirms knowledge of:

- modification proposal development and processing
- repair scheme proposal, including equivalent strength repair design and justification for extension of an approved repair scheme
- management processes for monitoring and reviewing maintenance requirements
- aircraft structure
- aircraft mechanical systems
- aircraft avionic systems
- aircraft recovery procedures
- OHS, equity, fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to assemble and provide engineering advice relating to aircraft and aircraft system maintenance, repair and modification design.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|-------------------------------------|--|
| 1. Notify authorities of occurrence | 1.1. Authorities are notified of <i>the occurrence</i> in accordance with ADF policy and procedures
1.2. Specialist advice is provided relevant to the occurrence
1.3. <i>The investigation</i> is planned in accordance with ADF and statutory requirements |
| 2. Collect evidence | 2.1. Evidence of personnel involved in the occurrence is documented
2.2. Witnesses are interviewed and information is documented
2.3. Evidence associated with the occurrence is collated |
| 3. Analyse occurrence | 3.1. Information is analysed in accordance with the established objectives of the investigation
3.2. Options for action are generated which are consistent with ADF and/or statutory requirements and lead to recommendations that reduce future risk
3.3. Criteria are specified to enable objective evaluation of the options to be undertaken |
| 4. Produce report | 4.1. All evidence is reviewed and satisfactory engineering conclusions and recommendations are made
4.2. Conclusions are reviewed with stakeholders
4.3. Recommendations are costed
4.4. <i>Formal reports</i> are produced in accordance with ADF policy and procedures and forwarded to appropriate authorities |
| 5. Implement corrective measures | 5.1. Measures selected for implementation are feasible in terms of practicality and costing
5.2. Measures are implemented |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral and written communication
- interviewing
- management and analysis of evidence
- technical aspects relating to the investigation

Required knowledge

Look for evidence that conforms knowledge in:

- ADF policy and procedures
- investigation procedures
- technical aspects relating to the aircraft type and its systems
- application of a no blame culture
- culpability matrix
- OHS, equity, fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Plan aircraft detachment maintenance activities
 - 1.1. **Deployment/detachment** objectives are ascertained
 - 1.2. **Resource requirements** are identified, obtained and allocated
 - 1.3. **Maintenance personnel qualifications and authorisations** are validated
 - 1.4. Liaison with **detachment locality authorities** is established
 - 1.5. Detachment activities are scheduled
2. Prepare maintenance plan
 - 2.1. Maintenance plan incorporates short and long-term goals in line with flight/squadron objectives and priorities
 - 2.2. Maintenance plan conforms to **airworthiness regulations, ADF policies and procedures**
 - 2.3. Realistic and relevant work objectives are developed
 - 2.4. The maintenance plan reflects the resources available
3. Detach aircraft
 - 3.1. **Pre-detachment inspections** are performed and deficiencies are reported in accordance with ADF policy and procedures
 - 3.2. Personnel briefings are provided
 - 3.3. Aircraft and equipment are despatched
4. Exercise limited engineering authority
 - 4.1. Maintenance interval extension requests are submitted, as required
 - 4.2. Carried forward unserviceabilities are authorised
5. Provide technical airworthiness/engineering advice
 - 5.1. Technical advice relating to maintenance and to design of modifications and repairs to aircraft structure/systems is provided to **higher authorities**
6. Monitor and evaluate maintenance activities
 - 6.1. Maintenance outcomes are assessed against the maintenance plan goals and objectives
 - 6.2. Deviations/problems are identified, analysed and appropriate responses are initiated
 - 6.3. Maintenance outcomes are recorded and reported in accordance with ADF policy and procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- planning
- communication
- problem solving
- liaison
- management

Required knowledge

Look for evidence that confirms knowledge of:

- airworthiness regulations
- relevant instructions
- aircraft maintenance documentation
- maintenance report compilation
- modifications and deviations
- defects and safety reports
- OHS, equity, fraud and ethics

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain proper custody of aircraft, aeronautical product and support equipment
 - 1.1. Aircraft and aeronautical product are maintained and/or stored in facilities or circumstances that comply with ***regulatory requirements and organisational policies and procedures***
 - 1.2. ***Special test equipment*** is stored in appropriate environmental conditions and calibration is carried out at required intervals
 - 1.3. ***Ground support equipment*** is stored and operated in an environment that will prevent undue deterioration or wear
 - 1.4. Storage and control requirements are observed for ***hazardous and controlled materials***
 - 1.5. Maintenance records and documentation are maintained in accordance with regulatory requirements, organisational policy and procedures
2. Transfer aircraft, aeronautical product and support equipment between organisations
 - 2.1. Aircraft, aeronautical product and support equipment are transferred between organisations in accordance with regulatory requirements, organisational policy and procedures
 - 2.2. Documentation and maintenance records are transferred between organisations in accordance with regulatory requirements, organisational policy and procedures
3. Dispose of aircraft, aeronautical product and support equipment
 - 3.1. Aircraft, items of aeronautical product and support equipment are correctly classified for disposal and appropriate documentation is compiled to allow disposal in accordance with regulatory requirements, organisational policy and procedures
 - 3.2. Aircraft and items of aeronautical product are prepared as directed for disposal
 - 3.3. Maintenance records and documentation are retained and stored in accordance with regulatory requirements, organisational policy and procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- administration
- management
- application of technical knowledge in the custody and disposal of aircraft, aeronautical product and support equipment
- compliance with regulatory requirements
- compliance with environmental protection requirements

Required knowledge

Look for evidence that confirms knowledge of:

- aircraft maintenance requirements/instructions
- aeronautical product maintenance requirements
- test equipment calibration requirements
- regulatory requirements relating to custody, transfer and disposal of aircraft, aeronautical product, support equipment and environmental protection
- organisational policies and procedures relating to custody, transfer and disposal of aircraft, aeronautical product and support equipment

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEA132A Manage budgetary resources in the aviation maintenance environment

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Aeroskills Advanced Diploma training pathways. It is relevant to senior maintenance managers and maintenance managers within AMOs operating within either the ADF or CASA regulatory systems and covers the competencies required to manage budgeting activities in aircraft and aeronautical product maintenance and logistic support activities.

Application of the Unit

This unit requires application of procedures for the development and monitoring of a budget.

Applications include aircraft and aeronautical product maintenance organisations, including engineering and logistic support areas.

In the case of major maintenance budgets associated with integrated logistic support (ILS) maintenance programs the applicable units would be MEA139A Perform aviation maintenance-related integrated logistic support management activities and PSPMNGT610A Manage public sector financial resources, from the PSP04 Public Sector Training Package.

Those who may become Accountable Managers of CASR Part 145 AMOs may, instead of this unit, consider attaining MEA146A Prepare and manage aviation maintenance organisation budgets and financial plans.

--	---

Elements and Performance Criteria

1. Plan a budget
 - 1.1. *Workplace resource needs* are identified and documented
 - 1.2. Resource needs are costed
 - 1.3. *Budget* document is prepared and processed in accordance with organisational requirements
2. Manage the acquisition and allocation of budgetary resources
 - 2.1. *Systems for monitoring expenditure* are maintained
 - 2.2. Budgets are monitored to ensure expenditure is within targets
 - 2.3. Appropriate technology is applied to the resource management system
 - 2.4. Changing priorities are identified and discussed with applicable personnel
 - 2.5. Budget document is amended in response to changing activities or costs
 - 2.6. Accountability requirements are satisfied
3. Evaluate and report budget outcomes
 - 3.1. Expenditure against planned budget is evaluated
 - 3.2. Impacts on financial changes/constraints on work unit objectives are evaluated and documented
 - 3.3. Report on expenditure/budget is prepared in accordance with organisational policy and procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- financial management
- monitoring
- evaluation and decision making
- mathematical calculation

Required knowledge

Look for evidence that confirms knowledge of:

- organisational budgetary processes
- tasking over the period of the budget
- requirements in CASR regarding financial status of maintenance organisations
- fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to prepare and apply budgetary resources in the aviation maintenance management environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all materials and documentation required and must be permitted to refer to any relevant workplace procedures, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application

Application of this unit may relate to:

- scheduled or unscheduled maintenance
- individual or team-related activities

Workplace resource needs

Workplace resource needs may include:

- personnel
- finance
- equipment
- facilities
- items of aeronautical product
- breakdown spares and materials
- consumables

Budget

Budget may be:

- annual
- length of project/activity
- quarterly
- for another period of time as required

Systems for monitoring expenditure

Systems for monitoring expenditure may include:

- paper-based systems
- computerised systems
- receipts and invoices
- quotes

MEA133B Communicate aviation technical and maintenance management knowledge

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Aeroskills Diploma and Advanced Diploma training pathways. It covers the competencies required to effectively communicate aviation technical and maintenance management knowledge. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of written and oral communication skills relating to aviation technical and maintenance management knowledge.

Applications include the evaluation of written technical communication and the delivery of verbal briefings.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1. Evaluate written technical communication | <ul style="list-style-type: none"> 1.1. Content of <i>written technical communication</i> is checked for accuracy and appropriateness 1.2. Format is checked against regulatory and organisational policy and procedures 1.3. The need for additional information is identified and writer advised of same 1.4. Verified communication is actioned in accordance with <i>regulatory requirements, organisational policy and procedures</i> |
| 2. Present technical and non-technical briefings | <ul style="list-style-type: none"> 2.1. <i>Briefing</i> is planned and prepared in a well structured manner 2.2. Briefing is delivered in an audible, articulate manner 2.3. <i>Information</i> delivered is accurate 2.4. Audiovisual equipment, where applicable, is used in an effective, professional manner |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- evaluation
- planning of briefings and use of aids to delivery

Required knowledge

Look for evidence that confirms knowledge of:

- applicable technical aspects
- requirements for written communication
- planning and delivery of briefings

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to evaluate written technical communication and deliver verbal briefings on a wide range of topics related to maintenance management.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team related activities
Written technical communication	Written technical communication may include: <ul style="list-style-type: none"> • instructions • reports • requests being submitted in accordance with regulatory requirements
Regulatory requirements, organisational policy and procedures	Regulatory requirements, organisational policy and procedures may include: <ul style="list-style-type: none"> • Civil Aviation Regulations (CARs) and associated Advisory Circulars (ACs) • CASRs, Manuals of Standards and associated Acceptable Means of Compliance and Guidance Material • maintenance organisation expositions • continuing airworthiness management organisation expositions • policy manuals • procedures manuals • quality manuals • work instructions • AAP 7001.053 Technical Airworthiness Maintenance Manual • defence instructions • standing instructions • maintenance management plans
Briefing	Briefing may be for: <ul style="list-style-type: none"> • employees of the organisation • business associates, such as teaming partners • clients • contractors and subcontractors • representatives of regulatory bodies • higher authorities

	<ul style="list-style-type: none">• visitors
Information	Information may include: <ul style="list-style-type: none">• changes to policy and procedures or regulations• workload requirements• organisational activities• organisational familiarisation• technical knowledge and skills• work procedures• non-technical matters

MEA134B Establish, maintain and evaluate the organisation's occupational health and safety system

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Aeroskills Advanced Diploma training pathways. It covers the competencies required to establish, maintain and evaluate an organisation's OHS system in order to ensure that the workplace is, so far as is practicable, safe and without risks to the health of employees.

The unit is based on the National Guidelines for integrating OHS competencies into national industry competency standards (NOHSC: 7025, 1998).

Application of the Unit

This unit requires application of OHS legislation and principles to establish, maintain and evaluate an OHS system within the maintenance organisation.

Applications include flight lines, hangars and workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Establish and maintain the framework for the OHS system
 - 1.1. OHS policies are developed which clearly express the organisation's commitment with respect to OHS within the area of managerial responsibility and how **relevant OHS legislation** will be implemented, consistent with overall organisational policies
 - 1.2. OHS responsibilities and duties which will allow implementation and integration of the OHS system are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions
 - 1.3. Financial and human resources for the operation of the OHS system are identified and sought in a timely and consistent manner
 - 1.4. Information on the OHS system and procedures for the area of managerial responsibility is provided and explained in a form that is readily accessible to employees
2. Establish and maintain participative arrangements for the management of OHS
 - 2.1. **Appropriate consultative processes** are established and maintained in consultation with employees and their representatives in accordance with relevant OHS legislation and consistent with the organisation's overall process for consultation
 - 2.2. Issues raised through participation and consultation are dealt with and resolved promptly and effectively in accordance with procedures for issue resolution
 - 2.3. Information about the outcomes of participation and consultation is provided in a manner accessible to employees
3. Establish and maintain procedures for identifying hazards
 - 3.1. Existing and potential **hazards** within the area of managerial responsibility are correctly identified and identification confirmed in accordance with OHS legislation, codes of practice and trends identified from the OHS records system
 - 3.2. A procedure for ongoing identification of hazards is developed and integrated within systems of work and procedures
 - 3.3. Activities are appropriately monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility
 - 3.4. Hazard identification is addressed at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created
4. Establish and maintain procedures for assessing
 - 4.1. Risks presented by identified hazards are correctly assessed in accordance with OHS legislation and codes of

- risks
- practice
- 4.2. A procedure for ongoing **assessment of risks** is developed and integrated within systems of work and procedures
- 4.3. Activities are monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility
- 4.4. Risk assessment is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that the risk from hazards is not increased
5. Establish and maintain procedures for controlling risks
- 5.1. Measures to control assessed risks are developed and implemented in accordance with the hierarchy of control, relevant OHS legislation, codes of practice and trends identified from the OHS records system
- 5.2. When measures that control a risk at its source are not immediately practicable, interim solutions are implemented until a control measure is developed
- 5.3. A procedure for ongoing control of risks, based on the hierarchy of control, is developed and integrated within general systems of work and procedures
- 5.4. Activities are monitored to ensure that the **risk control procedure** is adopted effectively throughout the area of managerial responsibility
- 5.5. Risk control is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that adequate risk control measures are included
- 5.6. Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control, and resources enabling implementation of new measures are sought and/or provided according to appropriate procedures
6. Establish and maintain organisational procedures for dealing with hazardous events
- 6.1. Potential hazardous events are correctly identified
- 6.2. Procedures which would control the risks associated with **hazardous events** and meet any legislative requirements as a minimum are developed in consultation with appropriate emergency services
- 6.3. Appropriate information and training is provided to all employees to enable implementation of the correct procedures in all relevant circumstances
7. Establish and maintain an OHS program
- 7.1. **An OHS training program** is developed and implemented to identify and fulfil employees' OHS training needs as part of the organisation's general

training program

8. Establish and maintain a system for OHS records
 - 8.1. *A system for keeping occupational health and safety records* is established and monitored to allow identification of patterns of occupational injury and disease within the area of managerial responsibility.
9. Evaluate the organisation's OHS system and related policies, procedures and programs
 - 9.1. The *effectiveness of the OHS system and related policies, procedures and programs is assessed* according to the organisation's aims with respect to OHS
 - 9.2. Improvements to the OHS system are developed and implemented to ensure more effective achievement of the organisation's aims with respect to OHS
 - 9.3. Compliance with OHS legislation and codes of practice is assessed to ensure that legal OHS standards are maintained as a minimum

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- ability to analyse working environment and design appropriate OHS management systems
- ability to analyse relevant data and evaluate OHS system effectiveness
- ability to assess resources to establish and maintain OHS management systems

Required knowledge

Look for evidence that confirms knowledge of:

- provisions of relevant OHS legislation
- principles and practice of effective OHS management
- management arrangements relating to regulatory compliance
- enterprise hazards and risks, control measures and relevant expertise required
- characteristics and composition of workforce and their impact on OHS management
- relevance of enterprise management systems to OHS management

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to effectively utilise OHS legislation and organisational policies and procedures to establish, maintain and evaluate an OHS system.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Application</p>	<p><i>Application of this unit may relate to:</i></p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance performed on flight lines, in hangars and in workshops • individual or team-related activities
<p>This competency is to be exhibited in accordance with all relevant OHS legislation, particularly:</p>	<ul style="list-style-type: none"> • state/territory/Commonwealth OHS Acts, regulations and codes of practice, including regulations and organisational codes of practice relating to hazards present in the workplace • general duty of care under OHS legislation and common law; requirements for the maintenance and confidentiality of occupational injury and disease • requirements for provision of OHS information and training • provisions relating to health and safety representatives and/or OHS committees • provisions relating to OHS issue resolution • Civil Aviation Safety Regulations (CASRs), Manuals of Standards and associated Acceptable Means of Compliance and Guidance Material
<p>Establish and maintain the framework for OHS may include:</p>	<ul style="list-style-type: none"> • policy development and updating • determining the ways in which OHS functions will be managed. This may include distinct OHS management activities, or inclusion of OHS functions within a range of management functions and operations, such as maintenance of plant and equipment; purchasing of materials and equipment • designing operations, work flow and materials handling; planning or implementing alterations to site, plant, operations or work systems; mechanisms for review and allocation of human, technical and financial resources needed to manage OHS, including defining and allocating OHS responsibilities for all relevant positions • mechanisms for keeping up to date with relevant information and updating the management arrangements for OHS, for example, information on health effects of hazards, technical developments in risk control and environmental monitoring and changes to legislation • mechanisms to assess and update OHS arrangements

	<p>relevant to legislative requirements; a system for communicating OHS information to employees, supervisors and managers within the enterprise</p>
<p>Appropriate consultative processes for management of OHS may cover:</p>	<ul style="list-style-type: none"> • OHS committees and other committees, for example, consultative, planning and purchasing • health and safety representatives; employee and supervisor involvement in OHS management activities, for example, OHS inspections, audits, environmental monitoring, risk assessment and risk control • procedures for reporting hazards, risks and OHS issues by managers and employees • inclusion of OHS in consultative or other meetings and processes
<p>Establish and maintain procedures for identifying hazards may include developing and updating procedures for:</p>	<ul style="list-style-type: none"> • workplace inspections, including plant and equipment; audits • maintaining and analysing OHS records, including environmental monitoring and health surveillance reports • maintenance of plant and equipment • reviews of materials and equipment purchases, including manufacturers and suppliers information • employee reporting of OHS issues
<p>Establish and maintain procedures for assessing risks may include developing and updating procedures for:</p>	<ul style="list-style-type: none"> • determining the likelihood and severity of adverse consequences from hazards • OHS audits; workplace inspections; maintenance of plant and equipment; purchasing of materials and equipment • planning or implementing alterations to site, operations or work systems • analysis of relevant records and reports, for example, injuries and incidents, hazardous substances inventories/registers, audit and environmental monitoring reports and OHS committee records
<p>Establish and maintain procedures for controlling risks may include developing and updating procedures for:</p>	<ul style="list-style-type: none"> • assessing the OHS consequences of materials, plant or equipment prior to purchase • obtaining expert advice; appropriate application of measures according to the hierarchy of control, namely: elimination of the risk • engineering controls • administrative controls • personal protective equipment • designing safe operations and systems of work; inclusion of new OHS information into procedures • checking enterprise compliance with regulatory

	requirements
Establish and maintain organisational procedures for hazardous events may include developing and updating procedures for:	<ul style="list-style-type: none"> • making inventories of, and inspecting, high risk operations • inspecting systems and operations associated with potentially hazardous events, for example, emergency communications, links to emergency services, fire fighting, chemical spill containment, bomb alerts and first aid services
Establish and maintain an OHS training program may include:	<ul style="list-style-type: none"> • arrangements for ongoing assessment of training needs, for example, relating to supervisors and managers • specific hazards; specific tasks or equipment • emergencies and evacuations • training required under OHS legislation • allocation of resources for OHS training, including acquisition of training resources, development of staff training skills and purchase of training services • induction training; training for new operations, materials or equipment
Establish and maintain a system for keeping OHS records may cover:	<ul style="list-style-type: none"> • identifying records required under OHS legislation, for example, worker's compensation and rehabilitation records • hazardous substances registers; material safety data sheets (MSDS) • major accident/injury notifications • certificates or licences • manufacturers and suppliers OHS information • OHS audits and inspection reports • maintenance and testing reports • workplace environmental monitoring and health surveillance records • records of instruction and training • first aid/medical post records
Effectiveness of the OHS system and related policies, procedures and programs is assessed through:	<ul style="list-style-type: none"> • reviewing the effectiveness of the OHS management system • regular review of operating procedures • regular analysis of OHS records • audits against OHS legislative requirements

MEA135A Use computers in aviation maintenance-related integrated logistic support activities

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Aeroskills Diploma and Advanced Diploma training pathways. It covers the competencies required to effectively use computers in support of maintenance-related ILS activities and comply with regulatory requirements relating to the compilation and safeguarding of data.

Application of the Unit

This unit requires application of competencies relating to the use of the Internet, word processing, spreadsheets, databases and project planning software to perform tasks relating to ILS activities associated with aviation maintenance, including aircraft technical records.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Use word processing software
 - 1.1. Correspondence is drafted using word processing software
 - 1.2. Reports, including tables, are drafted using word processing software
 - 1.3. Instructions are drafted and amended using word processing software
2. Use spreadsheets
 - 2.1. Spreadsheets used within the enterprise are used to obtain data
 - 2.2. Enterprise spreadsheets are updated through data input
 - 2.3. A simple spreadsheet is developed for a ***typical ILS-related application***
3. Use databases
 - 3.1. ***Databases used for maintenance-related ILS activities*** within the enterprise are used to obtain data
 - 3.2. Databases are populated with data, as required
4. Use project-planning software
 - 4.1. Project-planning software is used to plan a ***typical maintenance-related ILS task***
 - 4.2. Project-planning software is used to monitor the progress of a task
 - 4.3. Use and input data to enterprise maintenance task management software, where applicable
5. Use the internet
 - 5.1. Regulatory information is obtained from applicable internet websites
 - 5.2. ***Technical data*** is obtained from Internet websites
6. Maintain and store backup copies of data
 - 6.1. ***Required media for backup copies of data*** is determined
 - 6.2. Backup copies of data are made and are updated as required by ***regulatory requirements, organisational policy and procedures***
 - 6.3. Backup copies of data are stored in accordance with regulatory requirements, organisational policy and procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- use of word processing software
- development and use of spreadsheets
- populating and obtaining data from databases
- use of project planning software
- use of the internet to obtain regulatory and technical data

Required knowledge

Look for evidence that confirms knowledge of:

- types of word processing software commonly used in the maintenance-related ILS environment
- development and use of spreadsheets
- database usage in the maintenance-related ILS environment
- use of project planning software and the types of task management software used by maintenance organisations
- internet websites relating to regulatory requirements, standards and specifications
- use of internet search engines to obtain technical and commercial data
- procedures for backing up and storing data

--	---

Elements and Performance Criteria

- | | |
|---|---|
| 1. Perform spares assessment activities | <ul style="list-style-type: none"> 1.1. Enterprise <i>spares assessment and supply information systems</i> are identified and applied 1.2. Maintenance data, spares usage data and trends are monitored and required holdings of spares are varied, as required 1.3. Spares availability problems are identified and strategies are determined to resolve the problems 1.4. Where applicable, <i>suitable substitute parts</i> are identified and necessary engineering approvals obtained in accordance with <i>applicable regulations, organisational policy and procedures</i> 1.5. Acceptable sources of substitute parts are identified and requirements for documentation, such as certification reports and release notes, are specified in accordance with regulatory requirements, organisational policy and procedures 1.6. Configuration management requirements are observed in spares assessing 1.7. Data required for input to <i>ILS records</i> is provided where applicable |
| 2. Manage repairable items | <ul style="list-style-type: none"> 2.1. Maintenance and reliability data is monitored and changes to maintenance programs are proposed, where necessary 2.2. Documentation is raised to allocate <i>repairable items</i> to maintenance facilities in accordance with contractual requirements, organisational policy and procedures 2.3. Any specific <i>investigation or additional maintenance requirements</i> are specified 2.4. Data required for input to ILS records is provided, where applicable |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using software packages relevant to spares assessing and repairable item management
- oral communication
- written communication
- problem solving
- application of regulatory and procedural requirements
- identification and resolution of problems relating to availability of spares

Required knowledge

Look for evidence that confirms knowledge of:

- ILS principles relating to spares assessing, repairable item management and configuration management
- software packages used by the enterprise for spares assessment, supply management and repairable item management
- use of drawings, standards and specifications to identify substitute piece parts and materials
- use of catalogues and specifications to identify substitute components (items of aeronautical product)
- regulations, organisational policies and procedures relating to spares assessment and repairable item management
- OHS requirements relating to substitute piece parts, materials and components
- fraud and ethics

Unit Sector(s)

Integrated logistics support

Competency field

Co-requisite units

Not applicable

MEA137A Write aviation technical publications

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit is part of Diploma and Advanced Diploma training pathways. It covers the competencies required to draft and process aviation technical publications in accordance with relevant standards and regulatory requirements. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of competencies relating to the researching of data, drafting and processing of technical publications and amendments to technical publications.

Applications include maintenance manuals, operating instructions, parts catalogues, procedures manuals and related technical publications.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA135A Use computers in aviation maintenance-related integrated logistic support activities

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Research data
 - 1.1. *The required medium, style and layout* are determined
 - 1.2. *Relevant data* is obtained or accessed
 - 1.3. Potential problems are identified and *relevant experts* are identified and consulted
 - 1.4. Problem resolution strategies are determined
2. Draft publication or publication amendment
 - 2.1. The publication or amendment is drafted using relevant guidelines and specified software package
 - 2.2. Required graphics are selected and illustrator briefs are raised
 - 2.3. Copyright legislation is observed
 - 2.4. Completed graphics are inserted into the draft and annotations/labels added
 - 2.5. The draft is prepared for publishing and is submitted for editorial review
3. Process draft publication or amendment
 - 3.1. Proof copy of the publication or amendment is submitted for client acceptance
 - 3.2. Publication or amendment is published
 - 3.3. The publication management database is updated and the completed publication is delivered or distributed

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- research
- utilisation of international document standards, such as IATA and GAMA
- oral communication
- written communication
- problem solving
- use of word processing software and graphics packages

Required knowledge

Look for evidence that confirms knowledge of:

- word processing and graphics packages used for technical publication and publication amendment drafting
- publication writing conventions, standards and specifications
- the use of style guides
- illustration techniques
- reading of engineering drawings, including:
 - standard drawing sheets and drawing layouts
 - types of drawing
 - engineering standards and specifications
 - technical terms and abbreviations
 - sectioned views
 - dimensioning
 - tolerancing of dimensions
 - types of fit
 - aircraft standard hardware
 - screw threads
 - threaded components and washers
 - locking devices
 - rivets
 - special structural fasteners
 - spur gears
 - welding symbols and geometry tolerancing
 - surface texture
 - material specifications and metal surface treatment
- reading of electrical and electronic circuits and wiring diagrams
- development of system schematics
- development of block diagrams

- sketching
- use and development of logic charts
- development of fault diagnosis guides
- the preparation of illustrators' briefs
- the preparation of indexes to publication contents
- problem solving methodology
- regulations relating to technical publications
- OHS legislation
- for print-based publications, procedures for processing drafts through DTP to printing, binding and distribution
- for electronic format publications, the principles for publication database systems and the development of input data
- requirements for, and methods of, maintaining publication records

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to research, draft and process technical publications and amendments thereto.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
The required medium	<p>The required medium may be:</p> <ul style="list-style-type: none"> • print-based • electronic • microfiche
Style and layout	<p>Style and layout may be determined from:</p> <ul style="list-style-type: none"> • an applicable style guide • contract requirements • industry standards and specifications
Relevant data sources	<p>Relevant data sources may include:</p> <ul style="list-style-type: none"> • design and production data and drawings • parts and materials listings • operating procedure documentation • maintenance schedules • modification instructions and service bulletins • manufacturer's and trade catalogues • relevant legislation and regulations
Relevant experts	<p>Relevant experts may include:</p> <ul style="list-style-type: none"> • the client • design engineers and staff • production staff • component and material suppliers • regulator representatives

MEA139A Perform aviation maintenance-related integrated logistic support management activities

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit is part of Advanced Diploma training pathways. It covers the competencies required to perform a range of maintenance-related ILS activities at a managerial level within applicable airworthiness regulatory requirements. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of competencies relating to ILS elements and related data management and analysis tools in the maintenance-related management and support of systems throughout their life of type.

