This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Measuring equipment includes one (1) or more of the following:	• lasers • dumpy levels
Relevant standards include one (1) or more of the following:	• Australian Standards • building codes • air conditioning/refrigeration standards • local authority standards • environmental standards • greenhouse emission regulations
Refrigeration/air conditioning plant and equipment/components include one or more of the following:	• compressors • evaporators • condensers • valves • controllers • fans • solenoids • sensors • thermostats • switches • recorders
Routine modifications/alterations include one (1) or more of the following:	• fitting of spacers • relocation of brackets • alignment of holes

Assessment Requirements for MEM10009 Install refrigeration and air conditioning plant and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM10009B Install refrigeration and air conditioning plant and equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, regulatory and legislative requirements for installing refrigeration and air conditioning plant and equipment
- preparing the installation site and ensuring all surfaces are level using appropriate measuring equipment
- installing refrigeration/air conditioning plant and equipment and components to relevant standards
- charging the refrigeration system with refrigerant and lubricant in accordance with procedures
- developing a start-up procedure for installed refrigeration/air conditioning plant checking for conformance with specifications
- identifying any system faults and non-conformance and taking appropriate remedial action in accordance with urgency requirements to address equipment failure and/or personnel danger
- completing all reports and documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for non-compliances
- procedures for checking the refrigeration/air conditioning plant and associated equipment
- procedures for making alterations, corrections or adjustments to the refrigeration/air conditioning plant and associated equipment
- correct sequential installation of all components
- procedures for checking refrigeration systems for leaks
- methods of fixing/fastening and locating/holding the components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for checking refrigeration/air conditioning plant and associated equipment prior to start-up
- procedures for adjusting the refrigeration/air conditioning plant and associated equipment to specification
- codes and regulations relevant to the refrigeration/air conditioning industry, including environmental, ozone and greenhouse substance legislation.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing refrigeration and air conditioning plant and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10010 Install pipework and pipework assemblies

Modification History

Release 1. Supersedes and is equivalent to MEM10010B Install pipework and pipework assemblies

Application

This unit of competency defines the skills and knowledge required to plan, prepare and install pipework and assemblies.

Where pipework is to be cut by mechanical or thermal methods, or where welding processes are used, the appropriate unit(s) should also be selected.

Where the pipework is to be formed and shaped using mechanical and/or thermal techniques then unit MEM05010 Apply fabrication, forming and shaping techniques should also be selected.

Where pipework and assemblies are to be part of a system/process covered by legislative/regulatory requirements, units associated with the appropriate welding certificates for the pipe material and particular application must also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan the installation of pipework and pipework assemblies**	2.1	Ensure quantity and type of pipework and pipework assemblies are selected according to specifications
		2.2	Determine the appropriate sequence for the installation of pipework and pipework assemblies according to the installation type and specifications and other applicable factors
		2.3	Prepare the work area for installation of pipework and pipework assemblies
3	**Prepare pipework and pipework assemblies for assembly**	3.1	Clean pipework according to SOPs
		3.2	Ensure all pipework and assemblies are purged according to SOPs
		3.3	Ensure pipework and assemblies are capped/sealed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Install pipework and assemblies**	4.1 Install enclosures/hangers/support systems without damage or distortion to the surrounding environment or other services
	4.2 Install pipework and assemblies without damage or distortion to pipework, assemblies or surrounding environment or other services
	4.3 Leak test pipework in accordance with SOPs
	4.4 Install all ancillary devices and materials to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pipework and pipework assemblies of a variety of sizes and/or wall thickness include one (1) or more of the following:	• ferrous • non-ferrous • plastic
Joining systems include one (1) or more of the following:	• collars • unions • flanges
Enclosures include the following:	• metal and PVC

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hangers and support systems include one (1) or more of the following:	• pipe/tube bundle support • ties • unistrut • trays • ladder racks • ducts
Leak tests include one (1) or more of the following:	• soapy water • water immersion • compressed air
Ancillary devices and materials include one (1) or more of the following:	• insulation materials • valve control systems
Legislation and regulations include the following:	• building regulations and gas/fluid pipeline regulations

Assessment Requirements for MEM10010 Install pipework and pipework assemblies

Modification History

Release 1. Supersedes and is equivalent to MEM10010B Install pipework and pipework assemblies

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, legislative and regulatory requirements for installing pipework and pipework assemblies
- preparing installation of pipework and pipework assemblies by determining sequence of installation
- ensuring all pipework are cleaned, purged and capped/sealed
- installing pipework and pipework assemblies using hangers and support systems without damage or distortion to the surrounding environment or other services
- leak testing pipework to specifications
- installing all ancillary devices and materials to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- installation techniques
- site and safety requirements
- cleaning procedures and the applications and precautions for using solvents/cleaning material
- purging techniques, applications and precautions
- capping/sealing pipework and assembly methods
- identification of location/layout of pipework and assemblies and application and characteristics of enclosure/hanging/supporting systems
- pipework, ancillary installation and joining procedures
- leak testing applications and uses
- regulations and legislative requirements, including building regulations and gas/fluid pipeline regulations.

MEM10011 Terminate and connect specialist cables

Modification History

Release 1. Supersedes and is equivalent to MEM10011B Terminate and connect specialist cables

Application

This unit of competency defines the skills and knowledge required to prepare for the termination and connection of specialist cables that require particular techniques and, in some cases, testing.

Most types of these cables are designed to either exclude or minimise the ingress of gas or liquids, or to minimise the danger of flash.

Special fittings must be used for each type of specialist cable and cables requiring the use of bending tools and techniques which do not cause damage.

All testing is undertaken on completed circuits where these are not connected to main supply, using appropriate methods, including continuity and resistance checks.

Where termination and connection of standard electrical wiring/cable is required see unit MEM10002 Terminate and connect electrical wiring.

Where the selection and use of engineering measurement is required see unit MEM12023 Perform engineering measurements.

Where the selection and use of power tools/hand held operations is required see unit MEM18002 Use power tools/hand held operations.

Where termination and connection of signal and data cables is required see unit MEM18063 Terminate signal and data cables.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: **A**

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		job requirements
	2.3	Obtain certification documentation, as appropriate
	2.4	Ensure preparation of work is undertaken or checked/inspected for correct locations and specifications
3 **Connect specialist cables**	3.1	Ensure terminations/connections are made to specifications, manufacturers' requirements and to safety and state/territory regulations and legislative requirements
	3.2	Ensure all entry points are sealed using appropriate compounds, including resins
	3.3	Install equipment and wiring in a manner that does not reduce the type of protection afforded by the equipment design
	3.4	Test all cabling, connections and terminations for compliance with specifications
	3.5	Ensure all cables, wires, conductors and connections are marked/tagged and labelled to specifications
	3.6	Complete documentation in accordance with relevant specifications and regulatory requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM10011 Terminate and connect specialist cables

Modification History

Release 1. Supersedes and is equivalent to MEM10011B Terminate and connect specialist cables

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings, regulatory and legislative requirements for terminating and connecting specialist cables
- connecting and terminating specialist cables utilising a range of cable installations requiring specialised glands, fittings and enclosures, sealing entry points, as required, and marking/tagging and labelling wiring to specifications
- using test equipment to locate various faults
- inspecting and testing terminated cables to ensure they comply with continuity and insulation resistance and are safely intended for use
- completing all reports and documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- worksite procedures and relevant statutory requirements
- statutory requirements associated with the termination and connection of specialist cables
- manufacturer requirements and specifications for specialist cables and materials
- requirements for approval to work
- wiring support and/or protection requirements
- specifications of wiring support and/or protection requirements
- reading and interpreting relevant drawings, instructions and reference documents
- testing methods for specialist cables, including continuity and insulation resistance testing
- marking, tagging and labelling requirements for cables, wires, conductors and connections
- data to be recorded and/or reported and the frequency of recording/reporting
- impact of the site and location variables may have on termination and connection.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in terminating and connecting specialist cables at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10013 Install split air conditioning systems and associated pipework

Modification History

Release 1. Supersedes and is equivalent to MEM10013A Install split air conditioning systems and associated pipework

Application

This unit of competency defines the skills and knowledge required to install split air conditioning systems and associated pipework up to 18 kW cooling capacity.

This unit refers to plug in applications only. Where the installation and connection to mains supply of fixed wiring is necessary then this work must be undertaken by a suitably licensed person.

Where commissioning and decommissioning of split air conditioning systems is required see unit MEM18084 Commission and decommission split air conditioning systems.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate split air conditioning components**	2.1	Determine the location of unit components, piping and drains in consultation with customer and other site considerations
		2.2	Ensure industry and local authority requirements, standards and codes and manufacturer requirements are identified, including the appropriate capacity rating of the equipment and any impacts on the installation are identified
3	**Inspect and prepare installation sites**	3.1	Carry out all work safely to Australian Standards, state and local codes and regulations
		3.2	Prepare the installation site to industry codes of practice and manufacturer installation instructions, as appropriate
		3.3	Carry out the work without damage to the system, components and the surrounding environment or services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Prepare split system equipment and materials for installation**	4.1	Identify and note safety hazards and ensure established risk control measures are implemented
		4.2	Consult appropriate personnel to ensure the work is coordinated effectively with others involved on the worksite
		4.3	Check all components, piping and fittings for conformance to manufacturer specification, job requirements and applicable standards
		4.4	Determine the layout of the pipework from job specifications and diagrams
		4.5	Obtain materials needed to carry out the work in accordance with established procedures and check against job requirements
		4.6	Obtain tools, equipment and testing devices needed to conduct the work in accordance with established procedures and check for correct operation and safety
		4.7	Check preparatory work to ensure no damage has occurred and that it complies with work requirements
5	**Prepare and install refrigerant pipework**	5.1	Use tools and equipment in accordance with manufacturers' instructions
		5.2	Ensure pipework is prepared and joined to required specification with minimal wastage and damage/contamination to environment
		5.3	Join pipework and fittings using appropriate pipe joining methods
		5.4	Ensure pipes are run separately and insulated according to manufacturer instructions and to relevant standards codes and regulations
		5.5	Check pipework and joins for compliance and integrity using appropriate testing methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Unit components include the following:	• outdoor unit, indoor unit, fittings and fixtures
Site considerations include the following:	• inside wall, drains, pipe runs, exposure, access, air circulation, environment and power supply
Prepare installation site includes one (1) or more of the following:	• clearing and levelling • foundations • wall fixtures • roof mounting
Prepared and joined includes the following:	• cutting to length, flaring, swaging and bending
Pipe joining methods include one (1) or more of the following:	• silver brazing • soldering
Equipment and testing devices include one (1) or more of the following:	• refrigeration gauge manifold • Schraeder access valves • quick connect couplings • thermometer/thermocouple temperature measuring devices • analogue and digital vacuum measuring gauges • digital scales • refrigerant recovery unit • vacuum pump • electronic leak detectors • refrigerant containers/cylinders

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Industry best practice includes the following:	• pipe preparation and joining techniques and industry best practice for pipe brazing
Commonwealth, state and territory legislation, regulations, standards, codes of practice, and industry guidelines include the following:	• The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 • air conditioning residential best practice guidelines (AIRAH) • state/territory and local building regulations • codes of practice for domestic refrigeration and air conditioning (HB40)
Appropriate testing methods include the following:	• dimensional checks and leak tests

Assessment Requirements for MEM10013 Install split air conditioning systems and associated pipework

Modification History

Release 1. Supersedes and is equivalent to MEM10013A Install split air conditioning systems and associated pipework

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, customer requirements, regulatory and legislative requirements for installing plug in split air conditioning systems and associated pipework up to 18 kW cooling capacity
- preparing the installation site for installing unit components to manufacturer requirements, standards, codes and regulations
- using tools and equipment to prepare and join pipework to specifications
- ensuring pipes are run separately and insulated to specifications and relevant standards, codes and regulations
- checking the installed system for compliance and integrity using appropriate testing methods and test equipment.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- basic vapour compression cycle operating principles
- basic reverse cycle operating principles
- layouts, siting and set-ups of split air conditioning systems
- typical work environment, demands and considerations
- effective communication with appropriate persons and typical problems, contingencies and solutions
- components, accessories and fixtures for split air conditioning systems
- considerations for siting units and components and techniques and processes for site preparation
- fixing methods, tools and equipment for system components and pipework
- applicable legislative requirements, standards, codes and licensing requirements for installing system components, interconnecting wiring and connection to power supply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applicable procedures for storage, handling and treatment of ozone depleting and synthetic greenhouse gas refrigerant
- sustainable energy practices for the efficient use of materials and for minimising damage/contamination to environment
- tools and equipment used for fabricating pipework
- pipe preparation and joining techniques including cutting, flaring, swaging and bending
- brazing/silver soldering techniques, equipment and consumables
- dry nitrogen being used during all brazing/silver soldering work
- procedures and equipment for checking pipework integrity and compliance to specification
- procedures for reporting non-conformances
- required documentation and procedures to complete and process.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing split air conditioning systems and associated pipework at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10016 Terminate and test electrical wiring and accessories

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training, and the recognition of trade-level skills in the termination and testing of electrical cables, cords and accessories using appropriate fixing devices and methods.

It covers the installation requirements for a wide range of typically used electrical cables in a variety of situations and separation from other services, including fire wall penetrations.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 32 – Describe the construction, specifications, colour coding and applications of various types of cords and cables.
- EPC 33 – Demonstrate the skills to prepare and terminate cords and cables.
- EPC 34 – Demonstrate the knowledge and skills for selection and attachment of electrical accessories, using appropriate fixing devices, tools and methods.

And

Essential Performance Capability (EPC) classified as ‘critical’:

- EPC 27 – Demonstrate knowledge of AS/NZS 3000 and local regulatory requirements for the installation of aerial conductors and underground wiring, including specialist cables.
- EPC 35 – Demonstrate the knowledge and skill to install and terminate a variety of electrical cables in a wide range of applications (including final subcircuits) to AS/NZS 3000.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

MEM18001	Use hand tools

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Prepare to terminate electrical cables and cords	2.1	Inspect accessories to determine the appropriate type and size of cable/cord and termination connectors/lugs, as required
		2.2	Obtain specialised tools, equipment and test instruments needed for terminating electrical cables and cords
3.	Terminate electrical cables and cords	3.1	Isolate and tag circuits and equipment in accordance with procedures, where required
		3.2	Prepare cable/cord end to suit connector/lug without causing any damage to insulation or conductor
		3.3	Fit and secure specialist cable glands and retaining

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		devices
	3.4	Ensure terminations/connections are made to specifications, manufacturer requirements, and regulatory and legislative requirements
	3.5	Ensure all entry points are sealed using appropriate compounds, including resins, where required
	3.6	Mark/tag and label all cables, wires, conductors and connections to specifications
4. Test electrical cables and cords	4.1	Test terminated cables to ensure continuity and insulation resistance readings comply with requirements
	4.2	Complete all reports and documentation to the required specifications and SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Electrical cable and cord types include five (%) or more of the following:

- thermoplastic insulated cable (TPI)
- flat thermoplastic sheathed (TPS)
- circular thermoplastic sheathed (TPS)
- steel wired armoured (SWA)
- fire rated cable (high tension (HT) or high frequency (HF) or mineral insulated metal sheath (MIMS))
- cross-linked polyethylene (XLPE) cables
- neutral screened cables
- flexible cords and cables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

	• aluminium conductor/cable
Termination of cables and cords include two (2) or more of the following connectors and lugs:	connectors: • screw • stud • tunnel lugs: • crimp and compression • soldering • solderless
Regulatory requirements include:	• AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules) • AS/NZS 3008.1.1:2009 Electrical installations – Selection of cables – Cables for alternating voltages up to and including 0.6/1 kV – typical Australian installation conditions
Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- identifying the cables and cords by conductor size, type and rating
- preparing and terminating cable and cords to accessories using appropriate hardware, tools and equipment, including soldering without undue damage to insulation or conductor
- preparing and terminating at least five (5) or more of the following cable and cord types at a device terminal enclosure:
  - thermoplastic insulated cable (TPI)
  - flat thermoplastic sheathed (TPS)
  - circular thermoplastic sheathed (TPS)
  - steel wired armoured (SWA)
  - fire rated cable (high tension (HT) or high frequency (HF) or mineral insulated metal sheath (MIMS))
  - cross-linked polyethylene (XLPE) cables
  - neutral screened cables
  - flexible cords and cables
  - aluminium conductor/cable
- terminating the above selected cable and cord types into two (2) or more of the following connectors and lugs:
  - connectors:
    - screw
    - stud
    - tunnel
  - lugs:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - crimp and compression
    - soldering
    - solderless
- maintaining/achieving required fire rating
- inspecting and testing terminated cables to ensure they comply with continuity and insulation resistance requirements and are safely intended for use
- using test equipment to locate faults, completing remedial action and retesting to ensure compliance
- documenting termination and testing of electrical cables, cords and accessories in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- different types of electrical cables and cords and their applications
- structural components of cables and their purpose (conductor material, stranding, insulation type, voltage rating, screening, sheathing, armour and serving)
- Australian and International colour standards for cables and cords
- factors affecting cable current-carrying capacity:
    - current requirements for the circuit
    - cable installation method to be used
    - environmental conditions in the vicinity of cable installation
- Australian/New Zealand Wiring Rules requirements for flexible cords, cables and plugs
- Australian Standards and manufacture requirements for the termination of:
    - TPS and TPI cables
    - fire protection and MIMS cables
    - SWA
    - trailing cable and catenary wire systems
- soft soldering process, including the use of liquid petroleum (LP) gases and precautions to be observed
- fire rated cable types, including HT, HF and MIMS and their applications
- types of accessories and their intended use
- support, fixing and protection methods, including:
    - selection and safe application of devices for fixing to timber, metal, hollow structures, masonry and concrete
    - hazards and safety measures when working with adhesives and chemical fixing devices
- safe work methods for:
    - using hand and power tools
    - using powder and compressed gas operated tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- test requirements to ensure compliant continuity and insulation resistance and documentation to be completed.

Assessment Conditions

- Assessors must:
  - have vocational competency in terminating and testing electrical wiring and accessories at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10018 Select cable types and sizes to suit loads and electrical installation environment

Modification History

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training, and the recognition of trade-level skills in selecting cables for electrical installation work and equipment in areas including consumer mains, submains and final subcircuits for operating voltages up to 1000 V alternating current (AC) or 1500 V direct current (DC).

It covers a comprehensive understanding of the cable selection process of AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules) and cable selection standards in determining maximum demand, voltage drop limitations, current carrying capacity and short circuit capability.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs) classified as ‘critical’:

- EPC 21 – Demonstrate the ability to select cables for mains and submains using AS/NZS 3000 and AS/NZS 3008.1 based on current carrying capacity, short circuit capability, maximum demand and voltage drop, for single phase and three phase installations including multiple installations.
- EPC 22 – Demonstrate the ability to select cables for final subcircuits using AS/NZS 3000 and AS/NZS 3008.1 based on current carrying capacity, short circuit capability, maximum demand, earth loop impedance and voltage drop.
- EPC 27 – Demonstrate knowledge of AS/NZS 3000 and local regulatory requirements for the installation of aerial conductors and underground wiring. Including specialist cables.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine job requirements	1.1. Follow standard operating procedures (SOPs)
	1.2. Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
	1.3. Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4. Identify job requirements from specifications, drawings, job sheets or work instructions
2. Select wiring systems and cables for electrical installation work and equipment	2.1. Select wiring systems to suit loads and electrical installation work environment
	2.2. Select cable conductor sizes based on current-carrying capacity, short circuit capacity, maximum demand, voltage drop and earth fault-loop impedance in accordance with regulatory requirements
	2.3. Select circuit protective devices based on current-carrying capacity requirements of the selected cables
	2.4. Select earthing system parts to meet the multiple earth neutral (MEN) system
	2.5. Document selection of cable types and sizes and installation requirements in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Electrical installations include:

- at least one (1) general electrical installations comprising a main switchboard, supplying more than one circuit each for lighting, socket outlets and fixed appliances
- at least one (1) industrial electrical installation comprising a distribution board separate from the main switchboard and at least one (1) circuit supplying a three-phase load and safety system in one of the following industrial environments:
  - factory
  - building
  - off shore platform
  - mine site processing
  - oil and gas installation
  - processing plant
  - workshop
  - underground installation
- three-phase loads include at least one (1) or more of the following:
  - motors – for pumps, conveyors, mills, agitators, crushers and screening plants
  - heaters
  - compressor packages
  - heating, ventilation and air conditioning (HVAC) units
  - facility accommodation units, sea container workshops and storage units, and laboratories
  - workshop equipment, including lathes, milling machines and welders
  - underground dewatering systems and ‘gate end’ boxes for drilling equipment

Regulatory requirements

- AS/NZS 3000:2007 Electrical installations (known as the

Assessment Requirements for MEM10018 Select cable types and sizes to suit loads and electrical installation environment

Modification History

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- determining the cable routes, length and conditions in which the wiring system is to operate
- complying with relevant Australian/New Zealand Wiring Rules, Cable Selection and Service Rules when selecting cables ensuring coordination between protective devices and conductors in regard to the following aspects:
  - design of the circuit taking into account the safety considerations
  - determining the final subcircuit arrangements
  - determining the factors affecting suitability of wiring systems
  - calculating the maximum demand on consumer mains/submains
  - calculating the current-carrying capacity requirements
  - calculating the voltage drop requirements
  - calculating the expected fault loop impedance
  - selecting cables to satisfy voltage drop, current-carrying capacity and fault loop impedance requirements
  - selecting the appropriate protection devices
  - selecting the appropriate isolation devices and switching arrangements
- selecting earthing system parts to meet the multiple earthed neutral (MEN) system
- documenting reasons for selection and installation requirements in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work practices and procedures and use of personal protective equipment (PPE)
- Australian/New Zealand Wiring Rules, AS/NZS 3008.1.1:2009 Electrical Installations – Selection of cables – Cables for alternating voltages up to and including 0.6/1 kV – typical Australian installation conditions and other related standards in regards to the following:
  - design and safety performance requirements, including:
    - protection of persons, livestock and property from harmful effects
    - correct functioning of the electrical installation for intended use
    - compatibility with the electricity distribution system, or other source of supply, to which the electrical installation is to be connected
    - type of insulation required:
      - thermoplastic
      - elastomer
      - cross-linked polyethylene (XLPE)
      - mineral-insulated metal sheath (MIMS)
      - high temperature
    - supply characteristics
    - reasons for dividing installations into circuits and factors that determine their number and type
    - external influences that may damage installation and be considered in the design, including applying derating factors caused by the effect of:
      - grouping of cables
      - ambient temperature
      - depth of laying
      - thermal resistivity of soil
      - varying of loads
      - thermal insulation
      - direct sunlight
    - acceptable methods of protection against risks of ignition of flammable materials
    - likely sources of unwanted voltages and methods of dealing with this potential hazard
    - requirements for protection against fault current
    - protection against harmful effects of faults between live parts of circuits supplied at different voltages
    - mechanical movement protection
    - fire rated construction and how integrity of fire rating can be maintained
  - final subcircuit arrangements, including:
    - factors to consider when determining the number and type of circuits required
    - daily and seasonal demand for lighting, power, heating and other loads in a given installation
    - factors affecting current-carrying capacity of cables
    - layout/schedule of circuits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - factors affecting suitability of wiring systems
  - acceptable methods of determining maximum demand on an installation's consumer's mains and submains up to 400 A per phase
  - external factors that require the use of a derating factor when determining current-carrying capacity
  - requirements for maximum voltage drop in an installation and relevant tables for unit values of voltage drop
  - requirements for maximum fault loop impedance in an installation and the relevant tables to determine cable impedances
  - accepted methods used against indirect contact when selecting protection devices to protect against overload and short circuit current situations
  - provision of isolation of every circuit for a range of installations and conditions
  - earthing system parts including the selection of earth electrode, main earthing conductor, main earthing terminal/connection or bar, MEN link, protective earthing conductors and equipotential bonding
- effects of harmonic current on current-carrying capacity
- conditions where short circuit performance may need to be considered.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting cable types and sizes to suit loads and electrical installation environment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10019 Select circuit protection devices by type and rating, fit to switchboards and install earthing

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson –industrial electrician apprenticeship training and the recognition of trade-level skills in selecting and installing circuit protection devices to protect against electric shock, over current and over voltage for operating voltages up to 1000 V alternating current (AC) or 1500 V direct current (DC) and install earthing as per multiple earthed neutral (MEN) system.

It covers a comprehensive understanding of earthing arrangements, the MEN system (including sub-installations), the calculation and selection of protective devices, alternative arrangement against electric shock and the requirements for use of residual current devices (RCDs).

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs) classified as ‘critical’:

- EPC 16 – Demonstrate and apply in practice the requirements of AS/NZS 3000 in relation to earthing arrangements and fault-loop impedance calculations. Knowledge of alternate earthing systems when required by local Regulatory Authorities.
- EPC 17 – Demonstrate a comprehensive knowledge and understanding of the MEN system and its application, including on sub-installations. Demonstrate how to test an MEN system.
- EPC 27 – Describe and apply in practice the requirements for circuit protection using AS/NZS 3000:2000 and other relevant Australian Standards, e.g. AS/NZS 3018.1.
- EPC 20 – Demonstrate knowledge of the SELV and PELV systems, their application and testing in accordance with AS/NZS 3000.
- EPC 23 – Describe and apply the control and protection requirements for installations and equipment. Demonstrate the ability to select suitable equipment and switchgear for a particular installation or part of an installation using AS/NZS 3000.
- EPC 24 – Demonstrate an understanding of the AS/NZS 3000 and regulatory requirements for the location of switchboards and the arrangement of switchboard equipment in installations. Methods for determining prospective fault current. Switchboard form types.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- EPC 26 – Demonstrate the appropriate methods for the installation, modification and testing of electrical installations and equipment for construction and demolition sites, complying with AS/NZS 3012 and applicable workplace safety legislation. Need for calibration of instruments.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- determining the individual load requirements of the installation
- selecting the appropriate switchboard and layout arrangements
- complying with Australian/New Zealand Wiring Rules, other Australian Standards, e.g. AS/NZS 3008.1.1:2009 Electrical Installations – Selection of cables – Cables for alternating voltages up to and including 0.6/1 kV – typical Australian installation conditions, Service Rules and other relevant standards when selecting circuit protection controls and devices in regard to the following aspects:
  - protection against indirect contact, overcurrent or excess earth leakage current conditions and over and under voltage by selecting and installing using safe working practices:
    - a fuse/s for fault current limiting protection
    - an appropriate circuit breaker/s with a current rating not less than the maximum demand of the portion of the electrical installation they control
    - a residual current device (RCD) with a maximum rated residual current of 30 mA
  - control of the electrical installation (or parts thereof) by suitable switching arrangements by selecting and installing using safe working practices:
    - a main switch/es to control the whole of the electrical installation
    - switches for isolation, emergency, mechanical maintenance and functional (control) with appropriate Ingress Protection (IP) rating
  - installing and terminating the compliant earthing system components for the multiple earthed neutral (MEN) system and other earthing arrangements
  - terminating all circuit protection controls and devices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - inspect visually all components and earthing system to ensure compliance
    - test earthing system for continuity and insulation resistance
    - identify with marking all switches, circuit breakers and RCDs and other electrical equipment on or adjacent to the switchboard
- using test equipment to locate faults, completing remedial action and retesting to ensure compliance
- documenting reasons for selection and installation arrangement requirements in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- Australian/New Zealand Wiring Rules and other related standards in regards to the following:
    - requirements for the selection and installation of switchgear and controlgear, including:
        - protection against indirect contact
        - protection against over current or excess earth leakage current conditions
        - protection against over voltage and under voltage
        - control of the electrical installation (or parts thereof) by suitable switching arrangements
        - design, selection (including form type) and installation of switchboards
    - design of an electrical installation
    - design, selection (including form type) and installation of switchboards
    - application and segregation requirements of separated extra-low voltage (SELV) and protected extra-low voltage (PELV) circuits, including earthing requirements and testing
    - application and arrangement of an isolated supply
    - hazards and risks in an electrical installation
    - protection against indirect contact, including:
        - methods of protection
        - protection by automatic disconnection of supply
        - touch-voltage limits
        - earthing system impedance
        - disconnection times
        - supplementary equipotential bonding
        - protection by the use of Class II equipment or by equivalent insulation
        - protection by electrical separation
    - protection by the use of RCDs
    - protection against thermal effects in normal service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- protection against unwanted voltages
- protection against over current and fault currents
- protection against over voltage
- protection against injury from mechanical movement
- devices for isolation
- fire integrity
- protection from damp situations
- earthing system terms, parts and arrangement
- devices and operating principles for automatic disconnection of supply, including circuit breakers, fuse and RCDs
- devices for isolation and switching, including for the following functions:
  - isolation
  - emergency
  - mechanical maintenance
  - functional (control)
- switchboards and distribution boards purpose, types, application, layout and compliance requirements
- bonding of metallic meter enclosures
- minimum fault levels specified by electricity network operator
- methods for determining prospective fault current
- MEN arrangement, resultant fault current path and magnitude, operation of protective devices and implication of MEN link absence during fault conditions
- knowledge of alternate earthing systems when required by local Regulatory Authorities, e.g. TT low voltage supply earthing system in dairy sheds in New Zealand
- construction and demolition requirements as per AS/NZS 3012:2010 Electrical Installations – Construction and demolition sites.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting circuit protection devices by type and rating, fitting to switchboards and installing earthing at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace condition. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10020 Install low voltage cabling and fit-off accessories, appliances and equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in installing low voltage cabling/wiring; fitting off accessories, appliances and equipment to an electrical switchboard in a variety of situations; and connecting consumer mains to an installation.

It covers a comprehensive understanding of AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules) and regulatory requirements and knowledge of other standards that apply to particular situations and installations for selecting and fixing of accessories; the location of switchboards; arrangement and identification of switchboard equipment; and access requirements, including the separation and minimising the spread of fire.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 29 – Knowledge of the AS/NZS 3000 requirements for safety services and issues relevant to HV installations. Standards referenced for electrical installations related to transportable structures and vehicles, shows and carnivals, patient areas, marinas and boats, and construction/demolition sites.
- EPC 36 – Demonstrate the knowledge and skills for the installation of wiring support systems.
- EPC 39 – Determine and apply AS/NZS 3000 requirements for the installing, terminating and testing of catenary supported cables, pendant-type socket outlets and trailing cables.

And

Essential Performance Capabilities (EPCs) classified as ‘critical’:

- EPC 24 – Demonstrate an understanding of the AS/NZS 3000 and regulatory requirements for the location of switchboards and the arrangement of switchboard equipment in installations. Methods for determining prospective fault current. Switchboard form types.
- EPC 25 – Demonstrate an understanding of the AS/NZS 3000 and regulatory requirements for the installation of electrical equipment in given damp situations and wet areas. IP rating of electrical equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- EPC 26 – Demonstrate the appropriate methods for the installation, modification and testing of electrical installations and equipment for construction and demolition sites, complying with AS/NZS 3012 and applicable workplace safety legislation. Need for calibration of instruments.
- EPC 27 – Demonstrate knowledge of AS/NZS 3000 and local regulatory requirements for the installation of aerial conductors and underground wiring. Including specialist cables.
- EPC 28 – Demonstrate knowledge of AS/NZS 3000 requirements for electrical installations in hazardous areas and an awareness of the standards to which it refers.
- EPC 35 – Demonstrate the knowledge and skill to install and terminate a variety of electrical cables in a wide range of applications (including final subcircuits) to AS/NZS 3000.
- EPC 37 – Demonstrate knowledge and skills to install final subcircuit wiring into switchboards and connect to switchboard equipment in accordance with AS/NZS 3000 and local supply authority requirements.
- EPC 38 – Connect consumer mains to an installation, in accordance with AS/NZS 3000 and local supply authority requirements.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM10016	Terminate and test electrical wiring and accessories
MEM10018	Select cable types and sizes to suit loads and electrical installation environment
MEM10019	Select circuit protection controls devices by type and rating, fit to switchboards and install earthing
MEM10023	Design and connect control switching of circuits for building services and industrial equipment
MEM10024	Install and troubleshoot luminaires and ancillary equipment
MEM18001	Use hand tools

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Plan installation of electrical wiring, accessories and appliances	2.1	Plan cable routes in accordance with requirements contained in the job instructions/specifications
		2.2	Obtain necessary cables, appropriate cable support systems and enclosures, accessories and appliances needed for the installation work in accordance with established procedures and check against job requirements
		2.3	Obtain necessary tools, equipment and testing instruments needed for the installation work
3.	Install and fit off electrical wiring, accessories and appliances	3.1	Isolate and tag circuits and equipment in accordance with procedures, where required
		3.2	Install and fix cable support system in position ensuring components are square and plumb, securely attached using fastenings appropriate to the weight of the components and the material of the mounting
		3.3	Install electrical cables and wiring, accessories and appliances in compliance with specifications and regulatory requirements
		3.4	Maintain fire integrity when installing electrical cables and wiring
		3.5	Check installed accessories and appliances are straight and square in the required locations
		3.6	Terminate cables and conductors at switchboards,

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	accessories and appliances in accordance with manufacturer specifications and regulatory requirements
	3.7 Test and inspect installed circuits to ensure compliance in accordance with legislative and regulatory requirements
	3.8 Rectify any defects and re-test to ensure compliance
	3.9 Document installation of wiring, accessories and appliances in accordance with SOPs
4. Connect consumers mains to an installation	4.1 Install underground and overhead consumers mains
	4.2 Install unprotected consumers mains to reduce the risk of short circuit to a minimum
	4.3 Terminate consumers mains at pillars, pits, mains connection boxes and consumers switchboard
	4.4 Install bonding conductors, where required
	4.5 Ensure correct polarity

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Electrical installations include:	• at least one (1) general electrical installation comprising a main switchboard, supplying more than one circuit each for lighting, socket outlets and fixed appliances • at least one (1) industrial electrical installation comprising a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

	distribution board separate from the main switchboard and at least one circuit supplying a three-phase load and safety system in one of the following industrial environments: • factory • building • off shore platform • mine site processing • oil and gas installation • processing plant • workshop • underground installation • three-phase loads include at least one (1) or more of the following: • motors – for pumps, conveyors, mills, agitators, crushers and screening plants • heaters • compressor packages • heating, ventilation and air conditioning (HVAC) units • facility accommodation units, sea container workshops and storage units, and laboratories • workshop equipment including lathes, milling machines and welders • underground dewatering systems and ‘gate end’ boxes for drilling equipment
Cable routes include one (1) or more of the following:	• internal to buildings • underground • aerial
Electrical cable and wiring types include five (5) or more of the following:	• thermoplastic insulated cable (TPI) • flat thermoplastic sheathed (TPS) • circular thermoplastic sheathed (TPS) • steel wired armoured (SWA) • fire rated cable (HT or HF or MIMS) • cross-linked polyethylene (XLPE) cables • neutral screened cables • flexible cables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- aluminium conductor/cable
- underground cables
- aerial conductors

Termination of cables and cords include two (2) or more of the following connectors and lugs:

- connectors:
  - screw
  - stud
  - tunnel
- lugs:
  - crimp and compression
  - soldering
  - solderless

Cable support systems include four (4) or more of the following:

- metallic conduit
- non-metallic conduit
- trunking
- duct
- cable tray/ladder
- catenary
- posts/poles/struts

Regulatory requirements include:

- AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules)
- AS/NZS 3018.1 Electrical installations – Domestic installations (or its equivalent updated version)
- local supply authority requirements

Safe working practices include:

- demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Assessment Requirements for MEM10020 Install low voltage cabling and fit-off accessories, appliances and equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- planning the cable routes in accordance with legislative and customer requirements
- installing cable support systems
- complying with the following cable support system requirements:
  - bending steel conduits (where applicable) such that the internal diameter is not significantly reduced
  - preparing entry joints and joints to ensure cable insulation is not damaged
  - joining steel conduits together using appropriate accessories or if required through a welding process
  - ensuring that they are adequately sealed against entry of water or rain
- installing wiring systems using applicable cable support systems according to the electrical installation requirements and standards paying particular attention to factors effecting cable current-carrying capacity
- maintaining fire integrity
- terminating cables and conductors to switchboard protective devices
- terminating cables and conductors at switchboards, accessories and appliances according to legislative, regulatory and manufacturer requirements
- installing all accessories, appliances and equipment square and straight and in the required location using appropriate hand and power tools
- ensuring appropriate Ingress Protection (IP) rating when selecting suitable electrical equipment
- inspecting and testing installed and terminated cables to ensure they comply with continuity and insulation resistance and are safe to connect to the supply
- rectifying any defects and retesting to ensure compliance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- connecting and terminating consumers mains to an installation
- completing appropriate documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- Australian Standards, codes and requirements applicable to the installation for:
  - thermoplastic sheathed (TPS - flat and circular) and thermoplastic insulated (TPI) cables
  - fire protection and mineral insulated metal sheathed (MIMS) cables
  - steel wired armoured (SWA)
  - flexible cords used as fixed wiring
  - trailing cable and catenary wire systems
  - cables support systems
  - protection against mechanical damage
  - wiring systems likely to be disturbed
  - wiring systems installed vertically
  - change of direction
  - prohibited cable locations
  - selection and installation to minimise the spread of fire
  - limitation of circulating and eddy currents
- Australian/New Zealand Wiring Rules requirements for enclosure of cables, including:
  - types of wiring enclosures – change of wiring enclosures, entry of water and support of cables
  - installation of wiring enclosures – support, continuity, bending, passage of conductors, terminations, in direct sunlight, provision for expansion and cable trunking
  - factors effecting cable current-carrying capacity
- dissimilar metals in a corrosive environment
- application of protective coatings, e.g. paint, galvanizing and powder coatings
- techniques, tools and equipment required to install conduit (metallic and non-metallic), enclosures and support systems
- Australian Standards, codes and requirements applicable to the installation of electrical equipment, including:
  - appliances
  - switchgear, controlgear and accessories
  - switchboards – location and access, physical and circuit arrangements
  - socket outlets
  - lighting equipment and accessories, lamps and luminaires
  - smoke and fire detectors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - cooking appliances
    - appliances producing hot water or steam
    - room, space and duct heaters
    - electric heating cables for floors and ceilings
    - electricity converters
    - motors, transformers, capacitors and batteries
    - control, switching and over current and residual current device (RCD) protection
    - required and permitted locations for current-using equipment and accessories
    - suitable IP rating
- correct marking of equipment
- terminal configuration of phase, neutral and protective earthing conductors for each type of equipment
- installation standards called up by the Australian/New Zealand Wiring Rules for special situations, including:
    - movable premises and caravan parks
    - shows and carnivals
    - boating marinas
    - electromedical treatment areas
    - outdoor sites under heavy conditions
    - cranes and hoists
    - lifts
    - cold cathode illumination systems
    - electric fences
    - construction and demolition sites
    - film, video and television sites
    - telecommunications networks power supplies
    - hazardous areas e.g. AS/NZS 2430:2004 Classification of hazardous areas, AS/NZS 2381 Set:2008 Electrical equipment for explosive gas atmospheres – Selection, installation and maintenance Set (or their equivalent updated versions)
- Australian/New Zealand Wiring Rules requirements for special electrical installations or locations, including:
    - baths, showers or other fixed water containers
    - swimming pools, paddling pools and spa pools or tubs
    - sauna heaters
    - refrigeration rooms
    - locations where water general hosing down operations are carried out
    - fountains and water features
    - extra-low voltage electrical installations
    - high voltage electrical installations
    - hazardous areas
    - emergency systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- additional training required to work competently with electrical equipment for hazardous areas
- underground wiring systems, including:
  - arrangements and installation requirements
  - spacing from other underground services
  - consumer mains
- aerial wiring systems, including:
  - types of conductor
  - arrangements, clearances, distance between supports (spans), aerial conductor supports, poles and posts and joints and connections
  - Australian/New Zealand Wiring Rules and local supply authority requirements
  - testing of installed cables in compliance with Australian Standards
- cables supported by catenary, including:
  - types of cables
  - catenary supports
- tools, techniques and procedures for installing cables and wiring systems
- testing and verification of installed and terminated cables to ensure they comply with a visual inspection, all mandatory and optional tests and are safe to connect to the supply
- installation of underground and overhead consumer mains
- termination of consumer mains at pillars, pits, mains connection boxes and consumers switchboard
- installation of unprotected consumers mains to reduce the risk of short circuit to a minimum
- installation of bonding conductors, where required.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing low voltage cabling and fitting off accessories, appliances and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10021 Inspect, test and verify electrical installations

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in inspecting, testing and verifying electrical installations in accordance with the AS/NZS 3000:2007, Electrical Installations (known as the Australian/New Zealand Wiring Rules) and regulatory requirements.

It covers all aspects inspection and testing, including visual, application of mandatory testing, interpreting test results and recording reporting requirements.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs) classified as ‘critical’:

- EPC 26 – Demonstrate the appropriate methods for the installation, modification and testing of electrical installations and equipment for construction and demolition sites, complying with AS/NZS 3012 and applicable workplace safety legislation. Need for calibration of instruments.
- EPC 30 – Demonstrate to AS/NZS 3000 and AS 3017 standards the electrical checks and tests required to ensure electrical installations are safe, reporting of test results typically required to satisfy regulatory requirements.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining the relevant work permits and implementing appropriate risk control measures
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- preparing and following work plans in accordance with legislative and regulatory requirements and hazard and safety requirements
- reviewing all relevant documentation pertaining to the electrical installation to be inspected and tested
- consulting with all relevant personnel affected by this process
- obtaining the necessary tools, equipment and testing instruments ensuring all instruments are calibrated
- preparing a safe work method statement (SWMS) or job safety analysis (JSA) in the absence of established procedures for effective isolation
- performing a visual inspection ensuring that it meets the requirements of the Australian/New Zealand Wiring Rules – Testing and Verification Visual Inspection Check List
- performing the mandatory and optional circuit tests required for electrical cables in a range of installations and final subcircuits, including:
  - following safe testing procedures
  - testing to show if the earth continuity is sufficiently low
  - testing to show if the insulation resistance is sufficiently high
  - testing to show if the polarity and circuit connections are correct
  - testing to show earth fault-loop impedance is sufficiently low
  - performing testing to verify that residual current devices (RCDs) operate as intended
- identifying and reporting of any non-compliance defect/s and making necessary recommendations in accordance with appropriate procedures

- completing all mandatory documentation in accordance with regulatory and local supply authority requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- isolation and lockout procedures and the purpose and use of SWMS or JSA
- tools, equipment and test instruments needed to conduct electrical installation inspection, testing and verification process
- need for calibration of instruments
- testing procedures, requirements and considerations
- visual inspection of installations for compliance with the Australian/New Zealand Wiring Rules, including:
  - general – protection against direct and indirect contact, hazardous parts, spread of fire and general condition
  - consumers mains
  - switchboards
  - wiring systems
  - electrical equipment
  - earthing
- mandatory tests, including:
  - continuity of the earthing system
  - insulation resistance
  - polarity
  - correct circuit connections
- optional tests, including:
  - fault-loop impedance
  - verification of operation of RCDs
- mandatory documentation and records as required by local supply authority, legislative and regulatory requirements
- documentation for periodic testing and tagging of electrical equipment
- inspection and testing of construction and demolition sites complying with AS/NZS 3012:2010 Electrical installations – Construction and demolition sites, and recording of tests.

Assessment Conditions

- Assessors must:
  - have vocational competency in inspecting, testing and verifying electrical installations at least to the level being assessed with relevant industry knowledge and experience

MEM10022 Commission and decommission high and low voltage equipment or installations

Modification History

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities.

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson –industrial electrician apprenticeship training and the recognition of trade-level skills in switching, isolating, commissioning and decommissioning high voltage and low voltage electrical equipment or installations and seeking appropriate assistance.

It covers the knowledge of isolating and earthing arrangements, permit requirements for switching high voltage, appropriate assistance where required, commissioning and decommissioning procedures and safety measures.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 29 – Knowledge of the AS/NZS 3000 requirements for safety services and issues relevant to HV installations. Standards referenced for electrical installations related to transportable structures and vehicles, shows and carnivals, patient areas, marinas and boats, and construction/demolition sites.
- EPC 49 – Describe the types of potential operational situations that may be encountered in various areas of industry and the type of assistance that may be needed from more experienced industry personnel.

And

Essential Performance Capability (EPC) classified as ‘critical’:

- EPC 50 – Describe the methods of commissioning and/or decommissioning electrical equipment or an installation, using a systems approach.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine job requirements	1.1. Follow standard operating procedures (SOPs)
	1.2. Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
	1.3. Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4. Consult and obtain approval from authorised personnel the need to commission or decommission electrical equipment or installation
	1.5. Analyse and confirm commissioning, switching and work schedules, including drawings, plans and regulatory requirements
2. Prepare to commission or decommission electrical equipment or installation	2.1. Inspect or confirm suitability and safety of electrical equipment or installation site for required commissioning or decommissioning
	2.2. Identify and obtain WHS policies and procedures related to the requirements for commissioning or decommissioning electrical equipment or installation
	2.3. Obtain necessary tools, equipment and testing devices needed for commissioning or decommissioning electrical equipment or installation
	2.4. Brief others participating in or affected by the work on commissioning or decommissioning of electrical equipment or installation
	2.5. Prepare the site according to the work schedule to minimise risk, disruption and damage to property,

		operations and individuals
3.	Commission or decommission electrical equipment or installation	3.1. Commission electrical equipment or installation using a systems approach, including the use of appropriate test equipment, in accordance with the approved commissioning schedule
		3.2. Verify that the performance of the installed equipment/installation through a series of tests is consistent with the customer requirements/specified design intent
		3.3. Capture and record performance data of the whole installation as the baseline for future operation and maintenance
		3.4. Decommission electrical equipment or installation using an approved decommissioning schedule, including the use of appropriate test equipment, according to requirements and established procedures
		3.5. Shut down and isolate sequentially electrical equipment or installation in preparation for repair or maintenance work using safe working practices
		3.6. Deal safely with unexpected situations during the isolation process, including, where required, the approval of an authorised person
4.	Complete commission or decommission electrical equipment or installation	4.1. Check work undertaken against work schedules for conformance with requirements and report anomalies in accordance with established procedures
		4.2. Document completion of commissioning or decommissioning of electrical equipment or installation in accordance with established procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Electrical equipment and installations include:	• new, replaced, or extensively modified equipment or installation in one or more of the following industrial environments:
	  • factory
	  • building
	  • off shore platform
	  • mine site processing
	  • oil and gas installation
	  • processing plant
	  • workshop
	  • underground installation

Test equipment includes one or more of the following:	• multimeters • ammeters • tong testers • voltmeters • continuity testers • insulation resistance testers • appropriate proving dead meters • high potential testers
Regulatory requirements include:	• AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules)
Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Unit Mapping Information

Release 2. Equivalent. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities.

Assessment Requirements for MEM10022 Commission and decommission high and low voltage equipment or installations

Modification History

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, specifications, commissioning, decommissioning switching schedules and instructions relevant to the work to be undertaken
- preparing and following work plans associated with commissioning and decommissioning electrical equipment or installation in accordance with legislative and regulatory requirements, hazard and safety requirements
- complying with the Australian/New Zealand Wiring Rules and regulatory requirements for high voltage and low voltage electrical equipment and installations
- selecting the appropriate measuring and testing devices
- conducting briefing sessions to all personnel participating in or affected by the work
- preparing the site, including signage, barriers and warning devices
- commissioning electrical equipment or installation using a systems approach
- verifying the performance of the installed equipment/system to meet the design requirements through a series of tests/measurements
- making adjustments, where necessary, to ensure conformance with the specified design intent
- capturing and recording performance data of the whole installation as the baseline for future operation and maintenance
- decommissioning electrical equipment or installation
- shutting down and isolating electrical equipment sequentially in preparation for maintenance or repair using lock out and tag procedures and safe working practices
- seeking assistance from authorised personnel for site specific commissioning and decommissioning of electrical equipment and installations including the need for high voltage switching
- documenting completion of commissioning/decommissioning process in accordance with SOPs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- Australian/New Zealand Wiring Rules and regulatory requirements for high voltage and low voltage electrical installations
- industry personnel to be consulted for advice on commissioning or decommissioning procedures
- test and commissioning, including:
  - procedures required for a particular electrical equipment or installation
  - objectives to be achieved, including:
    - to verify proper functioning of the equipment/system after installation
    - to verify that the performance of the installed equipment/systems meet with the specified design intent through a series of tests and adjustments
    - to capture and record performance data of the whole installation as a baseline for future operation and maintenance
  - using a systems approach, including:
    - performance tests appropriate to equipment/installation to be commissioned
    - measurements required to ensure conformance to specifications
    - adjustments to be made to meet specified design and operational requirements
    - the use of appropriate test equipment
- decommissioning of electrical equipment or installation, including:
  - procedures required for a particular electrical equipment or installation
  - a working knowledge of the electrical equipment or installation in order to sequentially shut down and isolate for the purposes of repair and maintenance including using lock out and tag procedures to enable safe removal of equipment/conductors
  - types of operational forms, access authorities, permits and requirements associated with high voltage switching
- reporting requirements relevant to the electrical equipment or installation being commissioned.

Assessment Conditions

- Assessors must:
  - have vocational competency in commissioning and decommissioning high and low voltage equipment or installations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10023 Design and connect control switching of circuits for building services and industrial equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in designing and connecting control switching of circuits.

It covers basic switching and control arrangements and hazards and safety requirements associated with static electricity discharge from components.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 41 – Demonstrate the knowledge and skills to design and connect switching circuits, as per AS/NZS 3000.
- EPC 51 – Describe the functioning of basic electronic circuits used in common electrical power circuit applications including electronic logic controls, related hazards and safety requirements.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM10016	Terminate and test electrical wiring and accessories
MEM10018	Select cable types and sizes to suit loads and electrical installation environment
MEM10019	Select circuit protection devices by type and rating, fit to switchboards and install earthing
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1.	Follow standard operating procedures (SOPs)
		1.2.	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3.	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4.	Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Design control switching of circuits	2.1.	Design agreed control switching of circuits to comply with specifications and regulatory requirements
		2.2.	Document agreed design of control circuits in accordance with procedures
		2.3.	Obtain the necessary tools, equipment, test instruments and materials needed to connect the control circuits
3.	Connect control switching of circuits	3.1.	Isolate and tag circuits and equipment in accordance with procedures, where required
		3.2.	Terminate and connect control circuit components to comply with the design and regulatory requirements
		3.3.	Functional test control circuit operation to ensure compliance with agreed design
		3.4.	Rectify any non-compliances and re-test to meet requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5. Terminate and connect control circuits
	3.6. Test control circuits to ensure functionality
	3.7. Document control circuits in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Control switching of circuits include five (5) or more of the following:	• multiple light switching circuit • master control circuit • local start-stop control and with electrical interlocking • connecting a timer in a controlled circuit • a multiple motor starting circuit which incorporates start, stop and jog control • machine safety circuit • line conditioners • inverters • uninterrupted power supplies (UPS) • energy management systems
Control circuit components include five (5) or more of the following:	• multi-way switches • switches with more than two positions and Off • push buttons • electromechanical relays • programmable relays • contactors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- motor reversing contactors
- three-phase starters
- reduced voltage starters
- transducers/sensors, including:
  - limit, proximity, float and pressure switches
  - photoelectric cells
  - light and temperature sensors

Regulatory requirements include:	• AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules
Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Assessment Requirements for MEM10023 Design and connect control switching of circuits for building services and industrial equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- determining the electrical and non-electrical isolation requirements to prevent the creation of hazards linked from the loss of machine/system/process control according to established procedures
- using lock out tag procedures with appropriate tags/signs
- proving electrical isolation and following established safety rules prior to working on electrical equipment or wiring
- ensuring all electrical equipment and tools are tested and tagged and are up to date
- developing according to specifications at least five (5) or more of the following control circuit designs:
  - multiple light switching circuit
  - master control circuit
  - local start-stop control and with electrical interlocking
  - connecting a timer in a controlled circuit
  - a multiple motor starting circuit which incorporates start, stop and jog control
  - machine safety circuit
  - line conditioners
  - inverters
  - uninterrupted power supplies (UPS)
  - energy management systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- terminating and connecting to comply with the above selected control circuit scenarios and regulatory requirements at least five (5) or more of the following control circuit devices:
  - multi-way switches
  - switches with more than two positions and Off
  - push buttons
  - electromechanical relays
  - programmable relays
  - contactors
  - motor reversing contactors
  - three-phase starters
  - reduced voltage starters
  - transducers/sensors, including:
    - limit, proximity, float and pressure switches
    - photoelectric cells
    - light and temperature sensors
- programming timers and using the monitoring facility of the programmable relay to verify the values of the timer
- testing connected control circuit devices as against agreed design and rectifying any non-compliant functions
- complying with the Australian/New Zealand Wiring Rules and local supply requirements for three-phase motor installations and starters
- testing control circuits to ensure functionality
- using test equipment to locate faults, completing remedial action and retesting to ensure compliance
- documenting connected control circuits in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- electrical drawings – conventions in linework, symbols used in electrical circuit diagrams, placement and arrangement of circuit components
- drawing schematic circuit diagrams complying with Australian Drawing Standard AS/NZS 1102.101-1989 Graphical symbols for electrotechnical documentation – General information and general index, and converting to wiring diagrams
- construction and operation of contactors and relays with various types of contacts, including:
  - normally open
  - normally closed
  - timed on closing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - timed in opening
    - timed in both closing and opening
- drawing contactors in circuits and drawing conventions applied
- control diagrams drawn as ladder diagrams where the ladder stiles are the supply lines and the ladder rungs are the various circuit lines
- control circuit variations, including:
    - two-position control
    - local or remote operation
    - two-wire control
    - two-wire and push button control where extra start push-buttons are all placed in parallel and where extra stop push-buttons are placed in series
    - reversing circuits – use of mechanical and electrical interlocks
    - jogging control
- common control devices used in circuits, including:
    - multi-way switches
    - switches with more than two positions and Off
    - push buttons
    - electromechanical relays
    - programmable relays
    - contactors
    - motor reversing contactors
    - three-phase starters
    - reduced voltage starters
    - transducers/sensors, including:
        - limit, proximity, float and pressure switches
        - photoelectric cells
        - light and temperature sensors:
- programmable timers, including specifications to be met and functions to be controlled including machine operation or process output
- line conditioners and the purpose they provide
- inverters and the purpose they provide
- energy management systems and the purpose they provide
- static electricity discharge or electrostatic discharge and the hazards associated and the precautions to be taken.

Assessment Conditions

- Assessors must:
    - have vocational competency in designing and connecting control switching of circuits for building services and industrial equipment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10024 Install and troubleshoot luminaires and ancillary equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in installing and troubleshooting luminaires and ancillary equipment in accordance with the relevant standards.

It covers a basic understanding of the various types of faults, luminaires and the purpose components and ancillary equipment for operating voltages up to 1000 V alternating current (AC) or 1500 V direct current (DC) and related hazard and safety requirements.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capability (EPC):

- EPC 53 – Demonstrate an understanding of the basic operation and energy efficiency of the various types of luminaires and the purpose of components and ancillary equipment including related hazards and their safety requirements.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM10016	Terminate and test electrical wiring and accessories
MEM10018	Select cable types and sizes to suit loads and electrical installation environment
MEM10019	Select circuit protection devices by type and rating, fit to switchboards and install earthing
MEM10023	Design and connect control switching of circuits for building services and industrial equipment

MEM18001 Use hand tools

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine job requirements	1.1. Follow standard operating procedures (SOPs)
	1.2. Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
	1.3. Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4. Determine through the interpretation of electrical diagrams, drawings, lighting standards and/or from consultation the luminaire and ancillary equipment requirements for the electrical installation
2. Install luminaires and ancillary equipment	2.1. Obtain the number and type of luminaires and associated ancillary equipment through established procedures
	2.2. Obtain necessary tools, equipment and testing instruments needed for installing luminaires and ancillary equipment
	2.3. Isolate and tag circuits and equipment in accordance with procedures, where required
	2.4. Install luminaires and accessories complying with job specifications, and regulatory and legislative requirements
	2.5. Check installed accessories are straight and square in the required locations and within acceptable tolerances
	2.6. Terminate lighting circuits to luminaires, switches and other control devices in accordance with manufacturer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		specifications and regulatory requirements
	2.7.	Test luminaires and ancillary equipment to ensure compliance
3. Troubleshoot luminaires and ancillary equipment	3.1.	Identify the fault and resulting safety hazards and implement risk control measures in consultation with appropriate personnel
	3.2.	Apply diagnostic techniques to troubleshoot luminaires, ancillary equipment and associated lighting circuits using appropriate test equipment
	3.3.	Repair/replace faulty circuits/components according to manufacturer specifications and regulatory requirements
	3.4.	Test repaired/replaced circuit/component for functionality in accordance with regulatory requirements
	3.5.	Dispose of discharge lamps in accordance with environmental guidelines and procedures
	3.6.	Document installation and troubleshooting of luminaires, ancillary equipment and associated circuits in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Lighting standard includes:	• AS/NZS 1680.1:2006 Interior and workplace lighting general principles and recommendations
Regulatory requirements include:	• AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules • National Construction Code (NCC) Australia or building code (NZ)
Faults include:	• fluorescent light circuits, including lamp, ballast and starter • metal Halide and high-pressure sodium (HPS) lighting and circuits, including capacitor, poor connection, igniter and ballast • extra-low voltage (ELV) lighting devices, including transformer (iron core or electronic), voltage drop, heat, over-voltage, poor connections and incompatible dimmers • lighting control circuits, including manual control, passive infra-red (PIR), dimmers, photo electric or day-light switches and time clocks • lighting management systems

Lighting circuits include two (2) or more of the following:	• single light controlled by a single switch
	• multiple lights controlled by a single switch
	• two and three-way switching using:
	  • loop at the light method
	  • loop at the switch method

Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Assessment Requirements for MEM10024 Install and troubleshoot luminaires and ancillary equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, specifications and plans relevant to the work to be undertaken
- determining the electrical and non-electrical isolation requirements to prevent the creation of hazards linked from the loss of machine/system/process control according to established procedures
- using lock out tag procedures with appropriate tags/signs
- proving electrical isolation and following established safety rules prior to working on electrical equipment or wiring
- ensuring all electrical equipment and tools are tested and tagged and up to date
- installing accessories ensuring that they are straight and square in the required location
- using safe working practices and take additional care when working with lights that operate at high voltage or contain capacitors
- terminating two (2) or more of the following lighting circuits:
  - single light controlled by a single switch
  - multiple lights controlled by a single switch
  - two and three-way switching using:
    - loop at the light method
    - loop at the switch method
- complying with the Australian/New Zealand Wiring Rules requirements for the installation and termination of lighting equipment and accessories, including related hazards and safety requirements including maintaining fire integrity
- measuring and recording illumination for comparison against lighting standard AS/NZS 1680.1:2006 Interior and workplace lighting – General principles and recommendations, using a suitable light meter
- locating and repairing faults in luminaires and ancillary equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- troubleshooting and repairing faults in common lighting circuits
- replacing lamps with ‘like for like’
- performing periodic servicing of emergency lighting and smoke detector systems and recording intervals of servicing, including remedial action taken
- disposing of discharge lamps according to environmental guidelines and established procedures
- documenting installation and troubleshooting, including remedial action taken in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- lighting applications, including:
  - basic principles, terminology and units in describing process and concepts of illumination
  - the major design requirements of luminaires regarding reflection or diffusion of light and direct the light onto the working place
  - functional category types of luminaires:
    - direct with 90-100% downward light component
    - indirect with 90-100% upward light component
    - general diffusing with approximately equal upward and downward components
    - semi direct with 10-40% upward and 60-90% downward
    - semi direct with 60-90% upward and 10-40% downward
  - maintenance of luminaires, including lamp replacement and cleaning
  - common faults in luminaires
  - disposal of discharge lamps in accordance with environmental guidelines and established procedures
  - elementary lighting design, including:
    - requirements to clearly show up the task or work area
    - recommended maintenance luminance
    - the advantages of the use of reflectors and diffusers
    - determining illuminance on a working plane using the ‘point by point’ method and lumen method
    - the use of a lux meter to determine lighting and illumination requirements
  - emergency evacuation lighting in buildings, including:
    - escape and standby lighting
    - installation requirements of emergency lighting luminaires
    - installation of smoke detection in domestic and residential premises
    - inspection and maintenance of emergency lighting and smoke detectors
    - recording requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- light sources, including:
  - lamp type and their characteristics
  - the operating principles of various types of lamps and luminaries and the purpose of their auxiliary control equipment
  - energy efficiency
  - the cause of low power factor and the measures used to improve power factor in discharge lighting
  - Australian/New Zealand Wiring Rules requirements for the installation of lighting equipment and accessories, including related hazards and safety requirements
  - application of various types of lamps and luminaires
  - 'stroboscopic effect' and the methods used to overcome, including:
    - 'non-stroboscopic' circuit (inclusion of a capacitor in one fluorescent lamp circuit to provide phase shift in relation to the other lamp circuit)
    - connecting adjacent lamps to different phases in large installations
    - electronic lamp circuits operating at high frequencies
- lighting circuits, including:
  - single light controlled by a single switch
  - multiple lights controlled by a single switch
  - two and three-way switching using the loop at the light method and the loop at the switch method
- lighting control, including:
  - manual control involving the use of two-way and intermediate switches
  - time switches both analogue and digital for programmed control
  - time delay switches that are adjustable and may be air-valve or electronic type
  - photo-sensitive electronic control used to control outdoor and street lighting
  - passive infrared (PIR) technology used in scanning devices to detect movement of a hot or cold body and automatically switch on security or convenience lighting
  - various types light dimmers, including electronic
  - lighting management systems, e.g. C-Bus.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing and troubleshooting luminaires and ancillary equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10025 Undertake a capstone assessment

Modification History

Release 4. Prerequisite units updated

Release 3. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 2. Equivalent - correction to include missing prerequisites

Release 1. New unit

Application

This assessment is to be carried out after the completion of all other assessment requirements of the units of competency that make up MEM31219 Certificate III in Engineering – Industrial Electrician and prior to application for an Electrical Licence.

This assessment is to be carried out at the premises of the Registered Training Organisation (RTO) and is expected to be conducted by an assessor other than the one who has been a regular instructor to the apprentice.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs) classified as ‘critical’:

- EPC 2 – Demonstrate a knowledge of the various effects of electric current.
- EPC 5 – Explain the operation of a simple practical circuit. Determine the resistance, voltage, current and power in any part of a DC circuit using theory and actual measurement methods.
- EPC 8 – Demonstrate a knowledge of alternating voltage & current generation, phase relationships, energy in an AC circuit, and actual measurement methods.
- EPC 10 – Demonstrate an understanding of the fundamental principles of the AS/NZS 3000 Part 1. Knowledge of the hierarchy of standards. Nomative/informative text.
- EPC 13 – Demonstrate a knowledge of methods of electric motor selection, starting, connection and protection.
- EPC 16 – Describe and apply in practice the requirements of AS/NZS 3000 in relation to earthing arrangements and fault loop impedance calculations. Knowledge of alternate earthing systems when required by local Regulatory Authorities.
- EPC 17 – Demonstrate a comprehensive knowledge and understanding of the MEN system and its application, including on sub-installations. Demonstrate how to test a MEN system.
- EPC 19 – List the key safety issues of various types of transformers, including AS/NZS 3000 requirements.
- EPC 20 – Demonstrate a knowledge of the SELV and PELV systems, their application and testing in accordance with AS/NZS 3000.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- EPC 21 – Demonstrate the ability to select cables for mains and submains using AS/NZS 3000 and AS/NZS 3008.1 based on current carrying capacity, short circuit capacity, maximum demand and voltage drop, for single phase and three phase installations including multiple installations.
- EPC 22 – Demonstrate the ability to select cables for final subcircuits using AS/NZS 3000 and AS/NZS 3008.1 based on current carrying capacity, short circuit capacity, maximum demand, earth loop impedance and voltage drop.
- EPC 23 – Describe and apply the control and protection requirements for installations and equipment. Demonstrate the ability to select suitable equipment and switchgear for a particular installation or part of an installation using AS/NZS 3000.
- EPC 24 – Demonstrate an understanding of the AS/NZS 3000 and regulatory requirements for the location of switchboards and arrangement of switchboard equipment in installations. Methods for determining prospective fault current. Switchboard form types.
- EPC 25 – Demonstrate an understanding of the AS/NZS 3000 and regulatory requirements for the installation of electrical equipment in given damp situations and wet areas. IP rating of electrical equipment.
- EPC 26 – Demonstrate the appropriate methods for the installation, modification and testing of electrical installations and equipment for construction and demolition sites, complying with AS/NZS 3012 and applicable workplace safety legislation. Need for calibration of instruments.
- EPC 27 – Demonstrate knowledge of AS/NZS 3000 and local regulatory requirements for the installation of aerial conductors and underground wiring. Including specialist cables.
- EPC 28 – Demonstrate a knowledge of the AS/NZS 3000 requirements for electrical installations in hazardous areas and an awareness of the standards to which it refers.
- EPC 30 – Demonstrate to AS/NZS 3000 and AS 3017 standards the electrical checks and tests required to ensure electrical installations are safe, reporting of test results typically required to satisfy regulatory requirements.
- EPC 31 – Demonstrate the knowledge and skill to perform effective safe isolation of any equipment, including switch and lock off, circuit isolation, equipment testing and tag out procedures, including capacitor banks.
- EPC 35 – Demonstrate the knowledge and skill to install and terminate a variety of electrical cables in a wide range of applications (including final subcircuits) to AS/NZS 3000.
- EPC 37 – Demonstrate knowledge and skills to install final subcircuit wiring into switchboards and connect to switchboard equipment in accordance with AS/NZS 3000 and local supply authority requirements.
- EPC 38 – Connect consumers mains to an installation, in accordance with AS/NZS 3000 and local supply authority requirements.
- EPC 40 – Demonstrate ability to read, sketch and interpret electrical diagrams and specifications.
- EPC 42 – Describe basic statutory occupational safety and health responsibilities for employers and employees, including supervisory requirements and employees’ own "duty of care". Asbestos awareness and reporting. Hazardous gases.
- EPC 43 – Demonstrate understanding of the requirements for personal safety in the workplace and application of safety practices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- EPC 44 – Describe a workplace safety check, identify potential workplace hazards and suggest measures for accident prevention.
- EPC 46 – Describe the method of rescuing a person in contact with live electrical conductors or equipment.
- EPC 47 – Describe the emergency first aid requirements for an electric shock victim and demonstrate the knowledge and application skill of CPR.
- EPC 48 – Demonstrate knowledge and understanding of the significant dangers of High Voltage equipment and distribution systems.
- EPC 50 – Describe methods of commissioning and/or decommissioning electrical equipment or an installation, using a systems approach.
- EPC 54 – Demonstrate the knowledge and skills for diagnosing and rectifying faults in electrical apparatus and associated circuits.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 1

Pre-requisite Unit

MEM10016	Terminate and test electrical wiring and accessories
MEM10018	Select cable types and sizes to suit loads and electrical installation environment
MEM10019	Select circuit protection devices by type and rating, fit to switchboards and install earthing
MEM10020	Install low voltage cabling and fit-off accessories, appliances and equipment
MEM10021	Inspect, test and verify electrical installations
MEM10022	Commission and decommission high and low voltage equipment or installations
MEM10023	Design and connect control switching of circuits for building services and industrial equipment
MEM10024	Install and troubleshoot luminaires and ancillary equipment
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM13017	Apply safety practices, procedures and compliance standards associated with licensed electrical work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM17003	Assist in the provision of on-the-job-training
MEM18001	Use hand tools
MEM18100	Fault-find, test and rectify AC machines and circuits
MEM18102	Fault-find, test and rectify single and three-phase transformers
MEM18103	Fault-find, test and rectify electrical circuits and equipment
MEM18104	Dismantle, replace and assemble electrical components and equipment
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG102A	Solve problems in low voltage a.c. circuits

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to undertake a capstone assessment	1.1. Follow standard operating procedures (SOPs)
	1.2. Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
	1.3. Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4. Identify practical assessment requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2.	Carry out practical assessment	2.1.	Obtain necessary tools, equipment and testing devices needed for completing the practical assessment and check for correct operation and safety
		2.2.	Select cable types and sizes to suit loads and electrical installation environment
		2.3.	Select circuit protection devices by type and rating
		2.4.	Install and terminate low voltage (LV) cabling and wiring, fit off accessories, appliances and equipment in accordance with specifications and regulatory requirements
		2.5.	Inspect, test and verify electrical installation to ensure compliance with regulatory requirements
		2.6.	Rectify all non-compliance defects and re-test to ensure compliance
3.	Carry out a theory assessment	3.1.	Obtain all applicable standards and other approved reference books relevant to the test being undertaken
		3.2.	Complete the written component of the capstone assessment within the allocated timeframe
4.	Complete the capstone assessment	4.1.	Demonstrate fundamental knowledge and comprehension of electrical concepts and safety principles, using (where possible) problems that test a combination of practical and theoretical skills
		4.2.	Satisfy the minimum requirements of both the written and practical component of the capstone assessment
		4.3.	Demonstrate fundamental knowledge and comprehension of electrical concepts and safety principles, using (where possible) problems that test a combination of practical and theoretical skills
		4.4.	Satisfy the minimum requirements of both the written and practical component of the capstone assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment requirements include:	• as described by the National Uniform Electrical Licensing Advisory Council or its successor – Capstone assessment requirements for prospective electricians include the following:
	  • all ‘critical items’ of the EPCs list
	  • may be an ‘open book’ style, with the permitted use of standards and published reference books (programmable calculators, computers and personal notes are to be excluded)

Capstone assessment includes:	• written component – objective assessment methods to be used, including a sensible proportion of multiple choice questions (‘essay style’ to be avoided) and some written answers to the objective questions, aimed at demonstrating a trainee’s understanding of the ‘critical’ aspects as specified in the EPC list • practical component – required demonstration of fundamental knowledge and comprehension of electrical concepts and safety principles, as specified in the ‘critical’ items of the EPC list, using (where possible) problems that test a combination of practical and theoretical knowledge and skills
Duration of capstone assessment includes:	• one full working day to complete, with the practical component representing about 70% of the whole test, e.g. written test 2-3 hours and practical test 4-6 hours
Minimum requirements of the capstone	• written – the apprentice is required to demonstrate satisfactory performance in every ‘critical’ item tested

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

assessment include:	• practical – the apprentice is required to have demonstrated *****competence for the 'critical' items tested ***Note:** Competence in this setting means that it is evident that the person comprehends the key safety issues and the practical work performed does not suffer from any defects of the kind categorised as 'serious' by Electrical Regulators
Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Unit Mapping Information

Release 3. Equivalent. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities and inclusion of missing prerequisites.

Assessment Requirements for MEM10025 Undertake a capstone assessment

Modification History

Release 4. Prerequisite units updated

Release 3. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 2. Equivalent - correction to include missing prerequisites

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- demonstrating fundamental knowledge and comprehension of electrical concepts and safety principles, using (where possible) problems that test a combination of practical and theoretical skills
- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings, plans and specifications relevant to the work to be undertaken
- obtaining the necessary tools, equipment and testing devices ensuring that they are checked for safety and operation
- undertaking the necessary calculations in determining current carrying capacity, short circuit capacity, maximum demand and voltage drop and earth loop impedance for the given installation
- selecting cables ensuring coordination between protective devices and conductors in accordance with specifications and regulatory requirements
- selecting and installing suitable switch gear and circuit protection devices complying with specifications and regulatory requirements
- installing and terminating low voltage cabling and wiring; fitting off accessories, appliances and equipment in accordance with specifications and regulatory requirements
- performing a visual inspection ensuring that it meets the requirements of the Australian/New Zealand Wiring Rules – Testing and Verification Visual Inspection Check List
- performing the mandatory and optional circuit tests required for electrical cables in a range of installations and final subcircuits, including:
  - following safe testing procedures
  - testing to show if the earth continuity is sufficiently low
  - testing to show if the insulation resistance is sufficiently high
  - testing to show if the polarity and circuit connections are correct

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - testing to show earth fault-loop impedance is sufficiently low
  - performing testing to verify that residual current devices (RCDs) operate as intended
- demonstrating how to test a multiple earthed neutral (MEN) system
- identifying and rectifying of any non-compliance defect/s and retesting to ensure compliance
- completing all mandatory documentation in accordance with regulatory and local supply authority requirements
- completing the written component of the capstone assessment in the allocated timeframe
- satisfying the minimum requirements of both the written and practical component of the capstone assessment.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- various effects of electric current
- operation of a simple practical circuit
- determination of resistance, voltage, current and power in any part of a direct current (DC) circuit using theory and actual measurements
- alternating voltage and current generation, phase relationships, energy in an alternating current (AC) circuit and actual measurement methods
- understanding of the scope, application and fundamental principles of AS/NZS 3000: 2007 Electrical installations (known as the Australian/New Zealand Wiring Rules) Part 1
- methods of electric motor selection, starting, connection and protection
- requirements and its application of Australian/New Zealand Wiring Rules in relation to earthing arrangements and fault-loop impedance calculations
- alternate earthing systems when required by local regulatory authorities
- understanding of the MEN system and its application, including on sub-installations
- applications of transformers and key safety issues
- requirements and application of Australian/New Zealand Wiring Rules in relation to circuit protection and other relevant Australian Standards e.g. AS/NZS 3018:2001 Electrical installations – Domestic installations (or its equivalent updated version)
- requirements and application of Australian/New Zealand Wiring Rules in relation to separated extra-low voltage (SELV) and protected extra-low voltage (PELV) systems, their application and testing
- cable selection for mains and submains using Australian/New Zealand Wiring Rules and AS/NZS 3008.1.1:2009 Electrical Installations – Selection of cables – Cables for alternating voltages up to and including 0.6/1 kV – typical Australian installation conditions based on current carrying capacity, short circuit capacity, maximum demand and voltage drop for single-phase and three-phase installations, including multiple installations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cable selection for final subcircuits using Australian/New Zealand Wiring Rules and AS/NZS 3008.1.1:2009 Electrical Installations – Selection of cables – Cables for alternating voltages up to and including 0.6/1 kV – typical Australian installation conditions based on current-carrying capacity, short circuit capacity, earth loop impedance and voltage drop
- control and protection requirements for installations and equipment and the ability to select suitable equipment, switchgear and RCDs for a particular installation or part of an installation
- minimum fault levels specified by electricity network operator
- requirements and application of Australian/New Zealand Wiring Rules in relation to location of switchboards and arrangement of switchboard equipment in installations
- methods of determining prospective fault current
- switchboard form types
- installation of electrical equipment in given damp situations and wet areas in accordance with Australian/New Zealand Wiring Rules and regulatory requirements
- Ingress Protection (IP) rating of electrical equipment
- installation, modification and testing of electrical installations and equipment for construction and demolition sites complying with AS/NZS 3012:2010 Electrical installations – Construction and demolition sites, and applicable workplace safety legislation
- need for calibration of instruments
- requirements of Australian/New Zealand Wiring Rules in relation to the installation of aerial conductors, underground wiring and specialist cables
- requirements Australian/New Zealand Wiring Rules in relation for electrical installations in hazardous areas and awareness of the standards to which it refers
- additional training required to work competently with electrical equipment for hazardous areas
- electrical tests and checks to be performed as required by Australian/New Zealand Wiring Rules and AS 3017:2007 Electrical installations – Verification guidelines to ensure electrical installations are safe
- reporting of test results typically required to satisfy regulatory requirements
- effective safe isolation of any equipment, including capacitor banks, including switch and lock off, circuit isolation, equipment testing and tagging procedures
- installation and termination requirements for a variety of cables in a wide range of applications (including final subcircuits to Australian/New Zealand Wiring Rules
- circuit tests requirements for electrical cables in a range of installations, with attention to final subcircuits
- installation requirements of final subcircuit wiring into switchboards and connection to switchboard equipment in accordance with Australian/New Zealand Wiring Rules and local supply authority requirements
- connection requirements of consumer mains to an installation in accordance with Australian/New Zealand Wiring Rules and local supply authority requirements
- reading, sketching and interpretation of electrical diagrams and specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic statutory work health and safety (WHS) responsibilities for employers and employees, including supervisory requirements and employees' own 'duty of care', including asbestos awareness and hazardous gases
- requirements for personal safety in the workplace, including safe isolation and application of safety practices
- workplace safety checks, identification of potential workplace hazards and working with others to suggest measures for accident prevention
- method of rescuing a person in contact with live electrical conductors or equipment
- emergency first aid requirements for an electric shock victim and demonstrate the knowledge and application skill of cardiopulmonary resuscitation (CPR)
- understanding of the significant dangers of high voltage equipment and distribution systems
- methods of commissioning and/or decommissioning electrical installation using a systems approach
- diagnosing and rectifying faults in electrical apparatus and associated circuits.

