**Assessment Requirements for MEM26008
Select and use resin systems appropriate for
product**

Release: 1

Assessment Requirements for MEM26008 Select and use resin systems appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26008A Select and use resin systems appropriate for product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, safety data sheets (SDS), formulas/recipes, batch sheets, product drawings, customer requests for selecting and using resin systems appropriate for product
- considering all reasonably available resin systems when selecting and choosing the appropriate product
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- fabricating the final product using selected process and minimising waste as per specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports including items requiring further action in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using selecting and using resin systems appropriate for product
- physical and chemical properties of resins
- resin types, cost and source
- catalyst types and systems (e.g. polyester and vinyl ester)
- hardener types (e.g. epoxy and phenolic)
- fillers and thickeners (e.g. mineral extenders, milled and cut fibre)
- safety data sheets (SDS) appropriate to the resin system selected

- catalyst hazards (e.g. self-accelerating decomposition temperature (SADTs)) and control measures associated with selecting and using resin systems appropriate for product, including housekeeping.

Assessment Conditions

- Assessors must:
 - have vocational competency in selecting and using resin systems appropriate for product at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