Applications include support of maintenance on aircraft, aircraft systems, avionic systems and items of aeronautical product.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain logistic support analysis plans
 - 1.1. Logistic support analysis plans are reviewed in line with trends in system supportability and affordability
 - 1.2. Revisions are proposed to logistic support analysis plans
2. Perform life cycle cost analysis
 - 2.1. Actual and anticipated costs ***through to life of type*** are identified
 - 2.2. Cost data is ***analysed***
3. Establish and maintain baselines for reliability, availability and maintainability
 - 3.1. Data on in-service reliability, availability and maintainability is gathered
 - 3.2. ***Data is reviewed*** against established baselines and action is initiated to deal with deviations from the established baselines
4. Revise logistic support analysis record data
 - 4.1. Logistic support analysis parameters are analysed using current data
 - 4.2. ***Analysis results*** are entered in the logistic support analysis record
5. Manage data
 - 5.1. ***A technical data management system*** is developed and managed in accordance with contractual and ***regulatory requirements***
 - 5.2. ***The relevance of technical data*** is monitored and amendment action is initiated where necessary
 - 5.3. Logistic support management information systems are applied and supported

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- populating and extracting data from databases
- task analysis
- applying ILS principles

Required knowledge

Look for evidence that confirms knowledge of:

- ILS management and support philosophy and practice
- logistic support analysis (LSA) concepts and methods, including:
 - preparation of LSA plans
 - management and conduct of LSA programs
 - supportability analysis
 - task analysis
 - LSA record population
- reliability, availability and maintainability (RAM) determination and application, including:
 - baseline determination and application
 - RAM modelling
 - reliability and maintainability apportionment
- data management concepts and methods

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Plan maintenance for teams
 - 1.1. **Maintenance tasks** are identified and interpreted from available **maintenance data or schedule** in accordance with organisational procedures
 - 1.2. Workload is organised in order of priority taking into consideration all required maintenance tasks and specified timeframes
 - 1.3. **Required resources** are identified and obtained
Tools and support equipment are checked for serviceability and currency of calibration, where applicable
2. Implement team maintenance activities
 - 2.1. Maintenance tasks are allocated to team members after consideration of individual experience, qualifications and task authorisations
 - 2.2. Team members are clearly briefed on their responsibility and function in the team
 - 2.3. Team members are correctly authorised to operate the required items of **ground support and test equipment**
3. Provide guidance
 - 3.1. **Guidance** is provided to team members appropriate to the complexity or criticality of the maintenance task and the experience level of the individual
 - 3.2. Guidance is provided in determining the cause of complex faults or faults not covered in maintenance manual fault diagnosis guides
4. Monitor and certify maintenance quality
 - 4.1. Activities are checked and personnel are guided to ensure that maintenance is performed and certified in accordance with the **applicable documentation, policies and procedures**
 - 4.2. Check inspections are performed on completed work or work stages and certified in accordance with **regulatory requirements**, policies and procedures
5. Perform human resource management activities at the supervisor level
 - 5.1. **Human factors affecting job performance** are identified and addressed
 - 5.2. The possibility of **maintenance errors** is minimised
 - 5.3. Sound teamwork is maintained through an awareness of contributing factors
 - 5.4. **Sound employment relations** are maintained
6. Perform workplace training tasks
 - 6.1 **On-job training** is delivered
 - 6.2. The Supervisor's Verification portion of the Workplace History Sheets (Section 3) of the Log of Industrial Experience and Achievement is completed
 - 6.3. Expert witness verification of competency for workplace assessors is provided, when required

6.4. Opportunities for individuals to develop competencies are provided

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- planning
- supervision
- inspection
- advanced troubleshooting
- man management
- on-job training delivery
- application of OHS requirements in the workplace

Required knowledge

Look for evidence that confirms knowledge of:

- principles of supervision
- high level technical knowledge applicable to the job
- fault diagnosis techniques
- maintenance data and documentation
- regulations, policies and procedures relating to supervision and certification of maintenance
- human factors and guidelines
- equity, diversity and fraud
- Commonwealth and state/territory OHS legislation
- MSDS
- use of PPE
- confined space entry permits
- avoidance of maintenance errors
- National Aeroskills Training Package, including relevant competency units and training pathways
- The Log of Industrial Experience and Achievement, responsibility for making entries and responsibility for the certification of entries
- the role of supervisors in assisting workplace competency assessors
- techniques for delivery of on-job training
- relevant industrial awards and/or workplace agreements, or conditions of service

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to supervise work teams performing aviation maintenance tasks and certify maintenance quality/independent inspections. Individuals will need to have been appointed as an MQI or Independent Inspector before being assessed for competency in this Unit.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, or a combination of both on and off the job. Where partial assessment occurs off the job an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working as a team leader.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Maintenance tasks	<p>Maintenance tasks include:</p> <ul style="list-style-type: none"> • scheduled maintenance • unscheduled maintenance • configuration changes • modification incorporation • repair • overhaul
Maintenance data or schedule	<p>Maintenance data or schedule includes any or all of:</p> <ul style="list-style-type: none"> • maintenance records • maintenance manuals • servicing schedules • computer maintenance data systems • service bulletins • special technical instructions • modification orders • repair instructions • observations and feedback from maintenance personnel and aircrew • internal work instructions or management directives
Required resources	<p>Required resources may include:</p> <ul style="list-style-type: none"> • personnel in required numbers with applicable experience, qualifications and task authorisation • spares • consumables • tools • special equipment • ground support equipment • PPE
Ground support and test	<p>Ground support and test equipment may include:</p>

equipment	<ul style="list-style-type: none"> • power carts • hydraulic rigs • pneumatic rigs • stands and docking • component test stands
Guidance	<p>Guidance may encompass:</p> <ul style="list-style-type: none"> • damage assessment • assessment of repair cost effectiveness • assessment of replacement options
Applicable documentation, policies and procedures	<p>The applicable documentation, policies and procedures include:</p> <ul style="list-style-type: none"> • operating manuals • maintenance manuals • organisational policy manuals • quality manuals • safety manuals • MSDS • procedures manuals • work instructions • defence instructions and standards • standing instructions
Regulatory requirements	<p>Regulatory requirements are found in:</p> <ul style="list-style-type: none"> • AAP 7001.053 Technical Airworthiness Maintenance Manual • Commonwealth and state/territory OHS legislation
Human factors affecting job performance	<p>Human factors affecting job performance may include:</p> <ul style="list-style-type: none"> • individual health and disability • social psychology • time pressure and workload • the physical work environment
Actions to minimise maintenance errors may include:	<p>Actions to minimise maintenance errors may include:</p> <ul style="list-style-type: none"> • varying the extent of supervision according to the nature of the task and work conditions • allowance for qualification and experience levels within the team • allowance for human error and 'Murphy's Law' ('If something can go wrong, it will')
Sound employment relations	<p>Sound employment relations include knowledge of:</p>

	<ul style="list-style-type: none">• relevant sections of industrial awards• content of enterprise agreements• conditions of employment and service that that apply to the particular workplace
On-job training	On-job training involves: <ul style="list-style-type: none">• the reinforcement of knowledge and skills gained in off-job training and guiding their application to specific on-job maintenance tasks

Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|--|--|
| 1. Identify the criteria for risk management | <p>1.1. Risk management procedures are identified from the organisation's <i>risk management plan/maintenance organisation exposition</i></p> <p>1.2. Where a risk management plan does not exist <i>potential risks</i> are identified and documented</p> <p>1.3. <i>Criteria for managing the identified risks</i> are determined in accordance with <i>standard risk management procedures</i> and documented as a risk management plan</p> <p>1.4. The process for evaluation and review of the risk management plan is identified from the organisation's plan or an <i>evaluation methodology</i> is developed and included in the plan developed in accordance with criteria 1.3</p> |
| 2. Manage risk | <p>2.1. Activities are monitored in accordance with the risk management plan</p> <p>2.2. Performance deviations are identified and responses are initiated in accordance with the risk management plan</p> <p>2.3. The effectiveness of risk responses are monitored and reported in accordance with risk management plan procedures</p> |
| 3. Evaluate risk management processes | <p>3.1. Risk management outcomes are reviewed and analysed to assess the effectiveness of the risk management plan</p> <p>3.2. Recommendations on variations to the plan are developed and processed in accordance with organisational policy and procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- application of standards and procedures for assessing and evaluating risks
- development of risk treatment processes
- assessment of legal impact of risk occurrence
- evaluation of risk management plan operation
- oral communication
- written communication

Required knowledge

Look for evidence that confirms knowledge of:

- organisational policies and procedures for risk management
- CASR Part 145 Manual of Standards, in particular, Acceptable Means of Compliance and Guidance Material
- maintenance error management programs
- AS/NZS ISO 31000:2009 Risk Management - Principles and guidelines
- regulatory impact of risks
- contractual impact of risks
- cost-benefit analysis
- Commonwealth and state/territory OHS and environment protection legislation
- evaluation techniques
- equity, fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to develop, apply and evaluate a risk management plan.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Risk management plans	Risk management plans may include: <ul style="list-style-type: none"> • potential risks and their probability of occurrence and degree of severity • treatment options in each case • responsibility for implementing treatment options and required response times • resources required for risk management • plan implementation timeframe • periodic review timetable • internal reporting system • review methodology
Potential risks	Potential risks may include: <ul style="list-style-type: none"> • human factors, such as fatigue, illness and maintenance errors • OHS issues resulting in injury or death • regulatory and procedural violations, such as inappropriate use of minimum equipment lists and failure to observe type certification standards • providing maintenance guidance to remotely located aircrew or maintenance personnel • maintenance difficulties, such as spares shortages and unexpected failures of systems or components • support equipment failure • environmental problems • contractual issues • skill and experience shortfalls • maintenance cost escalation • natural events
Criteria for managing the identified risks	Criteria for managing the identified risks may include: <ul style="list-style-type: none"> • level and degree of acceptability of each identified risk • legal aspects, such as regulatory violations and

	<p>contractual commitments</p> <ul style="list-style-type: none"> • cost of managing specific risks versus the cost to the organisation if the risk eventuated • stakeholder perceptions and expectations
Standard risk management procedures	<p>Standard risk management procedures may be found in:</p> <ul style="list-style-type: none"> • organisational risk management policies • websites dealing with risk management • AS/NZS ISO 31000:2009 Risk Management - Principles and guidelines • CASR Part 145 Manual of Standards
Evaluation methodology	<p>Evaluation methodology may include:</p> <ul style="list-style-type: none"> • oversight of day-to-day operations • interviews with personnel in the organisation • physical inspections • incident reports • questionnaires • periodic review of risk treatment procedures and outcomes

Unit Sector(s)

Aviation maintenance management

Competency field**Co-requisite units**

Not applicable

MEA142B Manage self in the aviation maintenance environment

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Aeroskills Diploma and Advanced Diploma training pathways. It covers the competencies required to perform work ethically and efficiently in complying with legislative and regulatory requirements while managing the maintenance of aircraft and aircraft systems. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of competencies relating to self-management and skills/professional development relating to aviation management.

Applications include all aspects of aircraft maintenance, aeronautical product maintenance and other related ILS activities.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Manage self
 - 1.1. Responsibility for own workload is assessed, prioritised and accepted
 - 1.2. Work is undertaken autonomously to complete *tasks/roles* in a timely manner and in accordance with *organisational and/or legislative and regulatory standards*
 - 1.3. Independence and initiative are demonstrated in identifying and solving problems
 - 1.4. Initiative is exercised in liaison with colleagues in identifying and analysing alternative approaches to managing workplace issues and problems
 - 1.5. Own performance is evaluated and monitored and confidence is built in own capability, ideas and vision
 - 1.6. Performance feedback from others is used to improve work performance
 - 1.7. Organisational structure, career paths and eligibility criteria are identified
 - 1.8. Awareness is maintained of the effects of fatigue, drugs and alcohol on performance
2. Work effectively with others
 - 2.1. Effective *communication* is applied when dealing with others
 - 2.2. Others are dealt with ethically and principles of diversity applied
 - 2.3. Judgement and discretion are used as is appropriate to the situation
 - 2.4. The trust and confidence of others is developed and maintained at all levels of the organisation
 - 2.5. Others are mentored in specific areas of aviation maintenance and maintenance management and performance feedback is provided
 - 2.6. Advantages, disadvantages and consequences of ideas are identified and considered
 - 2.7. An awareness of the possibility of fraudulent behaviour is maintained
3. Comply with requirements
 - 3.1. Applicable contractual, legislative, regulatory and organisational requirements are complied with
 - 3.2. Work requirements are surveyed and quotes are provided
 - 3.3. Organisation and customer needs are surveyed and assessed
4. Manage work priorities and resources
 - 4.1. Competing demands to achieve objectives and meet requirements for deliverables are prioritised

- 4.2. Work plans, programs and budgets are prepared, monitored and reviewed
- 4.3. Resource use to achieve objectives is planned
- 4.4. The nature, extent and impact of any issues or changes relating to work priorities and resource allocation are identified
- 5. Facilitate and capitalise on change and innovation
 - 5.1. Change is introduced by working closely with others
 - 5.2. Opportunities for product and service enhancement and options for achieving the desired result are identified
- 6. Contribute to development of own skills and professional capability
 - 6.1. Competency standards relevant to current employment and career path through managing own skills development are interpreted and applied
 - 6.2. Problem solving skills are reviewed for further development
 - 6.3. Own personal knowledge and skills are assessed and learning opportunities are accessed as required to fill gaps and enhance skills
 - 6.4. New ideas and techniques are accepted and time and effort invested in learning new skills
 - 6.5. Performance feedback is used to identify and develop ways to improve competence

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- oral communication
- written communication
- applying principles of equity and diversity
- managing own work performance
- managing and interfacing with others
- applying legislation, regulations and organisational policies and procedures relevant to role and workplace
- managing own professional development

Required knowledge

Look for evidence that confirms knowledge of:

- OHS legislation at Commonwealth and state/territory levels
- human factors
- equal opportunity legislation
- privacy legislation
- freedom of information legislation
- equity guidelines
- diversity principles
- detection of fraud
- Australian Quality Training Framework (AQTF) and relevant Training Packages
- leadership principles
- management principles and techniques
- regulations, policies, instructions and guidelines relevant to the organisation and role
- problem solving principles
- constant improvement principles and procedures
- change management

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to demonstrate initiative and effectively manage their own workload and professional development while engaged in the management of aviation maintenance and/or related ILS activities.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Competency in this unit underpins competency in other aspects of the workplace role of employees with managerial responsibilities in aviation maintenance and related ILS activities. It may be appropriate to assess parts of this unit in conjunction with units relating to the performance of such aspects of the role.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>

MEA143B Develop and manage maintenance error management programs

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Aeroskills Advanced Diploma training pathways. It covers the competencies required to develop and manage maintenance error management programs within the civil aviation maintenance environment, as required by CASA.

Application of the Unit

This unit requires application of competencies relating to the development and management of maintenance error management programs aimed at reducing human error rates within aviation maintenance organisations.

Applications include all maintenance activities relating to aircraft and aeronautical product that are performed within the jurisdiction of CASA.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | |
|---|---|
| 1. Develop a maintenance error management program | <ul style="list-style-type: none"> 1.1. The aims and objectives of the maintenance error management program are clearly stated and the program is structured in accordance with <i>regulatory requirements</i> 1.2. The maintenance error management program encourages open and blame free (unless negligent) reporting of maintenance errors 1.3. Disciplinary boundaries are clearly stated for application in the event of negligence 1.4. A maintenance error investigation procedure is specified, including compliance, where applicable, with <i>regulatory procedures for the reporting of significant safety issues</i> related to maintenance errors 1.5. A strategy and procedure is specified for the development and delivery of staff training programs relating to maintenance error management 1.6. Reference to the maintenance error management program is included in <i>applicable organisational policies and procedures</i> 1.7. Provision is made for feedback of program results to the workforce, and for analysis of accumulated data to identify maintenance error trends |
| 2. Manage a maintenance error management program | <ul style="list-style-type: none"> 2.1. Reported events are reviewed to determine if they should be investigated within the procedures of the maintenance error management program 2.2. Significant safety issues related to maintenance errors are reported to CASA and/or the Australian Transport Safety Bureau (ATSB) 2.3. Events applicable to the maintenance error management program are investigated in accordance with program procedures 2.4. The results of the investigation are analysed to determine appropriate action to minimise the probability of a recurrence of the event 2.5. Necessary action is taken and feedback is provided to the workforce 2.6. The event and resultant action are reviewed to determine what information, if any, should be forwarded to bodies external to the organisation 2.7. Accumulated data is reviewed in accordance with the program procedures to determine and monitor maintenance error trends |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- written and oral communication
- use of regulations and advisory material to set up a maintenance error management program
- specification of training requirements
- application of human factors
- trend analysis

Required knowledge

Look for evidence that confirms knowledge of:

- relevant regulations and advisory material
- human factors
- investigative processes
- trend analysis
- how to specify training requirements
- equity, fraud and ethics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEA145A Conversion from allied trades for employment in aviation maintenance workshops

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is applicable to individuals with Certificate III or Certificate IV qualifications in allied trades (primarily automotive, electrotechnology or metals and engineering) who are to be employed in aviation maintenance workshops. It covers parts of common core competencies required of all individuals employed on the maintenance of items of aeronautical product that are aviation maintenance specific and would not have been covered in allied trade units that relate to similar areas of expertise. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit of competency requires application of common core skills and knowledge that are aviation maintenance specific and meet the requirements of the two Regulators, CASA and the ADF.

The skills and knowledge will be applied during the maintenance of items of aeronautical product in aviation maintenance workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Identify and access aviation industry manuals, specifications and drawings
 - 1.1. **Appropriate manuals** are identified and accessed for the type of aircraft or component to be maintained
 - 1.2. Amendment status is clearly established to ensure the correct specifications and procedures are applied
2. Amend manuals, specifications or drawings
 - 2.1. Manual, specification or drawing changes and/or amendments are incorporated and documented correctly in accordance with **statutory regulations and/or enterprise procedures**
3. Store manuals, specifications or drawings
 - 3.1. Manuals, specifications or drawings are stored appropriately to ensure prevention of damage, ready access and updating of information, when required, in accordance with regulatory and/or enterprise procedures
4. Apply standard trade practices
 - 4.1. Common types of aircraft attachment hardware are correctly selected and used
 - 4.2. Common types of safety locking devices and fasteners are correctly selected and used
 - 4.3. Aircraft components, devices and hardware are lockwired in the correct manner, using the appropriate wire gauge
 - 4.4. Common types of aircraft connectors and plumbing are accurately assembled or connected
5. Interpret and apply quality standards in the aviation maintenance environment
 - 5.1. Standards or specifications set out in maintenance documents and process specifications are identified and interpreted
 - 5.2. Enterprise quality requirements are identified, confirmed and applied
6. Plan steps and organise work to complete task
 - 6.1. Steps are planned in conjunction with the work of other personnel to allow achievement of practical outcomes, in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 6.2. **Human factors** are allowed for in planning of steps
 - 6.3. Work activity is organised with other involved personnel, allowing for relevant human factors and using relevant communication processes to ensure safe and appropriate sequencing of tasks
 - 6.4. All necessary **documentation** related to job planning and progress is completed, and recorded in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- accessing, interpreting and applying information from industry manuals, including paper-based, microfiche or computer-based media, relating to work activities, including determination of manual amendment status, knowledge of manual structures and locating relevant information/instructions for work activity
- amending industry manuals to reflect current/approved amendment status
- identifying and interpreting information from drawings and diagrams in aircraft maintenance manuals, including component scaling, section, assembly, location, drawing applicability and amendment status from the title block
- correct handling and storage of drawings, manuals and industry media, i.e. microfiche and digital formats
- determining correct lubricants for specified applications
- identifying common ferrous and non-ferrous aircraft materials
- identifying common aircraft composite and non-metallic materials (other than wood)
- identifying aircraft hardware by markings, part numbers, size, shape and material
- installing aircraft hardware using standard practices/techniques to ensure safe security and includes:
 - minimum thread engagement
 - split pinning
 - lockwiring
 - application of locking compounds
 - locking tabs and spring washers
 - lock nuts
- installing aircraft hardware using tightening, torquing and tensioning techniques
- identifying various types of aircraft rigid and flexible plumbing and their connectors
- identifying aircraft control cables and related cable system hardware
- applying workplace hazard reporting and identification procedures
- being able to differentiate the elements which constitute the quality system and the ability to identify processes, workplace regulations and ISO 9000 compliant documentation and specifications within the workplace environment
- interpreting information relating to the work activity from a range of industry manuals, industry and enterprise regulations and industry documentation
- considering OHS regulations/precautions specific to the work activity and others working in the vicinity of the planned work activity, particularly with regard to electricity, gases (especially oxygen), oils and chemicals
- using MSDS
- applying human factors in planning maintenance activities

Required knowledge

Look for evidence that confirms knowledge of:

- the types of industry manuals used in aviation maintenance and types of media
- requirements for custody and upkeep of industry manuals
- techniques for obtaining and applying data contained in industry manuals
- types of standard aircraft hardware and methods of identification, including bolts, nuts, washers, pins (cotter and tapered), and fasteners (rivets and camlocs)
- materials from which hardware is manufactured and its applications, including plain, corrosion resistant and temperature/heat resistant
- types of safety locking devices and their application
- common ferrous and non-ferrous aircraft materials, heat treatment and testing
- characteristics and properties of common composite and non-metallic materials (other than wood)
- types of aircraft cable, turnbuckles, end fittings, tensiometers, pulleys and cable system components, and aircraft flexible control systems
- types and characteristics of lubricants
- typical quality systems and their operation in the workplace
- workplace quality documentation, such as quality manuals, procedures manuals, work instructions and worksheets
- the relationship between the quality system and OHS requirements, such as workplace hazard reporting
- the relationship between the quality system and identification systems for aircraft hardware, materials and components
- the impact of human factors on the safe and effective performance of maintenance on aircraft and aircraft components
- MSDS

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly apply common core skills and knowledge covered by this unit that are specific to the maintenance of items of aeronautical product in aviation maintenance workshops.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>This unit must be linked in its assessment and application to those units that apply to actual maintenance of items of aeronautical product. It is essential that all OHS requirements are met and understood.</p> <p>The transferability of general manual interpretation and use in accordance with relevant aircraft component publications/maintenance regulations/orders and standards and practices must be clearly established.</p> <p>Evidence of underlying knowledge and skills associated with the interpretation and use of manuals is required to supplement understanding of the structure and regulatory requirements associated with the aircraft maintenance environment in this area.</p> <p>Evidence of knowledge about how aircraft materials, standard items of hardware and fittings are used in component maintenance and the application of quality systems and work planning must be demonstrated. The ability to apply the skills and knowledge across a variety of applications must also be demonstrated.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one manual from each of Groups 1, 2 and 3 listed in the Range Statement and on the tasks listed in Groups 4 to 7. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry .</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or by use of simulated activities, covering the use of publications/maintenance regulations/orders and standards and practices, the application of aviation maintenance specific standard trade practices and of task planning and quality system application in the</p>

	<p>aeronautical product maintenance environment.</p> <p>This unit must be linked in its assessment and application to those that apply to the actual maintenance of items of aeronautical product.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Appropriate manuals</p>	<p>Appropriate manuals may include:</p> <ol style="list-style-type: none"> 1. Aircraft publications, maintenance instruction manuals, process specifications, servicing or service bulletins or structural repair manuals 2. Tooling or equipment manuals, manufacturer's manuals, standard practices, enterprise aviation regulations and publications 3. Illustrated parts catalogues, aircraft wiring manuals or drawings
<p>Application of standard aviation trade practices</p>	<p>Application of standard aviation trade practices applies to the selection and use of hand and power tools and equipment associated with workshop-related activities in the aircraft maintenance environment that involve:</p> <ol style="list-style-type: none"> 4. Laying out and fabricating simple items from common aircraft materials 5. Assembling items using a representative range of common types of aircraft attachment hardware for which relevant fits and clearances, appropriate safety locking devices and fasteners, including lockwire, are correctly selected and applied 6. Assembling/connecting a range of common aircraft connectors and plumbing, applying safety locking devices where applicable 7. Assembling/connecting aircraft control cables and applying safety locking devices where applicable
<p>Regulatory and enterprise procedures</p>	<p>Regulatory and enterprise procedures may be found in:</p> <ul style="list-style-type: none"> • CARs or SASRs • maintenance organisation manual • procedures manuals • work instructions

	<ul style="list-style-type: none">• quality manuals• safety manuals• applicable defence regulations and instructions• standing instructions
Human factors	Human factors are: <ul style="list-style-type: none">• the factors relating to human behaviour and performance in aviation maintenance environments that are defined by either CASA or the ADF
Documentation	Documentation may include: <ul style="list-style-type: none">• maintenance logs, overhaul test/check sheets, job history sheets, traveller cards, maintenance reports, irregularity reports, serviceable tags or removal tags• MSDS or material record sheets

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|--|
| 1 Analyse strategic opportunities and intended maintenance activities | 1.1 <i>Strategic opportunities</i> are expressed in terms of aircraft and aeronautical product maintenance activities |
| | 1.2 All intended maintenance activities are converted into special projects or work programs |
| | 1.3 Financial trends are analysed and interpreted in the context of the organisational strategic objectives |
| | 1.4 Financial planning objectives, process timeframes and resources are clearly identified |
| 2 Develop revenue, expenditure and capital investment proposals | 2.1 Individuals and groups are given responsibility for the development of specific <i>budgets and plans</i> |
| | 2.2 Consultation occurs with all <i>relevant groups and individuals</i> throughout the organisation |
| | 2.3 Proposals are developed taking account of past experience, present trends and future expectations |
| | 2.4 Outcomes of proposals are clearly linked to organisational strategic objectives |
| | 2.5 Realistic cost-benefit and Maintenance Organisation Exposition compliance costs are incorporated into all proposals |
| | 2.6 Organisational <i>investment target rates</i> are met for <i>capital expenditure</i> proposals |
| | 2.7 Performance measures and tactics for monitoring and control processes are identified for each proposal/action and a financial risk management plan is developed |
| | 2.8 Proposals comply with the organisation's values, policies, code of conduct, <i>legal and ethical obligations</i> |
| | 2.9 Proposals are developed within the agreed timeframes |
| | 2.10 <i>Supporting evidence</i> is valid and sufficient to allow proper evaluation of the proposals |
| 3 Build agreement for budgets and financial plans | 3.1 Negotiation is undertaken with relevant groups and individuals in ways that build commitment to the plans |
| | 3.2 Links to the achievement of organisational strategic objectives are identified and agreed |

- 3.3 Outcomes are confirmed in terms of clear, concise objectives and timeframes
 - 3.4 Negotiations lead to a clear agreement of those matters to be incorporated into budgets and plans
 - 3.5 Budgets and plans incorporate the outcomes of negotiations and meet organisation's approval processes
 - 3.6 Delegations, accountabilities and responsibilities are agreed and confirmed in writing
 - 3.7 Final budget and plans are clearly documented and a communication plan developed
- 4 Communicate budget and financial plans
- 4.1 Budget/financial plan communication package is reviewed by finance specialists
 - 4.2 Package is amended/revised where appropriate
 - 4.3 Training activities are undertaken with users of the budget and plans across the organisation
 - 4.4 All data and terms are defined and understood by the users of the plans
 - 4.5 Communication outcomes are tested to ensure clear understanding of objectives, processes and accountabilities
- 5 Monitor and control activities against plans
- 5.1 Delegations and budget accountabilities are confirmed in writing prior to budget period
 - 5.2 Funds are allocated in accordance with budget objectives and parameters
 - 5.3 Recording systems and documentation meet all audit requirements and legal obligations
 - 5.4 Risk management plans are implemented and contingency plans put in place for all financial plans
 - 5.5 Performance is monitored and variances promptly identified
 - 5.6 Variances are analysed in conjunction with relevant experts to determine cause and effect

- 5.7 Remedial action is taken swiftly to minimise negative impact and maximise benefits
 - 5.8 Budgets and plans are renegotiated/restructured where necessary to optimise organisational performance
- 6 Report outcomes of financial plans
- 6.1 Records of financial performance are properly maintained within organisational systems
 - 6.2 Financial performance is analysed and reported in a form and language appropriate to the audience
 - 6.3 Non-financial objectives are reported in the context of overall organisational performance
 - 6.4 Strategies and plans are reviewed and updated to optimise organisational performance

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations and anti-discrimination
- requirements in CASR and TAMM regarding financial status of maintenance organisations
- aircraft and aeronautical product maintenance and maintenance management/certification requirements
- financial planning within the organisation
- budgeting
- organisation's intended aircraft and aeronautical product maintenance activities
- consultative methods and processes
- capital investment evaluation techniques
- performance measurement
- organisation roles in respect to financial delegations, accountabilities and responsibilities
- standards for organisational record-keeping and audit requirements

Look for evidence that confirms skills in:

- analysis and interpretation of relevant financial information
- development of formal estimates of reviews, costs, cash flows and logistic requirements
- communication/consultation to ensure all relevant groups and individuals are advised of what is occurring and are provided with an opportunity for input
- cost and benefit analysis to produce balanced arguments to support financial proposals
- risk management to assess probability and consequences of any potential negative event
- investment analysis to evaluate capital expenditure proposals (NPV, IROR, etc)
- negotiating agreement on budgets and financial plans with the relevant managers
- relating to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- arranging and delivering training to ensure team members and other managers understand the budget/financial planning objectives and processes
- analysing and interpreting positive and negative variances from budget/plan, determining the reasons therefore, and identifying potential actions to remediate the situation
- developing and implementing systems to ensure financial performance records are collected, maintained and properly reported

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to prepare and manage budgets and financial plans in the aviation maintenance organisation environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The candidate must have access to all materials and documentation required and must be permitted to refer to any relevant workplace procedures, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the

<p>performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Legislation, codes and national standards relevant to the workplace</p>	<p>Legislation, codes and national standards relevant to the workplace may include:</p> <ul style="list-style-type: none"> • CASRs and associated Manuals of Standards • TAMM • award and enterprise agreements and relevant industrial instruments • relevant legislation from all levels of government that affects business operation, especially in regard to OHS, environmental and sustainability issues, equal opportunity, and anti-discrimination
<p>Strategic opportunities</p>	<p>Strategic opportunities may include:</p> <ul style="list-style-type: none"> • aircraft operators and fleet operators seeking to outsource maintenance • aeronautical product maintenance needs • changing regulatory requirements for maintenance • new aircraft types • provision of logistic support services • opportunity to respond to requests for tender to provide aircraft and/or aeronautical product maintenance • opportunity to accept sub-contract maintenance tasks from other maintenance organisations
<p>Budgets and plans</p>	<p>Budgets and plans may include:</p> <ul style="list-style-type: none"> • aircraft maintenance budgets • aeronautical product maintenance budgets • financial budgets • logistic services sales budgets • regulatory compliance budgets • capital expenditure budgets • cash flow plans
<p>Relevant groups and individuals</p>	<p>Relevant groups and individuals include:</p> <ul style="list-style-type: none"> • all personnel within the organisation affected by the budgets and financial plans being developed
<p>Investment target rates</p>	<p>Investment target rates refers to:</p> <ul style="list-style-type: none"> • the minimum percentage rate of return required by the organisation for a capital investment project to proceed
<p>Capital expenditure</p>	<p>Capital expenditure refers to:</p>

	<ul style="list-style-type: none"> those components of the budget which, for internal policy reasons, are considered to provide benefits over more than one financial period and are to be evaluated as capital expenditure projects
Legal and ethical obligations	<p>Legal and ethical obligations include:</p> <ul style="list-style-type: none"> compliance with all relevant statutes, regulations and audit requirements of the organisation, along with the organisation's policies, values and codes of conduct
Supporting evidence	<p>Supporting evidence may include:</p> <ul style="list-style-type: none"> cost-benefit analyses risk management plans market research results tender details net present value interest rate of return pay pack calculations
Delegations	<p>Delegations refers to:</p> <ul style="list-style-type: none"> the decision-making accountabilities relating to the person's position description and/or other written and verbal delegations
Accountabilities and responsibilities	<p>Accountabilities and responsibilities include:</p> <ul style="list-style-type: none"> clarification of who is to be accountable for a decision or action prior to its execution, and identification of groups, individuals and activities for which a person is responsible for managing
Training activities	<p>Training activities may include:</p> <ul style="list-style-type: none"> small group discussions informal meetings formal, structured competency-based training television and video conferencing e-learning
Delegations and budget accountabilities	<p>Delegations and budget accountabilities may include:</p> <ul style="list-style-type: none"> monitoring expenditure authorising expenditure within limits reporting on variances to budget/plan taking remedial action within budget authority
Audit requirements	<p>Audit requirements include:</p> <ul style="list-style-type: none"> the internal standards required in the management of budgets and financial plans, approved by external/internal auditors

Risk management	Risk management refers to: <ul style="list-style-type: none">• the process of identification of potential negative events and the development of plans to mitigate or minimise the likelihood of the negative event occurring and/or the consequences in the event it does occur
Appropriate non-financial objectives	Appropriate non-financial objectives may include: <ul style="list-style-type: none">• environmental• sustainability• compliance with Maintenance Organisation Exposition (CASA regulatory system)• compliance with Maintenance Management Plan (ADF regulatory system)• compliance with requirements of the applicable airworthiness regulator• OHS• quality and safety management• market share• customer service• security or any other key result area

Unit Sector(s)

Aviation maintenance management

Custom Content Section

Not applicable.