Assessment Conditions

- Assessors must:
  - hold a current electrical licence be an assessor other than the one who has been a regular instructor to the apprentice
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires
- The capstone assessment is an entirely RTO conducted assessment at the RTO's chosen location where the entire assessment needs to be carried out in one day.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11001 Erect/dismantle scaffolding and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11001C Erect/dismantle scaffolding and equipment

Application

This unit of competency defines the skills and knowledge required to prepare, erect and dismantle scaffolding and equipment for maintenance and installation in a workshop and in factories, manufacturing plants and warehouses.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Interpret site plans, scaffolding/equipment designs and drawings to industry practices, as necessary
2	**Prepare to erect scaffold/equipment**	2.1	Inspect work area to identify hazards and implement appropriate prevention/control measures to avoid hazard
		2.2	Prepare erection site to meet job requirements
		2.3	Place necessary signage and barriers and third-party protection measures in appropriate position
3	**Erect scaffold/equipment**	3.1	Select and inspect appropriate scaffolding/equipment components and label and reject damaged components
		3.2	Erect scaffolding/equipment to plan and in accordance with safe work practices, Australian Standards, state and territory legislative requirements and equipment manufacturers' requirements
		3.3	Check the completed scaffolding/equipment for safety and operational requirements
		3.4	Leave site clear of all surplus components, equipment, tools and debris
4	**Inspect, repair**	4.1	Repair or send for repair rejected components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	and alter scaffold/equipment	4.2	Inspect the scaffolding/equipment for damage, corrosion and wear
		4.3	Carry out any alteration or repair in accordance with safe work practices and legislative requirements
		4.4	Complete any inspection log, as required
5	**Dismantle scaffold/equipment**	5.1	Inspect scaffolding/equipment for damage, corrosion or wear and note for consideration in planning for dismantling
		5.2	Dismantle scaffolding/equipment in accordance with site procedures, state and territory legislative requirements and critical structural and safety requirements
		5.3	Clean and clear site of all tools, excess material and debris and leave in a safe state

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Scaffolding/equipment includes one (1) or more of the following:	• modular or prefabricated scaffolds • cantilevered materials hoists with a maximum working load of 500 kg • ropes and gin wheels • safety nets and static lines • bracket scaffolds (tank and formwork)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards include one (1) or more of the following:

- chemicals
- dangerous or hazardous substances/materials
- movement of equipment, goods and materials
- vehicular traffic
- uneven/unstable terrain
- overhead service lines
- trees
- underground services
- obstructions
- structures
- surrounding buildings
- facilities
- bridges/walkways
- lifting equipment

Prescribed procedures include one (1) or more of the following:

- clarification of instructions and/or plans either written or from authorised personnel
- site safety policy and procedures
- SOPs
- correct use of equipment
- industry standards and requirements
- manufacturers' specifications

Signage and barriers and third-party protection measures include one (1) or more of the following:

- physical barriers (para webbing, bollards, timber or metal barriers)
- warning/direction signs
- personnel to restrict unauthorised access (spotters)
- permits to work

Safe work practices include the following:

- hazard identification
- risk assessment
- risk reduction measures
- housekeeping
- PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

State and territory legislative requirements include the following:

- appropriate WHS and Scaffolding Acts and regulations
- Australian Standards and codes of practice, including:
  - NOHSC:1006, National Occupational Health and Safety Certification Standards for Users and Operators of Industrial Equipment

Unit Mapping Information

Assessment Requirements for MEM11001 Erect/dismantle scaffolding and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11001C Erect/dismantle scaffolding and equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and legislative requirements for erecting scaffolding
- preparing the site for erection of scaffolding
- assessing the risks associated with erecting/dismantling scaffolding and equipment and determining the most appropriate technique
- using relevant hand tools and manual handling techniques ensuring the scaffolding is level
- undertaking site clean-up and remediation
- working safely and confidently at heights.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- erection and dismantling procedures as set out in relevant Australian Standards
- codes of practice, for example, the Scaffolder's Guide, and relevant acts and regulations
- site specific requirements
- scaffolding techniques and equipment and its limitations
- materials handling, storage and environmentally friendly waste management.

Assessment Conditions

- Assessors must:
  - have vocational competency in erecting/dismantling scaffolding and equipment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11002 Erect/dismantle intermediate scaffolding and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11002C Erect/dismantle complex scaffolding and equipment

Application

This unit of competency defines the skills and knowledge required to prepare, erect, maintain, inspect/alter/repair and dismantle intermediate scaffolding/equipment used generally in maintenance and installation in workshops, factories, manufacturing plants and warehouses.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where scaffolding alteration or repair work is undertaken appropriate units should also be selected.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Interpret site plans, scaffolding/equipment designs and drawings to industry practices, as necessary
2	**Prepare to erect intermediate scaffold/equipment**	2.1	Inspect work area to identify hazards and implement appropriate prevention/control measures to avoid hazard
		2.2	Prepare erection site to meet job requirements
		2.3	Place necessary signage and barriers and third-party protection measures in appropriate position
3	**Erect intermediate scaffold/equipment**	3.1	Select and inspect appropriate scaffolding/equipment components and label and reject damaged components
		3.2	Erect scaffolding/equipment to plan and in accordance with acceptable safe work practices, Australian Standards, state or territory legislative requirements and equipment manufacturers' requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Check scaffolding/equipment for safety and operational requirements and identify faults in accordance with legislative requirements
4	**Inspect, alter and/or repair intermediate scaffold/equipment**	4.1	Repair or send for repair rejected components
		4.2	Confirm alterations/repairs in accordance with safe work practices, Australian Standards and equipment manufacturers' requirements
		4.3	Inspect alterations/repairs for safety and operational requirements
		4.4	Confirm and understand scope of alteration/repair
		4.5	Inspect existing scaffold/equipment for suitability of alterations/repair requirements
		4.6	Determine materials, equipment and tools required for alteration
		4.7	Record/report work completion to appropriate authority
5	**Dismantle intermediate scaffold/equipment**	5.1	Inspect scaffolding/equipment for damage, corrosion or wear and note for consideration in planning for dismantling
		5.2	Dismantle scaffolding/equipment in accordance with site procedures, state and territory legislative requirements and critical structural and safety requirements
		5.3	Clear and clean site of all tools, excess material and debris and leave in a safe state

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Scaffolding/equipment includes one (1) or more of the following:

- modular or prefabricated scaffolds
- cantilevered materials hoists with a maximum working load of 500 kg
- ropes and gin wheels
- safety nets and static lines, and
- bracket scaffolds (tank and formwork)
- cantilevered crane loading platforms
- cantilevered and spurred scaffolds
- barrow ramps and sloping platforms
- perimeter safety screens and shutters
- mast climbers
- tube and coupler scaffolds (including tube and coupler covered ways and gantries)

Maintaining scaffold includes the following:

- ensuring that the scaffolding remains in a safe condition according to manufacturers' specifications and legislative requirements

Hazards include one (1) or more of the following:

- chemicals
- dangerous or hazardous substances/materials
- movement of equipment, goods and materials
- vehicular traffic
- uneven/unstable terrain
- overhead service lines
- trees
- underground services
- obstructions
- structures
- surrounding buildings
- facilities
- bridges/walkways
- lifting equipment

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Prescribed procedures include one (1) or more of the following:	• clarification of instructions either written or from authorised personnel • site safety policy and procedures • SOPs • correct use of equipment • industry standards and requirements • manufacturers' specifications
Signage, barriers and third-party protection measures include one (1) or more of the following:	• physical barriers (para webbing, bollards, timber or metal) • warning/direction signs • personnel to restrict unauthorised access (spotters) • permits to work
Safe work practices include the following:	• hazard identification • risk assessment • SOPs • housekeeping • PPE
State or territory legislative requirements include the following:	• appropriate WHS and Scaffolding Acts and regulations • Australian standards and codes of practice, including: • NOHSC:1006, National Occupational Health and Safety Certification Standards for Users and Operators of Industrial Equipment

Assessment Requirements for MEM11002 Erect/dismantle intermediate scaffolding and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11002C Erect/dismantle complex scaffolding and equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, legislative requirements for erecting intermediate scaffolding
- preparing the site for erection of intermediate scaffolding
- assessing the risks associated with intermediate scaffolding and equipment and determining the most appropriate technique
- using relevant hand tools and manual handling techniques ensuring the intermediate scaffolding is level
- determining the condition of scaffolding and determining the need for repair or alteration
- undertaking alteration or repair work on scaffolding or sending the scaffolding for repair or alteration.
- undertaking site clean-up and remediation
- working safely and confidently at heights.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- erection and dismantling procedures as set out in relevant Australian Standards
- codes of practice, for example, the Scaffolder's Guide, and relevant acts and regulations
- site-specific requirements
- sequence of operations in erecting intermediate scaffolding
- types of intermediate scaffolding systems and deck loadings
- scaffolding techniques and equipment and its limitations
- materials handling, storage and environmentally friendly waste management
- scaffolding condition and repair requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazards and control measures; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; and safe access and egress.

Assessment Conditions

- Assessors must:
  - have vocational competency in erecting/dismantling intermediate scaffolding and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11003 Coordinate erection/dismantling of complex scaffolding/equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11003B Coordinate erection/dismantling of complex scaffolding/equipment

Application

This unit of competency defines the skills and knowledge required to coordinate the erection, alteration, repair and dismantling of scaffolding/equipment in workshops, factories, manufacturing plants and warehouses, and applies to individuals coordinating a scaffolding team or employed in a supervisory capacity.

Complex scaffolding means intermediate scaffolding and above as set out the legislative requirements in each state and territory. The major difference between the complex and basic scaffolding is the height of the working platform and certain types of scaffolding and configurations.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11001	Erect/dismantle scaffolding and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11002	Erect/dismantle intermediate scaffolding and equipment
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Interpret site plans, scaffolding/equipment designs and drawings to industry practices, as necessary
2	**Plan and coordinate erection of complex scaffold/equipment**	2.1	Inspect work area to identify hazards and implement appropriate prevention/control measures to avoid hazard
		2.2	Prepare erection site to meet job and safety requirements
		2.3	Place necessary signage and barriers in appropriate position
		2.4	Coordinate scaffolding/equipment erection in accordance with acceptable safe work practices, Australian Standards, state or territory legislative requirements and equipment manufacturers' requirements
		2.5	Inspect completed scaffolding/equipment for safety and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			compliance with design, operational and statutory requirements
3	**Coordinate alterations and repairs of complex scaffold/equipment**	3.1	Confirm and understand scope of alteration/repair
		3.2	Inspect existing scaffolding/equipment and determine alterations/repairs
		3.3	Determine materials, equipment and tools required for alterations
		3.4	Determine existing or new load requirements using load tables
		3.5	Coordinate alteration/repairs in accordance with safe work practices, Australian Standards and equipment manufacturers' requirements
		3.6	Inspect alterations/repairs for safety and operational requirements
		3.7	Report work completion to appropriate personnel and record
4	**Inspect erected complex scaffold/equipment**	4.1	Inspect the critical structural and safety areas of the scaffolding/equipment for damage, corrosion and wear
		4.2	Check scaffolding/equipment and structure against the type of scaffolding/equipment and structure specified in the plan
		4.3	Complete inspection log and report potential safety and design/structural hazards for rectification
5	**Coordinate dismantling of complex scaffold/equipment**	5.1	Coordinate removal of scaffolding/equipment from site in accordance with procedures and critical structural and safety requirements
		5.2	Coordinate site clearance and remove surplus material, equipment, tools and debris and leave site in safe and operational state

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	5.3 Report work completion to appropriate authority

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Scaffolding/equipment includes one (1) or more of the following:	• modular or prefabricated scaffolds • cantilevered materials hoists with a maximum working load of 500 kg • ropes and gin wheels • safety nets and static lines, and • bracket scaffolds (tank and formwork) • cantilevered crane loading platforms • cantilevered and spurred scaffolds • barrow ramps and sloping platforms • perimeter safety screens and shutters • mast climbers • tube and coupler scaffolds (including tube and coupler covered ways and gantries) • cantilevered hoists • hung scaffolds, including scaffolds hanging from tubes, wire ropes or chains • suspended scaffolds
Hazards include one (1) or more of the following:	• chemicals • dangerous or hazardous substances/materials • movement of equipment, goods and materials • vehicular traffic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- uneven/unstable terrain
- overhead service lines
- trees
- underground services
- obstructions
- structures
- surrounding buildings
- facilities
- bridges/walkways
- lifting equipment

Prescribed procedures include one (1) or more of the following:

- clarification of instructions either written or from authorised personnel
- site safety policy and procedures
- SOPs
- correct use of equipment
- industry standards and requirements
- manufacturers' specifications

Signage and barriers include one (1) or more of the following:

- physical barriers (para webbing, bollards, timber or metal barriers)
- warning/direction signs
- personnel to restrict unauthorised access (spotters)
- permit signage

Safe work practices include the following:

- hazard identification
- control measures
- risk assessment
- standard operating procedures
- housekeeping
- PPE

State or territory legislative requirements include the following:

- appropriate WHS and Scaffolding Acts and regulations
- Australian standards and codes of practice, including:
  - NOHSC:1006, National Occupational Health and Safety Certification Standards for Users and Operators of

Assessment Requirements for MEM11003 Coordinate erection/dismantling of complex scaffolding/equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11003B Coordinate erection/dismantling of complex scaffolding/equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, specifications and legislative requirements for erecting complex scaffolding
- determining existing or new load requirements using load tables
- coordinating the following:
- preparation of the site
- basic levelling and alignment of scaffolding
- assess the risks associated with erecting/dismantling complex scaffolding and equipment and determine the most appropriate technique
- appropriate use of relevant hand tools and manual handling techniques
- determining personnel and equipment requirements, including working safely and confidently at heights
- time management
- clean-up and site remediation
- inspecting completed scaffolding with reference to structural integrity and design faults
- completing inspection log in accordance with procedures and legislative requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- erection and dismantling procedures as set out in the Australian Standards
- codes of practice, for example, the Scaffolder's Guide
- site-specific requirements
- types of scaffolding systems and deck loadings
- using load tables to determine existing or new load requirements
- sequence of operations in erecting and dismantling the scaffolding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- design and materials faults, including rust, wear and tear and stress
- scaffolding techniques and equipment and its limitations
- materials handling, storage and environmentally friendly waste management
- hazards; electrical, stability, mobile plant issues/requirements; falls protection measures; minimum gap requirements; and safe access and egress.

Assessment Conditions

- Assessors must:
  - have vocational competency in coordinating erection/dismantling of complex scaffolding/equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11004 Undertake dogging

Modification History

Release 1. Supersedes and is equivalent to MEM11004B Undertake dogging

Application

This unit of competency defines the skills and knowledge required to attach slings to loads and move loads using appropriate communication and signalling methods with a crane driver in a workshop or on-site.

This unit is not intended to apply to machine loading and simple straight lifts where knowledge of codes and signals is not required.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Attach lifting gear to loads**	2.1	Identify potential hazards associated with the use of cranes and other load shifting equipment and plan measures to eliminate or control these hazards
		2.2	Obtain site information, as necessary
		2.3	Inspect load and determine best lifting method
		2.4	Select load shifting equipment appropriate to load
		2.5	Inspect lifting gear and label and reject damaged or worn items
		2.6	Calculate safe working loads to Australian Standards, as appropriate
		2.7	Attach lifting gear to load in most appropriate and safe manner and to specifications, as required
3	**Move loads**	3.1	Perform load moving to acceptable safe working practices, Australian Standards, codes of practice and specifications
		3.2	Connect lifting gear to load shifting equipment using safe and appropriate techniques
		3.3	Use communication and signalling methods to coordinate the load movement in a safe manner
		3.4	Ground load or put down in accordance with prescribed procedure, in a safe and stable manner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5 Detach all lifting gear from load mover and load

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards include one (1) or more of the following:	• overhead power lines • trees • overhead service lines (steam, gas, water, telephone) • underground services • uneven and/or unstable ground • allowable floor loading as appropriate • other workers and persons • surrounding buildings/vessels/structures equipment • hazardous materials • corrosive substances • barricades • inadequate lighting • radio interference
Load shifting equipment includes one (1) or more of the following:	• overhead cranes • overhead gantry • forklift with approved lifting boom/jib • mobile cranes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Lifting method includes the following:	• slings in an appropriate configuration
Lifting gear includes one (1) or more of the following:	• tags • slings • ropes • shackles • lifting clutches • snatch blocks • I bolts • spreader beams • chain blocks • chain shorteners and include equalising sheaves • collared I bolts • turn buckles • rigging screws • lifting lugs
Calculations include the following:	• load and lifting gear calculations
Safe working practices include the following:	• inspection of the environment, assessment of hazards and personnel safety
Communication and signalling methods include the following:	• signals are given both within sight and out of sight of equipment operators • signals, including stop, raise, lower, slew, luff, extend and retract boom, using hands, verbal instructions and whistles

State or territory legislative requirements include the following:	• appropriate WHS and acts and regulations
	• Australian Standards and codes of practice, including:
	  • NOHSC:1006, National Occupational Health and Safety Certification Standards for Users and Operators of Industrial Equipment
	  • AS 1418 Set-2011, Cranes, hoists and winches Set

Assessment Requirements for MEM11004 Undertake dogging

Modification History

Release 1. Supersedes and is equivalent to MEM11004B Undertake dogging

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting lifting methods and load shifting equipment appropriate to the task
- calculating safe working loads
- assessing the hazards and risks associated with undertaking dogging and determining the most appropriate technique
- attaching lifting gear using appropriate techniques
- using communicating and signalling methods in the movement of the load, including when the load is out of view of the crane driver
- using basic hand tools relating to lifts
- identifying damaged/worn lifting gear and reporting to appropriate personnel.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- Australian Standards, codes of practice and specifications
- lifting methods and lifting gear to suit various loads
- dogging signals and communication methods
- calculations relevant to lifting procedures
- lifting methods
- types and applications of load shifting equipment
- manufacturers' specifications
- enterprise and workplace communication procedures
- licensing and permit requirements
- site/non-site personnel.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in undertaking dogging at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11005 Pick and process order

Modification History

Release 1. Supersedes and is equivalent to MEM11005B Pick and process order

Application

This unit of competency defines the skills and knowledge required to receive an order, pick an order, check against documentation and place in the correct area and complete enterprise documentation.

This unit applies where the employee needs to exercise knowledge of the enterprise product range and the procedures, practices and standards for the storage and handling of a product.

Simple handling of goods not requiring the ability to identify different products or to interact with inventory records and stock location systems is covered by unit MEM11010 Operate mobile load shifting equipment or unit MEM11011 Undertake manual handling.

If materials handling equipment skills are required unit MEM11010 Operate mobile load shifting equipment should also be selected.

Where materials handling equipment requires a licence, appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Where the storage and handling of dangerous goods is a component of the application of this unit, users should check for relevant regulations and legislation with the appropriate authorities.

Assessment Requirements for MEM11005 Pick and process order

Modification History

Release 1. Supersedes and is equivalent to MEM11005B Pick and process order

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices for picking and processing an order
- using appropriate material handling equipment in a warehouse
- picking/selecting products to fulfil order
- handling product in accordance with legislative requirements
- completing all enterprise documentation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- safe manual handling procedures
- reasons for selecting materials handling equipment
- safe storage and handling procedures for a range of products, including dangerous goods
- product identification systems
- Inventory and documentation requirements
- applicable safety data sheets (SDS).

Assessment Conditions

- Assessors must:
  - have vocational competency in picking and processing an order at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM11006 Perform production packaging

Modification History

Release 1. Supersedes and is equivalent to MEM11006B Perform production packaging

Application

This unit of competency defines the skills and knowledge required to package and label finished goods, including assemblies, sub-assemblies, and individual or multiple components in a production/process environment for storage or transport.

It is not intended to apply in situations where simple interim packing, storage and/or stacking are undertaken in context of a production function.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Where the storage and handling of dangerous goods is a component of the application of this unit, users should check for relevant regulations and legislation with the appropriate authorities.

Band: **A**

Assessment Requirements for MEM11006 Perform production packaging

Modification History

Release 1. Supersedes and is equivalent to MEM11006B Perform production packaging

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices for performing production packaging
- determining packaging requirements and methods in accordance with requirements
- labelling packaging items according to SOPs
- handling and storing packaged items using scanning devices in accordance with legislative requirements
- completing all enterprise documentation according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- packaging requirements
- legislative requirements
- labelling procedures and standards
- storage and recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing production packaging at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11007 Administer inventory procedures

Modification History

Release 1. Supersedes and is equivalent to MEM11007B Administer inventory procedures

Application

This unit of competency defines the skills and knowledge required for the administration of inventory procedures using manual or electric systems to support or maintain stores or inventory systems, for example, Just-in-Time or KANBAN systems.

Where routine activity within standard operating procedure (SOP) is undertaken unit MEM16006 Organise and communicate information and unit MEM16008 Interact with computing technology, should be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Use inventory procedures**	2.1	Apply inventory procedures according to SOPs
		2.2	Use requisition, purchase, shipping and invoice documentation, as required
		2.3	Access inward/outward recording/filing system and maintain according SOPs
		2.4	Maintain customer orders
		2.5	Book back returned orders
3	**Requisition goods**	3.1	Apply requisition procedures
		3.2	Complete requisition of goods on time
		3.3	Complete all recording/s on system and file in an appropriate manner in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

No range of conditions provided for this unit.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM11007B Administer inventory procedures

Assessment Requirements for MEM11007 Administer inventory procedures

Modification History

Release 1. Supersedes and is equivalent to MEM11007B Administer inventory procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting instructions on requisition, purchasing, shipping and invoice documentation, charts, lists and other applicable documents for administering inventory procedures
- accessing, organising, maintaining, recording and filing manual and electronic inventory information
- undertaking numerical operations and calculations to administer inventory procedures
- completing all enterprise documentation in accordance with SOPs

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features and application of inventory systems, including Just-in-Time and KANBAN
- inventory procedures
- measurement techniques, tools and equipment for administering inventory procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in administering inventory procedures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. MEM11008 Package materials (stores and warehouse)

Modification History

Release 1. Supersedes and is equivalent to MEM11008B Package materials (stores and warehouse)

Application

This unit of competency defines the skills and knowledge required to determine package requirements, package and label items in a stores and warehousing environment, and includes stacking, storage, weight, size, material type and expected life and transport requirements.

Packaging includes sequenced packaging and point of pick up packaging, packaging materials and methods and often relates to receive and dispatch functions.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Where the storage and handling of dangerous goods is a component of the application of this unit, users should check for relevant regulations and legislation with the appropriate authorities.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Determine packaging requirements**	2.1	Determine safety or special packaging requirements
		2.2	Determine storage requirements to meet safety, storage conditions, site and legislative requirements
		2.3	Determine transport and store requirements
3	**Undertake packaging and labelling of items**	3.1	Select and use the most appropriate packaging method to suit the product
		3.2	Use correct seal, compression and packaging materials
		3.3	Apply labels and identification stickers to accurately describe the content of package

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Site and legislative requirements include one (1) or more of the following:	• site requirements and SOPs • organisational policy • legislative requirements e.g. dangerous goods, storage of poisons, environmental protection acts and regulations
Transport and store requirements include one (1) or more of the following:	• racks • boxes • bins • road • rail • courier transport • dangerous goods code for transport of goods
Packaging methods and materials include one (1) or more of the following:	• wrapping • shrink wrapping • wrapping in bubble wrap • polystyrene packing, pallets • crates/boxes • other methods • packing tape • banding • boxes • pallet racking

Assessment Requirements for MEM11008 Package materials (stores and warehouse)

Modification History

Release 1. Supersedes and is equivalent to MEM11008B Package materials (stores and warehouse)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- effectively communicating with the production and dispatch personnel
- selecting packaging methods and materials and following site procedures for labelling of packaged products
- determining storage requirements according to requirements
- determine transport and store requirements according to dangerous goods code for transport of goods
- undertaking numerical operations and calculations for packing goods
- completing all enterprise documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- packaging methods, materials and legislation
- weights, measures and capacities
- types of transport
- knowledge of organisational receive and dispatch functions
- applicable safety data sheets (SDS)
- labelling procedures and standards
- storage and recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in packaging materials (stores and warehouse) at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11009 Handle/move bulk fluids/gases

Modification History

Release 1. Supersedes and is equivalent to MEM11009B Handle/move bulk fluids/gases

Application

This unit of competency defines the skills and knowledge required to determine the appropriate handling methods and storage of commercial fluids and gases greater than the quantities required by individuals to do their own jobs and applies to all containers used to store bulk fluids/gases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Where the storage and handling of dangerous goods is a component of the application of this unit, users should check for relevant regulations and legislation with the appropriate authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Determine handling methods**	2.1	Determine type of material from labels, colour codes, signage
		2.2	Interpret and identify all relevant material properties or clarify with appropriately qualified and authorised authority
		2.3	Interpret and implement all relevant safety and emergency procedures, as required
		2.4	Interpret and observe all relevant legislation, regulations and codes of practice
		2.5	Undertake correct and appropriate handling methods
3	**Store bulk fluids/gases**	3.1	Determine correct storage conditions from instructions/manufacturers' specifications/directions
		3.2	Check containers for safe and clean use
		3.3	Fill/empty containers in accordance with procedures, regulations/legislative requirements
		3.4	Handle containers and move in accordance with site procedures, regulations/legislative requirements
		3.5	Label containers in a correct manner and store according to site procedures, regulations/legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material properties include one (1) or more of the following:	• gas • solid • liquid Material properties are determined from safety data sheet, dangerous goods code, manifest or register
Safety and emergency procedures include the following:	• emergency procedures determined by organisational emergency response plan, and seeking advice from appropriately qualified and/or authorised personnel
Legislation, regulations and codes of practice include one (1) or more of the following:	• relevant jurisdictions WHS and dangerous goods acts and regulations • transport of dangerous goods code • industry codes of practice and standards
Storage conditions include the following:	• separation and segregation to legislative requirement and dangerous goods code

Assessment Requirements for MEM11009 Handle/move bulk fluids/gases

Modification History

Release 1. Supersedes and is equivalent to MEM11009B Handle/move bulk fluids/gases

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting handling and storage instructions, labels, colour codes, signage and terminology, regulations and industry codes of practice and standards
- communicating effectively with users of the materials and appropriately qualified and authorised authority
- calculating quantities and filling/emptying applicable containers, as required
- storing/handling bulk fluids and gases in accordance with storage conditions, including separation and segregation to legislative and dangerous goods code
- following safety and emergency procedures as determined by organisational emergency response plan and seeking advice from qualified or authorised personnel, as required
- completing all enterprise documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE) for various substances
- work health and safety (WHS) and dangerous goods acts and regulations, transport of dangerous goods code, industry codes of practice and standards, and relevant legislative requirements
- organisation's emergency response plan
- purpose and application of labels, colour codes and signage as applied to bulk fluids and gases
- safety data sheets
- procedures for filling and emptying storage containers
- packaging requirements for dangerous goods
- cleaning requirements for storage containers.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in handling/moving bulk fluids/gases at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11010 Operate mobile load shifting equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11010B Operate mobile load shifting equipment

Application

This unit of competency defines the skills and knowledge required to operate mobile load shifting equipment, including planning, moving and placing loads and shutting down and securing equipment after operation where knowledge of codes and signals is not required in workshops and/or on-site locations.

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

Where the use of a forklift is required unit TLILIC2001 Licence to operate a forklift truck should also be selected.

Where the use of an order picking forklift is required unit TLILIC2002 Licence to operate an order picking forklift truck should also be selected.

Where the use of a vehicle loading crane with a capacity of 10 metre tonnes and above is required unit TLILIC0012 Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above) should also be selected.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare to shift loads**	2.1	Inspect work area to identify hazards, and implement appropriate prevention/control measures to avoid hazards
		2.2	Undertake routine pre-operational checks in accordance with manufacturers' specifications and regulatory safety requirements
		2.3	Inspect attachments and/or equipment
3	**Check controls and equipment**	3.1	Carry out pre-operational and post start-up equipment checks in accordance with manufacturers' specifications and/or operating manual
		3.2	Report defects and damage according to site procedures
4	**Shift and place loads**	4.1	Select the most appropriate load shifting device to suit load and shifting requirements
		4.2	Operate load shifting device within design specifications and safe working load in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	4.3	Lift load, ensuring balance, vision of operation and protection of load
	4.4	Select and use the safe and efficient path of movement
	4.5	Check path of movement and monitor for obstacles and hazards
	4.6	Place loads ensuring safety, stability, protection of material and avoidance of hazards on-site
5 **Shut down equipment and secure site**	5.1	Park machinery in accordance with procedures, avoiding site and equipment hazards
	5.2	Conduct shutdown in accordance with manufacturers' specification to isolate vehicles
	5.3	Complete post-operational check in accordance with operational procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

On-site locations include one (1) or more of the following:	• factories • wharfs • ships • warehouses • manufacturing plants

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- building sites
- road construction
- demolition sites
- quarries and mine sites

Pre-operational checks include one (1) or more of the following:

- battery
- water
- fuel
- hazards warning lights
- fluid or gas leaks
- braking
- movement of booms
- visual checks of tyres
- emergency devise/alarms
- log books
- operating motions
- evidence of damage
- excessive wear and tear as determined by manufacturers' specifications and standard operating procedures

Attachments and/or equipment includes one (1) or more of the following:

- hooks
- electromagnetic hook
- buckets
- slings
- tag lines
- buckets
- trench
- excavating
- rock breakers
- shackles
- lifting lugs
- fork arms

Post start-up includes the following:

- hazards warning systems, attachments, movements and control functions are smooth
- operating and emergency controls and safety devices are located, identified and tested

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- communication signals are confirmed
- defects and damage are reported

Load shifting devices include one (1) or more of the following:

- front end loaders/back hoes
- ride on forklifts
- pallet trucks
- skid steer
- vehicle loading crane

Safe working load includes the following:

- assessing weight of load to ensure compliance with equipment load plate specifications

SOPs include one (1) or more of the following:

- industry standards
- production schedules
- safety data sheets (SDS)
- work notes and plans
- product labels
- manufacturers' specifications
- operator manuals
- enterprise policies and procedures
- supervisors' oral and written instructions
- current state/territory WHS legislation
- standards and codes of practice

Obstacles and hazards include one (1) or more of the following:

- overhead cables
- personnel, obstacles (fixed and moveable)
- trenches
- pits
- uneven terrain
- trees
- underground services
- exposure to chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- vehicular traffic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Shutdown includes the following:

- post-operational equipment checks, motion locks and brakes are applied
- lifting equipment is checked
- defective equipment is identified, segregated and reported to supervisor
- equipment is correctly stowed

Unit Mapping Information

Assessment Requirements for MEM11010 Operate mobile load shifting equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11010B Operate mobile load shifting equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting tables, figures and instructions (both written and verbal) to work with others to operate mobile load shifting equipment
- performing routine safety, basic service and maintenance procedures as determined by manufacturers' specifications and site procedures
- calculating load masses and safe working loads and assessing calculation to ensure compliance with equipment load plate specifications
- selecting and safely operating appropriate load shifting equipment to shift loads, including interpreting communication signals and instructions
- conducting pre-operational checks, start-up and shutdown procedures
- determining load masses, including irregular shaped loads and equipment requirements
- demonstrating emergency operating procedures
- communicating faults, malfunctions and workplace hazards, reports and maintenance of operational records in accordance with site procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pre-operational checks
- start-up and shutdown procedures
- manufacturers' and design specifications of load shifting device
- load chart
- licensing requirements
- load protection and safe load placement
- operational environment
- relevant hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effect of load mass and shape on lifting and placing loads
- equipment load plate specifications
- appropriate permits
- workplace communication procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating mobile load shifting equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11011 Undertake manual handling

Modification History

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Application

This unit of competency defines the skills and knowledge required to lift and move materials manually and/or using basic manual handling equipment in a wide range of environments.

Maximum manual lifting weight is limited to Safe Work Australia recommendations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Lift materials manually**	2.1	Determine material weight correctly utilising most appropriate technique, and assess risks associated with lifting
		2.2	Undertake lifting techniques to Safe Work Australia recommended procedures and having regard to types of movement, methods, storage, height and position
3	**Move/shift materials manually**	3.1	Select appropriate equipment, as required
		3.2	Place material safely and securely on moving equipment
		3.3	Relocate material ensuring safety of personnel and security of material
		3.4	Unload material and place in a safe and secure manner

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material weight includes	• determined using scales

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

one (1) or more of the following:	• interpreting signage
Lifting techniques include one (1) or more of the following:	• individual • team lifting • use of appropriate lifting equipment
Appropriate equipment includes one (1) or more of the following:	• hand trolleys • wheelbarrows • motorised/hand pallet trucks (not sit on) • hand carts • dedicated production or process lifting equipment • baskets, spreader bars, cradles or the like attached to lifting equipment

Assessment Requirements for MEM11011 Undertake manual handling

Modification History

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing the risks associated with lifting materials manually and determining the most appropriate technique
- selecting and using the appropriate equipment to move/shift materials ensuring safety of personnel and security of material.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- manual handling techniques, including individual or team lifting
- appropriate equipment associated with move/shift materials
- hazards of incorrect procedures
- Safe Work Australia standards for manual handling.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking manual handling at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11012 Purchase materials

Modification History

Release 1. Supersedes and is equivalent to MEM11012B Purchase materials

Application

This unit of competency defines the skills and knowledge required to determine purchasing requirements, prepare purchase order/list and purchase materials.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job**	1.1 Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
2	**Determine purchasing requirements**	2.1	Consult with client, customer and/or user to determine purchasing requirements
		2.2	Determine material specifications from orders, instructions and/or technical drawings
		2.3	Determine quantities, price limitations and delivery requirements from orders, instructions
3	**Prepare purchase order/list and purchase materials**	3.1	Develop purchase order/list according to SOPs
		3.2	Inform supplier/vendor of requirements and specifications
		3.3	Adjust purchasing schedules, as required
		3.4	Exchange appropriate paperwork/contracts in accordance with SOPs
		3.5	Maintain records/files in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM11012 Purchase materials

Modification History

Release 1. Supersedes and is equivalent to MEM11012B Purchase materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting information on purchasing from specifications, data sheets, orders, records, files, technical drawings and purchasing schedules for purchasing requirements
- communicating with client, customer, user and supplier/vendor in identifying purchasing specifications and determining quantities, price and delivery requirements
- selecting the supplier and developing the purchase order in accordance with SOPs
- checking/clarifying and entering and maintaining information on manual and electronic workplace documents utilising an on-site system
- maintaining records/files in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- suppliers and available products
- purchasing procedures
- contract initiation and exchange procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in purchasing materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM11013 Undertake warehouse receival process

Modification History

Release 1. Supersedes and is equivalent to MEM11013B Undertake warehouse receival process

Application

This unit of competency defines the skills and knowledge required to check supplier documentation, confirm the quality and quantity of received goods, arrange the unloading of goods and prepare, locate and store goods in a store or warehousing environment and utilise the application of the knowledge of warehouse systems and procedures.

Where the received goods are bulk fluids or gases (i.e. large commercial quantities) see unit MEM11009 Handle/move bulk fluids/gases.

Where load shifting equipment operation skills are required unit MEM11010 Operate mobile load shifting equipment should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where hazardous goods are received and handled unit MEM13003 Work safely with industrial chemicals and materials should also be selected.

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Where the handling of dangerous goods is a component of the application of this unit, users should check for relevant regulations and legislation with the appropriate authorities.

Band: **A**

Unit Weight: **4**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Check supplier documentation against order according to SOPs
2	**Confirm the quality and quantity of received goods**	2.1	Check the quality and quantity of goods against order and supplier documentation
		2.2	Identify incorrect and damaged goods and take appropriate action according to SOPs
3	**Arrange unloading of goods**	3.1	Identify goods requiring special unloading procedures
		3.2	Unload goods using manual handling or appropriate lifting equipment
		3.3	Sign or process carrier or supplier documentation according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Prepare, locate and store received goods**	4.1 Prepare goods for storage and apply appropriate signs, codes or labels
	4.2 Complete inventory records documentation
	4.3 Identify correct storage location and store goods using appropriate materials handling techniques

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Documentation includes one (1) or more of the following:	• invoice • carrier or supplier documentation • purchase specifications
Special unloading procedures include the following:	• special unloading procedures required in respect of hazardous goods, chemicals/poisons and goods where size, shape and fragility require special procedures
Lifting equipment includes one (1) or more of the following:	• hand trolleys • wheelbarrows • motorised/hand pallet trucks (not sit on) • hand carts • dedicated production or process lifting equipment • baskets, spreader bars, cradles or the like attached to lifting

Assessment Requirements for MEM11013 Undertake warehouse receival process

Modification History

Release 1. Supersedes and is equivalent to MEM11013B Undertake warehouse receival process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting signs, codes, labels and other applicable documentation for undertaking warehouse receival process
- checking orders, quantities, descriptions and supplier documentation against order
- identifying goods requiring special unloading procedures
- using manual handling or lifting equipment to unload goods
- selecting storage procedures and processes and labelling accordingly
- completing inventory documentation onto manual and electronic workplace documents.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant legislation, regulations and codes
- checking and recording processes and procedures
- handling of hazardous goods
- storage procedures and processes, including labelling.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking warehouse receival process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

Pre-requisite Unit

MEM11008	Package materials (stores and warehouse)
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify despatch requirements from customer requirements
2	**Arrange and consolidate orders**	2.1	Consolidate packed orders into customer or carrier batches according to SOPs
		2.2	Place consolidated goods into correct dispatch area
3	**Prepare for dispatch of goods**	3.1	Identify goods requiring special unloading procedures
		3.2	Pack goods and shrink-wrap and/or palletise
		3.3	Label goods and attach appropriate documentation according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.4	Place goods in dispatch area ready for loading according to pick-up schedule and carrier requirements
4 **Dispatch goods**	4.1	Check carrier and customer documentation
	4.2	Communicate loading and transportation requirements to driver and receive confirmation from the driver
	4.3	Load goods onto vehicle using appropriate materials handling techniques and devices
	4.4	Complete inventory records/documentation according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Packed includes one (1) or more of the following:

- wrapping
- shrink wrapping
- wrapping in bubble wrap
- polystyrene packing
- pallets
- crates/boxes
- other methods
- packing tape
- banding
- boxes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

	• pallet racking
Labelled includes the following:	• labelling to meet requirements of dangerous goods legislation acts and regulations, storage of chemicals/poisons, industry codes of practice and environmental codes
Documentation includes one (1) or more of the following:	• invoice • carrier or supplier documentation
Loading includes the following:	• special loading procedures required with respect to hazardous goods, chemicals/poisons and for goods where size, shape, fragility require special procedures
Materials handling techniques and devices include one (1) or more of the following:	• hand trolleys • wheelbarrows • motorised/hand pallet trucks (not sit on) • hand carts • dedicated production or process lifting equipment • baskets, spreader bars, cradles or the like attached to lifting equipment

Assessment Requirements for MEM11014 Undertake warehouse dispatch process

Modification History

Release 1. Supersedes and is equivalent to MEM11014B Undertake warehouse dispatch process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting signs, codes, labels and other applicable documentation for undertaking warehouse dispatch process
- checking orders, quantities, descriptions and supplier documentation against order
- packing goods ready for dispatch and label to meet dangerous goods legislation acts and regulations, storage of chemicals/poisons, industry codes of practice and environmental codes as required
- identifying goods requiring special loading procedures
- using manual handling or lifting equipment to load goods
- completing inventory documentation onto manual and electronic workplace documents.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant legislation, regulations and codes
- checking and recording processes and procedures
- handling of hazardous goods, storage procedures and processes, including labelling.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking warehouse dispatch process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM11015 Manage warehouse inventory system

Modification History

Release 1. Supersedes and is equivalent to MEM11015B Manage warehouse inventory system

Application

This unit of competency defines the skills and knowledge required to monitor warehouse record keeping processes, including computer based or manual, supervise the production of inventory system reports and analyse inventory reports and applies to the supervision of a warehouse inventory system used by other warehouse, production and maintenance or management personnel.

Where skills to maintain/supervise application of quality procedures are required unit MEM15012 Maintain/supervise the application of quality procedures should also be selected.

Where computer-based records are used appropriate computer units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM11007	Administer inventory procedures
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Monitor warehouse record keeping processes**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Develop monitoring procedures for requisition, purchase, shipping and invoice documentation
		1.4	Establish discrepancy reporting procedures for warehouse and other personnel in accordance with SOPs
		1.5	Follow audit and archive procedures
2	**Supervise production of inventory system reports**	2.1	Prepare regular inventory reports in accordance with SOPs
		2.2	Prepare special stock level and other inventory reports, as required
		2.3	Make adjustments to inventory reporting procedures to meet internal and external customer requirements
3	**Analyse inventory reports**	3.1	Undertake reconciliation of inventory records against production or purchase of sales records in accordance with SOPs
		3.2	Identify major trends not requiring sophisticated statistical analysis
		3.3	Interpret inventory system relationship to the manufacturing process

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Monitoring procedures include one (1) or more of the following:	• loss control • inventory system (paper based or electronic) • maximum/minimum limits • rotation
Discrepancy includes one (1) or more of the following:	• inventory numbers • quantity • products • price • damaged goods • delivery date
Inventory system includes one (1) or more of the following:	• Just-in-Time (JIT) • KANBAN • MRP2

Unit Mapping Information

Assessment Requirements for MEM11015 Manage warehouse inventory system

Modification History

Release 1. Supersedes and is equivalent to MEM11015B Manage warehouse inventory system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting information on requisition, purchase, sales, shipping and invoice documentation, inventory records, discrepancy reports, list and other applicable reference documents for managing warehouse inventory system
- developing monitoring procedures for an inventory system to monitor loss control, maximum/minimum limits and rotation of stock
- establishing discrepancy reporting procedures
- undertaking numerical operations and calculations associated with managing a warehouse inventory system
- accessing/managing manual and electronic information, including communicating with staff about the system/s used in the enterprise and monitoring all warehouse documentation
- preparing reports, including inventory, special stock level, reconciling and other reports, as required, and identifying major trends in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- inventory systems, for example, Just-in-Time (JIT), KANBAN and MRP2
- quality procedures
- monitoring and discrepancy processes and procedures
- warehouse organisation principles
- storage of hazardous materials
- auditing procedures
- relationship of manufacturing system to inventory process
- techniques for developing inventory monitoring and discrepancy procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in managing warehouse inventory system at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11016 Order materials

Modification History

Release 1. Supersedes and is equivalent to MEM11016B Order materials

Application

This unit of competency defines the skills and knowledge required to prepare a purchase/order list and place the order. It applies to purchasing activities carried out by a person other than the purchasing officer, including maintenance, service, stores and warehouse personnel. Approval to order limits and delegations will be included in the standard operating procedures (SOPs) or purchasing policy.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare purchase order/list**	2.1	Prepare purchase order/list according to SOPs
		2.2	Determine material specifications, price limitations, quantities and delivery requirements from instructions and requisitions
3	**Purchase order**	3.1	Inform supplier/vendor of requirements and specifications
		3.2	Follow up supplier/vendor to achieve delivery, as required
		3.3	Receive goods and check for damage, where appropriate
		3.4	Complete records/files according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material specifications include one (1) or more of the following:

- manufacturers' catalogues
- from the item
- from a drawing

Suppliers/vendors include one (1) or more of the following:

- local
- national
- international
- preferred supplier

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM11016B Order materials

Assessment Requirements for MEM11016 Order materials

Modification History

Release 1. Supersedes and is equivalent to MEM11016B Order materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting material specifications, requisitions, lists, records, files and other applicable reference documents for ordering materials
- preparing a purchase order/list, checking and clarifying information and entering information onto manual and electronic proformas and standard workplace forms
- communicating effectively with supplier/vendor and other personnel
- checking received goods for conformance to specifications
- completing all records/files in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- ordering policy (delegations and preferred suppliers)
- ordering procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in ordering materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11017 Organise and lead stocktakes

Modification History

Release 1. Supersedes and is equivalent to MEM11017B Organise and lead stocktakes

Application

This unit of competency defines the skills and knowledge required to organise and lead periodical stocktakes, including planning a stocktake, briefing team members, generating stocktake reports and adjusting inventory documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11007	Administer inventory procedures
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			requirements at all times
		1.3	Identify stocktake requirements from enterprise stocktaking policies, practices and procedures
2	**Plan stocktake and brief participants**	2.1	Prepare and distribute inventory lists
		2.2	Allocate warehouse and/or production areas to each individual or team assisting in stocktake
		2.3	Provide clear directions and appropriate documentation and equipment to each individual or team participating in stocktake
3	**Generate stocktake reports**	3.1	Collect written or computer reports from individuals or teams on stock counts
		3.2	Confirm inventory data to match stock levels
		3.3	Prepare and distribute stock discrepancy report according to SOPs
4	**Adjust inventory documentation**	4.1	Reconcile inventory documentation to match physical stock in accordance with SOPs
		4.2	Reconcile stocktake information with audit requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Directions include one (1) or more of the following:	• oral or written instructions • methodology • how to report discrepancies or damaged stock • timelines
Equipment includes one (1) or more of the following:	• calculators • scanners • portable computers
Inventory documentation includes one (1) or more of the following:	• reports on actual stock • damaged stock • out-of-date stock • discrepancies

Assessment Requirements for MEM11017 Organise and lead stocktakes

Modification History

Release 1. Supersedes and is equivalent to MEM11017B Organise and lead stocktakes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing inventory lists and instructions on procedures to be followed
- providing directions to personnel undertaking stocktaking and equipment to carry out the stocktake
- undertaking numerical operations and calculations associated with organising and leading stocktakes
- analysing and reporting results of stocktakes by manual and electronic means
- reconciling inventory documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices
- relevant inventory systems and procedures
- recording systems and procedures
- analysis and reporting methods/procedures
- audit processes.

Assessment Conditions

- Assessors must:
  - have vocational competency in organising and leading stocktakes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM11018 Organise and maintain warehouse stock receival and dispatch system

Modification History

Release 1. Supersedes and is equivalent to MEM11018B Organise and maintain warehouse stock receival and/or despatch system

Application

This unit of competency defines the skills and knowledge required to organise, configure and maintain warehouse receival and dispatch areas taking into account customer and supplier needs, including special requirements of products, materials and location, documentation and system requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM11008	Package materials (stores and warehouse)
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Plus, one or more of the following, including their prerequisites:

MEM11013	Undertake warehouse receival process
MEM11014	Undertake warehouse dispatch process

Competency Field

Materials handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify warehouse receival and dispatch areas organisational requirements from enterprise quality practices and procedures
2	**Allocate/coordinate work activities in receival and dispatch areas**	2.1	Allocate equipment and/or staff to meet receival and dispatch schedules
		2.2	Distribute and collect relevant documentation
		2.3	Develop contingency procedures and implement for receival and dispatch problems
3	**Maintain stock receival and dispatch system**	3.1	Provide information and extract in an accurate manner according to SOPs
		3.2	Produce receival and dispatch reports, as required
		3.3	Make modifications to dispatch and receival system according to SOPs
		3.4	Identify and report problems with receival and dispatch system
		3.5	Participate in continuous improvement of dispatch and receival systems

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• calculators • scanners • portable computers
Staff includes one (1) or more of the following:	• drivers • stores assistants • casuals • specialists
Modifications include one (1) or more of the following:	• extra staff • adjustment of hours • set up special storage areas • hire of lifting equipment
Problems include one (1) or more of the following:	• out-of-hours receival • late deliveries or dispatches • dealing with goods that need equipment for loading or unloading • hazardous goods • inadequate stores capacity • emergency procedures • special legislative requirements

Assessment Requirements for MEM11018 Organise and maintain warehouse stock receival and dispatch system

Modification History

Release 1. Supersedes and is equivalent to MEM11018B Organise and maintain warehouse stock receival and/or despatch system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- coordinating staff and equipment for receival and dispatch
- developing and implementing contingency procedures in solving warehouse problems
- producing stock receival and dispatch reports in accordance with SOPs
- making modifications to dispatch and receival system, as required
- participating in continuous improvement of the warehouse dispatch and receival system.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- receival and dispatch systems
- relevant legislation, regulations and codes of practice
- inventory systems and procedures
- auditing processes
- quality systems
- warehousing systems
- continuous improvement processes and procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in organising and maintaining warehouse stock receival and dispatch system at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11019 Undertake tool store procedures

Modification History

Release 1. Supersedes and is equivalent to MEM11019B Undertake tool store procedures

Application

This unit of competency defines the skills and knowledge required to order, receive, maintain and distribute permanent or disposable tooling and specialist tools and associated consumable items used in engineering applications and environments from a specialist store or warehouse.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11007	Administer inventory procedures
MEM11011	Undertake manual handling
MEM11013	Undertake warehouse receival process
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify tools/tooling requirements and consolidate from order documentation and liaise with trade and production personnel according to SOPs
2	**Order and receive tools/tooling**	2.1	Identify appropriate tools/tooling from supplier catalogues and manuals, including correct size, hardness and quality
		2.2	Place order according SOPs
		2.3	Receive orders from main receival warehouse or direct from supplier
		2.4	Unpack orders and place stock in correct location
		2.5	Check items and confirm against order
		2.6	Process incorrect items according to SOPs
3	**Maintain and distribute tools/tooling**	3.1	Clean tools/tooling and protect, as required
		3.2	Monitor supplies to ensure maintenance of contingency stock
		3.3	Issue tools/tooling to users according to SOPs
		3.4	Follow enterprise documentation procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5 Establish and follow procedures against unauthorised use of tools/tooling

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Engineering applications and environments include one (1) or more of the following:	• production manufacturing • specialist machining • maintenance settings • fabrication workshops
Tools/tooling include one (1) or more of the following:	• hand tools • cutting tips for lathes, mills and other machines for metal removal • grinding wheels • special steel • engineering power tools • specialised hand tools • mechanical and electro-mechanical devices (e.g. for lifting and clamping) • measuring and marking equipment • templates • jigs

Assessment Requirements for MEM11019 Undertake tool store procedures

Modification History

Release 1. Supersedes and is equivalent to MEM11019B Undertake tool store procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, data sheets, supplier catalogues and manuals for relevant tools/tooling information
- undertaking stock control and ordering tools/tooling as required
- performing manual handling and packing and storing engineering specialist tools/tooling
- cleaning and maintaining engineering tools/tooling and protecting in accordance with manufacturers' specifications and procedures, as required
- distributing tools/tooling and completing enterprise documentation in accordance with SOPs, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types and applications of engineering tooling and specialist engineering tools
- methods of storing and protecting tools/tooling
- ordering procedures
- inventory systems
- procedures for protecting store against unauthorised entry and use of tools/tooling.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking tool store procedures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11020 Perform advanced warehouse computer operations

Modification History

Release 1. Supersedes and is equivalent to MEM11020B Perform advanced warehouse computer operations

Application

This unit of competency defines the skills and knowledge required to identify programs appropriate to the purpose, manipulate data for analysis and/or report generation and edit the program, as required, and applies to advanced operations on warehouse computer information systems.

This unit identifies the level of computer skills needed rather than the inventory system or product knowledge required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM16008	Interact with computing technology

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify the range of programs available on the system
		1.4	Make appropriate selection of program/s to suit requirements
2	**Manipulate data for analysis and/or report generation**	2.1	Manipulate data through merging of files, transfer of information between programs or other strategies to generate desired outcome
3	**Edit program**	3.1	Create/delete categories in warehouse information system to cater for changes in stock lines
		3.2	Generate and/or modify report formats
		3.3	Identify access control requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Programs include one (1) or more of the following:	• word processing • spreadsheet

Assessment Requirements for MEM11020 Perform advanced warehouse computer operations

Modification History

Release 1. Supersedes and is equivalent to MEM11020B Perform advanced warehouse computer operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and accessing program/s appropriate to the task
- performing data input and manipulating and editing programs
- creating/deleting categories to cater for changes in stock lines
- generating and modifying reports and producing accurate records related to warehouse operations in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- application, features/functions and operation of relevant computer programs
- stock control systems
- recording requirements of enterprise
- access control requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced warehouse computer operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM11021 Perform advanced operation of load shifting equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11021B Perform advanced operation of load shifting equipment

Application

This unit of competency defines the skills and knowledge required to determine lift and load requirements, work within areas of restricted movement or conditions of restricted visibility, identify loads that need special care, and operate forklifts in special traffic conditions.

This unit applies to advanced forklift and load shifting skills above those required for general operation and is intended to cover load shifting applications where special-purpose equipment/accessories requiring advanced operational skills are required.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11010	Operate mobile load shifting equipment
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify load and check against safe working load and/or relevant specifications or regulations and final position/location
		1.5	Identify special handling requirements of load, if applicable
		1.6	Lift and place load in the correct final position/location to achieve specified balance of load
2	**Identify and carry loads that require special care**	2.1	Identify loads requiring special care
		2.2	Carry loads in accordance with special requirements of product according to procedures and/or regulations
3	**Operate forklifts in areas of restricted movement and in special traffic conditions**	3.1	Collect and manoeuvre load without damage to load or collision with obstacles according to SOPs
		3.2	Operate forklifts in areas of heavy traffic
		3.3	Operate forklifts over difficult or uneven surfaces
		3.4	Operate forklifts in areas shared with the general public, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Safe working load includes the following:	• as defined in the manufacturers' specifications for lifting plant or gear
Loads requiring special care include one (1) or more of the following:	• non-standard load configuration • fragile loads • dangerous (volatile, explosive and sensitive) • raising and lowering personnel on approved work platforms (forklift only)
Advanced operational skills include one (1) or more of the following:	• heavy loads • out-of-balance loads • awkward and irregular shaped loads • traversing over rough, broken or uneven surfaces • high lift situations • extremes of climate

Unit Mapping Information

Assessment Requirements for MEM11021 Perform advanced operation of load shifting equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11021B Perform advanced operation of load shifting equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, regulations, load charts and communicating with personnel on movement/location when performing advanced operation of load shifting equipment
- selecting appropriate load shifting device to suit shifting requirements
- identifying safe working loads as defined in the manufacturers' specifications for lifting plant or gear
- identifying/managing loads requiring special care and taking appropriate action
- operating forklifts in a complex mobile plant environment.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pre-operational checks
- licensing requirements and appropriate permits
- load protection
- operational environment
- methods and techniques for loads requiring special care.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced operation of load shifting equipment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11022 Operate fixed/moveable load shifting equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11022B Operate fixed/movable load shifting equipment

Application

This unit of competency defines the skills and knowledge required to conduct routine operation and safety checks of fixed/moveable load shifting equipment within the limits of manufacturers' recommended procedures.

It covers safe working loads, picking up loads, shifting and placing loads and activities where knowledge of codes and signals is not required.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Depending on the equipment being used a high risk work licence may be required and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from job sheets or work instructions
2	**Conduct routine operation and safety checks of load shifting equipment**	2.1	Interpret operational principles of fixed/moveable load shifting equipment
		2.2	Undertake routine pre-operational checks in accordance with manufacturers' specifications and regulatory safety requirements
		2.3	Report non-compliance with specifications according to SOPs
3	**Pick up loads**	3.1	Select appropriate load shifting device for the load and shifting requirements
		3.2	Operate load shifting device within design specifications and safe working load
		3.3	Lift/roll load, ensuring balance, vision of operation, safety of personnel and protection of load
4	**Shift and place loads**	4.1	Move load at an appropriate and safe speed using a safe and efficient path
		4.2	Monitor path of movement for obstacles and hazards during shifting process
		4.3	Lower loads at an appropriate and safe rate
		4.4	Place loads to ensure stability, protection of material and

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

avoidance of hazards on site

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fixed/moveable load shifting equipment includes one (1) or more of the following:	• pendant cranes • yard, workshop and travelling overhead cranes • monorail hoists and chain blocks • pivoting and slewing jibs rails (manual, air or electric)
Pre-operational checks include one (1) or more of the following:	• hazards warning lights • wire rope • lifting blocks • compass • operation of controls • safe working load marked as determined by manufacturers' specifications and SOPs
Obstacles and hazards include one (1) or more of the following:	• overhead cables • electrical hazards (live rails) • personnel • obstacles (fixed and moveable) • swing of the load • failure of slings

Assessment Requirements for MEM11022 Operate fixed/moveable load shifting equipment

Modification History

Release 1. Supersedes and is equivalent to MEM11022B Operate fixed/movable load shifting equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, regulations, load charts and communicating with personnel on movement/location when operating fixed/movable load shifting equipment
- selecting load shifting device appropriate to the task being performed
- conducting pre-operational checks in accordance with manufacturers' specifications and SOPs
- identifying the safe working load marked as determined by manufacturers' specifications and SOPs in relation to the capacity of the load shifting equipment
- lifting and moving loads in a safe manner being aware of obstacles and hazards
- placing loads ensuring stability, protection of materials and avoidance of hazards.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operational principles of fixed/moveable load shifting equipment
- pre-operational checks
- loads and lifting attachments
- load chart and safe working loads (SWL)
- licensing requirements
- load protection
- operational environment
- appropriate permits.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in operating fixed/movable load shifting equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11023 Operate a bridge and gantry crane

Modification History

Release 1. Supersedes and is equivalent to MEM11023A Operate a bridge and gantry crane

Application

This unit of competency defines the skills and knowledge required for the operation of bridge and gantry cranes that are operated from a permanent cabin/control station on the crane in a manufacturing related environment, including a factory, raw material or finished goods store.

While this unit applies to work covered by licensing requirements, it also includes other manufacturing related skills, including integrating crane operations with production, jobbing, maintenance or warehouse operations.

This unit does not cover the bridge and gantry crane types that are controlled from a location remote to a permanent cabin/control station on the crane and that have three or less powered operations, i.e. hoist/raise and lower in one operation and also does not cover the slinging or rigging of loads.

This unit is not recognised by regulators for licensing requirements. In order to satisfy licensing requirements, the imported unit TLILIC3003 Licence to operate a bridge and gantry crane will be required.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Obtain load transfer authorisation, including lift time and load destination
2	**Plan work**	2.1	Identify potential hazards for load lift and transfer
		2.2	Identify hazard control measures consistent with appropriate standards to ensure the safety of personnel and equipment
		2.3	Estimate weight (mass) of the load in consultation with associated personnel
		2.4	Determine appropriate paths for the movement of loads in the work area
		2.5	Check crane capacity to the load, as appropriate
		2.6	Identify appropriate communication methods with associated personnel
3	**Conduct routine checks**	3.1	Apply appropriate hazard prevention/control measures to the work area according to procedures
		3.2	Access crane in a safe manner
		3.3	Check crane visually for any damage or defects
		3.4	Ensure all signage and labels are visible and legible

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		according to the appropriate standard
	3.5	Carry out routine pre-operational crane checks according to SOPs
	3.6	Locate and identify all controls
	3.7	Check crane service logbook for compliance
	3.8	Start crane and check for any abnormalities according to SOPs
	3.9	Test crane safety devices according to SOPs
	3.10	Carry out post-start operational checks according to SOPs
	3.11	Check all communication equipment for serviceability
	3.12	Report all damage and defects and record according to SOPs, and take appropriate action
4 **Transfer loads**	4.1	Position hoist block over load following directions from associated personnel
	4.2	Carry out test lift according to SOPs
	4.3	Transfer loads along planned path
	4.4	Ensure all crane movements are according to SOPs and the appropriate standard
	4.5	Interpret communication signals according to SOPs and the appropriate standard
	4.6	Operate crane according to SOPs
	4.7	Monitor load movements constantly ensuring safety to personnel and load, and structural stability
	4.8	Respond to unplanned and/or unsafe situations in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Shut down and secure crane**	5.1 Park crane according to SOPs
	5.2 Stow crane and equipment and secure according to SOPs and the appropriate standard
	5.3 Apply all relevant motion locks and brakes, as applicable
	5.4 Shut down crane according to SOPs
	5.5 Carry out routine post-operational crane checks according to SOPs
	5.6 Remove hazard prevention/control measures, where applicable
	5.7 Report all damage and defects and record according to SOPs, and take appropriate action

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards include one (1) or more of the following:

- ground stability (e.g. ground condition or slopes for load placement)
- overhead hazards (e.g. powerlines and service pipes)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles and plant)
- environmental conditions (e.g. dust, wind, lightning and storms)
- other specific hazards (e.g. dangerous materials)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazard control measures include the following:

- the systematic process of eliminating or reducing the risk to personnel and property through the application of controls consistent with appropriate standards
- the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
  1. elimination
  2. substitution
  3. isolation
  4. engineering control measures
  5. using safe work practices
  6. personal protective equipment (PPE)

Appropriate standards include one (1) or more of the following:

- codes of practice and legislation
- Australian Standards
- crane manufacturer specifications
- industry and workplace standards, as applicable

Appropriate paths include one (1) or more of the following:

- ensure clearances of fixed machinery, equipment, fixtures and work in progress
- minimise transfers across workstations and walkways
- minimise disruption to work unrelated to the load transfer
- minimise transfer time and distance subject to safety and disruption assessments

Associated personnel include the following:

- riggers and doggers
- supervisory and expert personnel to advise on any special features of the load or transfer

Cranes are operated from a permanent cabin/control station on the crane and include one (1) or more of the following:

- bridge crane, a bridge beam mounted at each end to an end carriage, capable of travelling along elevated runways and having one or more hoisting mechanisms arranged to traverse across the bridge
- gantry crane, a bridge beam, supported at each end by legs mounted on end carriages, capable of travelling on supported surfaces or deck levels, whether fixed or not and which has a crab with one or more hoisting units arranged to travel across

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

	the bridge
Communication methods include one (1) or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels include one (1) or more of the following:	• crane data plates/labels • load charts • crane decals • control labels
Procedures include one (1) or more of the following:	• manufacturer guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures and checklists)
Controls include one (1) or more of the following:	• long travel levers • cross travel levers • hoisting and lowering levers • rotating hook levers, where applicable
Service logbook includes one (1) or more of the following:	• service book and any logbook • history record system where the service and maintenance history is kept
Safety devices include the following:	• horns/sirens and lights • audible and visual motion devices • operator restraint devices, where applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Communication equipment includes one (1) or more of the following:	• two-way radios • whistles • bells and buzzers
Hazard prevention/control measures include one (1) or more of the following:	• safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and controls • pedestrian controls • movement of obstructions • PPE • adequate illumination

Test lift includes the following:	• lifting the load just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:
	  • near capacity loads do not overload the crane
	  • loads of unusual shape or weight distribution are correctly slung
	  • load measuring equipment can be used to verify the calculated weight of the load
	  • all crane equipment is functioning properly
	  • adjustments to the slinging can be made in a safe manner

Relevant crane movements include the following:	• hoisting (raise and lower) • traversing (moving hoisting mechanisms along bridge) • travelling (at minimum speed, gentle acceleration and braking, to minimise load swing)
Communication signals include the following:	• stop – hand and whistle • hoist up – hand and whistle • hoist down – hand and whistle • traverse - hand • travel - hand • creep - hand

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Unplanned and/or unsafe situations include the following:	• failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning and storms)
Shutdown includes the following:	• retracting hoist rope and hook block • travelling crane to park position • removing key from control panel, as applicable • locking and securing cabin, as applicable • isolating power to crane

Assessment Requirements for MEM11023 Operate a bridge and gantry crane

Modification History

Release 1. Supersedes and is equivalent to MEM11023A Operate a bridge and gantry crane

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting safety signs, manufacturers' specifications and data, including maximum load information to ensure crane is not overloaded
- complying with work health and safety (WHS) licensing legislation
- communicating and working safely with others in the work area, including the use of hand signals, whistles and two-way radios
- applying risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, access to cabin, other personnel and equipment in the work area, including vehicles and clear access whilst travelling)
- conducting pre- and post-operational checks of the bridge and gantry crane
- planning load transfer path for safety and efficiency in a manufacturing related environment
- operating a bridge and gantry crane, including all functions to their maximum capacity in the lifting and moving of loads to the maximum rated capacity, in conjunction with other associated personnel
- applying appropriate mathematical procedures for estimation of loads.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- appropriate mathematical procedures for estimation of loads
- bridge and gantry crane characteristics
- federal, state or territory WHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- emergency procedures, including escape routes
- hierarchy of hazard identification and control
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical hazards in manufacturing related environments, including:
  - process areas that must be avoided, ceased or special procedures adopted before load transfers occur, including welding, machining, melting and casting
  - transfers across areas frequented by personnel, including workstations and walkways
  - hazardous loads, including hot or liquid metals, chemicals, heavy and non-standard shaped loads
- procedures for the recording, reporting and maintenance of workplace records and information
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating a bridge and gantry crane at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11024 Undertake basic rigging

Modification History

Release 1. Supersedes and is equivalent to MEM11024A Undertake basic rigging

Application

This unit of competency defines the skills and knowledge required to undertake basic rigging in a manufacturing or related enterprise and includes rigging work associated with movement of plant and equipment and temporary or permanent steel structures, including: platforms, access ways and ladders, hoppers and bins, and conveyors. This work will often be required to be undertaken with other employees especially tradespersons, bridge and gantry and mobile crane drivers, and doggers.

While this unit applies to work covered by licensing requirements, it also includes other manufacturing related skills, including integrating rigging with welding, fabrication, production, jobbing, maintenance or warehouse operations.

This unit is not recognised by regulators for licensing requirements. In order to satisfy licensing requirements, the imported unit CPCCLRG3001A Licence to perform rigging basic level will be required.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where erection, alteration or dismantling of scaffolding is required to be undertaken unit MEM11001 Erect/dismantle scaffolding and equipment and unit MEM11002 Erect/dismantle intermediate scaffolding and equipment, should also be selected as appropriate.

This unit does not cover the slinging of loads which is covered in unit MEM11004 Undertake dogging, or the skills associated with fabrication and welding of metal structures or components.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify rigging to be undertaken and assess from supervisor’s instructions and other appropriate sources
2	**Assess rigging site**	2.1	Identify equipment and processes in close proximity to rigging site and the need for protection, shielding or closure during rigging with appropriate personnel
		2.2	Identify other potential workplace hazards and appropriate hazard control measures
		2.3	Obtain site information
		2.4	Identify rigging equipment and associated equipment,

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			including safety equipment available on site
3	**Plan rigging work**	3.1	Consider all forces and loads associated with erecting and dismantling structures and associated equipment in consultation with appropriate personnel
		3.2	Identify required safety equipment for rigging task
		3.3	Consider procedures for minimising disruption to other site processes
		3.4	Identify appropriate communication methods with appropriate personnel
4	**Select and inspect equipment**	4.1	Select rigging equipment and associated equipment and inspect according to SOPs and the appropriate standard
		4.2	Select required safety equipment and inspect according to SOPs
		4.3	Isolate all defective rigging equipment, associated equipment and safety equipment and report and record according to SOPs
		4.4	Select, as applicable, communication equipment and inspect for serviceability
5	**Set up rigging task**	5.1	Apply appropriate hazard prevention or control measures to the work area according to SOPs
		5.2	Inspect ground suitability and check, where appropriate
		5.3	Review site information and interpret with appropriate personnel
		5.4	Determine all forces and loads associated with erecting and dismantling structures and associated plant and compare with planned forces and loads in consultation with appropriate personnel
		5.5	Make required adjustments for actual forces and loads to

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			rigging plan, rigging equipment, associated equipment and safety equipment
		5.6	Position rigging equipment and associated plant for work application and stability according to SOPs
		5.7	Apply methods of applying temporary connections using fibre rope according to SOPs and the appropriate standard
6	**Erect, move or dismantle structures, plant or equipment**	6.1	Erect structures, plant or equipment, move or dismantle according to SOPs and site information
		6.2	Maintain stability of structures, plant or equipment during erection, movement or dismantling
		6.3	Follow safety procedures where height work is required, including safe and effective use of safety equipment
		6.4	Use appropriate communication methods and communication equipment to coordinate the rigging tasks
		6.5	Use associated plant and equipment according to SOPs and the appropriate standard
		6.6	Connect temporary guys, ties, propping and shoring, including flexible steel wire rope and tubing, as required
		6.7	Follow procedures to minimise disruption to other site operations
		6.8	Inspect the completed task according to the appropriate standard
7	**Finalise rigging task**	7.1	Obtain approval for completion of rigging task according to site or enterprise procedures
		7.2	Remove excess materials from the work area, as applicable
		7.3	Inspect rigging equipment, associated equipment, safety equipment and associated plant used during rigging task for damage and defects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	7.4 Isolate all defective rigging equipment, associated equipment, associated plant and safety equipment, report and record according to SOPs
	7.5 Store rigging equipment and associated equipment according to SOPs and the appropriate standard
	7.6 Remove hazard prevention/control measures, as appropriate

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards include one (1) or more of the following:	• poor condition of ground surfaces and attachment points • utility related hazards, including powerlines and conduits, gas and compressed air pipes, water and drainage services • site or external traffic (e.g. pedestrians and vehicles) • proximity to operating machinery unable to be stopped/isolated, including conveyors, boilers and transformers • restricted access • insufficient lighting • environmental conditions (e.g. wind, lightning and storms) • other specific hazards (e.g. proximity to dangerous materials)
Hazard control measures include the following:	• the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

	consistent with appropriate standards • the application of the hierarchy of control, the six-step preference of control measures to manage and control risk: **1**. elimination **2.** substitution **3.** isolation **4.** engineering control measures **5.** using safe work practices **6.** personal protective equipment (PPE)
Appropriate standards include one (1) or more of the following:	• codes of practice and legislation • Australian Standards • manufacturer specifications • industry and enterprise standards, where applicable
Site information includes one (1) or more of the following:	• other work activities and equipment adjacent to or near area where rigging work is to be undertaken • location of services • ground surfaces and attachment points (e.g. concrete, steel plates and platform, columns and beams) • local conditions, such as access and egress • work method statements • site-specific job safety analyses and other site-specific documentation, as required • task plans/schedules and structural plans
Procedures for minimising disruption include the following:	• in conjunction with crane operators and doggers, planning of routes for load movements to avoid workstations, operating machinery, and walkways and roadways • coordinating rigging with other processes/adjacent sections to minimise downtime • planning rigging for efficient use of shared resources (e.g. bridge and gantry cranes)
Forces and loads include the following:	• dead loads • live loads

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- static load
- dynamic loads
- wind loads

Structures include one (1) or more of the following:

- structural steel
- steel plate and mesh
- bins and hoppers
- conveyor components
- machinery and equipment
- non-metallic equipment and components, including concrete, plastic and ceramic items, that need to be placed or erected on site

Associated plant includes one (1) or more of the following:

- static lines
- safety nets
- temporary and permanent hoists
- mast climbers
- loading platforms

Appropriate personnel include one (1) or more of the following:

- other riggers
- engineers
- supervisors
- technicians
- mechanical, electrical and fabrication tradespersons
- crane operators and doggers
- forklift drivers
- other workplace personnel who are authorised to take responsibility for supervising or assisting the rigging operation

Rigging equipment includes one (1) or more of the following:

- scaffolds
- elevated work platforms
- safety screens and shutters
- cranes:
  - non-slewing cranes
  - mobile slewing cranes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- vehicle loading cranes
- bridge and gantry cranes
- fixed and temporary hoists

Associated equipment includes one (1) or more of the following:

- all types of power and manually operated lifting gear
- fibre ropes
- flexible steel wire rope (FSWR)
- chains
- wire and synthetic slings
- shackles
- terminations
- wedge sockets
- eye bolts
- beam clamps
- plate clamps
- rope grips
- turnbuckles
- rigging screws
- chain blocks
- lever blocks
- lever-action winches
- sheaves
- spreader bars
- lifting beams
- jacks
- levers
- skates
- wedges
- rollers
- girder trolley

Procedures include one (1) or more of the following:

- manufacturer guidelines (instructions, specifications or checklists)
- industry operating procedures, including relevant codes of practice
- workplace procedures (work instructions, operating procedures and checklists)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Safety equipment includes the following:	• safety harness • energy absorber • lanyard • inertia reel • static safety lines • safety nets
Communication methods include one (1) or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding and appropriate worksite protocol **Note**: Mobile phones are not to be used for signalling purposes during the rigging process
Communication equipment includes one (1) or more of the following:	• fixed channel two-way radios • in-place intercom and other communication systems
Hazard prevention/control measures include one (1) or more of the following:	• safety tags on electrical switches/isolators • powerlines are insulated • safety observer used inside exclusion zone • power disconnected • traffic barricades and control • pedestrian barricades • trench covers • movement of obstructions • personal protective equipment • adequate illumination • safety shutters and screens

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Ground suitability includes one (1) or more of the following:	• bitumen • concrete • suspended concrete floors • earth floor • building roofs • landings • ground bearing pressure
Temporary connections include one (1) or more of the following:	• knots • bends • hitches • splicing • whipping
Flexible steel wire rope (FSWR) includes one (1) or more of the following:	Identification, uses, connections and termination (if applicable) of one or more of the following: • static lines • guys • purchase systems • lashing • cranes • hoist and winch ropes

Assessment Requirements for MEM11024 Undertake basic rigging

Modification History

Release 1. Supersedes and is equivalent to MEM11024A Undertake basic rigging

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting basic drawings, sketches and site plans, manufacturers' specifications and data for all plant and equipment used in rigging operations
- complying with work health and safety (WHS) licensing legislation
- communicating and working safely with others, including tradespersons, doggers and crane operators in the work area
- conducting risk assessment and management procedures
- calculating safe working load (SWL) and working load limit (WLL)
- inspecting relevant plant and equipment to ensure it is safe working condition
- installing and using safety equipment in accordance with SOPs
- demonstrating preparation of temporary connections
- working safely at heights, including the correct application of safety equipment
- erecting and dismantling structures,
- moving and correctly locating plant and equipment
- demonstrating the following knots, bends and hitches:
  - sheet bend, becket hitch, running bowline and double bowline
- demonstrating the following splices and whippings:
  - eye, back and short splice
  - sail makers and common whipping
  - west countryman's.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- appropriate mathematical procedures for estimation and measurement of loads
- principles relating to all plant, equipment and structural stability

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types and functions of rigging, safety and associated equipment, including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- sources of specialist knowledge and support in typical manufacturing sites, including engineers, technicians, tradespersons, and supervisors and managers
- relevant federal, state or territory and local government WHS legislation, standards and codes of practice for undertaking rigging activities
- inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer specifications
- hierarchy of hazard identification and control
- minimum clearance distances from powerlines or electrical equipment as determined by the relevant state or territory authority or electrical supply authority
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking basic rigging at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11025 Operate a non-slewing mobile crane of greater than three tonnes capacity

Modification History

Release 1. Supersedes and is equivalent to MEM11025A Operate a non-slewing mobile crane of greater than three tonnes capacity

Application

This unit of competency defines the skills and knowledge required to operate non-slewing mobile cranes of greater than three tonnes capacity in a manufacturing environment. It applies to cranes commonly referred to as yard cranes which require the crane to be moved for positioning to lift and lower loads. The cranes covered by this unit incorporate a boom or jig and include mobile cranes on articulated and non-articulated vehicles and cranes mounted on self-propelled or locomotive drawn rail vehicles inside a large manufacturing enterprise.