MEA201B Remove and install miscellaneous aircraft electrical hardware/components

Modification History

Minor formatting and editorial changes made. Prerequisite version code updated.

Unit Descriptor

This unit of competency is part of all Avionic Certificate IV training pathways and is also part of the Mechanical Aircraft Maintenance Engineer licensing pathway. It covers the competencies required for the removal and installation of miscellaneous electrical hardware and components found in various systems of both fixed and rotary wing aircraft. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of skills in basic soldering and in crimping associated with the removal and installation of electrical hardware.

Applications include miscellaneous electrical hardware fitted to fixed or rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Remove aircraft electrical hardware
 - 1.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 1.2. **Removal of electrical hardware** is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Removed components are tagged, packaged or discarded in accordance with specified procedures
2. Install aircraft electrical hardware
 - 2.1. Electrical hardware components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 2.2. Physical installation of electrical hardware is carried out in accordance with the applicable maintenance manual
 - 2.3. System is reinstated to correct physical condition in preparation for testing, as necessary
 - 2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- the preparation and termination of electrical cables to aircraft industry standards, using crimping techniques, soldering techniques and solder sleeves joints
- the correct interpretation of aircraft wire markings, terminal block identification and plug/socket pin numbering systems
- inspection of electrical looms and harness pre and post removal and installation to ensure minimum bends are maintained, cable is not in tension, plugs are correctly aligned, security of route ensures no chaffing of insulation, adequate clipping and cable ties have been utilised and construction complies with aircraft industry standards
- positive identification of miscellaneous electrical hardware and/or components in all aircraft systems

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- application of relevant OHS practices
- the use of approved maintenance documentation and aircraft publications relating to miscellaneous aircraft electrical hardware and components
- electrical wiring used in aircraft and wire marking
- plug/socket pin numbering and terminal block identification
- cable and loom installation requirements
- crimping tools and crimp terminals
- soldering techniques and the use of solder sleeve joints
- electrical fundamentals and related mathematical and physics principles

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills, use specialist tools and use maintenance publications to remove and install miscellaneous items of aircraft electrical hardware/components while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that applicable cleanliness requirements and OHS safety precautions are fully observed, including awareness of electrostatic discharge procedures.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. An understanding of the attachment methods, connection of hardware and system operation as they relate to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on each of the connection methods 1, 2 and 3 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- identifying/locating:
 - DC power generation, regulation, distribution and control systems and components, i.e. regulators and bus bars
 - piston engine ignition systems and components, i.e. coils, magnetos, auxiliary starting devices (impulse couplings and inductors/vibrators)
 - gas turbine engine igniter and starting system components (where applicable to enterprise)
 - batteries (lead acid and nickel cadmium) and associated mounting equipment, including related anti-vibration aids
 - motors and actuators in basic DC electrical systems
 - specific components of DC electrical systems, such as flaps and landing gear
- correctly connecting DC generators and alternator/rectifier generators.
- applying relevant OHS practices

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- relevant OHS practices
- the use of approved maintenance documentation and aircraft publications relating to DC electrical systems
- properties of permanent magnets
- precautions for the care and storage of permanent magnets
- general construction, operating characteristics and applications for:
 - aircraft DC generators
 - alternator/rectifier DC generators
 - DC starter/generators
 - DC motors, including starter motors
 - DC rotary and linear actuators
 - batteries
- how to locate and identify components of:
 - DC power regulation and distribution systems
 - piston engine ignition and starting systems
 - gas turbine engine igniter systems, including specific OHS precautions
 - gas turbine engine starting systems
 - DC electrical systems, such as flaps and landing gear retraction

- lighting systems
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to remove and install components of DC electrical systems while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.

Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across a range of aircraft major electrical system components encompassing electrical with mechanical interface, installations which require alignment and/or adjustment, mechanical or electrical. An understanding of the attachment methods, connection of hardware, and the need for adjustment or rigging and system operation as they relate to the work must be demonstrated before undertaking any action.

The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on at least one component from each of groups 1 to 8 in the Range Statement (group 8 may be omitted when not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.

Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA274A Maintain basic light aircraft electrical systems and components, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA274A Maintain basic light aircraft electrical systems and components may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

- connection of hardware and plugs
- relevant OHS practices
- the use of approved maintenance documentation and aircraft publications relating to AC and DC electrical systems
- properties of permanent magnets
- precautions for the care and storage of permanent magnets
- bonding of aircraft components and lightning protection
- general construction, operating characteristics and applications for aircraft:
 - generators
 - alternators

- AC and DC motors
- transformer rectifier units
- rotary and static inverters
- batteries
- linear and rotary actuators
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to remove and install components of advanced DC and AC electrical systems while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.

Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across a range of aircraft major electrical system components encompassing electrical with mechanical interface, installations that require alignment and/or adjustment, mechanical or electrical. An understanding of the attachment methods, connection of hardware, and the need for adjustment or rigging and system operation as they relate to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor, that the relevant elements of the Unit of Competency are being achieved under routine supervision on at least one component from each of Groups 1 to 6 and on three components from Group 7, as listed in the Range Statement. This shall be established via records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the work environment, using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.

Method of assessment	
Guidance information for assessment	<p>Individuals being assessed who have already attained MEA202C Remove and install basic aircraft electrical system components, will have covered a significant amount of the skill and knowledge requirements for this unit plus part of the Performance Criteria for Elements 1 and 2 and associated Range Statement items. Log of Industrial Experience and Achievement records relating to MEA202C Remove and install basic aircraft electrical system components may be accepted as also meeting the evidence requirements for this unit in the applicable areas.</p> <p>Guidance information in MEA202C Remove and install basic aircraft electrical system components, regarding MEA274A Maintain basic light aircraft electrical systems and components, should also be taken into consideration and the attainment of MEA277A Maintain twin engine aircraft electrical systems and components, would significantly increase the extent of coverage of Range Statement variables. Log of Experience and Achievement records relating to MEA274A Maintain basic light aircraft electrical systems and components and MEA277A Maintain twin engine aircraft electrical systems and components may also be accepted as meeting the evidence requirements for this unit in the applicable areas.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. It covers the competencies required for the removal and installation of aircraft instrument system components in the types of both fixed and rotary wing aircraft that have only basic instrument systems. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the removal and installation of basic aircraft instrument system components.

Applications include fixed and rotary wing aircraft with basic instrument systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA201B Remove and install miscellaneous aircraft electrical hardware/components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Remove basic aircraft instrument system components
 - 1.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 1.2. **Instrument component** removal is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Removed components are tagged and packaged in accordance with specified procedures

2. Install basic aircraft instrument system components
 - 2.1. Instrument components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 2.2. Physical installation of instrument components is performed in accordance with the applicable maintenance manual and regulatory requirements, ensuring appropriate adjustment/alignment is carried out
 - 2.3. System is reinstated to correct operational condition in preparation for testing, as necessary
 - 2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- locating and identifying flight instrument system components comprising:
 - engine system temperature, pressure, speed (including mechanical and electrical tachometers), manifold pressure/boost (including aneroid type, siphon bellows and dual compartment type)
 - auxiliary direct reading systems, including hydraulic pressure, pneumatic pressure and vacuum, fuel storage quantities
 - flight systems, including attitude, altitude, air speed, outside air temperature (OAT)
- locating and identifying direct reading compasses.
- correct handling and observance of maintenance precautions relating to gyroscopes, gimbals, pitot/static systems (connections, heating and protrusions)
- applying relevant OHS practices

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- handling precautions relating to:
 - electrostatic sensitive devices
 - gyroscopes and gimbals
- basic instrument system and component operating principles:
 - atmospheric and barometry
 - terminology and unit of measurement conversion
 - aircraft instrumentation requirements
 - instrument panel layout
 - pressure sensing elements
 - pitot static systems and testing requirements
 - gyroscopic principles
 - direct reading compasses
 - temperature sensors
 - fluid quantity indication systems
- general layout and components of the following systems:
 - flight systems, including:
 - altitude (direct reading altimeters)
 - attitude including directional gyros and artificial horizons (both air and electrically driven), turn and slip and turn coordinator
 - airspeed

- OAT
 - engine indication systems, including:
 - direct reading temperature
 - direct reading pressure (e.g. oil pressure)
 - speed including mechanical and electric tachometers
 - manifold pressure/boost including aneroid, syphon bellows and dual compartment types
 - auxiliary direct reading systems, including:
 - electrical
 - hydraulic pressure
 - pneumatic pressure and vacuum
 - basic fuel quantity indication
 - relevant OHS practices
 - relevant maintenance manuals
 - relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove and install the components of aircraft basic instrument systems while observing all relevant safety and component handling precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across a range of aircraft instrument system components as listed in the Range Statement. An understanding of the attachment methods, connection of hardware, and the need for adjustment or calibration and system operation as they relate to the work must be demonstrated before undertaking any action.</p> <p>The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on at least one component from each of Groups 1 to 8 as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>

<p>Guidance information for</p>	<p>Individuals being assessed who have already attained MEA275A Maintain basic light aircraft instrument</p>

assessment	systems and components, will have met all of the criteria for this unit. Log of Industrial Experience and Achievement records relating to MEA275A Maintain basic light aircraft instrument systems and components, may be accepted as also meeting the evidence requirements for this unit.
-------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Instrument components	<p>Instrument components include:</p> <ol style="list-style-type: none"> 1. Pitot/static system components, ASIs, VSIs and counter pointer altimeters 2. DGs and AHs, both air and electrically driven 3. Turn and bank and slip/turn coordinators 4. Direct reading compasses 5. Piston engine indication system components (direct reading measuring instruments and temperature indication) 6. Electrical systems indication (voltage, current, power and frequency) 7. Basic fuel quantity indication system components 8. Pneumatic/vacuum indication system components
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV AME training pathway. It covers the competencies required for the removal and installation of general instrument system components in the more advanced types of both fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the removal and installation of components of advanced instrument systems.

Applications include fixed and rotary wing aircraft that have advanced instrument systems.

Licensing/Regulatory Information

Not applicable.

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Remove advanced aircraft instrument system components
 - 1.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 1.2. *Instrument component* removal is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Removed components are tagged and packaged in accordance with specified procedures

2. Install advanced aircraft instrument system components
 - 2.1. Instrument components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 2.2. Physical installation of instrument components is performed in accordance with the applicable maintenance manual and regulatory requirements, ensuring appropriate adjustment/alignment is carried out
 - 2.3. System is reinstated to correct operational condition in preparation for testing, as necessary
 - 2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- locating and identifying flight instrument system components comprising:
 - engine system temperature, pressure (including thermocouples, sensor units and transmitters), speed (including mechanical and electrical tachometers), thrust (fan, propeller, jet), torque, fuel flow and vibration
 - auxiliary systems, including hydraulic pressure and temperature, transmission pressure and temperature, fuel storage quantities, fuel remaining/used, component position, i.e. flaps, landing gear, speed brakes and door/pylon locking
 - flight systems, including attitude, altitude, air speed, OAT and GPWS
- locating and identifying direct reading compasses, remote compass system components (flux valve, gyro, amplifier and indicator), and AHRS components
- locating and identifying FDR system components
- correct handling procedures and maintenance precautions relating to gyroscopes, gimbals, pitot/static systems (connections, heating and protrusions)
- applying relevant OHS practices

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- handling precautions for electrostatic sensitive devices
- relevant OHS practices
- the use of approved maintenance documentation and aircraft publications relating to basic and advance instrument systems
- basic instrument system and component operating principles:
 - atmospheric and barometry
 - terminology and unit of measurement conversion
 - aircraft instrumentation requirements
 - instrument panel layout
 - pressure sensing elements
 - pitot static systems and testing requirements
 - gyroscopic principles
 - direct reading compasses
 - temperature sensors
 - fluid quantity indication systems
- general layout and components of the following systems:
 - flight systems, including:
- altitude (direct reading, servo and encoding altimeters)

- attitude, including DG and AH (both air and electrically driven) and turn and slip, and AHRS
- airspeed, including ASI, machmeters and air data systems
- VSI
- angle of attack and stall warning/avoidance
- OAT
- GPWS
 - engine indication systems, including:
 - temperature and pressure (including thermocouples, sensors and transmitters)
 - speed including mechanical and electric tachometers
 - thrust including fan, propeller and jet
 - torque
 - fuel flow
 - vibration
 - auxiliary transmitter/indicator measuring systems, including:
 - hydraulic pressure and temperature
 - pneumatic pressure
 - transmission oil pressure and temperature
 - fuel remaining/used
 - fuel quantity indication
 - component position
 - remote compass systems
 - FDR systems
 - relevant OHS practices

- applying relevant OHS practices

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware, and plugs
- handling precautions for electrostatic sensitive devices
- relevant OHS practices
- the use of approved maintenance documentation and aircraft publications relating to radio communication and navigation systems and components
- basic layout and working principles to block diagram level of:
 - HF communication systems
 - VHF communication systems
 - ADF navigation systems
 - VOR navigation systems
 - ELT systems
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to remove and install the components of aircraft basic communication and navigation systems while observing all relevant safety and component handling precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.

Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across a range of radio communication and navigation system components as listed in the Range Statement.

An understanding of the attachment methods, connection of hardware, and the need for adjustment or calibration and system operation as they relate to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on at least one item from each of Groups 1 to 3 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the work environment, using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.

Method of assessment

Guidance information for assessment

Individuals being assessed who have already attained MEA207C Remove and install aircraft electronic system components, will have covered a significant amount of the skill and knowledge requirements for this unit plus part of the Performance Criteria for Elements 1 and 2 and associated Range Statement items. Those who have attained MEA276A Maintain basic light aircraft communication and radio navigation systems and components, or MEA289A Maintain basic light aircraft avionic systems and components, will have fully covered the requirements for this unit in common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA207C Remove and install aircraft electronic system components, MEA276A Maintain basic light aircraft communication and radio navigation systems and components and MEA289A Maintain basic light aircraft avionic systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.

Range Statement

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the pressurisation control system and components being maintained
- locating and identifying the components of pressurisation control systems

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of components and plugs
- relevant OHS practices
- the layout and operation to block diagram level of mechanical and electronic pressurisation control systems
- handling precautions relating to electrostatic sensitive devices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove and install the components of aircraft pressurisation control systems while observing all relevant safety and component handling precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. An understanding of the attachment methods, connection of hardware, and the need for confirming correct system operation must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of pressurisation control system components. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA209C Remove and install aircraft oxygen system components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV AME training pathway and is also part of the Mechanical Aircraft Maintenance Engineer licensing pathway. It covers the competencies required for the removal and installation of oxygen system components of both fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the removal and installation of aircraft oxygen system components.

Applications include fixed or rotary wing aircraft that have oxygen systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Remove oxygen system components
 - 1.1. Oxygen system is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 1.2. Removal of *oxygen system components* is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Removed components are tagged, packaged or discarded in accordance with specified procedures

2. Install aircraft oxygen system components
 - 2.1. Oxygen system components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 2.2. Oxygen system components to be installed are free from contamination and inspected for damaged flange ends and fittings
 - 2.3. Component installation is physically carried out in accordance with the applicable maintenance manual
 - 2.4. System is reinstated to correct physical condition in preparation for testing, as necessary
 - 2.5. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying appropriate OHS practices and using approved maintenance documentation and aircraft publications relating to aircraft oxygen systems and components
- demonstrating the procedure to replenish a dry breathing oxygen system, including:
 - correct identification of oxygen ground trolleys
 - maximum charging pressures for low and high pressure systems
 - safety precautions to be adhered to during replenishment
 - correct order of procedural replenishment steps.
- demonstrating the procedure to purge a dry breathing oxygen system, including:
 - reasons for the requirement to undertake a purging operation
 - identification of acceptable system purging gases
 - safety precautions to be adhered to during purging
- employing correct techniques when purging oxygen storage cylinders or systems

Required knowledge

Look for evidence that confirms knowledge of:

- OHS practices relevant to oxygen system maintenance
- component attachment methods
- connection of hardware and couplings
- oxygen system isolation
- the properties of aircraft oxygen and requirements for aircrew/passengers.
- the layout of low and high-pressure dry breathing oxygen systems and components
- the methods by which gaseous dry breathing oxygen is stored in both the aircraft and within the workplace environment. Reference to storage trolleys, aircraft cylinders and chemical oxygen cylinders is required
- the methods used to locate, identify and access oxygen system components for removal and installation
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove and install the components of aircraft oxygen systems while observing all relevant safety and component handling precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that oxygen system cleanliness requirements and safety precautions applicable to system component handling are fully observed, understood and complied with. These cleanliness requirements extend to all tooling and hardware associated with oxygen system maintenance.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across a range of aircraft oxygen system components listed in the Range Statement. An understanding of the attachment methods, connection hardware, and the need for adjustment or rigging and system operation as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 and 2 (Groups 3 and 4 may be omitted where they are not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is expected that dedicated tools, test and ground support equipment is used in routine oxygen situations.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

1. Inspect DC aircraft electrical systems and components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. **DC electrical system** is visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust DC aircraft electrical systems
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Electrical system is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot DC aircraft electrical systems
 - 3.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. System faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required and in accordance with standard enterprise procedures
 - 3.5. Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - DC power generation systems, including regulation, distribution and control
 - battery installations
 - piston engine ignition and starting systems and components:
- magnetos or coils
- starter motors
- ignition switches/start switches
- ignition harnesses
- low tension wiring
- spark plugs
- auxiliary starting devices
 - gas turbine engine ignition and starting systems:
- starter motors and starter/generators
- high energy ignition units
- control units
- switches
 - batteries and associated mounting equipment, including related anti-vibration aids
 - motors and actuators in DC electrical systems
 - internal/external lighting systems, including controls
 - flap systems
 - landing gear systems
- applying logic processes, taking and interpreting electrical measurements, using test equipment and appropriate wiring diagrams and manuals to isolate malfunctions in the above systems
- performing system functional tests and checks to isolate system faults and assess post maintenance serviceability
- applying relevant OHS practices, including those relating to gas turbine engine high energy ignition units

Required knowledge

Look for evidence that confirms knowledge of:

- DC circuit theory
- electrical system maintenance requirements and troubleshooting procedures
- the basic layout (block diagram level), function and operation of:
 - single generator DC power generation and distribution systems and components,

including:

- DC generators
- alternator/rectifier generators
- starter/generators
- voltage regulators
- circuit protection devices
- bus bars
 - piston engine ignition and starting systems and components, including:
 - magnetos or coils
 - starter motors
 - ignition switches/start switches
 - ignition harnesses
 - low tension wiring
 - spark plugs
 - auxiliary starting devices
 - gas turbine igniter and starting systems and components, including specific OHS precautions:
 - starter motors and starter/generators
 - high energy ignition units
 - control units
 - switches
 - landing gear and flap systems and components, including:
 - motors
 - actuators
 - selector switches
 - micro switches
 - internal and external lighting systems and components
 - batteries and associated mounting equipment including related anti-vibration aids
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot basic DC electrical systems and components, including looms, cables and connection hardware, while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft electrical systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of aircraft electrical systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on electrical looms, cables and connection hardware, and on each system in Range Statement Groups 1 to 5 (Group 4 may be omitted if not applicable to the enterprise) and on at least one major component/LRU in each case. For Group 6, competency may be demonstrated through the performance of a battery check. This shall be established via the records in

	the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA274A Maintain basic light aircraft electrical systems and components, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA274A Maintain basic light aircraft electrical systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>DC electrical systems</p>	<p>DC electrical systems may include:</p> <ol style="list-style-type: none"> 1. DC generators, and alternator/rectifier generators, and components of related single generator regulation and distribution systems 2. Piston engine ignition and starting system components 3. Specific components of DC electrical systems such as flaps and landing gear, including related motors and actuators 4. Gas turbine engine igniter and starting systems and components 5. Aircraft lighting 6. Aircraft main batteries
<p>Troubleshooting</p>	<p>Troubleshooting involves the use of fault-finding charts or similar, to line replacement level</p>
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
<p>Procedures and requirements</p>	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - DC and AC power generation systems including regulation, distribution and control
 - inverters (rotary and static)
 - battery installations including temperature monitoring systems
 - gas turbine and piston engine ignition and starting systems
 - propeller systems
 - internal/external lighting systems, including controls
 - landing gear systems, including anti-skid
 - flight controls
 - fire warning and extinguishing
 - air cycle air conditioning and combustion heating systems
 - equipment cooling and ventilation
 - fuel storage and distribution
 - master and central warning
- applying logic processes, taking and interpreting electrical measurements, using test equipment and appropriate wiring diagrams and manuals to isolate electrical system malfunctions in the above systems
- performing system functional tests and checks to isolate system faults and assess post maintenance serviceability
- applying OHS requirements applicable to the maintenance of aircraft electrical systems
- using approved maintenance documentation and aircraft publications relating to the electrical systems being maintained

Required knowledge

Look for evidence that confirms knowledge of:

- the basic layout (block diagram level), function and operation of the following systems:
 - DC and AC power multi-generator systems including regulation, distribution and control
 - inverters (rotary and static)
 - battery installations including temperature monitoring systems
 - gas turbine and piston engine ignition and starting systems
 - propeller systems
 - internal/external lighting systems, including controls
 - landing gear systems, including anti-skid
 - flight controls

- fire warning and extinguishing
- air cycle air conditioning and combustion heating systems
- equipment cooling and ventilation
- fuel storage and distribution
- master and central warning
- explaining basic principles/functions, relating to the above systems and associated with:
 - basic DC and AC circuit theory
 - DC generator characteristics
 - alternator characteristics
 - starter generator characteristics
 - DC and AC motors
 - rotary and static inverter operation
- OHS requirements applicable to the maintenance of aircraft electrical systems, including gas turbine engine high energy ignition units
- electrical system maintenance requirements and troubleshooting procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot DC and AC electrical systems and components, including looms, cables and connection hardware, while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft electrical systems and components.

It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of aircraft electrical systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a system and at least one item from each of Groups 1 to 7 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for

Competency should be assessed in the workplace or

assessment	simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	<p>Individuals being assessed who have already attained MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components, will have covered inspection, testing and troubleshooting of DC power generation and DC systems and components. Log of Industrial Experience and Achievement records relating to MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.</p> <p>Advice in MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components, regarding the coverage provided by MEA274A Maintain basic light aircraft electrical systems and components, should also be taken into consideration if the individual has attained that unit rather than MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components.</p>

Range Statement

--	---

Elements and Performance Criteria

1. Inspect aircraft basic instrument systems and components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. **Instrument system components** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust aircraft basic instrument systems and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Instrument system is functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot aircraft basic instrument systems and components
 - 3.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Instrument system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5. Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - flight instruments
 - pitot/static systems
 - direct reading compasses
 - piston engine indication systems
 - electrical systems indication
 - basic fuel quantity indication systems
 - pneumatic/vacuum indication systems.
- applying logic processes, taking and interpreting system measurements, using test equipment and appropriate wiring diagrams and manuals to isolate instrument system malfunctions in the above systems
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- applying OHS requirements relevant to instrument system maintenance

Required knowledge

Look for evidence that confirms knowledge of:

- the basic layout (block diagram level), function and operation of:
 - flight systems, including:
- altitude (direct reading altimeters)
- attitude, including directional gyros and artificial horizons (both air and electrically driven), turn and slip and turn coordinator
- airspeed
- OAT
 - engine indication systems, including:
- direct reading temperature
- direct reading pressure (e.g. oil pressure)
- speed including mechanical and electric tachometers
- manifold pressure/boost including aneroid, syphon bellows and dual compartment types
 - auxiliary direct reading systems, including:
- electrical
- hydraulic pressure
- pneumatic pressure and vacuum
- basic fuel quantity indication

- basic instrument system maintenance and testing requirements, and troubleshooting procedures
- OHS requirements relevant to instrument system maintenance
- the operating principles of the above systems and associated with:
 - atmospheric conditions; properties and effects on aircraft instruments and systems
 - pressure and temperature sensing elements and their use in aircraft instruments
 - gyroscopes and their use in aircraft instrument systems
 - electrical fundamentals
- direct reading compass installations and calibration
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot basic instrument systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft basic instrument systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of basic aircraft instrument systems and components listed in the Range Statement.

The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a system and at least one major system component/LRU from each of Groups 1 to 8 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for

Competency should be assessed in the workplace or

assessment	simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA275A Maintain basic light aircraft instrument systems and components, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA275A Maintain basic light aircraft instrument systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide.</p>
Instrument systems and components	<p>Instrument systems and components include:</p> <ol style="list-style-type: none"> 1. Pitot/static systems and components, ASIs, VSIs and counter-pointer altimeters 2. DGs and AHs (air and electrically driven) 3. Turn and bank and slip/turn coordinators 4. Direct reading compasses 5. Piston engine indication system components (direct reading measuring instruments and temperature indication) 6. Electrical systems indication (voltage, current, power and frequency) 7. Basic fuel quantity indication systems and components 8. Pneumatic/vacuum indication components
Troubleshooting	<p>Troubleshooting involves the use of fault-finding charts or similar, to line replacement level</p>
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aviation Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot instrument systems and components fitted to the more advanced types of fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot aircraft advanced instrument systems and components.

Applications include fixed and rotary wing aircraft that have advanced instrument systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA205C	Remove and install advanced aircraft instrument system components
MEA246C	Fabricate and/or repair aircraft electrical components or parts

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect aircraft advanced instrument systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.**Instrument system components** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test/adjust aircraft advanced instrument systems and components
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Instrument system is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3.System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot aircraft advanced instrument systems
 - 3.1.Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.Instrument system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - flight instruments
 - pitot/static systems
 - navigation systems - compasses and AHRS
 - GPWS
 - position indicators, engine/auxiliary system indication systems and system components
- applying logic processes, taking and interpreting system measurements, use test equipment and appropriate wiring diagrams and manuals to isolate instrument and display system malfunctions in the listed systems
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the instrument and display systems being maintained

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware
- instrument system maintenance requirements and testing and troubleshooting procedures
- the basic layout (block diagram level), function and operation of:
 - flight instruments including:
 - ASIs
 - VSIs
 - air data systems and components
 - machmeters
 - altimeters, including servo and encoding altimeters
 - turn and slip indicators
 - AHs
 - DGs
 - angle of attack and stall warning/avoidance systems
 - pitot/static systems
 - navigation systems:
 - direct reading compasses
 - gyro compasses

- AHRS
 - GPWS
 - turbine engine instruments, including:
 - temperature and pressure (including thermocouples, sensors and transmitters)
 - speed including mechanical and electric tachometers
 - thrust including fan, propeller and jet
 - torque
 - fuel flow
 - vibration
 - auxiliary transmitter/indicator measuring systems, including:
 - hydraulic pressure and temperature
 - pneumatic pressure
 - transmission oil pressure and temperature
 - fuel remaining/used
 - fuel quantity indication
 - component position (e.g. doors, flaps, speed brakes, landing gear)
 - FDR systems
- explaining the operating principles of the above-listed systems and associated with:
 - atmospheric conditions; properties and effects on aircraft instruments and systems
 - pressure and temperature sensing elements and their use in aircraft instruments
 - gyroscopes and their use in aircraft instrument and reference systems
- explaining the various methods of navigation, and describing how they are used by both aircraft conventional and electronic navigational instruments and systems
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot advanced instrument systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft advanced instrument systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of advanced aircraft instrument systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a system and at least one major system component/(LRU from each of Groups 1 to 7 (Groups 6 and 7 may be omitted where they are not applicable to the enterprise) listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	<p>Individuals being assessed who have already attained MEA212C Inspect, test and troubleshoot basic aircraft instrument systems and components, will have covered inspection, testing and troubleshooting of a range of flight instruments and direct reading compass and measuring systems. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect basic communication and radio navigation systems and components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. **Communication and radio navigation systems and components** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust basic communication and radio navigation systems and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Communication and radio navigation systems are functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot basic communication and radio navigation systems
 - 3.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Communication and radio navigation system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard operating procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the radio frequency and communications system being maintained
- recognition of system and component defects/external damage, correct installation, attaching hardware (including cabling/harnesses/transmission lines) and security in:
 - HF and VHF communications systems
 - VOR and ADF navigation systems
 - ELT systems
- applying logic processes, taking and interpreting system measurements to accurately and effectively isolate malfunctions within the above systems
- testing listed systems to isolate system faults and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- the basic layout (block diagram level), function and operation of:
 - HF and VHF communications systems
 - VOR and ADF navigation systems
- ELT systems
- communication and radio frequency navigation system maintenance requirements and troubleshooting procedures
- relevant OHS practices
- basic principles/functions, relating to the above systems and associated with:
 - electromagnetic radiation and propagation
 - basic AC and DC circuit theory
 - printed circuit boards
 - digital fundamentals
 - analogue fundamentals
 - transmitter and receiver principles
 - antenna characteristics
 - transmission line characteristics
 - fibre optic communications
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft ILS systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of ILS systems and components. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on an ILS system and at least one major system component/LRU. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that

	general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Troubleshooting	Troubleshooting involves the use of fault finding charts or similar, to line replacement level
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot multi-axis autopilot systems and components of fixed wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot fixed wing multi-axis autopilot systems and components.

Applications include fixed wing aircraft that have multi-axis autopilot systems, including those incorporating a radio-coupled flight director.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

1. Inspect fixed wing autopilot systems and components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. *Autopilot systems and components* are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust fixed wing autopilot systems and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Autopilot systems are functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot fixed wing autopilot systems
 - 3.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate ***troubleshooting***
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Autopilot system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5. Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the autopilot and flight director system being maintained
- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - flight director components and interface
 - multi-axis autopilot system components
- applying logic processes, taking and interpreting system measurements, use test equipment and appropriate wiring diagrams and manuals, to accurately and effectively isolate malfunctions in the above systems
- testing listed systems to isolate system malfunctions and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- the basic layout (block diagram level), function and operation of:
 - flight director components and interface
 - multi-axis autopilot system components
- integration with other avionic systems, e.g. flight management systems and navigation systems
- flight director and autopilot system maintenance requirements and troubleshooting procedures
- relevant OHS practices
- basic principles/functions, relating to the listed systems and associated with:
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - fixed wing flight theory
 - inner and outer loop control
 - flight control modes/channels
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot rotary wing autopilot systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with rotary wing aircraft autopilot systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across an autopilot system and its components. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on an autopilot system and its components. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the primary radar system being maintained
- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses/transmission lines/wave guides) and security in radar (navigation/weather) system components and interface
- applying logic processes, and taking and interpreting system measurements to accurately and effectively isolate malfunctions within the system and system components
- performing system testing to isolate system malfunctions and assess system's post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- the basic layout (block diagram level), function and operation of primary radar systems
- basic principles/functions relating to the system components and associated with:
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - radar fundamentals
 - transmission lines, waveguide and antenna characteristics
- primary radar system maintenance requirements and troubleshooting procedures
- relevant OHS practices including those relating to ground functional testing of radar systems
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot primary radar systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with primary radar systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a primary radar system and its components. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a primary radar system and at least one major system component/LRU. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that

	general and special purpose tools, test and ground support equipment would be used where appropriate.

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the pulse system being maintained
- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses/transmission lines) and security in:
 - DME components and interface
 - radio altimeters
 - ATC transponders
 - doppler navigation system
 - ACAS
- applying logic processes, taking and interpreting system measurements to accurately and effectively isolate malfunctions within the systems
- testing systems to isolate system malfunctions and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- the basic layout (block diagram level), function and operation of:
 - DME including components and interface
 - radio altimeters
 - ATC transponders
 - doppler navigation system
 - ACAS
- basic principles/functions, relating to the above-listed systems and associated with:
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - radar fundamentals
 - transmission lines, waveguide and antenna characteristics
- pulse system maintenance requirements and troubleshooting procedures
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot secondary radar systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with secondary radar systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across secondary radar systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one of the secondary radar systems in Groups 1 to 5 in the Range Statement and its major system components/LRU. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using tools and equipment specified

	in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Avionic (Aircraft Maintenance Stream) training pathways and is also part of the Mechanical Aircraft Maintenance Engineer licensing pathway. It covers the competencies required to inspect, test and troubleshoot oxygen systems and components of fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot aircraft oxygen systems and components.

Applications include fixed and rotary wing aircraft that have oxygen systems.

Licensing/Regulatory Information

Not applicable.

Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

1. Inspect oxygen system components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. **Oxygen system components** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust oxygen systems
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Oxygen system is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot oxygen systems
 - 3.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Oxygen system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 3.5. Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying appropriate OHS practices
- using approved maintenance documentation and aircraft publications relating to aircraft oxygen systems and components for the purpose of system testing
- general application of logical fault-finding and use of truth tables during troubleshooting
- interpreting oxygen system instruments, gauges, warning annunciators and test equipment, i.e. leak detectors
- applying the methods used to locate, identify and access oxygen system components for inspection, testing and troubleshooting
- demonstrating the procedure to replenish a dry breathing oxygen system, including:
 - correct identification of oxygen ground trolleys
 - maximum charging pressures for low and high pressure systems
 - safety precautions to be adhered to during replenishment
 - correct order of procedural replenishment steps
- demonstrating the procedure to purge a dry breathing oxygen system, including:
 - reasons for the requirement to undertake a purging operation
 - identification of acceptable system purging gases
 - safety precautions to be adhered to during purging
 - correct techniques to be employed when purging oxygen storage cylinders or systems

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods, connection of hardware and couplings and their physical security within the aircraft
- oxygen system isolation
- properties of aircraft oxygen and requirements for aircrew/passengers
- properties of the atmosphere and how they vary.
- defining terms and units of measurement relating to aircraft altitude and system pressures
- layout of low and high-pressure dry breathing oxygen systems and components
- operation of oxygen systems and components, including:
 - pressure demand regulators
 - passenger service regulators
 - altitude sensing barometers
- methods by which gaseous dry breathing oxygen is stored in both the aircraft and within the workplace environment. Reference to storage trolleys, aircraft cylinders and chemical oxygen cylinders is required
- oxygen system maintenance requirements and troubleshooting procedures
- relevant OHS practices

- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot aircraft oxygen systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft oxygen systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of aircraft oxygen systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 and 2 in the Range Statement (Groups 3 and 4 may be omitted where they are not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

MEA226D Inspect aircraft electronic systems and components

Modification History

Knowledge statements expanded - equivalent to previous unit.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required to inspect electronic systems and components of fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the B2 maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications to inspect aircraft electronic systems and components. Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

MEA246C Fabricate and/or repair aircraft electrical components or parts

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|--|--|
| <p>1 Inspect electronic systems and components</p> | <p>1.1 Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual</p> <p>1.2 <i>Electronic system components</i> are visually or physically checked for external signs of defects in accordance with applicable maintenance manual</p> <p>1.3 Defects are correctly identified and recorded in accordance with standard enterprise procedures</p> |
|--|--|

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- component attachment methods and connection of hardware
- the basic layout (block diagram level) and operation of:
 - multi-function display systems (interface units, display generators and display units), i.e. HUD, ICAS, FMS, ACARS, EFIS and ECAM
 - integrated modular avionics
 - INS and IRS
 - external communications systems:
 - HF
 - UHF
 - VHF
 - SATCOM
 - ELT
 - internal communications systems:
 - intercommunication
 - cabin intercommunication data systems
 - cabin network services
 - CVR
 - information systems, such as air traffic and information management systems, and network server systems
 - RF navigation systems:
 - ILS
 - VOR
 - ADF
 - GNS
 - primary radar (navigation/weather) components and interface
 - ACAS components and interface
 - radio altimeter components and interface
 - DME components and interface
 - ATC transponders
 - relevant OHS practices
 - maintenance requirements
 - relevant maintenance manuals
 - relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the avionic system being maintained

- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, and attaching hardware (including cabling/harnesses) and security in:
 - multi-function display systems (interface units, display generators and display units), i.e. HUD, EICAS, FMS, ACARS, EFIS and ECAM
 - integrated modular avionics
 - INS and IRS
 - external communications systems:
 - HF
 - UHF
 - VHF
 - SATCOM
 - ELT
 - internal communications systems:
 - intercommunication
 - cabin intercommunication data systems
 - cabin network services
 - CVR
 - information systems, such as air traffic and information management systems, and network server systems
 - RF navigation systems:
 - ILS
 - VOR
 - ADF
 - GNS
 - primary radar (navigation/weather) components and interface
 - ACAS components and interface
 - radio altimeter components and interface
 - DME components and interface
 - ATC transponders

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to inspect aircraft electronic systems and components while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of inspection applications (including the timely involvement of supervisors or other trades) associated with aircraft electronic systems and components. It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to inspection is essential. This is to be demonstrated through application across a range of electronic systems and components listed in the Range Statement. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on each type of system listed in Groups 1 to 7 in the Range Statement and at least one component for each listed system type (Groups 6 and 7 may be omitted where they are not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.</p>
<p>Method of assessment</p>	

Guidance information for assessment	<p>Individuals being assessed who have already attained any of MEA214C Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components, MEA215C Inspect, test and troubleshoot advanced aircraft communications systems and components, MEA216C Inspect, test and troubleshoot instrument landing systems and components, MEA220C Inspect, test and troubleshoot aircraft primary radar systems and components, and MEA221C Inspect, test and troubleshoot aircraft secondary radar systems and components, MEA233C Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components, and MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components, will have covered a significant proportion of the Performance Criteria for Element 1 and will have covered Range Statement variables applicable to the unit. Log of Industrial Experience and Achievement records relating to MEA214C Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components, MEA215C Inspect, test and troubleshoot advanced aircraft communications systems and components, MEA216C Inspect, test and troubleshoot instrument landing systems and components, MEA220C Inspect, test and troubleshoot aircraft primary radar systems and components and MEA221C Inspect, test and troubleshoot aircraft secondary radar systems and components, MEA233C Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components, MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components, MEA276A Maintain basic aircraft communication and radio navigation systems and components, MEA278A Inspect, test and troubleshoot instrument display systems and components, and MEA289A Maintain basic light aircraft avionic systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.</p>
--	---

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Electronic systems and components</p>	<p>Electronic systems and components include:</p> <ol style="list-style-type: none"> 1. Electronic instrument displays – EFIS, EICAS, FMS, ECAM and HUD (where applicable to enterprise) 2. Instrument navigation systems – INS, IRS, compasses and AHRS 3. Communication systems – HF, VHF, UHF, SATCOM, intercom, data and cabin network services, ELT and CVR 4. Radio navigation systems – ADF, VOR, ILS and GNS 5. Pulse operated systems – weather radar, navigation radar, ATC transponder, RADALT, DME, doppler and ACAS (where applicable to enterprise) 6. Integrated modular avionics (where applicable to enterprise) 7. Information systems – air traffic and information management, network servers (where applicable to enterprise)
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathways and is also part of the Mechanical Aircraft Maintenance Engineer licensing pathway. It covers the competencies required to test and troubleshoot electrical systems and components of fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen B1 or the B2 maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to test and troubleshoot aircraft electrical systems and components.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|-----------------------------------|---|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify an unserviceability |
| 2 Test/adjust electrical systems | 2.1 Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation

2.2 <i>Electrical system</i> is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction

2.3 System calibration or adjustments are performed in accordance with maintenance manual, as appropriate |
| 3 Troubleshoot electrical systems | 3.1 Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination

3.2 Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate <i>troubleshooting</i>

3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process

3.4 System faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required

3.5 Rectification requirements are determined |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware
- explaining the basic layout (block diagram level), function and operation of:
 - AC and DC power generation systems, including regulation, distribution, control and cooling
 - battery installations
 - flight control and/or electro-hydraulic systems
 - engine ignition, starting, fuel distribution and control systems
 - internal/external lighting systems, including controls
 - landing gear systems
 - anti-skid braking systems
 - auxiliary systems, including ice/rain protection, fire detection, environmental control and pressurisation, water and waste, doors, propeller control, equipment and furnishings
 - equipment cooling and ventilation systems
 - master caution and warning systems
- explaining basic principles/functions, relating to systems listed above and associated with:
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - AC and DC generator characteristics
 - single and polyphase AC motors and DC motors
 - rotary and static inverters
 - air cycle air conditioning
 - electrical sensing and transmitting devices
- OHS requirements applicable to the maintenance of aircraft electrical systems, including gas turbine engine high-energy ignition units
- electrical system maintenance requirements and troubleshooting procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the electrical system being maintained
- recognition of system and electrical component defects/external damage, correct installation, connection of plugs, terminations, and attaching hardware (including cabling/harnesses) and security in:
 - AC and DC power generation systems, including regulation, distribution, control and

cooling

- battery installations
- flight control and/or electro-hydraulic systems
- engine ignition, starting, fuel distribution and control systems
- internal/external lighting systems, including controls
- landing gear systems
- anti-skid braking systems
- auxiliary systems, including ice/rain protection, fire detection, environmental control and pressurisation, water and waste, doors, propeller control, equipment and furnishings
- equipment cooling and ventilation systems
- master caution and warning systems
- applying logic processes, taking and interpreting electrical measurements, using test equipment and appropriate wiring diagrams and manuals to isolate electrical system malfunctions of the above components and systems
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to test and troubleshoot DC and AC electrical systems and components, including looms, cables and connection hardware, while observing all relevant safety precautions</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft electrical systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to testing and troubleshooting is essential. This is to be demonstrated through application across a range of aircraft electrical systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a system and at least one item from each of Groups 1 to 14, including a battery check in the case of Group 14 (Groups 15 to 17 may be omitted where they are not applicable to the enterprise) in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources</p>	<p>Competency should be assessed in the workplace or</p>

for assessment	simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	<p>Individuals being assessed who have already attained MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components, will have covered a significant proportion of the Performance Criteria for Elements 1, 2 and 3 and will have covered many of the Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas. The relationship between MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components, and MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components, may also be taken into account where MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components, has been attained, but not MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components. Advice in MEA210C Inspect, test and troubleshoot basic aircraft electrical systems and components, regarding the coverage of MEA274A Maintain basic light aircraft electrical systems and components, may also be taken into consideration where applicable.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Electrical systems and components</p>	<p>Electrical systems may include the following electrical systems and components, including all related electrical hardware, looms and cables:</p> <ol style="list-style-type: none"> 1. AC and/or DC power generation, regulation and distribution systems 2. Rotary and static inverters and TR units 3. Air cycle air conditioning and pressurisation systems 4. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|---|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect/service difficulty reports where relevant, are interpreted to identify an unserviceability |
| 2 Test/adjust instrument and display systems | <p>2.1 The aircraft and systems are correctly prepared, in accordance with specified procedures, for the application of power and system operation</p> <p>2.2 <i>Instrument or display system</i> is functionally tested, in accordance with specified procedures, for evidence of serviceability or malfunction</p> <p>2.3 System calibration or adjustments are performed in accordance with specified procedures</p> |
| 3 Troubleshoot instrument and display systems | <p>3.1 Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination</p> <p>3.2 Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate <i>troubleshooting</i></p> <p>3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process</p> <p>3.4 Instrument or display system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required</p> <p>3.5 Fault rectification requirements are determined to assist in planning the repair or adjustment</p> |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool and test equipment usage and installation/securing of system components
- the basic layout (block diagram level) of the systems listed in the Range Statement
- the operating principles of the systems listed in the Range Statement and associated with:
 - the properties and effects of atmospheric conditions on aircraft instruments and systems
 - pressure and temperature sensing elements and their use in aircraft instruments
 - gyroscopes and their use in aircraft instrument and reference systems
 - electrical fundamentals and display screen generation
- the various methods of navigation and how they are used by both conventional and electronic navigational instruments and systems
- maintenance requirements and troubleshooting procedures
- OHS procedures relating to instrument and display systems and components
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures, including software management control

Look for evidence that confirms skills in:

- using hand skills, tools and test equipment in the testing, adjustment and troubleshooting of instrument and display systems
- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, and attaching hardware (including cabling/harnesses) for the systems listed in Range Statement
- interpreting the information presented on instrument and display systems
- applying logic processes and using appropriate wiring diagrams and manuals to isolate instrument and display system malfunctions
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process
- applying standard procedures
- observing all relevant OHS procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test and troubleshoot a range of instrument and display systems and components that is representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes. Coverage of display systems is required only where applicable to the enterprise.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft instrument and display systems and their components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a range of aircraft instrument and display systems (where display systems are applicable to the enterprise) listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on a system and on at least one major system component of each Group 1 to 6 (Groups 5 and 6 may be omitted if not applicable to the enterprise), as listed in the Range

	Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment, using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information to enable troubleshooting to line replaceable item level.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems, will have covered a significant proportion of the Performance Criteria for Elements 1, 2 and 3 and will have covered many of the Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems, may be accepted as also meeting the evidence requirements for this unit in the applicable areas. The relationship between MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems and MEA212C Inspect, test and troubleshoot basic aircraft instrument systems and components, may also be taken into account where MEA212C Inspect, test and troubleshoot basic aircraft instrument systems and components has been attained, but not MEA213C Inspect, test and troubleshoot advanced aircraft instrument systems. Advice in MEA212C Inspect, test and troubleshoot basic aircraft instrument systems and components regarding the coverage of MEA275A Maintain basic light aircraft instrument systems and components, may also be taken into consideration where applicable.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Instrument or display systems	<p>Instrument or display systems may include:</p> <ol style="list-style-type: none"> 1. Flight instruments – pitot/static systems, ASIs, machmeters, air data systems and instruments, VSIs, altimeters, altitude alerting and reporting, turn and bank, DGs, AHs, angle of attack, stall warning/avoidance, GPWS and FDRs 2. Engine Instruments – engine speed, pressure, temperature, performance, vibration and torque 3. Instrument navigation systems – INS, IRS, compasses and AHRS 4. Miscellaneous – pressure, fuel quantity, fuel flow, position, voltage, frequency, current and power 5. Display systems – EFIS, EICAS, FMCS, ECAM and HUD 6. Integrated modular avionics
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|--|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect reports where relevant, are used to identify an unserviceability |
| 2 Test/adjust RF navigation and communications systems | 2.1 Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
2.2 <i>RF navigation or communication system</i> is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
2.3 System calibration or adjustments are performed in accordance with maintenance manual, as appropriate |
| 3 Troubleshoot RF navigation and communications systems | 3.1 Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
3.2 Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate <i>troubleshooting</i>
3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process
3.4 RF navigation or communication system faults are located and the causes are clearly identified and correctly recorded in maintenance documentation, where required
3.5 Rectification requirements are determined |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- evidence of knowledge of component attachment methods
- explaining the basic layout (block diagram level), function and operation of:
 - external communications systems:
 - HF
 - UHF
 - VHF
 - SATCOM and microwave
 - internal communications systems:
 - intercommunication
 - cabin intercommunication data systems
 - cabin network services
 - CVR
 - information systems, such as air traffic and information management systems, and network server systems
 - RF navigation systems:
 - ILS
 - VOR
 - ADF
 - GNS
 - ACARS
 - ELT systems
- explaining basic principles/functions relating to the above systems and associated with:
 - electromagnetic radiation and propagation
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - antenna characteristics
 - transmission line characteristics
- OHS requirements
- system and component maintenance requirements and troubleshooting procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the RF and communications system being maintained
- recognition of system and component defects/external damage, correct installation, and

attaching hardware (including cabling/harnesses/transmission lines) and security in:

- external communications systems:
 - HF
 - UHF
 - VHF
 - SATCOM and microwave
- internal communications systems:
 - intercommunication
 - cabin intercommunication data systems
 - cabin network services
 - CVR
 - information systems, such as air traffic and information management systems, and network server systems
 - RF navigation systems:
 - ILS
 - VOR
 - ADF
 - GNS
 - ACARS
 - ELT systems
 - applying logic processes, taking and interpreting system measurements to accurately and effectively isolating malfunctions within the systems
 - performing system testing to isolate system faults and assess post-maintenance serviceability

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test and troubleshoot communication and RF navigation systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft communication and RF navigation systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to testing and troubleshooting is essential. This is to be demonstrated through application across a range of aircraft communication and RF navigation systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one system and its major components from each of Groups 1 to 4 (Groups 2 and 3 may be omitted where the listed systems are not applicable to the enterprise) and the general associated components in Group 5, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an

	equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained any of MEA214C Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components, MEA215C Inspect, test and troubleshoot advanced aircraft communications systems and components, MEA216C Inspect, test and troubleshoot instrument landing systems and components, MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components, MEA276A Maintain basic aircraft communication and radio navigation systems and components and MEA289A Maintain basic light aircraft avionic systems and components, will have covered Element 1 plus a significant proportion of the Performance Criteria for Elements 2 and 3 and will have covered common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA214C Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components, MEA215C Inspect, test and troubleshoot advanced aircraft communications systems and components, MEA216C Inspect, test and troubleshoot instrument landing systems and components, and MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>RF navigation or communication systems</p>	<p>RF navigation or communication systems may include:</p> <ol style="list-style-type: none"> 1. Control and sensing associated with cockpit radio, ground and flight crew communications and may comprise FM and AM modes of operation in the HF, UHF, and VHF bands, microwave systems and SATCOM 2. Passenger communications, cockpit voice recorder, audio integration system, cabin intercommunication data systems and cabin network services 3. Information systems, such as air traffic and information management systems, and network server systems 4. ILS, VOR, ADF, GNS, emergency beacons and ACARS 5. Antennae, impedance audio matching devices, microphones and headphones, transmission lines, computer controls, line replaceable units, transmitters/receivers and indicators
<p>Troubleshooting</p>	<p>Troubleshooting involves the use of fault-finding charts or similar, to line replacement level</p>
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
<p>Procedures and requirements</p>	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

MEA230C Test and troubleshoot fixed wing aircraft automatic flight control systems and components

Modification History

Knowledge statements expanded - equivalent to previous unit.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathways and is an alternative unit to MEA231C Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components. It covers the competencies required to test and troubleshoot automatic flight control systems and components of fixed wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the B2 maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications to test and troubleshoot aircraft automatic flight control systems and components.

Applications include fixed wing aircraft that have automatic flight control systems.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

MEA246C Fabricate and/or repair aircraft electrical components or parts

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify an unserviceability |
| 2 Test/adjust automatic flight control system | 2.1 Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
2.2 <i>Automatic flight control system</i> is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
2.3 System calibration or adjustments are performed in accordance with maintenance manual, as appropriate |
| 3 Troubleshoot automatic flight control system | 3.1 Available information from maintenance documents and inspection and test results is used, where necessary, to assist in fault determination
3.2 Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate <i>troubleshooting</i>
3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process
3.4 Automatic flight control system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
3.5 Rectification requirements are determined |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- explaining the basic layout (block diagram level), function and operation of:
 - flight director components and interface
 - flight control components and interface
 - automatic throttle components and interface
 - automatic pilot system and interface
 - flight management system interface
 - navigation system interfaces
- explaining basic principles/functions, relating to the above systems and associated with:
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - fixed wing flight theory
 - inner and outer loop control
 - fixed wing flight control system (mechanical, hydraulic and electro-mechanical types, trim and stabilisation)
 - flight control modes/channels
- OHS requirements
- system and component maintenance requirements and troubleshooting procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the automatic flight control system being maintained
- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, and attaching hardware (including cabling/harnesses) and security in:
 - flight director components and interface
 - flight control components and interface
 - automatic throttle components and interface
 - automatic pilot system and interface
- applying logic processes, taking and interpreting system measurements, using test equipment and appropriate wiring diagrams and manuals to accurately and effectively isolate malfunctions in the above systems
- performing system testing to isolate system malfunctions and assess post-maintenance serviceability

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test and troubleshoot automatic flight control systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with fixed wing aircraft automatic flight control systems and components. --	--

Elements and Performance Criteria

1. Inspect inertial navigation and reference systems and components
 - 1.1. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.2. Inertial navigation and reference system components are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.3. Defects are correctly identified and reported
2. Test/adjust inertial navigation and reference systems and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Inertial navigation and reference system is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Prepare for troubleshooting
 - 3.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify an unserviceability
4. Troubleshoot inertial navigation and reference systems
 - 4.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 4.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 4.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 4.4. Inertial navigation and reference system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 4.5. Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to inertial navigation and reference systems being maintained
- recognition of system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in inertial navigation and reference system components
- applying logic processes, take and interpret system measurements, use test equipment and appropriate wiring diagrams and manuals to isolate system malfunctions
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware
- the basic layout (block diagram level), function and operation of inertial navigation and reference systems
- the operating principles of inertial navigation and reference systems:
 - terminology
 - fundamental principles of inertial navigation
 - two degree of freedom systems
 - semi-analytical systems
 - strapdown systems
 - ring laser gyroscopes
- the various methods of navigation and how they are used by both aircraft conventional and electronic navigational instruments and systems.
- maintenance requirements and troubleshooting procedures
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot inertial navigation and reference systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with inertial navigation and reference systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across an inertial navigation and reference system and its components. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on an inertial navigation system and at least one major system component/LRU. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using tools and equipment specified

	in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Troubleshooting	Troubleshooting involves the use of fault finding charts or similar, to line replacement level

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA234C Inspect, test and troubleshoot aircraft global navigation systems and components

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot global navigation systems (GNS) and components of fixed and rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot global navigation systems and components.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA206C	Remove and install basic radio communication and navigation system components
MEA207C	Remove and install aircraft electronic system components
MEA246C	Fabricate and/or repair aircraft electrical components or parts

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect GNS and components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. GNS components are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust GNS and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. GNS is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot GNS
 - 3.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate ***troubleshooting***
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. GNS faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5. Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the GNS being maintained
- Recognition of system and component defects/external damage, correct installation, attaching hardware (including cabling/harnesses/transmission lines) and security in GNS
- applying logic processes, taking and interpreting system measurements to accurately and effectively isolate malfunctions within GNS
- performing system testing to isolate system faults and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- GNS principles, including the use of satellites for navigation
- component attachment methods
- the basic layout (block diagram level), function and operation of GNS, including interpretation of indicators and operation of controls
- basic principles/functions relating to the system and associated with:
 - electromagnetic radiation and propagation
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - transmitter and receiver principles
 - antenna characteristics
 - transmission line characteristics
- interface with other avionic systems, e.g. flight management systems
- maintenance requirements and troubleshooting procedures
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot GNS and components while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with global navigation systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.</p> <p>The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on a global navigation system and, in cases where the system is not replaced as a single unit, at least one major system component/LRU. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that general and special purpose tools, test and ground support equipment would be used where appropriate.</p>

Co-requisite units

Not applicable

MEA235B Perform advanced troubleshooting in aircraft avionic maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit covers competencies required to progress from an Aircraft Maintenance Engineer at Certificate IV to the granting of a B2 Aircraft Maintenance Engineer Licence or Aircraft Maintenance Specialist Certificate under Civil Aviation Safety Regulation (CASR) Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

The skills and knowledge covered by the units of competency listed in the Aeroskills Training Package for Aircraft Maintenance Engineer (Avionics or Mechanical as applicable) at Certificate IV are pre-requisite to the attainment of the elements of competency specified in this unit. This includes full coverage of the CASR Part 66 Avionics or Mechanical Syllabus subjects/topics listed in the Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of fundamental system/component knowledge and applicable maintenance publications and test equipment to troubleshoot faults in avionic systems that are beyond the bounds of maintenance manual fault diagnosis guides.

Applications include fixed and rotary wing aircraft

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	---

Elements and Performance Criteria

1. Verify the defect
 - 1.1. Available information from flight crew, such as flight phase, aircraft configuration, and so on, maintenance documentation both current and previous history, is used as necessary, to assist in fault determination
 - 1.2. Inspection of the affected *system* is carried out to check both physical integrity and correct operation
 - 1.3. Information gained from Central Maintenance Systems is verified against physical integrity and correct operation, where applicable
 - 1.4. The effects on a system from interfaces/integration with other systems are taken into account
2. Isolate the defect
 - 2.1. Logical processes including the application of basic principles and system knowledge and known facts are used to augment maintenance manual fault diagnosis guides to ensure efficient and accurate *troubleshooting*
 - 2.2. Specialist advice is obtained, where required and/or available, to assist with the troubleshooting process
 - 2.3. Faults are located and the causes of the defects are clearly identified and correctly recorded in maintenance documentation including any other systems disturbed, where required
3. Determine defect rectification requirements
 - 3.1. Defect rectification requirements are determined and the necessary repair action initiated once verification and isolation of the defect are confirmed
4. Verify defect rectification
 - 4.1. Defect is rectified in accordance with approved maintenance data
 - 4.2. All systems disturbed or accessed during troubleshooting are restored as applicable using maintenance manuals, repair schemes or approved maintenance data
 - 4.3. All check(s) required by approved maintenance data to ensure correct operation of all disturbed systems are performed

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- the diagnosis of faults that are beyond the coverage of maintenance manual fault diagnosis guides in simulated applications in the training environment and/or in the workplace across a representative range of systems and components.=

Required knowledge

For systems and components relevant to the scope of the licence/ratings sought as per CASR Part 43 Manual of Standards, look for evidence that confirms knowledge of:

- theory related to system operation and interfaces between systems and with electrical/electronic control media to a level that will facilitate the diagnosis of faults beyond the level of maintenance manual fault diagnosis guides using reported symptoms and functional test results
- component construction and theory of operation to a level that will facilitate the diagnosis of faults beyond the level of maintenance manual fault diagnosis guides using reported symptoms and functional test results
- advanced fault diagnostic techniques
- condition monitoring and trend analysis techniques

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to diagnose a range of system faults that are beyond the bounds of maintenance manual fault diagnosis guides while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications related to avionic systems, and where applicable other system interfaces/integration. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical, as is the demonstrated ability to apply fundamental system theory in the logical diagnosis of complex faults.

Evidence of transferability of skills and knowledge related to performance and supervision of inspection, testing and troubleshooting is essential. This must be demonstrated through application across a number of aircraft avionic systems, including system interfaces/integration. The troubleshooting approach should clearly demonstrate an in-depth knowledge of underpinning theory of a system, with this knowledge being used in a logical process to augment and extend the scope of the aircraft/system fault finding guide. The fault rectification work plan should take account of applicable safety (including safe handling of heavy components) and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under supervision without intervention and the ability has been demonstrated to identify the causes of defects not covered fully by maintenance manual fault diagnosis guides. Competency shall be assessed via simulated activities at the CASR Part 147 Maintenance Training

	Organisation and through performance during observed workplace activities.
Context of and specific resources for assessment	Competency is assessed in the workplace or simulated workplace and shall involve successfully dealing with a number of maintenance and fault scenarios across a range of avionic systems listed as Groups 1 to 5 in the Range Statement and related system components.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Systems and related components	<p>Systems and related components to be covered include:</p> <ol style="list-style-type: none"> 1. Electrical systems 2. Electronic systems 3. Instrument systems 4. Radio communication and navigation systems 5. Autoflight systems
Troubleshooting	<p>Troubleshooting, for the purpose of this unit, is defined as:</p> <ul style="list-style-type: none"> • the troubleshooting from first principles, of defects beyond available maintenance data in the systems of fixed or rotary wing aircraft types <p>Troubleshooting must be demonstrated across a range of typical systems and system components that includes, but is not limited to:</p> <ul style="list-style-type: none"> • airframes, engine(s) and other systems (and parts thereof) operated by inherently electrical, electronic, instrument or radio principles or means. Coverage is not required of specific type systems that are included in type training and PCT activities leading to a specific type licence rating
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual activities or troubleshooting tasks performed during the supervision of other personnel
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA238B Perform routine removal and installation of miscellaneous aircraft electrical hardware_components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Avionic Certificate II training pathway. It covers the competencies required for the removal and installation under qualified person guidance of a range of aircraft electrical components and items of hardware that can have bolted, soldered or plug connections. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and relevant maintenance publications and documentation to remove and install a range of electrical components and electrical hardware under the guidance of a qualified person.