This unit is not recognised by regulators for licensing requirements. In order to satisfy licensing requirements, the imported unit TLILIC3006 Licence to operate a non-slewing mobile crane (greater than three tonnes capacity) will be required.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools, and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Band A

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Obtain requirement for load lifting and/or transfer according to procedures
2	**Plan work**	2.1	Identify potential workplace hazards
		2.2	Identify hazard control measures consistent with appropriate standards to ensure the safety of personnel and equipment
		2.3	Identify and estimate the weight of the load in consultation with associated personnel
		2.4	Assess crane as appropriate to the load and workplace conditions
		2.5	Inspect and determine an appropriate path for the movement of loads in the work area
		2.6	Identify appropriate communication methods with associated personnel
3	**Conduct routine checks**	3.1	Check crane visually for any damage or defects
		3.2	Access crane in a safe manner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.3	Ensure all signage and labels are visible and legible according to the appropriate standard
	3.4	Carry out routine pre-operational crane checks according to SOPs
	3.5	Locate and identify all controls
	3.6	Check crane service logbook for compliance
	3.7	Start crane according to SOPs and check for any abnormal noises
	3.8	Test all crane safety devices according to SOPs
	3.9	Carry out post-start operational checks according to SOPs
	3.10	Check all communication equipment for serviceability
	3.11	Report all damage and defects and record according to SOPs, and take appropriate action
4 **Set up crane**	4.1	Check ground suitability
	4.2	Drive crane to the work area according to SOPs
	4.3	Position crane for work application and stability according to SOPs
	4.4	Determine appropriate crane configuration for work task according to SOPs
	4.5	Input boom or jib and counterweight configuration data into the crane computer, as applicable
	4.6	Apply appropriate hazard prevention or control measures to the work area according to SOPs
	4.7	Test communication equipment for functionality
5 **Lift and transfer load**	5.1	Determine lifts within the capacity of the crane and environmental conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	5.2	Position boom or jib and hoist block over load following directions from associated personnel
	5.3	Carry out test lift according to SOPs
	5.4	Lift loads and, where required, transfer or mobile using all relevant crane movements according to SOPs and the appropriate standard
	5.5	Follow appropriate path where load is transferred or mobiled
	5.6	Interpret all required communication signals according to SOPs and the appropriate standard
	5.7	Monitor load movement constantly, ensuring safety to personnel and stability of load and crane
	5.8	Respond to unplanned and unsafe situations in line with SOPs
6 **Shut down and secure crane**	6.1	Stow crane boom or jib and associated equipment and secure according to SOPs and the appropriate standard
	6.2	Apply relevant motion locks and brakes, where applicable
	6.3	Stow outriggers/stabilisers and secure according to SOPs, where applicable
	6.4	Shut down crane according to SOPs
	6.5	Carry out routine post-operational crane checks according to SOPs
	6.6	Stow plates or packing and secure, where applicable
	6.7	Record all damage and defects and report according to SOPs, and take appropriate action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards include one (1) or more of the following:

- ground stability (e.g. ground condition, recently filled trenches and slopes)
- overhead hazards (e.g. powerlines and service pipes)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles and other plant)
- fixed equipment, including machinery, tanks and conveyors
- environmental conditions (e.g. wind, lightning and storms)
- other specific hazards (e.g. dangerous materials)

Hazard control measures include the following:

- the systematic process of eliminating or reducing the risk to personnel and property through the application of controls consistent with appropriate standards
- the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

  1. elimination

  2. substitution

  3. isolation

  4. engineering control measures

  5. using safe work practices

  6. personal protective equipment

Appropriate path includes one (1) or more of the following:

- one which maximises safety and stability during lifting and transferring, including mobile operation of the crane and depositing of the load
- one which minimises disruption to other operations in the enterprise
- one which without compromising safety, stability and avoidance of disruption, is the most efficient route for the transfer of the load

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate standards include one (1) or more of the following:	• codes of practice and legislation • Australian Standards • manufacturer specifications • enterprise and industry standards, where applicable
Associated personnel include one (1) or more of the following:	• doggers and riggers • forklift and truck drivers • production and trades employees
Environmental conditions include one (1) or more of the following:	• wind • lightning • storms • poor light • temperatures
Cranes include one (1) or more of the following:	• a crane (greater than three tonnes capacity) which meets the requirements of AS 1418 Set-2009 Cranes, hoists and winches Set • articulated type mobile cranes • locomotive hauled and self-propelled rail cranes
Communication methods include one (1) or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels include one (1) or more of the following:	• crane data plates/labels/decals • load charts • control labels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures include one (1) or more of the following:	• manufacturer guidelines (instructions, specifications, operator's manual or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures and checklists)
Controls include one (1) or more of the following:	• luffing levers • hoisting and lowering levers • slewing levers, including brake • boom extension levers (where fitted)
Service logbook includes one (1) or more of the following:	• service book and any logbook • history record system where the service and maintenance history is kept
Crane safety devices include the following:	• horns/sirens/lights • audible and visual reversing devices • operator restraint devices
Communication equipment includes one (1) or more of the following:	• fixed channel two-way radios • whistles • bells and buzzers **Note**: Where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane
Ground suitability includes one (1) or more of the following:	• rough, uneven ground • backfilled ground • soft soils • hard, compacted soil • rock • bitumen • concrete

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Stability includes the following:

- deploying outriggers
- establishing correct size plates or packing
- correctly positioning plates or packing

Crane configuration includes the following:

- set up of crane for:
  - lift and lowering of loads where crane is not required to move (e.g. where a load is lifted of a truck and the truck then moves away to allow load to be lowered)
  - mobile load transfer where load is lifted and transferred to a different location by the crane
- boom/jib, fly-jib and counterweights

Hazard prevention/control measures include one (1) or more of the following:

- safety tags on electrical switches/isolators
- insulated power lines
- safety observer used inside exclusion zone
- disconnected power
- traffic barricades and controls
- pedestrian controls
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination

Test lift includes the following:

- lifting the load just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:
  - near capacity loads do not overload the crane
  - loads of unusual shape or weight distribution are correctly slung
  - load measuring equipment can be used to verify the calculated weight of the load
  - all crane equipment is functioning properly
  - adjustments to the slinging can be made in a safe manner

Relevant crane movements include the

- telescope in and out
- boom/jib up and down

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

following:	• articulating (as applicable) • raise and lower hoist (as applicable)
Communication signals include the following:	• stop – hand and whistle • hoist up – hand and whistle • hoist down – hand and whistle • luff boom down – hand and whistle • luff boom up – hand and whistle • telescope out – hand and whistle • telescope in – hand and whistle • slew/articulate right – hand and whistle • slew/articulate left – hand and whistle
Unplanned and/or unsafe situations include one (1) or more of the following:	• failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning and storms)
Planned route includes one (1) or more of the following:	• unusual or difficult terrains • obstacles or obstruction
Best mobile practice includes the following:	• minimum speed • gentle acceleration and braking (to minimise load swing) • minimum boom/jib length • carrying the load near to the ground surface • use of handheld taglines
Shutdown includes the following:	• retracting boom/jib/fly, where applicable • retracting hoist rope and hook block • retracting outriggers/stabilisers, where applicable • idling engine to stabilise temperature and turning off engine

Assessment Requirements for MEM11025 Operate a non-slewing mobile crane of greater than three tonnes capacity

Modification History

Release 1. Supersedes and is equivalent to MEM11025A Operate a non-slewing mobile crane of greater than three tonnes capacity

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting safety signs and crane manufacturers' specifications and data, including load charts to enable crane to be configured for the load
- complying with work health and safety (WHS) licensing legislation
- communicating and working safely with others in the work area following SOPs
- assessing ground conditions to confirm site is suitable (e.g. firm, level and safe) to operate crane
- applying risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping, other vehicles and personnel)
- operating a non-slewing mobile crane, including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of non-slewing mobile cranes (over three tonnes capacity), in conjunction with other associated personnel
- using appropriate mathematical procedures for estimation of loads
- conducting lifts and transfers to designated locations via appropriate paths.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- appropriate mathematical procedures for estimation and measurement of loads
- federal, state or territory WHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- crane characteristics and capabilities, including use of load charts, to allow the configuration of the crane to suit the range of loads
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- hierarchy of hazard identification and control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for the recording, reporting and maintenance of workplace records and information
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating a non-slewing mobile crane of greater than three tonnes capacity at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12001 Use comparison and basic measuring devices

Modification History

Release 1. Supersedes and is equivalent to MEM12001B Use comparison and basic measuring devices

Application

This unit of competency defines the skills and knowledge required to sort items in a production environment or at a workstation using basic comparison measuring equipment.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM12002 Perform electrical/electronic measurement

Modification History

Release 1. Supersedes and is equivalent to MEM12002B Perform electrical/electronic measurement

Application

This unit of competency defines the skills and knowledge required to use basic electro-measuring devices to check variables and applies to the measurement of voltage, current, resistance, power and frequency on a.c. and d.c. circuits up to 1000 volts.

Measurement skills for specific applications and context are covered by other units.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where simple measurement tasks such as reading of fixed devices, testing continuity, and tasks requiring the use of devices mounted in for example measuring jigs unit MEM12001 Use comparison and basic measuring devices and unit MEM12023 Perform engineering measurements, should also be selected as appropriate.

Where electrical/electronic measuring devices require the connection or disconnection of circuitry appropriate units should also be selected.

In circumstances where the application of this unit or legislation dictates, relevant units covering first aid and/or emergency procedures should also be considered.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Assessment Requirements for MEM12002 Perform electrical/electronic measurement

Modification History

Release 1. Supersedes and is equivalent to MEM12002B Perform electrical/electronic measurement

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting measurement requirements from specifications, including sketches and job instructions, schematics, diagrams and technical manuals
- selecting appropriate measuring device to achieve the required outcome
- obtaining measurements by making appropriate connections in a safe and effective manner, interpreting results and recording measurements, as required
- storing and maintaining measuring devices, including undertaking routine care, according to manufacturer's specifications or SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- terminology and concepts relating to electrical/electronic measurement
- selection of different measuring devices for particular applications within the scope of this unit
- specifications of selected electro-measuring devices
- application of the settings on each electro-measuring device
- procedures for obtaining electrical/electronic measurements
- procedures for connecting electro-measuring devices to circuitry
- correct scale for each setting on the electro-measuring device
- scale factor to be applied to readings taken from the electro-measuring device
- units applying to electrical and electronic measurements
- precautions to be observed when using measuring devices
- loading effect of meters on a circuit
- maintenance and storage requirements for a range of electro-measuring devices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing electrical/electronic measurement at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12003 Perform precision mechanical measurement

Modification History

Release 1. Supersedes and is equivalent to MEM12003B Perform precision mechanical measurement

Application

This unit of competency defines the skills and knowledge required to perform precision mechanical measurement.

This unit covers comprehensive measuring skills where judgement is required in the selection of the most appropriate techniques/devices and where results are interpreted and/or analysed.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Perform precision measurement**	2.1	Select appropriate precision equipment to achieve specified outcome
		2.2	Check the accuracy of the selected measuring equipment for where appropriate
		2.3	Use correct and appropriate measuring techniques for the measurement task
		2.4	Take measurements to the finest graduation of instrument in an accurate manner
		2.5	Interpret readings and measurements
3	**Maintain precision equipment**	3.1	Set measuring equipment to specifications using manufacturer guidelines or procedures and techniques
		3.2	Adjust and maintain measuring equipment to required accuracy using appropriate techniques according to manufacturer’s specifications or SOPs
		3.3	Store equipment to manufacturer’s specifications or SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:

- strip gauges
- precision squares
- angle dekkors
- sine bars
- angle gauges
- polygons
- precision levels
- dial indicators
- vernier protractors
- shadow graphs
- vibration measurement equipment
- dynamic balancing equipment
- micrometres
- height gauges
- hardness testers
- texture measuring equipment

Measurements include one (1) or more of the following:

- length
- circular
- straightness
- flatness
- hardness
- angles
- finishes
- textures
- roundness
- squareness
- alignment and coordinate measurement

Assessment Requirements for MEM12003 Perform precision mechanical measurement

Modification History

Release 1. Supersedes and is equivalent to MEM12003B Perform precision mechanical measurement

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting measurement requirements from specifications, including sketches and job instructions, schematics, diagrams and technical manuals
- selecting appropriate measuring device or equipment to achieve the required outcome
- checking the accuracy of the selected measuring equipment where appropriate
- setting up measuring equipment where appropriate
- obtaining measurements on components or equipment in a safe and effective manner, interpreting results and recording measurements, as required
- storing and maintaining measuring devices including routine adjustments according to manufacturer's specifications or SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- appropriate precision mechanical measuring device for given measurement requirements
- procedures for verifying equipment being used has been recently calibrated
- procedures for obtaining a range of mechanical measurements and techniques to be used
- suitability of environmental conditions for the measurements being carried out
- setting precision mechanical measuring devices procedures
- accuracy to which a range of precision mechanical measuring devices can be read
- procedures for reading graduated mechanical measuring devices
- units of measurement and numerical operations within the scope of this unit
- specifications of the equipment to be set
- tools and equipment for setting mechanical measuring devices
- procedures and techniques required to undertake adjustments to a range of precision mechanical measuring devices

MEM12004 Perform precision electrical/electronic measurement

Modification History

Release 1. Supersedes and is equivalent to MEM12004B Perform precision electrical/electronic measurement

Application

This unit of competency defines the skills and knowledge required to undertake precision measurements across a range of frequencies on the full range of electrical/electronic equipment including a.c., d.c., analogue, digital and microwave equipment.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **4**

Pre-requisite Unit

Assessment Requirements for MEM12004 Perform precision electrical/electronic measurement

Modification History

Release 1. Supersedes and is equivalent to MEM12004B Perform precision electrical/electronic measurement

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting measurement requirements from specifications, including sketches and job instructions, schematics, diagrams and technical manuals
- selecting appropriate measuring equipment to achieve the required outcome
- checking the accuracy of the selected measuring equipment where appropriate
- setting up measuring equipment where appropriate
- obtaining measurements and making appropriate connections in a safe and effective manner, interpreting results and recording measurements, as required
- storing and maintaining measuring equipment, including undertaking routine care according to manufacturer's specifications or SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications of the circuitry and/or components to be tested
- specifications of precision electrical/electronic measuring devices
- application of a range of precision electrical/electronic measuring devices
- procedures/techniques for obtaining and setting a range of electrical/electronic measurements
- units of measurement used in conjunction with precision electrical/electronic measurement
- specifications of the equipment to be set
- tools and equipment to be used in setting precision electrical/electronic measuring devices
- adjustments and procedures that can be made to a range of precision electrical/electronic measuring devices
- procedures for storing precision electrical/electronic measuring devices.

MEM12005 Calibrate measuring equipment

Modification History

Release 1. Supersedes and is equivalent to MEM12005B Calibrate measuring equipment

Application

This unit of competency defines the skills and knowledge required to check measuring equipment for correct operation and validate/calibrate precision measuring equipment in accordance with predetermined procedures.

It applies to the calibration skills used in the setting, adjustment, validation or verification of precision mechanical and/or electrical/electronic measuring instruments using reference standards. This involves the use of electronic setting equipment and the selection or determination of an appropriate external standard.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

This unit is not meant to apply to simple zeroing, external adjustment or manual adjustment for size range, e.g. micrometres. These skills are covered by units:

- MEM12023 Perform engineering measurements
- MEM12003 Perform precision mechanical measurement
- MEM12004 Perform precision electrical/electronic measurement.

There may be occasions when both pathways units MEM12003 Perform precision mechanical measurement and MEM12002 Perform electrical/electronic measurement will be required.

Where additional electrical/electronic measurement skills are required unit MEM12004 Perform precision electrical/electronic measurement should also be selected.

Competence in this unit does not require the level of skill that applies to calibration as defined in ISO 9000 and/or carried out by personnel accredited under ISO/IEC 17025/NATA certification or similar. Unit MEM15010 Perform laboratory procedures should be considered for this level of calibration.

Where reference standards only are to be verified under laboratory conditions unit MEM15022 Verify reference standards should also be selected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **6**

Pre-requisite Unit

Path 1	MEM11011	Undertake manual handling
	MEM12003	Perform precision mechanical measurement
	MEM12023	Perform engineering measurements
	MEM13015	Work safely and effectively in manufacturing and engineering
	MEM16006	Organise and communicate information
Path 2	MEM11011	Undertake manual handling
	MEM12002	Perform electrical/electronic measurement
	MEM12023	Perform engineering measurements
	MEM13015	Work safely and effectively in manufacturing and engineering

1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Check equipment for correct operation**	2.1	Check equipment for correct operation in accordance with manufacturers' specifications using appropriate tools, equipment and techniques
		2.2	Carry out appropriate checks of components, leads, fasteners for wear, loose connections or other faults
3	**Validate/calibrate precision measuring equipment**	3.1	Assess calibration of precision measuring equipment to manufacturers' specifications and/or SOPs
		3.2	Calibrate equipment against appropriate physical standards using correct calibration devices, equipment and techniques using predetermined procedures
		3.3	Recommission equipment in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM12005 Calibrate measuring equipment

Modification History

Release 1. Supersedes and is equivalent to MEM12005B Calibrate measuring equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking measuring equipment for correct operation and faults using appropriate tools and equipment
- selecting appropriate calibration devices and equipment to manufacturers' specification and procedures
- calibrating equipment to appropriate physical and reference standards for conformance to specifications and in accordance with manufacturers' manuals and SOPs
- recommissioning equipment in accordance SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- measuring equipment specifications, operation, wearing parts, connections and components
- checks that are to be made of the measuring equipment and the tools and equipment to be used when checking the measuring equipment
- common fault(s) that may be found in the measuring equipment
- effects of faults on the performance/accuracy of the measuring equipment
- relevant standards, legislative or regulatory requirements applicable to the measuring equipment and/or its calibration
- SOPs for calibrating and commissioning the measuring equipment and the tools and equipment required to do so
- calibration records to be kept/maintained in accordance with SOPs.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in calibrating measuring equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM12006 Mark off/out (general engineering)

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM12006 Mark off/out (general engineering) (Release 1).

Release 1. Supersedes and is equivalent to MEM12006C Mark off/out (general engineering).

Application

This unit of competency has been developed for engineering tradesperson - mechanical apprenticeship training and the recognition of trade-level skills in marking off/out in general engineering.

Marking off/out is undertaken using appropriate tools and equipment and templates are produced as required. Marking off/out techniques may apply to a range of materials and shapes.

Skills covered by this unit are generally applied in occupational and work situations associated with trade-level fitting, machining and toolmaking work.

Where the task involves a simple transfer of a dimension or marking a location point associated with general engineering and maintenance functions, select one or more of the following units as appropriate:

- MEM07005 Perform general machining
- MEM18006 Perform precision fitting of engineering components
- MEM18014 Manufacture press tools and gauges.

Where the manufacture of marked out components is required, appropriate units should also be selected.

Where a higher level of calculation is required unit MEM12026 Perform advanced trade calculations in a manufacturing, engineering or related environment should also be selected.

Where a higher level of measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where a higher level of precision work is required unit MEM18003 Use tools for precision work should also be selected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where marking out structural fabrications and shapes is required unit MEM12007 Mark off/out structural fabrications and shapes should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information

Competency Field

Measurement

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		requirements at all times
	1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
	1.5	Select appropriate methods and sequencing consistent with job requirements
2 **Transfer dimension**	2.1	Carry out all marking off/out to specifications using appropriate tools and equipment
	2.2	Establish datum points
	2.3	Transfer dimensions and undertake appropriate calculations, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment include one (1) or more of the following:

- marking out tables
- surface tables
- rotary tables
- dividing heads
- vee blocks
- cylinder squares

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- sine bars
- vernier height gauges
- protractors
- straight edge and set squares
- hammers
- scribers
- centre punch
- marking medium

Assessment Requirements for MEM12006 Mark off/out (general engineering)

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM12006 Mark off/out (general engineering) (Release 1).

Release 1. Supersedes and is equivalent to MEM12006C Mark off/out (general engineering).

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for marking out requirements, including measurements and tolerances
- carrying out all marking off/out using tools and equipment to specifications
- calculating measurements not shown on drawings, as required
- establishing and marking datum points
- transferring measurements, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- drawings, job instructions and specifications
- procedures for marking off/out
- tools, equipment and techniques related to the task
- purpose of establishing datum points
- method of determining/calculating dimensions.

Assessment Conditions

- Assessors must:
  - have vocational competency in marking off/out (general engineering) at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12007 Mark off/out structural fabrications and shapes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM12007 Mark off/out structural fabrications and shapes (Release 1).

Release 1. Supersedes and is equivalent to MEM12007D Mark off/out structural fabrications and shapes.

Application

This unit of competency been developed for engineering tradesperson - fabrication apprenticeship training and the recognition of trade-level skills in mark off/out of structural fabrications and shapes.

It applies to the marking off/out of general fabrications and shapes to specified measurements, tolerances and shapes using appropriate tools and equipment. Templates and patterns are produced as required.

Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boiler making or sheet metal work.

In a marine setting, it includes basic lofting/set out for construction of marine vessels and includes stem and transom development and use of tables of offsets that reflect chine and hull configuration. This includes lofting surfaces, straight edges, string lines, French curves and templates and marking out techniques apply to a range of materials and shapes.

Where more extensive lofting practices are required unit MEM09021 Interpret and produce drawings of curved 3-D shapes should also be selected.

Where marking out of general engineering components is required unit MEM12006 Mark off/out (general engineering) should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Transfer dimensions from a detail drawing to work or**	2.1	Determine and understand specifications and work requirements using correct and appropriate calculations
		2.2	Carry out marking out to specifications or procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	surface		using appropriate tools and equipment
		2.3	Establish datum points
3	**Make templates/ patterns as required**	3.1	Chose appropriate template/pattern material, as required
		3.2	Produce required templates to specifications
		3.3	Follow correct storage procedures, including labelling and identification to SOPs
4	**Develop patterns and/or transfer measurements to structures**	4.1	Chose and apply most appropriate development and/or measurement sequence
		4.2	Determine allowances for fabrication and assembly and transfer
		4.3	Check measurement transfer/layout of components to ensure accuracy/set out
5	**Interpret relevant codes, standards and symbols**	5.1	Interpret relevant standards/codes and symbols
		5.2	Interpret requirements of standards/codes and apply to materials and processes
6	**Estimate quantities of materials from detail drawings**	6.1	Identify materials
		6.2	Estimate quantities from drawing
		6.3	Minimise material wastage

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Template materials include one (1) or more of the following:	• steel plate • perspex • timber • cardboard • paper
Storage procedures include one (1) or more of the following:	• labelling • identification (e.g. template lofts)
Allowances include one (1) or more of the following:	• thickness • bend • pitch • angle • circumference • perimeter

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM12007 Mark off/out structural fabrications and shapes (Release 1).

Release 1. Supersedes and is equivalent to MEM12007D Mark off/out structural fabrications and shapes.

Assessment Requirements for MEM12007 Mark off/out structural fabrications and shapes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM12007 Mark off/out structural fabrications and shapes (Release 1).

Release 1. Supersedes and is equivalent to MEM12007D Mark off/out structural fabrications and shapes.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs)and safe work practices
- identifying and interpreting specifications and drawings for fabrication requirements, including materials, measurements and tolerances, joining methods, standards and code requirements
- carrying out all marking off/out using appropriate marking out tools and equipment to specifications
- calculating measurements not shown on drawings, as required
- establishing and marking datum points
- selecting appropriate template material and producing templates to specifications
- storing templates, including labelling and identification, to procedures, as required
- developing patterns by selecting and applying appropriate development and/or measurement sequence and determining correct allowances for fabrication and assembly and transferring these measurements
- calculating allowances for fabrication and assembly, including shrinkage, thickness and inside/outside measurements, and transferring these measurements
- identifying and estimating quantities of materials from drawings with minimise wastage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for marking off/out and pattern development
- tools and equipment to be used in the preparation of the marking off/out
- datum points
- materials that can be used for the preparation of templates and their application
- manufacturing allowances that have to be considered when developing patterns

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- template labelling and identification procedures and storage requirements of templates
- appropriate methods of development/marking off/out of a range of given objects
- appropriate fabrication and assembly allowances
- effects of material type and thickness on fabrication and assembly allowances
- sources of data on fabrication and assembly allowances
- relevant standards and codes and the meaning of symbols used
- requirements of the codes/standards applicable to the work to be done
- materials from which the component/assembly is to be manufactured
- benefits of minimising material wastage.

Assessment Conditions

- Assessors must:
  - have vocational competency in marking off/out structural fabrications and shapes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12019 Measure components using coordinate measuring machines

Modification History

Release 1. Supersedes and is equivalent to MEM12019B Measure components using coordinate measuring machines

Application

This unit of competency defines the skills and knowledge required to operate coordinate measuring machines (CMM) in a production environment, including basic setting up of components and manually aligning probes.

Where other machines/processes are to be adjusted as a consequence of the CMM operation, appropriate machining/process operation units should also be selected.

Where basic operation excludes setting up components and manually aligning probes is required unit MEM07024 Operate and monitor machine and process should also be selected.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM12019 Measure components using coordinate measuring machines

Modification History

Release 1. Supersedes and is equivalent to MEM12019B Measure components using coordinate measuring machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and sketches for selecting appropriate methods for measuring components using coordinate measuring machines (CMM)
- selecting and loading components and fixtures using appropriate fixture/clamping device
- setting and manually aligning probes in accordance with specifications
- selecting and activating part programs, as required, where machine is fitted with microprocessors and measuring components and interpreting results and reporting all anomalies in accordance with SOPs
- shutting down part program and removing components and cleaning CMMs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- task-related information on job sheets or equivalent
- pre-start checks
- fixtures/clamping devices, methods and their uses
- storage location and procedures
- procedures for undertaking pre-measurement manual hits for manual alignment and checking probe configuration
- procedures for running and verifying part program
- procedures, methods/techniques for interpreting results and reporting results and recommendations for adjustment
- effects of contamination
- procedures for shutting down part program
- safe removal and handling of components procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in measuring components using coordinate measuring machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Interpret drawing information and a range of tolerances that apply to components and establish datums
2	**Set up/orient components**	2.1	Undertake pre-start checks in accordance with SOPs
		2.2	Observe correct safety procedures and check all equipment for safe operation
		2.3	Determine the most appropriate method of clamping/support to minimise distortion and maximise measuring access
		2.4	Set up and orient component/fixture/clamping devices
3	**Select and activate part programs**	3.1	Identify and verify part program, as required
		3.2	Activate selected part program in accordance with SOPs
4	**Prepare CMM**	4.1	Determine probe configuration according to specifications
		4.2	Adjust probe configuration on CMM according to SOPs
		4.3	Check probe angles for compliance and adjust, as required
		4.4	Re-calibrate CMM
		4.5	Align probes manually for one-off components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Measure components**	5.1 Edit part program to compensate for errors or changes to component specifications
	5.2 Measure components and check for conformance to specification
	5.3 Produce data/report

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM12020 Set and operate coordinate measuring machines

Modification History

Release 1. Supersedes and is equivalent to MEM12020B Set and operate coordinate measuring machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for selecting appropriate methods for measuring components using coordinate measuring machines (CMMs)
- selecting and setting up and orienting appropriate component/fixture/ clamping device to minimise distortion and maximise measuring access
- selecting and loading part programs and activating in accordance with SOPs
- loading and configuring probes, checking probes angles and adjusting for compliance and re-setting/re-calibrating CMM in accordance with specifications
- manually aligning probes for one off components
- identifying problems/errors in programs and carrying out editing to ensure accurate operation
- checking results against drawings/specifications and interpreting for non-conformance and completing reports.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles and methods of coordinate measurement
- principles and interpretation of geometric tolerancing
- task-related information, symbols and terminology
- pre-start checks
- types and functions of various fixtures/clamping devices
- principles and methods of clamping
- efficient set-up/orientation procedure
- procedures to locate and activate part program
- procedures to verify changes/upgrades to part programs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- various probes and their uses and configurations and setting and adjusting probes
- requirements and procedures for re-setting/re-calibrating the CMM
- procedure and reason for taking manual hits
- procedures for editing part programs
- procedure for interpreting results
- procedure for maintaining records and reporting procedures
- techniques, tools and equipment to measure components.

Assessment Conditions

- Assessors must:
  - have vocational competency in setting and operating coordinate measuring machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12021 Program coordinate measuring machines

Modification History

Release 1. Supersedes and is equivalent to MEM12021B Program coordinate measuring machines

Application

This unit of competency defines the skills and knowledge required to write, trial and edit basic programs for a range of coordinate measuring machines (CMMs) to measure features of a part in a single work plane using a single probe.

Appropriate levels of measuring, computer and engineering drawing skills should be selected with this unit.

Where programming using multiple probes and more than one plane is required unit MEM12022 Program coordinate measuring machines (advanced) should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify part program parameters**	2.1	Select appropriate units to comply with specifications
		2.2	Specify part program name according to SOPs
3	**Establish single probe configurations**	3.1	Determine single probe configuration
		3.2	Determine probe angles and qualify in accordance with SOPs
4	**Position/align component**	4.1	Position and orient component/part to specifications
		4.2	Create manual alignment according to SOPs
		4.3	Create single direct computer control (DCC) alignment according to SOPs
5	**Measure features**	5.1	Measure features and define probe movement parameters according to SOPs
		5.2	Dimension basic features according to specifications
		5.3	Report operator notes
		5.4	Insert dimension descriptions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
6 **Verify and back up the program**	6.1 Verify execution and accuracy of program according to SOPs
	6.2 Edit program, if required
	6.3 Output results to various formats according SOPs
	6.4 Archive and back up program

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

No range of conditions provided for this unit.

Assessment Requirements for MEM12021 Program coordinate measuring machines

Modification History

Release 1. Supersedes and is equivalent to MEM12021B Program coordinate measuring machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate units and identifying part program in accordance with current identification and/or quality system to comply with specifications
- determining single probe configuration and calculating/determining and qualifying probe angles in accordance with SOPs
- undertaking numerical operations, geometry and calculations/formula applicable to programming coordinate measuring machine (CMM)
- positioning/aligning/securing component/part to appropriate orientation on CMM table and complying with probe configuration and calibrated angles
- taking an appropriate number of hits to create an accurate manual alignment
- demonstrating the correct procedure for creating direct computer control (DCC) alignment
- measuring features in correct sequence and location in a single work plane
- dimensioning basic features, including circles and points
- verifying execution and accuracy of program and editing according to SOPs, as required
- outputting results to various formats, including printer, disc or other format and backing up and archiving program, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles and methods of coordinate measurement
- principles and interpretation of geometric tolerancing
- procedure for producing the part program
- procedures and parameters for naming programs
- procedures and reasons for determining single probe configuration
- procedures for determining/calculating probe angles
- procedures and parameters for qualification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specifications for the program
- criteria for selecting specific units
- reasons for the specific location and aligning/securing the component/part
- method of securing/clamping
- methodology used to create manual alignment for the part
- procedures for creating a single DCC alignment and reasons for selection
- criteria for defining probe movement
- procedures for verifying correct probe movement
- dimensioning techniques
- procedures for running the program and verifying the results
- editing process and explanations
- method used to archive and back up the program
- access limitations by personnel and quality control guidelines
- procedures for outputting results to various formats.

Assessment Conditions

- Assessors must:
  - have vocational competency in programming coordinate measuring machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for MEM12022 Program coordinate measuring machines (advanced)

Modification History

Release 1. Supersedes and is equivalent to MEM12022B Program coordinate measuring machines (advanced)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining program parameters from job instructions, specifications, charts, lists, drawing and other applicable reference documents
- selecting suitable probes and determining probe configuration and determining and qualifying probe angles in accordance with SOPs
- undertaking numerical operations, geometry and calculations/formula for determining program parameters and checking tolerances
- demonstrating the correct procedure for creating multiple direct computer control (DCC) alignment and integrating new and existing DCC sub-routines
- constructing geometric features for the program and reviewing and editing program to specification
- changing system-wide operations to ensure the most efficient operation of the program
- outputting results to various formats, including printer, disc or other format and backing up and archiving program, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- program specifications
- procedure for producing the program
- parameters for selecting attributes
- procedures for determining multiple probe configuration and probe angles and reasons for selection
- qualification procedure
- procedure for creating DCC alignment
- critical differences between single and multiple DCC alignment
- problems due to integrating sub-routines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- advantages gained through integration of DCC sub-routines
- procedure for constructing geometric features in the sequence followed and reasons that apply
- procedure for ensuring the dimensioning techniques comply with relevant standards
- procedure for ensuring all notes/instructions are clear and logical
- procedures and parameters for editing, archiving and backing up programs
- effects of editing particular sections of the program
- effects on other programs of changing software or hardware options
- procedures for changing system-wide options
- list of recipients or those with access rights to the programs
- procedures for producing/storing results/reports
- procedure for notifying personnel of completion of the program is explained
- techniques, tools and equipment to measure components.

Assessment Conditions

- Assessors must:
  - have vocational competency in programming coordinate measuring machines (advanced) at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12023 Perform engineering measurements

Modification History

Release 1. Supersedes and is equivalent to MEM12023A Perform engineering measurements

Application

This unit of competency defines the skills and knowledge required to perform measurements requiring straightforward use of mechanical measuring devices which incorporate visual inspections representing units of measurement and associated calculations in a range of manufacturing, engineering and related environments. Measurements may be expressed in metric or imperial units.

Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **5**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Select appropriate device or equipment**	2.1	Determine measurement requirements from specifications
		2.2	Select appropriate device or equipment to achieve required outcome according to SOPs
3	**Obtain measurements using a range of measuring devices**	3.1	Use correct and appropriate measuring technique
		3.2	Obtain measurements accurately in a safe and effective manner
		3.3	Determine or verify dimensions using calculations, as required
4	**Maintain measuring devices**	4.1	Undertake routine care and storage of devices to manufacturers' specifications or SOPs
		4.2	Make routine adjustments to devices to maintain device accuracy
5	**Communicate measurements as required**	5.1	Record measurements accurately, as required
		5.2	Prepare freehand sketch which depicts required information, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Specifications include one (1) or more of the following:	• drawings • sketches • job instructions • schematics • diagrams • reference manuals
Measuring devices include one (1) or more of the following:	• protractors • combination squares • set squares • dial indicators • thermometers • tapes • rules • micrometres • vernier-scaled measuring equipment
Calculations include one (1) or more of the following:	• addition • subtraction • multiplication • division • fractions • decimals **Note:** Calculations may be made using a calculator
Routine adjustments	• validating the device using simple zeroing or scale adjustment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include the following:

Measurements include one (1) or more of the following:	• length • squareness • flatness • angle • roundness • clearances • any other measurements that can be read off analogue, digital or other measuring device
Information includes one (1) or more of the following:	• dimensions • instructions • base line • datum points

Assessment Requirements for MEM12023 Perform engineering measurements

Modification History

Release 1. Supersedes and is equivalent to MEM12023A Perform engineering measurements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting measurement requirements from specifications
- selecting appropriate measuring device or equipment to achieve the required outcome
- obtaining measurements in a safe and effective manner and recording measurements, including preparing a freehand sketch which depicts required information, as required
- performing calculations to determine or verify dimensions
- storing and maintaining measuring devices including routine adjustments according to manufacturer's specifications or SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- correct application of a range of measuring devices
- correct and appropriate measuring technique for a range of measuring devices
- calculations, including addition, subtraction, multiplication, division, fractions and decimals
- manufacturer's or SOPs for handling and storing a range of measuring devices
- appropriate procedures for adjusting and zeroing a range of measuring devices, including scale adjustment
- appropriate methods of communicating measurements by drawings.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing engineering measurements at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12024 Perform computations

Modification History

Release 1. Supersedes and is equivalent to MEM12024A Perform computations

Application

This unit of competency defines the skills and knowledge required to estimate approximate answers to arithmetical problems, carry out calculations involving percentages and proportions, and determine simple ratios and averages.

It also covers producing and interpreting simple charts and graphs in manufacturing, engineering or related environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **3**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Measurement

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

		requirements at all times
	1.3	Identify job requirements from specifications, sketches, job sheets or work instructions
	1.4	Establish required calculation outcomes from job instructions
	1.5	Determine required calculation method to suit the application, including selection of relevant arithmetic operations and/or formulae
	1.6	Estimate expected results, including rounding off, as appropriate
2 **Perform calculations**	2.1	Apply calculation method
	2.2	Obtain answer and check against estimation to ensure it is correct
3 **Produce charts and graphs from given information**	3.1	Transpose data to produce charts or graphs
	3.2	Ensure charts or graphs reflect data on which they are based to meet specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEM12024 Perform computations

Modification History

Release 1. Supersedes and is equivalent to MEM12024A Perform computations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining and interpreting data from job instructions and relevant sources to establish required outcomes
- determining the appropriate calculation method to suit the application
- performing calculations and confirming answer/s
- producing and interpreting simple charts and graphs from given data.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- formulae applicable to the determination of perimeter, area and volume of simple geometric shapes and the reasons for using dimensions with the same units
- techniques and procedures for rounding off figures when estimating approximate answers
- features and use of mixed numbers, decimals, fractions and whole numbers
- procedures for carrying out calculations involving fractions and using each of the four basic rules of addition, subtraction, multiplication and division
- concept of percentage and procedures to be followed in converting a decimal and fraction to a percentage
- concepts and calculations of ratio and proportion
- scales applicable to the axes of the graphs or charts
- types of charts and/or graphs used in the individual's field of work
- upper and lower limits of acceptability applicable to data entered on a graph or chart
- trends indicated by the slope or gradient of a graph
- action to be taken when given trends occur or set limits are approached on graphs or charts
- procedures for drawing 'lines of best fit'
- trends indicated by the graphs or charts drawn.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing computations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12025 Use graphical techniques and perform simple statistical computations

Modification History

Release 1. Supersedes and is equivalent to MEM12025A Use graphical techniques and perform simple statistical computations

Application

This unit of competency defines the skills and knowledge required to interpret and construct graphs and charts from given or determined data, and perform basic statistical calculations.

Graphs and charts apply to information from various work contexts, quality processes, production and market trends and other engineering applications and a range of devices are used to assist with calculations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **2**

Pre-requisite Unit

MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Read and construct graphs from given or determined data**	2.1	Extract complex information from graphical representation
		2.2	Analyse data with respect to emerging trends
		2.3	Construct graphs as required from data and draw with respect to scale and accepted method
		2.4	Interpret significant features of graphical representation
3	**Perform basic statistical calculations**	3.1	Calculate mean, median and mode from given data
		3.2	Calculate standard deviation
		3.3	Apply application of standard deviation and limits to process improvement techniques

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Features of graphical representations include one (1) or more of the following:	• limit lines • gradients (straight line graphs) • intercepts • maximum and minimum values
Graphs include one (1) or more of the following:	• histograms • control charts • straight line graphs • parabolic graphs
Process improvement techniques include the following:	• techniques in which error rates are mathematically calculated and recorded, including three sigma and six sigma **NOTE**: This unit gives the underpinning calculation skill for these techniques and does not cover the implementation or use of three or six sigma systems

Unit Mapping Information

Assessment Requirements for MEM12025 Use graphical techniques and perform simple statistical computations

Modification History

Release 1. Supersedes and is equivalent to MEM12025A Use graphical techniques and perform simple statistical computations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining and interpreting data presented in graphical form and analysing the emerging trends indicated by the data
- constructing graphs to scale for which the graph is intended and labelling the axis appropriately
- constructing graphs to suit the job requirements
- performing basic statistical calculations, including mean, median and mode and determining from that data the standard deviation
- undertaking numerical operations, geometry, calculations and formula for using graphical techniques and performing simple statistical computations
- applying standard deviation to process improvement techniques in which error rates are mathematically calculated and recorded
- checking performance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- characteristics of straight line, parabolic and hyperbolic curves
- procedures for determining the slope/rate of change of a curve
- trends indicated by changes in gradient of a graph
- procedures for drawing the line of best fit for the coordinates plotted
- standard form of equations relating to straight lines and parabolic curves
- gradient, intercepts, maximum and minimum values and limit lines for straight line and parabolic curves
- function of control charts
- meaning of the terms mean, median and mode

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- meaning of the term standard deviation
- significance of 1, 2 and 3 sigma limits.

Assessment Conditions

- Assessors must:
  - have vocational competency in using graphical techniques and performing simple statistical computations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12026 Perform advanced trade calculations in a manufacturing, engineering or related environment

Modification History

Release 1. New unit

Application

This unit of competency defines the skills and knowledge required to apply advanced mathematics to appropriate engineering post-trade situations within the individual's area of work.

It applies to the use of trigonometry, the sine and cosine rules, work-related formulae, geometric principles relevant to the workplace and the calculation of areas and volumes of common engineering shapes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Assessment Requirements for MEM12026 Perform advanced trade calculations in a manufacturing, engineering or related environment

Modification History

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- obtaining and interpreting data from specifications, drawings, job sheets or work instructions to establish required outcomes
- determining the appropriate calculation method to suit the application
- performing calculations using:
  - trigonometric ratios
  - Pythagoras Theorem
  - geometric formulae
- manipulation of formulae to change the subject
- checking answers using estimations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- formulae applicable to the determination of perimeter, area and volume of simple geometric shapes
- the reasons for ensuring calculations are carried out using the same units of measurement
- nomenclature used in trigonometry, Pythagoras' Theorem and geometry
- mathematical principles and order of operations
- techniques and procedures for rounding off figures when estimating approximate answers
- applications of geometric calculations in manufacturing and engineering situations.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing computations at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM13001 Perform emergency first aid

Modification History

Release 1. Supersedes and is equivalent to MEM13001B Perform emergency first aid

Application

This unit of competency defines the skills and knowledge required to apply the administration of basic emergency first aid treatment and the management of life threatening situations where an unconscious person requires expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR).

This unit does not meet all of the requirements expected of designated First Aid Officers.

The competencies required for situations involving isolation of persons from hazardous electrical situations is covered in unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.. and unit MEM18050 Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c..

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

- demonstrating correct procedures for expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR) on a mannequin
- simulating first aid treatment of the following:
  - cuts/abrasions and fractures
  - burns/scalds
  - concussion and shock
  - foreign bodies in eyes
  - poisoning
- recording details of first aid administered.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- applicable regulatory and legislative requirements
- instances where EAR and CPR should be performed
- procedures for preparing a person for the administration of EAR and CPR
- procedures for performing EAR and CPR on a child and an adult
- dangers and precautions to be taken when administering EAR and CPR
- emergency first aid procedures for injuries covered by the scope of this unit
- details to be recorded of first aid administered
- procedures and reasons for recording first aid administered
- relevant regulatory and legislative requirements with respect to emergency first aid
- impact of regulatory/legislative requirements on the individual and others.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing emergency first aid at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace condition. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13002 Undertake work health and safety activities in the workplace

Modification History

Release 1. Supersedes and is equivalent to MEM13002B Undertake occupational health and safety activities in the workplace

Application

This unit of competency defines the skills and knowledge required to apply principles of work health and safety (WHS) in the workplace and undertake a safety risk assessment for the employee's area of responsibility and applies to employees requiring additional WHS competencies beyond those inherent in their job.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **3**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Work health and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Use appropriate personal protective equipment (PPE) in accordance with SOPs
2	**Apply principles of WHS in a workplace**	2.1	Describe basic WHS principles of hazard identification, risk assessment and control
		2.2	Demonstrate understanding of WHS legislation as it is applied in the workplace
3	**Carry out safety audit**	3.1	Carry out regular safety audits in the area of responsibility in accordance with appropriate WHS standards
4	**Identify WHS improvements**	4.1	Raise WHS issues and suggestions for improvements to WHS representatives and committees, as appropriate
		4.2	Identify hazards and make recommendations for their control on the basis of safety audits or as required
		4.3	Make contributions to safety improvements using SOPs
		4.4	Identify WHS training needs
5	**Follow requirements of enterprise WHS program**	5.1	Ensure requirements of the WHS program are satisfied within the area of responsibility, including accident investigation and emergency procedures, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Risk assessment is a process that includes the following:	• analysing the risk to identify influencing factors and the range of potential consequences
	• assessing:
	  • the effectiveness of existing controls
	  • the likelihood of each consequence considering exposure and hazard level
	• and, combining these in some way to obtain a level of risk

Unit Mapping Information

Assessment Requirements for MEM13002 Undertake work health and safety activities in the workplace

Modification History

Release 1. Supersedes and is equivalent to MEM13002B Undertake occupational health and safety activities in the workplace

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- describing the risk assessment process
- reading and interpreting audit and safety-related documentation
- performing safety audits by following audit and work health and safety (WHS) procedures
- making recommendations for safety improvements and communicating effectively about WHS activities with workplace personnel
- identifying training needs and initiating WHS training
- meeting requirements of the WHS program and procedures in the individual’s area of responsibility
- entering information onto audit reports and other relevant documents.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of hazard identification, assessment and control as applied to the workplace
- procedures for hazard identification, assessment and control
- application of WHS legislation in the workplace
- procedures for conducting safety audits
- safety standards applicable to the individual's area of responsibility
- frequency at which safety audits should be conducted
- procedures for implementing WHS improvements
- means of rectifying given or identified hazards and reasons for selecting the chosen means of rectifying the hazard
- authority to whom recommended WHS improvements are to be reported
- procedures for making safety improvements
- requirement for WHS training in the individual's area of responsibility

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- objectives of WHS training and procedures for initiating WHS training
- accident investigation procedures
- emergency WHS procedures
- role of the individual in carrying out accident investigations and emergency procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking work health and safety activities in the workplace at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13003 Work safely with industrial chemicals and materials

Modification History

Release 1. Supersedes and is equivalent to MEM13003B Work safely with industrial chemicals and materials

Application

This unit of competency defines the skills and knowledge required to work safely with industrial chemicals and materials subject to codes and regulations that are stored and used in a workplace, for example, chemicals, solvents, dangerous materials, acids and noxious waste products in a manufacturing and/or engineering environment.

This unit describes the competencies which are beyond those safety requirements normally applied in the workplace as described in unit MEM13015 Work safely and effectively in manufacturing and engineering, or specifically described in individual units, such as welding.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Evidence of competency is to encompass the satisfactory application of current state/territory work health and safety (WHS) legislation, standards and codes of practice, and the hierarchy of hazard control measures.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
2	**Use personal protective equipment**	2.1	Select correct and appropriate personal protective equipment (PPE) and use correctly based on information in relevant safety data sheet (SDS)
3	**Adhere to emergency procedures**	3.1	Locate emergency equipment and use in accordance with workplace policies and SOPs
		3.2	Demonstrate responses to emergency procedures as detailed in approved safety procedures and instructions
4	**Observe safe working practices**	4.1	Identify hazardous areas and materials and understand and identify special handling procedures and obtain permits to work, if necessary
		4.2	Use all equipment and hazardous materials in accordance with relevant WHS legislation, manufacturers' instructions and SOPs
		4.3	Identify and understand all site-specific safety policies, safety signs, symbols and labels
		4.4	Interpret and apply SDS
		4.5	Use safe manual handling procedures, including equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.6 Ensure decanted chemicals and storage is to state/territory dangerous goods, WHS legislation and requirements
	4.7 Update chemical manifest following SOPs
	4.8 Perform housekeeping duties to maintain a safe working environment according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hierarchy of control measures include the following:	The application of the hierarchy of control follows the six-step preference of control measures to manage and control risk: **1**. elimination **2.** substitution **3.** isolation **4.** engineering control measures **5.** using safe work practices **6.** personal protective equipment (PPE)
PPE includes one (1) or more of the following:	• goggles/face shields • respirators • air supplied or self-contained helmets • safety boots • gloves and appropriate clothes/garments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Safe working practices include one (1) or more of the following:	• environment is inspected • hazards (and chemical reactive hazards) are assessed and controlled using hierarchy of hazard control • properly maintained PPE is available • emergency management plan is documented/understood • work to be undertaken in safe 'thermal' environments and all possible ignition sources are to be identified and controlled
Storage includes the following:	• only using containers, which includes minor quantities and those in consumer packages, that are suitable for chemical exposure • labelling and/or placarding containers • updating chemical manifests
State or territory legislative requirements include one (1) or more of the following:	• appropriate WHS • dangerous goods acts and regulations • Australian Standards • Australian Code for the Transport of Dangerous Goods by Road and Rail (ADGC) • Safe Work Australia codes of practice

Assessment Requirements for MEM13003 Work safely with industrial chemicals and materials

Modification History

Release 1. Supersedes and is equivalent to MEM13003B Work safely with industrial chemicals and materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate PPE based on data obtained in relevant safety data sheets (DS)
- observing safe working practices including undertaking a risk assessment
- following approved safety procedures and instructions in demonstrating responses to real or simulated emergencies
- performing proper manual handling techniques when shifting and moving industrial chemicals and materials
- ensuring all decanted chemicals are stored in storage containers that are suitable for chemical exposure and are properly labelled and/or placarded
- updating chemical manifests following SOPs
- complying with appropriate state or territory legislative requirements at all times.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- dangerous goods classification and labelling/placarding
- testing and maintenance of PPE
- inherent hazardous properties of the chemicals to be used
- interpretation of the relevant safety data sheets (SDS)
- basic fire-fighting procedures
- site-specific emergency plan procedures
- chemical spill confinement procedures
- dangerous occurrence (near miss) reporting procedures
- hierarchy of controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in working safely with industrial chemicals and materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM13004 Work safely with molten metals/glass

Modification History

Supersedes and is equivalent to MEM13004B Work safely with molten metals/glass

Application

This unit of competency defines the skills and knowledge required to work safely in a heavy engineering environment in which there are molten metals or glass, for example, in foundries, die casting operations, glass or molten glass operations and explosives manufacture.

Evidence of competency is to encompass the satisfactory application of any current state/territory work health and safety (WHS) legislation, standards and codes of practice, and the hierarchy of hazard control measures.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
2	**Use personal protective equipment (PPE)**	2.1	Select correct and appropriate PPE and use correctly based on WHS information relating to specific hazards
3	**Adhere to emergency procedures**	3.1	Locate emergency equipment and use in accordance with workplace policies and SOPs
		3.2	Demonstrate responses to emergency procedures as detailed in approved safety procedures and instructions
4	**Identify, assess and control hazardous conditions**	4.1	Identify and report hazards and undertake planning to maintain a healthy and safe work environment
		4.2	Follow workplace procedures and work instructions for controlling risks
5	**Observe safe working practices**	5.1	Identify hazardous areas and materials associated with molten metals or glass and identify potential risks
		5.2	Identify and understand safety signs and symbols
		5.3	Inspect PPE and maintain in good order and store for reuse
		5.4	Identify, remove, assess and control hazardous items associated with task from hot material area, if required
		5.5	Perform housekeeping duties to maintain a safe working environment according to SOPs

Assessment Requirements for MEM13004 Work safely with molten metals/glass

Modification History

Supersedes and is equivalent to MEM13004B Work safely with molten metals/glass

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- using appropriate personal protective equipment (PPE) as specified in work health and safety (WHS) requirements and SOPs
- responding to emergency procedures for incidents, including fires, accidents and spillage
- handling hazardous materials and equipment in accordance with procedures
- following workplace procedures to control risks that includes the likelihood and consequences of injury or damage and identifying and reporting hazardous conditions and taking actions to rectify hazards
- interpreting text and numerical (e.g. quantities, units of measurement) information on safety data sheets (SDS), safety signs, symbols and labels
- using appropriate manual handling techniques and equipment in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures relevant to raising WHS issues
- rights and responsibilities of workplace parties under WHS Acts, regulations and codes of practice
- designated personnel responsible for WHS
- emergency procedures, safety signs, symbols and labels
- procedures for correct inspection and service of equipment, including PPE
- routine maintenance procedures for equipment
- workplace procedures for working in hazardous areas
- consequences of not maintaining a clean and safe working environment
- specific hazards associated with the work environment/industry
- safe manual handling procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- location of emergency equipment, including first aid facilities
- hierarchy of controls.

Assessment Conditions

- Assessors must:
  - have vocational competency in working safely with molten metals/glass at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM13006 Collect and evaluate work health and safety data for an enterprise or section of an enterprise

Modification History

Release 1. Supersedes and is equivalent to MEM13006B Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise

Application

This unit of competency defines the skills and knowledge required to carry out standard work health and safety (WHS) measurements, collect and evaluate data, maintain records and report hazards. Data collected would typically relate to factors associated with temperature, noise (noise meter) and dust (Draeger tubes).

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Carry out standard WHS measurement and evaluate data**	2.1	Collect data using standard equipment in accordance with manufacturers' specifications
		2.2	Evaluate data from measurements taken to identify non-conformance with WHS standards
3	**Report outcomes of data evaluation**	3.1	Report results requiring remedial action to appropriate personnel using SOPs
		3.2	Prepare reports to detail data findings
		3.3	Report and record non-compliances and non-conformances
		3.4	Maintain records in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM13006 Collect and evaluate work health and safety data for an enterprise or section of an enterprise

Modification History

Release 1. Supersedes and is equivalent to MEM13006B Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts and other applicable reference documents to collect and evaluate work health and safety (WHS) data
- collecting and evaluating data from required measurements in accordance with manufacturers' specifications and procedures
- using numerical operations and calculations associated with collecting and evaluating WHS data
- detecting and reporting hazards and preparing reports requiring remedial action in accordance with procedures
- maintaining records of the WHS factors monitored in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- measurements to be taken and recorded and procedures for taking each type of measurement
- tools, techniques and equipment required to carry out the measurements
- WHS standards for each factor being measured
- variations between the data collected and the appropriate WHS standard
- probable causes of the variation of the data collected from the WHS standard
- procedures for maintaining records of WHS factors measured
- procedures for reporting hazards and the authority to whom hazards are to be reported.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in collecting and evaluating work health and safety data for an enterprise or section of an enterprise at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13007 Maintain water treatment systems for cooling towers

Modification History

Release 1. Supersedes and is equivalent to MEM13007B Maintain water treatment systems for cooling towers

Application

This unit of competency defines the skills and knowledge required to test water treatment as specified by AS/NZS 3666:2011 Air-handling and water systems of buildings, or equivalent, measure water properties, and maintains reticulation/treatment systems.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Apply principles of AS/NZS 3666:2011 Air-handling and water systems of buildings, or equivalent**	2.1	Explain causes of corrosion, scale, algae and treatment/prevention
		2.2	Explain air distribution of cooling towers
3	**Assess reticulation system**	3.1	Assess relevant water conditions against specifications using test equipment according to SOPs
		3.2	Assess condition of water circulation system and determine appropriate action
		3.3	Assess performance of regulating, filtering, conditioning/dosing and pumping systems against specification
4	**Measure relevant water properties**	4.1	Use and apply test equipment according to SOPs
		4.2	Determine/record water properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
5	**Maintain reticulation/ treatment systems**	5.1	Record water temperature control system and report non-compliances
		5.2	Adjust dosing to specification
		5.3	Report faults to appropriate personnel according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Relevant water conditions include one (1) or more of the following:	• acidity • alkalinity • microbial • corrosion

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM13007B Maintain water treatment systems for cooling towers

Assessment Requirements for MEM13007 Maintain water treatment systems for cooling towers

Modification History

Release 1. Supersedes and is equivalent to MEM13007B Maintain water treatment systems for cooling towers

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts and other applicable reference documents in maintaining water treatment systems for cooling towers
- assessing relevant water conditions against specifications
- testing the condition of the water in the cooling tower/treatment system and determining appropriate action
- testing dosing components for correct operation/performance
- testing water properties using appropriate techniques and equipment and checking for compliance to specifications
- determining and recording test results and adjusting dosing flow in the system to specification
- reporting system faults to appropriate personnel.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- causes of corrosion, scale and algae
- methods of treating/preventing occurrence of corrosion, scale and/or algae in water cooling towers and treatment systems
- air flow patterns of cooling towers
- testing requirements of AS/NZS 3666:2011 Air-handling and water systems of buildings, and/or other relevant regulations relating to water cooling towers
- precautions for preventing contamination of systems by Legionella bacteria
- procedures for testing the condition of the water in the cooling tower
- specifications of the water condition
- variations of the test results from specification and procedures to be followed when water condition varies from specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- correct operation/performance of the following system components: regulators, filters, conditioners and pumps related to treatment systems
- performance tests for treatment system components
- water properties to be tested and procedures for testing water properties
- test equipment and techniques
- water temperature specifications
- procedures for reporting system faults
- codes and regulations relevant to maintaining water treatment systems.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining water treatment systems for cooling towers at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13010 Supervise work health and safety in an industrial work environment

Modification History

Release 1. Supersedes and is equivalent to MEM13010A Supervise occupational health and safety in an industrial environment

Application

This unit of competency defines the skills and knowledge required to supervise implementation of work health and safety (WHS) practices and procedures in a section of a workplace in manufacturing, production, engineering and related industry environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13002	Undertake work health and safety activities in the workplace
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
2	**Implement WHS procedures for work site or section**	2.1	Identify legislative requirements for the work section and work supervisor
		2.2	Establish consultation mechanisms for the work section
		2.3	Allocate personal protective equipment (PPE) to all staff, as required
		2.4	Establish safety and housekeeping practices and procedures for the worksite or section
		2.5	Check tools and equipment for suitability and serviceability
		2.6	Establish safety monitoring procedures
		2.7	Rectify non-conformances with WHS legislative requirements
3	**Assess risks and apply risk management strategies for work site or section**	3.1	Identify hazards and assess risks in the work site or section
		3.2	Implement appropriate risk control measures
		3.3	Assess control measures for effectiveness in controlling the risk
		3.4	Monitor hazards
		3.5	Determine the need for expert advice to manage risks
		3.6	Conduct accident investigations to determine cause, as required
4	**Supervise others**	4.1	Supervise communication on WHS matters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	in the implementation of WHS procedures in the worksite or section	4.2	Identify WHS training needs for the work section
		4.3	Coordinate, evaluate and document WHS training and communication activity according to legislative requirements and organisational procedure
		4.4	Coordinate statutory WHS training requirements and document according to legislative requirements and organisational procedure
5	**Maintain records and statistics**	5.1	Maintain accident/incident records
		5.2	Analyse records for trends, and identify particular problem areas

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Consultation mechanisms include one (1) or more of the following:	• WHS committees • WHS representation • toolbox meetings • safety meetings • record keeping systems
PPE includes one (1) or more of the following:	• safety boots • gloves • goggles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- glasses
- ear muffs
- hard hats
- clothing
- respirators or masks
- reflective vests

Safety and housekeeping practices and procedures include one (1) or more of the following:

- emergency/evacuation procedures
- tool and equipment cleaning
- maintenance and storage procedures
- safety reporting and documentation procedures
- barricades and signage
- procedures for managing hazardous chemicals and materials

Hazards include one (1) or more of the following:

- tools and equipment
- lighting
- gases
- electricity and water
- toxic and hazardous substances
- flammable materials and fire hazards
- lifting practices
- working in confined spaces
- working at height
- spillage
- waste and debris
- noise
- mobile plants including forklifts and front end loaders
- moving parts of machinery
- gravity (falls from heights)
- dusts

Risks include the following:

- the chance of something happening that will result in injury or damage. It is measured in terms of consequences and likelihood

Risk control measures

The application of the hierarchy of control follows the six-step

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include the following: preference of control measures to manage and control risk:

1. elimination
2. substitution
3. isolation
4. engineering control measures
5. using safe work practices
6. personal protective equipment (PPE)

Communication includes one (1) or more of the following:

- signage and labelling
- hazard identification notices
- access to policies
- procedures
- SOPs
- meeting notices
- documentation procedures
- reporting procedures
- meetings

Supervised includes one (1) or more of the following:

- coordinated
- implemented
- referred
- delegated
- facilitated
- monitored
- documented

Training needs include one (1) or more of the following:

- induction programs
- technical training
- coaching and mentoring
- supervision
- specialist training
- on site/off site
- involvement of training specialists
- organisational training requirements
- referral to training personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Mapping Information

Assessment Requirements for MEM13010 Supervise work health and safety in an industrial work environment

Modification History

Release 1. Supersedes and is equivalent to MEM13010A Supervise occupational health and safety in an industrial environment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting information on work health and safety (WHS) legislation, workplace practices and procedures, specifications, charts, lists and other applicable reference documents
- establishing consultation mechanisms in sections of the work site
- scheduling meetings and keeping records/minutes of discussions with consultative forums on WHS matters
- supervising the allocation of personal protective equipment (PPE) to all staff
- establishing safety and housekeeping practices and procedures
- rectifying WHS legislative requirement non-conformances
- keeping records for monitoring the effectiveness of work practices and procedures with respect to the safety of the working environment
- identifying hazards and assessing risks and implementing risk control measures
- assessing control measures for effectiveness in controlling the risk
- monitoring hazards
- determining the need for expert advice in the identification and control of workplace hazards
- investigating accidents in accordance with procedures to determine the cause, as required
- supervising communication of WHS matters
- identifying training needs for a particular work section
- maintaining accident and incident records in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- legislative requirements for the workplace and supervisory responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for initiating discussions with the relevant consultative forums
- relevant consultative forums
- frequency of discussions to be held with the relevant consultative forums
- organisational WHS communication requirements
- WHS training practices, procedures and options available
- work practices and procedures developed in conjunction with the relevant consultative forums
- effect of work practices and procedures on the safety of the working environment
- procedures for monitoring the success of the work practices and procedures developed
- procedure for rectifying WHS legislative requirement non-compliances
- variables to be recorded during the monitoring process
- sources of information and expertise on WHS issues
- procedures for conducting accident investigations
- principles and hierarchy of hazard control measures and reasons for progressively implementing the hierarchy of control of hazards and the mechanisms for controlling hazards
- likely causes of accidents investigated
- procedures for accessing expertise external to the workplace
- procedures for recording accidents and incidents
- probable causes of trends or problem areas.

Assessment Conditions

- Assessors must:
  - have vocational competency in supervising work health and safety in an industrial work environment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13013 Work safely with ionizing radiation

Modification History

Release 1. Supersedes and is equivalent to MEM13013B Work safely with ionizing radiation

Application

This unit of competency defines the skills and knowledge required to work safely with ionizing radiation when performing radiographic testing in a range of open or closed industrial applications on fabrications, structures and components across a wide range of industries.

The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operator instructions.

All testing must be completed with particular attention to personal and work health and safety (WHS) regulations. Certification against Australian Standards can be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712 Non-destructive testing – Qualification and certification of non-destructive testing (NDT) personnel.

Materials and chemicals which are subject to codes and regulations – for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products – must be subject to safe work habits and must be stored and used in accordance with safe work practices.

This unit is a prerequisite to undertaking any other radiographic units of competency.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify the hazards and effects of ionizing radiation in the workplace**	2.1	Identify the source of ionizing radiation in accordance with relevant organisational policy and procedures
		2.2	Outline attenuation factors of ionizing radiation and the biological effects on living tissue
		2.3	Identify the biological effects of radiation
3	**Apply radiation safety procedures/plans**	3.1	Employ appropriate ionizing radiation protective measures in accordance with relevant organisational policy and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.2	State and adhere to exposure limits for personnel as laid down by the radiation authorities in Australia
		3.3	Determine minimum exposure rates/distances from calculations and charts
		3.4	Operate ionizing radiation sources in accordance with legislation, standards and/or organisational policy, procedures or guidelines
4	**Select and use radiation monitoring equipment**	4.1	Select the tools and equipment necessary to monitor radiation and use, as required
		4.2	Select and apply techniques and system verification checks necessary to monitor radiation
		4.3	Document safety breaches and/or report in accordance with organisational policy and procedures
5	**Respond to emergency situations**	5.1	Demonstrate procedures for dealing with both X-ray and gamma ray emergency situations

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Radiation safe work	• ensuring security of radiation sources during storage, transport

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

practices and controls include the following:

and use

- using signs, barriers, shielding to minimise radiation exposure of public
- reducing personal exposure time
- maintaining greatest feasible distance between radiation source and equipment operator
- using maximum feasible shielding between radiation source and equipment operator
- using a dosimeter to monitor personal radiation exposure
- maintaining statutory records of the use of radiation sources and/or instruments that emit ionising radiation

Standards and codes include the following:

- the latest version of all relevant Australian and international standards and codes applicable to radiographic testing
  - AS 2177 Non-destructive testing—Radiography of welded butt joints in metal
  - AS 3507.1 Non-destructive testing - Guide to radiography for ferrous castings
  - ISO 9712 Non-destructive testing -- Qualification and certification of NDT personnel
- codes of practice from Australian and overseas engineering and technical associations and societies

WHS, regulatory requirements and workplace procedures include:

- WHS Acts and regulations
- industry codes of practice
- risk assessments
- safe work practices
- workplace documents, such as:
  - SOPs
  - quality procedures
  - equipment manuals
  - calibration and maintenance schedules
  - safety data sheets (SDS)
  - safety procedures
  - work schedules
  - workplace recording and reporting procedures
  - waste minimisation
  - containment, processing and safe disposal procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- codes, regulations and safe work practices covering the use, handling, storage and transport of:
  - radiation sources
  - instruments that emit ionising radiation
  - dangerous materials such as chemicals, solvents, acids, or noxious waste products

Assessment Requirements for MEM13013 Work safely with ionizing radiation

Modification History

Release 1. Supersedes and is equivalent to MEM13013B Work safely with ionizing radiation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, specifications, relevant organisational policy and procedures and other applicable reference documents in working safely with ionizing radiation
- employing appropriate ionizing radiation protective measures and personal protective equipment (PPE) relevant to the industrial application
- determining minimum exposure rates/distances from calculations and charts
- undertaking numerical operations and calculations associated with determining minimum exposure rates/distances
- selecting and using appropriate tools and equipment necessary to monitor radiation
- documenting all safety breaches and recording/reporting in accordance with SOPs
- demonstrating the ability to assess risks and handle emergencies.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- International System of Units (SI) of radiation in accordance with the National Health and Medical Research Council (NHMRC)/statutory requirements
- production of X-rays and gamma rays in relation to radiographic testing activities
- principal radioactive sources used in industrial radiography
- attenuation factors
- known biological effects of radiation
- general principles of gas ionisation, photographic effect and luminescence
- use of film, film badges, ionisation chamber devices, quartz fibre, fluorescent, and electronic devices accuracy limits (energy/range)
- different SI units of radiation, including Becquerel, Sievert and Gray
- exposure limits for personnel as laid down by the radiation authorities in Australia

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- exposure reduction factors, including:
  - time
  - distance
  - shielding
- procedures for establishing safe working barriers
- relevant techniques and checks
- emergency procedures
- safety procedures for:
  - types of X-ray equipment
  - types of isotope cameras
  - shielding materials
  - design and requirements for exposure areas
  - requirements for storage of radioisotopes
- emergency situations, causes and appropriate responses
- storage requirements of equipment and materials
- legal requirements including:
  - Australian, state/territory regulations, code of practice (detail)
  - International Commission on Radiological Protection (ICRP) recommended limits for various persons and various parts of the body for short-term, long-term and accumulated exposure
  - background radiation
  - duties of Radiation Safety Officer (RSO)
  - requirements for transport
  - International Air Transport Association (IATA) regulations
  - obligations of the licensee.

Assessment Conditions

- Assessors must:
  - have vocational competency in working safely with ionizing radiation at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release 1. New unit. Supersedes and not equivelant to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Application

This unit of competency defines the skills and knowledge required to work effectively in manufacturing and engineering work situations, including planning routine work and participating in and following work health and safety (WHS) procedures. The unit applies to working either individually or in a team situation and includes contributing to work-related group activities in a manufacturing or engineering workplace.

This unit covers WHS skills associated with carrying out routine operational activities safely and in compliance with legislative and regulatory requirements.

The unit covers the skills associated with participation in quality systems, communication and cooperation with others. The unit applies to workplaces with informal or formal quality management and improvement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Identify goals, objectives and task requirements and clarify with appropriate persons, where required
		1.2	Prioritise task requirements
2	**Review and modify plan**	2.1	Adjust timelines, priorities and other planning components to respond to contingencies, as necessary
		2.2	Re-examine results of work activity against the plan and identify possible improvements to future performance of work tasks
3	**Work effectively with others in the workplace**	3.1	Identify own role and responsibilities and relationship to other employees, including employees performing related/interdependent activities
		3.2	Identify supervisors and other sources of advice and assistance for own work
		3.3	Apply effective interpersonal skills to interact with others and contribute to activities and objectives
		3.4	Review and modify own work progress to complement the work of others
		3.5	Report own work progress to supervisors and where required to fellow employees using standard operating procedures (SOPs)
4	**Follow safe work practices**	4.1	Check for and identify hazards in the work area before and during work
		4.2	Follow procedures for avoiding or controlling hazards already identified in instructions, signage or other workplace communication
		4.3	Identify and report risks and hazards not covered by procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		4.4 Select, use and maintain relevant personal protective equipment (PPE) by procedures, as required
		4.5 Recognise emergency situations and take appropriate initial emergency action
		4.6 Follow procedures for responding to emergencies
		4.7 Report incidents, injuries and other WHS non-conformances according to procedures
5	**Work within a quality system**	5.1 Follow instructions and procedures and perform duties in accordance with standard operating procedures or quality system requirements
		5.2 Ensure conformance of product and process to specifications
		5.3 Report defects and non-conformance to specifications according to procedures
		5.4 Participate in process improvement procedures, where required
6	**Participate in workplace health and safety procedures**	6.1 Identify workplace health and safety policies and procedures relevant to own work and work area
		6.2 Identify relevant WHS managers and representatives for own work area
		6.3 Provide input to minimise hazards in work area in line with organisation WHS procedures and participative arrangements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Quality systems include one (1) or more of the following	• quality planning • quality assurance • quality control • quality improvement procedures and processes
Task requirements include one (1) or more of the following:	• timeframe • quality requirements • outcome and performance requirements • job history • checks • reporting requirements • tools and equipment • materials and parts • supporting documents
Specifications include one (1) or more of the following:	• task lists • instructions • manufacturer manuals • diagrams and schematics • sketches • parts lists • SOPs
Planning includes one (1) or more of the following:	• preparing a plan to complete the task • organising task into manageable steps including appropriate order and timing • monitoring the progress of processes related to own responsibilities • applying relevant WHS instructions • collecting, sorting, recording results of work • seeking advice and guidance on setting priorities and timeframes

Assessment Requirements for MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release 1. New unit. Supersedes and not equivelant to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and avoiding or controlling hazards
- reporting hazards, incidents, injuries and other work health and safety (WHS) non-conformances following SOPs
- recognising and responding to emergencies following SOPs
- identifying and obtaining, instructions and information on job requirements, including one or more of the following:
  - verbal or written job instructions
  - specifications
  - SOPs
  - charts
  - lists
- identifying and responding to contingencies, including:
  - equipment breakdowns
  - non-conforming components
  - safety hazards
- recording information into proforma workplace documents, including:
  - production tally forms
  - quality control forms
  - safety incident forms
- performing assigned tasks and checking outcome of own work for conformance to specifications
- identifying own responsibilities within the workplace quality system
- giving and receiving feedback on own and group work
- seeking assistance from supervisors and mentors.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use and application of personal protective equipment
- basic quality system terminology and concept, including:
  - quality assurance
  - quality control
  - quality improvement
- procedures to be followed in performing own work
- objectives, requirements and specifications to which the individual's work is to comply
- costs and consequences of poor quality
- effective interpersonal skills:
  - effective listening
  - basic speaking skills
  - use of workplace terminology and jargon
  - giving and receiving feedback
  - checking and clarifying task-related information
  - verbal, visual and written instructions
  - appropriate modes and methods of communication
- barriers to effective communication
- sources of technical expertise/assistance
- hazards and control measures associated with workplace activities.

Assessment Conditions

- Assessors must:
  - have vocational competency in working safely and effectively in manufacturing and engineering at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13016 Work in hazardous areas

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Application

This unit has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in working in hazardous areas.