Applications include both on and off-aircraft work.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|---|
| 1. Prepare to remove aircraft electrical hardware | 1.1.The removal task is planned under qualified person guidance using applicable maintenance documentation and enterprise procedures
1.2.System safety is confirmed with the qualified person |
| 2. Remove aircraft electrical hardware | 2.1.Physical removal of <i>electrical hardware</i> is carried out in accordance with enterprise procedures and applicable maintenance documentation |
| 3. Complete aircraft electrical hardware removal process | 3.1.Required documentation is accurately completed and correctly processed in accordance with enterprise procedures
3.2.Removed components are tagged, packaged or discarded in accordance with specified procedures |
| 4. Prepare to install aircraft electrical hardware | 4.1.The installation task is planned under qualified person guidance using applicable maintenance documentation and enterprise procedures
4.2.Electrical hardware components to be installed are checked to confirm correct part numbers |
| 5. Install aircraft electrical hardware | 5.1.Physical installation of electrical hardware is carried out in accordance with enterprise procedures and applicable maintenance documentation |
| 6. Complete aircraft electrical hardware installation process | 6.1.Required documentation is accurately completed and correctly processed in accordance with enterprise procedures |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using enterprise procedures, applicable maintenance documentation and aircraft publications relating to the electrical system and components being worked on
- the preparation and termination of electrical cables to aircraft industry standards, using:
 - crimping techniques
 - soldering techniques
 - solder sleeve joints
- the correct identification of aircraft wire markings, terminal block identification and plug/socket pin numbering systems.
- electrical loom and harness installation ensuring minimum bends are maintained, cable is not in tension, plugs are correctly aligned, security of route ensures no chaffing of insulation, adequate clipping and cable ties have been utilised and construction complies with aircraft industry standards.
- positive identification of miscellaneous electrical hardware and/or components

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- electrostatic discharge procedures
- connection of hardware, plugs and terminals points
- wire marking, terminal block identification and plug/socket numbering systems

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria

- | | |
|--|---|
| 1. Prepare to fabricate aircraft electrical looms and harnesses | 1.1. Appropriate materials, tools and equipment are selected and prepared for the particular task in accordance with applicable maintenance documentation, enterprise procedures and under qualified person guidance
1.2. Assembly or fabrication jigs, where applicable, are aligned to ensure accurate fabrication of components |
| 2. Fabricate aircraft electrical looms and harnesses | 2.1. Components or parts are fabricated in accordance with qualified person guidance, applicable maintenance documentation and enterprise procedures |
| 3. Perform routine tests on aircraft electrical looms and harnesses | 3.1. Under qualified person guidance test equipment and rigs are used, where applicable, to confirm serviceability of finished components |
| 4. Complete the fabrication process with regard to aircraft electrical looms and harnesses | 4.1. Fabricated components are tagged, sealed and packaged within specified procedures |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved fabrication procedures and processes relating to electrical looms, cables and harnesses
- recognising the integrity/security of electrical component crimps, joints and plug/connector pins
- fabrication of cables, harnesses and looms, including wire marking, to approved industry standards
- under qualified person guidance performing testing to assess post construction serviceability according to enterprise procedures

Required knowledge

Look for evidence that confirms knowledge of:

- electrical wire gauges and standards
- wire marking conventions and procedures
- wire terminations, soldering and crimping

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to fabricate aircraft electrical looms, harnesses and cables for general electrical system use while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that the general aspects of material specification and selection, measurement and fabrication be related to specific aircraft component applications to the extent necessary to unambiguously understand expert guidance.

Evidence of knowledge about individual components and their links with systems will be necessary to supplement evidence of ability to interpret qualified person guidance and enterprise procedures to fabricate looms, harnesses and cables before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

Safety precautions applicable to the manufacturing of electrical looms, harnesses and cables are to be fully observed. An understanding of system operation as it relates to the work must be demonstrated before undertaking any action, to ensure safety and quality issues are addressed.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under qualified person guidance on a representative range of electrical loom, cable and harness fabrication tasks as provided for in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the work environment, using tools and equipment specified by aircraft in the maintenance manuals. It is also expected that general purpose tools and test equipment found in

	most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • routine scheduled or unscheduled maintenance activities performed under qualified person guidance in accordance with enterprise procedures and applicable maintenance documentation • work undertaken either autonomously or as part of a team and under the guidance of a qualified person. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare test equipment to perform basic electrical tests
 - 1.1. Appropriate electrical test equipment is selected and confirmed with a qualified person
 - 1.2. Test equipment is checked for serviceability and applicable leads are fitted, where required
 - 1.3. Applicable function and range of measurement is set and confirmed with a qualified person
2. Test component in accordance with enterprise procedures using electrical test equipment
 - 2.1. Test points and polarity are determined
 - 2.2. **Required parameters** are measured with the test equipment
 - 2.3. Results are recorded in accordance with enterprise procedures, under qualified person guidance

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- setting up applicable test equipment
- determining test points and polarity
- measuring required parameters
- recording results under qualified person guidance

Required knowledge

Look for evidence that confirms knowledge of:

- the range of relevant electrical test equipment used to measure or test:
 - volts and amps
 - continuity, resistance and insulation
 - bonding.
- identification methods used to confirm test equipment is serviceable and current regarding calibration
- use of selectors and scale adjustment of each item of test equipment to ensure accurate measurement of applicable parameter
- methods of connection of test equipment to components being tested
- methods used to determine polarity and applicable connection points for measurement or testing

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEA241C Perform aircraft weight and balance calculations as a result of modifications

Modification History

References to CASR requirements updated - equivalent to previous unit.

Unit Descriptor

This unit of competency covers competencies required to progress from an Aircraft Maintenance Engineer at Certificate IV to the granting of a B2 Aircraft Maintenance Engineer Licence in the Avionics category under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

The skills and knowledge covered by the units of competency listed in the MEA11 Aeroskills Training Package for Aircraft Maintenance Engineer (Avionics or Mechanical as applicable) at Certificate IV are prerequisite to the attainment of the elements of competency specified in this unit.

Application of the Unit

This unit requires application of mathematical formulae to calculate the weight and balance effect of components installed in aircraft during modification incorporation.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|--|---|
| <p>1 Calculate the weight and balance impact of a modification</p> | <p>1.1 The requirement for aircraft weighing is determined</p> <p>1.2 The new empty weight of the aircraft is determined and it is ensured that the weight is within the predetermined limits set by the CAMO</p> <p>1.3 The new empty weight centre of gravity of the aircraft is calculated and it is ensured that the centre of gravity is within the predetermined limits set by the CAMO</p> <p>1.4 Maintenance records are updated with new figures</p> |
|--|---|

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- mathematical formulae used to calculate centre of gravity of an aircraft

Look for evidence that confirms skills in:

- calculating the effect on aircraft weight and centre of gravity of components installed during modification incorporation using weight and moment arm data

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use mathematical formulae to calculate aircraft weight and balance given weight and moment arm data and correctly update maintenance records.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of aircraft types. Ability to interpret the instructions for configuring and weighing aircraft is critical.</p> <p>Evidence of transferability of skills and knowledge related to aircraft weight and calculation of centre of gravity is essential. A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision without intervention. This shall be established via simulated activities at the CASR Part 147 Maintenance Training Organisation and performance during observed workplace activities.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency may be assessed in the workplace or simulated workplace.</p>

MEA246C Fabricate and/or repair aircraft electrical hardware or parts

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of all Avionic Certificate IV training pathways. It is also part of the Mechanical Aircraft Maintenance Engineer licensing pathway. It covers the competencies required to fabricate and repair aircraft electrical hardware or parts. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and knowledge of wiring standards and specifications to fabricate aircraft electrical looms, harnesses and cables.

Applications include aircraft maintenance hangars and workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA201B	Remove and install miscellaneous aircraft electrical hardware/components
MEA260B	Use electrical test equipment

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|---|---|
| <p>1. Interpret specifications and organise materials</p> | <p>1.1. Specifications are interpreted to determine the dimensions and procedure for fabrication</p> <p>1.2. Appropriate materials, tools and equipment are selected and prepared for the particular specification requirements</p> |
| <p>2. Fabricate/repair electrical components or parts</p> | <p>2.1. Assembly or fabrication jigs, where applicable, are aligned to ensure accurate fabrication of components</p> <p>2.2. <i>Components or parts</i> are fabricated in accordance with required specifications</p> |
| <p>3. Test fabricated/repairs components or parts</p> | <p>3.1. Test equipment and rigs are used, where applicable, to confirm serviceability of finished components</p> <p>3.2. Fabricated components are tagged, sealed and packaged within specified procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the use of PPE and reference to MSDS
- using approved repair/fabrication procedures and processes relating to electrical cables, harnesses, antenna leads and aerial components
- recognising the integrity/security of electrical component crimps, wire wrapping, joints and plug/connector pins
- constructing cables, harnesses and looms, including wire marking, to approved industry standards
- performing component testing to assess post construction serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- aircraft wiring specifications and standards
- standard repair methods for:
 - electrical cables
 - ignition harnesses
 - fire warning system harnesses
 - coaxial cables, such as antenna leads
 - aerial components
- electrical plugs and connectors
- soldering methods
- fabrication methods for the above wiring and cables
- wire marking methods
- assembly of electrical cables into wiring looms
- relevant OHS procedures
- how to obtain relevant MSDS
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to fabricate aircraft electrical looms, cables and harnesses in accordance with applicable standards and specifications while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that the general aspects of material specification and selection, measurement and fabrication/manufacture are related to specific aircraft component applications.</p> <p>Evidence of knowledge about individual components and their links with systems will be necessary to supplement evidence of ability to interpret requirements and fabricate components before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of tasks from Groups 1 to 4 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified by aircraft in the maintenance manuals. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>

Elements and Performance Criteria

- | | |
|--|---|
| <p>1. Test synchro and servo system components</p> | <p>1.1. <i>Synchro and servo system components</i> are correctly prepared and connected to the appropriate test equipment/rig in accordance with approved procedures</p> <p>1.2. Components are functionally tested or cycled through the prescribed test procedures in accordance with maintenance manual for evidence of serviceability or malfunction</p> <p>1.3. Faults or unserviceabilities are correctly identified and recorded on appropriate maintenance documentation</p> |
| <p>2. Align synchro and servo system components</p> | <p>2.1. Synchro and servo system components are adjusted in accordance with approved procedures and maintenance manuals until operating within prescribed limits/tolerances</p> |
| <p>3. Troubleshoot synchro and servo system components</p> | <p>3.1. Available information from maintenance records and inspection and test results is used, where necessary, to assist in fault determination</p> <p>3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate troubleshooting</p> <p>3.3. Synchro and servo system component faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required</p> <p>3.4. Fault rectification requirements are determined</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved repair procedures and processes relating to synchro and servo system components
- recognising the serviceability state and repair requirements for:
 - synchro/servo system error detection devices
 - DC and AC synchronous components
 - gyroscopic instruments (mechanical, electro-mechanical, vacuum/pressure types)
 - flight control servo devices
- performing component testing to isolate/confirm faults and assessing post repair/overhaul serviceability
- correctly aligning synchro and servo system components to prescribed specifications
- applying logic processes to isolate synchro and servo system component faults

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- explaining the basic function and operation of synchro and servo system components to enable testing for fault isolation/confirmation, to determine repair or overhaul requirements and serviceability status post-repair or overhaul
- explaining basic principles/functions, relating to synchro and servo system components and associated with:
 - advanced analogue fundamentals
 - synchronous systems
 - gyroscopes

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test, align and troubleshoot synchro and servo system components circuitry in accordance with maintenance manuals and regulatory/industry procedures while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of testing, aligning and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with synchro and servo system components. Ability to interpret inspection and testing procedures and specifications (allowable limits) and apply them in practice is critical. It is essential that testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with.

Evidence of transferability of skills and knowledge related to testing, aligning and troubleshooting is essential. This may be demonstrated through application across a range of the synchro and servo system components listed in the Range Statement. The application of testing procedures should also clearly indicate knowledge of system operation. System operation knowledge, the relationship of individual components and the links with other systems (if applicable) will be necessary to supplement evidence of ability to troubleshoot the component within the limits of the fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of components from each of Group 1 and 2 as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment would be used where appropriate.
Method of assessment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|-----------------------------------|---|
| 1. Select required test equipment | 1.1. <i>System/component test requirements</i> are identified
1.2. Appropriate test equipment is selected |
| 2. Prepare test equipment for use | 2.1. Test equipment is checked for serviceability and applicable leads are fitted, where required
2.2. Applicable function and range of measurement is selected, as required |
| 3. Test system or component | 3.1. Test points and polarity are determined
3.2. Required parameters are measured with the test equipment |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- use of selectors and scale adjustment of each item of test equipment to ensure accurate measurement of applicable parameter
- connection of test equipment to components or circuits
- determination of polarity and applicable connection points for measurement or testing

Required knowledge

Look for evidence that confirms knowledge of:

- the range of electrical test equipment used to measure or test:
 - volts, amps and power
 - frequency
 - phase angle
 - continuity, resistance and insulation
 - bonding
- test equipment construction and calibration, and testing for serviceability

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use electrical test equipment to perform a range of electrical measurements and tests while observing all relevant safety precautions.</p>

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect single layer printed circuit cards and associated components
 - 1.1.Relevant maintenance documentation, including component defect reports where applicable, is interpreted and matched by part and serial number
 - 1.2.Preparation of work area and circuit card assemblies is appropriate to allow for effective detailed inspection of all substrate, circuit tracks, edge connectors and **attached components**, taking into account any static discharge procedures
 - 1.3.Circuit card assemblies are visually or physically inspected for physical integrity of substrate, circuit tracks, edge connectors and attached components
 - 1.4.Modification status is established to assist in determining repair requirements
 - 1.5.Defects are correctly identified and reported
2. Test single layer printed circuit cards and associated components
 - 2.1.Circuit card assemblies are correctly prepared and connected to the appropriate test facility in accordance with approved procedures, or circuit card assemblies are correctly prepared and connected in situ to allow required test procedures to be performed
 - 2.2.Circuit card assemblies are functionally tested in accordance with normal trade practice and approved maintenance documentation for evidence of serviceability or malfunction
 - 2.3.Circuit card assemblies, attached hardware and electronic components are electronically and/or physically adjusted/aligned in accordance with maintenance manuals or other prescribed procedures
3. Troubleshoot single layer printed circuit cards and associated components
 - 3.1.Maintenance documentation, physical inspection and test results are used, where applicable, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides, logical processes and test equipment are used appropriately to ensure efficient and accurate troubleshooting
 - 3.3.Component faults are located and the causes of the faults are clearly identified and recorded in maintenance documentation, where required
 - 3.4.Rectification requirements are determined
4. Dismantle single layer printed circuit cards and associated components
 - 4.1.Conformal/protective coatings are removed from the circuit card assembly to the extent required to effect necessary repairs and in accordance with maintenance manuals, industry or enterprise standards as applicable
 - 4.2.Appropriate OHS precautions are observed at all times during maintenance procedure

- 4.3. Circuit card assembly is dismantled to the extent necessary to allow repair of all identified faults
 - 4.4. Parts for processing are correctly tagged and despatched
 - 4.5. Parts for retention and re-fitment are correctly packaged and stored in accordance with approved procedures to avoid physical and electrostatic damage
 - 4.6. Parts for disposal are correctly packaged and processed to accord with statutory requirements pertaining to dangerous goods
5. Assemble single layer printed circuit cards and associated components
- 5.1. Parts removed for access, and replacement parts, are collected ensuring appropriate modification status, component tolerances and assembly configuration is maintained
 - 5.2. Printed circuit card and associated components are assembled in accordance with maintenance manuals, and all electrical joints meet the approved standard of the equipment manufacturer, or industry standard, as appropriate
 - 5.3. Circuit substrate material, circuit tracks, edge connectors and through-hole eyelets are reworked, as necessary, to restore printed circuit card to a serviceable condition
 - 5.4. Any conformal/protective coatings removed are replaced to the approved standard of the equipment manufacturer, or industry standard, as appropriate
 - 5.5. Rework techniques are in accordance with industry approval procedures and relevant OHS requirements are observed

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved repair procedures and processes relating to single and double sided circuit cards
- recognising unacceptable soldered connections, damage circuit card components, circuit tracks integrity, substrate damage and edge connector condition
- applying static-safe work area practices
- reworking unacceptable PCB soldered connections, via acceptable de-soldering and soldering techniques
- disassembling and assembling PCB cards to approved industry standards and prescribed specifications
- performing PCB tests using relevant test equipment and processes to isolate PCB track faults and assess serviceability state post-repair
- correctly disassembling, preparing repair area, reworking the card to industry standards, replacing faulted components and assembling card for post-repair inspection and testing

Required knowledge

Look for evidence that confirms knowledge of:

- component operation
- basic principles/functions relating to electrical and electronic components on PCBs
- substrate materials
- types of conformal coating
- types of soldering equipment and solders used in track repair and component assembly
- how to obtain MSDS
- OHS procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to repair single layer circuit boards in accordance with procedures and standards while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that substrate abrasion and rebuilding techniques, and precautions associated with handling and assembly of electrostatic and temperature sensitive devices are fully observed, understood and complied with. MEA263B Modify/repair aircraft component multi-layer printed circuit boards

Modification History

Minor formatting and editorial changes made. Missing knowledge requirements reinstated.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV training pathways. It covers the competencies required to modify or repair multi-layer printed circuit boards. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills (including those required to gain access to inner layers and repair outer layers after track repair), including high reliability hand soldering and knowledge of standard practices and techniques in the repair of multi-layer printed circuit boards.

Applications include circuit boards from aircraft avionic components that are repaired in aviation workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA260B	Use electrical test equipment
MEA261C	Use electronic test equipment

Employability Skills Information

This unit contains employability skills.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to repair multi-layer circuit boards in accordance with procedures and standards while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that substrate abrasion and rebuilding techniques, and precautions associated with handling and assembly of electrostatic and temperature sensitive devices are fully observed, understood and complied with. A high level of awareness of safety precautions associated with beryllium materials and use of fluxes and solvents is to be demonstrated.

Evidence of transferability of skills and knowledge related to single layer printed circuit card assembly and repair is essential before undertaking any action. This may be demonstrated through application of the techniques involved across a representative range of circuit card substrate materials and attached components. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. Use of high precision, high reliability soldering techniques and handling of components, including application of anti-static equipment, must be demonstrated.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of cards with various substrate materials and components. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified in maintenance manuals. It is also expected that general and special purpose test equipment found in most routine situations would be used where appropriate.

Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. MEA264A Remove and install aircraft electrical_avionic components during line maintenance

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit covers the competencies required to remove and install a limited range of aircraft electrical and avionic system components that are within the privileges of the Aircraft Maintenance Engineer A Licence. It is one of the units required for the granting of the chosen Aircraft Maintenance Engineer A Licence under CASR Part 66, in accordance with the licensing provisions in Section 3 Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the removal and installation of a limited range of aircraft electrical and avionic system components.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA265A Remove and install general aircraft electrical hardware

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Remove aircraft electrical system components
 - 1.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety.
 - 1.2. **Electrical component** removal is carried out in accordance with the applicable maintenance manual.
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures.
 - 1.4. Removed components are tagged and packaged in accordance with specified procedures.
2. Remove avionic system components
 - 2.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety
 - 2.2. **Avionic component** removal is carried out in accordance with the applicable maintenance manual
 - 2.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 2.4. Removed components are tagged and packaged in accordance with specified procedures
3. Install aircraft electrical system components
 - 3.1. Electrical components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 3.2. Physical installation of electrical components is performed in accordance with the applicable maintenance manual, ensuring appropriate adjustment/alignment with mechanical interface is carried out
 - 3.3. System is reinstated to correct operational condition in preparation for testing, as necessary
 - 3.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
4. Install avionic system components
 - 4.1. Avionic components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 4.2. Physical installation of electrical components is performed in accordance with the applicable maintenance manual, ensuring appropriate adjustment/alignment with mechanical interface is carried out
 - 4.3. System is reinstated to correct operational condition in preparation for testing, as necessary
 - 4.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using maintenance publications in identifying/locating:
 - ovens, boilers and beverage makers
 - aircraft main and APU batteries (lead acid and nickel cadmium) and associated mounting equipment including related anti-vibration aids and battery temperature monitoring systems
 - aircraft internal and external lights
 - static wicks
 - passenger entertainment system components
- correctly connecting:
 - ovens, boilers and beverage makers
 - aircraft main and APU batteries (lead acid and nickel cadmium) and associated mounting equipment including related anti-vibration aids and battery temperature monitoring systems
 - aircraft internal and external lights
 - passenger entertainment system components
- applying standard procedures, including handling of electrostatic sensitive devices

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- procedures for handling electrostatic sensitive devices
- relevant OHS practices
- the use of applicable maintenance documentation and aircraft publications relating to electrical and passenger entertainment systems
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove and install specified aircraft electrical and avionic components in accordance with applicable maintenance publications while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across the range of applicable components listed in the Range Statement. An understanding of the attachment methods, connection of hardware, and the need for functional testing as they relate to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision but without intervention on at least one component from each of Groups 1 to 5 as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, using tools and equipment specified in maintenance manuals. MEA265A Remove and install general aircraft electrical hardware

Modification History

Minor formatting and editorial changes made. Prerequisite version code updated.

Unit Descriptor

This unit covers the competencies required for the removal and installation of a range of general electrical hardware and components found in various systems of both fixed and rotary wing aircraft that are within the privileges of the Aircraft Maintenance Engineer A Licence. This unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer A Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills in the removal and installation of electrical hardware.

Applications include items of general electrical hardware fitted to fixed or rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Remove general aircraft electrical hardware
 - 1.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 1.2. *Removal of electrical hardware* is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Removed components are tagged, packaged or discarded in accordance with specified procedures
2. Install general aircraft electrical hardware
 - 2.1. Electrical hardware components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 2.2. Physical installation of electrical hardware is carried out in accordance with the applicable maintenance manual
 - 2.3. System is reinstated to correct physical condition in preparation for testing, as necessary
 - 2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using approved maintenance documentation and aircraft publications relating to miscellaneous aircraft electrical hardware and components
- recognising defects in and deterioration of electrical cables to aircraft industry standards, including crimped and soldered joints
- correctly interpreting aircraft wire markings, terminal block identification and plug/socket pin numbering systems
- inspecting electrical looms and harness pre and post-removal and installation to ensure minimum bends are maintained, cable is not in tension, plugs are correctly aligned, security of route ensures no chaffing of insulation, adequate clipping and cable ties have been utilised and construction complies with aircraft industry standards
- positively identifying miscellaneous electrical hardware and/or components in all aircraft systems
- plug connector pin removal and insertion

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- relevant OHS procedures
- electrical wiring used in aircraft and wire marking
- plug/socket pin numbering and terminal block identification
- cable and loom installation requirements
- crimping tools and crimp terminals
- procedures for removal and insertion of plug connector pins
- electrical fundamentals and related mathematical and physics principles

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills, use specialist tools and use maintenance publications to remove and install items of general aircraft electrical hardware that are within the privileges of the CASA Aircraft Maintenance Engineer A Licence while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that applicable cleanliness requirements and OHS safety precautions are fully observed, including awareness of electrostatic discharge procedures.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. An understanding of the attachment methods, connection of hardware and system operation as they relate to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision but without intervention on each of the connection methods 1 and 2 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. MEA270A Lay out avionic systems

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit is part of Diploma and Advanced Diploma training pathways. It covers the basic design and layout to block diagram level of avionic systems.

Application of the Unit

This unit requires application of basic knowledge of avionic system function, design and layout.

Applications include typical electrical and instrument systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Lay out to block diagram level an aircraft electrical system
 - 1.1. The *functions of aircraft electrical systems* are identified
 - 1.2. *Aircraft electrical system components* are identified
 - 1.3. A typical aircraft electrical system is sketched at block diagram level
 - 1.4. Aircraft electrical system maintenance requirements are identified
2. Lay out to block diagram level an instrument measuring system
 - 2.1. The various *instrument measuring systems* are identified
 - 2.2. *Measuring system components* are identified
 - 2.3. A typical instrument measuring system is sketched at block diagram level
 - 2.4. Measuring system maintenance requirements are identified
3. Lay out to block diagram level a pressurisation control system
 - 3.1. *Pressurisation control system components* are identified
 - 3.2. A typical pressurisation control system is sketched at block diagram level
 - 3.3. Pressurisation control system maintenance requirements are identified
4. Lay out to block diagram level an aircraft oxygen system
 - 4.1. The various *types of oxygen system* are identified
 - 4.2. *Oxygen system components* are identified
 - 4.3. A typical oxygen system is sketched at block diagram level
 - 4.4. Oxygen system maintenance requirements are identified

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- sketching typical avionic systems at block diagram level

Required knowledge

Look for evidence that confirms knowledge of:

- DC and AC power generation, control and distribution
- aircraft electrical systems and their components
- aircraft electrical system maintenance requirements
- the atmosphere
- use of synchros and servos
- basics of analogue electronics
- aircraft instrument measuring systems and their components
- aircraft instrument measuring system maintenance requirements
- air conditioning and pressurisation systems
- air conditioning and pressurisation system maintenance requirements
- types of aircraft oxygen systems and their applications
- oxygen system maintenance requirements and related cleanliness and safety precautions

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to identify avionic systems and their components, lay out typical systems at block diagram level and identify related maintenance requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the range of system types and components. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to individual or team-related activities
Functions of aircraft electrical systems	<p>Functions of aircraft electrical systems may include:</p> <ul style="list-style-type: none"> • power generation, control and distribution • lighting • electrically operated systems, such as doors, flap and landing gear systems • system control (e.g. hydraulic, pneumatic, air conditioning, propeller control and anti-skid) • warning systems • ice and rain protection • engine systems
Aircraft electrical system components	<p>Aircraft electrical system components may include:</p> <ul style="list-style-type: none"> • the major components of each of the above systems that would be shown in a block diagram or schematic
Instrument measuring systems	<p>Instrument measuring systems may include:</p> <ul style="list-style-type: none"> • engine indication • transmitter/indicator measuring (pressure, temperature and position) • fuel quantity indication and flow indication
Measuring system components	<p>Measuring system components may include:</p> <ul style="list-style-type: none"> • the major components of each of the above systems that would be shown in a block diagram or schematic
Pressurisation control system components	<p>Pressurisation control system components may include:</p> <ul style="list-style-type: none"> • the major components of a pressurisation control system that would be shown in a block diagram or schematic

Avionic engineering

Competency field

Co-requisite units

Not applicable

MEA271A Lay out avionic flight management systems

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit is part of Diploma and Advanced Diploma training pathways. It covers the basic design and layout to block diagram level of avionic flight management systems.

Application of the Unit

This unit requires application of basic knowledge of avionic flight management systems function, design and layout.

Applications include typical instrument, radio and electronic systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA270A	Lay out avionic systems

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

1. Lay out to block diagram level a flight instrument system
 - 1.1. The various *aircraft flight instrument systems* are identified
 - 1.2. *Flight instrument system components* are identified
 - 1.3. A typical advanced flight instrument system is sketched at block diagram level
 - 1.4. Flight instrument system maintenance requirements are identified
2. Lay out to block diagram level an instrument navigation system
 - 2.1. The various *instrument navigation systems* are identified
 - 2.2. *Instrument navigation system components* are identified
 - 2.3. A typical instrument navigation system is sketched at block diagram level
 - 2.4. Instrument navigation system maintenance requirements are identified
3. Lay out to block diagram level an aircraft communication system
 - 3.1. *Aircraft communication systems* are identified
 - 3.2. *Communication system components* are identified
 - 3.3. A typical communication system is sketched at block diagram level
 - 3.4. Communication systems maintenance requirements are identified
4. Lay out to block diagram level an aircraft pulse system
 - 4.1. *Aircraft pulse systems* are identified
 - 4.2. *Pulse system components* are identified
 - 4.3. A typical pulse system is sketched at block diagram level
 - 4.4. Pulse system maintenance requirements are identified
5. Lay out to block diagram level an aircraft radio navigation system
 - 5.1. *Aircraft radio navigation systems* are identified
 - 5.2. *Radio navigation system components* are identified
 - 5.3. A typical radio navigation system is sketched at block diagram level
 - 5.4. Radio navigation system maintenance requirements are identified
6. Lay out to block diagram level an aircraft electronic system
 - 6.1. *Aircraft electronic systems* are identified
 - 6.2. *Electronic system components* are identified
 - 6.3. A typical electronic system is sketched at

block diagram level
6.4. Electronic system maintenance requirements
are identified

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- sketching typical avionic systems at block diagram level

Required knowledge

Look for evidence that confirms knowledge of:

- the atmosphere
- pitot static systems
- magnetism
- function of gyroscopes
- use of synchros and servos
- basics of analogue electronics
- aircraft instrument systems and their components
- aircraft instrument system maintenance requirements
- radio, navigation and radar basics
- aircraft communication, pulse and radio navigation systems and their components
- communication, pulse and radio navigation system maintenance requirements
- basics of digital electronics
- basic computer architecture
- use of data buses
- automatic flight control systems and their components
- automatic engine control systems and their components
- flight management systems and their components
- display systems and their components
- aircraft electronic system maintenance requirements

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to identify avionic systems and their components, lay out typical systems at block diagram level and identify related maintenance requirements. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the range of system types and components. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Unit Sector(s)

Avionic engineering

Competency field

Co-requisite units

Not applicable

MEA272B Apply basic scientific principles and techniques in avionic engineering situations

Modification History

Additional knowledge requirements - equivalent to previous unit.

Unit Descriptor

This unit of competency covers the application of basic scientific principles and techniques to appropriate avionic engineering situations involving component and system design, modification and engineering support of maintenance.

Application of the Unit

This unit requires application of basic avionic scientific principles and techniques as a member of a design and development team or similar in support of the design and development of avionic applications, or as a member of a maintenance organisation engineering department.

Applications include identifying the range of basic avionic scientific principles and techniques relevant to avionic engineering, selecting avionic principles and techniques for particular applications, applying avionic principles and techniques appropriately to engineering tasks, and quoting results appropriately.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- 1 Research and identify the range of basic scientific principles and techniques relevant to avionic engineering
 - 1.1 Appropriate *sources of information* are researched, applications examined and the basic scientific principles relating to avionic engineering reported
 - 1.2 Basic avionic techniques and associated technologies, software and hardware required to implement scientific principles relating to avionic engineering situations are identified
- 2 Select basic avionic scientific principles and techniques relevant to particular avionic engineering applications
 - 2.1 The relevant basic avionic scientific techniques and principles for particular *avionic engineering* situations are selected
 - 2.2 The relevant basic aeronautical techniques and associated technologies, software and hardware for particular avionic engineering situations are selected
- 3 Apply the relevant basic avionic scientific principles and techniques
 - 3.1 The *basic avionic scientific principles* are applied in a consistent and appropriate manner to obtain any required solution
 - 3.2 Appropriate calculations and coherent units are used in the solution of engineering calculations
 - 3.3 Significant figures are used in engineering calculations
 - 3.4 The basic avionic techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain required solutions

4 Quote the results of the application of the basic avionic scientific principles and basic techniques

4.1 An appropriate style is used to quote solutions for applications involving engineering calculations

4.2 An appropriate style is used to quote solutions for applications not involving engineering calculations

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- physics for electronics:
 - units and measurements
 - magnetic force
 - vectors
 - electric fields and potential
 - electric current and resistance
 - capacitance
 - work, power and energy
- analogue electronics:
 - negative feedback amplifiers
 - differential amplifiers
 - operational amplifiers
 - amplifier frequency response
 - thermal circuits/heat exchangers
 - active filters
 - fault-finding
- digital electronics:
 - characteristics of digital systems
 - number systems
 - Boolean algebra
 - logic circuits
 - logic families
 - construction and testing techniques
 - flip flop circuits
 - analogue to digital conversion
 - digital to analogue conversion
 - timing and control
 - combinational logic circuits
- circuit theory:
 - Kirchhoff's Current and Voltage Laws
 - Thevenin's Network Theorem
 - Norton's Network Theorem
 - Superposition Network Theorem
 - inductance, capacitance and resistance (LCR) series circuit analysis
 - LCR parallel circuit analysis
 - series and parallel resonance
- electrical systems:

- DC and AC circuit design principles
 - generators and motors
 - inverters
 - power supply, transformer, rectifier, filter and regulator
 - solenoids
 - circuit protection
 - wiring cables and looms
- aerodynamics:
 - Bernoulli's Theorem
 - the atmosphere
 - aerodynamic forces (lift, drag, weight and thrust)
 - stability and control (to a level not requiring the application of calculus)
- thermodynamics – heat transfer principles (conduction, convection and radiation)
- instruments:
 - airspeed measurement
 - altitude measurement
 - attitude indication
 - measurement of quantity, flow, temperature, pressure and position
- control concepts and data communications:
 - servo and synchronous systems and components
 - data communication definitions and terminology
- communications:
 - radio transmission and modulation
 - radio reception
 - microphones, amplifiers and speakers
 - transmission lines and antennas
- pulse:
 - antennas
 - waveguides
 - transmitters/receivers
 - displays
- light, sound and vibration:
 - wave behaviour – standing vs travelling waves, transverse and longitudinal
 - light – reflection, absorption, refraction, diffraction, spectrum, infrared, visible, ultraviolet, transmission medium and engineering applications
 - sound – pitch, frequency, intensity (power), decibel scale, 'noise dose', spectrum, infrasound, audible, ultrasound, speed, natural frequency, resonance, transmission medium and engineering applications
 - vibration – sources, balancing, shaft alignment, measurement, damping and engineering applications

- appropriateness of calculations
- fundamental and derived quantities
- the procedure for carrying out dimensional analysis
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities

Look for evidence that confirms skills in:

- selecting appropriate basic avionic scientific principles to suit specific applications
- selecting appropriate basic avionic techniques and associated technologies, software and hardware to suit specific applications
- applying basic avionic scientific principles to particular engineering situations
- applying and manipulating appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations
- checking the validity of equations using dimensional analysis
- applying basic avionic techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units, using appropriate significant figures
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	<p>A person who demonstrates competency in this unit must be able to apply basic scientific principles and techniques in avionic engineering situations.</p> <p>This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Method of assessment	<p>This unit could be assessed in conjunction with any other units associated with applying basic scientific principles and techniques in avionic engineering situations.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Sources of information</p>	<p>Sources of information include:</p> <ul style="list-style-type: none"> • reference texts • manufacturer catalogues and industrial magazines • international aerospace organisation publications • websites • use of phone, email and fax information gathering
<p>Avionic engineering</p>	<p>Avionic engineering refers to:</p> <ul style="list-style-type: none"> • the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications
<p>Basic avionic scientific techniques and principles</p>	<p>Candidates should apply appropriate basic techniques supported by their mathematical skills and introductory knowledge of scientific principles to design, manufacturing, commissioning and maintenance-related tasks and projects relating to:</p> <ul style="list-style-type: none"> • electrical systems and related wiring and components (power generation, distribution, control interfaces with hydraulic and pneumatic systems, and caution and warning systems) • mechanical and electro-mechanical flight instruments and indication systems (quantity, pressure, temperature and position) and components • electronic systems and components (communications, radio navigation, pulse, display, automatic flight control, flight management and engine management) • automatic test stations, adapters and software <p>The applications may require the use of one or two basic avionic scientific principles together with a fundamental mathematical calculation leading to process, resources and system choices from a limited range of options.</p>

	<p>Basic techniques include:</p> <ul style="list-style-type: none">• basic hand and power tool operations• machining• fitting• welding• moulding• fabricating• wiring and programming techniques

MEA273A Select and test avionic engineering materials

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers selecting appropriate materials and materials and components tests for avionic engineering applications.

Application of the Unit

Applications of this unit include selecting engineering materials and materials tests; sourcing materials data; ensuring appropriate performance and physical standards for avionic applications; documenting materials tests; ensuring calibration standards; and interpreting and documenting materials data sheets, as appropriate for mass production, batch production, jobbing shop and prototyping applications.

Activities may be performed as a member of a design and development or engineering support team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Identify classes of materials, based on properties and materials tests relevant to avionic engineering
 - 1.1. *Classes of materials, based on properties*, required for particular *avionic engineering* applications are identified
 - 1.2. Material properties are related to common production and construction methods and processes
 - 1.3. Common characteristics, faults or flaws in materials and components or product in particular engineering applications are identified
 - 1.4. Test methods for materials and components or product in particular engineering applications are identified
 - 1.5. Specific industrial test standards/codes, calibration requirements, regulations and authorities related to selection of materials and products for particular engineering applications are identified
 - 1.6. The role of *Australia's national measurement system* is investigated
2. Identify and use sources of information on engineering materials, materials tests and test equipment, including manufacturers' catalogues and websites
 - 2.1. Appropriate *sources of information* on materials are identified and used
 - 2.2. Appropriate sources of information on methods of testing of properties of materials are identified and used to ensure suitability for a particular application
 - 2.3. Appropriate sources of information on materials, materials tests, test calibration, test certificates, regulations, standards, *standards councils/societies/authorities/regulatory bodies* are identified and used
 - 2.4. The use of *standards and codes* are investigated and reported on
 - 2.5. Appropriate sources of information on MSDS are identified and used
3. Specify and implement materials for particular avionic engineering applications
 - 3.1. Methods used to test or obtain the properties of engineering materials are specified and implemented
4. Specify and implement methods used to test or obtain the properties of engineering materials
 - 4.1. *Tests of materials* are specified and implemented to ensure quality, safety or suitability for a range of applications
 - 4.2. *Traceability* of measurement standard is ensured
 - 4.3. Test sheets/certificates for appropriate materials are obtained for applications in accordance with organisational procedures and/or codes and regulations
 - 4.4. Appropriate MSDS are obtained for applications in

- accordance with organisational procedures and/or codes and regulations
5. Report on and record materials design data and methods and results of materials tests
- 5.1. Materials selections are reported and recorded against design functional requirements in accordance with organisational procedures, codes and regulations including environmental impact and sustainability assessment
- 5.2. Materials tests and test sheets/certificates are reported and recorded in accordance with organisational procedures, codes and regulations
- 5.3. Appropriate calibration and traceability are ensured
- 5.4. Appropriate MSDS are reported and recorded for applications in accordance with organisational procedures, codes and regulations

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to production and construction methods and processes
- identifying, overcoming or compensating for common characteristics, faults or flaws in materials or product
- obtaining appropriate test sheets/certificates for applications
- obtaining appropriate MSDS for application
- completing reports, records and design documentation
- addressing environmental impact and sustainability issues
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability
- identifying test methods for materials and components, specific industrial test standards and regulations for particular engineering applications
- identifying test methods for faults or flaws in materials and components or product
- selecting materials following an extensive search of appropriate sources of information including manufacturer's catalogues and websites
- selecting appropriate tests from a range of possible tests, following an extensive search of appropriate sources of information including manufacturer's catalogues and websites
- satisfying applicable standards and regulations for materials and components
- sourcing materials test certificates and using the material properties information from them
- sourcing and implementing MSDS
- implementing tests correctly for materials and component faults and properties of materials
- selecting testing methods appropriate to applications

Required knowledge

Look for evidence that confirms knowledge of:

- properties of materials classes
- the effect of material properties on production and construction methods and processes
- the effect of characteristics, faults or flaws in materials on product and processes
- test methods for materials and components, specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- methods of accessing and using alternative information sources
- test procedures and typical applications for tests
- sources and uses of information on materials, materials tests, test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS

- identification of materials for an application based on comparison of properties of materials
- identification of test for an application based on an understanding of its ability to measure specific material or product properties
- significance of test sheets/certificates to applications
- the need for obtaining and filing test sheets/certificates
- significance of MSDS and relevance of procedures
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test reports and documentation to applications
- significance of reporting and recording procedures
- significance of materials tests and test sheets/certificates, test calibration and traceability
- significance of MSDS to applications
- significance of reporting and recording procedures

Evidence Guide

<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to select and test avionic engineering materials.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. <p>Method of assessment</p>	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting and testing aeronautical engineering materials or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Classes of materials, based on properties

Classes of materials include:

- non-ferrous metals and alloys (copper, aluminium, zinc, lead, tin and their alloys), ferrous metals (carbon steels, alloy steels, cast irons), non-metallic composite materials, bearing materials, lubricants, non-metals (timber, ceramics, polymers and fabrics, adhesives, electrical insulation materials), thermal conductors and insulators, electrical conductors, semiconductors and insulators

Properties of materials include:

- strength, elasticity, plasticity, malleability, toughness, brittleness, fatigue endurance, mouldability, weldability, machinability, formability, resistance to creep and stress relaxation, resistance to degradation (e.g. use of plastic fillers to enhance UV resistance), adhesion (electrical, magnetic, thermal, chemical and optical), material structure and effect on properties

Other factors include:

- corrosion and corrosion protection methods
- the effect of manufacturing and construction processes on material properties
- the effect of property enhancement on design (e.g. adhesives plus sintering replacing some forging and machining of gears on shafts)

Cost includes:

- manufacture of material and source of material, typical applications and possibilities

Avionic engineering

Avionic engineering refers to:

- the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Australia's national measurement system	Australia's national measurement system includes: <ul style="list-style-type: none"> • National Standards Commission (legal metrology) • Commonwealth Scientific and Research Organisation (physical standards) • National Association of Testing Authorities, Aust. (Laboratory accreditation) • Standards Australia International Ltd (AS standards specifications)
Sources of information	Sources of information includes: <ul style="list-style-type: none"> • reference texts, manufacturer's catalogues and industrial magazines • websites, use of phone, email and fax information gathering
Standards councils/societies/authorities/regulatory bodies	Standards councils/societies/authorities include: <ul style="list-style-type: none"> • Australian Standards • ASTM • MIL Spec. • ASME • ISO Regulatory bodies include: <ul style="list-style-type: none"> • CASA • ADF • United States FAA • European Joint Aviation Authority
Standards and codes	Standards and codes include: <ul style="list-style-type: none"> • NDT and mechanical test standards • chemical test standards • electrical test standards • compliance test standards for components
Tests of materials	Tests of materials include: <ul style="list-style-type: none"> • destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, and peel resistance (adhesives) • non-destructive, including hardness, ultrasonics, X-ray, dye penetrant, eddy current, surface friction, conductivity, heat expansion, photoelastic, heat capacity refractive index, and magnetic hysteresis loop
Traceability	Traceability ensures: <ul style="list-style-type: none"> • test calibrations can be traced back to the relevant base

	unit in the relevant measurement system

MEA274A Maintain basic light aircraft electrical systems and components

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required for the maintenance of electrical systems of the more basic types of both fixed and rotary wing aircraft. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the maintenance of basic aircraft electrical systems and components involving inspection, limited testing and troubleshooting and component removal and installation.

Applications include fixed wing aircraft with fixed undercarriage and basic rotary wing aircraft with skids or floats and no powered flight controls powered by either a normally aspirated piston engine or small gas turbine.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA246C Fabricate and/or repair aircraft electrical components or parts

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Inspect basic aircraft electrical systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.**DC electrical system** is visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test/adjust basic aircraft electrical systems
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Electrical system is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3.System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot basic aircraft electrical systems
 - 3.1.Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.System faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, and in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined
4. Remove and install basic aircraft electrical system components
 - 4.1.System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 4.2.**Electrical component** removal is carried out in accordance with the applicable maintenance manual
 - 4.3.Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 4.4.Removed components are tagged and packaged in accordance with specified procedures
 - 4.5.Electrical components to be installed are checked to

confirm correct part numbers, modification status,
serviceability and shelf life

- 4.6. Physical installation of electrical components is performed in accordance with the applicable maintenance manual, ensuring appropriate adjustment/alignment with mechanical interface is carried out
- 4.7. System is reinstated to correct operational condition in preparation for testing, as necessary
- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including those relating to gas turbine engine high energy ignition units
- using approved maintenance documentation and aircraft publications relating to DC electrical systems
- identifying/locating:
 - DC power generation, regulation, distribution and control systems and components:
 - generators and starter/generators
 - regulators
 - bus bars
 - circuit breakers and fuses
 - wiring
 - piston engine ignition and starting systems and components:
 - magnetos or coils
 - starter motors
 - ignition switches/start switches
 - ignition harnesses
 - low tension wiring
 - spark plugs
 - auxiliary starting devices
 - gas turbine engine ignition and starting systems:
 - starter motors and starter/generators
 - high energy ignition units
 - control units
 - switches
 - batteries and associated mounting equipment, including related anti-vibration aids
 - motors and actuators in basic DC electrical systems
- correctly connecting DC generators, alternator/rectifier generators and starter/generators
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - DC power generation systems including regulation, distribution and control
 - battery installations
 - piston engine ignition and starting systems
 - gas turbine engine ignition and starting systems (where applicable to the enterprise)
 - internal/external lighting systems, including controls
 - motors and actuators in basic DC electrical systems
- applying logic processes, taking and interpreting electrical measurements, using test

equipment and appropriate wiring diagrams and manuals to isolate malfunctions in the above systems

- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- DC electrical principles:
 - properties of permanent magnets
 - precautions for the care and storage of permanent magnets
 - properties of electromagnets
 - primary and secondary cells
 - aircraft battery types, construction, care and safety
 - resistor characteristics
 - fuses and circuit breakers
 - fundamental DC circuits
 - inductive circuits
 - capacitive circuits
 - basic fault-finding principles
- general construction, operating characteristics and applications for aircraft:
 - DC generators
 - alternator/rectifier generators
 - DC motors including starter motors
 - starter/generators
 - DC actuators (linear and rotary)
 - gas turbine high energy ignition system components and related safety precautions
 - lighting systems
- the basic layout (block diagram level), function and operation of the systems listed in the Range Statement
- electrical system maintenance requirements and troubleshooting procedures
- relevant OHS practices, including those relating to gas turbine engine high energy ignition units
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot basic DC electrical systems and remove and install components, including looms, cables and connection hardware, while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with basic aircraft DC electrical systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting and component removal and installation is essential. This is to be demonstrated through application across a range of aircraft electrical systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on electrical looms, cables and connection hardware, and on each system in Range Statement Groups 1 to 4 and on at least one major component/LRU in each case. For Group 5, competency may be demonstrated through the performance of a battery check. Component removal and

	installation competencies are to be demonstrated on at least one component from each of groups 6 to 11. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Applicable electrical systems	<p>Electrical systems may include:</p> <ol style="list-style-type: none"> 1. DC power generation, regulation and distribution systems 2. Piston engine and gas turbine engine ignition and starting systems (as applicable to the enterprise) 3. DC electrical systems, such as flaps, including related motors and actuators 4. Aircraft lighting 5. Aircraft main battery
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Applicable electrical components	<p>Electrical components include:</p> <ol style="list-style-type: none"> 6. DC generators, and alternator/rectifier generators, and components of related single generator regulation and distribution systems 7. Motors 8. Actuators 9. Piston engine ignition and starting system components 10. Aircraft batteries 11. Aircraft lighting components, such as bulbs, lenses, switches and rheostats
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using approved maintenance documentation and aircraft publications relating to basic instrument systems
- locating and identifying flight instrument system components comprising:
 - engine system temperature, speed (including mechanical and electrical tachometers)
 - auxiliary direct reading systems including vacuum, fuel storage quantities
 - flight systems including attitude, altitude, air speed and OAT
- locating and identifying direct reading compasses
- correct handling and observance of maintenance precautions relating to gyroscopes, gimbals and pitot/static systems (connections, heating and protrusions)
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - flight instruments
 - pitot/static systems
 - direct reading compasses
 - piston engine and gas turbine engine indication systems
 - electrical systems indication
 - basic fuel quantity indication systems
 - vacuum indication systems
- applying logic processes, taking and interpreting system measurements, using test equipment and appropriate wiring diagrams and manuals to isolate malfunctions in the above systems
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- applying OHS requirements relevant to instrument system maintenance

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- handling precautions for electrostatic sensitive devices
- relevant OHS practices
- the basic layout (block diagram level), function and operation of the following systems as listed in the Range Statement:
 - pitot/static systems
 - piston engine and gas turbine engine direct reading indication systems
 - basic fuel quantity measurement systems
- the operating principles of the above systems and associated with:
 - atmospheric conditions; properties and effects on aircraft instruments and systems

- pressure and temperature sensing elements and their use in aircraft instruments
- gyroscopes and their use in aircraft instrument systems
- electrical fundamentals
- instrument construction and operation:
 - instrument groupings, panel layout and construction
 - pitot static instruments (ASI, VSI and counter-pointer altimeters), their operation, calibration safe handling and related terminology
 - pitot pressure
 - static pressure
 - altimeter Q code settings:
 - QNH
 - QNE
 - QFE
 - IAS
 - TAS
 - vacuum system indication component construction and operation
 - air and electrically powered artificial horizon construction and operation
 - directional gyro construction and operation
 - construction and operation of direct reading engine instruments
 - turn and bank and slip/turn coordinator construction and operation
 - direct reading compass construction and compass calibration
 - piston and gas turbine engine direct reading measuring instruments and temperature indication instruments construction and operation
 - voltage and current measuring instrument construction and operation
 - volumetric fluid quantity system components, construction and operation
- instrument system maintenance requirements and troubleshooting procedures, including pitot/static system leak testing
- relevant maintenance documentation and maintenance publications
- relevant regulatory requirements and standard procedures

Elements and Performance Criteria

1. Inspect basic communication and radio navigation systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.**Communication and radio navigation systems and components** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Functionally test basic communication and radio navigation systems and components
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Communication and radio navigation systems are functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3.Deficiencies are correctly identified and reported
3. Troubleshoot basic communication and radio navigation systems
 - 3.1.Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.Communication and radio navigation system faults are located and are correctly recorded in maintenance documentation in accordance with standard operating procedures
4. Remove and install basic radio communication and navigation system components
 - 4.1.System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety
 - 4.2.Communication and navigation system component removal is carried out in accordance with the applicable maintenance manual
 - 4.3.Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 4.4.Removed components are tagged and packaged in

accordance with specified procedures

- 4.5. Communication and navigation system components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
- 4.6. Physical installation of components is performed in accordance with the applicable maintenance manual and regulatory requirements, ensuring appropriate adjustment/alignment is carried out
- 4.7. System is reinstated to correct operational condition in preparation for testing, as necessary
- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the radio frequency and communications system being maintained
- locating and identifying radio communication and navigation system components comprising:
 - HF and VHF communications
 - VOR, ADF and GNS
 - ATC transponders
 - ELT systems
- locating and identifying applicable radio system antennas
- recognising system and component defects/external damage, correct installation, attaching hardware (including cabling/harnesses/transmission lines) and security in:
 - HF and VHF communications systems
 - VOR, ADF and GNS navigation systems
 - air traffic control (ATC) transponders
 - ELT systems
- applying logic processes, functional testing and visual inspections to isolate malfunctions within the above systems
- functionally testing listed systems to assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- printed circuit boards
- semiconductors
- fibre optics
- handling precautions for electrostatic sensitive devices
- relevant OHS practices
- the use of approved maintenance documentation and aircraft publications relating to radio communication and navigation systems and components
- the general working principles of communication and navigation systems
- explaining the basic system layout (block diagram level), function and operation of:
 - HF and VHF communications systems
 - VOR, ADF and GNS navigation systems

- ATC transponders
- ELT systems
- radio frequency and communication system maintenance requirements and basic troubleshooting procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, functionally test and visually troubleshoot basic communication and radio navigation systems and remove and install components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, functional testing and visual troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft basic communication and radio navigation systems and components. It is essential that system functional testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, functional testing and visual troubleshooting is essential. This is to be demonstrated through application across a range of basic aircraft communication and radio navigation systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a system and at least one major system component/LRU from each of Groups 1 to 4 listed in the Range Statement. Elements and Performance Criteria

1. Inspect twin engine aircraft electrical systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.**DC electrical system** is visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test/adjust twin engine aircraft electrical systems
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Electrical system is functionally tested, in accordance with maintenance manual, for evidence of serviceability or malfunction
 - 2.3.System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot twin engine aircraft electrical systems
 - 3.1.Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.System faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required and in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined
4. Remove and install twin engine aircraft electrical system components
 - 4.1.System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety
 - 4.2.**Electrical component** removal is carried out in accordance with the applicable maintenance manual
 - 4.3.Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 4.4.Removed components are tagged and packaged in accordance with specified procedures
 - 4.5.Electrical components to be installed are checked to

confirm correct part numbers, modification status,
serviceability and shelf life

- 4.6. Physical installation of electrical components is performed in accordance with the applicable maintenance manual, ensuring appropriate adjustment/alignment with mechanical interface is carried out
- 4.7. System is reinstated to correct operational condition in preparation for testing, as necessary
- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to twin engine aircraft electrical systems
- identifying/locating:
 - DC multi-generator power generation, regulation, distribution and control systems and components, i.e. regulators and bus bars
 - electrical propeller control systems and components, such as feathering and synchronising systems
 - batteries in dual battery installations and associated mounting equipment, including related anti-vibration aids
 - fire warning and extinguishing systems and components
 - identification of halogen (e.g. BCF) fire-extinguishers
 - combustion heating systems
 - equipment cooling and ventilation
 - fuel storage and distribution system electrical components
 - master and central warning systems
- correctly connecting DC generators and alternator/rectifier generators in multi-generator systems and paralleling generator output
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in the above systems and system components
- applying logic processes, taking and interpreting electrical measurements, using test equipment and appropriate wiring diagrams and manuals to isolate malfunctions in the above systems
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- system testing procedures and paralleling of generator output
- the basic layout (block diagram level), function and operation of:
 - DC multi-generator and alternator/rectifier generator regulation and distribution systems and components
 - electrical propeller control systems, such as feathering and synchronising systems and system components
 - dual battery systems and associated mounting equipment, including related anti-vibration aids
 - fire warning and extinguishing systems and system components, including regulatory

requirements relating to halogen (e.g. BCF) fire-extinguishers

- combustion heating systems and system components
- equipment cooling and ventilation systems and system components
- fuel storage and distribution systems and system components
- master and central warning systems and system components
- maintenance requirements and troubleshooting procedures for the above electrical systems
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot the DC electrical systems and components of twin piston engine aircraft and remove and install components, including looms, cables and connection hardware, while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with twin piston engine aircraft DC electrical systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting and component removal and installation is essential. This is to be demonstrated through application across a range of aircraft electrical systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on electrical looms, cables and connection hardware, and on each system in Range Statement Groups 1 to 8 and on at least one major component/LRU in each case (Groups 2, 4, 5 and/or 8 may be omitted if they are not applicable

	to the enterprise). For Group 3, competency may be demonstrated through the performance of a battery check. Component removal and installation competencies are to be demonstrated on at least one component from each of Groups 9 to 16 (Groups 10, 12, 13 and/or 16 may be omitted if they are not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
DC electrical systems	<p>DC electrical systems may include:</p> <ol style="list-style-type: none"> 1. DC multi-generator and alternator/rectifier generator regulation and distribution systems and components 2. Electrical propeller control systems, such as feathering systems (where applicable to the enterprise) 3. Batteries in dual battery installations and associated mounting equipment, including related anti-vibration aids 4. Fire warning and extinguishing systems, including handling of halogen fire extinguishers (where applicable to the enterprise) 5. Combustion heating systems (where applicable to enterprise) 6. Equipment cooling and ventilation 7. Fuel storage and distribution systems 8. Master and central warning systems (where applicable to enterprise)
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Electrical components	<p>Electrical components include:</p> <ol style="list-style-type: none"> 9. Components of multi-generator regulation and distribution systems 10. Electrical propeller control system components (where applicable to the enterprise) 11. Batteries in dual battery installations and associated mounting equipment, including related anti-vibration aids 12. Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot electronic instrument display systems and components. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot electronic instrument display systems and components.

Applications include fixed and rotary wing aircraft that have electronic instrument display systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Electronic instrument display system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures 3.5. Rectification requirements are determined |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills, tools and test equipment in the testing, adjustment and troubleshooting of instrument display systems
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) for the range of systems listed in the Range Statement
- interpreting the information presented on instrument display systems
- applying logic processes and using appropriate wiring diagrams and manuals to isolate instrument display system malfunctions
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process
- applying standard procedures
- observing all relevant occupational health and safety (OHS) procedures

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool and test equipment usage and installation/securing of system components
- the basic layout (block diagram level) of the systems listed in the Range Statement
- the operating principles of the systems listed in the Range Statement and associated with:
 - electrical and instrument fundamentals relating to multi-function display systems
 - interpretation of display information and display screen symbol generation
 - the operation of each listed system and system components
- OHS procedures relating to instrument display systems and components
- relevant ARINC specifications
- relevant maintenance manuals
- maintenance requirements and troubleshooting procedures
- relevant regulatory requirements and standard procedures, including software management control

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot a range of electronic instrument display systems and components that is representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft electronic instrument display systems and their components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a range of aircraft instrument and display systems (where display systems are applicable to the enterprise) listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on a system and on at least one major system component of each Groups 1 to 4 (Group 4 may be omitted if not applicable to the enterprise), as listed in the Range Statement. This shall be established via the records in the

	Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.

--	---

Elements and Performance Criteria

1. Inspect FADEC systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.**FADEC system** is visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test FADEC systems
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.FADEC system is functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
3. Troubleshoot FADEC systems
 - 3.1.Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.System faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required and in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including those relating to engine ground running
- using approved maintenance documentation and aircraft publications relating to the applicable FADEC system
- using test sets to download maintenance data from the FADEC system and interpreting the data
- identifying/locating airframe and engine (including propeller/rotor)-mounted FADEC system components
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in airframe and engine-mounted FADEC system components
- correctly handling electrostatic sensitive devices
- applying logic processes, using test equipment and appropriate wiring diagrams and manuals to isolate FADEC system malfunctions
- using built-in test features to confirm post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- digital electronic theory
- open and closed loop control
- the basic layout (block diagram level), function and operation of FADEC systems
- architecture of FADEC system computers, software and software management
- operation of sensors that input data to FADEC system computers
- built-in test system operation and downloading and interpretation of system data
- relevant regulatory requirements and standard procedures, including software management control
- maintenance requirements and troubleshooting procedures
- relevant maintenance manuals

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot FADEC systems while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with FADEC systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting and component removal and installation is essential. --	---

Elements and Performance Criteria

1. Inspect light aircraft AC instrument systems, power supplies and components
 - 1.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. **AC instrument system and AC power supply components** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust light aircraft AC instrument systems, power supplies and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Instrument system and AC power supply is functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
 - 2.3. System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot light aircraft AC instrument systems, power supplies and components
 - 3.1. Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Instrument system or power supply faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5. Rectification requirements are determined
4. Remove and install light aircraft AC instrument system, and power supply components
 - 4.1. System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 4.2. Instrument or power supply component removal is carried out in accordance with the applicable maintenance manual
 - 4.3. Required maintenance documentation is completed and processed in accordance with standard enterprise

procedures

- 4.4. Removed components are tagged and packaged in accordance with specified procedures
- 4.5. Instrument or power supply components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
- 4.6. Physical installation of instrument or power supply components is performed in accordance with the applicable maintenance manual and regulatory requirements, ensuring appropriate adjustment/alignment is carried out
- 4.7. System is reinstated to correct operational condition in preparation for testing, as necessary
- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using approved maintenance documentation and aircraft publications relating to AC instrument systems and related AC power supplies
- locating and identifying AC powered instrument system components, including:
 - AH, DG, AHRS, servo and encoding altimeters
 - engine system temperature, speed, oil pressure, torque and manifold pressure
 - auxiliary systems, including vacuum, fuel storage quantities and fuel flow
 - remote reading gyro compasses
- locating and identifying AC instrument power supply system components, including:
 - inverters
 - transformer/rectifier units
 - voltage and frequency indication
- correctly handling and observing maintenance precautions for gyroscopes and gimbals
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in AC powered instruments and related power supply, including:
 - flight instruments
 - remote reading gyro compasses
 - piston engine and gas turbine engine indication systems (indicators and transmitters/sensors)
 - fuel quantity and flow indication systems (indicators, probes and transmitters)
 - transmitter/indicator measuring instrument systems (pressure, temperature and vacuum)
 - AC power supply, including inverters and transformer/rectifier units
- applying logic processes, taking and interpreting system measurements, using test equipment and appropriate wiring diagrams and manuals to isolate malfunctions in the above systems
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- applying OHS requirements relevant to instrument and electrical system maintenance

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware and plugs
- handling precautions for electrostatic sensitive devices
- relevant OHS practices
- AC theory:
 - calculations and measurement in AC circuits

- inductors and inductive reactance
- transformer operation
- capacitors and capacitive reactance
- LCR circuits and resonance
- passive filters
- power relationship in reactive circuits
- the basic layout (block diagram level), function and operation of AC powered:
 - flight instruments
 - remote reading gyro compasses
 - piston engine and gas turbine engine indication systems (indicators and transmitters/sensors)
 - fuel quantity and flow indication systems (indicators, probes and transmitters)
 - transmitter/indicator measuring instrument systems (pressure, temperature, vacuum)
 - AC power supply including AC generators, inverters and transformer/rectifier units
- the operating principles of the above systems and associated with:
 - atmospheric conditions - properties and effects on aircraft instruments and systems
 - pressure and temperature sensing elements and their use in aircraft instrument systems
 - gyroscopes and their use in aircraft instrument systems
 - electrical fundamentals
- relevant maintenance documentation and maintenance publications
- maintenance requirements and troubleshooting procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot AC powered instrument systems and related power supplies, and remove and install components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) and component removal and installation associated with aircraft instrument systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across a range of AC powered aircraft instrument systems, AC power supplies and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a system and at least one major system component/LRU from each of Groups 1 to 5 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
AC instrument systems and AC power supply components	<p>AC instrument system and AC power supply components may include:</p> <ol style="list-style-type: none"> 1. DG, AH, AHRS and components, servo and encoding altimeters, remote reading gyro compasses and components 2. Piston engine and gas turbine engine indication system components 3. Fuel quantity indication and flow indication systems and components 4. Transmitter/indicator measuring instrument systems (pressure, temperature, vacuum) and components 5. Inverters and transformer/rectifier units
Troubleshooting	Troubleshooting involves the use of test sets, downloaded maintenance data and fault-finding charts or similar, to line replacement level
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA282A Repair or overhaul aircraft pulse system components

Modification History

Minor formatting and editorial changes made. Minor clarification made to the unit descriptor.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Component Workshop Maintenance Stream) training pathway. It covers the competencies required to repair or overhaul components of aircraft pulse systems. Repair of circuit boards is covered by MEA262B Modify/repair single layer printed circuit boards and MEA263B Modify/repair multi-layer printed circuit boards. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills, test equipment and knowledge of pulse, analogue and digital theory to repair or overhaul components from aircraft pulse systems.