It covers the basic requirements for performing installation and maintenance work on electrical equipment in hazardous areas. It provides a fundamental understanding of hazardous areas with regard to Electrical Equipment for Hazardous Areas (EEHA) principles, hazardous area classification definitions and factors affecting this aspect, protection techniques, ex-certification, competency requirements for personnel affecting hazardous areas, relevant standards and restrictions to repair work.

If more extensive skills are required for hazardous areas then the appropriate national accredited unit/s should be selected.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering

Competency Field

Work health and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Prepare to work in hazardous areas	2.1	Ascertain and interpret the area classification regarding zoning, gas group and temperature class from hazardous area layout drawings
		2.2	Identify factors that may affect the classification of an area
		2.3	Identify relevant hazards specific to hazardous areas and implement appropriate risk control measures
		2.4	Obtain specialist tools, equipment and testing devices needed to carry out maintenance work
3.	Work in hazardous areas	3.1	Carry out maintenance work in accordance with specifications and procedures
		3.2	Check and test equipment to ensure functionality and complies with appropriate documentation
		3.3	Identify hazardous area defective and unsuitable equipment and components for the application and source replacement items with the appropriate equipment certification
		3.4	Carry out adjustment and/or permitted repairs to equipment using appropriate tools, equipment and techniques to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4. Complete work in hazardous areas	4.1 Ensure all completed work and testing complies with the relevant EEHA Standards
	4.2 Record all inspection and maintenance activities according to established procedures and regulatory requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Compliance with relevant EEHA Standards includes:

- hazardous area classification of the area regarding zone, gas group and temperature class
- factors affecting the zoning of an area
- protection technique of the equipment
- ex-certification
- competency requirements for personnel working on the equipment and the required supervision
- which repairs to the equipment may be restricted
- unauthorised modifications
- manufacturer specifications

Assessment Requirements for MEM13016 Work in hazardous areas

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, SOPs and safe work practices
- obtaining the relevant work permits and informing appropriate personnel prior to commencing work
- identifying and interpreting hazardous layout drawings and interpreting markings of hazardous areas classifications relevant to the work to be undertaken
- identifying hazards specific to hazardous areas and implementing appropriate risk control measures
- checking and testing equipment to ensure functionality of equipment
- identifying defective or unsuitable equipment and sourcing replacement items with the correct equipment certification
- carrying out adjustments or permitted repairs using appropriate tools, equipment and techniques in accordance with procedures and specifications
- ensuring all completed work and testing complies with the relevant EEHA standard along with equipment conformity certificate requirements and special conditions
- documenting all inspection and maintenance work in accordance regulatory requirements and SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- history and reasoning behind the EEHA Standards and accreditation creation
- aspects of hazardous area classification regarding zoning, gas group and temperature class
- markings of classifications on technical drawings
- situations which may alter the source of release conditions, thereby affecting the classification of an area
- hazards specific to hazardous areas
- different methods of protection, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - Ex-d
  - Ex-e
  - Ex-n
  - Ex-l
  - Ex-p
  - Ex-m
- relationship between the classification ratings of the equipment to the classification ratings of the area
- importance of earthing
- testing and certifying bodies, including International Electrotechnical Commission (IEC), Ex, ATEX, AUSEx, CSA and Fm
- documentation required for inspections.

Assessment Conditions

Assessors must:

- have vocational competency in working in hazardous areas at least to the level being assessed with relevant industry knowledge and experience.
- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturer specifications.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13017 Apply safety practices, procedures and compliance standards associated with licensed electrical work

Modification History

Release 3. Prerequisite units update

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in working safely with electrical installations and equipment; following work health and safety (WHS) systems and procedures; and the scope, application and fundamental principles of AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules).

It covers knowledge of the application of WHS regulations; procedures for identifying and mitigating electrical hazards; supervision requirements applying to apprentices and trainees; following documented safe work methods, including safe isolation procedures: and application of compliance standards to ensure electrical installations and equipment are safe to use.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 45 – Demonstrate the knowledge and practices that are essential for working safely with electrical equipment and tools, for safe manual handling, working safely at heights and in confined spaces. Knowledge of testing and tagging procedures to AS 3760.
- EPC 55 – Demonstrate knowledge and application of electricity generation systems and electricity converters and the requirements of AS/NZS 3000 Wiring Rules for stand-alone and grid connected systems. Basic knowledge of battery storage systems and uninterruptible power supplies.

And

Essential Performance Capability (EPC) classified as ’critical’:

- EPC 10 – Demonstrate an understanding of the fundamental safety principles of AS/NZS 3000 Part 1. Knowledge of hierarchy of standards. Nomative/informative text.
- EPC 31 – Demonstrate the knowledge and skill to perform effective isolation of any equipment, including switch and lock off, circuit isolation, equipment testing and tag out procedures, including capacitor banks.
- EPC 43 – Demonstrate understanding of the requirements for personal safety in the workplace and application of safety practices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering

Competency Field

Work health and safety

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Follow WHS systems and procedures	1.1 Follow standard operating procedures (SOPs)
	1.2 Comply with WHS requirements at all times, including appropriate risk control measures
	1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
	1.5 Isolate and tag circuits and equipment in accordance with procedures, where required
	1.6 Ensure all tools and equipment are checked for safety in accordance with procedures and regulatory requirements
	1.7 Follow established safety rules before beginning work on electrical wiring and equipment
	1.8 Determine and implement the level of supervision required appropriate to the type of electrical work and the level of the apprentice's and/or trainee's training
	1.9 Follow safe work procedures when working at heights

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			and in confined spaces
2.	Perform emergency first aid	2.1	Assess situation to identify points of danger to the injured person and potential rescuer
		2.2	Rescue/recover injured person or provide assistance to injured person in accordance with recognised standards/procedures
		2.3	Make contact with the appropriate medical and rescue authorities
		2.4	Record details of first aid given
3.	Identify codes of practice, standards and organisations that have an impact on the work of licensed electricians	3.1	Identify the codes of practice that apply to work carried out by licensed electricians
		3.2	Apply the fundamental safety procedures as outlined in AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules) Part 1
		3.3	Identify the other relevant standards that apply to work carried out by licensed electricians
		3.4	Identify other regulatory requirements that apply to work carried by licensed electricians
		3.5	Identify reference compliance standards for electricity generation systems and electricity converters
		3.6	Identify organisations that have an impact on the roles and responsibilities of licensed electricians

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory requirements include:

- AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules)
- AS/NZS 3008.1.1:2009 Electrical Installations – Selection of cables – Cables for alternating voltages up to and including 0.6/1 kV – typical Australian installation conditions
- AS/NZS 3017:2007 Electrical installations – Verification guidelines
- AS/NZS 3760:2010 In-service safety inspection and testing of electrical equipment
- Electrical Safety Act (various states/territories)
- electrical regulations (various states/territories)
- local service rules
- the Building Code of Australia

Compliance standards include:

- AS/NZS 4777:2005 (series), Grid connected inverter systems
- AS/NZS 5033:2014 Installation and safety requirements for photovoltaic (PV) arrays
- AS/NZS 3010:2005 Electrical installations – Generating sets
- AS/NZS 4509 (series), Stand-alone power systems
- AS 3011.1:1992 Electrical installations – Secondary batteries installed in buildings

Organisations include:

- Electrical Regulatory Authorities Council (ERAC)
- Electrical Safety Office or equivalent (various states/territories)
- Electrical Contractor Association or equivalent (various states/territories)
- energy supply authorities
- local TAFE

Safe working practices include:

- demonstration of safe working practices and installation in accordance with industry established safe and sound practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining the electrical and non-electrical isolation requirements to prevent the creation of hazards linked from the loss of machine/system/process control according to established procedures
- using lock out tag procedures with appropriate tags/signs
- preparing a safe work method statement (SWMS) or job safety analysis (JSA) in the absence of established procedures for effective isolation
- proving electrical isolation and following established safety rules prior to working on electrical equipment or wiring, including capacitor banks
- ensuring all electrical equipment and tools are tested and tagged and up to date
- supervising all electrical apprentices and trainees to the level determined by their training and competence
- working safely at heights and in confined spaces
- applying procedures for movement/treatment of injured, including:
  - safe rescue of victim from a live situation
  - clearing of airways
  - cardio-pulmonary resuscitation (CPR)
  - care of spinal injuries
  - treatment of cuts/lesions
  - treatment of burns/scalds
  - treatment of shock
- accessing and using other relevant standards associated with electrical installation work
- accessing and abiding by codes of practice and other regulatory requirements
- contacting (when appropriate) organisations for guidance and assistance.

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- typical hazards and risks in an electrical installation, including:
  - effects on the human body of various levels of alternating current (AC) and direct current (DC) and duration of current flow for various current paths
  - risk of ignition of flammable materials due to the thermal effects of current or electric arcs in normal service of an electrical installation
  - risk of injury from mechanical movement of electrical actuated equipment
  - protection from direct contact (basic protection)
  - acceptable methods
  - use of extra-low voltage (ELV)
- procedures and principles used to control risks associated with these hazards, including:
  - the development of a work health and safety (WHS) policy
  - consultation with everyone involved in the workplace
  - providing information training
  - identifying and assessing hazards
  - implementing and following risk control measures
  - maintaining and improving the WHS program
- approved lock out and tag procedures, including:
  - purpose and use of SWMS or JSA
  - reasons for isolation
  - lock-off equipment and signage
  - tools and equipment to prove electrical isolation of circuit/installation/system including capacitor banks is dead
- testing and tagging guidelines for electrical equipment and tools in accordance with AS/NZS 3760:2010 In-service safety inspection and testing of electrical equipment
- level of supervision required by electrical apprentices and trainees
- safe use of ladders and elevated work platforms, and working at heights
- working in confined spaces, including the following:
  - identification of the hazards
  - assessing the risks
  - controlling the risks
  - emergency procedures
- workplace emergency procedures, including appropriate methods of rescue:
  - removal of the victim of electric shock, including live switchboard rescue from live low voltage conductors
  - release from contact with live high voltage conductors (no attempt should be made until circuit has been switched off)
  - risks associated with fallen distribution lines and the associated voltage gradients

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

- other points of danger, including:
  - fire
  - traffic
  - risks including chemicals
  - possibility of falls
- life support – CPR procedures, including duty of care
- appropriate use of fire extinguishers for given types of fires
- using carbon dioxide or dry chemical powder to fight electrical fires
- appropriate local medical and rescue services
- recording of first aid delivered

- codes of practice and regulatory requirements, including:
  - Electrical Safety Act or equivalent
  - Electrical Regulations or equivalent
  - Service Rules provided by local electricity distributors
  - Building Code of Australia
- AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules) Part 1 – Scope, application and fundamental principles in regards to the following:
  - scope and application
  - referenced documents
  - definitions
  - alterations, additions and repairs
  - alternative arrangements
  - protection for safety, including:
    - against both direct and indirect contact by use of ELV
    - against direct and indirect contact
    - use of residual current devices (RCDs)
    - thermal effects in normal service
    - unwanted voltages
    - over-current and fault currents
    - over-voltage
    - injury from mechanical movement
    - devices for isolation
    - fire integrity
  - design of an electrical installation, including:
    - protection, functioning and compatibility
    - supply characteristics
    - maximum demand
    - voltage drop
    - electrical installation circuit arrangements
    - external influences

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

- selection of electrical equipment, including:
  - safety requirements
  - external influences
  - adverse effects and interference
  - evidence of compliance
- installation of electrical equipment, including:
  - safe and sound practice
  - accessibility
  - information and identification
  - segregation
- inspection and testing, including:
  - visual inspection
  - continuity of earthing system
  - insulation resistance
  - polarity
  - correct circuit connections
- knowledge of hierarchy of standards
- normative/informative text
- other relevant standards associated with electrical installation work and testing and tagging of electrical equipment and tools
- Australian/New Zealand Wiring Rules requirements for electricity generation systems installation and electricity converters
- reference compliance standards, including:
  - AS/NZS 4777 (series), Grid connected inverter systems
  - AS/NZS 5033:2014 Installation and safety requirements for photovoltaic (PV) arrays
  - AS/NZS 3010:2005 Electrical installations – Generating sets
  - AS/NZS 4509 (series), Stand-alone power systems
  - AS 3011.1:1992 Electrical installations – Secondary batteries installed in buildings
- fundamental requirements of electricity generating systems, including:
  - DC polarity, including switching and protection devices
  - inverter principles
  - safe isolation and testing of systems
  - arrangement for connecting an alternative supply to an installation
  - earthing arrangements
- battery storage systems and requirements
- uninterruptible power supplies
- organisations that can have an impact of the role of the licensed electrician.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

  - have vocational competency in applying safety practices, procedures and compliance standards associated with licensed electrical work at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM14001 Schedule material deliveries

Modification History

Release 1. Supersedes and is equivalent to MEM14001B Schedule material deliveries

Application

This unit of competency defines the skills and knowledge required to identify material requirements and schedule material delivery and applies to the estimating, planning and scheduling of material deliveries so that materials are available to the specifications and quantities required.

This unit is not intended to be used by personnel carrying out maintenance and installation.

Where scheduling is based on engineering drawings and supporting engineering data, appropriate units of competence should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Planning

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine material requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify materials required from appropriate documentation, including type and quality
		1.4	Estimate quantities required in accordance with requirements
2	**Schedule material delivery**	2.1	Determine delivery requirements and dates from production plans or job sequencing requirements
		2.2	Follow up material supply and report problems
		2.3	Process material orders in accordance with established organisational practice and SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate documentation includes one (1) or more of the following:	• bills of materials • parts lists • catalogues • service manuals • engineering drawings

Assessment Requirements for MEM14001 Schedule material deliveries

Modification History

Release 1. Supersedes and is equivalent to MEM14001B Schedule material deliveries

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying type and quantity of materials required from appropriate documentation
- scheduling material delivery in accordance with established organisational practices and procedures and following up any material or supply problems
- processing orders onto proformas and standard workplace forms in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- identification of material specifications from appropriate documentation
- established organisational practice and procedures relating to estimating, ordering and follow up of materials
- interpretation of production plans, or job sequencing requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in scheduling material deliveries at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM14002 Undertake basic process planning

Modification History

Release 1. Supersedes and is equivalent to MEM14002B Undertake basic process planning

Application

This unit of competency defines the skills and knowledge required to review process specifications and determine the production sequence and applies to one of a range of processes in manufacturing: machining, pressing, assembly and to a stage of the overall production process.

It does not apply to interfacing between processes.

Where planning is based on engineering drawings and supporting engineering data, appropriate units of competence should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM14002 Undertake basic process planning

Modification History

Release 1. Supersedes and is equivalent to MEM14002B Undertake basic process planning

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting engineering and production data and determining production processes, including work planned over a specified timeframe, taking into account required and available resources
- identifying steps and milestones against which progress can be checked and preparing flow charts in accordance with procedures
- preparing material and parts lists and documenting tooling and/or equipment requirements in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- production processes found within the organisation
- tooling and/or equipment requirements for workplace processes
- quality assurance requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking basic process planning at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM14003 Undertake production scheduling

Modification History

Release 1. Supersedes and is equivalent to MEM14003B Undertake basic production scheduling

Application

This unit of competency defines the skills and knowledge required to identify production requirements and capacities and prepare schedules for production of a component/part.

It applies to the scheduling of the manufacture of a single component, a single assembly function, a single small production work unit or production cell, or a single production process, where there are only a small number of constraints or variables.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Planning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	production requirements and capabilities	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify and obtain engineering production data in accordance with workplace procedures
		1.4	Identify and obtain inventory capacities and requirements in accordance with SOPs
		1.5	Identify and obtain procurement and supply requirements and constraints in accordance with SOPs
		1.6	Identify and obtain production capacity and constraints in accordance with SOPs
		1.7	Identify and obtain standard times in accordance with SOPs
2	**Prepare schedule for production of a component/part**	2.1	Use a project management tool to prepare a production schedule for components/parts
		2.2	Document schedule in accordance with accepted SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Production schedules are prepared in accordance with one (1) or more of	• production • inventory • procurements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

the following:

- time constraints
- supply capacities
- requirements

Assessment Requirements for MEM14003 Undertake production scheduling

Modification History

Release 1. Supersedes and is equivalent to MEM14003B Undertake basic production scheduling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting production process data and procedures to identify production requirements and capacities
- using a project management tool to develop a Gantt chart, or similar graphical display to depict the production schedule, to schedule production of components/parts
- undertaking numerical and mathematical calculations, as required
- documenting schedule in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- scheduling techniques
- production methods
- quality assurance requirements
- inventory policies
- procurement, supply requirements and constraints
- general staffing levels, capabilities and application of standard times
- machine set-up, capability and application of standard times
- enterprise safety requirements and directives.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking production scheduling at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM14006 Plan work activities

Modification History

Release 1. Supersedes and is equivalent to MEM14005A Plan a complete activity

Application

This unit of competency covers the skills and knowledge required to plan familiar work activities, whilst following established procedures and work health and safety (WHS) policies and procedures of the organisation.

Planning is undertaken by the individual performing the work. Individual plan components may require modification and prioritising to meet job requirements or to respond to unforeseen circumstances.

Where computations are required to be performed unit MEM12024 Perform computations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Identify outcomes and objectives and clarify with appropriate persons
		1.3	Obtain and clarify relevant specifications and procedures
		1.4	Identify and prioritise individual components of the plan
		1.5	Select and use planning tools and techniques according to the requirements of the work
		1.6	Check the plan for accuracy and relevancy to job requirements
2	**Modify plan components**	2.1	Modify the plan components, as necessary, to respond to unforeseen developments
		2.2	Review the outcome of the work activity and, where necessary, identify future improvements to the plan
3	**Follow WHS requirements**	3.1	Comply with WHS requirements at all times
		3.2	Identify WHS hazards and risks and implement appropriate risk control measures in accordance with SOPs
		3.3	Select, use and maintain appropriate personal protective equipment (PPE) in accordance with SOPs
		3.4	Raise WHS issues with designated personnel in accordance with SOPs
		3.5	Report WHS related actions and incidents according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Plan components include one (1) or more of the following:	• resources • tools and equipment • materials and parts • overall timeframe • job history • quality requirements • criteria for acceptable completion • checks and tests • outcome and performance requirements • WHS requirements
Specifications include one (1) or more of the following:	• task lists • instructions • manufacturer manuals • diagrams and schematics • technical drawings and sketches • parts lists • computer records
Planning techniques and tools include one (1) or more of the following:	• scheduling • time management • brainstorming • setting goals and defined outcomes • prioritising • review and evaluation strategies
Risk control measures	• eliminate the hazard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include one (1) or more of the following:

- substitute the hazard with a safer alternative
- isolate the hazard
- use engineering controls to reduce the risk
- use training to reduce the risk
- use PPE

Assessment Requirements for MEM14006 Plan work activities

Modification History

Release 1. Supersedes and is equivalent to MEM14005A Plan a complete activity

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning a work activity using appropriate planning tools and techniques whilst following established procedures, including work health and safety (WHS) requirements
- checking the plan to ensure accuracy and conformance and modifying the plan components, as necessary, to overcome any unforeseen difficulties or developments
- identifying hazards and implementing appropriate risk control measures and procedures
- selecting, using and maintaining relevant personal protective equipment (PPE)
- evaluating the effectiveness of risk controls measures
- providing proforma WHS reports in accordance with SOPs, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- relevant specifications
- sources of advice relating to the objectives, requirements and specifications
- timeframe for activity completion
- quality requirements of the product or service
- techniques and reasons for prioritising of each step in a plan
- modifications that can be made to the plan to respond to unforeseen developments
- risk control measures
- reporting requirements for accidents, incidents and other non-conformances with WHS procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in planning work activities in a manufacturing and engineering environment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM15001 Perform basic statistical quality control

Modification History

Release 1. Supersedes and is equivalent to MEM15001B Perform basic statistical quality control

Application

This unit of competency defines the skills and knowledge required to take samples and apply a statistical process to monitor production and applies to the collation and interpretation of statistical data in the context of statistical quality control.

When the production and interpretation of charts and graphs not dependent on knowledge and understanding of the implications for quality are required unit MEM12024 Perform computations should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Quality

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, plans, job sheets or work instructions
2	**Take samples**	2.1	Interpret the difference between populations and apply various sampling schemes in accordance with SOPs
3	**Apply statistical process to monitor production**	3.1	Interpret the concept of variation in terms of average and spread and use data to produce relevant statistical information
		3.2	Interpret data and present information to appropriate authority according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sampling schemes include one (1) or more	• agreed customer plans • acceptable quality level (AQL) plans • average outgoing quality Level (AOQL) plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

of the following:	• Shainin • Six Sigma

Relevant statistical information includes one (1) or more of the following:	• average
	• range and process control data
	• plotting of charts, including one or more of the following:
	  • line graphs
	  • run charts
	  • tally charts
	  • histograms
	  • control charts
	• random and assignable causes

Assessment Requirements for MEM15001 Perform basic statistical quality control

Modification History

Release 1. Supersedes and is equivalent to MEM15001B Perform basic statistical quality control

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, plans, charts, lists and other applicable reference documents
- applying statistical process control procedures in accordance with instructions to a given production process
- applying various sampling schemes in accordance with procedures
- producing relevant statistical information, as required
- presenting collated information including uncontrolled variations to relevant authority and completing records in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- difference between population and sample, and the concept of variation in terms of average and range, random and assignable causes
- numerical operations and statistical calculations/formulae within the scope of this unit
- statistical process control procedures the sampling procedures to be followed
- types of charts that can be produced to assist monitoring of products, including run charts, tally charts, histograms and control charts
- procedures for reporting sample data information.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing basic statistical quality control at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM15003 Use improvement processes in team activities

Modification History

Release 1. Supersedes and is equivalent to MEM15003B Use improvement processes in team activities

Application

This unit of competency defines the skills and knowledge required to identify improvements and/or solve problems, implement/monitor the employment of an improvement strategy and evaluate the improvement. It applies to quality circle participation using problem-solving techniques.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of manual handling is required unit MEM11011 Undertake manual handling should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM15003 Use improvement processes in team activities

Modification History

Release 1. Supersedes and is equivalent to MEM15003B Use improvement processes in team activities

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other applicable reference documents
- participating and communicating in a team setting and identifying improvements and/or solving problems using improvement tools and methods
- implementing improvement strategies
- recommending further action, as required
- completing all reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices
- roles and functions of self and team members
- team discussion and problem-solving processes
- improvement tools and methods and their application
- procedures for using process improvement tools in the team environment
- improvement strategies
- procedures for implementing the improvement strategies
- individual's role in implementing improvement strategies
- procedures for initiating further action
- procedures for collecting and collating improvement feedback data
- analytical tools and processes to evaluate the improvement.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in using improvement processes in team activities at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM15004 Perform inspection

Modification History

Release 1. Supersedes and is equivalent to MEM15004B Perform inspection

Application

This unit of competency defines the skills and knowledge required to inspect products, keep records and provide feedback on the conformance of product to specifications and applies to inspection of completed or partly completed products produced by others. It applies to a range of manufacturing enterprises and requires application of a range of measuring equipment/devices/ tools.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, as appropriate should also be selected.

This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities. These skills are covered by other units such as unit MEM18006 Perform precision fitting of engineering components.

This unit should not be selected for the purposes of non-destructive testing where any of the following units have already been selected:

- MEM24002B Perform penetrant testing
- MEM24004B Perform magnetic particle testing
- MEM24006B Perform eddy current testing
- MEM24008B Perform ultrasonic testing
- MEM24010B Perform radiographic testing

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM15004 Perform inspection

Modification History

Release 1. Supersedes and is equivalent to MEM15004B Perform inspection

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other applicable reference documents
- testing products for conformance to specifications using appropriate testing methods
- testing reworked/repaired products for conformance to specifications
- completing all reports/records in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures as defined by job instructions to be used to check conformance to specifications
- data to be recorded and the frequency of recording required
- consequences of not keeping accurate records
- non-conformances of given products that can be removed by rework/repair in accordance with job instructions.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing inspection at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM15005 Select and control inspection processes and procedures

Modification History

Release 1. Supersedes and is equivalent to MEM15005B Select and control inspection processes and procedures

Application

This unit of competency defines the skills and knowledge required to select inspection and test procedures to inspect products for conformance to specifications and control the inspection/test environment and equipment. It applies to a range of manufacturing enterprises where inspection involves working autonomously and taking responsibility for overseeing inspection process and environment.

This person would use a wide range of equipment/instruments and take responsibility for the reliability of inspection results to ensure conformance to specifications.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, as appropriate should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Select inspection/test procedures**	2.1	Select appropriate methods of inspection and implement
		2.2	Monitor inspection/test procedures to ensure desired outcomes
3	**Control inspection/test environment and equipment**	3.1	Monitor environmental conditions to ensure reliability of tests and results
		3.2	Check equipment/instruments for correct calibration
		3.3	Initiate calibration of equipment/instruments, as required
		3.4	Check validity of previous results if equipment/instruments are found to be out of calibration, and report according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

No range of conditions provided for this unit.

Assessment Requirements for MEM15005 Select and control inspection processes and procedures

Modification History

Release 1. Supersedes and is equivalent to MEM15005B Select and control inspection processes and procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other applicable reference documents
- implementing and monitoring inspection/test procedures to ensure desired outcomes are achieved
- checking calibration of measuring equipment/instruments and initiating calibration against the appropriate standard, as required
- detecting and reporting out-of-calibration equipment in accordance with procedures
- applying units of measurement and numerical operations and calculations in selecting and controlling inspection processes and procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- range of inspection methods and their application
- appropriate inspection method for the process/product and procedures for implementing inspection methods
- desired/target outcomes of the inspection/test procedures and reasons for any discrepancies/trends
- procedures for monitoring inspection/test procedures
- effects of environmental conditions on test equipment and the results and procedures for monitoring environmental conditions
- acceptable range of variations to environmental conditions
- specifications and correct operation of the measuring equipment
- procedures for checking the calibration of the measuring equipment
- appropriate techniques, tools and equipment to measure components
- units of measurement and numerical operations/calculations within the scope of this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration
- procedures for initiating the calibration of measuring equipment
- physical reference standard against which the measuring equipment is to be calibrated
- procedures for recording calibration details and reasons for keeping calibration records
- procedures to be followed when measuring equipment is found to be out-of-calibration and reasons for checking results from out-of-calibration measuring equipment
- procedures for reporting out-of-calibration measuring equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and controlling inspection processes and procedures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM15007 Conduct product and/or process capability studies

Modification History

Release 1. Supersedes and is equivalent to MEM15007B Conduct product and/or process capability studies

Application

This unit of competency defines the skills and knowledge required to conduct process capability studies, set control limits and select sampling plans and applies to the analysis of data from a production section or processes using appropriate statistical techniques.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of manual handling is required unit MEM11011 Undertake manual handling should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **6**

Pre-requisite Unit

MEM12024	Perform computations
MEM12025	Use graphical techniques and perform simple statistical computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM15001	Perform basic statistical quality control
MEM15008	Perform advanced statistical quality control
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Quality

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Consult with production or process personnel within the enterprise's total quality plan about conducting studies
2	**Conduct process capability studies**	2.1	Determine procedure for conducting capability study
		2.2	Prepare instructions for personnel conducting trial run
		2.3	Analyse data from trial run and calculate the process capability
		2.4	Estimate possible number of product defects from a particular process
		2.5	Determine optimum target mean to suit process capability data
		2.6	Prepare reports listing various options from process capability studies
		2.7	Recommend design specifications based on an analysis of data
3	**Set control limits**	3.1	Calculate control limits for sample/subgroup average, range and standard deviation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.2	Calculate warning limits for subgroup average, range and standard deviation
	3.3	Determine course of action resulting from out-of-control situation and document according to SOPs
4 **Select sampling plans**	4.1	Select appropriate sampling plan to suit production schedule and determine acceptable quality limits, taking into account specified producer and consumer risks
	4.2	Document sampling plan, including implementation strategy

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedure includes the following:	• frequency of sample and sample size
Data includes the following:	• periodic samples drawn from a trial run of the process
Process capability includes the following:	• the natural tolerance of the process which may be calculated at 3 sigma/standard deviations
Product defects include	• from a consideration of 3 or 6 sigma standard deviations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

the following:	compared to specification requirements
Various options include one (1) or more of the following:	• adjustment of process to move average • improvements to reduce process capability • changes to reduce assignable causes
Appropriate sampling plan includes one (1) or more of the following:	• plans within the adopted quality system • sample size • frequency of sample

Assessment Requirements for MEM15007 Conduct product and/or process capability studies

Modification History

Release 1. Supersedes and is equivalent to MEM15007B Conduct product and/or process capability studies

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining procedure for conducting capability study
- analysing data, identifying solutions and developing recommendations
- estimating the possible number of defects compared to the specification requirements
- preparing reports listing the various options
- determining process design specifications from process capability data
- selecting appropriate sampling plan
- documenting sampling plan and implementation strategy in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- process to be studied
- procedures for conducting process capability studies
- data used to calculate the process capability
- procedures for estimating the possible number of product defects
- options for improving the process and benefits of each
- procedures for determining the optimum target mean
- numerical operations and calculations/formulae for process capability, control limits and other outcomes within the scope of this unit
- procedures for setting control and warning limits
- concept of out-of-control situations
- action to be taken when an out-of-control situation is detected and procedures for documenting out-of-control situations
- acceptable level of quality
- variety of sampling plans and their application

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sampling plan to be applied to a given situation and reasons for selection
- acceptable quality limits
- risks associated with identifying acceptable quality limits for the producer and customer
- procedures for documenting and implementing sampling plans.

Assessment Conditions

- Assessors must:
  - have vocational competency in conducting product and/or process capability studies at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

Assessment Requirements for MEM15008 Perform advanced statistical quality control

Modification History

Release 1. Supersedes and is equivalent to MEM15008B Perform advanced statistical quality control

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining the product parameters to be controlled from a given specification
- constructing control charts/proformas following workplace procedures
- interpreting control charts and applying the results to quality/improvements
- calculating the population dispersion for given data in terms of 1, 2 and 3 sigma limits.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- control charts and their application to quality/improvements
- statistical process control procedures
- procedures for constructing control charts and determining control limits from sample data
- population dispersion in terms of 1, 2 and 3 sigma limits.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced statistical quality control at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM15010 Perform laboratory procedures

Modification History

Release 1. Supersedes and is equivalent to MEM15010B Perform laboratory procedures

Application

This unit of competency defines the skills and knowledge required to work under laboratory conditions, perform calibration of equipment and write reports on the results. It applies to the use of a range of sophisticated equipment that provides independent feedback on quality processes and procedures.

Calibration refers to those calibrations which are conducted to a specified standard using equipment available in the workplace/laboratory. It can include the testing of known standard samples.

This unit would be taken in conjunction with appropriate technical units.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tests will be conducted to a standard and include one (1) or more of the following:	• mechanical tests including for hardness, tensile and impact • electrical tests including for resistance, capacitance and inductance • semiconductor or other electronic tests
Test equipment includes one (1) or more of the following:	• mechanical • electrical • electronic • some combination

Documentary evidence includes one (1) or more of the following:	• identification of equipment
	• frequency of re-calibration
	• calibration status
	• procedures for:
	  • recall
	  • handling and storage
	  • adjustment
	  • repair
	  • calibration
	  • installation and use

Assessment Requirements for MEM15010 Perform laboratory procedures

Modification History

Release 1. Supersedes and is equivalent to MEM15010B Perform laboratory procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting relevant drawings, circuits, specifications, instructions and data
- conducting independent tests to a standard method under controlled conditions
- checking measuring equipment for correct calibration against agreed quality standards
- safeguarding the calibration status of the equipment against unauthorised adjustment
- recalling test equipment for adjustment, repair and re-calibration and using reference standards or specific criteria as a basis for calibration
- completing and maintaining records of measuring equipment calibrated and preparing reports on the tests carried out.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- tests and conditions under which they are to be undertaken
- testing procedures to be followed and the reasons for conducting tests under controlled conditions and the need for tests to be conducted independently
- quality standards against which the measuring equipment is to be calibrated
- specifications and correct operation of the measuring equipment
- tools and equipment required to check the calibration of the measuring equipment
- procedures for checking the calibration of the measuring equipment
- any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration
- procedures for preventing unauthorised adjustment of equipment and the reasons for protecting equipment against unauthorised adjustment
- records to be kept with respect to the calibration of measuring equipment and the reasons for keeping accurate calibration records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for recalling test equipment for adjustment, repair and re-calibration and the frequency of test equipment recall and reasons why test equipment can be recalled
- all relevant documentation relating to the calibration/re-calibration of test equipment and procedures for completion
- sources of reference standards and procedures to be used in the absence of reference standards
- reports to be prepared/provided with respect to the test equipment being tested and the procedures for preparing/ providing reports on tests carried out on test equipment
- auditing processes to be applied to testing procedures
- use of information from the inspections, tests and audits conducted in the development of design and servicing of products/equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing laboratory procedures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM15011 Exercise external quality assurance

Modification History

Release 1. Supersedes and is equivalent to MEM15011B Exercise external quality assurance

Application

This unit of competency defines the skills and knowledge required to liaise with external suppliers, check for conformance to specifications, assess the external suppliers and evaluate their goods and/or services.

It applies to evaluating and communicating with a wide range of supplier enterprises to ensure that purchased supplies meet quality standards and that adequate documents are prepared and maintained to standard operating procedures.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM15011 Exercise external quality assurance

Modification History

Release 1. Supersedes and is equivalent to MEM15011B Exercise external quality assurance

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting relevant drawings, specifications, instructions and appropriate documentation
- negotiating and agreeing on a quality assurance system
- implementing a system for recording and tracing products or services procured
- checking products/materials or services provided for conformance to documented requirements/specifications
- assessing and evaluating supplier capability to provide the required product/material or service
- evaluating supplier quality systems and supplier goods or services
- reporting on assessment and evaluation of suppliers.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- exact quality requirements of the product/material to be supplied
- procedures to be followed to ensure the supplier understands the quality requirements
- requirements of a quality assurance system to ensure the supplied product/material conforms to the quality requirements
- procedures for negotiating agreements with suppliers
- procedures for verifying that the agreed quality assurance system is being utilised by the supplier
- techniques for dispute resolution
- procedures for recording procured products or services
- means and reasons for tracing procured products or services
- specifications of the product/material to be supplied or service to be provided
- variations from documented requirements/specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for assessing/evaluating a supplier's capability to supply the required product/material or service
- procedures for evaluating a supplier's quality system
- procedures for evaluating a supplier's goods or services
- equipment and techniques required to carry out the evaluation procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in exercising external quality assurance at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM15012 Maintain/supervise the application of quality procedures

Modification History

Release 1. Supersedes and is equivalent to MEM15012B Maintain/supervise the application of quality procedures

Application

This unit of competency defines the skills and knowledge required to improve the quality system, collect and summarise data to support the quality improvement process and use data to produce statistical information.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM12024	Perform computations
MEM12025	Use graphical techniques and perform simple statistical computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM15001	Perform basic statistical quality control
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Quality

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Interpret specifications to meet customer needs (internal and external)
2	**Improve quality system**	2.1	Undertake leadership role as a supplier to ensure quality within the supply chain
		2.2	Record and interpret the collected data
		2.3	Use data to produce relevant statistical information

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Customer needs include one (1) or more of the	• product • service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

following:	• delivery and distribution • quality • quantity • price • communication and documentation
Statistical information includes one (1) or more of the following:	• averages • ranges • tally charts • run charts • control charts

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM15012B Maintain/supervise the application of quality procedures

Assessment Requirements for MEM15012 Maintain/supervise the application of quality procedures

Modification History

Release 1. Supersedes and is equivalent to MEM15012B Maintain/supervise the application of quality procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting the specifications of the product or service to be provided
- communicating effectively with suppliers and customers and establishing their needs
- calculating relevant statistical information from collected data
- producing tally, run and control charts from collected data.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications to be achieved in providing the service or producing the product
- team's suppliers and customers
- possible effects of supplying products and/or services to customers that do not comply with specifications
- procedures to be followed in producing the product and/or supplying the service
- checks to be undertaken to ensure the product/service complies with specifications
- personnel responsible for the quality of the product/service provided
- actions to be taken when a non-conformance to specifications is detected and reasons for taking those actions
- procedures for recording data collected
- possible trends from the collected data and reasons for collecting data
- actual trends indicated by given samples of data
- statistical information to be calculated
- use of statistics in interpreting production data
- functions of tally, run or control charts in representing production data
- trends indicated by the statistical information calculated and/or the charts produced

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- action to be taken in response to any trends identified and reasons for taking proposed action
- appropriate techniques, tools and equipment to measure machined components.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining/supervising the application of quality procedures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM15015B Examine trading practices

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	The unit covers examining trading practices relating to measurement employed by traders.

Application of the Unit

Application of the unit	This unit is designed for those performing trade measurement inspection activities in public or private enterprises. This unit applies to the examination of sales made by reference to measurement. It does not apply to inspection of pre-packed articles. For inspection of pre-packed articles, Unit MEM15016B (Inspect pre-packed articles) should be selected. This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Band**: **A** **Unit Weight**: **5**

Licensing/Regulatory Information

Not Applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Prerequisite units		
Path 1	MEM12023A	Perform engineering measurements

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Explain the requirements of trade measurement legislation relating to trading practices	1.1. Legislation requirements that apply to trading practices are explained. 1.2. Policy guidelines that apply to trading practices are explained.
2. Inspect trading practices for compliance	2.1. Trading practice methods employed on premises are examined for compliance with legislative requirements. 2.2. Incidents of non-compliance in a range of trading environments are identified and, where appropriate, activities are undertaken to prove the breach of legislation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Results of inspection are documented.
3. Finalise inspection and identify appropriate action	3.1. Trading practice information relevant to the inspection is communicated to the trader. 3.2. Appropriate actions to encourage compliance are determined and identified. 3.3. Inspection documentation is completed in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- applying relevant organisational policy and procedures in regard to trading practices
- examining methods utilised for advertising and the sale of goods employed on the premises for compliance with legislative requirements
- examining the manner in which a measuring instrument is used on the premises
- identifying incidents of non-compliance in a range of trading environments
- determining action to be undertaken based on the organisation's enforcement policy
- gathering sufficient and relevant evidence to prove a breach
- accurately recording information
- advising on appropriate trading practices to assist compliance
- undertaking observation and surveillance in relation to trading practices
- explaining legislative requirements and obligations
- completing notices accurately in accordance with organisational guidelines
- planning follow-up activities as required
- accurately recording results of the inspection and recommendations in the organisation's information files
- completing breach reports in accordance with organisational guidelines

Required knowledge

Look for evidence that confirms knowledge of:

- definition of the term 'trading practices'

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• relevant policy and procedures across a range of trading environments • legislation relating to trading practices • the range of trading environments • trading practices relevant to a range of business types • processes for evidence collection and evidence handling • specific reporting procedures • techniques to liaise with traders • legislative requirements and obligations for the issuing of notices • organisation's policy guidelines for return visits • specific reporting procedures • types of evidence

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to examine trading practices involving measurement employed by traders. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with examining trading practices employed by traders, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislation requirements and policy guidelines	Enabling legislation, organisational procedures and policies - workplace, health and safety, enforcement policies
Trading practices	Methods of sale of goods, advertising, use of measuring instrument, position of measuring instruments, misrepresentations, environmental factors, suitability of instrument, over-pricing,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	incorrect measurement
Premises	Supermarkets, fruit and vegetables retailers, packing house, meat, seafood and smallgoods, bakery, etc.
Examination for compliance	Observation, trial purchase, questioning, reviewing records
Activities used to prove a breach of legislation	Trial purchases, observation/surveillance, photographs, seizure of documentations, articles, measuring instruments, testing the measuring instruments
Appropriate actions to encourage compliance	Warning letter, non-compliance notice, infringement notice, prosecution

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Explain the requirements of trade measurement legislation relating to pre-packed articles	1.1. Legislative requirements that apply to pre-packed articles are explained. 1.2. Approved markings as they apply to all pre-packed articles intended for sale are described.
2. Inspect pre-packed articles for compliance with marking requirements	2.1. Pre-packed articles are examined for the marking of quantity statements and unit pricing in accordance with legislative requirements. 2.2. Pre-packed articles are examined for the marking of packer identification. 2.3. Results of examination are documented for further action.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Measure pre-packed articles	3.1. Articles are selected for check measuring in accordance with marketplace intelligence, legislative requirements and organisational procedures. 3.2. Product handling and disposal requirements are assessed and complied with in accordance with workplace, health and safety requirements, environmental considerations and public sector auditor's requirements. 3.3. Specialised equipment and measuring devices are selected in accordance with organisational procedures. 3.4. Articles are check measured in accordance with organisation's procedures to determine compliance with legislation. 3.5. Results of check measurements are documented for further action.
4. Finalise inspection and take appropriate action	4.1. Trading practice information relevant to the inspection is communicated to the trader. 4.2. Approved procedures to remedy non-compliance are determined and applied, 4.3. Inspection documentation is completed in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- applying relevant sections of the legislation to pre-packed articles
- measuring pre-packed articles
- assessing quantity and unit pricing statements, for compliance with legislation
- comparing marking of packer identification, against legislation
- recording marking non-compliance accurately for further action
- interpreting marketplace intelligence
- safely handling and disposing of products in relation to measuring pre-packed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
articles • documenting check-measurement results and non-compliances in accordance with organisational guidelines • checking the accuracy and suitability of the measuring devices • discussing trader's enquiries and concerns • explaining legislative requirements to traders • completing legal documentation • planning follow-up activities • recording results of the inspection accurately in organisation's information files • making clear and accurate recommendations
Required knowledge
Look for evidence that confirms knowledge of: • definition of 'pre-packed articles' • relevant sections of legislation across a range of pre-packed articles • the range of packing types • quantity statement or measurement marking form, size and position • pre-packed articles exempted from the requirements of legislation • all symbols for units of measurement • application of qualifying statements • pre-packed articles exempted from marking packer identification • how to identify origin of packing • marketplace intelligence, legislative requirements and organisational procedures in relation to selecting pre-packed articles • the impact of environmental factors on pre-packed articles • use of protective clothing and equipment • checking of hazardous product data sheet • the organisation's policy and procedures • the accuracy and suitability of the measuring devices used to check pre-packed articles • procedures for determining the measurement method of pre-packed articles • the number of articles to check-measure in accordance with legislative requirements • methods of determining the tare weight of packages • responding to trader's enquiries • advising the trader • accurate wording of notices • legislative requirements and obligations for the issuing of notices • organisation's guidelines for return visits • specific reporting procedures

Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the appropriate class of reference standard suitable to verify a range of trade measuring instruments	1.1. Tolerances required for reference standards are researched in relation to testing a range of trade measuring instruments and legislation. 1.2. The correct classes of reference standards are selected to test a range of trade measuring instruments.
2. Use reference standards and test equipment in a safe and metrologically sound manner	2.1. Standards Laboratory purpose and function are explained. 2.2. An operational assessment on reference standards and test equipment is performed prior to use. 2.3. Documented operating policies and procedures for reference standards and test equipment are accessed and followed. 2.4. Safety requirements for the use of reference standards and test equipment within the work environment are demonstrated.
3. Store and transport reference standards and test equipment to maintain their integrity	3.1. Specialised equipment and reference standards are stored in accordance with organisational procedures. 3.2. Specialised equipment and reference standards are transported in accordance with organisational procedures.
4. Perform required maintenance of reference standards and test equipment	4.1. Maintenance requirements of reference standards and test equipment are identified. 4.2. Regular maintenance of reference standards and test equipment is undertaken in accordance with maintenance register. 4.3. Defective reference standards and test equipment are identified and reported for repair.
5. Interpret documentation relating to the use of maintenance of reference standards and test equipment	5.1. Information contained in the certificate of verification is checked and compared with reference standards and test equipment being used. 5.2. Reference standards are used in accordance with documented instructions and certificates.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing correct reference manuals for appropriate information concerning tolerances for reference standards
- identifying correct class of reference standard and matching with the appropriate trade measuring instrument
- accessing documented operating procedures for reference standards and test equipment
- using reference standards and test equipment
- calibrating/maintaining reference standards and test equipment
- maintaining maintenance register
- identifying and recording/reporting malfunction of or damage to reference standards or test equipment
- interpreting certificates of verification in relation to the use of reference standards
- using graphs and tables within certificates

Required knowledge

Look for evidence that confirms knowledge of:

- definition of 'legal metrology'
- the hierarchy of reference standards in relation to legal metrology
- Australian legal units of measurement used for trade
- the organisations involved in legal metrology in Australia
- application of different classes of reference standards used to test measuring instruments
- maintenance requirements for reference standards and test equipment
- major function and purpose of the Standards Laboratory
- the actions to be taken if reference standards and test equipment are found to be defective
- test equipment and reference standards storage specifications and procedures
- personal responsibility for workplace, health and safety requirements
- specialised equipment, reference standards and transport specifications and procedures
- transport specifications and procedures
- variations from storage specifications and procedures requiring appropriate approval
- variations from transport specifications and procedures requiring appropriate approval

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• maintenance required for test equipment where manufacturers' requirements are unavailable • a range of maintenance and calibration procedures • procedure for reporting faults • action to be taken where legal traceability can not be confirmed • the purpose of certificates of verification issued under the national legislation • information in graphs and tables within certificates • workplace, health and safety requirements relating to reference standards and test equipment

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to use and maintain reference standards. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive and document the complaint	1.1. Allegations are recorded in accordance with organisational procedures. 1.2. Complaints are screened to ensure that they are relevant to trade measurement and are assessed to determine priority. 1.3. Complainant is advised of investigative process and timeframes for feedback.
2. Plan the investigation	2.1. The information received is assessed for possible breaches in relation to the legislation. 2.2. Trader history and complaint precedence is researched. 2.3. Suitable equipment and personnel are organised to undertake the investigation. 2.4. Enforcement policies and procedures are researched to ascertain appropriate action to be implemented.
3. Investigate the complaint	3.1. Preliminary investigation to gather prima facie evidence is conducted in accordance with organisational procedures. 3.2. Evidence is gathered to substantiate a breach in accordance with investigative practices. 3.3. The relevant components of a routine field inspection are conducted in accordance with organisational procedures.
4. Finalise the complaint investigation	4.1. Information relevant to the inspection is communicated to the trader. 4.2. Approved procedures to remedy non-compliance are determined and applied. 4.3. Inspection documentation is completed in accordance with organisational procedures.
5. Complete complaint file documentation	5.1. Complainant is advised of outcome of the investigation. 5.2. Complaint documentation is completed in accordance with organisational guidelines.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accurately recording complaint details
- prioritising complaints and other related activities
- researching and applying relevant legislation to the complaint investigation
- accessing and using organisational information systems
- identifying and organising suitable equipment and personnel
- briefing personnel concerning the requirements of the investigation
- accessing the organisation's enforcement policies and procedures
- establishing appropriate courses of action
- conducting surveillance of trading premises is conducted
- gathering information to verify the complainant's allegations
- gathering evidence to prove all elements of a breach
- using appropriate investigative techniques are used
- maintaining the integrity of evidence
- responding to traders' concerns
- discussing traders' enquiries and concerns.
- explaining legislative requirements and obligations to the trader
- completing notices in accordance with organisational guidelines
- planning follow-up activities
- recording results of the inspection accurately in organisation's information files
- completing breach reports in accordance with organisational guidelines
- communicating outcomes of the investigation to the complainant within specified organisational timeframes
- applying interpersonal communication and listening skills
- accurately recording results of the investigation in the complaint file

Required knowledge

Look for evidence that confirms knowledge of:

- the different methods of complaint lodgements
- organisational policy guidelines concerning complaints
- organisational guidelines in regard to timelines
- the equipment required to investigate a range of complaints
- the organisation's guidelines for the deployment of personnel
- the range of possible investigation activities available
- elements of offence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• available surveillance methods for a range of complaints and premises • the evidence required to prove a range of breaches of legislation • a range of investigation methods • the required procedures for the handling of evidence to maintain its integrity • the reasons for selecting relevant components of a routine field inspection • legislative requirements and obligations for the issuing of notices • organisation's policy guidelines for return visits • specific reporting procedures • complaint outcome classifications • complaint documentation procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to investigate consumer complaints. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	materials handling, recording and reporting associated with investigating consumer complaints, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Organisational procedures	Trial purchase, surveillance, witness statements, verification/in-service inspection procedures, pre-packed articles inspection procedures, trading practices inspection procedures, routine field inspection procedures
Complaints	Measuring instruments, pre-packed articles, trading practices, servicing licensees, public weighbridge licensees, fair trading matters relating to trade measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Sources of information	Business/company details, organisational database, searches from other government agencies
Legislation	Enabling legislation, workplace, health and safety, environmental legislation, enforcement policies
Equipment	Reference standards, test equipment, safety equipment
Documentation	Organisational forms, notices, field books, product handling sheets, educational material/brochures

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a work plan to conduct field inspections	1.1. Traders are identified for inspection in accordance with organisational priorities. 1.2. Routine field inspections are scheduled to complement other inspection activities whilst maximising organisational efficiencies and effectiveness. 1.3. Appropriate equipment is identified and accessed. 1.4. Specific inspection arrangements are made with the trader. 1.5. Relevant reference and/or technical information and trader history is researched.
2. Maintain test equipment during a field inspection	2.1. Test equipment is transported in accordance with manufacturers' specifications and organisational procedures. 2.2. Test equipment is operated within manufacturers' specifications and organisational procedures. 2.3. Failures and repairs of test equipment are reported in accordance with organisational procedures.
3. Conduct initial on-site assessment of the trading premises	3.1. Surveillance of the trading premises is undertaken to evaluate the trading practices in use. 3.2. Officer establishes their identity with the trader or responsible person and explains the purpose of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	inspection. 3.3. Local workplace, health and safety issues relevant to the premises are identified and appropriate action is taken to comply. 3.4. Measuring instruments used for trade are identified and the inspection is planned with minimal disruption to the trader. 3.5. Locations for product return or disposal are identified for later use.
4. Inspect instruments and/or trading practices	4.1. Measuring instruments are selected for inspection in accordance with organisational guidelines. 4.2. Test equipment is used in accordance with organisational procedures taking into consideration workplace health and safety factors. 4.3. Relevant test procedures for verification and in-service inspection are conducted in accordance with organisational procedures. 4.4. Inspection of pre-packed articles is conducted in accordance with organisational procedures. 4.5. Trading practices are identified and action is taken to remedy any non-compliance.
5. Undertake an investigation where a breach is detected	5.1. Evidence relating to the breach is gathered. 5.2. Trader and witnesses are interviewed for supporting evidence. 5.3. Chain of evidence is maintained.
6. Complete documentation for inspection	6.1. Instrument and trader information is recorded accurately for the organisation's information system. 6.2. Inspection documentation is completed in accordance with organisational procedures.
7. Advise trader of inspection outcomes	7.1. The trader is advised of instrument test, pre-packed article and trading practice results where appropriate. 7.2. The trader's enquiries and concerns are discussed. 7.3. Legislative requirements, obligations and possible corrective solutions are explained to the trader where appropriate. 7.4. The trader is advised of reporting procedures and possible outcomes for any detected breaches. 7.5. Follow-up activities are planned if required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing and interrogating organisation's information system for relevant trader information
- researching and collecting information
- scheduling inspection activities
- identifying priorities and their integration into routine field inspections
- being aware of the operational needs of the trader
- selecting instruments for tests
- completing calibration/repairs
- evaluating information gathered during surveillance to identify non-compliance
- conducting surveillance of trading premises
- using the organisation's identification procedure (e.g. ID card)
- explaining the purpose of the inspection to the trader
- obtaining workplace, health and safety information specific to the trading environment
- recording data plate information and instrument errors
- monitoring sales transactions
- assessing advertising used on or outside the premises
- identifying incorrect trading practices
- gathering evidence to prove a breach
- preparing interview questions to cover all elements of an offence
- using assertive communication and active listening

Required knowledge

Look for evidence that confirms knowledge of:

- the organisation's inspection priorities
- options for dealing with conflicting priorities
- a range of equipment used for trade measurement field inspections
- alternative contact arrangements
- a range of environmental factors that impinge on measuring instruments
- criteria for selecting instruments
- test equipment transportation specifications and procedures
- variations from transport specifications and procedures requiring appropriate approval
- variations from operating specifications and procedures requiring appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

approval

- types of failure that might occur and possible remedies in a range of test equipment
- preventative work practices/maintenance to keep equipment in good working order
- methods of surveillance
- legislative requirements for the inspection
- personal responsibility for workplace, health and safety
- workplace, health and safety issues relating to a range of occupational and business environments
- contingencies to facilitate minimal disruption to the trader
- action that would be taken if incorrect disposal occurs
- research methods used to determine instrument performance trends
- workplace, health and safety requirements for a range of test procedures and working environments
- a range of environmental and operational factors that may adversely influence the accuracy of instruments, and action required to remedy their effect
- organisational guidelines for the selection of pre-packed articles for inspection
- a range of non-compliance issues for trading practices
- strategies used to prove breaches of trading practices including trial purchases
- the format and procedure for conducting an interview in accordance with organisational guidelines
- the principles of natural justice; requirements of appropriate legislation; judges' or court rules; the organisation's code of conduct
- strategies for handling conflict
- cultural and gender issues that influence the communication/interviewing process
- maintenance of evidence integrity
- recording and secure storage of evidence in accordance with organisational procedures can be explained.
- types of ownership entities for legal responsibilities
- appropriate forms used for inspection outcomes including non-compliance and rejection notices, instrument performance records, fees and traders' files
- suitable environment to communicate inspection outcomes with trader
- strategies for handling conflict situation
- sensitivity to cultural and gender issues that influence the communication process
- corrective solutions for a range of scenarios
- legislative requirements for a range of trading environments
- reporting processes and outcomes
- accurate interpretation of enforcement guidelines
- methods for conducting a follow-up activity

MEM15020C Perform verification/certification or in-service inspection

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	The unit covers testing a range of measuring instruments used for trading activities.

Application of the Unit

Application of the unit	This unit is designed for those performing trade measurement inspection/certification activities in public or private enterprises. This unit applies to the legal verification/certification or in-service inspection of measuring instruments used for trading activities. This unit may be applied to the inspection of trade measuring instruments, such as those used for measuring pre-packed articles, and direct and/or indirect trading to the public. Relevant reference material includes NSC certificates of approval, manufacturers' product specifications, Australian standards, WHS legislation, uniform test procedures, organisational procedures and guidelines, and certificates of verification. Where work requires measuring instruments of a lower level of complexity and range and lower scope relating to uniform test procedures, reference material etc., Unit MEM15004B (Perform inspection) or Unit MEM15005B (Select and control inspection processes and procedures) should be selected as appropriate. If use and maintenance of reference standards is required, Unit MEM15017C (Use and maintain reference standards) should also be selected.

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Describe the design and application of basic components in trade measuring instruments	1.1. The fundamental operating features for a range of measuring instruments are identified. 1.2. The purpose of major components within the range of measuring instruments is described.
2. Determine the type of inspection required for a range of measuring instruments	2.1. Instrument is assessed to determine whether a verification/certification or in-service tolerance is to be applied for inspection. 2.2. The processes required for both the verification/certification and in-service of a range of measuring instruments are explained. 2.3. Appropriate tolerances are identified for the determined inspection.
3. Perform inspection of measuring instruments to determine compliance	3.1. The operating environment of the instrument is analysed and monitored to determine its impact on the instrument. 3.2. Sources of any possible operational error in the use of measuring instruments/systems are identified. 3.3. Specialised equipment is selected and used in the prescribed manner for the inspection. 3.4. Inspection of measuring instrument is conducted in accordance with appropriate test procedures, legislation and policies, and workplace, health and safety considerations.
4. Finalise inspection and take appropriate action	4.1. The appropriate action to be undertaken is determined and implemented. 4.2. Performance trends of particular models of measuring instruments are identified and reported. 4.3. The information is recorded in the organisation's information system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms skills in: • examining instruments for existing verification/certification marks • identifying operational errors relevant to the type of instrument being tested • selecting and correctly using the test equipment • testing measuring instruments • preparing technical reports relating to verification/certification or in-service inspection • completing files
Required knowledge
Look for evidence that confirms knowledge of: • the major components and functions of an instrument • the purpose of major components and functions of an instrument • differences in the application of tolerances being applied • process variations between verification/certification and in-service inspection • appropriate tolerances for a range of measuring instruments • environmental factors that may not result in an instrument rejection but other remedial actions • specialised equipment that may be required from other organisations • the action to be taken where a conflict occurs between uniform test procedures and those test procedures contained in certificates of approval • removal of verification/certification marks is impractical on some instruments and the appropriate action to be taken in these circumstances • methods to monitor performance trends

MEM15021C Conduct audits of servicing licensees and public weighbridge licensees

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	The unit covers auditing the work undertaken by servicing licensees/certifiers and the operations undertaken by public weighbridge licensees.

Application of the Unit

Application of the unit	This unit is designed for those performing trade measurement audits on public and/or private trade measurement licensees. This unit applies to personnel working for or appointed by a trade measuring administering authority. In encompasses audits of measuring instruments and documentation supplied by licensee, such as instrument accuracy, instrument markings, and adherence to legislative requirements and test procedures. Reference material includes uniform test procedures, inspector handbook, NSC certificates of approval, and organisational procedures and guidelines. Workplace, health and safety considerations include storage of test equipment, site/premises conditions, manual handling techniques, and specific safety equipment and clothing. If use and maintenance of reference standards is required, Unit MEM15017C (Use and maintain reference standards) should also be selected. If verification/certification is required, Unit MEM15020C (Perform verification/certification or in-service inspection) should also be selected.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Explain the licensing system for servicing licensees and public weighbridges	1.1. Major components of the licensing system for certification of measuring instruments are described. 1.2. Major components of the licensing system for public weighbridges are described. 1.3. The requirements for issuing servicing and public weighbridge licences in accordance with legislation and organisational policies/ procedures are described.
2. Identify measuring instruments for audit of certifiers	2.1. Servicing licensee's documentation is monitored for compliance with organisational requirements. 2.2. Organisational procedures are used to generate a list of measuring instruments to be audited.
3. Conduct performance audits on certifiers	3.1. Inspection of measuring instruments is performed to determine compliance in accordance with legislation and organisational procedures. 3.2. The certifier's procedures and documentation are assessed to ensure legislative requirements are met. 3.3. Results of audit are recorded in the organisation's information system. 3.4. Action required to remedy non-compliance is determined and applied.
4. Examine public weighbridge licensee's operations for compliance with legislation	4.1. Licensee's documentation is assessed for compliance with legislation and organisational requirements. 4.2. The operator's ability to undertake public weighbridge duties is observed for compliance with legislation. 4.3. Action required to remedy non-compliance is determined and applied.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- evaluating servicing licensee's documentation for completeness of information
- monitoring lodgement of servicing licensee's documentation
- selecting instruments for auditing
- scheduling audits
- testing measuring instruments
- recording instrument errors
- assessing the certifier's documentation for accuracy against the instrument certified and legislative requirements
- completing audit reports
- determining and implementing appropriate remedial action
- assessing licensee's documentation for accuracy against the public weighbridge instrument certified and legislative requirements
- assessing signage, certificates and public weighbridge tickets for accuracy
- evaluating the operator's ability to perform the duties of a public weigher
- investigating and reporting detected breaches

Required knowledge

Look for evidence that confirms knowledge of:

- major components of the licensing system for certification of measuring instruments such as legislative requirements, eligibility, conditions of licence including provision of competent employees, provision of reference standards, use of test procedures, and use of reporting documentation and quality assurance systems
- major components of the licensing system for public weighbridge such as legislative requirements, eligibility, conditions of licence including provision of competent employees, maintaining accuracy of the public weighbridge, weighing methods and obligations, and use of reporting documentation
- the process for issuing servicing and public weighbridge licences, specifically the activities undertaken by trade measurement personnel
- the process for handling incomplete forms
- inspection variations between verification inspection and an audit inspection
- reporting variations for a range of instruments
- requirements to complete a public weighbridge ticket
- methods to complete a public weighbridge ticket
- requirements for authority to operate a public weighbridge
- duties of operator of public weighbridge
- options to remedy non-compliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislation and organisational policies/procedures	Enabling legislation, workplace, health and safety practices, organisational policies and procedures, licensing conditions, enforcement policies
Documentation	Application forms, certification forms, non-compliance forms, public weighbridge tickets, documents as specified by legislation, educational material/brochures, batch test histograms

MEM15022B Verify reference standards

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	The unit covers verifying reference standards used for legal purposes.

Application of the Unit

Application of the unit	This unit applies to those performing verification of reference standards in a verifying authority organisation. It would mainly occur under laboratory conditions. **Band:** This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V). **Unit Weight**: **8**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM09002B	Interpret technical drawing
	MEM12003B	Perform precision mechanical measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Prerequisite units		
	MEM12023A	Perform engineering measurements
	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify the categories and levels of verification for reference standards	1.1. The categories of reference standards that the organisation is authorised to verify are identified. 1.2. The classes of reference standards required to verify a range of standards are identified. 1.3. Tolerances for a range of reference standards are identified. 1.4. Tolerances for a range of reference standards are described.
2. Maintain suitable environmental conditions to facilitate verification of reference standards	2.1. Reference standard details are recorded in accordance with organisational guidelines. 2.2. Sources of possible operational procedures errors in the verification of reference standards are identified. 2.3. Required atmospheric conditions for the verification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	of a range of reference standards are applied. 2.4. Environmental conditions are assessed to determine whether a verification can be conducted.
3. Examine the design and required markings for a range of reference standards	3.1. The identification marking required for reference standards is located and explained. 3.2. Design features of a range of reference standards are correctly identified and applied. 3.3. The function of major components for a range of reference standards is described and applied. 3.4. The fundamental features of a range of reference standards are identified and explained.
4. Perform verification of reference standards	4.1. A variety of reference standards are verified. 4.2. Uncertainty and tolerances for reference standards are applied. 4.3. Results of verification are documented and certificate of verification is issued in accordance with organisational procedures, legislation and policies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • researching and identifying suitable reference standards for verification within standards hierarchy • accessing reference manuals to gain appropriate information concerning tolerances for reference standards • completing the organisation's information tracking documentation • identifying operational errors relevant to the verification • locating identification marks on reference standards • researching design features on a range of reference standards • completing verification work sheets • completing and issuing certificates of verification
Required knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • relevant categories of reference standards for which the organisation is authorised to verify • a range of classes for reference standards • appropriate tolerance for a range of reference standards • current status of clients' reference standards • atmospheric factors required for verifying a range of reference standards • remedial action for atmospheric deficiencies • environmental factors that may adversely influence the integrity of the reference standards • remedial action for a range of environmental deficiencies • requirements for identification marking on reference standards • the purpose of design specifications • the purpose of the major components and functions of reference standards • the fundamental features of reference standards • the process for maintaining integrity of results including calculation • the reference material for uncertainty and maximum permissible errors for a variety of reference standards. • the process for producing certificates of verification in accordance with verifying authority status

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to verify reference standards. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with verifying reference standards, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT	
regional contexts) may also be included.	
Reference standards	Mass, volume, density, area, length, master meters, temperature
Operating procedures	Manufacturers' specifications, industry guidelines, Australian standards, legislation, organisational procedures and guidelines
Legislation and policies	Enabling legislation, organisational procedures and guidelines Workplace health and safety legislation including storage and transportation of test equipment, handling of test equipment, handling of hazardous materials, safety clothing, manual handling techniques, site/premises conditions
Documentation	Fees, verification work sheets, certificate of verification

MEM16001 Give formal presentations and take part in meetings

Modification History

Release 1. Supersedes and is equivalent to MEM16001B Give formal presentations and take part in meetings

Application

This unit of competency defines the skills and knowledge required to participate in formal meetings and give formal presentations of information of a technical, job-related or trade-related nature. It covers communication skills needed for meetings governed by formal rules or well-established conventions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Participate in formal meetings**	1.1	Receive, read and follow set meeting agenda
		1.2	Follow meeting conventions
		1.3	Contribute to discussions, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	1.4 Focus discussion on the objectives of the meeting
	1.5 Confirm action requirements arising from the meeting
2 **Give formal presentations**	2.1 Clarify objectives and scope of information required for presentation
	2.2 Prepare information and communication resources to support presentation, acknowledging sources used
	2.3 Ensure presentation is accurate, structured and includes all necessary content, and adheres to time limitations
	2.4 Use communication strategies to deliver effective presentation

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Meeting conventions include one (1) or more of the following:	• order of proceedings • punctuality • language expectations • relevancy • procedures for addressing others • facilitation by formal chairperson • recording of minutes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Communication resources include one (1) or more of the following:	• visual aids • audio visual aids • handout materials • charts and diagrams • props/objects • digital resources • demonstration • reports/print outs
Sources include one (1) or more of the following:	• colleagues • data • technical information sources • internet or web sources • supervisors • experience
Communication strategies include one (1) or more of the following:	• engaging eye contact with audience • speaking clearly and loudly enough for audience to hear • checking understanding of audience • asking questions • answering questions • listening effectively • using appropriate body language • maintaining focus on topic

Assessment Requirements for MEM16001 Give formal presentations and take part in meetings

Modification History

Release 1. Supersedes and is equivalent to MEM16001B Give formal presentations and take part in meetings

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- following an agenda and adhering to meeting rules/conventions
- contributing to discussions that focus on the objectives of the meeting
- giving a prepared presentation clearly and concisely using communication resources, as appropriate
- using effective communication strategies for meetings and presentations
- acknowledging all relevant resources.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- topics for discussion during the meeting
- meeting conventions and terminology
- objectives of the meeting
- topic/subject on which a presentation is to be made
- effective presentation techniques and communication strategies
- information to be conveyed
- sources of information to support presentation.

Assessment Conditions

- Assessors must:
  - have vocational competency in giving formal presentations and taking part in meetings at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16002 Conduct formal interviews and negotiations

Modification History

Release 1. Supersedes and is equivalent to MEM16002C Conduct formal interviews and negotiations

Application

This unit of competency defines the skills and knowledge required to plan, conduct and participate in interviews, and take part in negotiations. It requires the application of effective communication skills to explore defined ideas and achieve specific outcomes in formal on-site or small group situations.

This unit does not cover the skills needed for participation in formal group processes such as meetings which are covered by Unit MEM16001 Give formal presentations and take part in meetings.

For interviews associated with training and assessment, refer to the appropriate units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM16002 Conduct formal interviews and negotiations

Modification History

Release 1. Supersedes and is equivalent to MEM16002C Conduct formal interviews and negotiations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- confirming the purpose and required outcomes of the interview
- planning and formatting interviews and asking open and closed interview questions to gain required information
- building rapport, using active listening skills and exercising appropriate discretion and confidentiality
- taking part in negotiations using language and communication medium appropriate to other party and nature of negotiations
- clarifying and reporting of negotiation outcomes.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- purpose and assessment criteria of the interview
- procedures to be followed in planning and conducting the interview
- detail/information to be obtained from the interview and appropriate questions
- active listening techniques that can be applied in interview situations
- effects of the individual's presentation during the interview upon the interview
- effects of the timing of questions on the interviewee
- importance of following-up issues raised during the interview and negotiations
- procedures for reporting the outcomes of follow-up activities
- parties to be involved in the negotiations
- reasons for using appropriate language
- reasons for maintaining confidentiality
- reasons for clarifying the needs/wants of others and the individual
- views of fellow team or group members

MEM16003 Provide advanced customer service

Modification History

Release 1. Supersedes and is equivalent to MEM16003B Provide advanced customer service

Application

This unit of competency defines the skills and knowledge required to provide comprehensive assistance to customers. It includes identifying a customer's relationship to the enterprise and determining how service could be improved.

Applications of this unit would typically be found in warehouses, service and design departments, and relate to internal or external customers, across a range of products and services. This may include the taking of one-off or special orders requiring detailed descriptions, the handling of complaints referred for more detailed assistance than the initial point of contact, and work as a designated liaison officer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify customer relationship to enterprise**	1.1	Follow standard operating procedures and comply with work, health and safety (WHS) requirements at all times
		1.2	Identify customer as a new or repeat customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Obtain and check formal customer identification details for repeat customers and access information according to workplace procedures
		1.4	Capture information on new customers according to workplace procedures
2	**Identify customer requirements**	2.1	Identify customer requirements from order or other verbal or written communication
		2.2	Apply product knowledge to answer and address customer questions and support informed purchase decision
		2.3	Communicate clearly the degree to which customer requirements can be met
		2.4	Propose alternatives for any inability to completely satisfy customer requirements
		2.5	Use communication skills to provide positive customer experience
3	**Action customer requirements**	3.1	Undertake appropriate action to implement customer requirements
		3.2	Record customer requirements not able to be met immediately, and undertake follow-up checks according to procedures
		3.3	Communicate with customers to inform of service progress or completion, according to workplace procedures
4	**Address customer complaints**	4.1	Apply active listening skills and receive complaint information to ensure a thorough understanding of customer complaint
		4.2	Determine source of complaint or issue and report to relevant personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.3 Determine process for resolving complaint and confirm with customer
	4.4 Action process and maintain communication with customer until completion
	4.5 Assess effectiveness of resolution and report or record outcomes according to work procedures
5 **Promote better customer service**	5.1 Record products and services provided to customer, and any other customer information that can help to improve future relations
	5.2 Assess customer service provided and identify and report opportunities for improvement

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM16003 Provide advanced customer service

Modification History

Release 1. Supersedes and is equivalent to MEM16003B Provide advanced customer service

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying customer relationship to the enterprise and ensuring customer information is complete, accurate and current
- applying product knowledge to address customer enquiries
- establishing rapport with the customer and providing positive customer experience
- handling difficult or unsatisfied customers and determining and implementing process of resolution
- determining and managing customer requirements not able to be met
- taking appropriate action to meet customer requirements according to procedures and recording customer products/service details
- reporting/recommending opportunities for improving customer service.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- procedures for:
  - identifying customers and defining customer relationships
  - identifying customer requirements
  - informing the customer of the degree to which the customer's requirements can be met
  - actioning customer orders
  - recording and managing customer complaints
  - initiating repairs and/or service to customer equipment
  - managing organisational errors in service provision
  - following up on unmet customer requirements
  - reporting/recommending improvement to customer service
- service provision procedures for new/repeat customers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- customer relationship management system use and application
- features and characteristics of products and services offered
- product and service availability and processes
- range of customer requirements for product/service and alternatives available
- reasons for informing the customer promptly of the ability/inability to meet requirements
- principles and practices of effective customer service
- strategies for managing difficult customers
- record keeping requirements of customer service interactions and transactions.

Assessment Conditions

- Assessors must:
  - have vocational competency in providing advanced customer service at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16004 Perform internal/external customer service

Modification History

Release 1. Supersedes and is equivalent to MEM16004B Perform internal/external customer service

Application

This unit of competency defines the skills and knowledge required to provide assistance to internal and external customers across a range of products and services.

Typical applications of this unit would be found in service and design departments and include taking one-off or special orders requiring detailed descriptions or handling of complaints.

This unit should not be selected when Unit MEM16003 Provide advanced customer service has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Customer liaison includes using one (1) or more of the following:	• telephone • written forms • email • face-to-face contact • digital/electronic tools
Customer requirements include one (1) or more of the following:	• product • service • price • delivery date • quantity • quality • specifications
Communication skills include one (1) or more of the following:	• active listening • asking and answering questions • appropriate body language • reading • writing • plain English • politeness • assertiveness • building rapport • calmness • patience • empathy • effective verbal communication
Appropriate action to implement customer requirements include one (1) or more of the following:	• filling or entering order • corrective action to resolve complaints • repair or service to customer equipment
Customer issues include	• damaged goods

Assessment Requirements for MEM16004 Perform internal/external customer service

Modification History

Release 1. Supersedes and is equivalent to MEM16004B Perform internal/external customer service

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- applying product knowledge to address customer enquiries
- establishing rapport with the customer and providing positive customer experience
- identifying customer requirements and clearly communicating the degree to which the customer requirements can be met
- proposing alternative products and/or services to satisfy customer requirements and taking action to implement these
- recording and following up customer requirements not able to be met.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- cost of the required product or service
- features and characteristics of products and services offered
- product and service availability and processes
- range of customer requirements for product/service and alternatives available
- reasons for informing the customer promptly of the ability/inability to meet the customer requirements
- strategies for managing customer issues
- record keeping requirements of customer service interactions and transactions
- procedures for:
  - actioning customer orders
  - recording and managing customer complaints
  - recording customer requirements which are not met
  - following up on customer requirements that are not met.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing internal/external customer service at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16005 Operate as a team member to conduct manufacturing, engineering or related activities

Modification History

Release 1. Supersedes and is equivalent to MEM16005A Operate as a team member to conduct manufacturing, engineering or related activities

Application

This unit of competency defines the skills and knowledge required to operate as a member of a team, where operations and outcomes are dependent on the performance of the entire team, and applies to a range of team activities that are carried out within a section of a manufacturing, engineering or a related work environment.

Activities are interdependent in nature, with each team member providing a critical component of the output and effective interaction and collaboration between team members is required in order to achieve team goals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify team goals and processes**	1.1	Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2	Identify team goals and requirements
		1.3	Identify processes in place to assist in meeting team goals
		1.4	Describe workflow and processes
		1.5	Identify roles and responsibilities of team members
		1.6	Identify relationships within team and with other work areas
2	**Communicate and cooperate with team members**	2.1	Use effective interpersonal skills to interact with team members and contribute to activities and objectives
		2.2	Use formal and informal forms of communication effectively to support team achievement
		2.3	Assist team members to ensure team achieves goals and requirements, as required
		2.4	Respect diversity and value in team functioning
		2.5	Recognise views and opinions of other team members and reflect in an accurate manner
		2.6	Use workplace terminology in a correct manner to assist communication
3	**Work as a team member**	3.1	Perform tasks in accordance with organisational and team requirements, specifications and workplace procedures
		3.2	Follow agreed reporting lines using procedures
4	**Solve problems as a team member**	4.1	Identify potential and real problems faced by team
		4.2	Identify procedures for avoiding and managing problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.3 Solve problems effectively and in a manner which supports team functioning

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Team goals include one (1) or more of the following:	• production or manufacturing output • deadlines and timelines • resource use • performance • mistake elimination targets • process improvements • maintenance activity • safety levels
Effective interpersonal skills include one (1) or more of the following:	• basic listening and speaking skills • use of terminology and jargon • giving and receiving feedback • interpreting instructions • verbal and non-verbal modes and methods of communication • managing communication breakdowns and barriers • applying basic principles of effective communication
Formal and informal forms of communication	• meetings • documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include one (1) or more of the following:	• updates • handover • signage • discussion • explanations • demonstration • electronic
Diversity includes one (1) or more of the following:	• ethnicity • age • gender • ability / disability • opinions / beliefs • sexual orientation • language • status in the organisation • level of expertise
Workplace terminology is specific to the processes and equipment used in the workplace including one (1) or more of the following:	• equipment • processes • workplace areas • staff and procedures

Assessment Requirements for MEM16005 Operate as a team member to conduct manufacturing, engineering or related activities

Modification History

Release 1. Supersedes and is equivalent to MEM16005A Operate as a team member to conduct manufacturing, engineering or related activities

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- contributing to achievement of team goals
- communicating and cooperating with team members using effective interpersonal skills
- using formal and informal forms of communication effectively to support team achievement
- respecting diversity and value in team functioning
- using correct workplace terminology correctly to assist in communication
- identifying potential and real problems faced by the team and identifying procedures for avoiding, managing and solving problems in a manner which supports team functioning.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- effective interpersonal strategies and skills
- relationships and roles within team and with others
- benefits of diversity in the workplace
- reporting relationships and procedures
- own responsibilities with respect to products/services to be provided by team
- skills and competencies of the individual and other employees performing interdependent activities
- team goals, objectives and task requirements
- sources of technical expertise/assistance
- appropriate forms of communication.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in operating as a team member to conduct manufacturing, engineering or related activities at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Application

This unit of competency covers the skills and knowledge required to access, organise and communicate information related to production, maintenance or associated processes or tasks that apply in manufacturing, engineering or related environments.

For accessing and recording of data requiring system knowledge and judgement, Unit MEM16008 Interact with computing technology should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015 Work safely and effectively in manufacturing and engineering

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Access information**	1.1	Determine information requirements of tasks and access relevant information from a range of sources
		1.2	Recognise and use workplace terminology correctly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
2	**Organise and analyse information**	2.1 Interpret information and organise in accordance with work requirements 2.2 Determine relevance and implications for immediate work requirements
3	**Communicate organised information using established workplace methods**	3.1 Identify purpose of communication and appropriate communication method 3.2 Communicate information using established workplace methods

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range of sources include using one (1) or more of the following:

- job instructions
- specifications
- standard operating procedures (SOPs)
- charts
- lists
- documents
- computer data
- drawings
- sketches
- tables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- technical manuals and/or charts
- other applicable reference material

Determining relevance of information includes one (1) or more of the following:

- checking relevance of information to own work
- selecting task relevant information from a larger document or from a diagram
- preparing an opinion based on analysis of simple facts
- expressing an opinion on the cause of faults

Workplace terminology refers to one (1) or more of the following:

- equipment
- processes
- workplace areas
- staff
- procedures

Established workplace methods include using one (1) or more of the following:

- proforma reports
- data entry
- verbal
- drawings

Purpose of communication includes one (1) or more of the following:

- simple incident/non-conformance report
- maintenance request
- production records
- material usage records
- work records
- other standard workplace records

Assessment Requirements for MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing and recording relevant information from a range of sources
- recognising and using workplace appropriate terminology
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information
- communicating using appropriate methods and procedures for a variety of situations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- types of information relevant to the workplace and required tasks
- terminology used in the workplace relevant to own work
- available sources of information
- information analysis techniques appropriate to tasks and position
- methods of categorising and organising information including correct sequencing of information
- methods of recording and communicating information.

Assessment Conditions

- Assessors must:
  - have vocational competency in organising and communicating information at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16008 Interact with computing technology

Modification History

Release 1. Supersedes and is equivalent to MEM16008A Interact with computing technology

Application

This unit of competency defines the skills and knowledge required to use a range of computing technology typically used in manufacturing, engineering or related environments to access, input and store information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2	Identify job requirements from specifications, job sheets or work instructions
		1.3	Identify information/data required to be accessed, input

			or stored and its source
2	**Access information/data**	2.1	Follow access procedures and navigate technology to find the required information/data
		2.2	Use relevant software application menus, functions and commands to locate required information/data
		2.3	Retrieve information/data using organisational procedures
		2.4	Check information/data for relevance to job requirements
3	**Input information/data**	3.1	Use relevant software menus, functions and commands to manipulate information/data
		3.2	Enter, change or remove information/data, as required
4	**Store information/data**	4.1	Save data/files following standard procedures prior to exiting the application
		4.2	Produce data output, as required
		4.3	Follow procedures for shutting down/logging off/exiting computing technology
5	**Access assistance as required**	5.1	Identify appropriate personnel and consult, as required
		5.2	Identify manuals, online help and other reference materials and use, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Access procedures include one (1) or more of the following:	• logging on • security procedures • virus checks • start-up routines • application start-up
Technology includes one (1) or more of the following:	• hand held data recording devices • screen based equipment • personal computers • bar coders • tablets
Applications include one (1) or more of the following:	• word processing • spreadsheets • databases • customised engineering and manufacturing applications • material resource planning (MRP) • warehousing inventory applications • predictive reliability and maintenance applications • production data management applications
Data output includes one (1) or more of the following:	• report • email • chart • graph • printout • data transfer • labels

Assessment Requirements for MEM16008 Interact with computing technology

Modification History

Release 1. Supersedes and is equivalent to MEM16008A Interact with computing technology

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing, inputting, manipulating and storing information using workplace computing technology whilst following standard procedures
- accessing assistance, where required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- functions and capabilities of computing technology used in the workplace
- functions of software applications
- use and features of data outputs.

Assessment Conditions

- Assessors must:
  - have vocational competency in interacting with computing technology at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM16009 Research and analyse engineering information

Modification History

Release 1. Supersedes and is equivalent to MEM16009A Research and analyse engineering information

Application

This unit of competency defines the skills and knowledge required to research and analyse engineering information and prepare the information for dissemination.

Applications of this unit would typically be found in manufacturing and engineering work environments with materials and documents based on the relevant knowledge of the employee competency level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM16012	Interpret technical specifications and manuals

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Research information**	1.1 Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.2	Identify research requirements and clarify with appropriate persons
		1.3	Identify sources of research data/information and verify for currency and accuracy
		1.4	Compile information, record and store using research techniques appropriate to the task requirements
		1.5	Sort information for relevance to research and analysis requirements
		1.6	Conduct research within given timeframe, resource and quality constraints
2	**Analyse information**	2.1	Determine scope, criteria and method for analysis and verify, if necessary, with appropriate persons
		2.2	Analyse information accurately according to established criteria
		2.3	Document analysis in an appropriate format according to workplace requirements
3	**Establish findings and conclusions**	3.1	Ensure findings are factual and accurate and describe the results of the analysis
		3.2	Reach conclusions that are logical and based on objective analysis of available data
		3.3	Verify research data, analysis, findings and conclusions with appropriate persons where required
4	**Summarise and organise technical data**	4.1	Record information in suitable form according to workplace requirements
		4.2	Summarise information and organise for ease of reference, using established communication principles
		4.3	Disseminate information to others according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Research requirements include one (1) or more of the following:	• purpose • expected outcomes • scope and nature • timeframe • required resources
Sources of research data/information include one (1) or more of the following:	• surveys • interview • observation • test results • data records • reference books and journals • technical manuals • job histories • internal/external databases
Research techniques include one (1) or more of the following:	• surveying/scanning • skimming • questioning • note-taking • summarising • relationship diagrams • tabling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Communication principles include one (1) or more of the following:	• avoidance of ambiguity, redundancy, verbosity and circumlocution • writing in plain English • use of headings • logical ordering • summarising • layout • customising material to audience • use of graphics and tables

Assessment Requirements for MEM16009 Research and analyse engineering information

Modification History

Release 1. Supersedes and is equivalent to MEM16009A Research and analyse engineering information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and confirming research requirements
- identifying sources of research data/information and verifying for currency and accuracy
- compiling, recording and storing research information using techniques appropriate to task requirements
- analysing information and data, sorting and documenting established findings and conclusions based on analysis and verifying conclusions with appropriate personnel
- summarising and organising information and technical data
- presenting information according to communication principles.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- basic principles and methods of research and analysis
- effective communication principles with respect to research, analysis and organisation of technical data
- sources of research data/information
- relevant personnel for consultation
- relevant information/data
- effect of variations in the information/data on the conclusions reached.

Assessment Conditions

- Assessors must:
  - have vocational competency in researching and analysing engineering information at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16010 Write reports

Modification History

Release 1. Supersedes and is equivalent to MEM16010A Write reports

Application

This unit of competency defines the skills and knowledge required to write technical or non-technical reports that include a basic level of analysis and/or research.

The term report is used to denote any required written communication that goes beyond a simple recording of facts such as completion of a pro forma shift production schedule.

Conclusions and/or recommendations where required are based on prior research or analysis of data. The analysis and conclusions should be consistent with the level of skill and knowledge of an employee working at that level.

Where more than a simple level of data research and analysis is necessary to produce information for the report, Unit MEM16009 Research and analyse engineering information should also be selected.

For preparation of simple technical reports, unit MEM16014 Report technical information should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **2**

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify report requirements**	1.1	Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2	Identify requirements for a written report and confirm with appropriate persons
		1.3	Access information for the report according to workplace procedures
		1.4	Assess information for currency, accuracy and relevance for inclusion in the report
2	**Prepare and produce report**	2.1	Develop a structure and outline of the report according to identified report requirements
		2.2	Write the report using terminology appropriate to the reader and established principles of report writing
		2.3	Base findings and conclusions on factual analysis
		2.4	Give recommendations, alternatives/suggestions and supply supporting evidence, as required
		2.5	Apply protocols, conventions and legal requirements related to acknowledgements and intellectual property, where necessary
3	**Finalise and distribute report**	3.1	Check the report for accuracy and edit, as required
		3.2	Ensure the completed report is consistent with objectives and requirements
		3.3	Copy and distribute the report and store according to instructions and workplace procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Requirements include one (1) or more of the following:

- purpose
- expected outcomes
- scope and nature
- timeframe
- required resources

Reports include one (1) or more of the following:

- reports types:
  - accident/injury
  - equipment report
  - memo and letter reports
  - information report
  - analytical report
- report structure:
  - title page
  - table of contents
  - summary
  - introduction
  - body (findings and conclusions)
  - recommendations
  - references
  - appendices
  - glossary
- report content:
  - text
  - graphs
  - charts
  - tables
  - diagrams

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Principles of report writing include one (1) or more of the following:

- use of headings, subheadings, sectioning and numbering
- objectivity
- expression
- language and grammar
- sentence and paragraph structure
- logical ordering and sequencing
- summarising and editing
- layout and spacing
- content relevancy
- use of graphics, charts, tables and illustrations

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM16010A Write reports

Assessment Requirements for MEM16010 Write reports

Modification History

Release 1. Supersedes and is equivalent to MEM16010A Write reports

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying report requirements and required resources and confirming with appropriate personnel
- preparing the type of report to be written according to report requirements
- writing the report using principles of report writing appropriate to the reader
- presenting findings and conclusions based on factual analysis, making recommendations and supplying supporting evidence, as required
- copying and distributing report and storing according to workplace procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- principles of report writing
- report types and purposes
- structure, style and parts of a report
- use of language and expression in reports
- common writing pitfalls
- report numbering systems
- techniques for reviewing and editing
- importance and benefits of preparing reports appropriate for the intended audience
- referencing and the importance of acknowledging sources.

Assessment Conditions

- Assessors must:
  - have vocational competency in writing reports at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16011 Communicate with individuals and small groups

Modification History

Release 1. Supersedes and is equivalent to MEM16011A Communicate with individuals and small groups

Application

This unit of competency defines the skills and knowledge required to communicate effectively in interpersonal, mediated and group settings during a range of common workplace activities.

This unit includes written communication by letter, short memorandum or report.

Where basic research and structured report writing is required, Unit MEM16009 Write reports should also be selected.

Where research and analysis is required, Unit MEM16009 Research and analyse engineering information should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Plan and prepare**	1.1 Follow standard operating procedures and comply with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	communication		work health and safety (WHS) requirements at all times
		1.2	Identify communication types and networks within the enterprise
		1.3	Follow enterprise conventions, policies and procedures when planning and preparing communication activities
		1.4	Select communication channels and codes appropriate to objectives, circumstances and receivers
		1.5	Plan communication and structure to promote the accurate transfer of meaning
		1.6	Establish communication setting and climate appropriate to purpose and content of message
		1.7	Prepare or obtain required resources
2	**Communicate effectively in interpersonal, mediated and group settings**	2.1	Apply effective communication skills, strategies and principles to communication activity
		2.2	Use verbal and non-verbal language appropriate to the topic, sensitivities and technical understanding of the persons being addressed
		2.3	Respect and consider individual differences
		2.4	Adhere to purpose and objectives of communication
		2.5	Encourage participation in communication
		2.6	Follow conventions, rules, policies and procedures during communication activity
3	**Evaluate communication**	3.1	Obtain feedback regarding the effectiveness of the communication activity
		3.2	Assess outcomes against communication objectives and selected channels and codes
		3.3	Identify communication barriers and determine and implement strategies for overcoming barriers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Communication types include one (1) or more of the following:	• upward:
	  • reporting
	  • suggestions
	  • grievances
	• downward:
	  • policy and procedures
	  • job instruction
	  • feedback
	  • information sharing
	• horizontal:
	  • task coordination
	  • conflict resolution
	  • discussion
	  • problem solving
	  • information sharing

Communication networks include one (1) or more of the following:	• hierarchies • patterns or clusters of personnel • enterprise conventions, protocols and procedures for communication

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Communication channels and codes include one (1) or more of the following:

- written
- verbal:
  - spoken
  - visual
  - sound media
- non-verbal:
  - visual
  - sound
  - touch
  - taste and smell and combinations of these
- codes that give mutual meaning to a message:
  - verbal (spoken or written language)
  - non-verbal (symbols, emblems, body language)

Effective communication skills, strategies and principles include one (1) or more of the following:

- questioning and clarifying
- speaking and conversation skills
- effective and active listening
- reading and comprehension skills
- giving and receiving feedback
- giving and interpreting verbal and non-verbal messages
- using the telephone and similar mediated channels
- establishing communication climate
- basic conflict resolution
- seeking and acknowledging contribution
- agreeing on communication protocols
- clarifying the purpose of the communication activity
- principles and protocols for informal and formal meetings
- principles and protocols for speaking to a group
- group discussion strategies, principles and protocols
- interpersonal strategies and principles

Assessment Requirements for MEM16011 Communicate with individuals and small groups

Modification History

Release 1. Supersedes and is equivalent to MEM16011A Communicate with individuals and small groups

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying communication types within the enterprise
- selecting appropriate enterprise networks for communication
- selecting and using various communication channels and codes in communicating to specific audiences
- communicating effectively using appropriate communication activities
- respecting and considering diversity within the audience
- obtaining feedback and assessing outcomes against communication objectives
- identifying communication barriers and implementing strategies to overcome them.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- communication process, stages and roles
- communication types and networks
- verbal and non-verbal channels - advantages and disadvantages
- verbal and non-verbal codes - advantages and disadvantages
- principles, strategies and conventions for interpersonal, mediated and group communication
- benefits of diversity in the workplace
- communication skills for sender and receiver
- communication blockages, barriers and breakdowns and strategies for overcoming them
- individual differences between communicators and strategies for effective communication
- establishing communication climate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in communicating with individuals and small groups at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16012 Interpret technical specifications and manuals

Modification History

Release 1. Supersedes and is equivalent to MEM16012A Interpret technical specifications and manuals

Application

This unit of competency defines the skills and knowledge required to identify, access, interpret and analyse technical information in an enterprise. It covers explaining and using the information, and identifying implications of information changes on engineering or manufacturing work activities.

Where routine accessing, organising and communicating of information related to processes or tasks is required, MEM16006 Organise and communicate information should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Identify and locate technical information**	1.1 Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2 Identify information needs and confirm with appropriate

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	resources		persons
		1.3	Identify workplace information resources and determine their location in the information system
		1.4	Obtain appropriate technical information
2	**Access technical information**	2.1	Locate relevant technical information using search techniques appropriate to the resource and information requirements
		2.2	Interpret symbols, codes, legends and abbreviations
		2.3	Obtain clarification or further explanation of technical information, as required
		2.4	Verify the revision status of the technical information to ensure currency and authenticity
3	**Interpret and analyse technical information**	3.1	Check technical information/data is appropriate to work requirements
		3.2	Interpret technical information and analyse for use in given engineering or manufacturing applications
		3.3	Use technical information according to the specific engineering or manufacturing application
4	**Explain and use information**	4.1	Explain information and analyses and distribute to appropriate personnel
		4.2	Use information resources according to work requirements
		4.3	Undertake work in accordance with acquired technical information
5	**Identify**	5.1	Monitor technical information systems for changes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
implications of changes to technical information	5.2 Identify personnel affected by changes to internal or external specifications or other technical information
	5.3 Establish means of distributing changed information
	5.4 Document changes to technical information according to enterprise procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Information resources include one (1) or more of the following:	• documented management system (manufacturing, quality, environmental and WHS) • manufacturers' manuals • specifications • Australian Standards • international standards • customer requirements • industry manuals • codes of practice • legislation • quality documentation • equipment manufacturer specifications • engineering data sheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Location includes one (1) or more of the following:	• reference libraries • workplace storage areas • internet • site
Information system includes one (1) or more of the following:	• internal • external

Search techniques include one (1) or more of the following:	• computer database
	• internet search
	• standard techniques to identify relevant information:
	  • skimming and scanning
	  • identifying key words/ideas
	  • using index
	  • table of contents
	  • numbering
	  • classification systems

Assessment Requirements for MEM16012 Interpret technical specifications and manuals

Modification History

Release 1. Supersedes and is equivalent to MEM16012A Interpret technical specifications and manuals

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and locating information resources appropriate for the purpose
- accessing, interpreting and drawing conclusions from analysis of technical information and data required for use in given engineering or manufacturing applications
- undertaking numerical operations, calculations and formulae appropriate to interpreting technical information
- communicating information and analyses of technical information and distributing to appropriate personnel in ways appropriate for the audience
- monitoring technical information systems for changes, notifying personnel and documenting changes to technical information according to procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- available industry information resources
- uses and applications of information resources
- range of formats that information can be presented
- location and retrieval requirements of system information
- correct process used to identify relevant specifications
- quality improvement processes for information systems
- interpretation of technical data and information
- appropriate communication strategies
- dissemination of information regarding information systems
- range of instructional techniques
- implications of changes to technical information
- procedures for responding to information changes.

MEM16013 Operate in a self-directed team

Modification History

Release 1. Supersedes and is equivalent to MEM16013A Operate in a self-directed team

Application

This unit of competency defines the skills and knowledge required to effectively participate in a formally established, highly developed and self-directed team in which the individuals have a common aim, and the jobs and skills of each member fit in with those of others.

The team may have a single leader or shared leadership and would be responsible for all aspects of its designated function within operating parameters and constraints, and members would have day-to-day responsibility for managing themselves and the technical aspects of their work.

Where an individual works with others, such as within a section or department, unit MEM13015 Work safely and effectively in manufacturing and engineering should be regarded as sufficient.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify team function and composition**	1.1	Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2	Identify and understand team purpose and scope
		1.3	Identify team composition, including role of self and team members
		1.4	Identify and understand established parameters, rules and team norms
2	**Participate in team planning**	2.1	Make significant contribution to planning the team activities, based on the individual's technical skills, knowledge and competence
		2.2	Make contribution to the allocation and performance of team tasks
3	**Function effectively as a team member**	3.1	Respect and consider individual differences
		3.2	Ensure interaction with team members is in accordance with established rules, conventions and procedures
		3.3	Perform tasks and responsibilities effectively and in accordance with team objectives
		3.4	Contribute to resolution of real or perceived team issues
		3.5	Make significant contribution to team performance, based on own technical skills and application of established principles and practices for effective teamwork
4	**Monitor and review team performance**	4.1	Participate effectively in the planning and development of team review processes
		4.2	Collect relevant performance data and analyse on an individual and team basis using standard enterprise procedures and methodology
		4.3	Use results to evaluate own and team performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	against established performance indicators and to assist determination of improvement requirements
	4.4 Use principles/techniques for effective team development to identify own/team improvement strategies
5 **Implement team performance improvements**	5.1 Implement performance improvement processes and strategies on an individual and collective basis using standard enterprise procedures
	5.2 Evaluate individual and team performance improvements using standard enterprise procedures
	5.3 Make adjustments to improvement strategies in accordance with team requirements and standard enterprise procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Teams include one (1) or more of the following:

- engineering production teams responsible for a product or process
- maintenance teams
- special-purpose
- project teams

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Team tasks include one (1) or more of the following:	• planning and scheduling activities • implementing plans or work programs • making production-related decisions • acting on problems • focusing on continuous improvement • effective use of resources
Principles and practices for effective teamwork include one (1) or more of the following:	• goals • problem solving • resolving conflict • team leadership • team decision making • team rules and norms • team roles and behaviours • team maintenance
Individual differences include one (1) or more of the following:	• ethnicity • age • gender • ability / disability • opinions / beliefs • sexual orientation • language • status in the organisation • level of expertise

Assessment Requirements for MEM16013 Operate in a self-directed team

Modification History

Release 1. Supersedes and is equivalent to MEM16013A Operate in a self-directed team

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying team composition and managing day-to-day activities within operating parameters and constraints
- participating in team planning and making significant contribution to team activities and resolution of team issues
- respecting and considering diversity within the team
- communicating and interacting effectively with team members
- making individual and joint decisions
- reviewing performance against indicators, identifying strategies to improve team performance and implementing performance improvement processes according to procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- team objectives, targets/goals, performance indicators, processes, rules and conventions
- team member roles – task and behavioural
- team member technical skills, knowledge and competence relevant to the tasks being planned
- scope of work for which the team is responsible
- benefits of diversity in the team
- methods for planning team activities and person(s) responsible for team planning
- impact of planning decisions on other teams, personnel and/or resources
- procedures for obtaining resources
- characteristics of effective teams, including structure, formation and operation of teams
- strategies for effective team development/functioning and team communication
- forms of team leadership and decision making

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- strategies and techniques for resolving conflict and team problem solving
- issues that may affect team performance
- sources of data relevant team performance indicators and reasons for reviewing team performance
- methods/procedures to evaluate team performance
- where appropriate, source(s) of approval to change team performance parameters
- processes/strategies for improving team performance.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating in a self-directed team at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM16014 Report technical information

Modification History

Release 1. Supersedes and is equivalent to MEM16014A Report technical information

Application

This unit of competency defines the skills and knowledge required to prepare reports of a technical nature on tasks or assignments within the employee's skill and competence. The technical information being reported is based on analysis and/or research appropriate for the information being conveyed and applies to the reporting of technical and engineering information beyond simple communication of facts (including completion of a proforma shift production schedule).

Where an individual works with others, such as within a section or department, unit MEM13015 Work safely and effectively in manufacturing and engineering should be regarded as sufficient.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Report structure includes	• reference to the scope of the report • justification for any conclusions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

the following:	• references to any authorities or persons responsible for investigations and or conclusions • description of the methodology involved in preparing and analysing the technical information in the report
Report types include one (1) or more of the following:	• accident/injury report • equipment purchase report • condition monitoring report • test results • production data • a standard workplace format • memoranda • written short reports
Reporting requirements include one (1) or more of the following:	• purpose • expected outcomes • scope and nature • timeframe • required resources

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM16014A Report technical information

Assessment Requirements for MEM16014 Report technical information

Modification History

Release 1. Supersedes and is equivalent to MEM16014A Report technical information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying reporting requirements and confirming with appropriate personnel
- preparing report to convey technical information ensuring content contains all available information, conclusions and description of the methodology involved in preparing and analysing the technical information in the report
- using terminology and language appropriate to the target audience
- presenting findings and conclusions based on factual information and making recommendations and alternatives with supporting evidence
- copying, distributing and storing report according to procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- reporting methods and purposes
- structure, style and parts of a technical report
- correct use of language and expression
- techniques for checking and editing
- importance and benefits of preparing reports appropriate for the intended audience
- referencing and the importance of acknowledging sources.

Assessment Conditions

- Assessors must:
  - have vocational competency in reporting technical information at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM17001 Assist in development and deliver training in the workplace

Modification History

Release 1. Supersedes and is equivalent to MEM17001B Assist in development and deliver training in the workplace

Application

This unit of competency defines the skills and knowledge required to plan and deliver on-the-job training and review the training program and includes structured or informal training, based on cooperation between trainer and other training personnel and is delivered in a one-to-one or small group situation.

Where assessment skills are required unit MEM17002 Conduct workplace assessment should also be selected.

Where normal supervision of an apprentice is required unit MEM17003 Assist in the provision of on-the-job training should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Training

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Plan for delivery of on-the-job training**	2.1	Identify objectives of training and competency to be achieved
		2.2	Clarify role in provision of training
		2.3	Prepare content required to meet training objectives
3	**Deliver on-the-job training**	3.1	Explain training objectives to trainee
		3.2	Carry out training using appropriate techniques
		3.3	Monitor trainee progress and provide constructive feedback to trainee
4	**Review training program**	4.1	Evaluate training program following feedback from participants according to SOPs
		4.2	Record and report training data according to SOPs
		4.3	Promote training according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Objectives of training include one (1) or more of the following:

- achieve effective and safe operation of equipment
- induction to organisational practices and procedures
- continuous improvement
- provision of technical information

Appropriate techniques include the following:

- logical presentation
- sound communication methods
- explanation
- demonstration
- practice
- feedback

Communication techniques include one (1) or more of the following:

- active listening
- using pauses
- using clear, concise and courteous language
- using suitable workplace terminology
- questioning to confirm understanding and elicit information
- selecting timing of interactions
- selecting environments conducive to effective communication

Assessment Requirements for MEM17001 Assist in development and deliver training in the workplace

Modification History

Release 1. Supersedes and is equivalent to MEM17001B Assist in development and deliver training in the workplace

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining, through consultation, the objectives of training and the role of on-the-job training with appropriate personnel
- planning training delivery
- using appropriate communication techniques
- determining and using suitable training techniques
- conducting appropriate training sessions in a safe and effective manner, including the appropriate use of personal protective equipment (PPE)
- monitoring trainee's progress and providing feedback
- reporting trainee's progress through appropriate channels.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- competencies to be achieved through training
- role of the trainer in the provision of training
- identification of person(s) to be trained
- skills and knowledge to be learned
- training location(s)
- tools, equipment, materials and resources required
- training techniques and reasons for selecting chosen training techniques to be used in delivering training
- the reasons for monitoring trainee progress
- procedures for recording trainee progress and reasons for providing feedback
- procedures and reasons for evaluating training programs
- training records to be kept and procedures for recording training data

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for preparing training reports
- procedures and reasons for promoting training in the workplace.

Assessment Conditions

- Assessors must:
  - have vocational competency in assisting in developing and the delivering of training in the workplace at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM17002 Conduct workplace assessment

Modification History

Release 1. Supersedes and is equivalent to MEM17002B Conduct workplace assessment

Application

This unit of competency defines the skills and knowledge required to conduct workplace assessment on an individual basis or in groups where appropriate assessment techniques will be selected based on assessor knowledge of the competency to be assessed or in conjunction with someone who is competent (technical expert).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Training

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify and plan assessment requirements**	2.1	Identify area and purpose of assessment in consultation with appropriate personnel and candidate/s being assessed
		2.2	Identify and select appropriate standards and assessment guides, as required
		2.3	Determine evidence required to establish competency according to industry and enterprise assessment procedure
		2.4	Discuss and confirm evidence required and assessment arrangements to be confirmed in an appropriate way with candidates/s being assessed
3	**Carry out assessment**	3.1	Implement agreed assessment procedure in a manner, time and location to maximise active participation from assessment candidate/s
		3.2	Gather evidence consistent with the agreed assessment procedure using appropriate and specified methods and tools, and document according to agreed industry or site procedures
		3.3	Make evaluation and assessment decisions according to agreed assessment procedures
		3.4	Provide clear and appropriate feedback to candidate/s assessed
		3.5	Provide advice to assessment candidate/s on training needs, appeal mechanisms, as appropriate
4	**Record results**	4.1	Record assessment results according to industry or site

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
and review the procedure	procedures
	4.2 Keep/store records in a manner appropriate to maintenance of confidentiality and safety
	4.3 Review assessment procedures in cooperation with candidate/s being assessed and revise, as appropriate

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Purpose of assessment includes one (1) or more of the following:	• recognition of prior learning • determination of award classification level • identification of training needed
Additional evidence required includes the following:	• task skills, task management and contingency management application
Assessment procedures include one (1) or more of the following:	• observation • documentation • demonstration • projects • oral tests • computer based assessment • written tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate and specified methods and tools include the following:	• clarity, reliability, validity of results, fairness in assessment application, and cost effectiveness of process

Assessment Requirements for MEM17002 Conduct workplace assessment

Modification History

Release 1. Supersedes and is equivalent to MEM17002B Conduct workplace assessment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting relevant units of competency and assessment guides and determining purpose of assessment with the candidate/s being assessed
- discussing and confirming evidence required and the assessment arrangements
- evaluating evidence and making assessment decisions
- providing positive feedback to the candidate/s and providing advice on training gaps and appeal mechanisms
- recording and storing assessments results and notifying appropriate personnel with results of assessment
- reviewing and revising assessment procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- area and purpose of the assessment
- persons to be consulted when determining the assessments to be carried out
- relevant competencies
- evidence required to establish competency and reasons for identifying the evidence to be obtained
- industry assessment procedure
- reasons for discussing and confirming the assessment arrangements with the assessment candidate
- time and location of the assessment and reasons for selection
- methods and reasons for using selection methods and evaluating the gathering of evidence
- procedures for documenting the assessment
- need to provide clear and positive feedback to the assessment candidate
- appeals procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- any further training required by the assessment candidate
- procedures for recording assessment results and keeping and storing assessment records securely
- procedures for reviewing assessments undertaken
- reasons for evaluating assessment methods/procedures and procedures for revising them.

Assessment Conditions

- Assessors must:
  - have vocational competency in conducting workplace assessment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM17003 Assist in the provision of on-the-job training

Modification History

Release 1. Supersedes and is equivalent to MEM17003A Assist in the provision of on the job training

Application

This unit of competency defines the skills and knowledge required to assist in the provision of on-the-job training to others while undertaking normal duties and it may involve the replacement of normal duties with training duties for limited periods of time. The individual would not be expected to be solely responsible for the assessment or reporting of a trainee's progress.

Typical applications could include the provision of on-the-job training by a tradesperson to apprentices/trainees or by a production worker to other production workers/trainees.

Where the development of training programs is required unit MEM17001 Assist in development and deliver training in the workplace should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM17003 Assist in the provision of on-the-job training

Modification History

Release 1. Supersedes and is equivalent to MEM17003A Assist in the provision of on the job training

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining through consultation the objectives of training and the role of on-the-job training
- planning training delivery
- conducting appropriate training in a safe and effective manner, including the appropriate use of personal protective equipment (PPE)
- using appropriate training methods
- monitoring trainee's progress and providing feedback
- reporting trainee's progress through appropriate channels.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- requirements for planning occasional on-the-job training
- features of training with relevant personnel, including:
  - identification of person(s) to be trained
  - the individual's role in the provision of training
  - skills and knowledge to be learned
  - procedures to be followed
  - training location(s)
  - tools, equipment, materials and resources required
  - appropriate delivery method/s
  - the role of feedback in the provision of on-the-job training
  - the reasons for monitoring trainee's progress
- reporting procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in assisting in the provision of on the job training at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18001 Use hand tools

Modification History

Release 1. Supersedes and is equivalent to MEM18001C Use hand tools

Application

This unit of competency defines the skills and knowledge required to use a range of hand tools for a variety of general engineering applications.

This unit should not be selected if the hand tool is dedicated to a single operation or machine or when a machine-specific/customised tool is used.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Use hand tools for general engineering applications**	2.1	Select hand tools appropriate to the task requirements
		2.2	Use hand tools to produce outcomes that meet job specifications
		2.3	Identify unsafe or faulty tools and mark for repair according to designated procedures before, during and after use
		2.4	Undertake routine maintenance of tools using engineering principles, tools, equipment and procedures
		2.5	Store hand tools safely in appropriate location according to procedures and manufacturers' recommendations

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hand tools include one (1) or more of the following:	• hacksaws • hammers • punches • screwdrivers • sockets • wrenches • scrapers • chisels • gouges • wood planes • files of all cross-sectional shapes and types • hand held taps and dies
Applications include one (1) or more of the following:	• adjusting • dismantling • assembling and finishing of items or components • finishing, cutting, scraping of metallic and non-metallic material to size and shape • tapping/retapping and threading/rethreading new/damaged threads
Drawings include one (1) or more of the following:	• drawings and sketches not covered by AS 1100 Technical drawing or AS 1102 Graphical symbols for electrotechnical documentation, and their equivalents • work specifications that include graphic representations that do not require interpretation
Job specifications include one (1) or more of the following:	• finish • tension • size • shape
Routine maintenance includes one (1) or more of the following:	• cleaning • lubricating • tightening • simple tool repairs • adjustments

Assessment Requirements for MEM18001 Use hand tools

Modification History

Release 1. Supersedes and is equivalent to MEM18001C Use hand tools

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using hand tools to produce the desired outcome to job specifications
- following designated procedures for dealing with unsafe or faulty tools
- undertaking routine maintenance and cleaning of hand tools, including storage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features and applications of different hand tools used in a general engineering context, including hacksaws, hammers, punches, screwdrivers, sockets, wrenches, scrapers, chisels, gouges, wood planes and files of all cross-sectional shapes and sizes
- common faults and/or defects in hand tools
- procedures for marking unsafe or faulty tools for repair
- routine maintenance requirements for a range of hand tools, including lubricating, tightening, simple tool repairs and adjustments using engineering principles and relevant equipment
- storage location and procedures for a range of hand tools.

Assessment Conditions

- Assessors must:
  - have vocational competency in using hand tools at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18002 Use power tools/hand held operations

Modification History

Release 1. Supersedes and is equivalent to MEM18002B Use power tools/hand held operations

Application

This unit of competency defines the skills and knowledge required to use a range of hand held power tools and fixed power tools for hand held operations used in a variety of general engineering applications.

This unit should not be selected if the power tools used are dedicated to an operation or machine, e.g. nut-runner, air drill and power driver.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use hand tools is required unit MEM18001 Use hand tools should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Use power tools for general engineering applications**	2.1	Select power tools appropriate to the task requirements
		2.2	Use power tools for a determined sequence of operations to produce desired outcomes to job specifications
		2.3	Identify unsafe or faulty tools and mark for repair before, during and after use according to SOPs
		2.4	Undertake operational maintenance of tools according to principles, techniques and SOPs
		2.5	Store power tools safely in appropriate location according to manufacturers' recommendations and SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Power tools include one (1) or more of the following:	• electric or pneumatic/hydraulic drills • grinders • jigsaws • nibblers • cutting saws • sanders • planers • routers • pedestal drills • pedestal grinders
Power tool operations include one (1) or more of the following:	• clamping • alignments • adjustments
Applications include one (1) or more of the following:	• loosening and fastening items or components • shaping, finishing, cutting, grinding of metallic and non-metallic materials and/or tool bits to size and shape
Drawings include one (1) or more of the following:	• drawings and sketches not covered by AS 1100 Technical drawing or AS 1102 Graphical symbols for electrotechnical documentation, and their equivalents • work specifications that include graphic representations that do not require interpretation
Clamping includes one (1) or more of the following:	• multigrips • vices • jigs and fixtures • clamps
Job specifications include one (1) or more of the following:	• finish • size • shape
Operational maintenance includes one (1) or more of the following:	• cleaning • lubricating • tightening

Assessment Requirements for MEM18002 Use power tools/hand held operations

Modification History

Release 1. Supersedes and is equivalent to MEM18002B Use power tools/hand held operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using a range of hand held and fixed power tools for a variety of general engineering applications
- following designated procedures for dealing with unsafe or faulty power tools
- undertaking routine maintenance and cleaning of power tools, including storage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features and application of different power tools
- clamping/securing methods
- adjustments/alignments to a range of power tools
- common faults and/or defects in power tools
- procedures for marking unsafe or faulty power tools for repair
- routine maintenance requirements and cleaning of a range of power tools
- storage location and procedures of a range of power tools.

Assessment Conditions

- Assessors must:
  - have vocational competency in using power tools/hand held operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18003 Use tools for precision work

Modification History

Release 1. Supersedes and is equivalent to MEM18003C Use tools for precision work

Application

This unit of competency defines the skills and knowledge required to use tools to manually produce work to precise dimensions and/or finishes.

It covers performing precision tasks on a range of metallic and non-metallic materials using a variety of tools, instruments and power equipment.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where precision marking out is required unit MEM12006 Mark off/out (general engineering) should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011 Undertake manual handling

MEM12023 Perform engineering measurements

MEM13015 Work safely and effectively in manufacturing and engineering

MEM16006 Organise and communicate information

MEM18001 Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18002 Use power tools/hand held operations

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare tools and tooling to produce precision outcome**	2.1	Select processes/techniques appropriate to the precision work to be undertaken, material and specifications
		2.2	Select tools, accessories and consumables appropriate to task, specifications and material
		2.3	Prepare tools/tooling and adjust, as required
3	**Use tools to produce work to precise specifications**	3.1	Prepare the work piece and secure using appropriate method for selected operation
		3.2	Use tools to produce specified outcome to the required accuracy in accordance with SOPs
		3.3	Inspect tools and equipment for safe and proper working order before, during and after use
		3.4	Identify unserviceable tools, repair where appropriate, or mark for repair or disposal, according to prescribed procedure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5 Undertake inspection and maintenance of tools and equipment according to standard workplace procedures, principles and techniques
	3.6 Store and maintain tools to ensure serviceability

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Techniques include one (1) or more of the following:	• cutting out • drilling • fitting • filing • reaming • lapping • broaching • burnishing • scraping • polishing • hand held grinding • chiselling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Precision work includes one (1) or more of the following:	• scraping machine beds to precise tolerances • broaching a keyway • hand reaming the bore of a spigot or bush to a positive transition fit with shaft • core drilling (finishing) a blind hole to receive a mating pin • lapping a mechanical seal to fine finish • filing complex angles and mating edges • precision grinding using a flexible drive shaft attachment
Precision outcomes include one (1) or more of the following:	• specified tolerances • allowances • fits • finishes • alignments
Tools or equipment required to achieve precision outcomes include one (1) or more of the following:	• reamers • files • chisels • polishing buffs • lapping plate • broaches • flat, half round and bore scrapers
Tool adjustment includes one (1) or more of the following:	• tool shape • rake angle • clearance angles
Inspection and preventative maintenance include one (1) or more of the following:	• visual checking of leads and connections • sharpening of cutting equipment • repair of associated tools

Assessment Requirements for MEM18003 Use tools for precision work

Modification History

Release 1. Supersedes and is equivalent to MEM18003C Use tools for precision work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing tools for precision outcomes, including selecting processes and engineering techniques, methods and procedures appropriate to the task
- determining and making tool adjustments to produce required outcome, where applicable
- selecting and using precision tools and equipment to produce the desired outcome to meet job specifications
- following designated procedures for dealing with unsafe or faulty tools
- undertaking routine repair/operational maintenance of tools and equipment and storing in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- work to be undertaken and specifications to be achieved
- appropriate tools, processes and equipment required to carry out the work to the required specifications and reasons and procedures for using the selected tools
- engineering principles to be applied during the use of the tools
- manufacturers' specifications of the tools and equipment selected
- procedures for checking tools and equipment for correct and safe operation
- common faults and/or defects in tools and equipment used/selected
- procedures for marking unsafe or faulty tools and equipment for repair
- repairs/operational maintenance that can be made to the tools and equipment used/selected
- procedures for repairing/maintaining the tools and equipment used/selected
- procedures for checking/storing tools and equipment used/selected prior to storage and storage location.

MEM18004 Maintain and overhaul mechanical equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18004 Maintain and overhaul mechanical equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18004B Maintain and overhaul mechanical equipment.

Application

This unit of competency defines the skills and knowledge required to diagnose, locate faults, repair, overhaul, fit and adjust mechanical systems and equipment.

It integrates the application of prerequisite diagnostic, maintenance and overhaul competencies and applies to situations where an integrated level of skills in maintenance and overhaul of mechanical systems and equipment is required.

Where gland packing is required, unit MEM18013 Perform gland packing should also be selected.

Where additional specialist skills are required select appropriate units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18005	Perform fault diagnosis, installation and removal of bearings
MEM18006	Perform precision fitting of engineering components
MEM18007	Maintain and repair mechanical drives and mechanical transmission assemblies
MEM18009	Perform precision levelling and alignment of machines and engineering components
MEM18011	Shut down and isolate machines/equipment
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Perform maintenance tasks and adjustments**	2.1	Perform maintenance tasks on mechanical equipment, components or sub-assemblies to meet specifications
		2.2	Check mechanical equipment, components and sub-assemblies visually and with test equipment to ensure correct function or determine malfunction
		2.3	Make adjustments to equipment or components to ensure specifications are met
3	**Diagnose and locate faults**	3.1	Determine equipment component function by reference to engineering drawings, technical manuals and/or consultation with appropriate personnel
		3.2	Check maintenance reports, review and diagnose faults
		3.3	Carry out consultation with operators and other relevant plant personnel to assist in locating faults, as required
		3.4	Diagnose fault condition and localise at component level using appropriate test equipment and procedures
		3.5	Evaluate faulty condition and take appropriate corrective action
		3.6	Document faults according to SOPs
4	**Repair or overhaul mechanical system**	4.1	Isolate machine or equipment safely or check for isolation
		4.2	Remove faulty equipment, component or sub-assembly from system
		4.3	Select replaceable items from manufacturers' catalogues and obtain by appropriate means
		4.4	Select correct repair procedure, tools and equipment and prepare for use on serviceable items
		4.5	Service, repair or overhaul items to manufacturers' or site specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	4.6	Check components for compliance to specifications, where applicable
5 Fit and adjust mechanical equipment	5.1	Adhere to all electrical, safety and site requirements throughout the maintenance cycle
	5.2	Complete maintenance report to procedures and convey to designated personnel
	5.3	Determine fitting requirements and carry out sequential assembly planning, where applicable
	5.4	Prepare and assemble component parts using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety
	5.5	Select correct jointing and gasket materials and apply in conformance to specifications and operational requirements
	5.6	Determine correct lubrication requirements by appropriate means and attend to, where applicable, using mechanical or manual applications
	5.7	Level mechanical equipment as appropriate using appropriate wedges and levelling devices
	5.8	Perform correct alignment and balancing functions, where appropriate
	5.9	Perform final adjustments on mechanical equipment to align to operational specifications
	5.10	Test mechanical equipment for accuracy and correct operation where applicable, and return to service to specifications
	5.11	Obtain appropriate work and safety clearances throughout maintenance cycle

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Routine maintenance tasks include one (1) or more of the following:	• correct operation • lubrication • adjustments

Test equipment includes one (1) or more of the following:	• engineers' level
	• laser alignments
	• appropriate equipment for measurement of:
	  • alignment
	  • flatness
	  • squareness
	  • straightness
	  • temperature
	  • vibration
	  • load deflection
	  • noise level
	  • RPM

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fitting techniques utilised in the assembly/disassembly of component parts using fastening equipment and methods and procedures to specifications include one or more of the following:	• dowelling
	• pinning and pegging
	• keying
	• thread production and repair which ensures conformance to specifications, operational performance, quality and safety
	• the straightforward removal and replacement of pre-manufactured bearings and seals
	• using acceptable maintenance procedures
	• appropriate lubrication
	• jointing/gaskets
	• seals
	• selection and application of materials in conformance to application requirements and specifications, as applicable
	• manufacture of new or replacement components, including:
	  • marking out
	  • drilling
	  • scraping
	  • filing
	  • reaming
	  • tapping
	  • threading

Assessment Requirements for MEM18004 Maintain and overhaul mechanical equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18004 Maintain and overhaul mechanical equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18004B Maintain and overhaul mechanical equipment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and drawings to maintain and overhaul mechanical equipment
- performing maintenance tasks on mechanical equipment, components or sub-assemblies in accordance with procedures
- assessing mechanical equipment, components and sub-assemblies visually and with appropriate test equipment to ensure correct function or determine malfunction and make adjustments according to procedures
- diagnosing and locating faults using appropriate diagnostic techniques, including visual inspection and use of test equipment, and localising fault condition to component level
- repairing or overhauling faulty equipment using appropriate fitting techniques and principles, tools, equipment and procedures and to manufacturers' or site specifications
- fitting and adjusting mechanical systems and equipment by applying sound fitting principles and techniques to specifications
- performing final adjustments and testing mechanical equipment for accuracy and correct function to align with operational specifications and return to service in accordance with work site procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- preventative maintenance procedures
- functions of system/equipment and their operational requirements
- causes and symptoms of faults and failures
- system and equipment hazard identification and isolation procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- options for sourcing replacement parts
- consequences of incorrect adjustments
- procedures for testing the mechanical systems and equipment
- procedures for returning mechanical systems and equipment to service.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and overhauling mechanical equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18005 Perform fault diagnosis, installation and removal of bearings

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18005 Perform fault diagnosis, installation and removal of bearings (Release 1).

Release 1. Supersedes and is equivalent to MEM18005B Perform fault diagnosis, installation and removal of bearings.

Application

This unit of competency defines the skills and knowledge required to perform fault diagnosis, installation and removal of bearings.

It covers performing routine bearing checks during operation and non-operation, diagnosing bearing faults, identifying bearing requirements for replacement or installation, and removing and installing bearings to industry and enterprise standards of quality and safety.

Where diagnostic skills are not required and where straightforward removal and replacement of pre-manufactured bearings is undertaken, unit MEM18055 Dismantle, replace and assemble engineering components should be regarded as sufficient.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Perform routine bearing checks during operation and non-operation**	2.1	Inspect bearing installation and determine task requirements
		2.2	Check bearing installation during operation using standard procedures of listening, feeling and observing, and using appropriate test equipment
		2.3	Check seal condition for seal and wear leaks
		2.4	Check lubricating devices for correct operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Diagnose bearing faults**	3.1	Perform visual and sensory inspection of bearing arrangement
		3.2	Test bearings for correct operation and malfunction using manufacturers' specifications and diagnostic equipment
		3.3	Identify faulty bearings for replacement
		3.4	Identify causes of failure
		3.5	Take corrective action to avoid recurrences, where necessary
4	**Identify bearing requirements for replacement or installation**	4.1	Inspect bearing installation and determine task requirements
		4.2	Determine operational function of bearings to be installed or replaced
5	**Remove bearings**	5.1	Determine bearing removal techniques and tools
		5.2	Remove bearings from shafts or bearing housings with minimal damage to components
		5.3	Inspect condition of serviceable items using measuring and test equipment
		5.4	Repair serviceable items using engineering techniques, tools and equipment
6	**Install plain bearings**	6.1	Select standard replaceable items for plain, wrapped, flanged, split bush and thrust bearings from manufacturers' parts lists, catalogues or engineering drawings
		6.2	Select installation techniques and tools
		6.3	Size bearings to correct clearance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	6.4	Cater for lubrication requirements to meet specification and/or application requirements
	6.5	Fit and tension down bearings and run according to manufacturers' recommendations or SOPs
	6.6	Check final clearance, adjustments and lubrication and take corrective action, if necessary
7. **Install anti-friction bearings**	7.1	Select standard replaceable ball and roller anti-friction bearings from manufacturers' catalogues, spare parts lists or interpret from engineering drawing to meet specifications
	7.2	Determine bearing inside/outside diameters from specifications or manufacturers' catalogue and check using measuring instruments
	7.3	Check shafts and housings size for correct fit and clearances
	7.4	Select installation techniques
	7.5	Fit bearings to shafts or housings
	7.6	Seal and cap bearings to specifications, where required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Plain bearings include one (1) or more of the following:

Rotational plain bearings:

- plain bush
- wrapped bush
- flanged bush
- split bush
- self-lubricating
- thrust bearings for radial
- thrust and combination radial and thrust loading applications

Anti-friction bearings include one (1) or more of the following:

Ball and roller bearings (anti-friction or rolling element bearings):

- self-aligning ball bearings with cylindrical bore
- taper bore (and adaptor sleeve)
- taper bore (and unthreaded adaptor sleeve)
- single row deep groove ball bearings
- magneto bearings (separable ball bearings)
- single row angular contact ball bearings
- double row angular contact ball bearings
- spherical roller bearings including narrow type and C design
- spherical roller bearings (NV, N NS Type)
- double row cylindrical roller bearings
- linear ball bearings
- needle roller bearings
- taper roller bearings
- single thrust ball bearings
- double thrust ball bearings
- single thrust ball bearings with spherical housing washer and seating ring
- spherical roller thrust bearings
- radial bearings with cylindrical, tapered bore (and adaptor or withdrawal sleeve
- associated bearings for radial, axial and combination radial and axial applications

Assessment Requirements for MEM18005 Perform fault diagnosis, installation and removal of bearings

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18005 Perform fault diagnosis, installation and removal of bearings (Release 1).

Release 1. Supersedes and is equivalent to MEM18005B Perform fault diagnosis, installation and removal of bearings.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and drawings to perform fault diagnosis, installation and removal of bearings
- performing routine bearing checks during operation and non-operation by observing, listening, feeling and the use of appropriate test equipment appropriate to the installation; checking seal for seal and wear leaks and lubricating devices for correct operation
- performing fault diagnosis of bearings using diagnostic techniques and equipment and testing bearings for correct function/malfunction according to manufacturers' specifications
- identifying faulty bearings and causes of failure and taking remedial action to avoid recurrences
- removing bearings from shafts and bearing housings using appropriate fitting techniques and principles, tools, equipment and procedures; and inspecting condition, including measuring bearings and components to specified tolerances and repairing, where appropriate
- installing rotational plain bearings by sizing for correct clearances, lubricating, fitting, tensioning down and running according to specifications and procedures
- installing anti-friction bearings, including ball and roller by determining bearing inside/outside diameters, checking shafts and housings size for correct fit and clearances using appropriate fitting techniques and principles, tools and equipment and seal and cap bearings to specifications, where required
- undertaking numerical operations, calculations and formulae for diagnosing, installing and removal of bearings.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for:
  - checking bearings and seals
  - checking bearing lubrication/lubrication devices
  - determining the appropriate clearances for a range of plain bearings
  - 'sizing' plain bearings
- manufacturer specifications
- engineering principles relating to fault diagnosis, installation and removal of bearings
- reasons for deciding to replace/not replace given bearings
- common causes of bearing failure and their indicators
- lubricants and lubrication requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing fault diagnosis, installation and removal of bearings at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18006 Perform precision fitting of engineering components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18006 Perform precision fitting of engineering components (Release 1).

Release 1. Supersedes and is equivalent to MEM18006C Repair and fit engineering components.

Application

This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in precision fitting and mechanical repair.

It defines the trade-level fitting skills and knowledge associated with manufacturing of new parts/components and fitting mechanical engineering components into assemblies or sub-assemblies to specifications and specified tolerances.

The skills and knowledge described by this unit are applied in occupational and work situations associated with fitting, mechanical trade and maintenance work.

Where the knowledge and skills associated with machining or welding are required, the appropriate units should also be selected.

Where additional or higher marking out skills are required unit MEM12006 Mark off/out (general engineering) should also be selected.

Where the knowledge and skills associated with the installation, removal, repair or replacement of mechanical seals is required unit MEM18012 Perform installation and removal of mechanical seals should also be selected.

Where the knowledge and skills associated with high pressure fluid power seals is required unit MEM18020 Maintain hydraulic system components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work, health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan and prepare to undertake work**	2.1	Assess operation and condition of components against specifications
		2.2	Identify and isolate any faulty or worn components
		2.3	Mark component parts for identification, where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.4	Determine the cause/s of faults using appropriate engineering principles, techniques, procedures, tools and equipment
		2.5	Determine repair/replacement strategy
3	**Manufacture and/or repair and/or replace faulty components**	3.1	Obtain parts, component and or materials from appropriate sources
		3.2	Source, repair or produce components to meet specifications
		3.3	Inspect components for compliance with specifications
4	**Fit engineering components into assemblies or sub-assemblies**	4.1	Determine the correct fitting requirements and sequence of assembly
		4.2	Prepare and assemble component parts using fastening equipment and methods which ensures conformance to specifications, operational performance, quality and safety
		4.3	Determine lubrication requirements by appropriate means and lubricate, where applicable
		4.4	Perform final adjustments on component assembly to meet operational specifications
5	**Check operation of repaired components/unit**	5.1	Check all components/unit under operational conditions for compliance to specifications
		5.2	Approve any out-of-specification modification/alterations through an appropriate authority and record
		5.3	Perform final modifications/alterations on assembly to meet operational specifications
		5.4	Commission the final assembly and return to service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Engineering principles and fitting techniques include one (1) or more of the following:

- limits of tolerance
- allowances and clearances
- effects of wear, stress and temperature
- types of fits:
  - clearance
  - transition
  - interference
- press fitting methods
- force fits
- shrink and freeze (expansion) fits
- keyed fits
- taper fits
- lateral and radial forces
- datum and centrelines
- broaching
- drilling
- scraping
- filing
- reaming
- tapping
- threading
- simple gland top-ups in non-critical applications
- routine gland maintenance
- jointing
- gaskets

Assessment Requirements for MEM18006 Perform precision fitting of engineering components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18006 Perform precision fitting of engineering components (Release 1).

Release 1. Supersedes and is equivalent to MEM18006C Repair and fit engineering components.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing engineering components visually and dimensionally with appropriate testing and measuring equipment techniques for compliance to specifications
- repairing or replacing faulty components using appropriate tools, equipment and techniques
- assembling components using appropriate fitting techniques and principles
- recording approved modifications/alterations
- inspecting final assembly to check compliance to specifications
- returning the final assembly to service in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- tools and equipment used to dismantle, repair, assemble and fit engineering components
- consequences of having non-compliant components
- types of modifications/adjustments to components being repaired/fitted
- repair methods
- sources of replacement parts
- techniques for the production of engineering components
- assembly and fitting techniques
- machine backlash/recoil
- measuring equipment
- engineering components - shafts, single and multi-throw crankshafts, cams and journals, bearings and bearing surfaces, and keys

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- squareness, roundness, concentricity, flatness, straightness, surface finish and angular correctness
- purpose, selection criteria and use of gland packing, jointing or gasket materials
- types and application of lubricants
- approval processes for documenting out-of-specification modifications
- commissioning and return to service procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing precision fitting of engineering components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training* Organisations *2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18007 Maintain and repair mechanical drives and mechanical transmission assemblies

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18007 Maintain and repair mechanical drives and mechanical transmission assemblies (Release 1).

Release 1. Supersedes and is equivalent to MEM18007B Maintain and repair mechanical drives and mechanical transmission assemblies.

Application

This unit of competency defines the skills and knowledge required to undertake maintenance, diagnose faults and repair drives and transmission assemblies, and undertake final adjustment and commissioning on industrial machinery.

Where levelling and alignment of machines and engineering components is required unit MEM18009 Perform precision levelling and alignment of machines and engineering components should also be selected.

MEM27028 Diagnose and rectify manual transmissions, MEM27014 Diagnose and rectify automatic transmissions and MEM27015 Diagnose and rectify drive line and final drives define the skills and knowledge applicable to mobile plant.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			related malfunctions using appropriate maintenance principles, techniques, tools and equipment
		2.3	Identify assembly requiring further diagnosis, repair or adjustment and document findings
3	**Adjust mechanical drives and transmission assemblies**	3.1	Determine a suitable adjustment method and requirements from manufacturers' instruction sheets, standard workshop manuals/procedures or similar means
		3.2	Select adjustment tools and equipment according to the type of assembly being serviced
		3.3	Tension, align, balance or adjust drives/transmission components to manufacturers'/site specifications
		3.4	Check drive/transmission assembly after adjustment for correct operation or identify for further diagnosis or repair
		3.5	Complete service report
		3.6	Action further diagnosis or repair requirements
4	**Diagnose faults**	4.1	Read service reports and undertake visual and sensory inspection of the drive/transmission assembly
		4.2	Test diagnostic equipment drive/transmission assembly to manufacturers' specifications, where applicable
		4.3	Localise faults at the component level and identify for repair or replacement
		4.4	Analyse fault causes and develop preventative measures to avoid re-occurrence, document and action by appropriate means
		4.5	Action requirements for repair or replacement
5	**Repair**	5.1	Ascertain task requirements

	mechanical drives/ transmission assemblies	5.2 Select tools and equipment according to the type of assembly being serviced
		5.3 Dismantle mechanical drive/transmission using appropriate maintenance principles, techniques, tools, equipment and safe workshop practices
		5.4 Repair serviceable items to manufacturers' specifications and standard workshop practices
		5.5 Select and obtain standard replaceable items from appropriate resources
		5.6 Re-fit component parts to mechanical drive/transmission assembly in accordance with manufacturers'/site specifications
6	**Undertake final adjustment and commissioning**	6.1 Tension, balance, align or adjust drive/transmission components to suit specifications and operational requirements
		6.2 Check drive/transmission assembly after adjustment and operational performance is analysed
		6.3 Commission assembly to specifications
		6.4 Complete service report

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM18007 Maintain and repair mechanical drives and mechanical transmission assemblies

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18007 Maintain and repair mechanical drives and mechanical transmission assemblies (Release 1).

Release 1. Supersedes and is equivalent to MEM18007B Maintain and repair mechanical drives and mechanical transmission assemblies.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and drawings to maintain and repair mechanical drives and transmission assemblies
- undertaking diagnosis and testing of mechanical drives/transmissions components for wear, lubrication, faults and malfunctions using appropriate tools, equipment and techniques
- identifying assemblies requiring further diagnosis/repair or adjustment and document findings
- determining adjustment requirements of mechanical drives and transmission assemblies from manufacturers' specifications and manuals
- carrying out adjustments to specifications and confirming correct operation
- interpreting service reports and carrying out inspection of drive/transmission assembly visually, sensory and use of diagnostic test equipment to localise faults down to component level and identify for repair or replacement
- dismantling mechanical drive/transmission using appropriate tools and equipment, repairing serviceable items and re-fitting component parts in accordance with manufacturers'/site specifications
- analysing fault causes and developing preventive measures to avoid re-occurrence
- making final adjustments and commissioning to specifications and completing service report.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- uses and characteristics of lubricants
- principles of operation of a range of mechanical drives and transmissions
- techniques, tools and equipment to measure components
- common malfunctions in mechanical drives, transmissions and their components
- procedures for checking and adjusting mechanical drives, transmissions and their components
- preventative measures that can be undertaken to avoid recurrence of the fault/failure.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing mechanical drives and mechanical transmission assemblies at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18008 Balance equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18008 Balance equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18008B Balance equipment.

Application

This unit of competency defines the skills and knowledge required to check the balance and balancing of equipment.

Balancing may include the addition or removal of material and all specifications for machine operation and degree of balance to be supplied.

Where wheel and tyre balancing is required unit MEM27029 Maintain wheels and tyres should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Assessment Requirements for MEM18008 Balance equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18008 Balance equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18008B Balance equipment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and drawings to balance equipment
- setting up component to be balanced to site/manufacturer's procedures and determining balance/out-of-balance and comparing to specifications
- operating balance equipment using appropriate techniques safely
- checking for compliance to specifications
- undertaking numerical operations, geometry, calculations and formulae for balancing equipment.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of balancing and reasons for testing equipment for balance
- effect of out of balance components on machine/equipment operation and life
- procedures for checking the balance of equipment
- most appropriate procedure to be applied to selected balancing situations and reasons for selection
- procedures for:
  - setting up the component to be balanced
  - operating the balancing equipment
  - recording out-of-balance readings
  - balancing out-of-balance equipment
- specifications of the component to be balanced
- principles and methods of rigid and flexible rotation balancing
- techniques of single and multiple plane balancing
- appropriate balancing technique for given balancing situations and reasons for selection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- precautions to be taken when adding or removing material to achieve balance.

Assessment Conditions

- Assessors must:
  - have vocational competency in balancing equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for MEM18009 Perform precision levelling and alignment of machines and engineering components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18009 Perform precision levelling and alignment of machines and engineering components (Release 1).

Release 1. Supersedes and is equivalent to MEM18009B Perform levelling and alignment of machines and engineering components.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and drawings to perform levelling and alignment of machines and engineering components
- selecting appropriate levelling and/or alignment procedure in accordance with task requirements
- selecting appropriate levelling and alignment devices/equipment appropriate to the task
- performing levelling/alignment tasks, including levelling or alignment calculations, using appropriate tools, equipment and techniques to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of levelling and alignment
- numerical operations, geometry and calculations/formulae for levelling and alignment
- effects on equipment performance and life of non-level or out-of-alignment components
- techniques, tools, equipment and procedures to carry out the levelling and/or alignment
- reasons for selecting tools, techniques and equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing levelling and alignment of machines and engineering components at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18010 Perform equipment condition monitoring and recording

Modification History

Release 1. Supersedes and is equivalent to MEM18010C Perform equipment condition monitoring and recording

Application

This unit of competency defines the skills and knowledge required to undertake condition monitoring of equipment, including recording the results.

It applies where specialist monitoring activities are undertaken as part of a preventive maintenance or total productive maintenance plan or program and monitoring is undertaken in workshop, laboratory or in situ environment.

Where only routine maintenance checking and diagnostic skills are applied see other appropriate units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Undertake condition monitoring**	2.1	Apply principles and methods of equipment condition monitoring
		2.2	Select appropriate condition monitoring technique to achieve required outcomes
		2.3	Undertake checks safely
		2.4	Plot results and report deviations from specification to appropriate authority and record

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Techniques include one (1) or more of the following:	• built-in systems (software and site displays) • vibration monitors • infra-red and ultraviolet non-destructive testing

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18010C Perform equipment condition monitoring and recording

Assessment Requirements for MEM18010 Perform equipment condition monitoring and recording

Modification History

Release 1. Supersedes and is equivalent to MEM18010C Perform equipment condition monitoring and recording

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and drawings to perform equipment condition monitoring and recording
- selecting appropriate condition monitoring device/equipment to achieve the required outcomes
- carrying out condition monitoring, plotting results and reporting deviation from specifications according to procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- application of principles and methods for a variety of situations
- appropriate records for a variety of situations.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing equipment condition monitoring and recording at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18011 Shut down and isolate machines/equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18011C Shut down and isolate machines/equipment

Application

This unit of competency defines the skills and knowledge required to isolate and shut down machines and equipment and applies to situations that require extensive system knowledge that exclude the straightforward starting/stopping of machinery/equipment through the use of simple switching, including use of emergency switches.

All shutdown and isolation must comply with relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006 Organise and communicate information

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
		1.5	Identify any relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown
2	**Shut down and isolate machine/ equipment**	2.1	Determine machine/equipment operational function
		2.2	Undertake shutdown/isolation sequence safely and to SOPs
		2.3	Ensure machine/equipment is depressurised/emptied/de-energised/bled to SOPs
		2.4	Verify safe shutdown/isolation of machine/equipment
		2.5	Install safety/security lock-off devices and signage
		2.6	Confirm shutdown and isolation complies with relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Shut down/isolate includes one (1) or more of the following:	• isolation of mechanical and electrical drives • pipework (pressure) • rotating equipment utilising electrical lock-off isolators • mechanical and power driven valves
Machine/equipment includes one (1) or more of the following:	• manual • semi-automatic • automatic machines of a stand-alone, continuous production or process nature

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18011C Shut down and isolate machines/equipment

Assessment Requirements for MEM18011 Shut down and isolate machines/equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18011C Shut down and isolate machines/equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other applicable reference documents to shut down and isolate machines and equipment
- shutting down machines/equipment ensuring machine/equipment is depressurised/emptied/de-energised/bled according to procedures
- isolating machines/equipment safely in accordance with SOPs, relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown and verifying safe isolation
- installing safety/security lock-off devices and signage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operational function of the machine/equipment
- shutdown sequence
- procedures and safety precautions for shutting down and isolating the machine/equipment
- procedures for purging/de-energising the machine/equipment and reasons for doing so
- procedures for verifying machine/equipment shutdown and isolation and reasons for verifying
- relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown
- safety/security lock-off devices and signage to be installed
- reasons and procedures for installing lock-off devices and signage
- reasons for ensuring the machine/equipment is left in a clean safe state.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in shutting down and isolating machines/equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18012 Perform installation and removal of mechanical seals

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18012 Perform installation and removal of mechanical seals (Release 1).

Release 1. Supersedes and is equivalent to MEM18012B Perform installation and removal of mechanical seals.

Application

This unit of competency defines the skills and knowledge required to check, dismantle, select, reassemble and install a range of mechanical seals.

Skills covered by this unit include the knowledge of appropriate applications for a range of mechanical seals and the ability to remove, select, repair or replace all component parts of the seal.

Where straightforward replacement of seals is required see unit MEM18055 Dismantle, replace and assemble engineering components.

Lubrication requirements are attended to according to suppliers' instructions and recommendations or specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine mechanical seal requirements**	2.1	Apply principles and operational function of mechanical seals and component parts to determine seal requirements
		2.2	Interpret specifications from engineering drawings for new mechanical seal installation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Dismantle mechanical seal installations**	3.1	Examine mechanical seal assembly and select appropriate dismantling techniques, tools and equipment to suit work requirements
		3.2	Dismantle mechanical seal assembly
		3.3	Examine all component parts for wear, including housing, shafts, primary sealing elements, secondary seals and seat assembly, to determine need for repair or replacement
		3.4	Repair serviceable items by appropriate means
		3.5	Remove primary sealing elements and secondary seals for replacement, where required
4	**Select replacement items and reassemble mechanical seal installations**	4.1	Select replacement items from appropriate sources or sample using SOPs
		4.2	Fit mechanical seal components, including seal head, secondary seals, seat assembly, shaft and housing
		4.3	Tension and adjust mechanical seal assembly to manufacturers' specifications
		4.4	Test mechanical seal assembly using appropriate methods for compliance with specifications and operational performance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Seals include one (1) or more of the following:	• carbon • stellite • neoprene • other associated materials
Mechanical seals include (1) one or more of the following:	• pusher • non-pusher • conventional • balanced • unbalanced • cartridge • single spring • multiple spring

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM18012 Perform installation and removal of mechanical seals (Release 1).

Release 1. Supersedes and is equivalent to MEM18012B Perform installation and removal of mechanical seals.

Assessment Requirements for MEM18012 Perform installation and removal of mechanical seals

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18012 Perform installation and removal of mechanical seals (Release 1).

Release 1. Supersedes and is equivalent to MEM18012B Perform installation and removal of mechanical seals.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents for determining mechanical seal requirements
- dismantling mechanical seal assemblies used across different sealing applications using appropriate tools, equipment and techniques
- examining all component parts for wear and determining the need for repair/replacement and selecting replacement parts according to specifications
- reassembling/repairing mechanical seal installations using appropriate tools and equipment
- selecting and fitting replacement parts
- measuring components to specified tolerances
- adjusting mechanical seal tensions and checking for compliance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of operation of mechanical seals
- components and function of a range of mechanical seal designs
- installation specifications and procedures
- techniques/tools for removing primary sealing elements and secondary seals from mechanical seals
- reasons for selection mechanical seal
- specified mechanical seal tension
- testing mechanical seals

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- techniques, tools and equipment to measure components.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing installation and removal of mechanical seals at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18013 Perform gland packing

Modification History

Release 1. Supersedes and is equivalent to MEM18013B Perform gland packing

Application

This unit of competency defines the skills and knowledge required to inspect glands and gland packing and remove and replace or top up gland packing. It applies to packing for high or low temperatures and pressures, solids, gases and liquids.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where skills that relate to maintaining simple gland top-ups in non-critical applications and routine gland maintenance are required unit MEM18006 Perform precision fitting of engineering components should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Inspect glands and gland packing**	2.1	Apply principles of gland packing
		2.2	Inspect stuffing box assembly and gland packing and determine packing requirements
3	**Remove and replace or top up gland packing**	3.1	Extract or remove gland packing using appropriate engineering techniques, tools and equipment
		3.2	Select correct and appropriate gland packing and cut to size and shape to conform to application and/or specifications
		3.3	Fill the stuffing box with packing material and reassemble the gland using site procedures or manufacturers' recommended procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Packing includes one (1) or more of the following:	• flat • ribbon • round • square • moulded • dry • lubricated
Packing material includes one (1) or more of the following:	• carbon • hemp • rubber • leather • Teflon • felt • neoprene

Assessment Requirements for MEM18013 Perform gland packing

Modification History

Release 1. Supersedes and is equivalent to MEM18013B Perform gland packing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other reference material to perform gland packing
- inspecting stuffing box assembly and gland packing and determining task requirements
- extracting or removing gland packing using appropriate tools, equipment, techniques and procedures to specifications
- replacing gland packing material, cutting to size and shaping to conform to application and/or specifications
- topping up stuffing box with packing material and reassembling the gland according to procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of gland packing
- tools, techniques and equipment required to remove gland packing
- various types of gland packing
- reasons for selecting gland packing
- methods of cutting gland packing to size and shape
- reassembling procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing gland packing at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18014 Manufacture press tools and gauges

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18014 Manufacture press tools and gauges (Release 1).

Release 1. Supersedes and is equivalent to MEM18014B Manufacture press tools and gauges.

Application

This unit of competency defines the skills and knowledge required to manufacture and trial press tools and gauges.

Manufacture of the tooling includes preparing to manufacture including assembly of the tooling components and trialling all types of production tooling.

Where brazing skills are required unit MEM05006 Perform brazing and/or silver soldering should also be selected.

Where manufacture of cavity dies is required unit MEM18097 Manufacture cavity dies should also be selected.

This unit does not cover any welding that may be associated with manufacturing press tools and gauges. If welding skills are required, appropriate welding units must also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 8

Pre-requisite Unit

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.4	Identify job requirements from specifications, drawings, prints, job sheets, work instructions or sample component
2	**Prepare to manufacture tool or gauge**	2.1	Plan and develop tooling type and design with reference to customer's specifications (written or verbal) for numbers, finish, quality and material
		2.2	Assess production machine to be used to produce components and consider in tooling design
		2.3	Determine selected production machine mounting requirements to ensure any special or additional provisions are incorporated in tooling design
3	**Manufacture tooling**	3.1	Select and obtain appropriate materials to meet tooling requirements for strength, durability, component finish, heat treatment qualities, where necessary, and account for materials availability
		3.2	Test selected material for hardness, as appropriate to aid selection of machine tools, hand tools and hand held power tools to be used to fashion or shape tooling components
		3.3	Develop a plan to sequence and stage manufacturing process, including establishing datum, mark out, rough out (machine or fashion), stress relieve/heat treat, finish size, fashion and fit, and assemble componentry
4	**Perform machining operations**	4.1	Select appropriate machines and machining process from a range of standard tool room machines to shape/produce tooling components to specifications
5	**Use hand and hand held power tools**	5.1	Select a range of hand and hand held power tools and use to fashion/manufacture tooling components to specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	5.2 Produce components sample or section for testing, where practical
6 **Assemble tooling components and trial tooling**	6.1 Check components and fit/assemble to specifications using acceptable tool making techniques and procedures
	6.2 Check first-off component with precision instruments against specification
	6.3 Modify tooling to produce components to specification, as necessary
	6.4 Re-trial modified tooling and produce component
	6.5 Verify compliance to specification and report according to SOPs
	6.6 Record all deviations or modifications to original tooling design, prints or plans and report

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tooling includes one (1) or more of the following:	• press tools • jigs • fixtures • gauges

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- special purpose machines and equipment

Standard tool room machines include one (1) or more of the following:

- lathes
- mills
- copy/duplicator
- grinders
- electrical discharge machining (EDM) and wire cut equipment
- precision measurement machines and equipment

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM18014 Manufacture press tools and gauges (Release 1).

Release 1. Supersedes and is equivalent to MEM18014B Manufacture press tools and gauges.

Assessment Requirements for MEM18014 Manufacture press tools and gauges

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18014 Manufacture press tools and gauges (Release 1).

Release 1. Supersedes and is equivalent to MEM18014B Manufacture press tools and gauges.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, prints and/or sample components to manufacture press tools and gauges
- planning and developing tooling type with reference to tooling drawings, prints or plans
- incorporating mounting requirements into tooling design and confirming against customer specifications
- manufacturing tooling by selecting and testing appropriate materials for hardness to meet requirements
- preparing a sequential plan for the manufacture of the required tooling
- shaping/producing tooling components to specifications using appropriate machines and machining processes
- using hand and hand held power tools to fashion/manufacture tooling components to specifications
- assembling and fitting tooling components using appropriate tool making techniques and procedures
- producing first-off component and checking for compliance to specifications
- modifying and re-trialling tooling, as required and verifying compliance to specifications
- recording all deviations or modifications to original tool design and reporting according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- customers' tooling requirements, including type of tooling to be manufactured
- machine(s) in which the tooling is to be used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tooling design concept in terms of customer specifications and proposed production machine(s)
- performance requirements of the tooling
- method of mounting the tooling in the production machine into which it is to be installed
- physical properties of a range of tool steels
- appropriate materials for each component of the tooling to be produced
- reasons for selecting the chosen materials in terms of strength, durability, component finish, heat treatment requirements and availability
- procedures for:
  - hardness testing materials and the effect of material hardness on machinability of the material
  - documenting plans for the manufacture of tooling
  - fitting/assembling the tooling components
  - reporting/recording the conformance of the component/product produced by the tooling to specifications
  - recording/reporting modifications and/or alterations to tooling design
- appropriate machinery and tools to be used to fashion or shape tooling components and reasons for selection
- reasons for establishing a sequential plan for the manufacture of tooling
- hand and hand held power tools to be used to fashion/manufacture the required tooling components and reasons for selection
- precautions to be taken when fitting/assembling tooling components
- appropriate precision instruments for checking the components produced
- specifications of the finished product
- causes of any non-conformance to specification
- tool making techniques/procedures to be applied to return the tooling to specification.

Assessment Conditions

- Assessors must:
  - have vocational competency in manufacturing press tools and gauges at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18015 Maintain tools and dies

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18015 Maintain tools and dies (Release 1).

Release 1. Supersedes and is equivalent to MEM18015B Maintain tools and dies.

Application

This unit of competency defines the skills and knowledge required to maintain tools and dies.

It covers identifying and analysing defects in tooling, disassembling and assessing tooling components, manufacturing or repairing tooling components to conform to specifications, and assembling tooling components. Potential production/maintenance problems are also identified.