Applications include pulse system components from fixed and rotary wing aircraft that are repaired or overhauled in aviation maintenance workshops.

Licensing/Regulatory Information

Not applicable.

Assembly of component parts is carried out in accordance with specified tolerances and the applicable maintenance documents 5.2. Assembled components are tested and adjusted/aligned in accordance with the applicable maintenance documentation using the appropriate test equipment 5.3. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices
- using approved repair/overhaul manuals, procedures and processes relating to pulse system components
- recognising the serviceability state and repair or overhaul requirements for pulse system components
- applying logic processes, using test equipment and appropriate wiring diagrams and manuals to isolate component faults
- performing component testing to isolate/confirm component fault and assess post-repair/overhaul serviceability
- correctly aligning components listed above to operate within prescribed specifications

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- explaining the basic function and operation of components of pulse systems to enable testing for fault isolation/confirmation, to determine repair or overhaul requirements and serviceability status post-repair or overhaul
- explaining basic principles/functions relating to pulse system components and associated with:
 - advanced analogue fundamentals
 - digital fundamentals
 - AC and DC electrical systems
 - electromagnetic radiation
 - antenna and transmission line (including waveguide) characteristics
 - pulsed radar system operation

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test, troubleshoot and align/adjust circuitry of components from aircraft pulse systems in accordance with maintenance manuals and regulatory/industry procedures while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of testing, aligning and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft pulse system component repair and overhaul. Ability to interpret inspection and testing procedures and specifications (allowable limits) and apply them in practice is critical. It is essential that testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with.

Evidence of transferability of skills and knowledge related to testing, aligning and troubleshooting is essential. This may be demonstrated through application across a representative range of the components listed in Groups 1 to 6 in the Range Statement. The application of testing procedures should also clearly indicate knowledge of system operation before undertaking any action. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. Use of high precision, high reliability soldering techniques and handling of components, including application of anti-static equipment, must be demonstrated.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of components from two or more of Groups 1 to 6 in the Range Statement. This shall be established via the records in the Log of Industrial

	Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment would be used where appropriate.
Method of assessment	Assessment should be made across a sufficient number of components to establish the ability to apply attained skills and knowledge across the full range of pulse system components with the aid of applicable maintenance manuals and data.

Elements and Performance Criteria

1. Determine requirements
 - 1.1. Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers
 - 1.2. *System components* are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required
 - 1.3. Modification status is clearly established to assist in determining the overhaul requirements for the components
 - 1.4. Extent of overhaul or repair is correctly identified and documented
2. Troubleshoot instrument system components
 - 2.1. Available information from maintenance records and test results is used, where necessary, to assist in fault determination
 - 2.2. Logical processes are used to ensure efficient and accurate troubleshooting
 - 2.3. Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement
 - 2.4. System component faults are located and the causes of the faults are clearly identified
 - 2.5. Fault rectification requirements are determined to assist in planning the repair
3. Dismantle and inspect instrument system components
 - 3.1. System component parts are dismantled in accordance with maintenance manuals
 - 3.2. Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3. Parts requiring specialist repair are tagged and repair instructions are accurately specified
 - 3.4. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify instrument system components
 - 4.1. System component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures
5. Assemble, test and adjust instrument system components
 - 5.1. Assembly of component parts is carried out within specified tolerances and in accordance with the appropriate maintenance documents
 - 5.2. System components are adjusted or calibrated to operate within prescribed specifications

- 5.3. Finished components are tagged, sealed and packaged in accordance with specified procedures
- 5.4. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved repair/overhaul procedures and processes relating to instrument system components
- recognising the serviceability state and repair or overhaul requirements for:
 - mechanical instruments
 - electro-mechanical instruments
 - instrument sensors
- applying logic processes, and using test equipment and appropriate wiring diagrams and manuals to isolate components faults
- performing component testing to isolate/confirm component fault and assess post-repair/overhaul serviceability
- correctly disassembling, inspecting component parts, repairing/ replacing/modifying component parts and assembling components listed above
- correctly interpreting instrument and display information, symbols and readings

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- explaining the basic function and operation of the following components to enable testing for fault isolation/confirmation, to determine repair or overhaul requirements, and serviceability status post-repair or overhaul:
 - mechanical instruments
 - electro-mechanical instruments
 - instrument sensors
- explaining basic principles/functions relating to the above components and associated with:
 - AC and DC synchronous systems
 - servomechanisms
 - gyroscopes
 - vacuum and pressure-based indication methods (pitot/static and pressurisation)
 - advanced analogue fundamentals
 - electro-mechanical sensor signal generation

 - 3.3. Parts requiring specialist repair are tagged and repair instructions are accurately specified
 - 3.4. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify RF communication and navigation system components
 - 4.1. Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components or parts is undertaken, where required, by relevant manufacturers' bulletins or procedures
5. Assemble, test and adjust RF communication and navigation system components
 - 5.1. Assembly of component parts is carried out in accordance with specified tolerances and the applicable maintenance documents
 - 5.2. Assembled components are tested and adjusted/aligned in accordance with the applicable maintenance

documentation using the appropriate test equipment

5.3. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved repair/overhaul manuals, procedures and processes relating to analogue circuitry
- recognising the serviceability state and repair or overhaul requirements for aircraft RF communication and navigation system components
- applying logic processes, and using test equipment and appropriate wiring diagrams and manuals to isolate component faults
- performing component testing to isolate/confirm component fault and assess post-repair/overhaul serviceability
- correctly aligning components listed above to operate within prescribed specifications

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- explaining the basic function and operation of components of RF communication and navigation systems to enable testing for fault isolation/confirmation, to determine repair or overhaul requirements, and serviceability status post-repair or overhaul
- explaining basic principles/functions relating to RF communication and navigation system components and associated with:
 - advanced analogue fundamentals
 - digital fundamentals
 - AC and DC electrical systems
 - electromagnetic radiation
 - antenna and transmission line (including waveguide) characteristics
 - radio transmission/signal propagation and frequency modulation
 - GPS
 - satellite communications (industry specific)

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test, troubleshoot and align/adjust circuitry of components from aircraft RF communication and navigation systems in accordance with maintenance manuals and regulatory/industry procedures while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of testing, aligning and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft RF communication and navigation system component repair and overhaul. Ability to interpret inspection and testing procedures and specifications (allowable limits) and apply them in practice is critical. It is essential that testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with.

Evidence of transferability of skills and knowledge related to testing, aligning and troubleshooting is essential. This may be demonstrated through application across a representative range of the components listed in Groups 1 to 11 in the Range Statement. The application of testing procedures should also clearly indicate knowledge of system operation before undertaking any action. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. Use of high precision, high reliability soldering techniques and handling of components, including application of anti-static equipment, must be demonstrated.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of components from systems listed in Groups 1 to 11 in the Range Statement that are

	applicable to the enterprise. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment would be used where appropriate.
Method of assessment	Assessment should be made across a sufficient number of components to establish the ability to apply attained skills and knowledge across the full range of RF components with the aid of applicable maintenance manuals and data.
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
Communication and navigation system components	<p>Communication and navigation system components may be from the following aircraft systems:</p> <ol style="list-style-type: none"> 1. VHF communications 2. HF communications 3. UHF communications 4. Satellite communications 5. ELT 6. ARINC Communication Addressing and Reporting System 7. Intercommunication and public address 8. Co-requisite units

MEA260B Use electrical test equipment

MEA261C Use electronic test equipment

MEA286A Repair or overhaul aircraft electrical/electro-mechanical components

Modification History

Minor formatting and editorial changes made. Minor clarification made to the unit descriptor.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Component Workshop Maintenance Stream) training pathway. It covers the competencies required to repair or overhaul aircraft electrical and electro-mechanical components. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and knowledge of component repair and overhaul procedures relating to electrical and electro-mechanical components.

Applications include fixed and rotary wing aircraft components repaired or overhauled in aviation maintenance workshops

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Determine requirements
 - 1.1. Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers
 - 1.2. **Components** are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required
 - 1.3. Modification status is clearly established to assist in determining the overhaul requirements for the components
 - 1.4. Extent of overhaul or repair is correctly identified and documented
2. Troubleshoot electrical/electro-mechanical components
 - 2.1. Available information from maintenance records and test results is used, where necessary, to assist in fault determination
 - 2.2. Logical processes are used to ensure efficient and accurate troubleshooting
 - 2.3. Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement
 - 2.4. Electrical/electro-mechanical component faults are located and the causes of the faults are clearly identified
 - 2.5. Fault rectification requirements are determined to assist in planning the repair
3. Dismantle and inspect electrical/electro-mechanical components
 - 3.1. Component parts are dismantled in accordance with maintenance manuals
 - 3.2. Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3. Parts requiring specialist repair are tagged and repair instructions are accurately specified
 - 3.4. Parts lists are compiled and processed in accordance with standard enterprise procedure
4. Repair and/or modify electrical/electro-mechanical components
 - 4.1. Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures
5. Assemble, test and adjust electrical/electro-mechanical components
 - 5.1. Assembly of component parts is carried out within specified tolerances and in accordance with the appropriate maintenance documents

- 5.2. Components are adjusted or calibrated to operate within prescribed specifications
- 5.3. Finished components are tagged, sealed and packaged in accordance with specified procedures
- 5.4. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved repair/overhaul procedures and processes relating to electrical and electro-mechanical components
- recognising the serviceability state and repair or overhaul requirements for:
 - AC and DC motors, generators and alternators
 - static inverters
 - TRU
 - regulators/control units
 - actuators
 - solenoids and shutoff valves
 - engine ignition/starting components
- applying logic processes, and using test equipment and appropriate wiring diagrams and manuals to isolate component faults
- performing component testing to isolate/confirm component fault and assess post-repair/overhaul serviceability
- correctly disassembling, inspecting component parts, repairing/replacing/modifying component parts and assembling components listed above

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- explaining the basic function and operation of components listed below to enable testing for fault isolation/confirmation, to determine repair or overhaul requirements, and serviceability status post-repair or overhaul:
 - AC and DC motors, generators and alternators
 - static inverters
 - TRU
 - regulators/control units
 - actuators
 - solenoids and shutoff valves
 - engine ignition/starting components
- explaining basic principles/functions, relating to components listed above and associated with:
 - AC and DC power generation
 - circuit theory
 - analogue fundamentals
 - electro-mechanical interface

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to repair and overhaul a range of electrical and electro-mechanical components in accordance with applicable maintenance manuals and regulatory/industry procedures while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of repair or overhaul applications associated with electrical/electro-mechanical components listed in the Range Statement. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are fully observed, understood and complied with. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to repair is essential. This may be demonstrated through application across a range of aircraft electrical/electro-mechanical components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. The application of testing procedures should also clearly indicate knowledge of system operation before undertaking any action. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one component from each Group 1 to 4 as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment would be used where appropriate.

4. Assemble, test and adjust audio and video system and reproducer components
 - 4.1. Assembly of component parts is carried out in accordance with specified tolerances and the applicable maintenance documents
 - 4.2. Assembled components are tested and adjusted in accordance with the applicable maintenance documentation using the appropriate test equipment
 - 4.3. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved repair/overhaul procedures and processes relating to analogue and digital circuitry
- recognising the serviceability state and repair or overhaul requirements for digital electronic interface systems:
 - VCRs
 - video display systems
 - CRT display systems
 - symbol generators
 - audio amplifiers
 - audio selectors
 - voice recorders
 - microphones
 - head sets
 - PCUs
 - tape reproducers (and tape reproduction)
- applying logic processes, and using test equipment and appropriate wiring diagrams and manuals to isolate component faults
- performing component testing to isolate/confirm component fault and assess post-repair/overhaul serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component and system operation
- explaining the basic function and operation of audio and visual and reproducer components to enable testing for fault isolation/confirmation to determine repair or overhaul requirements, and serviceability status post-repair or overhaul
- explaining basic principles/functions relating to audio and visual and reproducer components and associated with:
 - advanced analogue fundamentals
 - basic logic and semiconductor theory
 - digital fundamentals
 - ESD precautions
 - AC and DC electrical systems
 - video display theory
 - video recorder theory
 - cleaning and maintenance techniques for video and recorder heads

- aircraft display systems
- symbol generation
- vector and raster graphics
- audio circuit theory
- sound measurement
- dB level standards
- audio tape control signals and recording techniques
- basic logic and semiconductor theory
- cleaning and maintenance techniques for audio recorder heads

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to repair and overhaul audio and video system and tape reproducer components in accordance with maintenance manuals and regulatory/industry procedures while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of repair or overhaul applications associated with audio and video system and tape reproducer components. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are fully observed, understood and complied with. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to repair, modification and overhaul is essential. This may be demonstrated through application across a range of components of the systems listed in the Range Statement. The application of testing procedures should also clearly indicate knowledge of system operation before undertaking any action. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. Use of high precision, high reliability soldering techniques and handling of components, including application of anti-static equipment, must be demonstrated.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on an item from each of Groups 1 to 11, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment would be used where appropriate.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required for the maintenance of avionic systems of the more basic types of both fixed and rotary wing aircraft. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the maintenance of basic aircraft avionic systems and components involving inspection, testing and troubleshooting and component removal and installation.

Applications include basic fixed wing and rotary wing aircraft where the avionic systems are limited to VHF communications, basic audio system, ADF and VOR radio navigation systems, stand-alone GNS and ATC transponder.

Licensing/Regulatory Information

Not applicable.

--	---

Elements and Performance Criteria

1. Inspect basic aircraft avionic systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.**Avionic systems** are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test/adjust basic aircraft avionic systems
 - 2.1.Aircraft and systems are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Avionic systems are functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
 - 2.3.System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot basic aircraft avionic systems
 - 3.1.Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.System faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required and in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined
4. Remove and install basic aircraft avionic system components
 - 4.1.System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted where necessary to ensure personnel safety
 - 4.2.**Avionic component** removal is carried out in accordance with the applicable maintenance manual
 - 4.3.Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 4.4.Removed components are tagged and packaged in accordance with specified procedures
 - 4.5.Avionic components to be installed are checked to

confirm correct part numbers, modification status,
serviceability and shelf life

- 4.6. Physical installation of avionic components is performed in accordance with the applicable maintenance manual
- 4.7. System is reinstated to correct operational condition in preparation for testing and calibration or adjustment, as necessary
- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the avionic system being maintained
- locating and identifying avionic system components comprising:
 - VHF communications systems
 - VOR and ADF navigation systems
 - basic audio systems
 - stand-alone GNS systems
 - ATC transponders
 - ELT systems
- locating and identifying applicable antennas
- recognising system and component defects/external damage, correct installation, attaching hardware (including cabling/harnesses/transmission lines) and security in the systems listed above
- applying logic processes, taking and interpreting system measurements to accurately and effectively isolate malfunctions within the above systems
- testing listed systems to isolate system faults and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection of hardware, and plugs
- handling precautions for electrostatic sensitive devices
- the basic layout (block diagram level), function and operation of:
 - VHF communications systems
 - VOR and ADF navigation systems
 - basic audio systems
 - stand-alone GPS systems
 - ATC transponders
 - ELT systems
- basic principles/functions, relating to the above systems and associated with:
 - electromagnetic radiation and propagation
 - basic AC and DC circuit theory
 - printed circuit boards
 - digital fundamentals
 - analogue fundamentals

- transmitter and receiver principles
- pulse
- antenna characteristics
- transmission line characteristics
- fibre optic communications
- maintenance requirements and troubleshooting procedures
- applicable maintenance data and manuals
- relevant OHS practices
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot basic aircraft avionic systems and remove and install system components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with basic aircraft avionic systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting and component removal and installation is essential. This is to be demonstrated through application across a range of avionic systems and components listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on each system in Range Statement Groups 1 to 7 and on at least one major component/LRU in each case. Component removal and installation competencies are to be demonstrated on at least one component from each of Groups 8 to 12. This shall be established via the records in the Log of Industrial Experience and Achievement or,

	where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Avionic systems	Avionic systems may include: <ol style="list-style-type: none"> 1. VHF communication 2. Basic audio systems, such as intercom and audio selection 3. ADF 4. VOR 5. Stand-alone GPS 6. ATC transponder 7. ELT
Troubleshooting	Troubleshooting involves the use of test sets, maintenance data and fault-finding charts or similar, to line replacement level
Avionic components	Avionic components include: <ol style="list-style-type: none"> 8. Transmitters and receivers 9. Antennas and antenna cables 10. Control boxes and frequency selectors 11. Speakers 12. Switches
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA290A Fit avionic modification sheetmetal components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required for the performance of sheetmetal work associated with the incorporation of avionic modifications on small aircraft.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications and modification documentation to perform sheetmetal work associated with avionic modifications being incorporated on small aircraft.

Applications include small fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|---|
| 1. Prepare to fit avionic modification sheetmetal components | 1.1.Applicable sheetmetal components are identified in accordance with applicable modification instructions and maintenance documentation |
| | 1.2.All required materials and equipment are selected and organised in accordance with the applicable modification instructions and maintenance documentation |
| 2. Fit avionic modification sheetmetal components | 2.1. <i>Sheetmetal components</i> are fitted in accordance with the modification instructions, ensuring that aircraft standard practices are used and standard process requirements are carried out |
| | 2.2.Work area is cleaned of all waste material |
| 3. Complete modification activities | 3.1.Required documentation is accurately completed and correctly processed in accordance with enterprise procedures |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft sheetmetal components
- identifying various aircraft metals used for sheetmetal components and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals used for sheetmetal components, including sealing agents, to industry standards
- identifying aircraft sheetmetal assembly fasteners (metal and non-metallic) by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting, modification drawings and hand sketches
- using appropriate hand tools and machines to fit avionic modification sheetmetal components to the aircraft
- freehand precision hole generation
- applying corrosion prevention techniques during component fitment
- restoring sealing and surface finishes

Required knowledge

Look for evidence that confirms knowledge of:

- aircraft sheetmetal component construction principles
- identification of primary, secondary and tertiary structure
- aircraft sheetmetal assembly fasteners, their characteristics and identification
- fits and clearances for fasteners
- fitting methods for fasteners
- use of grip pins
- corrosion of aircraft structure and its prevention
- application of surface finishes
- relevant OHS procedures
- how to obtain MSDS
- use of PPE

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications and modification instructions to correctly fit small aircraft avionic modification sheetmetal components while applying all relevant safety precautions.</p>

MEA291A Inspect, test and troubleshoot fixed wing single axis autopilot systems and components

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Avionic Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot single axis autopilot systems and components of fixed wing aircraft.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot fixed wing single axis autopilot systems and components.

Applications include fixed wing aircraft that have single axis autopilot systems, including those with radio navigation system interfaces.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA207C Remove and install aircraft electronic system components

MEA246C Fabricate and/or repair aircraft electrical components or parts

Employability Skills Information

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Inspect fixed wing single axis autopilot systems and components
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.Single axis autopilot system and components are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test/adjust fixed wing single axis autopilot systems and components
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Autopilot systems are functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
 - 2.3.System calibration or adjustments are performed in accordance with maintenance manual, as appropriate
3. Troubleshoot fixed wing single axis autopilot systems
 - 3.1.Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate ***troubleshooting***
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.Autopilot system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using approved maintenance documentation and aircraft publications relating to the single axis autopilot system being maintained
- recognising system and component defects/external damage, correct installation, connection of plugs, terminations, attaching hardware (including cabling/harnesses) and security in:
 - autopilot system components
 - radio navigation system interfaces
- applying logic processes, taking and interpreting system measurements, and using test equipment and appropriate wiring diagrams and manuals, to accurately and effectively isolate system malfunctions
- testing the system to isolate system malfunctions and assess post-maintenance serviceability

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- the basic layout (block diagram level), function and operation of:
 - autopilot system components
 - interface with radio navigation systems
- autopilot system maintenance requirements and troubleshooting procedures
- relevant OHS practices
- basic principles/functions, relating to the listed systems and associated with:
 - basic AC and DC circuit theory
 - digital fundamentals
 - analogue fundamentals
 - fixed wing flight theory
 - inner and outer loop control
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot fixed wing single axis autopilot systems and components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with fixed wing aircraft single axis autopilot systems and components. It is essential that system testing procedures, cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This is to be demonstrated through application across an autopilot system and its components. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on an autopilot system and its components. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in the maintenance manuals. It is also expected that

	general and special purpose tools, test and ground support equipment, would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA301C Perform aircraft flight servicing

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of Avionic and Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required to perform maintenance and system replenishment activities associated with flight servicing. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and standard trade practices in the performance of pre and post-flight servicing activities and the application of aircraft ground handling procedures.

Applications include the performance of flight servicing on both fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare for flight
 - 1.1. Aircraft is positioned as required
 - 1.2. Ground locks, aircraft support and safety devices and covers are removed and stowed in accordance with *maintenance documentation*
 - 1.3. Aircraft tie-down devices are removed and stowed/stored
2. Inspect aircraft and systems
 - 2.1. Preparation of the aircraft and systems is appropriate to allow for proper inspection
 - 2.2. Aircraft and systems are visually or physically checked for external signs of defects in accordance with maintenance documentation
3. Replenish aircraft systems
 - 3.1. Fluid level checks and replenishments are carried out in accordance with maintenance documentation requirements
 - 3.2. Maintenance of gaseous levels (nitrogen and compressed air) is carried out in accordance with maintenance documentation requirements
 - 3.3. Role equipment/components requiring pre-flight replacement are changed as required by maintenance documentation
 - 3.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- ground handling of aircraft
- using hand skills and tools to perform flight servicing activities
- correctly installing and securing of aircraft hardware
- locating, using and correctly stowing aircraft safety and security equipment (including ground locks, covers, support and safety devices and tie-down devices)
- applying ground power (where applicable)
- inspecting structure for damage and deterioration
- recognising external signs of component damage, leakage and security in aircraft systems
- recognising visual signs of damage, leakage and security with regard to engines and propellers (where applicable)
- refuelling the aircraft with the correct type, quantity and distribution of fuel
- checking and replenishing fluid level using the correct fluids
- recharging of gaseous levels using the correct support equipment and procedures
- checking fire protection systems (where applicable) for correct gas charge levels and portable fire-extinguishers for serviceability and correct stowage
- replacing role equipment requiring pre-flight replacement
- using maintenance data and manuals to determine flight servicing requirements and procedures
- applying standard procedures
- observing all relevant OHS procedures, including the use of MSDS and items of PPE

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- the aircraft structure to the extent required to be able to recognise typical types of structural damage and deterioration during flight servicing activities
- system layout, operation and typical external signs of faults to the extent required to perform flight servicing activities
- aircraft flight servicing requirements
- ground de-icing of aircraft
- aircraft ground handling procedures including towing and marshalling
- aircraft safety and security equipment including:
 - ground locks
 - wheel chocks
 - covers
 - support and safety devices
 - tie-down devices and picketing
- types and characteristics of fuels and fuel additives

- types and characteristics of lubricants
- types and characteristics of hydraulic fluids
- OHS procedures relating to flight servicing activities
- how to obtain MSDS
- selection and use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Remove hydro-mechanical system components
 - 1.1. *Hydro-mechanical system* is rendered safe and prepared in accordance with the applicable maintenance manual, including fitment of isolation tags, where necessary, to ensure personal safety
 - 1.2. Removal of *hydro-mechanical components* is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is accurately completed and correctly processed
 - 1.4. Removed components are tagged, sealed and packaged in accordance with specified procedures
2. Remove landing gear components
 - 2.1. The aircraft is jacked as specified in the maintenance manual for *landing gear component* removal
 - 2.2. Removal of components is carried out in accordance with the applicable maintenance manual
 - 2.3. Required maintenance documentation is accurately completed and correctly processed
 - 2.4. Removed components are tagged, sealed and packaged in accordance with specified procedures
3. Install hydro-mechanical system components
 - 3.1. Components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 3.2. Component installation is carried out in accordance with the applicable maintenance manual
 - 3.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
4. Install landing gear components
 - 4.1. Components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 4.2. Component installation is carried out in accordance with the applicable maintenance manual
 - 4.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills and tools to remove and install hydraulic and fuel system components
- jacking of the aircraft, as required, for landing gear component removal and installation
- correctly installing and securing of aircraft hardware
- using hand skills and tools to remove and install landing gear components and the correct handling of heavy components
- using maintenance manuals to prepare the aircraft for component removal and installation and correct interpretation of removal and installation instructions
- applying standard procedures
- observing all relevant OHS procedures, including the use of MSDS and relevant items of PPE

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- hydraulic fluids (mineral and synthetic) and handling precautions
- hydraulic seal types and applications
- how to locate and correctly remove and install components of hydraulic systems
- aircraft fuels and handling precautions
- fuel seal types and applications
- how to locate and correctly remove and install fuel system components
- electrical circuit isolation and plug removal and installation
- how to jack the aircraft for landing gear component removal and installation
- how to locate and correctly remove and install landing gear components, including the handling of heavy components
- OHS procedures relating to hydraulic systems, fuel systems and landing gear components
- how to obtain MSDS
- the selection and use of items of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to remove and install a range of hydraulic and fuel system and landing gear components in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable into other units that require similar techniques. It is essential that system cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with.

Evidence of transferability of skills and knowledge related to removal and installation is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types, but must cover a sufficient range of tasks to demonstrate familiarity with attachment methods, connection hardware and couplings peculiar to each type of system, and of safe handling of heavy components. An understanding of system operation as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on each type of system and on at least one component of each Group listed in the Range Statement, as follows:

- Hydraulic systems - preparation of a system for safe component removal and replacement of at least one component from each of hydro-mechanical system components 3 and 5
- Fuel systems - preparation of a system for safe component removal and replacement of at least one component from each of 4 and 5
- Landing gear components - one each of 6 to 8.
Coverage of brakes and struts/oleos are not required

	<p>where the aircraft is rotary wing and is fitted with skids or floats.</p> <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
Context of and specific resources for assessment	<p>Competency should be assessed in the work environment or simulated work environment, using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>

Pre-Requisites

- ME A101B Interpret occupational health and safety practices in aviation maintenance
- ME A103B Plan and organise aviation maintenance work activity
- ME A105C Apply quality standards applicable to aviation maintenance processes
- ME A107B Interpret and use aviation maintenance industry manuals and specifications
- ME A108B Complete aviation maintenance industry documentation
- ME A109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|---------------------------------------|---|
| 1 Remove pneumatic system components | <p>1.1 Pneumatic system is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety</p> <p>1.2 Removal of <i>components</i> is carried out in accordance with the applicable maintenance manual</p> <p>1.3 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> <p>1.4 Removed components are tagged, sealed and packaged in accordance with specified procedures</p> |
| 2 Install pneumatic system components | <p>2.1 Components to be installed are checked to confirm correct part numbers, serviceability and modification status</p> <p>2.2 Installation is carried out to pneumatic system in accordance with the applicable maintenance manual</p> <p>2.3 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- connection hardware and couplings
- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- how to locate and correctly remove and install components of:
 - pneumatic systems
 - air cycle air conditioning system components
 - pressurisation system components
 - fire-extinguishers, including the ozone-depleting properties of halons and special precautions and handling requirements for BCF fire-extinguishers
- electrical circuit isolation and plug removal and installation
- OHS procedures relating to pneumatic, air conditioning and pressurisation systems
- how to obtain MSDS
- the selection and use of items of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures, including those relating to the handling and control of halon fire extinguishers

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - locate and correctly remove and install components in pneumatic systems, including fire-extinguishing systems
 - locate and correctly remove and install components in air cycle air conditioning systems
 - locate and correctly remove and install components in pressurisation systems
 - correctly remove and install rigid and flexible pipelines
 - correctly remove and install ducting

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to remove and install aircraft pneumatic system components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other units that require similar techniques. It is essential that system cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types, but must cover a sufficient range of tasks to demonstrate familiarity with attachment methods, connection hardware and couplings peculiar to each type of system, and of safe handling of heavy components. An understanding of system operation as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on one item from each of Groups 1 to 6 (Group 6 may be omitted where not applicable to enterprise) in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>

Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA355A Maintain light aircraft air cycle air conditioning systems, and/or MEA356A Maintain light piston engine aircraft pressurisation systems, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA355A Maintain light aircraft air cycle air conditioning systems and MEA356A Maintain light piston engine aircraft pressurisation systems, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Pneumatic components</p>	<p>Pneumatic components may include:</p> <ol style="list-style-type: none"> 1. Filters, valves, pumps, motors, actuators and regulators 2. Gauges (direct reading), temperature sensors, pressurisation controllers and temperature controllers 3. Heat exchangers, pressure vessels, condensers, compressors, expansion turbines and humidifiers 4. Rigid and flexible pipelines, hoses and fittings 5. Ducting 6. Fire-extinguishers, including those containing halons (e.g. BCF) (where applicable to enterprise)
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities • pneumatic systems, including pressurisation, air cycle air conditioning systems and fire-extinguishing systems
<p>Procedures and requirements</p>	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

MEA304C Remove and install non-pressurised aircraft structural and non-structural components

Modification History

Minor formatting and editorial changes made. Unit codes referred to in the Range Statement updated. Additional assessment advice provided in the Evidence Guide.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It may also be part of a Structures Maintenance Certificate IV training pathway. This unit covers the competencies required for the removal and installation of both structural and non-structural components of non-pressurised fixed and rotary wing aircraft. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and maintenance publications to remove and install structural and non-structural components from non-pressurised aircraft.