Where simple maintenance not requiring precision repair is required unit MEM18006 Perform precision fitting of engineering components should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM06007	Perform basic incidental heat/quenching, tempering and annealing
MEM07005	Perform general machining
MEM07006	Perform lathe operations
MEM07007	Perform milling operations
MEM07008	Perform grinding operations
MEM09002	Interpret technical drawing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Identify and analyse defects in tooling**	2.1	Determine defects from production components produced, production reports or tool inspections
		2.2	Plan sequence of maintenance operations
3	**Disassemble and assess tooling components**	3.1	Disassemble tooling and assess condition of components against prints, drawings and manufacturers' drawings
		3.2	Replace/recondition worn/damaged parts
4	**Manufacture/repair and assemble tooling components**	4.1	Obtain materials to meet tooling requirements
		4.2	Select and use appropriate hand and hand held power tools
		4.3	Choose appropriate machining process from a range of standard tool room machines
		4.4	Set machining parameters to produce components to specification
		4.5	Initiate heat treatment according to specification, where appropriate
		4.6	Check tooling components and assemble in conformance with specifications and procedures
		4.7	Check production components to ensure compliance to specifications, as required
5	**Identify potential production/ maintenance problems**	5.1	Identify and record conditions leading to tooling failure
		5.2	Identify recurrent faults and initiate solutions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tooling includes one (1) or more of the following:	• press tools • plastic moulds • forging dies • die casting • jigs • fixtures • gauges
Tool room equipment includes one (1) or more of the following:	• lathes • mills • grinders • hand and power tools used for precision work

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM18015 Maintain tools and dies (Release 1).

Release 1. Supersedes and is equivalent to MEM18015B Maintain tools and dies.

Assessment Requirements for MEM18015 Maintain tools and dies

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18015 Maintain tools and dies (Release 1).

Release 1. Supersedes and is equivalent to MEM18015B Maintain tools and dies.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings and sample products/components to maintain tools and dies
- examining defective tooling for breakage, wear and defects requiring precision repair
- disassembling the defective tooling in accordance with acceptable tool making techniques and procedures and marking worn/damaged components for repair or replacement
- obtaining appropriate materials for manufacture of replacement tooling components and testing for hardness
- using appropriate hand and hand held power tools to fashion/manufacture tooling components to specifications and utilising sample components or sections to test tooling components being manufactured
- shaping and producing the tooling components to specifications using appropriate machines and machine processes and initiating heat treatment, where required
- assembling and fitting all tooling components to specifications using acceptable tool making techniques and procedures
- using precision instruments to check the first-off component/product for compliance to specifications
- recording the conditions that lead to the failure of a given set of tooling and initiating design modifications/alterations to rectify recurring faults or failure.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- common tooling defects from a range of sample products/components and reasons and probable causes of tooling failure
- reasons for establishing a sequential plan for the repair/maintenance of defective tooling
- procedures for:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - documenting plans for the repair/maintenance of defective tooling
  - disassembling defective tooling
  - identifying worn/damaged tooling and components for repair or replacement
  - obtaining/selecting the chosen materials in terms of strength, durability, component finish, heat treatment requirement, availability and reasons for selection
  - hardness testing materials
  - initiating the heat treatment of tool steels and components and heat treatment requirements to achieve specified hardness
  - fitting/assembling the tooling components and precautions to be taken
  - fitting/assembling the tooling components
  - documenting the chosen mode of tooling failures
  - initiating modifications/alterations to tooling design
- specifications of all tooling components
- precision instruments to be used to check tooling components for conformance to specification and reasons for selection
- reasons for deciding to repair or replace worn/damaged components
- appropriate materials, including physical properties for each component of the tooling to be replaced
- hand and hand held power tools to be used to fashion/manufacture the required tooling components and reasons for selection
- appropriate machines and machining processes to shape/produce the required tooling components and reasons for selection
- effect of machining parameters on the surface finish and tolerances achievable from machining processes for given machining tasks and specifications
- reasons for heat treating the tool steel in accordance with heat treatment procedures and specifications
- appropriate precision instruments for checking the components produced
- specifications of the finished product
- common causes of tooling failure and conditions leading to the failure of a given set of tooling
- previous faults with the given set of tooling
- any commonalities of causes of failures or trends/events associated with tooling failure and proposed solutions for a range of recurrent faults that may occur in tooling and reasons for selection.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining tools and dies at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18016 Analyse plant and equipment condition monitoring results

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18016 Analyse plant and equipment condition monitoring results (Release 1).

Release 1. Supersedes and is equivalent to MEM18016B Analyse plant and equipment condition monitoring results.

Application

This unit of competency defines the skills and knowledge required to analyse condition monitoring results and develop recommendations based on the analysis. The data analysed is generated by a continuous plant and equipment condition monitoring program.

Where production of formal reports is required unit MEM16010 Write reports should also be selected.

Where production of reports of a technical nature is required unit MEM16014 Report technical information should also be selected.

Where equipment condition monitoring and recording only is required to be performed then unit MEM18010 Perform equipment condition monitoring and recording should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM12025	Use graphical techniques and perform simple statistical computations

Assessment Requirements for MEM18016 Analyse plant and equipment condition monitoring results

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18016 Analyse plant and equipment condition monitoring results (Release 1).

Release 1. Supersedes and is equivalent to MEM18016B Analyse plant and equipment condition monitoring results.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining results of condition monitoring of plant and equipment and examining and analysing records/graphs/results and identifying areas of concern
- determining indications of malfunctions or impending failure by performing calculations to analyse condition monitoring data
- reporting recommendations to the appropriate authority in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operational specifications of the plant/equipment being monitored and any trends and/or deviations
- numerical operations and calculations/formulae for data analysis within the scope of this unit
- procedures for reporting the analysis of condition monitoring data
- previous history of the plant/equipment being monitored
- relevant legislative requirements
- recommendations and reasons with respect to action to be taken
- expected effect of the recommendations on the operational performance of the plant/equipment
- procedures for reporting recommendations and authority/person to whom the recommendations are to be made.

MEM18017 Modify mechanical systems and equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18017 Modify mechanical systems and equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18017C Modify mechanical systems and equipment.

Application

This unit of competency defines the skills and knowledge required to determine the requirements of the modification, undertake the modification and evaluate the modified mechanical system/equipment.

It applies to significant modifications to plant and equipment that lead to desired changes in performance of existing equipment or the installation of new or replacement equipment.

Maintenance schedules are required for mechanical machines and systems, including stationary, stand-alone machines, and manual, semi-automatic and automatic process systems.

Where drafting skills to Australian Standard 1100 Technical drawing is required unit MEM09003 Prepare basic engineering drawing should also be selected.

Where the selection and use of precision mechanical measurements is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where interpretation of technical specifications is required unit MEM16012 Interpret technical specifications and manuals should also be selected.

Where minor modifications are required to be performed unit MEM18055 Dismantle, replace and assemble engineering components and MEM18006 Perform precision fitting of engineering components, should also be selected as appropriate.

Where balancing equipment is required unit MEM18008 Balance equipment should also be selected.

Where equipment condition monitoring and recording is required unit MEM18010 Perform equipment condition monitoring and recording should also be selected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where analysing of plant and equipment condition monitoring results is required unit MEM18016 Analyse plant and equipment condition monitoring results should also be selected.

Where graphical techniques and simple statistical computations are required, unit MEM12025 Use graphical techniques and perform simple statistical computations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan modification requirements**	2.1	Analyse maintenance reports and system output information
		2.2	Identify defective components, sub-assemblies and design faults
		2.3	Develop corrective action plan
3	**Undertake standard modifications to mechanical systems and equipment**	3.1	Identify modification options for overcoming parts failures and design faults
		3.2	Select replacements for failed components and sub-assemblies from manufacturers' catalogue
		3.3	Develop modification design in conjunction with and approved by appropriate authority
		3.4	Record modification according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

4	**Evaluate modified mechanical system/equipment**	4.1	Evaluate alterations for effectiveness and efficiency
		4.2	Report and record effectiveness/efficiency
		4.3	Check results against specifications
		4.4	Recommend additional modification/changes, where required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Analysis includes:

- interpretation and integration of data from consultations, process control instrumentation, and specifications and manuals

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM18017 Modify mechanical systems and equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18017C Modify mechanical systems and equipment.

Assessment Requirements for MEM18017 Modify mechanical systems and equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18017 Modify mechanical systems and equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM18017C Modify mechanical systems and equipment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining modification requirements by obtaining and analysing relevant maintenance reports, production data, specifications, drawings, circuits and conditioning monitoring data and developing corrective action plan in accordance with SOPs
- inspecting plant/equipment for correct location, alignment, operation, performance and conformance to specifications and identifying modification options to overcome parts failure and design faults
- developing modification/s to plant and equipment which lead to desired changes in performance in conjunction with, and approved by, appropriate authority
- recording approved modifications in accordance with procedures and preparing and authorising drawings of the modified components and/or sub-assemblies
- operating and monitoring performance of modified plant/equipment to ensure compliance with the required performance specifications
- recording/reporting efficiency/effectiveness of the modifications undertaken and recommending further modifications, where required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- desired changes in performance of the plant/equipment
- specifications of the plant/equipment and its performance requirements
- procedures for:
  - inspecting the plant/equipment against specifications
  - documenting the proposed modifications to the plant/equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - modifying and authorising changes to drawings of components and/or sub-assemblies, and plant/equipment
  - recording modifications undertaken
  - checking the operation of the modified plant/equipment against required performance specifications
  - reporting/recording the effectiveness/efficiency of the modifications
- effect of defective components, sub-assemblies and design faults on the performance of plant/equipment
- reasons and action to be taken to achieve the desired changes in performance
- authority from whom approval to undertake the proposed modifications is to be obtained
- typical part failure modes and the causes and action to be taken to correct part failures and design faults
- options for modifying the plant/equipment for given part failures and/or design faults
- replacement parts from manufacturers'/suppliers' catalogues for given components and/or sub-assemblies
- tests to be undertaken to check the performance of the modified plant/equipment
- engineering design and drawing skills associated with modifying mechanical systems and equipment
- numerical operations, geometry and calculations/formulae.

Assessment Conditions

- Assessors must:
  - have vocational competency in modifying mechanical systems and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18018 Maintain pneumatic system components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18018 Maintain pneumatic system components (Release 1).

Release 1. Supersedes and is equivalent to MEM18018C Maintain pneumatic system components.

Application

This unit of competency defines the skills and knowledge required to check pneumatic system components, identify and repair or replace faulty components.

Pneumatic system components are identified and inspected and assessed using fluid power principles to predetermined specifications interpreted from data sheets and circuits diagrams.

Where straightforward removal/replacement of components from a pneumatic system is required unit MEM18055 Dismantle, replace and assemble engineering components and unit MEM18071 Connect and disconnect fluid conveying system components, should be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Check pneumatic system components**	2.1	Identify the characteristics and operational function of each system component
		2.2	Inspect and test the operational function of each component
		2.3	Assess correct operation of each component against specifications
3	**Identify, repair**	3.1	Localise faulty system components and confirm

or replace faulty pneumatic system components	malfunction by inspection and testing using fluid power principles, procedures and safety requirements
	3.2 Dismantle faulty system components and repair to manufacturers'/site specifications
	3.3 Select replacement parts from appropriate sources
	3.4 Reassemble system components and verify for correct operation and test against specifications
	3.5 Confirm correct operation of the pneumatic system according to SOPs
	3.6 Adopt appropriate follow-up procedures
	3.7 Complete service reports

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pneumatic system components include one (1) or more of the following:	• static and dynamic seals • linear and semi-rotary actuators • pressure control valves • directional control valves • flow control valves • normally open and closed timers • counters • pneumatic motors

Assessment Requirements for MEM18018 Maintain pneumatic system components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18018 Maintain pneumatic system components (Release 1).

Release 1. Supersedes and is equivalent to MEM18018C Maintain pneumatic system components.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to maintain pneumatic system components
- inspecting and testing pneumatic system components to predetermined specifications using fluid power principles
- checking component parts visually and dimensionally for compliance to specification and, where appropriate, marking faulty parts for repair, replacement or adjustment
- dismantling and repairing faulty system components, including selecting replacement parts from manufacturers'/suppliers' catalogues to site or manufacturers' specifications
- assembling and testing pneumatic components for correct operation and compliance to specifications
- checking the operation of the pneumatic system for compliance to specifications
- completing service reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- full range of pneumatic system components and characteristics/operational function of each component
- procedures and equipment for inspecting and testing pneumatic system components
- specifications of each pneumatic system component
- faulty system components and causes of faulty components
- individual components within the pneumatic system
- procedures for repairing pneumatic system components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for checking pneumatic system operation
- follow-up procedures with respect to repaired/replaced pneumatic system components
- reporting/recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining pneumatic system components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18019 Maintain pneumatic systems

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18019 Maintain pneumatic systems (Release 1).

Release 1. Supersedes and is equivalent to MEM18019B Maintain pneumatic systems.

Application

This unit of competency defines the skills and knowledge required to undertake preventive maintenance checks/adjustments on pneumatic systems, and fault-find, replace, repair or overhaul and recommission pneumatic systems.

It applies to pneumatic systems in industrial and mobile plant and equipment used in manufacturing, agricultural, forestry, mining and transport industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM18019 Maintain pneumatic systems

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18019 Maintain pneumatic systems (Release 1).

Release 1. Supersedes and is equivalent to MEM18019B Maintain pneumatic systems.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining and interpreting maintenance reports and preventative maintenance schedules
- inspecting and testing pneumatic system components, assemblies or sub-assemblies and carrying out preventative maintenance tasks to predetermined specifications using fluid power principles, tools and equipment
- checking component parts visually and dimensionally for compliance to specification and, where appropriate, marking faulty parts for repair, replacement or adjustment
- consulting with system operator and carrying out visual inspection of pneumatic system and components with respect to the fault being investigated and other anomalies
- undertaking fault-finding and verifying and confirming faults/malfunctions
- isolating and depressurising system or sub-assembly, confirming and using appropriate tagging system according to SOPs
- removing, dismantling and repairing/overhauling faulty system components or sub-assembly, including selecting replacement parts from manufacturers'/suppliers' catalogues, to site or manufacturers' specifications
- assembling pneumatic components or sub-assembly for compliance to specifications, refitting items to equipment and testing for correct operation
- recommissioning pneumatic system/sub-assembly to specifications and verifying correct operation and initiating any follow-up procedures
- updating and completing maintenance records and/or service reports.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pneumatic principles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manufacturers' specifications and structure of common pneumatic system components and their constituent parts
- pneumatic system/component faults that can be determined by visual inspection
- application of common pneumatic system/component test equipment
- scheduled preventative maintenance tasks
- common pneumatic system and component faults and any previous faults
- any previous maintenance carried out on the pneumatic system/components
- typical checks/tests that can be carried out on pneumatic systems/components and their application
- pneumatic system/component tests and testing techniques
- apparent faults/malfunctions
- documentation/reporting requirements with respect to verified faults/malfunctions
- procedures for initiating repair and/or overhaul of the pneumatic system
- procedures for isolating and depressurising pneumatic systems
- tagging requirements for isolated systems
- appropriate repair/overhaul procedures of pneumatic components
- pneumatic system operational specifications and system recommissioning procedures
- any appropriate follow-up maintenance or operational checks
- maintenance recording/reporting requirements and consequences of inaccurate or incomplete recording/reporting of maintenance/service activities.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining pneumatic systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- removing, dismantling and repairing/overhauling faulty system components or sub-assembly, including selecting replacement parts from manufacturers'/suppliers' catalogues, to site or manufacturers' specifications
- assembling hydraulic components or sub-assembly for compliance to specifications, refitting items to equipment and testing for correct operation
- recommissioning hydraulic system/sub-assembly to specifications and verifying correct operation and initiating any follow-up procedures
- updating and completing maintenance records and/or service reports.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- hydraulic principles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- manufacturers' specifications and structure of common hydraulic system components and their constituent parts
- hydraulic system/component faults that can be determined by visual inspection
- application of common hydraulic system/component test equipment
- scheduled preventative maintenance tasks
- common hydraulic system and component faults and any previous faults
- any previous maintenance carried out on the hydraulic system/components
- typical checks/tests that can be carried out on hydraulic systems/components and their application
- hydraulic system/component tests and testing techniques
- apparent faults/malfunctions
- documentation/reporting requirements with respect to verified faults/malfunctions
- procedures for initiating repair and/or overhaul of the hydraulic system
- procedures for isolating and depressurising hydraulic systems
- tagging requirements for isolated systems
- appropriate repair/overhaul procedures of hydraulic components
- hydraulic system operational specifications and system recommissioning procedures
- any appropriate follow-up maintenance or operational checks
- maintenance recording/reporting requirements and consequences of inaccurate or incomplete recording/reporting of maintenance/service activities.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining hydraulic systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18022 Maintain fluid power controls

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18022 Maintain fluid power controls (Release 1).

Release 1. Supersedes and is equivalent to MEM18022B Maintain fluid power controls.

Application

This unit of competency defines the skills and knowledge required to install and repair and/or rectify fluid power controls, and adjust fluid power system control sequence and operation.

It covers fault-finding of fluid power systems control circuits, maintaining and repairing or replacing system control components, and checking and adjusting the sequence of fluid power system controls. System circuit/components are identified, traced, inspected and operational function is assessed and verified using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams.

Where skills beyond the sequencing of programmable logic controllers (PLCs) are required unit MEM10004 Enter and change programmable controller operational parameters and unit MEM10005 Commission programmable controller programs, should be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18055	Dismantle, replace and assemble engineering components

Plus, one or more of the following, including their prerequisites:

MEM18019	Maintain pneumatic systems
MEM18021	Maintain hydraulic systems

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Install/replace fluid power systems and**	2.1	Interpret and apply fluid power control principles and system/circuit diagrams
		2.2	Identify system/circuit components and inspect for

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	controls		compliance with specifications
		2.3	Undertake sequential installation according to manufacturers' specifications and SOPs
3	**Check and adjust fluid power system control sequence and operation**	3.1	Check controls and system operation against operational specifications using appropriate test equipment and application principles/techniques
		3.2	Perform adjustments to sequence system to meet/align to operational requirements and specifications
		3.3	Report modifications/alterations and according to SOPs
		3.4	Check controls and system operation and commission to specifications
4	**Fault find fluid power systems control circuit**	4.1	Interpret and apply system/circuit diagrams and data sheets
		4.2	Identify and inspect system/circuit components
		4.3	Trace system/circuit and diagnose action of components to identify and localise faults
		4.4	Test system/circuit parts using appropriate test equipment and application principles
		4.5	Assess system/circuit parts against operational specifications
		4.6	Localise fault condition at the component level
		4.7	Evaluate faulty condition, analyse root cause and plan corrective action
5	**Maintain, and repair or rectify system control**	5.1	Apply correct maintenance procedures
		5.2	Select and apply repair procedures using appropriate tools, equipment and techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	components	5.3	Test faulty items, repair or replace using sequential installation procedures according to manufacturers' recommendations
		5.4	Select replacement items from appropriate sources
		5.5	Reassemble system control components according to specifications
6	**Check and adjust sequence of fluid power system controls**	6.1	Identify circuit sensors and controllers using circuit diagrams and fluid power system control principles
		6.2	Make necessary adjustments to sequence system control circuit to meet operational specification
		6.3	Check and verify correct operation of system control circuit against operational specification
		6.4	Commission fluid power system controls to specifications
		6.5	Adopt appropriate follow-up procedures
		6.6	Complete service/maintenance report

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fluid power systems control sequencing includes one (1) or more of the following:	• PLCs • relay logic control systems • unitised/modular sensors • transducers • timers • counters • associated equipment

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM18022 Maintain fluid power controls (Release 1).

Release 1. Supersedes and is equivalent to MEM18022B Maintain fluid power controls.

Assessment Requirements for MEM18022 Maintain fluid power controls

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18022 Maintain fluid power controls (Release 1).

Release 1. Supersedes and is equivalent to MEM18022B Maintain fluid power controls.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining and interpreting specifications system/circuit diagrams, system operation data sheets and control data and identifying and inspecting system components for compliance with specifications
- planning and undertaking sequential installation of fluid power systems and controls in accordance with manufacturers' specifications and procedures
- checking and adjusting control and system operation using appropriate test equipment ensuring that the sequence of operations conforms to specifications and operational requirements
- recording/reporting any modifications/alterations to the system in accordance with standard operating procedures
- fault-finding fluid power systems control circuit using fault-finding techniques and appropriate test equipment and identifying and localising components not conforming to operational specifications for repair/replacement
- repairing/replacing faulty items after testing for compliance to specifications using appropriate tools, equipment and techniques
- reassembling control components to meet specifications
- verifying correct operation of system power control circuit and commissioning the fluid power system controls to specifications
- initiating maintenance and/or service follow-up procedures and completing maintenance and/or service reports according to standard operating procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- system operational and control requirements and specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- application of common fluid power system components and controllers
- system/circuit components
- special installation requirements
- fluid power and common test equipment and their application
- correct operational sequence of the system
- typical adjustments to correct sequencing variations from specification
- procedures for recording/reporting modifications/alterations and consequences of not recording/reporting
- fluid power system commissioning procedures
- component(s) not complying with operational specification and typical causes of component failure
- cause of the faulty condition in the component(s) and appropriate procedures for rectifying the faulty condition
- appropriate maintenance schedule and procedures
- appropriate control component repair procedures
- typical test equipment and applications
- circuit sensors and controllers
- common adjustments that can be made to control systems and their effect
- any maintenance/service follow-up procedures
- maintenance/service recording/reporting requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining fluid power controls at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18023 Modify fluid power system operation

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18023 Modify fluid power system operation (Release 1).

Release 1. Supersedes and is equivalent to MEM18023B Modify fluid power system operation.

Application

This unit of competency defines the skills and knowledge required to determine the requirements of the modification, undertake the modification and evaluate the modified or repaired fluid power system.

Tasks are undertaken based on analysis of service/maintenance reports and defective components, sub-assemblies and design faults are identified and appropriate redesign action is commissioned.

Preparation for redesign specifications and associated drawing changes/modifications are personally undertaken or delegated to appropriate personnel and supervised.

Where the modification requires the knowledge of programmable logic control (PLC) program installation or commissioning is required unit MEM10004 Enter and change programmable controller operational parameters and unit MEM10005 Commission programmable controller programs, should be selected as appropriate.

Where equipment condition monitoring and recording is required unit MEM18010 Perform equipment condition monitoring should also be selected.

Where analysing of plant and equipment condition monitoring results is required unit MEM18016 Analyse plant and equipment condition monitoring results should also be selected.

Where graphical techniques and simple statistical computations are required, unit MEM12025 Use graphical techniques and perform simple statistical computations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM18023 Modify fluid power system operation

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18023 Modify fluid power system operation (Release 1).

Release 1. Supersedes and is equivalent to MEM18023B Modify fluid power system operation.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining, interpreting and analysing service/maintenance and system output information
- identifying and verifying defective components, sub-assemblies and design faults using appropriate tools, equipment and techniques
- investigating modification requirements, including obtaining relevant information, to overcome parts failure or design faults in consultation with appropriate personnel
- undertaking modifications to fluid power systems and checking and evaluating the operation of the modified/repaired fluid power system for compliance with operational specifications
- recording/reporting modifications in accordance with SOPs
- initiating and monitoring further corrective action until desired efficiencies/outcomes are achieved
- completing evaluation reports on the modifications/repairs in accordance with standard operating procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- fluid power system performance, faults history and variations from operational specification
- faults attributable to poor design and defective components/sub-assemblies
- appropriate test equipment and applications and techniques for verifying design faults
- personnel to be consulted during the modification process
- specifications and sources of information pertaining to the selected modification/design option

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- modification/design options available to overcome system faults
- most appropriate modification/design option, including cost and benefits
- procedures for undertaking the selected modification/design option
- replacement components conforming to predetermined specifications from manufacturer's catalogues
- modifications to be undertaken
- revised operational specification of the fluid power system
- frequency of checks for compliance against operational specifications
- effectiveness and efficiency of the modifications/repairs and any variations from operational specifications
- any further modifications/repairs that could improve the effectiveness and efficiency of the fluid power system
- personnel to whom recommendations are to be made
- appropriate reporting requirements for recording/reporting modifications to fluid power systems.

Assessment Conditions

- Assessors must:
  - have vocational competency in modifying fluid power system operation at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18045 Fault find and repair electrical equipment/components up to 250 volts single phase supply

Modification History

Release 1. Supersedes and is equivalent to MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply

Application

This unit of competency defines the skills and knowledge required to locate and rectify faults in equipment and components using up to 250 volts single phase power where they are disconnected from their electrical supply and this would also typically cover plug-in appliances.

It also covers basic mechanical disconnection, dismantling and reassembly of equipment components, enclosures and drives.

This unit should not be selected if unit MEM18046 Fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c. has been selected.

Where disconnection and reconnection of fixed-wired equipment is required unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. should also be selected.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Assessment Requirements for MEM18045 Fault find and repair electrical equipment/components up to 250 volts single phase supply

Modification History

Release 1. Supersedes and is equivalent to MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to fault find and repair electrical equipment/components up to 250 volts single phase supply
- checking that the electrical equipment/components are isolated and tagged where necessary in strict accordance with work health and safety (WHS) requirements and procedures
- locating and reading/recording built-in indicators and error codes
- checking and testing electrical components for correct operation and/or compliance with specifications
- identifying and localising faults in electrical equipment/components using appropriate fault-finding techniques and test equipment and recording/reporting faults in accordance with SOPs
- repairing/replacing or adjusting electrical equipment/components to specifications and selecting replacement parts using manufacturers' catalogues and data
- verifying that the electrical equipment/components are operating to specifications
- recording rectification activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation and characteristics of active and passive components
- basic motor operation of various types
- function of the electrical equipment/component within the circuit
- relevant regulatory requirements
- electrical equipment/component isolation procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- test equipment to be used to verify isolation of the electrical equipment/circuit
- errors indicated by built-in devices
- procedures for:
  - testing the operation of the electrical equipment/component and tools, equipment and techniques to be used and reasons for selection
  - localising faults in electrical equipment/components
  - recording/reporting faults in electrical equipment/components
  - recording electrical equipment/component rectifications
- specifications of the electrical equipment/component
- variations between test results and specifications
- techniques/procedures and adjustments that can be made for returning the electrical equipment/components to specification.

Assessment Conditions

- Assessors must:
  - have vocational competency in fault finding/repairing electrical equipment/components up to 250 volts single phase supply at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or* its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18046 Fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM18046B Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.

Application

This unit of competency defines the skills and knowledge required to diagnose, locate and rectify faults in electrical equipment/components up to 1000 volts a.c./1500 volts d.c. single and multi-phase power where these are disconnected from the electrical supply.

It covers basic mechanical disconnection, dismantling and reassembly of equipment components, enclosures and drives.

Where disconnection and reconnection of fixed-wired equipment is required unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. should also be selected.

Where work involves up to 250 volt single phase supply only then unit MEM18045 Fault find and repair electrical equipment/components up to 250 volts single phase supply should be selected.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate fault**	2.1	Determine equipment/component function by reference to circuit diagrams, schematics, manual and/or consultation with technical adviser
		2.2	Examine and interpret built-in fault indicators and error codes and record results to procedures, where appropriate
		2.3	Isolate equipment in accordance with procedures from power supply
		2.4	Check and test equipment/component using appropriate tools, test equipment, procedures and techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.5	Interpret and verify check and test results, where required
	2.6	Identify, localise and record equipment/component fault in accordance with SOPs
3 **Rectify fault(s)**	3.1	Repair, replace or adjust equipment/component/s and check and test to specification or manufacturers' requirements using appropriate tools, equipment and techniques
	3.2	Record rectifications report in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• single and multi-phase motor drive and heating appliances • relays • coils • transformers • thermostats • gauges • illuminating devices • switches • circuit fuses and breakers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:	• brushes • armatures • windings • contactors • relays • programmable controllers • other electronic switching devices • switches • fuses • circuit breakers • relays • transformers • semi-conductor devices • regulators • motors
Appropriate fault-finding techniques include:	• testing for voltage, current, frequency, polarity, phase, circuit continuity, insulation resistance and earth continuity
Test equipment includes one (1) or more of the following:	• continuity testers • ammeters • voltmeters • multimeters • tong testers • wattmeters • cathode ray oscilloscopes

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18046B Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.

Assessment Requirements for MEM18046 Fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM18046B Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.
- checking that the electrical equipment/components are isolated and tagged where necessary in strict accordance with work health and safety (WHS) requirements and procedures
- locating and reading/recording built-in indicators and error codes
- checking and testing electrical equipment and components on non-interconnected circuits for correct operation and/or compliance with specifications
- identifying and localising faults in electrical equipment and components using appropriate fault finding techniques using appropriate fault finding techniques and test equipment and recording/reporting faults in accordance with SOPs
- repairing/replacing or adjusting electrical equipment/components to specifications and selecting replacement parts using manufacturers' catalogues and data
- verifying that the electrical equipment/components are operating to specifications
- recording rectification activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- function of the electrical equipment/component within the circuit
- relevant regulatory requirements
- electrical equipment/component isolation and tagging procedures
- test equipment to be used to verify isolation of the electrical equipment/circuit
- errors indicated by built-in devices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for:
  - testing electrical equipment/components for correct operation
  - localising faults in electrical equipment/components
  - recording/reporting faults in electrical equipment/components
  - recording electrical equipment/component rectification
- tools, equipment and techniques to be used to test the operation of the electrical equipment/component and reasons for selection
- specifications of the electrical equipment/component
- variations between test results and specifications
- appropriate techniques/procedures for returning and confirming the electrical equipment/components have been returned to specification
- adjustments that can be made to electrical equipment/components.

Assessment Conditions

- Assessors must:
  - have vocational competency in fault finding/repairing electrical equipment/components up to 1000 volts a.c./1500 volts d.c. at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18048 Fault find and repair/rectify basic electrical circuits

Modification History

Release 1. Supersedes and is equivalent to MEM18048B Fault find and repair/rectify basic electrical circuits

Application

This unit of competency defines the skills and knowledge required to locate and repair/rectify faults in non-interconnected electrical circuits.

It applies to work on basic circuits which are defined as single circuits with single outputs. The single circuits may be controlled by one or more devices and the output may control one or more devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **12**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM10002	Terminate and connect electrical wiring
MEM10003	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18049	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate fault**	2.1	Determine circuit function and characteristics by reference to circuit diagrams, specifications, schematics and/or consultation with technical adviser
		2.2	Examine and interpret built-in fault indicators and error codes and record results to procedures, where appropriate
		2.3	Isolate circuit from power supply
		2.4	Verify and localise faults using appropriate tools, test equipment, procedures and techniques
		2.5	Record faults in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3 **Repair/rectify fault**	3.1 Repair/replace or adjust circuit/s to specifications or manufacturers' requirements
	3.2 Check and test circuit/s for compliance with site or manufacturers' specifications
	3.3 Record repair/rectification report in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Specifications/regulations and drawings include one (1) or more of the following:	• legislative acts • wiring rules • other standards • specifications • electrical and architectural drawings
Appropriate fault-finding techniques include testing for the following:	• voltage • current • frequency • polarity • phase • circuit continuity • insulation resistance • earth continuity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEM18048 Fault find and repair/rectify basic electrical circuits

Modification History

Release 1. Supersedes and is equivalent to MEM18048B Fault find and repair/rectify basic electrical circuits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- use appropriate personal protective equipment (PPE)
- identify and interpret specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to fault find and repair/rectify basic electrical circuits
- check and record built-in fault indicators and error codes to site requirements
- checking that the electrical circuit is isolated and tagged where necessary in strict accordance with work health and safety (WHS) requirements and procedures
- using diagnostic skills to locate faulty operation using appropriate fault-finding techniques and test equipment to verify faults
- test, adjust or set basic controls (e.g. pressure controls thermostats, timers and overloads)
- repairing/replacing or adjusting electrical circuits to specifications and verifying using appropriate test equipment that the electrical circuit is operating to manufacturers specifications
- recording rectification activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- circuit characteristics
- relevant regulatory requirements
- errors indicated by built-in devices
- circuit isolation and tagging procedures
- common electrical test instruments and their application
- common techniques for testing electrical circuits
- recording/reporting requirements for electrical circuit faults
- appropriate techniques/procedures for returning the circuit/s to specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- site/manufacturers' circuit specifications
- requirements for recording circuit rectifications or replacement.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing, repairing/rectifying basic electrical systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM18049C Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Application

This unit of competency defines the skills and knowledge required to disconnect and reconnect equipment to all voltage levels up to1000 volts a.c./1500 volts d.c.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band:

This unit has dual status and is to be regarded as both a specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **3**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM10002	Terminate and connect electrical wiring
MEM12002	Perform electrical/electronic measurement
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Disconnect equipment**	2.1	Determine electrical characteristics of equipment and circuit by reference to circuit drawings, schematics, reference manuals, equipment specifications, identification plate and/or consultation with technical adviser
		2.2	Determine and record equipment characteristics, including direction of rotation, where appropriate
		2.3	Identify point/s of electrical isolation and isolate equipment in accordance with procedures
		2.4	Use all lock-off equipment and signage requirements appropriately
		2.5	Prove electrical isolation using appropriate techniques, procedures and test equipment
		2.6	Note, record and label conductor layout
		2.7	Disconnect conductors and terminate and make safe disconnected cables/connections
3	**Connect equipment**	3.1	Identify characteristics of the equipment to be connected and determine connection requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.2	Check circuit for safe isolation using appropriate test equipment, procedures and techniques
	3.3	Check connections and prepare conductors for termination
	3.4	Connect conductors to equipment in accordance with specifications and regulatory requirements
	3.5	Fasten/seal all cables/wires/conduit to specifications
	3.6	Remove all lock-off equipment and signage
	3.7	Check and test equipment and circuit for compliance with specifications and regulatory and legislative requirements
4 **Perform emergency first aid**	4.1	Assess situation to identify points of danger to the injured person and potential rescuer
	4.2	Undertake rescue/recovery of injured person or provide assistance to injured person in accordance with recognised standards/procedures
	4.3	Make contact with the appropriate medical and rescue authorities
	4.4	Record details of first aid given

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes:	• as defined in the licensing requirements, including electric motors, modular sensing switches and limit switches
Electrical isolation includes:	• safe disconnection of all electrical power to equipment or equipment supply circuits via switching, circuit breakers or fuses on circuits/equipment using up to 1000 volts a.c. or 1500 volts d.c. single or multi-phase supply
Test equipment and tools include one (1) or more of the following:	• voltmeters • multimeters • tong testers
Connect equipment includes:	• reconnection of existing equipment or the replacement on a 'like for like' basis with no alteration to existing fixed wiring and also includes the original connection of fixed wired equipment

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18049C Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Assessment Requirements for MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM18049C Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.
- checking that the electrical equipment is isolated and tagged where necessary in strict accordance with work health and safety (WHS) requirements and procedures using appropriate lock-off equipment and tags/signs
- disconnecting equipment by labelling and recording conductors and making safe disconnected cables/connections using appropriate tools, test equipment, procedures and techniques
- confirming isolation prior to reconnecting fixed wired equipment and checking connections and preparing conductors for termination in accordance with manufacturers' specifications and regulatory requirements
- connecting conductors to equipment and fasten/seal cables/wires/conduits using appropriate procedures and tools to relevant specifications and regulatory requirements
- testing terminated cables to ensure continuity and insulation resistance and complying with following requirements:
  - checking continuity of the protective earth conductor to determine whether it is sufficiently low
  - testing the resistance between the protective earth conductor and the neutral conductor to determine whether it is sufficiently low – not greater than 2 Ohms
  - testing the insulation resistance of active conductors to confirm that it is greater than 1 Megohm
- removing all lock-off devices and signage and checking/testing equipment and circuits for compliance to specifications
- rescuing/recovering of injured person in accordance with appropriate standards/procedures and providing first aid, where appropriate, including contacting the appropriate medical and rescue authorities
- recording details of first aid given.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- basic knowledge of electrical theory for the operation of the circuit/equipment
- relevant regulatory requirements
- procedures for:
  - determining and recording equipment characteristics
  - proving and removing electrical isolation
  - labelling conductors and recording conductor layout
  - disconnecting conductors and terminating disconnected cables/connections
  - terminating conductors and checking connections and specifications that apply
  - connecting conductors to equipment
  - fastening and sealing the cables, wires and conduits and tools, techniques and equipment to be used
  - checking and testing the compliance of the equipment with specifications and tools, techniques and equipment to be used
  - recording first aid
- tools, techniques and equipment required to determine equipment characteristics, prove electrical isolation and disconnect/reconnect and terminate conductors
- point(s) of isolation for the fixed wired equipment and reasons for selecting the chosen isolation point(s)
- safe isolation and proving dead
- range of isolation procedures for the fixed wired equipment
- lock-off equipment and signs to be used and reasons for using and procedures for lock-off equipment and signage
- characteristics of the circuit and the equipment
- operational specifications of the fixed wired equipment
- points of danger to the injured person or potential rescuer
- recognised procedures for the movement and treatment of the injured person, including safe rescue of victim from a live situation, clearing of airways, care of spinal injuries, treatment of cuts/lesions, burns/scalds and treatment of shock
- appropriate local medical and rescue services.

Assessment Conditions

- Assessors must:
  - have vocational competency in disconnecting/reconnecting fixed wired equipment up to 1000 volts a.c./1500 volts d.c. at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate techniques and procedures include:	• clearances for safe approach as mandated by statutory authorities
Electrical isolation includes:	• isolating supply for safe disconnection of all electrical power to equipment supply circuit with switch circuit breaker or fuses on circuits/equipment at voltage levels above 1000 volts a.c. and 1500 volts d.c.
Test equipment and tools include, in accordance with voltage and fault limiting requirements, one (1) or more of the following:	• appropriate proving dead meters • high potential testers • voltmeters
Signage includes one (1) or more of the following:	• tags • access permit holders • restricted access signs

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18050C Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.

Assessment Requirements for MEM18050 Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM18050C Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c.
- checking that the electrical equipment is isolated and tagged where necessary in strict accordance with work health and safety (WHS) requirements and procedures using appropriate lock-off equipment and tags/signs
- disconnecting equipment by labelling and recording conductors and making safe disconnected cables/connections using appropriate tools, test equipment, procedures and techniques
- confirming isolation prior to reconnecting fixed wired equipment and checking connections and preparing conductors for termination in accordance with manufacturer's specifications and regulatory requirements
- connecting conductors to equipment and fasten/seal cables/wires/conduits using appropriate procedures and tools to relevant specifications and regulatory requirements
- inspecting and testing terminated cables to ensure they comply with continuity and insulation resistance requirements and are safely intended for use
- removing all lock-off devices and signage and checking/testing equipment and circuits for compliance to specifications
- rescuing/recovering of injured person in accordance with appropriate standards/procedures and providing first aid, including contacting the appropriate medical and rescue authorities
- recording details of first aid given.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant regulatory requirements
- characteristics of the circuit and the equipment
- point(s) of isolation for the fixed wired equipment and reasons for selecting the particular isolation point(s) and reasons for using earthing, lock-off equipment and signs
- clearances from live parts
- safe isolation
- operational specifications of the fixed wired equipment and connections to be made
- procedures, techniques, tools and equipment to be used for:
  - determining and recording equipment characteristics
  - isolating the fixed wired equipment and proving electrical isolation
  - labelling conductors and recording conductor layout
  - disconnecting conductors
  - terminating disconnected cables/connections
  - checking circuits for safe isolation
  - terminating conductors and checking connections
  - connecting the conductors to the equipment
  - fastening and seal the cables, wires and conduits
  - removing lock-off equipment and signage
  - checking the operation of the equipment and circuits
  - checking and testing the compliance of the equipment with specifications
- potential dangers/risks associated with work
- recognised procedures for the movement and treatment of the injured person, including high voltage (HV) rescue, clearing of airways, care of spinal injuries, treatment of cuts/lesions, burns/scalds and treatment of shock
- appropriate local medical and rescue services
- procedures for incident reporting.

Assessment Conditions

- Assessors must:
  - have vocational competency in disconnecting/reconnecting fixed wired equipment over 1000 volts a.c./1500 volts d.c. at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18051 Fault find and repair/rectify complex electrical circuits

Modification History

Release 1. Supersedes and is equivalent to MEM18051B Fault find and repair/rectify complex electrical circuits

Application

This unit of competency defines the skills and knowledge required to locate and repair/rectify faults in interconnected electrical circuits.

It applies to work on interconnected electrical circuits where electrical equipment and/or components are connected electrically, that is, there are multiple electrical power supplies or sources, voltages or circuits which are found in the control or switching of the circuit.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM10002	Terminate and connect electrical wiring
MEM10003	Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18048	Fault find and repair/rectify basic electrical circuits
MEM18049	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate fault**	2.1	Determine circuit/system function and characteristics by reference to circuit diagrams, specifications, schematics and/or consultation with technical adviser
		2.2	Examine and interpret built-in fault indicators and error codes and record results to procedures, where appropriate
		2.3	Isolate circuit power supply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.4	Verify and localise faults using appropriate, tools and test equipment, procedures and techniques
	2.5	Record faults in accordance with SOPs
3 **Repair/rectify fault**	3.1	Repair/replace or adjust circuit/s to specifications or manufacturers' requirements
	3.2	Check and test circuit/s for compliance with site or manufacturers' specifications
	3.3	Record repair/rectification report in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Specifications/regulations and drawings include one (1) or more of the following:	• legislative acts • wiring rules • other standards • specifications • electrical and architectural drawings
Appropriate fault-finding techniques include testing for the following:	• voltage • current • frequency • polarity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- phase
- circuit continuity
- insulation resistance
- earth continuity

Test equipment includes one (1) or more of the following:

- continuity testers
- ammeters
- voltmeters
- multimeters
- tong testers
- wattmeters
- cathode ray oscilloscopes

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18051B Fault find and repair/rectify complex electrical circuits

Assessment Requirements for MEM18051 Fault find and repair/rectify complex electrical circuits

Modification History

Release 1. Supersedes and is equivalent to MEM18051B Fault find and repair/rectify complex electrical circuits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to fault find and repair/rectify complex electrical circuits
- checking that the electrical circuit/system is isolated and tagged where necessary in strict accordance with work health and safety (WHS) requirements and procedures
- locating and reading/recording built-in indicators and error codes
- using diagnostic skills to locate faulty operation using appropriate fault finding techniques and test equipment to verify faults
- repairing/replacing or adjusting electrical circuits/systems to specifications and verifying using appropriate test equipment that the electrical circuit/system is operating to specifications
- recording rectification activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- circuit characteristics
- relevant regulatory requirements
- errors indicated by built-in devices
- circuit isolation procedures
- common electrical test instruments and their application
- common techniques for testing electrical circuits
- recording/reporting requirements for electrical circuit faults
- appropriate techniques/procedures for returning the circuit/s to specification
- site/manufacturers' circuit specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- requirements for recording circuit rectifications
- any applicable industry standards, national/Australian Standards, NOHSC guides, and state/territory regulatory codes of practice/standards.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing, repairing/rectifying complex electrical circuits/systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18053 Modify fluid power control systems

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18053 Modify fluid power control systems (Release 1).

Release 1. Supersedes and is equivalent to MEM18053B Modify fluid power control systems.

Application

This unit of competency defines the skills and knowledge required to check and test software programs, control system inputs and outputs, repair faulty system inputs and outputs, and prepare a service report.

It covers the skills required to alter the control parameters of fluid power control systems by system modification, this includes the ability to assess system performance based on sound working knowledge of established principles, methods and procedures.

System specifications are interpreted and understood from data sheets, circuit diagrams and flow diagrams.

Where equipment condition monitoring and recording only is required to be performed then unit MEM18010 Perform equipment condition monitoring and recording should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12025	Use graphical techniques and perform simple statistical computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM16010	Write reports
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18018	Maintain pneumatic system components
MEM18019	Maintain pneumatic systems
MEM18020	Maintain hydraulic system components
MEM18021	Maintain hydraulic systems
MEM18022	Maintain fluid power controls
MEM18023	Modify fluid power system operation
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Check/test control software program**	2.1	Check program steps against manufacturers' and site specifications using schematics, circuit and ladder diagrams and determine and record deviations
3	**Correct or modify control system software/program**	3.1	Correct and align program deviations to specification requirements
		3.2	Undertake modifications to program to specification requirements
		3.3	Back up and record modified program
4	**Check/test control system inputs/outputs**	4.1	Check and assess input/output signals against operational specifications using appropriate tools, equipment and techniques
		4.2	Identify and repair and record/report faulty signals to appropriate personnel
5	**Repair faulty control system input/output**	5.1	Repair and/or replace faulty signal source
		5.2	Test repaired/replaced signal source for correct operation in system and commission in compliance to operational specifications
6	**Prepare service report**	6.1	Prepare and complete a service report and include recommendations for improvement and repeat downtime avoidance analysis in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Control system includes one (1) or more of the following:	• programmable controllers (PCs) • distributed control system (DCS) • relay logic (electric-hydraulic-pneumatic)
Modifications to program includes one (1) or more of the following:	• software timers • gates • associated equipment • flow • ladder and logic diagrams
Fault-finding of system hardware input/outputs include one (1) or more of the following:	• input/output circuitry • cards • external sensors • limits • mnemonic coding and associated equipment

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM18053 Modify fluid power control systems (Release 1).

Release 1. Supersedes and is equivalent to MEM18053B Modify fluid power control systems.

Assessment Requirements for MEM18053 Modify fluid power control systems

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18053 Modify fluid power control systems (Release 1).

Release 1. Supersedes and is equivalent to MEM18053B Modify fluid power control systems.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, data sheets, drawings, circuit and ladder diagrams and other applicable reference documents to modify fluid power control systems
- identifying, recording and correcting deviations of control software program from specification
- modifying control system software/program and recording and backing up the modified system program
- checking input and output signals for compliance to specifications using appropriate tools, equipment and techniques
- identifying, recording and correcting faulty signals and marking the source of the faulty signal for repair or replacement
- testing and commissioning repaired/replaced signal source in accordance with specifications and procedures
- recording/reporting service activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operational specifications and program steps and their function of the control system
- procedures for:
  - recording and correcting deviations of the control software program from specification
  - recording and backing up control system software modifications
  - recording/reporting faulty input/output signals
  - marking items for repair or replacement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - testing and commissioning signal sources into operation
  - reporting service undertaken on control systems
- modifications to be made to the control system software and reasons for modifying the control system software
- tools, equipment and techniques to be used to check input and output signals for conformance to specification
- tools, equipment and techniques necessary to repair the signal source
- disassembly/assembly procedures to be followed when repairing signal sources
- specifications of the signal source
- any trends and probable causes, evident in the data collected and collated and reasons for recommended improvements.

Assessment Conditions

- Assessors must:
  - have vocational competency in modifying fluid power control systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18054 Fault find, test and calibrate instrumentation systems and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18054B Fault find, test and calibrate instrumentation systems and equipment

Application

This unit of competency defines the skills and knowledge required to test instrumentation systems and equipment, apply data collection techniques and pinpoint fault conditions, analyse and report test results, and calibrate instrumentation systems and components.

Where soldering/desoldering of electrical/electronic components is required unit MEM05001 Perform manual soldering/desoldering – electrical/electronic components and unit MEM05002 Perform high reliability soldering and desoldering, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18055 Dismantle, replace and assemble engineering components

Plus, one or more of the following, including their prerequisites:

MEM18057 Maintain/service analog/digital electronic equipment

MEM18064 Maintain instrumentation system components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Test instrumentation systems and equipment**	2.1	Identify and define work/test requirements
		2.2	Observe and pinpoint device isolation methods/requirements
		2.3	Apply appropriate test procedures and application principles in assessing operation of instrumentation systems, equipment and components
		2.4	Apply normal operating characteristics of instrumentation systems, equipment/components to the level necessary to identify and pinpoint faults
		2.5	Apply characteristics/operational function assessment procedures according to safety and regulatory/site specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.6	Check and verify characteristics and operational function
3	**Apply data collection techniques and pinpoint fault conditions**	3.1	Utilise drawings/diagrams and operational specifications in identifying and pinpointing fault conditions
		3.2	Examine and interpret built-in fault indicators and error codes and record results, where appropriate
		3.3	Pinpoint fault condition down to major component level using appropriate test equipment, procedures and techniques
4	**Analyse and report test results**	4.1	Analyse/verify test results against operational specifications and confirm faults
		4.2	Report potential and real faults in accordance with SOPs
		4.3	Evaluate faulty conditions and plan corrective action
		4.4	Record and document action plan in accordance with SOPs
5	**Install replacement parts**	5.1	Select replacement parts from catalogues
		5.2	Install replacement parts
		5.3	Check replacement parts for correct operation
6	**Calibrate instrumentation equipment/ components**	6.1	Undertake zero, span and range checks on indicators/controllers using appropriate configuration
		6.2	Perform and document methods of adjustment using calibration devices to prescribed procedures and operational specifications, where applicable

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Instrumentation systems include the following:	• those made up of more than one interdependent component controlling and processing multiple inputs and/or outputs
Tasks are undertaken include one (1) or more of the following:	• workshop/site • laboratory environments
Correct operational function determination includes the operational function of one (1) or more of the following:	• systems • equipment • components • associated equipment
Systems, components, equipment and associated items include one (1) or more of the following:	• electrical • electronic • mechanical • fluid power
Equipment includes one (1) or more of the following:	• process machines • temperature control systems • sterilisation units • water cooling/filtration systems • equipment utilising mechanical, pneumatic/electro-pneumatic or electronic (analog/digital) principles • associated instruments measuring variables including level, pressure light, flow, current, resistance, voltage, density and temperature

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:	• sensors • transmitters • converters • indicators • analysers • controllers • transducers • power supplies • removable circuit boards • sensor units associated with determining/controlling density, level, flow, temperature and composition of a range of materials
Test equipment includes one (1) or more of the following:	• system calibrators • manometers • dead weight testers • wheatstone bridge • potentiometers • frequency/signal generators • logic probes • multimeters (analog/digital) • test gauges • cathode ray oscilloscopes • other associated equipment

Assessment Requirements for MEM18054 Fault find, test and calibrate instrumentation systems and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18054B Fault find, test and calibrate instrumentation systems and equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents and obtain relevant data with respect to the operation of the instrumentation systems/equipment
- locating, inspecting and testing a range of instrumentation system components
- isolating instrumentation system/equipment in accordance with procedures
- checking the individual components for correct operation using applicable test equipment
- reporting faults and developing a corrective action plan in accordance with SOPs
- recording and documenting the action plan in accordance with SOPs
- dismantling, repairing and reassembling faulty components by selecting replacement parts from manufacturer/supplier catalogues
- checking repaired/replaced instrumentation system components for correct operation and completing all service reports
- checking and verifying the operational functions of the instrumentation system/equipment including reading/recording and interpreting built-in fault indicators and error codes
- undertaking zero, span and range checks on instrumentation system/equipment in accordance with SOPs
- calibrating instrumentation system/equipment to prescribed procedures and operational specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- instrumentation principles controlling density, level, flow, temperature and composition of a range of materials
- effects of resistance, capacitance, inductance and impedance (R, L, C) upon an electrical circuit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- interpretation requirements of schematic, wiring and block diagrams and circuits
- principles of hydraulic, pneumatic and electrical flow
- calibration procedures of instrumentation systems and equipment/components
- purpose/operational function of instrumentation system
- procedures for:
  - inspecting and testing instrumentation system and equipment to be used
  - repairing faulty instrumentation system
  - dismantling, reassembly and testing techniques
  - checking and verifying the operational function of the instrumentation system/equipment and operational specifications
  - recording and completing service reports and reporting faults
  - recording/documenting test and calibration results
- specifications of each instrumentation system and acceptable deviations from specifications
- correct operation of the instrumentation system, including the procedures for isolating instrumentation systems
- range of faults in instrumentation system/equipment components
- variations between test results and operational specifications
- probable causes of faults in instrumentation system/equipment components and action to be taken to rectify the causes of faults
- sequence of events to be undertaken to correct faults in the instrumentation system/equipment components
- errors indicated by built-in devices
- methods of determining procedures
- difference between real and potential faults
- function and procedures for zero, span and range checks on instrumentation systems/equipment
- equipment required to carry out the calibration of instrumentation systems/equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in fault finding, testing and calibrating instrumentation systems and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18055 Dismantle, replace and assemble engineering components

Modification History

Release 1. Supersedes and is equivalent to MEM18055B Dismantle, replace and assemble engineering components

Application

This unit of competency defines the skills and knowledge required to dismantle, identify faulty components, select replacements and assemble engineering components into assemblies or sub-assemblies in accordance with standard operating procedures (SOPs).

It also applies to the straightforward removal and replacement of pre-manufactured bearings and seals.

Where precision mechanical measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where fitting techniques and principles are required to assess component condition, and/or modify components to achieve precision fits unit MEM18006 Perform precision fitting of engineering components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **3**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Dismantle engineering components**	2.1	Inspect engineering components and analyse task requirements
		2.2	Dismantle components using appropriate tools and techniques
		2.3	Mark components for identification, where required
3	**Identify faulty components and select replacement parts**	3.1	Obtain and interpret specifications for components from appropriate source
		3.2	Identify out-of-specification, damaged or faulty components
		3.3	Identify faulty components for repair, replacement or adjustment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Select replacement and/or repaired parts for reassembly
4 **Assemble engineering components into assemblies or sub-assemblies**	4.1 Prepare, assemble and adjust components using fastening equipment and methods using appropriate tools, equipment and techniques which ensures compliance to specifications
	4.2 Select and apply lubrication, packing and sealing materials
	4.3 Inspect, test and adjust final component assembly, as necessary, for compliance with operational specifications and return to use according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Engineering components include one (1) or more of the following:	• couplings • universal joints • pumps employing shafts • pre-manufactured bearings and seals • lubricants • fasteners • gaskets

Assessment Requirements for MEM18055 Dismantle, replace and assemble engineering components

Modification History

Release 1. Supersedes and is equivalent to MEM18055B Dismantle, replace and assemble engineering components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to dismantle, replace and assemble engineering components
- dismantling components using appropriate techniques, tools and equipment and marking component parts for reassembly purposes
- checking component parts visually and dimensionally for compliance to specification and marking faulty parts for repair, replacement or adjustment
- selecting replacement parts using manufacturers' catalogues and data
- assembling components using appropriate techniques and principles
- inspecting final assembly for compliance to specifications
- returning the final assembly to service in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- tasks to be performed in accordance with SOPs
- tools and equipment associated with dismantling the components
- procedures for:
  - checking components for conformance to specification and equipment required
  - assembling components and requirements of the assembly in terms of specifications, operational performance, quality and safety
  - lubricating the assembly
  - returning components/assemblies into use and checks to be undertaken during inspection of the final assembly
- specifications of the components to be replaced, including features and/or dimensions
- process of identifying replacement parts from catalogues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- packing and sealing materials.

Assessment Conditions

- Assessors must:
  - have vocational competency in dismantling, replacing and assembling engineering components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18056 Diagnose and repair analog equipment and components

Modification History

Release 1. Supersedes and is equivalent to MEM18056B Diagnose and repair analog equipment and components

Application

This unit of competency defines the skills and knowledge required to locate faults in analog electronic equipment or sub-assemblies, and replace faulty components.

Where soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered then unit MEM05002 Perform high reliability soldering and desoldering should also be selected.

Where termination of cables is required unit MEM10002 Terminate and connect electrical wiring and unit MEM18063 Terminate signal and data cables, should also be selected as appropriate.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **10**

Pre-requisite Unit

MEM05001	Perform manual soldering/desoldering - electrical/electronic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	components
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12004	Perform precision electrical/electronic measurement
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18057	Maintain/service analog/digital electronic equipment

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate fault in electronic system/sub-assembly**	2.1	Determine functions and principles of system/sub-assembly with reference to equipment manuals and circuit diagrams
		2.2	Run built-in test functions and fault indicator error codes and check and review appropriate maintenance records
		2.3	Reproduce fault symptoms and verify using appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		fault-finding techniques
	2.4	Isolate and remove faulty sub-assembly from electronic system using appropriate tools and techniques, where appropriate
	2.5	Check and test sub-assembly using appropriate test equipment and fault-finding techniques
	2.6	Identify faulty component and/or isolate fault cause
3 **Repair/replace faulty components**	3.1	Remove faulty component using appropriate tools and techniques
	3.2	Repair/replace faulty component in accordance with site/manufacturers' recommended procedure
	3.3	Re-fit repaired/replacement components into system/sub-assembly
	3.4	Refit repaired sub-assembly to electronic system, where appropriate
	3.5	Check and test systems/sub-assembly for compliance with specifications utilising appropriate test procedures and equipment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Electronic systems and equipment include one (1) or more of the following:

- amplifiers
- analog hardware
- communication
- consumer audio/video
- electronic appliances
- scanning systems
- security/fire systems
- power supplies
- test equipment

Fault-finding techniques include one (1) or more of the following:

- signal injection
- substitution
- monitoring
- measurement
- heating
- sound
- visual
- touch
- smell

Test equipment includes one (1) or more of the following:

- continuity testers
- ammeters
- voltmeters
- cathode ray oscilloscopes
- frequency counters
- signal generators
- digital probes

Components include (1) one or more of the following:

- discrete component assemblies
- individual components, including:
  - resistors
  - switching devices
  - capacitors
  - transformers
  - solenoids
  - tubes
  - semi-conductors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM18056 Diagnose and repair analog equipment and components

Modification History

Release 1. Supersedes and is equivalent to MEM18056B Diagnose and repair analog equipment and components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuit diagrams, specifications, schematics, maintenance records, drawings, supplier catalogues and obtain relevant data with respect to diagnosing and repairing analog equipment and components
- checking electronic equipment/sub-assemblies, components, connections and terminations for compliance to specifications
- locating, reading/recording and diagnosing built-in fault indicators and obtaining error code interpretation documents and running test functions and recording faults and/or equipment status indicated by built-in test functions/displays
- checking and testing sub-assembly using appropriate test equipment for compliance with specifications
- reproducing fault symptoms in the electronic equipment and verifying faults using appropriate test equipment and fault-finding techniques to locate and isolate faulty component or fault cause
- removing and replacing faulty components from the electronic equipment
- adjusting/tuning, calibrating and testing the repaired electronic equipment/sub-assemblies to specifications
- returning the repaired electronic equipment/sub-assembly to service in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- implications of electro-static discharge (ESD) upon the electronic equipment
- analog electronics, including amplifiers, oscillators, power suppliers and filters
- function(s) of the electronic equipment/sub-assembly
- symptoms of the fault in the electronic equipment/sub-assembly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose of reproducing electronic equipment/sub-assembly fault symptoms
- equipment and techniques to be used to test the faulty sub-assemblies/component
- probable causes of component failure
- procedures for:
  - running built-in test functions
  - verifying faults in electronic equipment/sub-assemblies
  - isolating electronic equipment/sub-assemblies
  - removing sub-assemblies from electronic equipment
  - testing faulty sub-assemblies and removing faulty components from electronic equipment
  - fitting repaired/replaced components into sub-assemblies and fitting repaired sub-assemblies into electronic equipment
  - testing electronic equipment/sub-assembly performance
- errors indicated by built-in devices
- test equipment and fault-finding techniques necessary to confirm electronic equipment/sub-assembly faults
- tools and techniques to be used to remove/refit/repair/replace the faulty sub-assemblies/component from the electronic equipment
- operational specifications of the sub-assembly and electronic equipment/component
- test equipment and techniques necessary to check electronic equipment/sub-assembly performance.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and repairing analog equipment and components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18057 Maintain/service analog/digital electronic equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18057B Maintain/service analog/digital electronic equipment

Application

This unit of competency defines the skills and knowledge required to maintain/service analog/digital electronic equipment.

Where termination of cables is required see unit MEM10002 Terminate and connect electrical wiring and unit MEM18063 Terminate signal and data cables, as appropriate.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where diagnosis and repair of electronic equipment is undertaken to component level unit MEM18056 Diagnose and repair analog equipment and components and unit MEM18065 Diagnose and repair digital equipment and components, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Assessment Requirements for MEM18057 Maintain/service analog/digital electronic equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18057B Maintain/service analog/digital electronic equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuit diagrams, specifications, schematics, maintenance records, drawings, supplier catalogues and obtain relevant data with respect to maintaining/servicing analog/digital electronic equipment
- locating, reading/recording and diagnosing built-in fault indicators and obtaining error code interpretation documents and running test functions and recording faults and/or equipment status indicated by built-in functions/display
- checking electronic equipment/sub-assemblies and components using appropriate test equipment for compliance with specifications
- removing and replacing components from the electronic equipment
- maintaining and/or servicing electronic equipment by isolating sub-assembly from power supply and adjusting/tuning and calibrating in accordance with specifications and verifying for operational compliance
- returning the repaired/serviced electronic equipment to service
- recording all test results in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- function(s) and operational specifications of the electronic equipment/sub-assembly and electrical principles associated with electronic sub-assemblies
- implications of electro-static discharge (ESD) upon the electronic equipment
- procedures for:
  - running built-in test functions
  - recording faults and/or equipment status identified by built-in test functions/displays
  - checking electronic equipment/sub-assemblies, components, connections and terminations for compliance with specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - removing/refitting faulty components from electronic equipment
    - testing electronic equipment
    - recording electronic equipment test results
    - isolating electronic equipment/sub-assemblies
    - recording/documenting the maintenance servicing of the electronic equipment/sub-assembly
    - adjusting/tuning and calibrating and return the electronic equipment/sub-assembly back into service and tools, equipment and techniques to be used
    - checking the electronic equipment/sub-assembly for conformance to specification and equipment and techniques to be used
- errors indicated by built-in devices
- tools and techniques to be used to remove/replace components from/into electronic equipment
- equipment and techniques to be used to test the electronic equipment.

Assessment Conditions

- Assessors must:
    - have vocational competency in maintaining/servicing analog/digital electronic equipment at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Assessment Requirements for MEM18058 Modify electronic equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18058C Modify electronic equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (sops) and safe work practices
- identifying and interpreting circuit diagrams, specifications, schematics, maintenance records, drawings, supplier catalogues and obtaining relevant data with respect to modifying electronic equipment
- isolating and tagging electronic equipment in strict accordance with work health and safety (WHS) requirements and procedures using appropriate lock-off equipment and tags/signs
- checking that the electronic equipment is isolated and tagged where necessary
- removing sub-assembly/equipment from the system and carrying out applicable modifications
- refitting modified sub-assembly/equipment to system and checking/testing for compliance to specifications utilising appropriate test equipment
- recommissioning electronic equipment using appropriate techniques and procedures
- amending circuit diagrams, schematics, equipment manuals, specifications affected by the modifications
- recording all modifications according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- implications of electro-static discharge (ESD) upon the electronic equipment
- system concept, including software/hardware systems, feasibility analysis and circuit analysis
- diagnostic skills and implications relative to the modification
- modification and specification requirements and sources of technical advice applicable to the modification
- procedures for isolating and removing equipment from the system
- permits/approvals required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tools and equipment and specialised fitting requirements necessary to carry out the modification
- operational specifications, procedures of electronic equipment and the applicable test equipment
- procedures for recommissioning electronic equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in modifying electronic equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine modification**	2.1	Determine modification requirements by reference to schematics, circuit diagrams, documentation and/or consultation with appropriate authority
		2.2	Analyse maintenance reports and system output information to confirm the need and nature of modification, where appropriate
		2.3	Determine scope and nature of modifications, confirm with appropriate authority and record according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Undertake modification/s**	3.1	Undertake modification/s using appropriate tools, procedures and techniques
		3.2	Amend circuit diagrams, schematics and equipment manuals to reflect modifications undertaken
		3.3	Update computer software, if required
4	**Test and evaluate modified electronic systems**	4.1	Check/test modifications and evaluate for compliance with desired outcome or specification using appropriate tools, test equipment and techniques
		4.2	Recommend additional modification changes in accordance with SOPs, if required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Modifications include the following:	• approved design changes and/or replacement of components or sub-assemblies on electronic analog and digital systems • updating proprietary software, where appropriate
Systems include one (1) or more of the following:	• computer • process • communication • digital

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- security/fire

Test equipment includes one (1) or more of the following:

- continuity testers
- ammeters
- voltmeters
- cathode ray oscilloscopes
- frequency counters
- signal generators
- digital probes

Assessment Requirements for MEM18059 Modify electronic systems

Modification History

Release 1. Supersedes and is equivalent to MEM18059B Modify electronic systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuit diagrams, specifications, schematics, maintenance records, drawings, supplier catalogues and obtaining relevant data, including relevant maintenance reports and system output information with respect to modifying electronic systems
- obtaining approval for modifications to electronic systems from appropriate authorities and recording the proposed modifications in accordance with SOPs
- carrying out modifications on electronic analog or digital systems
- checking modified electronic system for compliance to specifications utilising appropriate test equipment
- programming computers, including uploading/downloading of proprietary software, where appropriate
- testing and evaluating modified electronic system for compliance to specifications
- amending circuit diagrams, schematics, equipment manuals, specifications affected by the modifications
- recording all modifications in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- implications of electro-static discharge (ESD) upon the electronic equipment
- advanced analog and digital electronics theory
- modifications to be made to the electronic system and reasons for undertaking the modification
- appropriate personnel to consult for technical advice
- probable causes for any detected trends and/or deviations from specification
- appropriate authority to authorise modifications to electronic systems and changes to documentation, circuit drawings and schematics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures to be followed when undertaking and recording modifications to electronic systems
- tools and techniques to be used to modify the electronic system
- procedures for amending documents, circuit drawings and schematics
- procedures for checking the performance of the modified electronic system
- test equipment, techniques and operational specifications to be used to evaluate the modified electronic system
- deviations/variations of test results from operational specifications and probable causes of any deviations/variations from specification
- likely effect of further modifications on electronic system performance.

Assessment Conditions

- Assessors must:
  - have vocational competency in modifying electronic systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18060 Maintain, repair control instrumentation - single and multiple loop control systems

Modification History

Release 1. Supersedes and is equivalent to MEM18060B Maintain, repair control instrumentation – single and multiple loop control systems

Application

This unit of competency defines the skills and knowledge required to determine control loop characteristics, monitor and record the operation of a control loop, localise the fault condition, and replace or repair the faulty condition.

It applies to split architecture single/multiple loop control instrumentation that includes programmable logic controllers (PLCs), distributed control systems (DCS) and computer-based systems.

Where fault-finding is required to electronic component level unit MEM18056 Diagnose and repair analog equipment and components and unit MEM18065 Diagnose and repair digital equipment and components, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

MEM05001	Perform manual soldering/desoldering - electrical/electronic components
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12004	Perform precision electrical/electronic measurement
MEM12023	Perform engineering measurements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18054	Fault find, test and calibrate instrumentation systems and equipment
MEM18055	Dismantle, replace and assemble engineering components
MEM18062	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Plus, one or more of the following, including their prerequisites:

MEM18057	Maintain/service analog/digital electronic equipment
MEM18064	Maintain instrumentation system components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine control loop**	2.1	Examine engineering specifications, technical information and historical trends for relevant data

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	operating characteristics	2.2	Examine, read and interpret system specifications, operational data and other relevant data sources and note relevant conclusions
		2.3	Consult with system operators and other relevant plant personnel and extract relevant data and document by appropriate means
		2.4	Observe operation of the system by applying all control loop device characteristics, controller mode principles and adjustment methods
3	**Monitor and record operation of a control loop**	3.1	Interpret pneumatic, electrical and electronic circuit diagrams
		3.2	Set point and manual output changes by applying all control loop device characteristics, controller mode principles and calibration/adjustment methods, and loop operation from the controller response using appropriate test equipment, principles and procedures
		3.3	Interpret software configuration data for digital control systems
		3.4	Monitor and record operational responses
		3.5	Utilise fault-finding and diagnostic techniques throughout the checking and testing procedures including simple and multi-controller type control schemes
		3.6	Analyse diagnostic results and conclusions against predetermined operational specifications
4	**Localise fault condition**	4.1	Test circuits to the level necessary to identify and localise faults using fault-finding, diagnostic techniques and appropriate test equipment
		4.2	Utilise drawings/diagrams and operational testing data in identifying and localising fault conditions
		4.3	Verify and localise fault condition to major component level using appropriate test equipment, procedures and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			techniques
5	**Replace faulty items or repair faulty condition**	5.1	Dismantle components for repair or replacement using appropriate tools, equipment and techniques
		5.2	Select replaceable items from manufacturers' catalogues, spare parts lists or data sheets
		5.3	Repair faulty condition, where applicable
		5.4	Reassemble repaired and replaceable items
6	**Calibrate and adjust control instrumentation**	6.1	Calibrate and adjust panel mounted, split architecture single loop/multiple loop control instruments using appropriate calibration principles, equipment and methods for all devices according to manufacturers' instructions
		6.2	Adjust controller modes and actions are adjusted according to specifications
		6.3	Undertake zero span and range checks using appropriate configuration
		6.4	Make final adjustments to control instrumentation to meet specifications
7	**Complete service reports and recommission**	7.1	Complete service reports in accordance with SOPs
		7.2	Adopt appropriate follow-up procedures
		7.3	Recommission control instrumentation in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Historical trends include one (1) or more of the following:	• supervisory control and data acquisition (SCADA) • charts • chart recorders and data loggers • equipment conditioning monitoring
An open and closed loop system includes:	• final control elements • process measuring devices • converters • controllers • process signals
Relevant data includes one (1) or more of the following:	• maintenance records • fault indicators • charts • error codes • operational symptoms • observation monitoring • consultation with appropriate personnel
Major components include one (1) or more of the following:	• transducers • power supplies • removable circuit boards • sensor units • other like components

Assessment Requirements for MEM18060 Maintain, repair control instrumentation - single and multiple loop control systems

Modification History

Release 1. Supersedes and is equivalent to MEM18060B Maintain, repair control instrumentation – single and multiple loop control systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuit diagrams, specifications, software data, diagrams and drawings, historical trends and documents and obtaining relevant data pertaining to the system components and operational data
- consulting with system operators and other relevant personnel with respect to the control loop and confirming function/ malfunction of the system and/or its components
- checking operational characteristics of the control devices, signal conversion instruments and final control elements for compliance to specifications
- locating, reading and interpreting in-built fault indicators and error codes and identifying faults/defects in control system
- obtaining relevant pneumatic, electrical and electronic circuit diagrams and testing and monitoring control loop for correct operation and recording the responses of the control system
- using fault-finding and diagnostic techniques and procedures throughout the monitoring and testing phase and comparing collected data with the operational specifications of the control system
- dismantling, repairing and reassembling faulty components, including selecting replacement parts from manufacturer/supplier catalogues
- calculating the control loop characteristics for the appropriate system in accordance with specifications
- setting and adjusting the controller modes using appropriate test and calibration equipment
- checking the control instrumentation for correct zero, span and range and making final adjustments, as required and recommissioning the control system
- completing all service reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work practices and procedures and use of personal protective equipment (PPE)
- mathematical computations, including algebra, exponentials and logarithms, equations, graphs, charts, vectors, complex numbers and Boolean algebra
- relevant data, including information from in-built devices, on the control loop characteristics
- specifications of each system component
- control programming
- supervisory control and data acquisition (SCADA) systems, programmable logic controller (PLC) systems, distributive control systems (DCS) and computer-based systems
- procedures for:
  - documenting/reporting information and control system tests and analysis
  - isolating and testing the control system and its components
  - verifying apparent faults in circuits and/or control system components
  - marking components for repair or replacement
  - dismantling/disassembling components for repair or replacement
  - assembling repaired and/or replacement items
  - calibration of control system components and necessary equipment
  - checking control instruments for zero, span and range
  - making final adjustments to ensure all control system components conform to specification
  - commissioning the control system
- signal transmission, including the principles of operation of the final control element, procedures for calibrating and adjusting the control system
- correct function of the circuits and components within the control loop
- calibration and adjustment methods for the control loop devices
- configuration of the digital control system software
- operational responses and procedures for monitoring and recording test and operational data
- fault-finding and diagnostic techniques throughout the monitoring and testing process
- deviations/variations from specification
- correct maintenance procedures for serviceable item(s)
- adjustments which affect the calibration to control system components
- controller modes and actions
- reporting/recording requirements associated with the commissioning of the control system
- follow-up actions to be undertaken after maintaining/repairing control system instrumentation.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, repairing control instrumentation – single and multiple loop control systems at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18061 Maintain/calibrate complex control systems

Modification History

Release 1. Supersedes and is equivalent to MEM18061B Maintain/calibrate complex control systems

Application

This unit of competency defines the skills and knowledge required to determine system specification and control loop characteristics, and test, monitor and record system operation.

It applies to localising the fault condition; repairing or replacing faulty condition; calibrating, configuring and adjusting complex control systems; and recommissioning the system.

Where soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/desoldered then unit MEM05002 Perform high reliability soldering and desoldering should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

Path 1	MEM05001	Perform manual soldering/desoldering - electrical/electronic components
	MEM09002	Interpret technical drawing
	MEM11011	Undertake manual handling
	MEM12004	Perform precision electrical/electronic measurement
	MEM12023	Perform engineering measurements
	MEM13015	Work safely and effectively in manufacturing and engineering

			accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine system specifications and control loop characteristics**	2.1	Examine engineering specifications, technical information and historical records and trends and document relevant data
		2.2	Obtain, read and interpret system specifications and operational data, including those for multiple loop control systems and devices
		2.3	Obtain, read and interpret circuit and logic diagrams and configuration data
		2.4	Consult with system operators and other relevant plant personnel and extract and document relevant data by appropriate means
		2.5	Obtain appropriate work clearances for monitoring and testing the system
3	**Test, monitor and record system operation**	3.1	Collect all relevant data by appropriate means from all sources
		3.2	Analyse fault detection and diagnostic data against predetermined operational specifications, and document conclusions
		3.3	Observe system operation by applying all individual/multiple element loop device characteristics, controller mode principles, testing, calibration and adjustment methods
		3.4	Set up and undertake tests using appropriate test equipment in accordance with procedures
		3.5	Set up and use signal transmission test equipment, where applicable
		3.6	Determine adjustment/maintenance needs through interpretation and analysis of pneumatic, electrical,

			electronic, logic diagrams and configuration data for all control system devices
		3.7	Connect and test field instrumentation for selected control operation, and monitor performance against specifications
		3.8	Carry out diagnostics checks to ensure correct operation
		3.9	Undertake fault finding and diagnostic tests on faulty control system components or elements using appropriate equipment, procedures and techniques
		3.10	Analyse and evaluate fault condition and plan corrective action
4	**Replace faulty items or repair faulty condition**	4.1	Dismantle faulty items for repair or replacement using appropriate tools, equipment and techniques according to manufacturers' recommendations
		4.2	Select replaceable items from manufacturers' catalogues, spare parts lists or data sheets
		4.3	Establish correct maintenance procedures for faulty items using manufacturers' handbooks
		4.4	Repair faulty items and/or faulty condition, where applicable
		4.5	Reassemble repaired and replaceable items to meet specifications
5	**Calibrate, configure, adjust complex control systems**	5.1	Carry out diagnostic checks to ensure correct operation of system and take appropriate corrective action, as necessary
		5.2	Select/set up calibration and test equipment to enable calibration to manufacturers' specifications
		5.3	Undertake mechanical alignment of control devices, where applicable
		5.4	Configure system using appropriate programming tools

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		and techniques
		5.5 Perform all relevant alignment procedures for optimum control and in accordance with specifications
		5.6 Set up recording equipment for adjustment and monitoring during alignment
		5.7 Perform calibration and adjustment function on multi-loop devices, multi-element control loops, controller modes and actions according to operational specifications using appropriate techniques applicable to the type of control loop being serviced
		5.8 Make online changes to parameters in the system to meet specified requirements
		5.9 Connect field instrumentation for selected control operation and system and ensure it is operated to a satisfactory level of control
6	**Return system to service**	6.1 Undertake final adjustments to align system operation to operational specifications, including process and optimum control efficiencies
		6.2 Return system to service
		6.3 Complete service reports in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Control loop includes:

- a process of documenting and recording measurements and variables within the process

Relevant data includes one (1) or more of the following:

- maintenance records
- fault indicators
- chart recorders
- data loggers
- error codes
- operational symptoms
- observation monitoring
- tests

Test equipment includes one (1) or more of the following:

- engineering level
- laser alignments
- appropriate equipment for the measurement of:
  - alignment
  - flatness
  - squareness
  - straightness
  - temperature
  - vibration
  - load deflection
  - noise level
  - RPM

Control system includes one (1) or more of the following:

- pneumatic control
- analog and/or digital electronics
- distributed programmable logic controller (PLC)
- distributive control systems (DCS)
- supervisory control date acquisition (SCADA)
- computer-based control systems which include supervisory mode

Field instrumentation includes:

- test and measuring equipment which includes specialised testing fixtures or equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Control strategies include one (1) or more of the following:	• ratio • cascade • selector • duplex • feed forward • adaptive • dynamic compensations • computations • energy management • environmental control/systems
Return system to service includes one (1) or more of the following:	• configuring • calibrating • adjusting • tuning • final validation of system performance

Assessment Requirements for MEM18061 Maintain/calibrate complex control systems

Modification History

Release 1. Supersedes and is equivalent to MEM18061B Maintain/calibrate complex control systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting manuals, specifications, software data, historical trends and diagrams, including pneumatic, electrical, electronic and logic diagrams, as well as program listings and configuration data for control system devices pertaining to the system components and operational data
- consulting with system operators and other relevant personnel with respect to the control loop characteristics and confirming function/malfunction of the system and/or its components and documenting information obtained
- obtaining the necessary work clearances for monitoring and testing of the system
- locating, reading and interpreting in-built fault indicators and error codes and identifying faults/defects in control system and comparing and analysing collated data with the operational specifications of the control system
- observing the operation of control system, confirming function/malfunction of the system and/or its components
- setting up and using test equipment to measure and analyse to ensure correct operation
- connecting field test instruments and monitoring and performing diagnostic checks on selected controls and system
- checking operational characteristics of control devices, signal conversion instruments and final control elements and using fault-finding techniques, including continuity testing and fault isolation for conformance/non-conformance to specifications
- dismantling/assembling and repairing items, including selecting replacement parts from manufacturers’/suppliers' catalogues, spare parts list or data sheets
- performing diagnostic checks and taking corrective action to bring system operation in line with specifications
- setting up test and calibration equipment to align control devices and controllers for optimum performance, configuring the system, and aligning multiple control loops in the correct sequence to specifications
- adjusting and calibrating control system components by setting up and monitoring recording equipment during the tuning phase to identify the effects of adjustment made on the system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- changing system parameters online to meet specified requirements
- operating, adjusting and validating the system performance and returning control systems to service
- completing all service reports according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specification of each system component
- relevant data and/or trends
- system components and their function
- procedures for:
  - documenting information
  - obtaining work clearances
  - documenting control system tests and analysis
  - using test equipment
  - testing system configuration, control system components/elements, testing circuits and control lines
  - testing and monitoring the operation of selected controls
  - carrying out diagnostic checks
  - isolating the control system and its components
  - marking serviceable items for repair or replacement
  - dismantling/assembling items for repair or replacement and servicing item(s)
  - adjusting the system to conform to operational specifications
  - calibrating the control system components
  - aligning control devices and configuring the system
  - tuning controllers, multiple control loops and multi-element systems
  - recording signals and data during system tuning operations
  - changing parameters and operating and monitoring a control system
  - making final adjustments to ensure all control system components conform to specifications
  - returning to service and reporting/recording requirements
- reasons for:
  - observing the system in operation
  - selecting the chosen test equipment
  - identifying the adjustments/maintenance to be carried out
  - selecting the chosen diagnostic checks
  - selecting the chosen test and calibration equipment
  - any deviations/variations from specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- errors indicated by in-built devices
- deviations/variations from specification
- information for the given system, including:
  - all individual/multiple element loop device characteristics
  - controller mode principles
  - testing methods
  - calibration methods
  - adjustment methods
- equipment to be used and reasons for selecting the chosen equipment:
  - required to verify an apparent fault
  - used to test system configuration
  - required to undertake maintenance on item(s)
  - necessary to calibrate the control system components
  - necessary to carry out the alignment of the control devices
  - programming tools and techniques to be used
  - appropriate measuring techniques, tools and equipment
- adjustments/maintenance to be carried out
- diagnostic checks to be applied to the system to ensure correct operation of the system
- fault-finding and performing diagnostic tests to be applied to control devices, signal conversion instruments and final control elements
- causes of verified faults and the action to be taken to return the control system/component to specification
- appropriate replacement parts
- specifications of serviceable item(s)
- diagnostic checks to be carried out
- specifications of the equipment to be calibrated
- alignment specifications
- specifications of the controllers
- correct sequence of tuning
- recording equipment to be used
- adjustments that can be made to control system components
- effects of those adjustments on the calibration of the control system components
- requirements to be achieved by changing system parameters online and level of control to be achieved.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining/calibrating complex control systems at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18062 Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Modification History

Release 1. Supersedes and is equivalent to MEM18062B Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Application

This unit of competency defines the skills and knowledge required to select and install appropriate sensors and signal transmitters, maintain and diagnose correct operation of sensors and signal transmitters, and complete fault documentation.

It applies to planning corrective action; repairing, replacing and overhauling sensors and signal transmitters; and calibrating, testing, re-installing and recommissioning instrumentation sensors and signal transmitters.

Where soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/desoldered then unit MEM05002 Perform high reliability soldering and desoldering should also be selected.

Where diagnosis and repair of electronic equipment is undertaken to component level unit MEM18056 Diagnose and repair analog equipment and components and unit MEM18065 Diagnose and repair digital equipment and components, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **8**

Pre-requisite Unit

Path 1	MEM05001	Perform manual soldering/desoldering - electrical/electronic components
	MEM09002	Interpret technical drawing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	MEM11011	Undertake manual handling
	MEM12004	Perform precision electrical/electronic measurement
	MEM12023	Perform engineering measurements
	MEM13015	Work safely and effectively in manufacturing and engineering
	MEM16006	Organise and communicate information
	MEM18001	Use hand tools
	MEM18002	Use power tools/hand held operations
	MEM18054	Fault find, test and calibrate instrumentation systems and equipment
	MEM18055	Dismantle, replace and assemble engineering components
	MEM18057	Maintain/service analog/digital electronic equipment
Path 2	MEM09002	Interpret technical drawing
	MEM11011	Undertake manual handling
	MEM12002	Perform electrical/electronic measurement
	MEM12023	Perform engineering measurements
	MEM13015	Work safely and effectively in manufacturing and engineering
	MEM16006	Organise and communicate information
	MEM18001	Use hand tools
	MEM18002	Use power tools/hand held operations
	MEM18054	Fault find, test and calibrate instrumentation systems and equipment
	MEM18055	Dismantle, replace and assemble engineering components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18064 Maintain instrumentation system components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Select appropriate sensors, transmitters and final control elements for installation**	2.1	Determine specification requirements from data sheets, circuit diagrams, engineering drawings
		2.2	Interpret and define specification requirements through application of device characteristics and principles of operation
		2.3	Select equipment and final control elements having regard for measurement range, processes and environment according to their device characteristics, principles of operation and measurement capabilities, in conformance to specifications
3	**Install instrumentation sensors, transmitters and final control**	3.1	Install components using appropriate tools, test equipment, techniques and procedures
		3.2	Plan and cater for maintenance access during installation when mounting connections for power, signal, and process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	elements		
		3.3	Diagnose installed components for correct operation using appropriate test equipment and procedures and assess results against specifications or manufacturers' technical data sheets
4	**Maintain and diagnose correct operation of sensors, transmitters and final control elements**	4.1	Apply preventative maintenance schedules and procedures to maintain components in optimum condition by interpreting device characteristics and principles of operation
		4.2	Clean and service elements to maintain optimum operating condition by interpreting device characteristics and principles of operation
		4.3	Determine correct operation or malfunction by diagnosing components within the system or as individual devices using appropriate test equipment and procedures
		4.4	Monitor operation of components and assess against predetermined specification or manufacturers' technical data
5	**Complete fault documentation and plan corrective action**	5.1	Document faults and malfunctions and/or report according to SOPs
		5.2	Plan corrective action autonomously or in consultation with appropriate personnel
6	**Analyse control loop and localise faults**	6.1	Obtain and interpret engineering specifications and technical information, control device, signal transmission and final element specifications and read and interpret system specifications, including operational data, and historical records and trends
		6.2	Carry out consultation with system operators and other relevant plant personnel and extract relevant data and document to procedures
		6.3	Observe operation of the system using sound knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			of all external control device characteristics, controller modes, signal transmission and final control devices
		6.4	Set up and apply appropriate signal transmission test equipment
		6.5	Test circuits and control lines to the level necessary to detect and localise fault
7	**Repair/replace/ overhaul sensors, transmitters and final control elements**	7.1	Examine and verify components for replacement, repair or overhaul using appropriate tools, test equipment, procedures and techniques
		7.2	Select and obtain replacement items from manufacturers' parts lists or catalogues to meet specifications
		7.3	Repair or overhaul faulty items to meet specifications
		7.4	Refit repaired, overhauled and replacement sensors, transmitters and final control elements
		7.5	Prepare refitted sensors, transmitters and final control elements for testing and calibration
8	**Calibrate and test instrumentation sensors, transmitters and final control elements**	8.1	Calibrate components against appropriate physical standards using appropriate calibration devices, test equipment, techniques and procedures
		8.2	Perform zero, span and range tests and assess results against manufacturers' instructions sheets
		8.3	Align components to manufacturers' instruction sheets by applying zero and span adjustments
9	**Return sensors, transmitters and final control elements and control loops to service**	9.1	Put components into service in conformance to specifications with due regard to process requirements, safety, installation/commissioning procedures and sequence of operation
		9.2	Adjust controller modes and actions according to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	9.3 Test electrical and pneumatic transmission lines and take appropriate action, including the use of signal conditioning devices
	9.4 Return instrumentation to service, including configuring, calibrating, adjusting, tuning and validating system performance
	9.5 Return system to service

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Signal transmitting instrumentation sensing indicators include the use of one (1) or more of the following:	• mechanical • electrical • electronic (analog and digital)
Signals transmitted include measurement of one (1) or more of the following:	• pressure • temperature • level • flow rate • weight • density • other process variables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Maintenance includes one (1) or more of the following:	• maintenance of control valves (including changing and reseating valve plugs) • adjustment of valve actuators (pneumatic, electrical and hydraulic) • maintenance and adjustment of pneumatic, electro-pneumatic and electronic valve positioners and signal converters

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18062B Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Assessment Requirements for MEM18062 Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Modification History

Release 1. Supersedes and is equivalent to MEM18062B Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting equipment specifications, circuit diagrams, engineering drawings, supplier catalogues and replacement components and obtaining relevant data with respect to installing, maintaining and calibrating instrumentation sensors, transmitters and final control elements
- interpreting device characteristics and principles of operation for cleaning and servicing of elements to maintain optimum operating condition
- consultation with relevant plant personnel
- selecting, installing and testing sensors, transmitters and final control elements to site and manufacturers' specifications
- obtaining and performing relevant scheduled/preventive maintenance schedules and determining correct function and recording the results
- identifying, localising, monitoring and reporting/recording faults and preparing sequential action plan to correct faults, including applying procedures to sequential and loop testing
- repairing/overhauling faulty items using appropriate tools, equipment, techniques and procedures to manufacturers' specifications
- refitting sensors, transmitters and final control elements and preparing for testing and calibration
- configuring, calibrating, testing and adjusting tuning and validating system performance against manufacturers' instruction sheets and returning system to service
- completing all service reports according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics, specifications and principles of operation of the sensors, transmitters and final control elements to be installed
- cleaning and servicing requirements to maintain optimum operating condition for elements
- relevant codes, standards, safety and legislative requirements
- criteria for selecting sensors, transmitters and final control elements and factors that determine the type of test equipment required
- procedures for testing, installing and maintaining sensors, transmitters and final control elements and for reporting/recording and monitoring faults and/or malfunctions in sensors, transmitters and final control elements
- tools, equipment and techniques required to install sensors and transmitters
- connections to be made to sensors, transmitters and final control elements
- variations of test results from specifications and probable causes of variations between test results and specifications
- test equipment and techniques required to determine correct function or malfunction of sensors, transmitters and final control elements
- probable causes of variations between test results and specifications
- need for systematic and/or sequential testing
- procedures for configuring, calibrating, testing, adjusting, tuning and validating system performance, including sensors, transmitters and final control elements
- physical standards against which sensors, transmitters and final control elements are to be calibrated
- devices, equipment and techniques required to calibrate sensors, transmitters and final control elements
- zero, span and range tests to be applied to the sensors, transmitters and final control elements
- procedures for recommissioning sensors, transmitters and final control elements.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing, maintaining and calibrating instrumentation sensors, transmitters and final control elements at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18063 Terminate signal and data cables

Modification History

Release 1. Supersedes and is equivalent to MEM18063B Terminate signal and data cables

Application

This unit of competency defines the skills and knowledge required to terminate signal and data cables and covers fixing, securing, identifying and marking conductors and cables.

Where termination of cables is undertaken to pre-determined specifications and procedures then unit MEM03004 Perform electronic/electrical assembly (production) should also be selected.

Where termination and connection of other cables is required unit MEM10002 Terminate and connect electrical wiring should also be selected.

Where termination and connection of specialist cables is required unit MEM10011 Terminate and connect specialist cables should also be selected.

Where higher levels of electrical/electronic measures are required unit MEM12004 Perform precision electrical/electronic measurement should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM05001	Perform manual soldering/desoldering – electrical/electronic components
MEM09002	Interpret technical drawing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11011	Undertake manual handling
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify and mark conductors/cables**	2.1	Identify cables and conductors using appropriate test equipment and techniques
		2.2	Label cables and conductors in accordance with procedures, legislative requirements and statutory regulations to specifications
3	**Prepare and terminate cable**	3.1	Obtain termination requirements and specifications
		3.2	Prepare cable ends and terminate cables to

MEM18064 Maintain instrumentation system components

Modification History

Release 1. Supersedes and is equivalent to MEM18064B Maintain instrumentation system components

Application

This unit of competency defines the skills and knowledge required to maintain instrument system components of a primarily mechanical nature.

Application of this unit would involve identifying instrumentation system components as well as inspecting and assessing component condition/operation using instrumentation principles and methods and interpreting information from data sheets and circuit diagrams in order to make repairs and replacements to predetermined site or manufacturer specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM18064 Maintain instrumentation system components

Modification History

Release 1. Supersedes and is equivalent to MEM18064B Maintain instrumentation system components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting instrumentation circuits, specifications, drawings, data sheets and manuals and obtaining relevant data with respect to the operation of the instrumentation systems/equipment
- locating, inspecting and testing a range of instrumentation system components using appropriate test equipment, techniques and procedures
- fault finding components and confirming malfunction by inspection and testing using instrumentation principles and procedures
- dismantling/repairing/reassembling faulty components and sourcing replacement parts from manufacturer/supplier catalogues
- checking repaired/replaced instrumentation system components for correct operation and completing all service reports in accordance with SOPs
- undertaking zero, span and range checks and calibrating instrumentation systems/equipment to operational specifications
- recording/documenting test results in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- instrumentation principles, including controlling density, level, flow, temperature and composition of a range of materials
- effects of resistance, capacitance, inductance and impedance (R, L, C) upon electrical circuit
- interpretation requirements of schematic, wiring and block diagrams and circuits
- basic principles of hydraulic/pneumatic/electrical flow
- procedures for:
  - inspecting and testing instrumentation system components and equipment to be used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - dismantling, repairing, reassembling and testing faulty instrumentation system components
  - recording and completing service reports
- purpose, operational function and specifications, including deviations of instrumentation system components
- correct operation of the instrumentation system.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining instrumentation system components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM18065 Diagnose and repair digital equipment and components

Modification History

Release 1. Supersedes and is equivalent to MEM18065B Diagnose and repair digital equipment and components

Application

This unit of competency defines the skills and knowledge required to locate faults in digital electronic equipment or sub-assemblies and replace faulty components.

Where soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered then unit MEM05002 Perform high reliability soldering and desoldering should also be selected.

Where termination of cables is required unit MEM10002 Terminate and connect electrical wiring and unit MEM18063 Terminate signal and data cables, should also be selected as appropriate.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **10**

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate fault**	2.1	Determine system/equipment functions and principles by reference to equipment manuals and circuit diagrams
		2.2	Run built-in test functions and check and review fault indicators error codes and appropriate maintenance records
		2.3	Reproduce fault symptoms and verify using fault-finding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		techniques
	2.4	Isolate faulty equipment and remove from system using appropriate tools and techniques
	2.5	Check and test equipment using appropriate test equipment and fault finding techniques
	2.6	Identify faulty component and/or isolate fault cause
3 **Repair/replace faulty components**	3.1	Remove faulty component using appropriate tools and techniques
	3.2	Repair/replace faulty component in accordance with site/manufacturers' recommended procedures
	3.3	Refit repaired/replacement components
	3.4	Refit repaired equipment to system
	3.5	Check and test systems/equipment for compliance with specifications using appropriate test procedures and equipment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• digital hardware • communication • consumer audio/video • electronic appliances • scanning systems • security/fire systems • power supplies • test equipment
Fault-finding techniques include one (1) or more of the following:	• signal injection • substitution • monitoring • measurement • heating/cooling • sound • visual • touch • smell • use of inbuilt software and hardware diagnostics
Test equipment includes one (1) or more of the following:	• continuity testers • ammeters • voltmeters • cathode ray oscilloscopes • frequency counters • signal generators • digital probes

Components include (1) one or more of the following:	• discrete component assemblies
	• individual components, including:
	  • resistors
	  • switching devices
	  • capacitors
	  • transformers
	  • solenoids
	  • tubes
	  • semi-conductors

Assessment Requirements for MEM18065 Diagnose and repair digital equipment and components

Modification History

Release 1. Supersedes and is equivalent to MEM18065B Diagnose and repair digital equipment and components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting equipment specifications, manuals, circuit and schematic diagrams, maintenance records and supplier catalogues and obtaining relevant data with respect to diagnosing and repairing digital equipment and components
- checking electronic equipment/sub-assemblies, components, connections and terminations for compliance to specifications
- locating, reading/recording and diagnosing built-in fault indicators and obtaining error code interpretation documents and running test functions and recording faults and/or equipment status indicated by built-in test functions/displays
- checking and testing equipment using appropriate test equipment and fault-finding techniques for compliance to specifications
- reproducing fault symptoms in the electronic equipment and verifying faults using appropriate test equipment and fault-finding techniques to locate and isolate faulty component or fault cause
- removing and replacing faulty components from the electronic equipment
- adjusting/tuning, calibrating and testing the repaired electronic equipment/sub-assemblies to specifications
- returning the repaired equipment and components to service in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- implications of electro-static discharge (ESD) upon the electronic equipment
- analog and digital electronics, including amplifiers, oscillators, power suppliers, filters, transistors, ICs, digital timers, gate arrays, transmitters and converters
- function(s) of the electronic equipment/sub-assembly
- procedures for:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - running built-in test functions
  - verifying faults in electronic equipment/sub-assemblies
  - isolating electronic equipment/sub-assemblies
  - removing sub-assemblies from electronic equipment
  - testing faulty sub-assemblies
  - removing and repairing/replacing faulty components from electronic equipment
  - fitting repaired/replaced components into sub-assemblies and sub-assemblies into electronic equipment
  - testing electronic equipment/sub-assembly performance
- errors indicated by built-in devices
- symptoms of the fault in the electronic equipment/sub-assembly and purpose of reproducing fault symptoms
- test equipment and techniques necessary to confirm electronic equipment/sub-assembly faults
- tools and techniques to be used to remove/refit/repair/replace the faulty sub-assemblies/component from the electronic equipment
- operational specifications of the sub-assembly
- equipment and techniques to be used to test the faulty sub-assemblies/component and probable causes of component failure
- operational specifications of the electronic equipment/sub-assembly/component
- test equipment and techniques necessary to check electronic equipment/sub-assembly performance.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and repairing digital equipment and components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18066 Diagnose and repair microprocessor-based equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18066B Diagnose and repair microprocessor-based equipment

Application

This unit of competency defines the skills and knowledge required to locate, replace/repair faulty components in microprocessor-based equipment.

It applies to situations in which the individual has sufficient information and access to microprocessor components to diagnose the functioning of elements within the microprocessor and requires an understanding of machine and assembly language and address and bus systems.

Where diagnosis of analog components is required unit MEM18056 Diagnose and repair analog equipment and components should also be selected.

Where routine fault finding within microprocessor systems is required unit MEM18057 Maintain/service analog/digital electronic equipment should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **6**

Pre-requisite Unit

MEM05001	Perform manual soldering/desoldering - electrical/electronic components
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12004	Perform precision electrical/electronic measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18057	Maintain/service analog/digital electronic equipment
MEM18065	Diagnose and repair digital equipment and components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate fault**	2.1	Determine equipment function and principles by reference to schematics, circuit diagrams, flow charts and equipment manuals
		2.2	Run built-in test functions and interpret results
		2.3	Reproduce fault symptoms and verify using fault-finding techniques
		2.4	Identify faulty or defect component/s and/or isolate fault cause

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3 **Replace/repair faulty components**	3.1 Remove faulty component using and appropriate tools and techniques
	3.2 Repair/replace faulty component/s in accordance with site/manufacturers' recommended procedures
	3.3 Re-fit repaired/replaced component/s
	3.4 Check and test equipment for compliance to specifications utilising correct and appropriate test procedures and equipment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• digital hardware • sub-assemblies of systems • discrete equipment used in computer, communication, consumer audio/video, electronic appliances, scanning systems, security/fire systems, power supplies and test equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fault-finding techniques include one (1) or more of the following:

- signal injection
- substitution
- monitoring
- measurement
- heating/cooling
- sound
- visual
- touch
- smell
- use of inbuilt software and hardware diagnostics

Test equipment includes one (1) or more of the following:

- continuity testers
- ammeters
- voltmeters
- cathode ray oscilloscopes
- frequency counters
- signal generators
- digital probes
- pulse generators
- computer and computer software
- data analysers

Components include (1) one or more of the following:

- discrete component assemblies
- individual components, including:
  - resistors
  - switching devices
  - capacitors
  - transformers
  - solenoids
  - tubes
  - semi-conductors
  - transistors
  - ICs
  - digital timers
  - gate arrays
  - transmitters
  - converters

Assessment Requirements for MEM18066 Diagnose and repair microprocessor-based equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18066B Diagnose and repair microprocessor-based equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting equipment specifications, manuals, circuit and schematic diagrams, maintenance records and supplier catalogues and obtaining relevant data with respect to diagnosing and repairing microprocessor-based equipment
- locating, reading/recording and diagnosing built-in indicators and obtaining error code interpretation documents and running test functions and recording faults and/or equipment status indicated by built-in test functions/displays
- reproducing fault symptoms in the microprocessor-based equipment and verifying faults using appropriate test equipment and fault-finding to locate and isolate faulty component or fault cause
- checking microprocessor-based equipment, electronic equipment/sub-assemblies, components, connections and terminations for conformance to specifications
- removing and replacing faulty components and/or microprocessor from the electronic equipment/sub-assemblies
- checking and testing equipment using appropriate test equipment and fault-finding techniques for conformance with specifications
- adjusting/tuning, calibrating and testing the repaired microprocessor-based equipment to specifications
- returning the repaired equipment and components to service in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- implications of electro-static discharge (ESD) upon the electronic equipment
- microprocessor systems, architecture, circuits and dedicated chips
- function(s) of the microprocessor-based equipment
- electronic principles utilised in the operation of the microprocessor-based equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for:
  - running built-in test functions
  - verifying faults in microprocessor-based equipment
  - testing faulty microprocessor-based equipment
  - testing microprocessor-based equipment performance
  - removing/refitting/repairing/replacing faulty components from microprocessor-based equipment and tools and techniques to be used
- errors indicated by built-in devices
- symptoms of the fault in the microprocessor-based equipment and purpose of reproducing fault symptoms
- test equipment and fault-finding techniques necessary to confirm microprocessor-based equipment faults
- test equipment and techniques to be used to test the faulty microprocessor-based equipment and probable causes of component failure
- reasons for identifying the faulty component for repair or replacement
- operational specifications of the microprocessor-based equipment
- test equipment and fault-finding techniques necessary to check the microprocessor-based equipment performance.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and repairing microprocessor-based equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18067 Tune control loops - multi controller or multi element systems

Modification History

Release 1. Supersedes and is equivalent to MEM18067B Tune control loops – multi controller or multi-element systems

Application

This unit of competency defines the skills and knowledge required to determine and record control loop responses in open and closed loop modes, tune control loops and complete service records.

Included is the application of step response (open loop tuning calculations and closed loop ultimate sensitivity trials) to achieve specified loop characteristics in conformance to operational specifications.

Where fault-finding is required to electronic component level unit MEM18056 Diagnose and repair analog equipment and components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18054	Fault find, test and calibrate instrumentation systems and equipment
MEM18055	Dismantle, replace and assemble engineering components

Plus, one or more of the following, including their prerequisites:

MEM18062	Install, maintain and calibrate instrumentation sensors, transmitters and final control elements
MEM18064	Maintain instrumentation system components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine control loop characteristics**	2.1	Examine engineering specifications, technical information and historical process, records and trends for relevant data
		2.2	Carry out consultation with system operators and other relevant plant personnel and extract relevant data and document to procedures
		2.3	Read programmed maintenance/service reports and note relevant data
		2.4	Analyse data and ascertain control loop characteristics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Record control loop responses**	3.1	Record control loop responses in open and closed loop mode using chart recorders and data loggers
		3.2	Test unit for tuning using appropriate diagnostic techniques
		3.3	Analyse diagnostic results against specifications
4	**Tune control loops**	4.1	Perform tuning operations by applying control loop device characteristics, controller mode principles and adjustment methods using appropriate equipment, procedures and techniques
		4.2	Monitor and adjust control loop components during controller tuning operation using test recording equipment
		4.3	Apply step response – open loop tuning calculations to achieve specified loop characteristics
		4.4	Use closed loop tuning methods incorporating ultimate sensitivity and systematic trials to achieve specified loop characteristics
		4.5	Use correct sequence of tuning on multi controllers and/or multi element systems to achieve specified characteristics
		4.6	Tune control loops to optimum mode settings
		4.7	Recommission process control loop to specifications
5	**Complete service reports**	5.1	Adopt appropriate follow-up procedures
		5.2	Complete service reports according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Historical trends include one (1) or more of the following:	• supervisory control and data acquisition (SCADA) • charts • chart recorders and data loggers • equipment conditioning monitoring
An open and closed loop system includes:	• final control elements • process measuring devices • converters • controllers • process signals
Test and recording equipment for the monitoring and adjustment of control loop tuning includes the use of one (1) or more of the following:	• pneumatic • analog electronic • digital electronic

Assessment Requirements for MEM18067 Tune control loops - multi controller or multi element systems

Modification History

Release 1. Supersedes and is equivalent to MEM18067B Tune control loops – multi controller or multi-element systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting engineering specifications, technical information, diagrams and drawings, documents and historical records and obtaining relevant data with respect to tunning control loops
- consulting with system operators and other relevant personnel with respect to the control loop characteristics, including an open and closed loop system and confirming function/malfunction of the system and/or its components
- checking operational characteristics of the control devices, signal conversion instruments and final control elements for conformance to specifications
- locating, reading and interpreting in-built fault indicators and error codes and identifying faults/defects in control system
- obtaining relevant pneumatic, electrical and electronic circuit diagrams and testing and monitoring control loop for correct operation and recording the operational responses of the control system/loop
- using fault-finding and diagnostic techniques and procedures throughout the monitoring and testing phase and comparing collected data with the operational specifications of the control system
- dismantling/disassembling serviceable items using appropriate tools, techniques and procedures
- setting and adjusting the controller modes using appropriate test and calibration equipment for the monitoring and adjustment of control loop tuning
- checking the control instrumentation for correct zero, span and range and making final adjustments, as required
- tuning the control loop to optimum mode settings and recommissioning the control system
- completing all service reports, including appropriate follow up procedures in accordance with SOPs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- proportional integral differential (PID) control loops tuning/calibration techniques
- mathematical computations, including algebra, exponentials and logarithms, equations, graphs, charts, vectors, complex numbers and Boolean algebra
- relevant data, including information from in-built devices on the control loop characteristics
- specifications of each system component
- control programming
- supervisory control and data acquisition (SCADA) systems, programmable logic controller (PLC) systems, distributive control systems (DCS) and computer-based systems
- procedures for:
  - documenting/reporting information
  - documenting control system tests and analysis
  - isolating and testing the control system and its components
  - verifying apparent faults in circuits and/or control system components
  - dismantling/ disassembling components for repair or replacement
  - assembling repaired and/or replacement items
  - calibration of control system components and necessary equipment
  - checking control instruments for zero, span and range
  - making final adjustments to ensure all control system components conform to specification
  - commissioning the control system
- signal transmission, including the principles of operation of the final control element, procedures for calibrating and adjusting the control system
- correct function of the circuits and components within the control loop
- calibration and adjustment methods for the control loop devices
- configuration of the digital control system software
- operational responses and procedures for monitoring and recording test and operational data
- fault-finding and diagnostic techniques throughout the monitoring and testing process
- deviations/variations from specification
- correct maintenance procedures for serviceable item(s)
- adjustments which affect the calibration to control system components
- controller modes and actions
- reporting/recording requirements associated with the commissioning of the control system
- follow-up actions to be undertaken after maintaining/repairing control system instrumentation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in tuning control loops – multi controller or multi-element systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18069 Maintain, repair instrumentation process control analysers

Modification History

Release 1. Supersedes and is equivalent to MEM18069B Maintain, repair instrumentation process control analysers

Application

This unit of competency defines the skills and knowledge required to perform preventative maintenance on process control analysers; complete fault documentation; plan corrective action; repair, replace, overhaul, calibrate and test; re-install and recommission process control analysers and applies to the use of electrical and electronic test equipment for transmission and signal measurement.

Central to the task is the interpretation of electrical and electronic circuit diagrams and the interpretation of calibration and analysis data and procedures in accordance with manufacturers' data sheets.

Where soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/desoldered then unit MEM05002 Perform high reliability soldering and desoldering should also be selected.

Where diagnosis and repair of electronic equipment is undertaken to component level then unit MEM18056 Diagnose and repair analog equipment and components and unit MEM18065 Diagnose and repair digital equipment and components, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Perform preventative maintenance on process control analysers**	2.1	Determine specification requirements from manufacturers' manuals, maintenance schedules and other relevant documents
		2.2	Interpret and define specification requirements by applying principles of operation and process control analyser characteristics
		2.3	Perform preventative maintenance schedules on process control analysers to service and maintain analysers within defined specifications
		2.4	Diagnose specified process control analysers within the system or within the laboratory to determine correct operation or malfunction using appropriate electrical and electronic test equipment, techniques, data and procedures
		2.5	Identify and confirm faults and malfunctions
3	**Complete fault documentation and plan corrective action**	3.1	Document or report faults and malfunctions according to SOPs
		3.2	Plan corrective action autonomously or in consultation with appropriate personnel and action
4	**Repair, replace, overhaul process control analysers**	4.1	Examine process control analysers and verify for repair, replacement or overhaul
		4.2	Select replacement items from manufacturers' parts lists or catalogues according to specifications
		4.3	Repair or overhaul faulty items using appropriate principles, techniques, tools, equipment and procedures
		4.4	Refit repaired, overhauled and replacement process control analysers
		4.5	Prepare refitted process control analysers for testing and calibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
5	**Calibrate and test process control analysers**	5.1	Calibrate process control analysers against appropriate physical standards using correct calibration devices, equipment, techniques and procedures
		5.2	Test calibrated process control analysers using appropriate test equipment
		5.3	Collect and interpret calibration and analysis data
		5.4	Assess calibration and analysis data in accordance with manufacturers' data sheets, codes of practice and safety procedures
6	**Re-install and recommission process control analysers**	6.1	Put process control analysers into service to specifications with due regard to process requirements, codes of practice, safety, commissioning procedures and techniques
		6.2	Complete service reports in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tasks include the use of one (1) or more of the following:	• hygrometers • wet and dry bulb • calibration of gas cylinders and gas supply equipment • the use of chemical calibration solutions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- the use of special calibration devices specific to chemical detectors
- gas analysis devices
- liquid analysis devices

Safety codes of practice includes one (1) or more of the following:

- identification handling and appropriate use of high pressure gas cylinders
- equipment
- chemical solutions

Assessment Requirements for MEM18069 Maintain, repair instrumentation process control analysers

Modification History

Release 1. Supersedes and is equivalent to MEM18069B Maintain, repair instrumentation process control analysers

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting engineering specifications, technical information, circuit diagrams, engineering drawings, manufacturers' manuals and supplier catalogues and obtaining relevant data with respect to maintaining, repairing instrumentation process control analysers
- performing scheduled/preventative maintenance and determining correct function or the malfunction of process control analysers and recording test results
- identifying, monitoring and localising faults by confirming correct action of process control analysers using a structured diagnostic approach, recording/reporting faults and malfunctions and preparing sequential action plan to correct faults
- checking process control analysers and marking for replacement, repair or overhaul
- repairing/overhauling faulty items using appropriate tools, equipment, techniques and procedures to manufacturers' specifications
- refitting process control analysers and preparing for testing and calibration
- calibrating process control analysers against appropriate physical standards using appropriate calibration devices, equipment and techniques
- testing calibrated process control analysers using appropriate equipment by interpreting relevant calibration and analysis data with respect to the given process controller
- recommissioning process control analysers
- completing all service reports according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications for the process control analyser to be installed
- maintenance to be undertaken and the frequency at which process control analysers are to be maintained

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for:
  - maintaining process control analysers
  - determining correct function or the malfunction of process control analysers
  - recording test results and procedures for monitoring apparent faults detected from test results
  - reporting/recording faults and/or malfunctions in process control analysers
  - fitting/refitting process control analysers including preparing items
  - calibrating and recommissioning process control analysers
  - reporting/recording service undertaken on process control analysers and reasons for recording service undertaken
- test equipment and diagnostic techniques required to determine correct function or malfunction of process control analysers
- probable causes of variations between test results and specifications
- action to be taken to return the process control analysers to specification and reasons for undertaking the proposed actions
- persons to be consulted in planning the corrective action and sequence of actions to be taken
- tools, equipment and techniques required to test components and reasons for marking components for repair, replacement and/or overhaul
- specifications for the component(s) to be replaced
- preparation requirements of items to be fitted/refitted
- tools, techniques and equipment required to repair/overhaul and fit/refit process control analysers
- preparation requirements of process control analysers prior to testing and calibration
- physical standards against which process control analysers are to be calibrated
- devices, equipment and techniques required to calibrate process control analysers
- equipment and procedures for testing calibrated process control analysers
- probable causes of any variations/deviations detected
- action to be taken to return the process control analyser to specification and reasons for undertaking the proposed action(s)
- appropriate measuring techniques, tools and equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, repairing instrumentation process control analysers at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18071 Connect and disconnect fluid conveying system components

Modification History

Release 1. Supersedes and is equivalent to MEM18071B Connect/disconnect fluid conveying system components

Application

This unit of competency defines the skills and knowledge required to safely remove and replace a range of fluid conveying components and assemblies, and inspect/test fluid conveying assemblies.

It applies to repairs and replacement to pressure and suction systems on fixed and mobile plant/equipment, including marine, heavy plant and manufacturing plant applications with system pressures range of 10.5 MPa to 35 MPa, ranging up to 70 MPa.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

This unit should not be selected when unit MEM18055 Dismantle, replace and assemble engineering components or unit MEM27017 Maintain, fault find and rectify hydraulic systems for mobile plant has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Disconnect fluid conveying components and assemblies**	2.1	Carry out safety/risk assessment, identify potentially hazardous situations/conditions and position safety devices
		2.2	Note, record and label lay out of fluid conveying conductor
		2.3	Identify faulty component/assembly using specific troubleshooting procedures, reference documents and fluid power principles
		2.4	Disconnect and remove fluid conveying components and assemblies using appropriate tools, equipment, procedures and techniques
		2.5	Seal open system adequately with standard or special purpose sealing materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Obtain replacement parts**	3.1	Select replacement parts from manufacturer catalogues and other relevant reference sources according to international standards and specifications
4	**Test and store components**	4.1	Pressure test fluid conveying assemblies and individual components according to industry and manufacturer standards and using fluid power principles
		4.2	Assess and note condition
		4.3	Clean, seal and store components/assemblies according to industry and manufacturer standards
5	**Connect fluid conveying components and assemblies**	5.1	Check connections and prepare for reconnection
		5.2	Connect components and assemblies to equipment to specifications using appropriate techniques
		5.3	Remove tagged out equipment, signage and safety blocking devices according to SOPs
		5.4	Check equipment and fluid conveying systems and functional test, including in-situ and high pressure test rigs for correct operation according to manufacturer and industry standards
6	**Report results**	6.1	Follow reporting and certification procedures
		6.2	Complete all relevant information

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fluid conveying applications include one (1) or more of the following:	• hydraulic • pneumatic • water • gas • acids/corrosives/alkalines • abrasives • petroleum • other dry/wet media
Potentially hazardous situations/ conditions include one (1) or more of the following:	• accumulated pressure • contamination • fluid handling
Components and assemblies include one (1) or more of the following:	• high pressure seals • seats • hoses • tubes • pipes • fittings • connectors • adaptors and anchors • other associated attachments

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18071B Connect/disconnect fluid conveying system components

Assessment Requirements for MEM18071 Connect and disconnect fluid conveying system components

Modification History

Release 1. Supersedes and is equivalent to MEM18071B Connect/disconnect fluid conveying system components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and obtaining relevant data with respect to connecting and disconnecting fluid conveying system components
- identifying potential hazardous situations and carrying out a risk assessment and isolating, tagging, locking off and displaying signage using appropriate procedures
- locating faulty component, neutralising pressures and disconnecting and removing fluid conveying components and assemblies using appropriate techniques, tools and equipment and sealing open system with appropriate sealing materials
- selecting replacement components from manufacturer catalogues and other reference sources
- performing pressure testing on fluid conveying assemblies and individual components using fluid power principles and undertaking condition and serviceability assessment and storing components/assemblies according to industry standards
- connecting components and assemblies to equipment, removing tagged out equipment, signage and safety blocking devices
- testing equipment and fluid conveying systems using appropriate test equipment and rigs for compliance to manufacturer and industry standards
- completing routine reports and certification procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- different sources of stored energy and their applications
- work health and safety (WHS) responsibilities of customer and self
- safety/security lock-off devices and signage and procedures and reasons for installing lock-off devices and signage
- basic functions of fluid power systems, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - effects of heat and contamination
  - pressures
  - flow rates and temperatures
  - hose strength and size
  - effect of media on hoses
  - test
  - operational and burst pressures
- techniques and safety practices for pressure testing
- tools, techniques and procedures for removal of components
- troubleshooting techniques
- standard and specific sealing materials and techniques
- different fluid conveying parts and their function
- techniques and safety practices for pressure testing
- criteria for assessment
- methods of cleaning, sealing and storage
- techniques and criteria for connection and confirming connection
- techniques, procedures and safety practices. including neutralisation of pressures.

Assessment Conditions

- Assessors must:
  - have vocational competency in connecting and disconnecting fluid conveying system components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18072 Manufacture fluid conveying conductor assemblies

Modification History

Release 1. Supersedes and is equivalent to MEM18072B Manufacture fluid conveying conductor assemblies

Application

This unit of competency defines the skills and knowledge required to perform assembly and functional testing of fluid conveying components and assemblies.

Conductor assemblies may apply to positive and negative pressure systems on fixed and mobile plant/equipment, including marine, heavy plant and manufacturing plant applications with system pressures range of 10.5 MPa to 35 MPa, ranging up to 70 MPa.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

This unit should not be selected when unit MEM18055 Dismantle, replace and assemble engineering components or unit MEM27017 Maintain, fault find and rectify hydraulic systems for mobile plant has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM18072 Manufacture fluid conveying conductor assemblies

Modification History

Release 1. Supersedes and is equivalent to MEM18072B Manufacture fluid conveying conductor assemblies

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting tables and charts, equipment specifications, circuit and schematic diagrams and obtaining relevant data with respect to manufacturing fluid conveying conductor assemblies
- preparing and assembling conductors using appropriate tools and equipment to specifications and industry standards
- performing pressure testing on fluid conveying assemblies and individual components and identifying faulty items and confirming failure or potential to fail and carrying out appropriate remedial action
- testing and verifying correct operation of components to ensure compliance to manufacturer and industry standards using appropriate test equipment and rigs
- completing routine reports and certification procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- conductor materials and fittings for a range of applications and media (fluid types)
- methods for preparation of different conductors, including hose and pipe assemblies
- different methods for assembling hose and pipe assemblies
- dismantle and repair procedures
- operational function and characteristics of fluid conveying installation and application category types
- industry standards and manufacturer specifications
- procedures to assemble, clean, test and assess operation
- fluid power conveying principles, procedures and safety requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in manufacturing fluid conveying conductor assemblies at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM18083 Handle fluorocarbon refrigerants according to regulations

Modification History

Release 1. New Unit

Application

The unit of competency defines the knowledge and skills required to undertake work on refrigeration and air conditioning in a manner consistent with requirements of the Australian Refrigeration Council (ARC) for working with ozone depleting refrigerants. The unit's focus is on compliance and awareness of global warming and the dangers of ozone depleting substances. The unit does not cover the technical skills required for typical refrigeration and air conditioning trade tasks such as installing, servicing, repair or decommissioning of equipment or the testing, recovering, evacuating or charging of refrigerants.

This unit should be selected in conjunction with relevant technical units if the learner intends to apply to the ARC for a Refrigerant Handling Licence – qualified persons (ARCTICK licence). Other MEM units are specified where a person intends to apply for other ARC licences, including those covering vehicle or split system related work.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: A

Unit Weight: 1

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Maintenance and diagnostics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Demonstrate knowledge of global warming and ozone layer depletion**	1.1	Identify the role of the ozone layer in the earth's climate and human health
		1.2	Explain effects of global warming and consequences of ozone layer depletion
		1.3	Explain role of ozone depleting substances (ODS) and synthetic greenhouse gas (SGG) emissions in global warming
2	**Demonstrate knowledge of regulatory requirements in regards to fluorocarbon refrigerants**	2.1	Explain ARC licence classes and relationship to HVAC/R equipment
		2.2	Identify requirements to apply for a Refrigerant Handling Licence – Qualified Persons Licence
		2.3	Explain licence period and procedures to obtain or renew a licence
		2.4	Explain refrigerant coding and numbering system, including classification for toxicity and flammability
		2.5	Identify the range of refrigerants covered by ARC licencing
		2.6	Identify role of ODS and SGG handling licences and trading authorisations in refrigerant handling and disposal
		2.7	Access information in the Australia and New Zealand Refrigerant Handling Code of Practice relating to specific work tasks
3	**Determine job requirements**	3.1	Identify job requirements from customer order, work specification or other enterprise procedure
		3.2	Determine if required work includes risk of refrigerant emission
		3.3	Check refrigerant handling equipment is available and serviceable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.4	Plan work tasks to conform to regulatory requirements
4	**Assess equipment and refrigerant status prior to commencement of work**	4.1	Check refrigerant label on equipment and confirm refrigerant is appropriate for equipment
		4.2	Adjust work plan to avoid any venting if refrigerant is unable to be positively identified
		4.3	Identify if refrigerant is flammable and if so check for potential ignition sources and provide appropriate ignition source protection or elimination
		4.4	Conduct visual check and other tests for gross leaks
		4.5	Conduct other appropriate leak tests
		4.6	Adjust work plan to include rectification of leaks
5	**Apply regulations, codes and standards to refrigeration and air conditioning work**	5.1	Apply regulations, codes and standards to installation, servicing, repair or decommissioning of equipment and systems
		5.2	Establish or maintain appropriate ventilation and temporary flammable zone for equipment with flammable refrigerant
		5.3	Set and locate gas detectors appropriately for type of equipment
		5.4	Conduct leak testing according to regulations, codes and standards
		5.5	Evacuate equipment according to regulations, codes and standards
		5.6	Charge and recover refrigerants using prescribed methods and equipment
		5.7	Ensure work on piping, valves and gauges is consistent with regulations, codes and standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Handle refrigerant includes the following:	• any actions with an ARC prescribed refrigerant, or a component of refrigeration and air conditioning equipment, that carries the risk of its emission
Prescribed methods and equipment include the following:	• methods and equipment as described in ARC codes and regulations or referenced by the ARC • manufacturer's instructions where available except where the instructions would lead to emission of refrigerant
Refrigerant handling equipment includes the following:	• cylinders
Contamination includes one or more of the following:	• moisture • non-condensables • solids and acids • refrigerants or mixed refrigerants that are not specified for the refrigeration equipment
Prescribed refrigerant includes the following:	• chlorofluorocarbons (CFCs) • hydrochlorofluorocarbons (HCFCs) • hydrofluorocarbons (HFCs) • any other refrigerant prescribed by the ARC

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Refrigeration equipment includes one or more of the following:	• compressors • air/water cooled condensers, • liquid receivers • chilled water heat exchangers • evaporators • air/water cooled condensing units • associated piping and valves
Reclaim includes the following:	• to reprocess used refrigerant to a new product specification by means which may include distillation. This term usually implies the use of processes or procedures available only at a specialised reclaim or manufacturing facility
Recovery includes the following:	• removing refrigerant in any condition from a system and storing it in an external cylinder, without necessarily testing or processing it in any way
Self-contained low charge systems include the following:	• appliances which contain a fluorocarbon refrigerant charge of two kilograms or less, and do not require any work to be done on the refrigeration system at the time of installation

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MEM18083 Handle fluorocarbon refrigerants according to regulations

Modification History

Release 1. New Unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include at least one (1) instance of application on a system other than a self-contained low charge system:

- following work instructions, standard operating procedures (SOPS) and safe work practices
- identifying and applying regulations, codes and standards relevant to handling and/or disposal of fluorocarbons in regards to:
  - removing refrigerant from a self-contained low charge system and store it in an external cylinder
  - pumping-down refrigerant from a non self-contained low charge system, including:
    - complying with code limits for receivers
    - ensuring auxiliary receivers are fitted and suitable
  - inspecting joints, seals, gaskets and flanges for traces of refrigerant oil and repairing as necessary
  - leak testing evaporator, heat exchanger, expansion valve, solenoid valve, and other components, including placing low pressure side into positive pressure before testing
  - using air purgers in negative pressure systems
  - fitting of gauge isolation valves
  - mounting compressors, including anti vibration mountings and mufflers
  - aligning shafts
  - tensioning compressor drive belts
  - evacuating a factory matched evaporator and condenser system
- identifying coding and classification for at least six:
  - chlorofluorocarbons (CFCs)
  - hydrochlorofluorocarbons (HCFCs)
  - hydrofluorocarbons (HFCs)
- identifying flammable refrigerants and taking recommended actions as per fact sheets and Flammable Refrigerants Safety Guide published by The Australian Institute of Refrigeration, Air Conditioning And Heating (AIRAH).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE) when handling or working with refrigerants
- operating principles of refrigeration systems
- characteristics, properties and operating specifications of fluorocarbon refrigerants
- consequences of releasing quantities of ozone depleting refrigerants into the atmosphere
- ARC licensing criteria and regulations relating to handling fluorocarbon refrigerants
- methods of identifying and labelling stored refrigerants and the type of refrigerant used in a refrigeration system
- methods for recovery, storage and dispatch of fluorocarbon refrigerants to licensed reclamation facilities
- mandatory and recommended procedures in regulations, codes and standards for self-contained and non self-contained refrigeration and air conditioning systems work, including:
  - leak testing
  - charging of systems
  - recovery/pump down of refrigerants
  - evacuation
  - minimising refrigerant content of lubricant oil
  - aligning shafts
  - tensioning compressor belts
  - cleaning contaminated systems
- codes and standards for pipe joints and mountings
- safe handling and storage procedures for refrigerant cylinders
- rules and safe handling procedures for flammable refrigerants as published by AIRAH
- causes of contamination in refrigeration and air conditioning systems and their effect on refrigeration system performance
- relevant codes and regulations applying to fluorocarbon refrigeration and air conditioning systems not specifically mentioned above.

Assessment Conditions

- Assessors must:
  - have vocational competency in refrigeration system maintenance at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Assessment should be co-assessed with one or more MEM HVAC/R trade units applying to work on systems other than a self-contained low charge system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18084 Commission and decommission split air conditioning systems

Modification History

Release 1. Supersedes and is equivalent to MEM18084A Commission and decommission split air conditioning systems

Application

This unit of competency defines the skills and knowledge required to commission and decommission single head split air conditioning systems, up to 18kW, to relevant standards, codes and local regulations.

It includes the application of safe working practices, following standard procedures to pressure test, evacuate, recover, charge and perform functional checks to test system performance.

This unit refers to plug in appliances only.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine the operating conditions of vapour compression systems**	2.1	Determine the actual and specified range of operating conditions from measured and calculated values using established procedures to determine as they apply to particular vapour compression systems
		2.2	Establish operating conditions and record on commissioning documentation
		2.3	Obtain tools, equipment and testing devices needed to determine the basic operating conditions and check for correct operation and safety
3	**Recover refrigerants from split air conditioning systems**	3.1	Check for, and protect site from, ignition sources if R32 or other flammable refrigerants are used
		3.2	Isolate circuits/appliances in strict accordance with work health and safety (WHS) requirements and procedures, where necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Remove refrigerants safely into suitably labelled containers in accordance with legislative and industry requirements
		3.4	Deal with contaminated refrigerant in accordance with requirements
4	**Pressure and leak test split air conditioning systems**	4.1	Identify and note safety hazards and implement established risk control measures
		4.2	Follow industry codes of practice and manufacturer installation instructions
		4.3	Take precautions to prevent damage to components while pressure testing the system
		4.4	Conduct pressure testing at a pressure compatible with the refrigerant to be used
		4.5	Located leak, isolate and repair using methods appropriate to the system type under test and in accordance with industry practices
5	**Evacuate split air conditioning systems**	5.1	Note safety hazards which have not previously been identified, and implement established risk control measures
		5.2	Evacuate the system to the required level and clean the system of all moisture and other containments in accordance with requirements
		5.3	Apply a standing vacuum test in accordance with industry codes of practice and applicable standards
6	**Charge split air conditioning systems**	6.1	Select correct refrigerant for the system, in accordance with manufacturer requirements and industry practices
		6.2	Measure the refrigerant charge by weight in accordance with manufacturer specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		6.3	Charge the system in accordance with manufacturer requirements and industry practices
		6.4	Check all components and maintain in accordance with manufacturer requirements
7	**Test the operation of split air conditioning systems**	7.1	Start and operate the system
		7.2	Carry out standard tests to confirm system performance to manufacturer specifications
		7.3	Check the refrigerant charge and add refrigerant, if required
		7.4	Leak check the system
		7.5	Record test data, as required
8	**Complete the commissioning/ recommissioning of split air conditioning systems**	8.1	Ensure the worksite is cleaned and left in presentable condition in accordance with original presentation, client requirements, industry standards and organisational requirements
		8.2	Undertake final inspections to ensure installation conforms to industry, legislative and work order requirements
		8.3	Instruct the client on the use of the product in accordance with organisational requirements and manufacturer specifications
		8.4	Complete certificates of compliance and other relevant commissioning documentation and process in accordance with state/territory regulatory requirements
9	**Decommission split air conditioning systems**	9.1	Electrically disconnect plug in appliance
		9.2	Recover refrigerants, store and dispose of in accordance with legislative and industry requirements
		9.3	Remove units and components and dispose of safely and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	in accordance with regulations, industry codes of practice and sustainable environmental practices
	9.4 Clean the worksite and leave in presentable condition, to client and organisational requirements, industry standards and sustainable environmental practices
	9.5 Complete decommissioning documentation and process in accordance with state/territory regulatory requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools, equipment and testing devices include one (1) or more of the following:	• refrigeration gauge manifold • Schraeder access valves; quick connect couplings, and thermometer/thermocouple temperature measuring devices • analogue and digital vacuum measuring gauges • digital scales • refrigerant recovery unit • vacuum pump • electronic leak detectors • refrigerant containers/cylinders
Legislative and industry requirements include one (1) or more	• Commonwealth, state and territory legislation, regulations, standards and industry codes of practice • The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

of the following:	• air conditioning residential best practice guidelines (AIRAH) • AIRAH flammable refrigerants fact sheets and guide • state/territory and local building regulations • sustainable environmental practices for commissioning and decommissioning split air conditioning
System performance includes one (1) or more of the following:	• pressure • temperature • sub-cooling • superheating • evaporator coil to air temperature difference

Assessment Requirements for MEM18084 Commission and decommission split air conditioning systems

Modification History

Release 1. Supersedes and is equivalent to MEM18084A Commission and decommission split air conditioning systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, legislative and industry requirements and drawings and obtaining relevant data with respect to commissioning and decommissioning split air conditioning systems
- checking system for correct operation using appropriate tools, techniques and equipment and comparing system and component performance/operation against specifications
- isolating circuit and appliances in strict accordance with work health and safety (WHS) requirements and procedures, where necessary
- identifying faulty components and non-compliances using appropriate tools, equipment and testing
- removing, containing and adding refrigerant safely in compliance with relevant Australian Standards or codes and regulations
- pressure and leak testing split air conditioning systems at a pressure compatible with the refrigerant to be used and locating leaks, isolating and applying appropriate repairs, adjustments or remedial action to achieve specifications
- completing commissioning procedures, including undertaking final inspection, instructing the client and completing certificates of compliance and other relevant commissioning documentation and processes
- decommissioning split air conditioning – single head systems using sustainable environmental practices
- completing all relevant commissioning and decommissioning documentation in accordance with state/territory regulatory requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applicable legislative and regulatory requirements, standards, codes, licensing requirements and sustainable environmental practices for commissioning and decommissioning systems
- applicable procedures and legislative requirements for storage, handling and treatment of ozone depleting and synthetic greenhouse gas refrigerant
- applicable procedures for working with R32 and other flammable refrigerants where used in split air conditioning systems
- typical work environments, demands and considerations
- specifications, operational characteristics and process for identifying system components
- typical problems, contingencies and solutions
- applicable tools, equipment and testing devices and their operation
- procedures for determining the actual and specified range of operating conditions from measured and calculated values as they apply to particular vapour compression systems
- procedures for evacuating system, leak testing, adding refrigerant and checking air flow
- requirements and procedures to isolate circuits/appliances
- measuring instruments/equipment, specifications and procedures for checking temperature, system performance and components
- process for identifying refrigerant type
- types of commissioning documentation
- requirements and procedures for reporting non-compliances completing documentation.

Assessment Conditions

- Assessors must:
  - have vocational competency in commissioning and decommissioning split air conditioning systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18085 Install, service and repair domestic air conditioning and refrigeration appliances

Modification History

Release 1. Supersedes and is equivalent to MEM18085A Install, service and repair domestic air conditioning and refrigeration appliances

Application

This unit of competency defines the skills and knowledge required to install, service and repair domestic air conditioning and refrigeration appliances to relevant standards, codes and local regulations and is limited to domestic air conditioning and refrigeration systems only.

It includes the application of safe working practices, following standard procedures to perform functional checks, test system performance and carry out straightforward maintenance.

This unit refers to plug-in appliances only.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Install and remove domestic refrigeration and air conditioning appliances**	2.1	Identify appliance location and site in accordance with customer requirements, regulations, standards, codes of practice and industry guidelines
		2.2	Prepare site and install and secure appliance in accordance with manufacturer instructions and industry best practice
		2.3	Check operation of the appliance in accordance with manufacturer instructions
		2.4	Dispose of waste materials and products in accordance with Commonwealth and state/territory legislation, environmental and industry codes of practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Determine operating condition of appliances**	3.1	Identify refrigerant used in equipment and protect from ignition sources if refrigerant is flammable
		3.2	Carry out established procedures and standard electrical tests to determine actual operating condition
		3.3	Follow established work health and safety (WHS) risk control measures and procedures to enable the system to be isolated and checked, where necessary
		3.4	Determine the basic refrigeration operating conditions and check for correct operation and safety using appropriate tools, equipment and testing devices
		3.5	Follow industry codes of practice and manufacturer service instructions
4	**Carry out routine maintenance**	4.1	Identify safety hazards and record and implement established risk control measures
		4.2	Perform routine maintenance procedure in accordance with manufacturer and client scheduling
		4.3	Maintain routine maintenance records and record faults
5	**Fault find and troubleshoot faults**	5.1	Select equipment and testing devices needed to determine fault
		5.2	Apply standard test procedures to determine faults against equipment specifications
		5.3	Record test data and record faults, as required
6	**Replace, repair or service faulty components**	6.1	Disconnect plug in appliance electrically
		6.2	Replace electrical components in accordance with manufacturer recommendations
		6.3	Select and prepare refrigeration system replacement

			components
		6.4	Recover refrigerant, store and dispose of in accordance with Commonwealth and state/territory legislation and industry codes of practice
		6.5	Install refrigeration system components in accordance with industry best practice, standards and codes
7	**Return to service domestic refrigeration and air conditioning appliances**	7.1	Identify standard electrical tests to identify electrical faults before operating
		7.2	Start appliance and operate in accordance with manufacturer standards
		7.3	Carry out standard tests to confirm system performance to manufacturer specifications
		7.4	Record appliance operating data, as required
		7.5	Ensure worksite is cleaned and left in presentable condition in accordance with original presentation, client requirements, industry standards and organisational requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Routine maintenance includes the following:	• electrical testing of the appliance • polarity testing • cleaning condensers • clearing drains • checking temperatures • pressures • component operation • air flow and system capacity • cleaning filters
Standard electrical tests include:	• earth continuity, insulation resistance, and circuit resistance to meet electrical equipment regulations and codes (AS/NZS 3000:2007 Electrical Installations (known as the Australian/New Zealand Wiring Rules) • testing of supply voltage and the appliance or individual component current draw
Tools, equipment and testing devices include one (1) or more of the following:	• refrigeration gauge manifold • Schraeder access valves; quick connect couplings, thermometer/thermocouple temperature measuring devices • analog and digital vacuum measuring gauges • digital scales • refrigerant recovery unit • vacuum pump • electronic leak detectors • refrigerant containers/cylinders
Industry best practice includes:	• pipe fabrication techniques and industry best practice for pipe brazing
Standard refrigeration return to service procedures include one (1) or more of the following:	• leak detection • evacuation • refrigerant charging of domestic air conditioning and refrigeration plug-in appliances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Commonwealth, state and territory legislation, regulations, standards, codes of practice and industry guidelines include one (1) or more of the following:	• Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 • air conditioning residential best practice guidelines (AIRAH) • AIRAH flammable refrigerant fact sheets and guide • state/territory and local building regulations • codes of practice for domestic refrigeration and air conditioning. (HB40)
System performance includes one (1) or more of the following:	• pressure • temperature • sub-cooling • superheating • evaporator coil to air temperature difference

Domestic refrigeration and air conditioning appliances include:	• self-contained plug in appliances primarily designed for domestic and residential situations, including one or more of the following:
	  • refrigerators - single door, two door and two door side by side
	  • freezers - chest and vertical door using, for example, refrigeration systems with cyclic defrost, frost-free with electric and hot-gas defrost, and manual defrost
	  • air conditioners (window and wall mounted self-contained room air conditioners)

Assessment Requirements for MEM18085 Install, service and repair domestic air conditioning and refrigeration appliances

Modification History

Release 1. Supersedes and is equivalent to MEM18085A Install, service and repair domestic air conditioning and refrigeration appliances

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications and legislative and industry requirements and guidelines and obtaining relevant data with respect to servicing and repairing domestic air conditioning and refrigeration appliances
- installing and removing domestic refrigeration and air conditioning appliances in accordance with customer requirements, regulations, standards, codes of practice and industry guidelines
- isolating circuit and appliances in strict accordance with work health and safety (WHS) requirements and procedures, where necessary
- checking operating condition of refrigeration and air conditioning appliances using appropriate tools, techniques and equipment and comparing system and component performance/operation against specifications
- carrying out routine maintenance of refrigeration and air conditioning appliances
- identifying faulty components and non-compliances using appropriate tools, equipment and testing devices
- replacing, repairing or servicing faulty components in accordance with specifications and industry best practice
- removing, containing and adding refrigerant safely in compliance with relevant Australian Standards or codes and regulations
- carrying out standard electrical tests in accordance with specifications
- completing all relevant standard, code or local required documentation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures and industry best practice for brazing refrigeration pipework

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for complying to all legislative and regulatory requirements for safely removing the refrigerant and charging and evacuating the system
- procedures for evacuating system, pressure and leak testing, handling and adding refrigerant and checking air flow
- safety and legislative requirements for handling refrigerants
- standard electrical measurements for earth continuity, insulation resistance, circuit resistance, supply voltage and current
- measuring instruments/equipment, specifications and procedures for checking temperature, system performance and testing components
- specifications, operational characteristics and process for identifying system components
- process for identifying refrigerant type
- requirements and procedures for reporting non-compliances completing documentation.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing, servicing and repairing domestic air conditioning and refrigeration appliances at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM18086 Test, recover, evacuate and charge refrigeration systems

Modification History

Release 1. Supersedes and is equivalent to MEM18086B Test, recover, evacuate and charge refrigeration systems

Application

This unit of competency defines the skills and knowledge required to test, recover, evacuate and charge refrigeration systems to achieve performance specification.

It applies to refrigeration systems associated with refrigeration and air conditioning in commercial, industrial, domestic, marine and transport applications. This unit does not apply to vehicle in-cab air conditioning systems.

Demonstration of competency must be in accordance with Australian Standards, including AS - HB40 Refrigeration and Air Conditioning codes of practice, and relevant ozone and greenhouse substance legislation.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess refrigeration system operation**	2.1	Apply refrigeration system operating principles and terminology to assessment of system operation
		2.2	Access and interpret all relevant information to commencement of work on the refrigeration system
		2.3	Undertake checks on the refrigeration system, including appropriate basic electrical safety checks in accordance with relevant codes and regulations
		2.4	Develop appropriate operating procedures, as required
		2.5	Determine and record pressures and temperatures
		2.6	Isolate faults to component level and determine appropriate corrective action
		2.7	Check the refrigeration system for leaks and any contamination

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Recover refrigerant and evacuate system**	3.1	Recover and contain refrigerant used in the system in accordance with codes and regulations
		3.2	Evacuate the refrigeration system in accordance with codes and regulations
4	**Charge the refrigeration system**	4.1	Charge the refrigeration system with the correct refrigerant
		4.2	Add appropriate lubricating oil to the refrigeration system
		4.3	Check the refrigeration system for leaks

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Relevant information includes one (1) or more of the following:	• manufacturers' technical data • pressure temperature charts • operating manuals
Appropriate corrective action includes:	• isolation and tagging of faulty components, repair and/or replacement
Contamination includes	• moisture

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

one (1) or more of the following:	• non-condensables • solids and acids
Refrigerant includes one (1) or more of the following:	• chlorofluorocarbons (CFCs) • hydrochlorofluorocarbons (HCFCs) • hydrofluorocarbons (HFCs) • natural refrigerants • ammonia
Relevant codes and regulations include:	• Australian Standards, refrigeration and air conditioning codes of practice, relevant ozone and greenhouse substance legislation

Assessment Requirements for MEM18086 Test, recover, evacuate and charge refrigeration systems

Modification History

Release 1. Supersedes and is equivalent to MEM18086B Test, recover, evacuate and charge refrigeration systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting drawings, instructions, specifications, procedures, codes and regulations to test and check refrigeration components and systems
- planning and sequencing refrigeration operations and developing operating procedures for equipment as required in compliance with AS - HB40 Refrigeration and Air Conditioning codes of practice and ozone and greenhouse substance legislation
- performing electrical safety checks and tests for conformance to specifications using appropriate techniques and equipment, determining pressures and temperatures and documenting test results and procedures undertaken
- identifying faulty components and any system contamination and selecting appropriate materials, equipment and refrigerant to recover, evacuate and charge the system
- lubricating and checking the re-charged refrigeration system for leaks and rectifying, where required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE) when handling or working with refrigerants
- operating principles of refrigeration systems
- characteristics, properties and operating specifications of all types of refrigerant
- methods of identifying stored refrigerants and the type of refrigerant used in a refrigeration system
- relevant codes and regulations applying to refrigeration systems
- procedures and safety precautions for testing/checking refrigeration systems
- corrective actions for system and component faults, including appropriate basic electrical safety checks
- types of refrigerant leak detection equipment/techniques and their applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- causes of contamination in refrigeration systems and their effect on refrigeration system performance
- procedures for cleaning contaminated systems, tools and equipment used
- care and use of vacuum pumps
- tools, techniques and equipment required to carry out refrigerant recovery procedures
- procedures for charging refrigeration systems and the correct refrigerant for a range of given applications and tools, techniques and equipment to be used
- safety precautions to be taken when charging refrigeration systems with refrigerant by various methods
- procedures for storing and disposing of recovered refrigerant and consequences of releasing quantities of refrigerant into the atmosphere
- properties and uses of refrigeration oil and the procedures to be followed when checking level and adding lubricating oil.

Assessment Conditions

- Assessors must:
  - have vocational competency in testing, recovering, evacuating and charging refrigeration systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18087 Service and repair domestic and light commercial refrigeration and air conditioning equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18087B Service and repair domestic and light commercial refrigeration and air conditioning equipment

Application

This unit of competency defines the skills and knowledge required to service domestic and light commercial refrigeration and air conditioning equipment and components.

It applies to retrofitting existing domestic and light commercial refrigeration and air conditioning equipment with alternative refrigerants; reconditioning components; returning to service; testing equipment; and completing service reports for administrative action.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Undertake preventive maintenance checks/ adjustments**	2.1	Carry out visual inspection and testing with appropriate test equipment according to refrigeration/air conditioning principles, procedures and safety requirements
		2.2	Perform preventative maintenance tasks according to manufacturers' specifications using refrigeration/air conditioning techniques/practices
3	**Undertake fault-finding**	3.1	Identify equipment components
		3.2	Interpret the characteristics and operation of each component
		3.3	Inspect and test the operational function of each component and assess correct operation against specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Repair/replace faulty components**	4.1	Localise faulty components and confirm malfunction
		4.2	Remove the refrigerant from the system safely and contain in accordance with procedures and regulatory requirements, where appropriate
		4.3	Dismantle faulty components and repair/replace to manufacturers' specifications, as required
		4.4	Select replacement parts from manufacturers' catalogues
5	**Return to service refrigeration/ air conditioning equipment**	5.1	Reassemble components and test for correct operation and assess against specification
		5.2	Verify correct operation of the equipment
		5.3	Complete maintenance records/service reports according to SOPs and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Test equipment includes one (1) or more of the following:	• service manifolds • pressure gauges • vacuum gauges • multimeter • ampmeter

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- insulation resistance tester
- vacuum pump

Preventative maintenance tasks include one (1) or more of the following:

- check/adjust fan belts
- check/clean filters
- check/clean heat exchangers (evaporator and condenser)
- overhaul of major system components
- cleaning of major system components
- testing operation of all control and safety devices
- testing refrigeration charge
- testing operational current
- testing insulation resistance of relevant electrical components

Governing and guidance documentation includes the following:

- noise and environmental regulations
- applicable Commonwealth, state and territory regulations and legislation
- air conditioning residential best practice guidelines (AIRAH)
- AIRAH flammable refrigerant fact sheets and guide

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18087B Service and repair domestic and light commercial refrigeration and air conditioning equipment

Links

Assessment Requirements for MEM18087 Service and repair domestic and light commercial refrigeration and air conditioning equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18087B Service and repair domestic and light commercial refrigeration and air conditioning equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation and regulations with respect to servicing and repairing domestic and light commercial refrigeration and air conditioning equipment
- checking system components for correct operation using appropriate tools, techniques and test equipment and comparing system and assessing component performance/operation against specifications
- carrying out preventative maintenance of domestic and light commercial refrigeration and air conditioning according to manufacturers' specifications using refrigeration/air conditioning techniques/practices
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with servicing and repairing domestic and light commercial refrigeration and air conditioning
- charging the system and verifying the correct operation of the equipment to meet specifications
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- preventative maintenance requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for protecting worksite and equipment from ignition sources if refrigerant used is flammable
- variations in component identities
- operation and characteristics of range of components
- procedures for checking refrigeration/air conditioning components for correct operation
- tools, equipment and procedures for assembling components
- tools, equipment, techniques and procedures for adjusting refrigeration/air conditioning systems for correct operation and to specification
- procedures for obtaining authorisation of adjustments outside of operational specifications
- procedures for recovery, containment and storage
- effect of poor repair practices
- processes and resources to select replacement parts
- basic electrical principles, testing and fault identification
- codes and regulations relevant to the refrigeration/air conditioning industry, including environmental and ozone and greenhouse substance legislation.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing domestic and light commercial refrigeration and air conditioning equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18088 Maintain and repair commercial air conditioning systems and components

Modification History

Release 1. Supersedes and is equivalent to MEM18088B Maintain and repair commercial air conditioning systems and components

Application

This unit of competency defines the skills and knowledge required to maintain and repair commercial air conditioning systems and components.

It applies to commercial air conditioning systems and components, including heating systems, direct expansion refrigeration systems, and/or simple air distribution systems; typically used for comfort air conditioning and also applies to retrofitting existing commercial air conditioning systems with alternative refrigerants and reconditioning components.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM18086	Test, recover, evacuate and charge refrigeration systems

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Undertake preventive maintenance checks/ adjustments**	2.1	Check the temperature, quality, properties and flow of air delivered by the air conditioning system for conformance to specification
		2.2	Check the noise/vibration levels of the air conditioning system components for conformance to specification
		2.3	Perform preventative maintenance tasks according to manufacturers' specifications using refrigeration and air conditioning principles and techniques
3	**Undertake fault-finding**	3.1	Identify system components
		3.2	Interpret the characteristics and operation of each component

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Inspect and test the operational function of each component and assess correct operation against specification
4	**Repair/replace faulty components**	4.1	Localise faulty components and confirm malfunction
		4.2	Remove the refrigerant from the system safely and contain in accordance with procedures and regulatory requirements, where appropriate
		4.3	Dismantle faulty components and repair to manufacturers' specifications, as required
		4.4	Select replacement parts from manufacturers' catalogues
5	**Return to service commercial air conditioning systems and components**	5.1	Reassemble components and test for correct operation and assess against specification
		5.2	Charge the system with correct refrigerant safely and in accordance with procedures and regulatory requirements
		5.3	Verify correct operation of the equipment
		5.4	Complete maintenance records/service reports according to SOPs and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM18088 Maintain and repair commercial air conditioning systems and components

Modification History

Release 1. Supersedes and is equivalent to MEM18088B Maintain and repair commercial air conditioning systems and components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions, on at least (2) systems, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing commercial air conditioning systems and components
- selecting and using equipment to test and check temperature, flow and quality of conditioned air for conformance against specifications, legislation and regulations
- carrying out preventative maintenance according to manufacturers' specifications using refrigeration/air conditioning techniques/practices
- checking system components for correct operation using appropriate tools, techniques and test equipment and assessing component performance/operation against specifications
- identifying and localising faulty components and confirming malfunction by inspection/testing, making required adjustments to achieve specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements
- removing/dismantling and reassembling faulty components and selecting replace parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with maintaining and repairing commercial air conditioning systems and components
- charging the system and verifying correct operation of the equipment to meet specifications
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- measuring instruments/equipment and specifications for checking air temperatures, air flows, air quality and air properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for performing preventative maintenance on air conditioning systems and sequence of implementation
- techniques and procedures for inspecting, testing and assessing system components and operational compliance to meet specifications
- procedures for safely removing the refrigerant from the system and charging the system and all legislative and regulatory requirements
- tools, equipment, techniques and procedures for dismantling and repairing faulty components, reassembling and testing components
- air properties controlled by the air conditioning system
- measuring instruments/equipment and specifications required for checking component noise and vibration levels
- specifications and process for identifying system components
- operational characteristics of the system components
- appropriate process for localising and confirming faulty components
- selecting and using equipment for testing electrical compliance of equipment
- procedures for completing maintenance records/service reports and reporting non-conformances.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing commercial air conditioning systems and components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for MEM18089 Maintain and repair central air handling systems

Modification History

Release 1. Supersedes and is equivalent to MEM18089B Maintain and repair central air handling systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions, on at least (2) systems, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing central air handling systems
- selecting and using appropriate tools, techniques and equipment necessary to check and assess large central air conditioning system, sub-system and components for conformance against specifications, legislation and regulations
- carrying out preventative maintenance tasks according to manufacturers' specifications using refrigeration/air conditioning techniques/practices
- identifying and localising faulty components and confirming malfunction by inspection/testing, making required adjustments to achieve specifications
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with maintaining and repairing central air handling
- verifying correct operation of the equipment to meet specifications
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- appropriate measuring instruments/equipment and specifications for checking humidity, air temperatures, air flows, air quality and air pressure
- tools, equipment, techniques and procedures for performing preventative maintenance on an air conditioning system and sequence of implementation
- procedures for localising and confirming faulty components
- tools, equipment, techniques and procedures for dismantling and repairing faulty components and selecting replacement parts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- measuring instruments/equipment and specifications required for checking sub-system noise and vibration levels
- techniques and procedures for inspecting, testing and assessing each sub-system components against specifications
- specifications of, and process for, identifying primary and secondary refrigerant, or air distribution/reticulation systems
- operational characteristics of each sub-system component
- codes and regulations relevant to the refrigeration/air conditioning industry, including environmental and ozone and greenhouse substance legislation
- procedures for completing maintenance records/service reports and reporting non-conformances.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing central air handling systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18090 Maintain and repair industrial refrigeration systems and components

Modification History

Release 1. Supersedes and is equivalent to MEM18090B Maintain and repair industrial refrigeration systems and components

Application

This unit of competency defines the skills and knowledge required to maintain and repair industrial refrigeration systems.