Applications include both fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA302C Remove and install aircraft hydro-mechanical and landing gear system components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Remove components
 - 1.1. Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage to aircraft or component during ***component*** removal
 - 1.2. Component removal is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Where applicable, removed components are tagged and prepared for transport in accordance with specified procedures
2. Install components
 - 2.1. Structural and/or non-structural components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 2.2. Component installation is carried out in accordance with the applicable maintenance manual
 - 2.3. Support/safety equipment is removed at an appropriate time to ensure personnel safety and freedom from structural damage
 - 2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - remove and install structural and non-structural components
 - remove and install aircraft interior fittings
 - remove and install doors, door seals, windows and transparent panels
 - checking and adjusting all doors and access panels including locking mechanisms
 - remove and install emergency equipment

Required knowledge

Look for evidence that confirms knowledge of:

- structural and non-structural component methods of construction and attachment, faying surface treatment and fuel tank sealing
- non-pressurised fuselage aircraft doors, related seals and window and transparent panel construction, attachment methods and sealing
- aircraft interior fittings (trim, linings, seats, floor panels, and so on) construction and attachment methods
- the location and attachment or stowage methods for emergency equipment
- relevant OHS practices
- how to obtain MSDS
- use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use maintenance manuals and applicable tools to remove and install removable structural and non-structural components from non-pressurised aircraft while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other units that require similar techniques. It is essential that shoring, trestling and lifting requirements and safety precautions applicable to the structure being maintained are fully observed, understood and complied with.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This may be demonstrated through application across a representative range of the areas listed in the Range Statement. An understanding of component handling, attachment methods, adjustment and sealing as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each Group 1 to 6, as listed in the Range Statement. Elements and Performance Criteria

- | | |
|--|--|
| 1. Remove fixed wing flight control system components | <p>1.1. System is rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety</p> <p>1.2. Fixed wing <i>flight control system component</i> removal is carried out in accordance with the applicable maintenance manual</p> <p>1.3. Required maintenance documentation is accurately completed and correctly processed</p> <p>1.4. Removed components are tagged, sealed and packaged in accordance with specified procedures</p> |
| 2. Install fixed wing flight control system components | <p>2.1. Components to be installed are checked to confirm correct part numbers, serviceability and modification status</p> <p>2.2. Mass balance of control surfaces to be installed is checked in accordance with the applicable maintenance manual, if required</p> <p>2.3. Installation is carried out in accordance with the applicable maintenance manual</p> <p>2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices
- using relevant maintenance documentation and aircraft manuals to:
 - remove flight control surfaces
 - check the mass balance of control surfaces where required
 - install flight control surfaces
 - remove power flight control system components
 - install power flight control system components
 - remove mechanical flight control system components
 - install mechanical flight control system components

Required knowledge

Look for evidence that confirms knowledge of:

- flight control surface and system component attachment methods
- connection hardware and couplings
- electrical circuit isolation and plug removal and installation
- requirements for balancing of control surfaces
- flight control system rigging requirements
- requirements for independent inspection of work performed on flight control systems and components
- relevant OHS practices
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Support/safety equipment is removed at the appropriate time to ensure personnel safety and freedom from structural damage</p> <p>4.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including lifting and handling heavy components
- using MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - correctly remove and install engines, engine change units and APUs
 - prepare removed engines for transportation and/or storage
 - locate and correctly remove and install the range of engine system components listed in the Range Statement
- identifying the requirement for adjustment and rigging of systems and controls after the installation of engines or system components

Required knowledge

Look for evidence that confirms knowledge of:

- removal and installation procedures for aircraft:
 - engines
 - engine change units
 - APUs
- engine inhibiting and de-inhibiting procedures
- layout, installation and connection of components of:
 - fuel systems
 - lubrication systems
 - air systems
 - super and turbo charging systems
 - exhaust systems
 - ignition and igniter systems
 - starting systems
 - fire protection systems
- accessories and associated drives
- engine control system component removal and installation including the requirement for rigging and for the independent inspection of work performed
- engine maintenance documentation and manuals
- relevant OHS practices, including those relating to the lifting and handling of heavy items
- how to obtain MSDS
- use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including lifting and handling heavy components
- using MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - correctly remove and install propellers and related components such as spinners
 - locate and correctly remove and install pitch control system components
 - locate and correctly remove and install propeller de-icing system components
- identifying requirements for adjustment and rigging of systems and controls

Required knowledge

Look for evidence that confirms knowledge of:

- propeller attachment methods and removal and installation procedures
- propeller system component attachment methods for:
 - spinners
 - governors
 - beta control systems
 - de-ice and anti-ice systems
- controls and control linkages, including the requirement for rigging and for independent inspection of work performed
- electrical circuit isolation, plug removal and installation
- relevant OHS practices, including those relating to lifting and handling of heavy items
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to remove and install propellers and propeller system components on propeller-driven fixed wing aircraft while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other units that require similar techniques. It is essential that shoring, trestling and lifting requirements and safety precautions applicable to propeller system maintenance are fully observed, understood and complied with, and that an awareness is demonstrated of dual inspection requirements.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This may be demonstrated through application across a representative range of propeller system components. An understanding of component attachment methods, the need for adjustment or rigging and system operation as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 4 in the Range Statement (Group 5 may be omitted where it is not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>

Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Propeller system components	<p>Propeller system components may include:</p> <ol style="list-style-type: none"> 1. Propellers, including spinners, where fitted 2. Constant speed, feathering and reversing propeller drives 3. Beta control systems and governors 4. Controls and linkages 5. De-ice/anti-ice equipment
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

Modification History

Minor formatting and editorial changes made. Additional assessment advice provided in the Evidence Guide.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required for the removal and installation of rotary wing aircraft rotors and flight control system components. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications to remove and install rotors and associated flight control system components.

Applications include rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA302C Remove and install aircraft hydro-mechanical and landing gear system components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Remove rotary wing rotor
 - 1.1. System is rendered safe and prepared in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 1.2. Isolation and warning signs are installed/fitted to ensure personnel safety
 - 1.3. **Rotary wing rotor** removal is carried out in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 1.4. Required aircraft maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.5. Removed components are labelled, sealed and packaged in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
2. Remove rotary wing flight control system components
 - 2.1. System is rendered safe and prepared in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 2.2. Isolation and warning signs are installed/fitted to ensure personnel safety
 - 2.3. Rotary wing **flight control system component** removal is carried out in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 2.4. Required aircraft maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 2.5. Removed components are labelled, sealed and packaged in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
3. Install rotary wing rotor
 - 3.1. Rotor to be installed is checked to confirm correct part or model numbers, modification status and serviceability
 - 3.2. Mass balance of rotor blades/head is checked in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 3.3. Installation is carried out in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
 - 3.4. Support/safety equipment is removed at the appropriate time to ensure personnel safety and freedom from structural damage
4. Install rotary wing flight control
 - 4.1. Rotary wing flight control system components to be installed are checked to confirm correct part or model numbers,

system components

modification status and serviceability

- 4.2. Installation is carried out in accordance with relevant aircraft publications/maintenance regulations/orders and standards and practices
- 4.3. Support/safety equipment is removed at the appropriate time to ensure personnel safety and freedom from structural damage
- 4.4. Required aircraft maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including lifting and handling heavy components
- using relevant maintenance documentation and aircraft manuals to:
 - correctly remove and install main rotors and rotor heads
 - check the mass balance of rotor blades and heads
 - correctly remove and install tail rotor blades and pitch control assemblies
 - locate and correctly remove and install mechanical flight control system components
 - locate and correctly remove and install drive train components, such as gearboxes and drive shafts and couplings
 - identify the requirements for component balancing
- identifying the requirements for adjustment and rigging of systems after component removal and installation

Required knowledge

Look for evidence that confirms knowledge of:

- component attachment methods
- removal and installation procedures for:
 - main rotors and rotor blades
 - rotor heads
 - tail rotors and tail rotor blades
 - swash plates
 - tail rotor pitch control assemblies
- requirements for the checking and adjustment of blade tracking after rotor maintenance
- control system layout, linkages and operation (operation only to the extent necessary for the specified tasks) including the requirement for rigging and the independent inspection of work performed
- power train layout and assembly:
 - main rotor gearboxes
 - intermediate gearboxes
 - tail rotor gearboxes
 - drive shafts
 - couplings
- relevant OHS practices, including those relating to lifting and handling of heavy items
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to remove and install rotary wing aircraft rotors and flight control system components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other units that require similar techniques. It is essential that safety precautions applicable to the rotary wing rotor and flight control system components being maintained, including allowance for the effect on weight and balance (i.e. cg) when heavy components are removed, are fully observed, understood and complied with.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This may be demonstrated through removal and installation of a representative range of the rotary wing rotor and flight control system components. An understanding of component attachment methods, the need for adjustment or rigging and system operation as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 6 in the Range Statement. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Inspect hydro-mechanical systems and components
 - 1.1. Isolation tags already attached to the system or related systems are checked and aircraft configured for safe system inspection and operation in accordance with specified procedures
 - 1.2. **Hydro-mechanical system and system components** are visually or physically checked for external signs of defects in accordance with specified procedures
2. Inspect landing gear systems and components
 - 2.1. Isolation tags already attached to the system or related systems are checked and aircraft configured, including jacking, where necessary, for safe system inspection and operation in accordance with specified procedures
 - 2.2. **Landing gear system and system components** are visually or physically checked for external signs of defects in accordance with specified procedures
3. Test hydro-mechanical and landing gear systems
 - 3.1. The aircraft and hydro-mechanical systems are correctly prepared in accordance with specified procedures for the application of power
 - 3.2. Power is applied and system functionally tested in accordance with specified procedures for evidence of malfunction or leaks
 - 3.3. System calibration or adjustments are performed in accordance with specified procedures
4. Prepare for troubleshooting
 - 4.1. Relevant maintenance documentation and modification status, including system defect/ service difficulty reports where relevant, are interpreted to identify an unserviceability
5. Troubleshoot hydro-mechanical and landing gear systems
 - 5.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 5.2. Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate **troubleshooting**
 - 5.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 5.4. Hydro-mechanical and landing gear system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 5.5. Fault rectification requirements are determined to assist in planning the repair or adjustment

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills and tools in the inspection, adjustment and troubleshooting of hydraulic, fuel and landing gear systems
- using hand skills and tools in the inspection, adjustment and troubleshooting of hydraulic and fuel system components
- jacking of the aircraft as required for landing gear system inspection, testing and troubleshooting
- using hand skills and tools in the inspection, adjustment and troubleshooting of landing gear components
- using of maintenance manuals to prepare the aircraft for inspection, testing and troubleshooting of hydro-mechanical and landing gear systems and components
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process
- recognising external defects in hydro-mechanical and landing gear systems and components
- applying standard procedures
- observing all relevant OHS practices, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- fluid power theory
- hydraulic system layout, operation and characteristics (including electrical system interfaces) and system component construction and operation for:
 - flight control systems including primary controls, flaps, speed brakes and spoilers
 - landing gear retraction systems
 - brake and anti-skid systems
 - nosewheel steering systems
- fuel system and component layout, operation and characteristics (including electrical system interfaces) and system component operation and construction
- construction and operation of landing gear components, including:
 - wheel assemblies
 - skids
 - floats
 - struts/oleos
 - uplocks and downlocks
 - mechanical linkages
- how to configure the aircraft for inspection, testing and troubleshooting of hydraulic, fuel and landing gear systems and components
- maintenance requirements and troubleshooting procedures

- relevant OHS practices relating to hydraulic systems, fuel systems and landing gear components, including lifting and handling of heavy items
- how to obtain MSDS
- selection and use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot a range of hydraulic and fuel system and landing gear components that are representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard procedures. Coverage of brakes and struts/oleos are not required where the aircraft is rotary wing and is fitted with skids or floats.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft hydro-mechanical and landing gear systems and their components.

It is essential that system test procedures take into account all safety precautions applicable to the system being maintained, especially where system operation/switching inter-relates to other systems being maintained. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action.

The work plan should take account of applicable safety (including safe handling of heavy components) and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision

	<p>on:</p> <ul style="list-style-type: none"> • each type of system (Groups 1, 2, 6, 7, 8) • on at least one component of each group listed in the Range Statement against hydro-mechanical system components 3 to 5 • landing gear system components 9 to 11 <p>Where the aircraft is rotary wing and is fitted with skids or floats coverage of Groups 6, 7, 8, 10 and 11 is not required and where a rotary wing aircraft is fitted with a fixed undercarriage with wheels coverage of Groups 6 and 7 is not required. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment, using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.</p>

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills and tools in the inspection, adjustment and troubleshooting of pneumatic systems
- using hand skills and tools in the inspection, adjustment and troubleshooting of pneumatic system components
- using maintenance manuals to prepare the aircraft for inspection, testing and troubleshooting of pneumatic systems and components
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process
- recognising external defects in pneumatic systems and components
- applying standard procedures
- observing all relevant OHS practices

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- pneumatic system:
 - layout
 - operation and characteristics
 - component operation and construction
 - electrical and instrument system interfaces
- how to configure the aircraft for inspection, testing and troubleshooting of pneumatic systems and components
- pneumatic system maintenance requirements and troubleshooting procedures
- OHS procedures relating to pneumatic systems and components
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures, including those relating to the handling and control of halon fire-extinguishers

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to inspect, test and troubleshoot a range of pneumatic systems and components while applying all relevant OHS procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft pneumatic systems and their components. It is essential that system test procedures take into account all safety precautions applicable to the system being maintained, especially where system operation/switching interrelates to other systems being maintained. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on each type of system (Groups 1 to 4) and on at least one component from each of Groups 5 to 9, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for

Competency should be assessed in the work environment

assessment	or simulated work environment, using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA355A Maintain light aircraft air cycle air conditioning systems, and/or MEA356A Maintain light piston engine aircraft pressurisation systems, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA355A Maintain light aircraft air cycle air conditioning systems, and MEA356A Maintain light piston engine aircraft pressurisation systems, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Pneumatic systems and components	<p>Pneumatic systems include:</p> <ol style="list-style-type: none"> 1. De-icing 2. Air cycle air conditioning 3. Pressurisation 4. Fire-extinguishing <p>Components of pneumatic systems include:</p> <ol style="list-style-type: none"> 5. Filters, valves, pumps, motors, actuators, regulators 6. Gauges (direct reading), temperature sensors, pressurisation controllers, temperature controllers 7. Heat exchangers, pressure vessels, condensers, compressors, expansion turbines, humidifiers 8. Rigid and flexible pipelines, hoses and fittings 9. Ducting
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Electrical interface	The work can include associated electrical loom terminations and/or plugs
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or tea- related activities

|-------------------------------|---|
| 1 Inspect aircraft structure | <p>1.1 Relevant maintenance documentation and modification status, including defect reports, where relevant, are used to identify <i>specific inspection requirements</i></p> <p>1.2 Appropriate preparation and access to the aircraft structure is undertaken to allow for proper inspection in accordance with maintenance documentation</p> <p>1.3 Aircraft structure is visually or physically checked for signs of deformation defects or damage in accordance with maintenance documentation and approved procedures</p> <p>1.4 Damage or defects are assessed against damage or wear limits specified by structural repair manual or other approved data to determine if repair or replacement is required</p> |
| 2 Prepare to undertake repair | <p>2.1 Extent of damage is correctly assessed to assist in determining <i>repair</i> procedure</p> <p>2.2 Structure is supported and prepared, in accordance with the applicable maintenance manual, to ensure personnel safety and freedom from damage</p> <p>2.3 Jigs, fixtures or bracing are used, as required, to maintain shape and/or alignment</p> <p>2.4 Appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data</p> <p>2.5 Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or where damage is beyond specified limits</p> <p>2.6 All materials and equipment required are organised</p> |

- 3 Repair/modify aircraft structure
 - 3.1 Required maintenance/repair documentation is accurately completed and correctly processed
 - 3.2 Structural repairs/modifications are performed, in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out
 - 3.3 Work area is cleaned of all waste material or contaminants
 - 3.4 Required mensuration/alignment checks are completed and components are adjusted, where necessary, to operate within prescribed specifications
 - 3.5 Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required
 - 3.6 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- aircraft construction principles and structural component attachment methods:
 - types of aircraft structure
 - structural loads
 - loads under various conditions of flight
 - causes of structural failure
 - attachment methods:
- bolts and screws
- solid and blind rivets
- close tolerance fasteners
- bonding
- the construction methods used in:
 - fuselage sections
 - wing sections
 - engine nacelles and mounts
 - windows and window frames
 - doors, locks and access panels in pressurised and non-pressurised aircraft
- describing various aircraft metals and their basic properties:
 - ferrous
 - non-ferrous
- aircraft plastic transparency construction methods and common defects
- glass windscreen basic constructional features and common defects
- composite materials:
 - terminology
 - materials used for minor repairs
 - OHS requirements
- aircraft structure inspection requirements:
 - metallic structure
 - non-metallic/composite structure (other than wood and fabric)
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- NDT methods and application of the various techniques
- assessment of structural damage:
 - types and classes of mechanical damage
 - types of corrosion and determining the extent of damage
 - relevant documentation and manuals

- damage limits and repair schemes for metallic and non-metallic structure
- procedures for the fabrication and fitment of metal repairs:
 - scab patch
 - flush patch
 - splice
 - lap
 - formed section
- corrosion removal and passivation
- procedures for performing composite repairs:
 - external patch
 - scarf patch
 - stepped repairs
- procedures for replacement of primary structure components, such as:
 - fuselage frames and longerons
 - wing spars or spar caps
 - wing-to-fuselage attachment fittings
 - tailplane attachment fittings
- aircraft mensuration checks – when required and methodology
- repair of integral fuel tanks and sealing of faying surfaces, including specific OHS and PPE requirements
- surface finishes and methods of restoration
- how to obtain MSDS
- relevant maintenance and structural repair manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS regulations and practices, including the use of MSDS and PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- demonstrating appropriate cleaning procedures to enable structure inspection
- demonstrating correct inspection procedures, in particular pressurised aircraft, in accordance with aircraft and procedures manuals
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of:
 - impact
 - fatigue
 - corrosion
- identifying the various forms of structural corrosion, stating the causes and structural effects of corrosion on aircraft
- identifying composite materials used in aircraft construction, associated safety precautions and hazard
- inspecting damage and assessing composite components/structures

- handling and storing aircraft metals and composite materials, including sealing agents, to industry standards
- identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting and/or producing repair scheme/modification drawings, including third angle projection, isometric, sectional formats and hand sketches
- using appropriate hand tools and machines to remove and assemble aircraft structural components, parts, sections and skin, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
 - a range of close tolerance fasteners (standard and oversize – hillocks and taper locks), including hole preparation
 - threaded devices, including internal and external thread cutting, Helicoil inserts and damaged stud replacement
 - hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- correctly supporting the aircraft structure by jacking, trestling and/or jiggling methods
- performing a range of metal structure and composite material repair techniques, including:
 - metal scab patch, flush, splice, lap and formed section repair
 - composite external patch, scarf and stepped repairs
 - metal to metal and metal to composite bonding
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use maintenance manuals, repair scheme drawings and applicable tools to inspect and repair/modify aircraft structure while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of inspection, testing and repair applications associated with aircraft maintenance. It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.</p> <p>Evidence of transferability of skills and knowledge related to inspection, testing and repair of aircraft structure is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. Ability to interpret inspection and repair procedures and specifications and apply them in practice is critical. The application of the procedures should also clearly indicate knowledge of structural flight loads and aerodynamic requirements.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one inspection task from each of Groups 1 to 8 and at least one repair task from each of Groups 9 to 17, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for</p>	<p>Individuals being assessed who have already attained</p>

assessment	<p>MEA339C Inspect, repair and maintain aircraft structures or MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft, will have met the requirements of the Performance Criteria and Range Statement variables for Elements 1 to 3 for common Range Statement variables. Those who have attained MEA401C Inspect aircraft structures, will have met the Performance Criteria and Range Statement variables requirements for Element 1. Log of Industrial Experience and Achievement records relating to MEA339C Inspect, repair and maintain aircraft structures, MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft, and MEA401C Inspect aircraft structures, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.</p>
-------------------	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Specific inspection requirements and repair tasks</p>	<p>Specific inspection requirements may cover:</p> <ol style="list-style-type: none"> 1. Non-ferrous and ferrous alloys and composite (FRP) materials used in aircraft construction 2. Structural fastening and attachment hardware and/or devices 3. Seals and sealants 4. Glass and moulded plastics 5. Application of NDT techniques 6. Doors, hinges and locking mechanisms for damage/misalignment 7. Inspections applicable to each of safe life, damage tolerant and fail safe structure relevant to enterprise 8. Ageing aircraft inspection programs <p>Repair tasks may include:</p> <ol style="list-style-type: none"> 9. Removing corrosion by chemical and mechanical methods 10. Restoring protective coatings 11. Applying sealants and jointing compounds 12. Freehand precision hole generation 13. Removing and installing structural hardware and fastening devices 14. Removing and replacing bushes, bearings and bearing surfaces 15. Removing and repairing damaged sections and reinstalling 16. Repairing by replacement major load-carrying structural members, i.e. skins, longerons, spars, frames

	and bulkheads 17. Minor repairs to non-metallic materials
Inspection techniques	Inspection techniques may include: <ul style="list-style-type: none"> • visual inspection • physical checks • mensuration and alignment
Assembly stress defects	Assembly stress defects can refer to: <ul style="list-style-type: none"> • oil canning • buckling • contour misalignment

MEA312C Inspect, test and troubleshoot aircraft fixed wing flight control systems and components

Modification History

Minor formatting and editorial changes made. Additional assessment advice provided in the Evidence Guide.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot fixed wing aircraft flight control systems and components. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications and knowledge of system theory to inspect, test and troubleshoot aircraft flight control system components.

Applications include fixed wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA305C Remove and install aircraft fixed wing flight control system components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	---

Elements and Performance Criteria

1. Inspect fixed wing flight control systems and components
 - 1.1. Isolation tags already attached to the system or related systems are checked and aircraft configured for safe system inspection and operation in accordance with applicable maintenance manual
 - 1.2. Fixed wing *flight control systems and components* are visually or physically checked for signs of defects in accordance with applicable maintenance manual
2. Test fixed wing flight control systems
 - 2.1. Powered controls of the aircraft and system are prepared in accordance with maintenance manual for the application of electrical and hydraulic power
 - 2.2. Power is applied, if necessary, and system is functionally tested in accordance with applicable maintenance manual for malfunction or evidence of incorrect rigging
 - 2.3. System rigging is performed in accordance with applicable maintenance manual
3. Prepare for troubleshooting
 - 3.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are interpreted to identify an unserviceability
4. Troubleshoot fixed wing flight control systems
 - 4.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 4.2. Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate *troubleshooting*
 - 4.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 4.4. Fixed wing flight control system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 4.5. Fault rectification requirements are determined to assist in planning the repair

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant maintenance documentation and aircraft manuals to:
 - recognise defects during visual inspection of fixed wing flight control systems and system components
 - rig fixed wing flight control systems
 - functionally test the operation of fixed wing flight control systems and recognise system/component malfunction or evidence of incorrect rigging
- to the extent permitted by applicable fault diagnosis guides, troubleshooting unserviceabilities in fixed wing flight control systems and clearly recording the causes of the unserviceabilities

Required knowledge

Look for evidence that confirms knowledge of:

- OHS precautions relevant to flight control system maintenance
- standard trade practices relating to tool and test/rigging equipment usage and installation/securing of system components
- flight control system layout and operation
- theory of flight:
 - airflow
 - conditions of flight
 - lift and forces
 - drag
 - wings, tailplane and vertical stabiliser
 - lift augmentation (flaps, slats and slots)
 - aircraft control surfaces and their function (elevator, ailerons, rudder, elevons and trim tabs)
 - spoilers and speed brakes
 - flight control balancing and flutter
 - stability and control and flight control rigging
- mechanical system layout and operation:
 - cockpit controls
 - cables and cable tensioning
 - pulleys and fairleads
 - bellcranks
 - levers
 - control surface horns

- screwjacks
- push/pull rods
- powered flight controls:
 - system layout and operation
 - component construction and operation
 - electrical and instrument interfaces:
- flaps
- trim
- position indication
- flight control system maintenance procedures and troubleshooting methods
- flight control system interfaces with automatic pilot systems
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to inspect, test and troubleshoot fixed wing aircraft flight control systems and components while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with the aircraft fixed wing flight systems. It is essential that testing procedures take into account all safety precautions associated with flight control system operation, in particular where system operation/switching inter-relates to other systems being maintained, and that an awareness be demonstrated of dual inspection requirements associated with work on flight controls and systems.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. In addition, knowledge of dual inspection requirements must be demonstrated. The application of ground testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action.

The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 5 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and

	Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA351A Maintain airframe systems of light fixed wing aircraft, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA351A Maintain airframe systems of light fixed wing aircraft, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Flight control systems and system components</p>	<p>Flight control systems and system components may include:</p> <ol style="list-style-type: none"> 1. Elevator, aileron and rudder primary flight control systems and associated trim systems 2. Speed brake, spoiler, flap and high lift systems 3. Ailerons, elevators, rudders, trim tabs, speed brakes, spoilers, flaps and slats 4. Actuators - mechanical, hydraulic, pneumatic or electric 5. Mechanical flight control components (cables, pulleys, guides, fairleads, tension regulators, control rods, bellcranks, torque tubes, chains, sprockets, control sticks, wheels or columns, trim wheels or handles, and rudder pedals)
<p>Troubleshooting</p>	<p>Troubleshooting involves the use of fault-finding charts or similar, to line replacement level</p>
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
<p>Procedures and requirements</p>	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals
- through visual/physical inspection, recognising external and internal signs of defects in piston engines, components and system components
- assisting with testing of piston engine and engine system operation, be able to operate systems, monitor indications, record parameters and recognise correct function
- compiling engine condition monitoring records
- rigging and adjusting engine controls and systems
- using fault diagnosis guides and equivalent data to accurately and efficiently troubleshoot the causes of unserviceabilities in piston engines and engine systems, clearly recording details and identifying the required rectification actions

Required knowledge

Look for evidence that confirms knowledge of:

- OHS procedures associated with piston engine maintenance, including lifting and handling of heavy objects
- how to obtain MSDS
- use of PPE
- fault diagnosis techniques
- piston engine and engine system layout and operation:
 - four stroke engine theory of operation and performance
 - cylinder configurations
 - construction - components and materials
 - carburettors and air induction systems
 - fuel injection systems
 - fuels and their characteristics
 - ignition systems
 - lubricating systems and lubricants
 - cooling systems
 - exhaust systems
 - superchargers and turbochargers
 - accessory drives and mounts
 - controls and rigging of controls
 - piston engine maintenance requirements and troubleshooting procedures, including ground running of engines
- system component operation, including electrical and instrument system interfaces:
 - magnetos and ignition harnesses

- spark plugs
- fuel pumps
- fuel filters
- oil pumps
- oil filters
- oil tanks
- vacuum pumps and air pumps
- generators
- starter motors
- oil pressure gauges (direct reading)
- temperature gauges (direct reading)
- tachometers
- manifold pressure gauges
- system and component maintenance requirements and troubleshooting procedures
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to inspect, test and troubleshoot piston engines and engine system components on fixed or rotary wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisor or other trades) associated with engine systems. It is essential that system testing procedures take into account all safety precautions associated with piston engine system operation, and that awareness be demonstrated of dual inspection requirements associated with work on engine controls.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of engine systems or types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures and functional rigging checks should also indicate knowledge of system operation. Engine system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out rigging checks and troubleshoot the system within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 5 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent

	Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	Testing of engines fitted to helicopters (where auxiliary drive is not available) may be carried out through the applicant directing a pilot qualified on type.
Guidance information for assessment	Individuals being assessed who have already attained MEA353A Maintain basic light aircraft engines and propellers, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA353A Maintain basic light aircraft engines and propellers, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Piston engines and engine systems	<p>Piston engines and engine systems may include:</p> <ol style="list-style-type: none"> 1. Engine (all types), main components and accessories/drives 2. Control system 3. Ignition and starter systems 4. Fuel, air systems and super/turbo chargers 5. Oil system
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

- using MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - through visual/physical inspection, recognise external and internal signs of defects in gas turbine engines, components and system components
 - assist with testing of gas turbine engine and engine system operation, be able to operate systems, monitor indications, record parameters and recognise correct function
 - compile engine condition monitoring records
 - rig and adjust engine controls and systems
- using fault diagnosis guides and equivalent data, accurately and efficiently to troubleshoot the causes of unserviceabilities in gas turbine engines and engine systems, clearly recording details and identifying the required rectification actions

Required knowledge

Look for evidence that confirms knowledge of:

- fault diagnosis techniques
- gas turbine engine layout and operation:
 - types of gas turbine
 - operating principles and power output
 - gas path
 - intakes
 - compressors
 - combustion chambers
 - turbines
 - exhaust
 - thrust reversers
 - accessory drives
 - bearings and seals
 - maintenance requirements and troubleshooting procedures
- system and component operation, including electrical and instrument system interfaces:
 - fuel control and fuels
 - lubrication and lubricants
 - air distribution
 - starting
 - ignition

- power augmentation
- instrumentation:
- performance indication
- condition indication
- warning
- presentation and interpretation of electronic displays
 - fire warning and extinguishing
 - control system and rigging of engine controls
- engine spin/run procedures, including the operation of APUs
- engine condition monitoring
- relevant OHS practices, including the requirements for the lifting and handling of heavy components
- how to obtain MSDS
- selection and use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to inspect, test and troubleshoot gas turbine engines and engine system components on fixed or rotary wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisor or other trades) associated with engine systems. It is essential that system test procedures take into account all safety precautions associated with gas turbine engine system operation, especially with regard to high energy ignition units, and that awareness be demonstrated of dual inspection requirements associated with work on engine control systems.