It applies to industrial refrigeration systems that include large capacity plant typically used for product/process, temperature/environment control, including retrofitting existing industrial refrigeration systems and reconditioning components.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: **A**

			specifications using refrigeration principles techniques/practices
3	**Undertake fault finding on industrial refrigeration systems and components**	3.1	Identify system components
		3.2	Interpret the characteristics and operation of each component
		3.3	Inspect and test the operational function of each component and assess correct operation against specification
4	**Repair/replace faulty industrial refrigeration components**	4.1	Localise faulty components and confirm malfunction
		4.2	Remove the refrigerant safely from the system and contain in accordance with procedures and regulatory requirements, where appropriate
		4.3	Dismantle faulty components and repair to manufacturers' specifications, as required
		4.4	Select replacement parts from manufacturers' catalogues
5	**Return to service industrial refrigeration systems and components**	5.1	Reassemble components and test for correct operation and assess against specification
		5.2	Charge the system safely with correct refrigerant and in accordance with procedures and regulatory requirements, where appropriate
		5.3	Verify correct operation of the equipment
		5.4	Complete maintenance records/service reports according to SOPs and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Controlled mediums include one (1) or more of the following:

- process chilling
- secondary refrigerants, including:
  - glycol
  - brine
  - air
  - water
  - ice

Test equipment includes one (1) or more of the following:

- measuring instruments/equipment for checking:
  - temperatures
  - properties
  - noise and vibration levels
- multimeter
- ampmeter
- insulation resistance tester

Preventative maintenance tasks include one (1) or more of the following:

- check/adjust fan belts
- check/clean filters
- check/clean heat exchangers (evaporator and condenser)
- overhaul of major system components
- cleaning of major system components
- testing operation of all safety devices

Assessment Requirements for MEM18090 Maintain and repair industrial refrigeration systems and components

Modification History

Release 1. Supersedes and is equivalent to MEM18090B Maintain and repair industrial refrigeration systems and components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions, on at least two (2) systems, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing industrial refrigeration systems and components
- checking the temperature and properties of controlled mediums for conformance with specifications
- carrying out preventative maintenance tasks according to manufacturers' specifications using refrigeration techniques/practices
- checking components for correct operation using appropriate tools, techniques and test equipment and assessing component performance/operation against specifications
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with maintaining and repairing industrial refrigeration systems and components
- charging the system and verifying correct operation of the equipment to meet specifications
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- measuring instruments/equipment, specifications and procedures for checking temperatures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- properties of controlled mediums
- measuring instruments/equipment, specifications and procedures for checking components noise and vibration levels
- tools, equipment, techniques and procedures for performing preventative maintenance on air conditioning systems and sequence of implementation
- procedures for safely removing the refrigerant and charging the system and all legislative and regulatory requirements
- tools, equipment, techniques and procedures for dismantling, repairing, reassembling and testing components
- specifications, operational characteristics and process for identifying system components
- process for localising and confirming faulty components
- procedures for completing maintenance records/service reports and reporting non-conformances.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing industrial refrigeration systems and components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18091 Maintain and repair multistage, cascade and/or ultra-cold industrial refrigeration systems

Modification History

Release 1. Supersedes and is equivalent to MEM18091B Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems

Application

This unit of competency defines the skills and knowledge required to maintain and repair multistage, cascade and ultra-cold industrial refrigeration systems.

It applies to retrofitting existing multi-stage, cascade and/or ultra-cold industrial refrigeration systems; reconditioning components; returning to service and testing systems; and completing service reports for administrative action.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: B

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM10002	Terminate and connect electrical wiring
MEM11011	Undertake manual handling
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18049	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.
MEM18055	Dismantle, replace and assemble engineering components
MEM18086	Test, recover, evacuate and charge refrigeration systems

Plus, one or more of the following including prerequisites:

MEM18087	Service and repair domestic and light commercial refrigeration and air conditioning equipment
MEM18088	Maintain and repair commercial air conditioning systems and components
MEM18090	Maintain and repair industrial refrigeration systems and components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Undertake preventive**	2.1	Check the temperature, pressure and properties of the system for conformance to specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	maintenance checks/ adjustments	2.2	Check the noise/vibration levels of the system for conformance to specification
		2.3	Perform preventative maintenance tasks according to manufacturers' specifications using refrigeration techniques/practices
3	**Undertake fault-finding**	3.1	Identify system components
		3.2	Interpret the characteristics and operation of each component
		3.3	Inspect and test the operational function of each component and assess correct operation against specification
4	**Repair/replace faulty components**	4.1	Localise faulty components and confirm malfunction
		4.2	Remove the refrigerant safely from the system and contain in accordance with procedures and regulatory requirements, where appropriate
		4.3	Dismantle faulty components and repair to manufacturers' specifications, as required
		4.4	Select replacement parts from manufacturers' catalogues
5	**Return to service multistage, cascade and/or ultra-cold refrigeration systems**	5.1	Reassemble components and test for correct operation and assess against specification
		5.2	Charge the system safely with correct refrigerant and in accordance with procedures and regulatory requirements, where appropriate
		5.3	Verify correct operation of the equipment
		5.4	Complete maintenance records/service reports according to SOPs and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Test equipment includes one (1) or more of the following:	• measuring instruments/equipment for checking:
	  • temperatures
	  • pressures
	  • properties
	  • noise and vibration levels
	• multimeter
	• ampmeter
	• insulation resistance tester

Preventative maintenance tasks include one (1) or more of the following:	• check/adjust fan belts • check/clean filters • check/clean heat exchangers (evaporator and condenser) • overhaul of major system components • cleaning of major system components • testing operation of all safety devices

Unit Mapping Information

Assessment Requirements for MEM18091 Maintain and repair multistage, cascade and/or ultra-cold industrial refrigeration systems

Modification History

Release 1. Supersedes and is equivalent to MEM18091B Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions, on at least two (2) systems, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing multi-stage, cascade and/or ultra-cold industrial refrigeration systems
- checking the temperature, pressure, properties, noise and vibration levels for conformance with specifications
- carrying out preventative maintenance tasks according to manufacturers' specifications using refrigeration techniques/practices
- checking components for correct operation using appropriate tools, techniques and test equipment and assessing component performance/operation against specifications
- identifying and localising faulty components and confirming malfunction by inspection/testing, making required adjustments to achieve specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with maintaining and repairing industrial refrigeration systems
- charging the system and verifying correct operation of the equipment to meet specifications
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- measuring instruments/equipment and specifications for checking the temperature/s and properties of the controlled medium/s
- tools, equipment, techniques and procedures for performing preventative maintenance and sequence of implementation
- procedures for performing safety equipment checks and sequence of implementation
- tools, equipment, techniques and procedures for dismantling, repairing, reassembling and testing components
- procedures for safely removing the refrigerant from the system and all legislative and regulatory requirements
- measuring instruments/equipment and specifications for checking component noise and vibration levels
- specifications and processes for identifying system components
- operational characteristics of the system components
- procedures for completing maintenance records/service reports and reporting non-conformances.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing multi-stage, cascade and/or ultra-cold industrial refrigeration systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18092 Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls

Modification History

Release 1. Supersedes and is equivalent to MEM18092B Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls

Application

This unit of competency defines the skills and knowledge required to repair or replace commercial and/or industrial refrigeration and/or commercial air conditioning controls.

This unit applies to the installation, adjustment, repairs, replacements and overhauls undertaken to site or manufacturers' specifications, using application of principles of domestic refrigeration and/or commercial air conditioning control sequencing.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: B

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations

	conditioning control sequence and operation		conformance to specification
		3.2	Check controls operation against operational specifications using appropriate test equipment and application principles/techniques
		3.3	Perform adjustments to control sequence to meet/align to operational requirements and specifications
		3.4	Record modifications/alterations and report according to SOPs
		3.5	Check controls operation and return to service to specification
4	**Fault find refrigeration/air conditioning control circuits**	4.1	Identify and inspect control circuit components
		4.2	Trace control circuit and diagnose action of components to identify and localise faults
		4.3	Test control circuit parts using appropriate test equipment and application principles
		4.4	Assess control circuit parts against operational specification
		4.5	Localise fault condition at the component level, evaluate faulty condition, analyse root cause and plan corrective action
5	**Maintain, repair/replace control components**	5.1	Apply correct maintenance procedures according to procedures
		5.2	Use appropriate tools, equipment and techniques to test faulty items and repair or replace using sequential installation procedures according to manufacturers' specifications
		5.3	Select replacement items from manufacturers' catalogues
		5.4	Reassemble control components according to specification

Assessment Requirements for MEM18092 Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls

Modification History

Release 1. Supersedes and is equivalent to MEM18092B Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions, on at least two (2) systems, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing commercial and/or industrial and/or air conditioning controls
- selecting and using appropriate tools, techniques and equipment necessary to check commercial and/or industrial and/or air conditioning controls for conformance against specifications
- checking and performing adjustments to control sequence using appropriate test equipment meeting/aligning to operational requirements and specifications
- recording any modifications complying with manufacturers' specifications and making all changes to on-site drawings/documents and documenting in accordance with SOPs
- testing and assessing control circuit parts using appropriate test equipment and application principles against operational specifications
- performing maintenance procedures, including overhauling and cleaning of major system components, and testing of all control and safety devices to specifications
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- undertaking calculations and numerical operations associated with maintaining and repairing commercial and/or industrial and/or air conditioning controls
- removing/dismantling and reassembling faulty control components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- checking and adjusting sequence control circuit to meet operational specifications and confirming correct operation
- returning refrigeration/air conditioning controls to service and adopting appropriate follow-up procedures
- completing all service/maintenance reports in accordance with SOPs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- refrigeration/air conditioning system operational requirements and specifications
- application of common system/circuit components and controllers
- importance of following installation procedures in terms of control operation, safety and reliability
- measuring instruments/equipment and specifications for checking air temperatures, air flows, air quality and air properties
- tools, equipment, techniques and procedures for rectifying faulty conditions and components
- procedures for returning to service and commissioning refrigeration/air conditioning control systems
- operational sequence of the system
- typical adjustments to correct sequencing variations from specification
- typical causes of component failure
- maintenance requirements
- codes and regulations relevant to the refrigeration/air conditioning industry, including environmental and ozone and greenhouse substance legislation
- procedures for reporting/recording modifications/alterations maintenance and reporting non-conformances.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing commercial and/or industrial refrigeration and/or air conditioning controls at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for MEM18093 Maintain and repair integrated industrial refrigeration and/or large air handling system controls

Modification History

Release 1. Supersedes and is equivalent to MEM18093B Maintain and repair integrated industrial refrigeration and/or large handling system controls

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions, on at least two (2) systems, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing integrated industrial refrigeration and/or large air handling system controls
- selecting and using appropriate tools, techniques and equipment necessary to check integrated industrial refrigeration and/or large air handling system controls for conformance against specifications
- checking and performing adjustments to control sequence using appropriate test equipment meeting/aligning to operational requirements and specifications
- recording any modifications complying with manufacturers' specifications and making all changes in site drawings/documents and documenting in accordance with SOPs
- testing and assessing control system/circuit parts using appropriate test equipment and application principles against operational specifications
- performing maintenance procedures, including testing of all control sequences and safety devices to specifications
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- undertaking calculations and numerical operations associated with maintaining and repairing integrated industrial refrigeration and/or large air handling system controls
- removing/dismantling and reassembling faulty system control components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- checking and adjusting sequence system control circuit to meet operational specifications and confirming correct operation
- commissioning refrigeration/air handling system controls to service and adopting appropriate follow-up procedures
- completing all service/maintenance reports in accordance with SOPs.

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- system operational requirements and specifications
- application of common refrigeration/air handling system components and controllers
- importance of following installation procedures in terms of control operation, safety and reliability
- measuring instruments/equipment and specifications for checking air temperatures, air flows, air quality and air properties
- tools, equipment, techniques and procedures for rectifying faulty conditions
- procedures for returning to service or commissioning refrigeration/air handling control systems
- refrigeration/air conditioning test equipment and application
- operational sequence of systems
- typical adjustments to correct sequencing variations from specification
- typical causes of component failure
- maintenance schedule and procedures
- common adjustments that can be made to control systems and their effect
- maintenance/service recording/reporting requirements
- procedures for reporting/recording modifications/alterations maintenance and reporting non-conformances.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing integrated industrial refrigeration and/or large handling system controls at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18094 Service and repair commercial refrigeration

Modification History

Release 1. Supersedes and is equivalent to MEM18094B Service and repair commercial refrigeration

Application

This unit of competency defines the skills and knowledge required to service and repair commercial and supermarket equipment and components.

It applies to supermarket, retail, wholesale and other commercial applications and can include retrofitting alternative refrigerants in existing equipment.

Where the removal and replacement of components by brazing and/or silver soldering is required unit MEM05006 Perform brazing and/or silver soldering should also be selected.

Where detailed maintenance on control systems is required unit MEM18057 Maintain/service analog/digital electronic equipment should also be selected.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: **A**

MEM18049	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.
MEM18055	Dismantle, replace and assemble engineering components
MEM18086	Test, recover, evacuate and charge refrigeration systems

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Undertake preventive maintenance checks/adjustments**	2.1	Carry out visual inspection and testing with appropriate test equipment according to refrigeration principles, procedures and safety requirements
		2.2	Perform preventative maintenance tasks according to manufacturers' specifications
3	**Undertake fault**	3.1	Identify equipment components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	finding on commercial refrigeration equipment	3.2	Interpret the characteristics and operation of each component
		3.3	Inspect and test the operational function of each component and assess correct operation against specifications
4	**Repair/replace commercial refrigeration components**	4.1	Localise faulty components and confirm malfunction
		4.2	Remove the refrigerant safely from the system and contain in accordance with procedures and regulatory requirements, where appropriate
		4.3	Dismantle faulty components and repair to manufacturers' specifications, as required
		4.4	Select replacement parts from manufacturers' catalogues
5	**Return to service commercial refrigeration equipment**	5.1	Reassemble components and test for correct operation and assess against specification
		5.2	Charge the system safely with correct refrigerant and in accordance with procedures and regulatory requirements, where appropriate
		5.3	Verify correct operation of the equipment
		5.4	Complete maintenance records/service reports according to SOPs and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Test equipment includes one (1) or more of the following:	• multimeter • ammeter • insulation resistance tester • refrigeration gauge set • vacuum pump • service gauges • thermometer
Preventative maintenance tasks include one (1) or more of the following:	• overhaul of major system components • cleaning of major system components • test operation of all safety devices

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18094B Service and repair commercial refrigeration

Assessment Requirements for MEM18094 Service and repair commercial refrigeration

Modification History

Release 1. Supersedes and is equivalent to MEM18094B Service and repair commercial refrigeration

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to servicing and repairing commercial refrigeration
- selecting and using appropriate tools, techniques and test equipment necessary to check and assess commercial and supermarket equipment and components for conformance with specifications
- carrying out preventative maintenance tasks according to manufacturers' specifications using refrigeration techniques/practices
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements, where required
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with servicing and repairing commercial refrigeration
- charging the system and verifying correct operation of the equipment to meet specifications, where required
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- frequency and reason for preventative maintenance
- variations in component identities
- operation and characteristics of range of components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for refrigeration systems evacuation, recovery containment and storage for refrigerants
- tools, techniques, equipment and procedures necessary to check and test refrigeration system components
- tools, techniques, equipment and procedures for adjusting refrigeration systems
- procedures for obtaining authorisation of adjustments outside of operational specifications
- effect of poor repair practices
- process to select replacement parts
- codes and regulations relevant to the refrigeration/air conditioning industry, including environmental and ozone and greenhouse substance legislation.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing commercial refrigeration at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18095 Maintain and repair cooling towers/evaporative condensers and associated equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18095A Maintain and repair cooling towers/evaporative condensers and associated equipment

Application

This unit of competency defines the skills and knowledge required to perform maintenance procedures and/or repairs on cooling towers or evaporative condensers, associated equipment and controls to ensure performance to relevant Australian Standards, regulations and codes.

Cooling towers and evaporative condensers form an integral part of the refrigeration system in commercial, industrial and air conditioning fields. The towers, condensers, centrifugal water pumps, fans, valves and controls comprise the maintenance/repair work skills relevant to this field and must be assessed in this context.

Where the refitting or repair/replacement of components involves the fabrication and installation of pipework and assemblies then unit MEM10010 Install pipework and pipework assemblies should also be selected.

Where water treatment only is required then unit MEM13007 Maintain water treatment systems for cooling towers should be selected.

Where rectification, modification involving electrical disconnection and reconnection is required unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. should also be selected.

There is legislation, regulation and codes of practice for cooling towers in each jurisdiction. Relevant material should be referenced.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM18086	Test, recover, evacuate and charge refrigeration systems

Plus, one or more of the following including their prerequisites:

MEM18088	Maintain and repair commercial air conditioning systems and components
MEM18094	Service and repair commercial refrigeration

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Undertake preventive maintenance checks**	2.1	Carry out visual inspection and testing with appropriate test equipment according to refrigeration principles, procedures and safety requirements
		2.2	Perform preventative maintenance tasks to manufacturers' specifications
3	**Undertake fault-finding on cooling tower/evaporative condenser water systems components**	3.1	Identify system components
		3.2	Interpret the characteristics and operation of each component
		3.3	Inspect and test the operational function of each component and assess correct operation against specifications
4	**Repair/replace cooling tower/evaporative condenser components**	4.1	Localise faulty components and confirm malfunction
		4.2	Remove the refrigerant safely from the system and contain in accordance with procedures and regulatory requirements, where appropriate
		4.3	Dismantle faulty components and repair to manufactures' specifications, as required
		4.4	Select replacement parts from manufacturers' catalogues
5	**Return to service cooling tower/evaporative condenser components**	5.1	Reassemble components and test for correct operation and assess against specification
		5.2	Charge the system safely with correct refrigerant and in accordance with procedures and regulatory requirements, where appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	5.3 Verify correct operation of the equipment
	5.4 Complete maintenance records/service reports according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:	• fan motor • fan blade • pump • pump motor • sprays • condenser • valves (bypass, shut-off and temperature control valves) • thermostat • drift eliminators • V belt • water strainer
Test equipment includes one (1) or more of the following:	• sling psychrometer • thermometer • refrigeration gauges • vacuum pump • leak detector

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- multimeter
- insulation resistance tester

Assessment Requirements for MEM18095 Maintain and repair cooling towers/evaporative condensers and associated equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18095A Maintain and repair cooling towers/evaporative condensers and associated equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications, drawings and relevant legislation with respect to maintaining and repairing cooling towers/evaporative condensers and associated equipment
- selecting and using appropriate tools, techniques and test equipment necessary to check and assess components for correct operation and conformance against specifications
- carrying out preventative maintenance according to manufacturers' specifications using refrigeration techniques/practices
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements, where required
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with maintaining and repairing cooling towers/evaporative condensers and associated equipment
- charging the system and verifying correct operation of the equipment to meet specifications, where required
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- terminology of cooling towers
- psychrometrics
- measuring instruments/equipment, specifications and procedures for checking temperature/humidity/air flow

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operation of centrifugal water pumps
- terminology of centrifugal water pumps
- field testing centrifugal pumps
- operation of water valves including bypass valve either mechanical or electrical operation
- procedures for testing of fan motors and operation of controls
- tools, techniques, equipment and procedures for performing preventative maintenance on cooling towers/evaporative condensers and sequence of implementation
- procedures for safely removing the refrigerant and charging the system, including all legislative and regulatory requirements
- tools, techniques, test equipment and procedures for dismantling, repairing, reassembling and testing components
- V belts
- measuring instruments/equipment, specifications and procedures for checking component noise and vibration levels
- process to select replacement parts
- specifications, operational characteristics and process for identifying system components
- process for localising and confirming faulty components
- procedures for reporting non-conformances and completing maintenance records/service reports.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and repairing cooling towers/evaporative condensers and associated equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18096 Maintain, repair/replace and adjust refrigerant flow controls and associated equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18096A Maintain, repair/replace and adjust refrigerant flow controls and associated equipment

Application

This unit of competency defines the skills and knowledge required to perform the selection, maintenance, repair/replacement and adjustment of refrigerant flow controls, either liquid or vapour (mechanical or electronic types) to achieve desired operational performance.

The associated equipment includes controllers and/or valves required to ensure proper operation of the flow device.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where rectification, modification involving electrical disconnection and reconnection is required unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. should also be selected.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering
MEM10010	Install pipework and pipework assemblies
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM18086	Test, recover, evacuate and charge refrigeration systems

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Undertake preventative maintenance checks on refrigerant flow controls**	2.1	Identify the location and interpret the operational parameters of the refrigerant control
		2.2	Carry out visual inspection and testing with appropriate test equipment by following refrigeration principles, procedures and safety requirements
		2.3	Identify the refrigerant type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Undertake fault finding on refrigerant flow controls**	3.1	Identify and interpret flow control and its characteristics
		3.2	Inspect, test and assess the operational function of the flow control and associated valves using appropriate test equipment and techniques against specifications
4	**Repair or replace refrigerant flow control**	4.1	Select for replacement/repair appropriate flow control or components relevant to system operation using manufacturers' catalogues and specifications
		4.2	Remove and safely contain the refrigerant from the system in accordance with refrigeration principles and procedures and relevant standards and codes
		4.3	Dismantle faulty components and repair/replace to manufactures' specifications, as required
		4.4	Select replacement parts from manufactures catalogues
5	**Return to service refrigerant flow control**	5.1	Evacuate system and recharged with refrigerant safely, in accordance with refrigeration principles and procedures and relevant standards and codes
		5.2	Leak test system and adjust flow control to manufacturers' specifications
		5.3	Undertake performance check and return to service
		5.4	Complete maintenance records/service reports according to SOPs and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Associated valves include one (1) or more of the following:	• check valves • solenoid valves
Test equipment includes one (1) or more of the following:	• refrigeration gauges • thermometers • multimeter • vacuum pump • leak detector • associated hand tools • specialised hand tools
Performance incudes:	• pressures, temperatures and relationships

Assessment Requirements for MEM18096 Maintain, repair/replace and adjust refrigerant flow controls and associated equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18096A Maintain, repair/replace and adjust refrigerant flow controls and associated equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, catalogues, specifications and relevant legislation with respect to maintaining, repairing/replacing and adjusting refrigerant flow controls and associated equipment
- selecting and using appropriate tools, techniques and test equipment necessary to inspect, test and assess the operational function of the flow control valves and components for correct operation and conformance against specifications
- removing the refrigerant from the system and containing in accordance with procedures and regulatory requirements
- identifying and localising faulty components and confirming malfunction by inspection/testing, and making required adjustments to achieve specifications
- removing/dismantling and reassembling faulty components and selecting replacement parts from manufacturers' catalogues to meet the required specifications
- undertaking calculations and numerical operations associated with maintaining, repairing/replacing and adjusting refrigerant flow controls and associated equipment
- evacuating the system and recharging with refrigerant, and leak testing system and adjusting flow control to manufacturers' specifications in accordance with refrigerant principles and procedures
- undertaking performance check to meet specifications
- completing all maintenance records/reports in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation of refrigerant flow controls, including:
  - Thermal Expansion Valve (TEV)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - internal equalised
  - external equalised
  - direct operating
  - servo operated
  - pilot operated
- Maximum Operating Pressures (MOP), cross charged, gas charged, capillary tube, thermo electric, electronic TEV and controllers, low side floats, high side floats, distributors, reversing valves, solenoid valves, non-return valves, evaporator pressure regulators (EPR) valves, crankcase pressure regulating (CPR) refrigeration valves, condenser bypass valves, liquid level controllers, AX valves and hand expansion valves
- measuring instruments/equipment, specifications and procedures for checking temperature(s)
- measuring instruments/equipment, specifications and procedures for checking components
- tools, equipment, techniques and procedures for performing preventative maintenance and sequence of implementation
- procedures for identifying refrigerant type and safely removing the refrigerant and charging the system including all legislative and regulatory requirements
- tools, equipment, techniques and procedures for dismantling, repairing, reassembling and testing components
- process for selecting replacement parts
- specifications, operational characteristics and process for identifying system components
- procedures for reporting non-conformances and completing maintenance records/service reports.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, repairing/replacing and adjusting refrigerant flow controls and associated equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18097 Manufacture cavity dies

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM18097 Manufacture cavity dies (Release 1).

Release 1. Supersedes and is equivalent to MEM18097A Manufacture cavity dies.

Application

This unit of competency defines the skills and knowledge required to prepare to manufacture and manufacture cavity dies, including matching use of hand and hand held power tools, assembly of the tooling components and trialling the tooling.

Where the selection and use of welding processes are required select appropriate units.

Where brazing or silver soldering is required unit MEM05006 Perform brazing and/or silver soldering should also be selected.

Where manufacture of press tools and gauges is required unit MEM18014 Manufacture press tools and gauges should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM06007	Perform basic incidental heat/quenching, tempering and annealing
MEM07005	Perform general machining
MEM07006	Perform lathe operations
MEM07007	Perform milling operations
MEM07008	Perform grinding operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12006	Mark off/out (general engineering)
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM12026	Perform advanced trade calculations in a manufacturing, engineering or related environment
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18015	Maintain tools and dies
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to manufacture cavity die**	2.1	Determine tooling requirements from customer's components drawings, prints or sample component
		2.2	Develop the tooling type and design and plan with reference to customer's specifications (written or verbal) for numbers, finish, quality and material
		2.3	Assess production machine to be used to produce components and consider in tooling design
		2.4	Interpret tool design from tooling drawings, prints or plan and check against customer requirements
		2.5	Determine selected production machine mounting requirements to ensure any special or additional provisions are incorporated in tooling design
3	**Manufacture tooling**	3.1	Select and obtain appropriate materials to meet tooling requirements for strength, durability, component finish and heat treatment qualities, where necessary, and account for materials availability
		3.2	Test selected material for hardness, as appropriate, to aid selection of machine tools, hand tools and hand held power tools to be used to fashion or shape tooling components
		3.3	Develop plan to sequence and stage manufacturing process, including establishing datum, mark out, rough out (machine or fashion), stress relieve/heat treat, finish size, fashion and fit and assemble componentry
4	**Perform machining**	4.1	Select appropriate machines and machining process from a range of standard tool room machines to shape/produce

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	operations		tooling components to specifications
5	**Use hand and hand held power tools**	5.1	Select a range of hand and hand held power tools and use to fashion/manufacture tooling components to specification
		5.2	Produce components sample or section for testing, where practicable
6	**Assemble tooling components**	6.1	Check and fit/assemble to specifications using acceptable tool making techniques and procedures components
7	**Trial tooling**	7.1	Check first-off component with precision instruments against specification
		7.2	Modify tooling to produce components to specification, as necessary
		7.3	Re-trial modified tooling and produce component
		7.4	Verify conformance to specification and report according to SOPs
		7.5	Record all deviations or modifications to original tooling design, prints or plans and report according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting drawings, prints and/or sample components, specifications and customer requirements with respect to manufacturing cavity dies
- sketching or drawing the tooling design incorporating mounting requirements into tooling design and planning with reference to customer specifications for numbers, finish, quality and materials
- selecting and obtaining appropriate materials to meet tooling requirements and testing for hardness using appropriate hardness tester ensuring rating meets customers specifications
- shaping/producing tooling components to specifications using appropriate machines and machining processes
- fashioning/manufacturing tooling components using hand and hand held power tools to specifications
- assembling and fitting tooling components using acceptable tool making techniques and procedures
- producing first-off component/product and checking for conformance, trialling and modifying, where necessary, to meet specifications and verifying conformance
- recording/reporting modifications or alterations to original tooling design in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- customers' tooling requirements and the type of tooling to be manufactured
- machine(s) in which the tooling is to be used
- tooling design concept and performance requirements in terms of customer specifications and proposed production machine(s)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- method of mounting the tooling in the production machine into which it is to be installed
- physical properties of a range of tool steels
- appropriate materials for each component of the tooling to be produced and reasons for selecting the chosen materials in terms of strength, durability, component finish, heat treatment requirements and availability
- procedures for hardness testing of materials
- tools, equipment, techniques and procedures for fitting/assembling the tooling components
- effect of material hardness on machinability of the material
- appropriate machinery and tools to be used to fashion or shape tooling components and reasons for selection
- procedures for documenting plans for the manufacture of tooling
- reasons for establishing a sequential plan for the manufacture of tooling
- hand and hand held power tools to be used to fashion/manufacture the required tooling components and reasons for selection
- precautions to be taken when fitting/assembling tooling components
- appropriate precision instruments for checking the components produced
- specifications of the finished product and causes of any non-conformance to specification
- tool making techniques/procedures to be applied to return the tooling to specification
- procedures for recording/reporting modifications and/or alterations to tooling design
- procedures for reporting/recording the conformance of the component/product produced by the tooling to specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in manufacturing cavity dies at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18098 Prepare to perform work associated with fuel system installation and servicing

Modification History

Release 1. Supersedes and is equivalent to MEM18098A Prepare to perform work associated with fuel system installation and servicing

Application

This unit of competency defines the skills and knowledge required to prepare for work associated with fuel system installation and servicing.

It applies to personnel who install or service fuel systems and equipment. They will typically undertake this in a service station forecourt which may be operational or be shut down for refurbishment or under construction.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 2

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Maintenance and diagnostics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan and prepare for installation or servicing task**	2.1	Clarify job requirements and variations to work plan and take appropriate action
		2.2	Obtain required work permits
		2.3	Identify and comply with emergency and safety procedures for worksite
3	**Confirm location and nature of key fuel system components**	3.1	Identify and locate above and below ground storage components
		3.2	Identify and locate fuel conveying, pumps and dispensing systems
		3.3	Confirm location of fuel system components with site plan
		3.4	Identify and report any hazards and/or inconsistencies with site plan, equipment drawings and regulatory requirements
4	**Assess and manage risks associated with the work**	4.1	Identify fuels and other hazardous materials and other hazards on site
		4.2	Identify and confirm shut-off procedures, details of evacuation plan and location of emergency equipment
		4.3	Assess hazards and determine risks and apply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	appropriate control measures to control risks
	4.4 Select appropriate tools and equipment to be used on the job
	4.5 Identify nature and location of required isolations
	4.6 Determine the type of, and appropriate locations for, barriers to prevent unauthorised access to the work location and put them in place before job commencement

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Work permits include one (1) or more of the following:	• permits issued by client • permits using the Australian Institute of Petroleum (AIP) form • other work documents required for the job • hot work • cold work • confined space • excavation • working at heights

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Emergency and safety procedures for worksite include one (1) or more of the following:	• specific procedures for that site • location of emergency shut-off and procedures for re-setting emergency shut-off • dealing with spills or other losses in containment • fire response • other incident response procedures for that site • other site-specific hazards and procedures
Storage components include one (1) or more of the following:	• single wall tanks • jacketed steel tanks • double-walled tanks (dry and liquid filled interstitial space) • fibre composite (FRP) tanks • high density polyethylene (HDPE) tanks
Fuel conveying systems include one (1) or more of the following:	• steel pipes • HDPE pipes • vapour recovery systems and pipes • pipe joining
Pumps and pump systems include one (1) or more of the following:	• centrifugal pumps • positive displacement pumps • pressure and suction systems • pumping problems • multiproduct pumps
Dispensing systems include one (1) or more of the following:	• fuel metering • hoses and nozzles • stage two vapour recovery • flow control valves • discharge control • multiproduct dispensers

Corrosion protection systems and components include one (1) or more of the following:	• cathodic protection, including:
	  • impressed current
	  • sacrificial anode
	• wrapping
	• coating

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fuels include one (1) or more of the following:	• petrol • ethanol blend fuels (of various concentrations) • diesel and biodiesel • liquefied petroleum gas (LPG)
Hazardous materials include one (1) or more of the following:	• ‘solid’ pool chlorine (calcium hypochlorite) • ‘liquid’ pool chlorine (sodium hypochlorite solutions) • lubricants • cleaning agents • gas bottles • workshop materials

Appropriate tools include:	• tools that are:
	  • intrinsically safe
	  • ergonomically appropriate to the job
	  • safe and in good condition

Required isolations include one (1) or more of the following:	• lock out/tag out • double block and bleed • use of blanks, blinds and goggles • removal of spool piece • removal of mechanical drives
Barriers include one (1) or more of the following:	• temporary fencing • bollards • witches hats • tapes • signage
Problems include one (1) or more of the following:	• variations to the work schedule • variations to the work scope • issues with the public or site personnel • failure of equipment • inappropriate/incomplete permit or work instructions

Assessment Requirements for MEM18098 Prepare to perform work associated with fuel system installation and servicing

Modification History

Release 1. Supersedes and is equivalent to MEM18098A Prepare to perform work associated with fuel system installation and servicing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining relevant work permits and other work documents required for the job
- identifying and complying with emergency and safety procedures relevant to the site
- identifying types of fuel and their associated hazards
- identifying fuel delivery systems and their associated hazards, including pressure, suction, flammability, explosive potential, toxicity and static electricity
- determining appropriate control measures using hierarchy of control and identifying support and assistance requirements and establishing plan for the performance of work
- applying any state/territory licensing, work health and safety (WHS) and environmental legislation, standards and industry codes of practice
- relating to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of fuels and their associated hazards
- fuel delivery systems and associated hazards, including pressure, suction, flammability, explosive potential, toxicity and static electricity
- dangerous goods classification and labelling
- storage and handling of dangerous goods
- suction/pressure systems
- first stage vapour recovery systems
- second stage vapour recovery systems
- pumps and pumping principles and problems
- fuel dispensing and metering systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- interpretation of permits, site maps and hazard maps
- regulatory requirements, including licensing, WHS and environmental regulations.

Assessment Conditions

- Assessors must:
  - have vocational competency in preparing to perform work associated with fuel system installation and servicing at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18100 Fault-find, test and rectify AC machines and circuits

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson –industrial electrician apprenticeship training and the recognition of trade-level skills in locating and rectifying faults in alternating current (AC) machines and circuits.

It covers characteristics including their construction and operating principles. It also includes their application, control and protection methods, reversal of rotation and the requirements to limit starting current as well as skills in testing and fault finding, including abnormal operating conditions.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 12 – Demonstrate the rationale and operating principles and characteristics of three phase induction motors and generators. Describe AS/NZS 3000 requirements and knowledge of local Supply Authority requirements for three phase motor installations and starters.
- EPC 14 – Demonstrate knowledge of possible causes of malfunction of three phase induction motors and demonstrate the tests required for diagnosing faults.
- EPC 15 – Describe the operating principles, characteristics, and suitability of typical control methods for single-phase motors and their key components.

And

Essential Performance Capability (EPC) classified as ‘critical’:

- EPC 13 – Demonstrate a knowledge of methods of electric motor selection, starting, connection and protection.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 4

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM10016	Terminate and test electrical wiring and accessories
MEM10018	Select cable types and sizes to suit loads and electrical installation environment
MEM10019	Select circuit protection devices by type and rating, fit to switchboards and install earthing
MEM10023	Design and connect control switching of circuits for building services and industrial equipment
MEM12023	Perform engineering measurements
MEM18001	Use hand tools
MEM18104	Dismantle, replace and assemble electrical components and equipment

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Research the nature of the fault through checking of documentation and/or consultation with appropriate person
2.	Prepare to fault find on AC machines	2.1	Obtain all necessary tools, equipment and testing instruments needed to conduct fault diagnosis of AC

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
and associated control circuits	machines and circuits
	2.2 Isolate and tag circuits and equipment in accordance with procedures
3. Fault find AC machines and associated control circuits	3.1 Apply diagnostic techniques to solve problems in AC machines and their associated control circuits, including the use of specialised test equipment
	3.2 Test single and three-phase windings for continuity and insulation resistance between windings and to earth with appropriate test equipment
	3.3 Dismantle and reassemble AC machine using appropriate fitting techniques, equipment and tools in accordance with specifications and procedures, if required
	3.4 Remove/repair/replace faulty components/circuits in accordance with manufacturer specifications and regulatory requirements
	3.5 Test AC machine/circuit to ensure functionality in accordance with specifications
	3.6 Document all necessary repairs in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

AC machines include three (3) or more of the following:	• single-phase motors • three-phase motors • variable speed drives (VFDs) • synchronous machines • non-rotating AC equipment and components
Control starter circuits include one (1) or more of the following:	• direct-on-line (DOL) • star-delta • autotransformer • primary resistance • secondary resistance
Split phase induction motors include:	• split-phase motor • capacitor-start motor • capacitor-start, capacitor-run motor • permanently-split capacitor motor • shaded-pole motor
Environmental protection and general enclosure types include:	• open motors • protected motors • drip-proof motors • duct ventilated • totally enclosed • flameproof
Specialised test equipment includes one or more of the following:	• built-in systems (software and site displays) • vibration monitors • infra-red temperature sensing device
Rotating electrical machines in general requirements include:	• AS 1359.106-1996 Rotating electrical machines – General requirements – Methods of cooling (IC Code)
Regulatory requirements include:	• AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules
Safe working practices include:	• Demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings and specifications relevant to the work to be undertaken
- determining the electrical and non-electrical isolation requirements to prevent the creation of hazards linked from the loss of machine/system/process control according to established procedures
- using lock out tag procedures with appropriate tags/signs
- proving electrical isolation and following established safety rules prior to working on electrical equipment or wiring
- ensuring all electrical equipment and tools are tested and tagged and up to date
- using specialised test equipment, including condition monitoring equipment to conduct on-line analysis
- carrying out on-line functional tests for voltage and current using a voltmeter or multimeter and a clip on ammeter
- applying fault finding and diagnostic techniques on at least three (3) or more of the following AC machines and circuits:
  - single-phase motors
  - three-phase motors
  - variable speed drives (VSDs)
  - synchronous machines
  - non-rotating AC equipment and components
- carrying out electrical tests for continuity and insulation resistance tests; between windings and to earth of single and three-phase motors
- dismantling, replacing and assembling single and three-phase AC machines using appropriate hand and power tools in accordance with manufacturer specifications, if required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- complying with the Australian/New Zealand Wiring Rules and local supply requirements for three-phase motor installations and starters
- using a synchroscope for paralleling of alternators
- documenting all necessary repairs in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- three-phase induction motors, including:
  - basic component parts of a three-phase induction motor, i.e. stator and rotor (squirrel-cage and wound rotor)
  - motor enclosures
  - terminal block arrangements – connecting a three-phase motor in both star and delta
  - operating principles, including:
    - rotating magnetic fields
    - rate of rotation and factors affecting it
    - direction of rotation and reversal
  - induction and its effects, including:
    - torque
    - slip
    - rotor frequency
  - operating characteristics, including:
    - squirrel-cage rotors
    - special purpose squirrel-cage rotors
    - wound-rotor motors
  - operating parameters for induction motors
- single-phase induction motors, characteristics and operating principles of the following:
  - split-phase motor
  - capacitor-start motor
  - capacitor-start, capacitor-run motor
  - permanently-split capacitor motor
  - shaded-pole motor
- series motor – operating characteristics and reversing the direction of rotation
- comparison of single-phase and three-phase motors and advantages and disadvantages of three-phase motors
- abnormal operating conditions for three-phase motors, including:
  - phase reversal, single phasing and overloading
  - voltage fluctuation, higher operating temperatures, frequency variation, overloading and frequent starting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - other factors, including exposure to corrosive fumes, explosive vapours, dust, steam, salt air, high humidity, operation in ambient temperature of below approximately 100C or above 400C, or operation at altitudes in excess of 1000 metres
- abnormal operating conditions for single-phase motors, including centrifugal switch failure
- diagnostic techniques including the use of specialised test equipment, including growlers
- electrical tests for continuity and insulation resistance tests; between windings and to earth of single and three-phase motors
- testing, including the following:
    - DC test – to determine the stator resistance
    - no-load test – to determine the rotational losses and magnetisation current
    - locked rotor test – to determine the rotor and stator impedances
    - thermography and condition monitoring
- dismantling three-phase motors, including application of ‘witness marks’
- operation of a ’growler’ to perform voltage drop testing of armatures of the series or universal motor
- electric motor control and protection, including:
    - reasons why motor protection is required
    - Australian/New Zealand Wiring Rules and local supply requirements for three-phase motor installations and starters, including:
        - isolation and switching
        - automatic starting
        - emergency stopping
        - starting methods for limitation of starting currents
- three-phase motor starters and their operating principles and characteristics, including:
    - DOL
    - star-delta
    - autotransformer
    - primary resistance
    - secondary resistance
- various types of motor overload protection, including high rupture capacity (HRC) fuses
- operating principles of magnetically activated over-current relays, thermally activated over-current relays and combined thermal-magnetic over-current relays
- temperature-dependent resistor protection
- under-voltage and over-voltage protection
- single-phasing and reverse-phase sequence protection and the protection methods
- types of enclosures to give environmental protection, including:
    - open - ends of machine are open allowing free ventilation with fan attached to the motor shaft to draw air through the motor
    - protected - protection obtained by fastening steel wire mesh or perforated metal over enclosures with fan attached to the motor shaft to draw air through the motor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - drip proof - an advance on the protected motors with openings further protected by a hood to prevent foreign materials or moisture from falling vertically into motor
  - duct ventilated - air is drawn from outside through a duct or air is forced via a blower through a duct to the motor
  - totally enclosed - no contact between the air outside and inside the machine can be classified as waterproof, weatherproof or submersible
  - flameproof - totally enclosed motor with additional precautions, including to seal bearings and used where there are flammable gases and risk of explosion if spark enters the atmosphere
- AS 1359.106-1996 Rotating electrical machines – General requirements – Methods for cooling (IC Code)
- three-phase motor braking and the principles of operation of the major types, including mechanical, eddy current, dynamic, regenerative and plug
- altering the speed of AC induction motors by varying the number of poles or frequency
- VSDs, including:
  - methods and operating principles
  - installation requirements
  - shielding and filtering
  - harmonics and power factor
  - performance characteristics
  - set up and commissioning
  - common faults – their symptoms and causes
- three-phase synchronous machines – alternators:
  - construction and operating principles
  - excitation and generated voltage
  - effect of load on alternator voltage
  - effect of power factor on output voltage of an alternator
  - voltage regulation
  - alternator ratings expressed in kVA
  - parallel operation of alternators – synchronising and the methods used to achieve synchronisation, including the use of a synchroscope
  - effects of a change in excitation when connecting two alternators in parallel
- three-phase synchronous machines – motors:
  - construction and operating principles
  - effect of a load on a synchronous motor
  - effect on varying the field (DC) excitation, including changes in power factor
- hunting in three-phase synchronous machines and the methods used to reduce this effect, including the use of amortisseur windings in the pole faces of the rotor
- starting methods and applications of three-phase synchronous motors
- single-phase synchronous motors:
  - the primary purpose and the major types: reluctance and hysteresis motors
  - applications of single-phase synchronous motors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standby power supplies including uninterruptable power supplies (UPS) and the purpose they provide, i.e. mains power at a specified voltage and frequency
- standby engine driven alternators starting methods and sequence of operation
- non-rotating AC equipment and components including construction, operation and application of:
  - linear motors and actuators
  - solenoids, relays and contactors
  - welders and other non-rotating AC machines.

Assessment Conditions

- Assessors must:
  - have vocational competency in fault finding, testing and rectifying AC machines and circuits at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18102 Fault-find, test and rectify single and three-phase transformers

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in fault finding and rectifying single and three-phase transformers.

It includes the operating principles of transformers, their construction and open circuit and full load characteristics; types of transformers used in transmission and distribution systems, appliances and welding machines; hazards associated with step and touch voltages, induced voltages and stored energy particularly with high voltages; earthing requirements to limit the rise of touch voltage; safe working procedures for connecting and testing and fault finding transformers.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capabilities (EPCs):

- EPC 18 – Describe the basic construction, principles of operation, and typical applications of the main types of transformers.

And

Essential Performance Capabilities (EPCs) classified as ‘critical’:

- EPC 19 – List the key safety issues of various types of transformers, including AS/NZS 3000 requirements.
- EPC 48 – Demonstrate knowledge and understanding of the significant dangers of High Voltage equipment and distribution systems.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Transformers include two (2) or more of the following:	• instrument
	• current
	• voltage
	• oil filled transformers
	• high voltage (HV) power transformers
	• low voltage (LV) power transformers
	• neutral
	• distribution:
	  • step up
	  • step down

Regulatory requirements include:	• AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules
Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Assessment Requirements for MEM18102 Fault-find, test and rectify single and three-phase transformers

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings and specifications relevant to the work to be undertaken
- determining the electrical and non-electrical isolation requirements to prevent the creation of hazards linked from the loss of machine/system/process control according to established procedures
- using lock out tag procedures with appropriate tags/signs
- proving electrical isolation and following established safety rules prior to working on electrical equipment or wiring
- ensuring all electrical equipment and tools are tested and tagged and up to date
- observing work health and safety (WHS) precautions and considerations when dealing with instrument transformers especially current transformers and high voltage equipment
- applying fault finding and diagnostic techniques on at least two (2) or more of the following single and three-phase transformers and their associated control circuits:
  - instrument
  - current
  - voltage
  - oil filled transformers
  - high voltage power transformers
  - low voltage power transformers
  - neutral
  - distribution:
    - step up
    - step down

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- complying with the Australian/New Zealand Wiring Rules for the installation and safety requirements of transformers, including limiting the rise of touch voltages
- performing the following tests in accordance with specifications and regulatory requirements:
  - basic insulation resistance, continuity and winding identification tests
  - open and short circuit tests
- carrying out routine maintenance on transformers
- documenting all necessary repairs in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operating principles of transformers, including:
  - principles of mutual induction and how it relates to a transformer
  - phasor diagram for a transformer on no-load and the voltage and current components
  - factors that determine the value of induced voltage in a transformer winding
  - transformers ratios both voltage and current
  - calculate the value of output voltage given the input voltage and turns ratio of a transformer
- transformer losses, including:
  - eddy current losses and the use of laminations to reduce this effect
  - hysteresis losses and core materials to reduce this effect
  - copper losses also referred to as primary/secondary losses or I2R losses
  - transformer efficiency and the effect flux leakage has on it and its related formula, i.e. transformer efficiency $= \frac{output}{output + losses}$
  - voltage regulation as applicable to a transformer and its related formula, i.e. voltage regulation = $\frac{VNL - VFL}{VFL} \ X \ 100\%$
- power in a transformer, i.e. power in = power out
- impedance ratio and reflected impedance
- percentage impedance as applied to transformers and how its value affects the value of the available short-circuit current
- calculating the percentage impedance of a transformer and determine the percentage impedance of a transformer from test results
- transformer construction, including:
  - single and three-phase transformer cores and winding arrangements
  - transformer ratings, i.e. in kVA
  - relationship between transformer cooling and rating
  - methods used for natural and forced cooling of transformers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- properties and tests that are conducted on transformer oil
- winding polarities and polarity identification of single and three-phase transformers
- four common methods of connecting the primary and secondary windings of a three-phase transformer, i.e. star-star, delta-delta, delta-star and star-delta
- three-phase tertiary windings and the purpose they perform
- changing transformer ratios, i.e. off-load and on-load changing
- transformer auxiliary equipment and their function (bushings, surge-diverters, tap-changers, hot oil and winding indicators, breather, Buchholz relay and conservator)
- application of transformers, including welders

- paralleling of single-phase transformers, including:
  - ensuring their voltages are equal
  - instantaneous polarities are identical
  - consequences of incorrectly phased transformers
- paralleling of three-phase transformers, including:
  - the need for paralleling
  - ensuring they are of equal voltages, same phase sequence and phase voltages are in step and the consequences if they are not
- testing of transformers, including:
  - performing basic insulation resistance, continuity and winding identification tests
  - testing of final connections, i.e. in star, delta and open-delta configurations and transformer ratio
  - safe working procedures when connecting and testing transformers
  - open and short circuit tests
  - dielectric tests
- special transformers, including:
  - potential and current transformers and the reason why they are used
  - construction and application of potential and current transformers
  - work health and safety (WHS) hazards associated with instrument transformers especially current transformers where the secondary must never be open-circuited under any circumstances as it will cause a potentially dangerous voltage to be present at the secondary terminals
  - instrument transformer load or burden ratings
  - safe working procedures of potential and current transformers
  - commissioning and testing instrument transformers
  - transformers with multiple secondaries and tapped windings
  - advantages and disadvantages of auto-transformers
  - calculate the voltage and current in the windings of an auto-transformer
  - high-reactance or leakage transformers
  - applications of auto-transformers and instrument transformers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian/New Zealand Wiring Rules installation and safety requirements for transformers
- dangers of high voltage equipment and distribution systems, including:
  - step and induced voltages
  - sources of induced voltage and stored energy
  - creepage and clearance requirements
  - application of safe working procedures in the vicinity of high voltage equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in fault finding, testing and rectifying single and three-phase transformers at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18103 Fault-find, test and rectify electrical circuits and equipment

Modification History

Release 3. Prerequisite units updated

Release 2. Minor adjustments to reflect ERAC requirements for electrician licensing and revision of Essential Performance Capabilities

Release 1. New unit

Application

This unit of competency has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in finding and rectifying faults in electrical circuits and equipment.

It covers safe fault finding testing and procedures in a range of electrical circuits and equipment as well as the rectification of those faults in accordance with the relevant standards.

This unit covers the skills and knowledge required to meet the Electrical Regulatory Authorities Council (ERAC).

Essential Performance Capability (EPC) classified as ‘critical’:

- EPC 54 – Demonstrate the knowledge and skills for diagnosing and rectifying faults in electrical apparatus and associated circuits.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM10016	Terminate and test electrical wiring and accessories
MEM10018	Select cable types and sizes to suit loads and electrical installation environment
MEM10019	Select circuit protection devices by type and rating, fit to switchboards and install earthing
MEM12023	Perform engineering measurements
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18100	Fault-find, test and rectify AC machines and circuits
MEM18102	Fault-find, test and rectify single and three-phase transformers
MEM18104	Dismantle, replace and assemble electrical components and equipment

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Research the nature of the fault through checking of documentation and/or consultation with appropriate person/s
2.	Prepare to fault find and rectify electrical circuits and equipment	2.1	Obtain all necessary tools, equipment and testing instruments needed to conduct fault diagnosis and repair of electrical circuits and equipment
		2.2	Isolate and tag circuits and equipment in accordance with procedures
3.	Fault find and rectify electrical circuits and equipment	3.1	Apply diagnostic techniques to locate faults in electrical circuits and equipment, including the use of specialised test equipment
		3.2	Dismantle equipment, where necessary, and repair/replace faulty items and reassemble using

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	appropriate tools and equipment in accordance with manufacturer specifications and regulatory requirements
	3.3 Test repaired electrical circuits and equipment to ensure functionality and compliance
	3.4 Document reasons and all necessary repairs in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Circuits include two (2) or more of the following:

- power distribution
- lighting control
- distributed control system (DCS) instrument loop control
- motor control
- package unit control

Single circuit may be controlled by one or more devices and the output may control one or more devices

Complex circuit is defined as interdependent circuits and applies to interconnected electrical circuits where electrical equipment and/or components are connected electrically, that is there are multiple electrical power supplies or sources, voltages or circuits which are found in the control or switching of the circuit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes three (3) or more of the following single and three-phase appliances:	• single-phase appliances – hand held power tools, fridges, microwaves, TV's, lighting, motors, air conditioning units, air compressors, portable pumps, pedestal drills, lathes, bench grinders, motors, fans and fan motors • three phase appliances – variable speed drives (VSDs), fan and pump motors, welding machines, freezer units, heaters, general commercial kitchen equipment, generators, air conditioning units, air compressors and air blowers
Diagnostic techniques include:	• testing for voltage, current, frequency, polarity, phase, circuit continuity, insulation resistance and earth continuity
Test equipment includes one (1) or more of the following:	• continuity testers • ammeters • voltmeters • multimeters • tong testers • wattmeters • cathode ray oscilloscopes (CROs)
Regulatory requirements include:	• AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules
Safe working practices include:	• demonstration of safe working practices and installation in accordance with industry established safe and sound practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting circuits, drawings and specifications relevant to the work to be undertaken
- determining the electrical and non-electrical isolation requirements to prevent the creation of hazards linked from the loss of machine/system/process control according to established procedures
- using lock out tag procedures with appropriate tags/signs
- proving electrical isolation and following established safety rules prior to working on electrical equipment or wiring
- ensuring all electrical equipment and tools are tested and tagged and up to date
- applying methodical diagnostic techniques and using safe working practices to fault find electrical circuits and equipment
- using test equipment, including the use of multimeters, cathode ray oscilloscopes (CROs), signal/function generators and power supplies in diagnosing faults in electrical circuits and equipment
- taking measurements and compare the results to the calculated value
- dismantling, repairing and replacing faulty components and equipment using appropriate hand and power tools and engineering techniques
- carrying out electrical tests for continuity and insulation resistance tests on single and three-phase appliances and equipment
- repairing faulty electrical installation circuits, components and wiring to comply with relevant standards
- retesting according to regulatory and legislative requirements
- documenting all reasons and remedial action taken in accordance with SOPs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- fault finding techniques, including:
  - visual inspection
  - signal injection and measurement
  - half split rule and component isolation
  - interpreting wiring and equipment circuits, drawings and specifications
- test equipment for diagnosing faults including multimeters, ammeters, voltmeters, continuity testers, wattmeters and tong testers
- specialised alternating current (AC) test equipment, including:
  - CRO and its operating features, interpreting a CRO screen, dual trace CROs and its advantage over a single trace CRO and CRO applications
  - signal, function generators and power supplies and their operating features and applications when fault finding AC circuits
- diagnostic techniques, including testing for voltage, current, frequency, polarity, phase, circuit continuity, insulation resistance and earth continuity
- wiring faults, including short circuit, open-circuit, high resistance, breakdown in insulation resistance, residual current device (RCD) tripping, transposition of conductors, earthing, loose connections and corrosion
- power distribution, lighting control, signal and data, motor control and package unit control circuits
- lighting faults, including switching, lamp holders, ballast, starter, capacitor, igniter, transformer, loose connections, poor contact, corrosion and lighting management systems
- equipment faults in the following single-phase appliances:
  - hand held power tools, fridges, microwaves, hot water systems, TV’s, motors, air conditioning units, air compressors, portable pumps, pedestal drills, lathes, bench grinders, motors, fans and fan motors
- equipment faults in the following three-phase appliances:
  - variable speed drives (VSDs), fan and pump motors, freezer units, welding machines, heaters, general commercial kitchen equipment, generators, air conditioning units, air compressors and air blowers
- mechanical faults in motors, including bearings, fans, bent shaft, locked rotor, blocked air vents, centrifugal switches, slipping belts and environmental factors.

Assessment Conditions

- Assessors must:
  - have vocational competency in fault finding, testing and rectifying electrical circuits and equipment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18104 Dismantle, replace and assemble electrical components and equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Application

This unit has been developed for Engineering Tradesperson - industrial electrician apprenticeship training and the recognition of trade-level skills in dismantling, replacing and assembling electrical components and equipment which are designed to operate at voltages greater than 50 V alternating current (AC) or 120 V direct current (DC).

It covers dismantling and identifying faulty components, selecting replacements, and assembling electrical components into assemblies or sub-assemblies, including the safe use of hand and power tools and interpretation of mechanical drawings/diagrams.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Assessment Requirements for MEM18104 Dismantle, replace and assemble electrical components and equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- Following work instructions, SOPs and safe work practices
- identifying and interpreting circuits, drawings and specifications relevant to the work to be undertaken
- preparing component/equipment for dismantling
- ensuring all handheld power tools are tested and tagged to the requirements of AS/NZS 3760:2010 In-service safety inspection and testing of electrical equipment
- dismantling component/equipment using appropriate techniques, tools and equipment
- marking component/equipment parts appropriately to aid in reassembly
- checking components visually and dimensionally for conformance to specifications
- selecting and confirming replacement parts to specifications from supplier catalogues
- preparing and assembling component/equipment using appropriate techniques and procedures
- undertaking shaft and coupling alignment, where appropriate
- applying lubricants, packing and/or sealing materials, where appropriate, in accordance with the job specifications
- inspecting and checking the final assembly for conformance with operational specifications and returning to use
- documenting all necessary remedial action and reasons why they were carried out in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- mechanical drawing interpretation, including:
  - application of AS 1100.101-1992 Technical drawing – General principles, in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - conventions used in technical drawings, including relationship between the views contained in the drawing, objects represented, units of measurement, and dimensions of the key features and symbols used
  - correct interpretation of instructions contained in drawings
  - materials from which drawing objects are made and their features and manufacturing/assembly requirements
- power tools, including:
  - application of different power tools, including electric or pneumatic/hydraulic drills, grinders, jigsaws, nibblers, cutting saws, sanders, planers, routers, pedestal drills and grinders
  - clamping/securing methods, including multigrips, vices, jigs, fixtures and clamps
  - adjustments/alignments to a range of power tools
  - common faults and/or defects in power tools
  - procedures for marking unsafe or faulty power tools for repair
  - routine maintenance requirements and cleaning of a range of power tools, including lubricating, tightening, simple tool repairs and adjustments using engineering principles, tools, equipment and procedures to statutory and regulatory requirements
  - tool sharpening techniques for a range of power tools
  - storage location and procedures of a range of power tools
  - safety precautions when using power tools
- precautions to be observed when drilling materials containing asbestos, including the following:
  - undertaking a risk assessment prior to commencement of work
  - a non-powered hand drill or low speed battery-powered drill or drilling equipment fitted with local exhaust ventilation (LEV) dust control hood wherever possible
  - safe working procedures, including applicable PPE
- portable tool safety and tagging system in accordance with the requirements of AS/NZS 3760:2010 In-service safety inspection and testing of electrical equipment
- correct procedures for storage of hand and power tools
- types of seals, bearings, fans and pulleys commonly found in electrical equipment
- non-rotating DC equipment and components, including construction, operation and application of:
  - solenoids, relays and contactors
  - linear actuators
  - Hall effect devices
  - magnetic sensing devices
  - magnetostriction equipment
- dismantling and assembly techniques, including:
  - marking component/equipment parts to aid in reassemble
  - selecting appropriate hand and power tools used in dismantling and assembling electrical components
  - procedures for safe handling and storage of dismantled components.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessors must:

- have vocational competency in dismantling, replacing and assembling electrical components and equipment at least to the level being assessed with relevant industry knowledge and experience.
- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturer specifications.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18105 Disconnect and reconnect high voltage fixed wired equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Application

This unit has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in disconnecting and reconnecting high voltage (HV) fixed wired equipment using appropriate techniques and procedures.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band:

This unit has dual status and is to be regarded as both a specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).

Unit Weight: **3**

Pre-requisite Unit

Path 1	MEM10016	Terminate and test electrical wiring and accessories
	MEM10018	Select cable types and sizes to suit loads and electrical installation environment
	MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Disconnect equipment	2.1	Determine function of electrical of equipment by reference to circuit drawings, schematics, reference manuals, equipment specifications, identification plate and/or consultation with technical adviser
		2.2	Determine and record equipment characteristics, including direction of rotation, where appropriate
		2.3	Identify points of isolation and isolate equipment in accordance with procedures
		2.4	Check that circuits/equipment are isolated and tagged using all appropriate lock-off equipment and signage
		2.5	Note, record and label conductor layout
		2.6	Disconnect conductors and terminate and make safe disconnected cables/connections using appropriate tools, equipment and techniques
3.	Prepare to reconnect equipment	3.1	Plan reconnection ensuring WHS policies and procedures are followed
		3.2	Identify characteristics, including rating of the equipment to be connected, and determine connection requirements
		3.3	Test original and/or replacement item to ensure it is safe to be connected

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4. Connect equipment	4.1 Isolate and tag circuits and equipment in accordance with procedures
	4.2 Check connections and prepare conductors for termination
	4.3 Test the conductors for continuity and insulation resistance readings ensuring they comply with regulatory and legislative requirements
	4.4 Confirm continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure
	4.5 Connect conductors to equipment in accordance with specifications and regulatory requirements
	4.6 Fasten/seal all cables/wires/conduit to specifications
	4.7 Remove all lock-off equipment and signage
5. Perform emergency first aid	5.1 Assess situation to identify points of danger to the injured person and potential rescuer
	5.2 Rescue/recover injured person or provide assistance to injured person in accordance with recognised standards/procedures
	5.3 Make contact with the appropriate medical and rescue authorities
	5.4 Record details of first aid given

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate techniques and procedures include:

- Clearances for safe approach as mandated by statutory authorities

Isolation includes:

- Isolating supply for safe disconnection of all electrical power to equipment supply circuit with switch circuit breaker or fuses on circuits/equipment at voltage levels above 1000 V alternating current (AC) and 1500 V direct current (DC)

Test equipment and tools includes one or more of the following:

In accordance with voltage and fault-limiting requirements:

- appropriate proving dead meters
- high potential testers
- voltmeters
- insulation resistance testers
- handheld tools, including pliers, screwdrivers, sockets, spanners, keys, earthing links and operating sticks

Signage includes one or more of the following:

- tags
- access permit holders
- restricted access signs

Assessment Requirements for MEM18105 Disconnect and reconnect high voltage fixed wired equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- following work instructions, SOPs and safe work practices
- identifying and interpreting specifications, charts, lists, circuit drawings, schematics, regulatory and legislative requirements to disconnect/reconnect HV fixed wired equipment
- checking that the electrical equipment is isolated and tagged where necessary in strict accordance with WHS requirements and procedures using appropriate lock-off equipment and tags/signs
- disconnecting equipment by labelling and recording conductors and making safe disconnected cables/connections using appropriate tools, test equipment, procedures and techniques
- confirming isolation prior to reconnecting fixed wired equipment and checking connections and preparing conductors for termination in accordance with manufacturer specifications and regulatory requirements
- testing conductors prior to connection to ensure continuity, and insulation resistance readings comply with following requirements:
  - checking continuity of the protective earth conductor to determine whether it is sufficiently low
  - testing the resistance between the protective earth conductor and the neutral conductor to determine whether it is sufficiently low – not greater than 2 Ohms
  - testing the insulation resistance of active conductors to confirm that it is greater than 1 Megohm
- testing to ensure continuity is confirmed between the exposed conductive parts of the equipment and the main earth or metal switchboard enclosure
- connecting conductors to equipment and fasten/seal cables/wires/conduits using appropriate procedures and tools to relevant specifications and regulatory requirements
- removing all lock-off devices and signage and checking/testing equipment and circuits for compliance to specifications
- rescuing/recovering of injured person in accordance with appropriate standards/procedures and provide first aid, including cardiopulmonary resuscitation (CPR) where appropriate, and contacting the appropriate medical and rescue authorities
- recording details of first aid given.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- any applicable industry standards, national/Australian Standards, NOHSC guides, state/territory regulatory codes of practice/standards and relevant regulatory requirements
- characteristics of the circuit and the equipment, including rating and rotation
- points of isolation for the fixed wired equipment and reasons for selecting the particular isolation point) and reasons for using earthing, lock-off equipment and signs
- clearances from live parts
- safe isolation
- operational specifications of the fixed wired equipment and connections to be made
- procedures for confirming electrical isolation of fixed wired equipment and circuits
- procedures, techniques, tools and equipment to be used for disconnecting/reconnecting conductors
- test requirements to ensure compliant continuity and insulation resistance of conductors
- test requirements to ensure continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure
- potential dangers/risks associated with work
- recognised procedures for the movement and treatment of the injured person, including HV rescue, clearing of airways, CPR, care of spinal injuries, treatment of cuts/lesions, burns/scalds and treatment of shock
- appropriate local medical and rescue services
- procedures for incident reporting.

Assessment Conditions

Assessors must:

- have vocational competency in disconnecting and reconnecting HV fixed wired equipment at least to the level being assessed with relevant industry knowledge and experience.
- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturer specifications.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18106 Terminate communication and data cables

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Application

This unit has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in terminating all types of communication and data cables in accordance with the relevant legislative requirements and statutory regulations.

Some jurisdictions require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

Path 1	MEM05001	Perform manual soldering/desoldering – electrical/electronic components
	MEM12023	Perform engineering measurements
	MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine job	1.1 Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2 Comply with work health and safety (WHS) requirements at all times, including appropriate risk control measures
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Identify and mark conductors/cables	2.1 Identify cables and conductors using appropriate test equipment and techniques
		2.2 Label cables and conductors in accordance with procedures, legislative requirements and statutory regulations to specifications
3.	Prepare and terminate cable	3.1 Obtain termination requirements and specifications
		3.2 Maintain the minimum bend radius of the cable in accordance with specifications when cutting cable to required length
		3.3 Prepare cable ends to specifications, legislative requirements and statutory regulations utilising appropriate tools and techniques
		3.4 Terminate cables according to specifications using appropriate tools and techniques
		3.5 Test/examine terminations for compliance with specifications
4.	Fix/secure cables	4.1 Fix/secure cables utilising appropriate fixing/securing techniques
		4.2 Use the proper cable management hardware to support the in-place cables and relieve tension

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Legislative requirements and statutory regulations include one or more of the following:	• ACA Technical Standards AS/ACIF008, AS/ACIF009 • SAA Communications Cabling Manual (Open) • AS/NZS 3000:2007 Electrical installations (known as the Australian/New Zealand Wiring Rules) • Telecommunications Act 1997
Types of cables include one or more of the following:	• thermocouple/compensator cables, including mineral-insulated metal sheath (MIMS) • transmission cables • thermoplastic/elastomer insulated/sheathed • compensating cables • coaxial • telephone • category 5 • optical fibre • extra-low voltage (ELV) control cables
Minimum bend radius includes:	Bend radius according to manufacturer specifications, including: • 4 times the cable diameter for unshielded twisted pair (UTP) and screened twisted pair (ScTP) cables • 10 times the cable diameter for optical fibre cable
Tools include one or more of the following:	• krone tool • cable strippers • crimping tools, e.g. RJ45 crimping tool • slitter tool • pliers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Terminations include one or more of the following:

- crimp
- wire wrap (non-insulated and pre-insulated)
- solder
- connectors
- multi-terminal plugs and sockets
- fibre optics
- coaxial
- terminal blocks
- punch-down connections

MEM18108 Troubleshoot analog and digital electronic equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Application

This unit has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in troubleshooting analog/digital electronic equipment down to sub-assembly and/or card level where a series of checks and pre-determined tests is applied in accordance with workshop manuals and testing procedures.

It applies to a wide range of electronic systems and sub-assemblies used in an industrial environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

Path 1	MEM12023	Perform engineering measurements
	MEM18001	Use hand tools
	MEM18104	Dismantle, replace and assemble electrical components and equipment

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine job requirements	1.1 Follow standard operating procedures (SOPs)
	1.2 Comply with work health and safety (WHS) requirements at all times
	1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
	1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
2. Troubleshoot electronic equipment	2.1 Determine the function of electronic equipment by reference to circuit diagrams, equipment manuals and/or consultation with equipment operator, where appropriate
	2.2 Run equipment built-in test functions and record results, where appropriate
	2.3 Note and record built-in faults/status display
	2.4 Apply diagnostic techniques to locate faults in electronic equipment, including the use of specialist test equipment
	2.5 Isolate and remove faulty card or sub-assembly from electronic system using appropriate tools and techniques
	2.6 Source replacement item and replace in accordance with manufacturer specifications
3. Return electronic equipment to service	3.1 Adjust/tune or calibrate electronic equipment for conformance to specifications, where appropriate
	3.2 Test repaired equipment/sub-assemblies for compliance to specifications and/or manufacturer requirements
	3.3 Complete all documentation requirements according to SOPs

Assessment Requirements for MEM18108 Troubleshoot analog and digital electronic equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, SOPs and safe work practices
- identifying and interpreting circuit diagrams, specifications, schematics, maintenance records, drawings, supplier catalogues and obtaining relevant data with respect to troubleshooting analog/digital electronic equipment
- locating, reading/recording and diagnosing built-in fault indicators and obtaining error code interpretation documents and run test functions and recording faults and/or equipment status indicated by built-in functions/display
- applying diagnostic techniques in fault-finding electronic equipment down to sub-assembly and/or plug-in card level
- isolating and removing faulty item and selecting replacement item from appropriate sources
- adjusting/tuning and calibrating in accordance with specifications
- verifying repaired electronic equipment for compliance to specifications
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- function(s) and operational specifications of the electronic equipment/sub-assembly and electrical principles associated with electronic sub-assemblies
- implications of electro-static discharge (ESD) upon the electronic equipment
- procedures for running built-in test functions and recording identified faults
- equipment and techniques to be used to test the electronic equipment, including the use of specialised test equipment
- diagnostic techniques, including:
  - visual inspection
  - signal injection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - half-split rule and component isolation
- procedures for running built-in test functions and recording faults identified
- errors indicated by built-in devices
- procedures for isolating electronic equipment/sub-assemblies
- tools and techniques to be used to remove/replace components from/into electronic equipment
- procedures and techniques for adjusting/tuning and calibrating electronic equipment/sub-assemblies
- test procedures and specifications for returning repaired equipment/sub-assemblies to service.

Assessment Conditions

Assessors must:

- have vocational competency in troubleshooting analog and digital electronic equipment at least to the level being assessed with relevant industry knowledge and experience.
- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturer specifications.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18109 Troubleshoot instrumentation systems and equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Application

This unit has been developed for Engineering Tradesperson – industrial electrician apprenticeship training and the recognition of trade-level skills in fault-finding and troubleshooting techniques that are instrumental in reducing instrumentation down-time.

It covers performing functional tests under normal, extreme, overload and environmental conditions using hardware and software techniques across a wide range of instrumentation systems used in an industrial environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: **4**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1.	Determine job requirements	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2.	Prepare to troubleshoot systems and equipment	2.1	Observe and localise device isolation methods/requirements
		2.2	Apply appropriate test procedures and application principles in assessing operation of instrumentation systems and equipment
		2.3	Apply normal operating characteristics of instrumentation systems and equipment to the level necessary to identify and localise faults
		2.4	Apply characteristics/operational function assessment procedures according to safety and regulatory/site specifications
		2.5	Check and verify characteristics and operational function
3.	Troubleshoot systems and equipment and localise fault conditions	3.1	Utilise manufacturer manuals, history files and maintenance and repair records as a source of information when troubleshooting
		3.2	Utilise drawings/diagrams and operational specifications in identifying and localising fault conditions
		3.3	Examine and interpret built-in fault indicators and error codes and record results, where appropriate
		3.4	Conduct appropriate tests to establish fault condition to major component level using appropriate test equipment,

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tests include one or more of the following:

- determining the correct operational function of electrical, electronic, mechanical, fluid power systems, equipment, components and associated items
- tests conducted under:
  - normal
  - extreme
  - overload
  - environmental conditions using hardware and software techniques

Equipment includes one or more of the following:

- process machines
- temperature control systems
- sterilisation units
- water cooling/filtration systems
- equipment utilising mechanical, pneumatic/electro-pneumatic or electronic (analog/digital) principles
- associated instruments measuring variables, including level, pressure, light, flow, current, resistance, voltage, density and temperature

Components include one or more of the following:

- sensors
- transmitters
- converters
- indicators
- analysers
- controllers
- transducers
- power supplies
- removable circuit boards
- sensor units associated with determining/controlling density, level, flow, temperature and composition of a range of materials

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Test equipment includes one or more of the following:

- system calibrators
- manometers
- dead weight testers
- wheatstone bridge
- potentiometers
- frequency/signal generators
- logic probes
- multimeters (analog/digital)
- test gauges
- cathode ray oscilloscopes (CROs)
- other associated equipment

Assessment Requirements for MEM18109 Troubleshoot instrumentation systems and equipment

Modification History

Release 2. Prerequisite units updated

Release 1. New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, SOPs and safe work practices
- identifying and interpreting specifications, drawings, manufacturer manuals, history files and maintenance and repair records, and other applicable reference documents and obtaining relevant data with respect to troubleshooting instrumentation systems/equipment
- isolating instrumentation system/equipment in accordance with procedures
- checking and verifying the operational functions of the instrumentation system/equipment, including reading/recording and interpreting built-in fault indicators and error codes
- conducting appropriate tests to establish fault condition using applicable test equipment using hardware and software techniques
- repairing fault condition to meet specification requirements
- isolating and removing faulty major component and selecting replacement item from appropriate sources
- undertaking appropriate tests on instrumentation system/equipment in accordance with SOPs
- verifying system to meet operational requirements
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- instrumentation principles controlling density, level, flow, temperature and composition of a range of materials
- effects of resistance, capacitance, inductance and impedance (R, L, C) upon electrical circuit
- interpretation requirements of schematic, wiring and block diagrams and circuits
- principles of hydraulic, pneumatic and electrical flow
- purpose/operational function of instrumentation system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment and techniques to be used to test instrumentation systems and equipment, including the use of specialised test equipment
- procedures for running built-in test functions and recording identified faults
- functional tests to be carried out under normal, extreme, overload and environmental conditions
- specifications of each instrumentation system and acceptable deviations from specifications
- correct operation of the instrumentation system, including the procedures for isolating instrumentation systems
- range of faults in instrumentation system/equipment components
- variations between test results and operational specifications
- probable causes of faults in instrumentation system/equipment components and action to be taken to rectify the causes of faults
- sequence of events to be undertaken to correct faults in the instrumentation system/equipment components
- difference between real and potential faults
- function and procedural checks on instrumentation systems/equipment.

Assessment Conditions

Assessors must:

- have vocational competency in troubleshooting instrumentation systems and equipment at least to the level being assessed with relevant industry knowledge and experience.
- satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* and comply with the *National Vocational Education and Training Regulator Act 2011* or equivalent legislation covering VET regulation in a non-referring State as the case requires.

Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturer specifications.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19001 Perform jewellery metal casting

Modification History

Release 1. Supersedes and is equivalent to MEM19001B Perform jewellery metal casting

Application

This unit of competency defines the skills and knowledge required to perform jewellery metal casting using the 'lost wax' method of investment casting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare metals for casting**	2.1	Select required metals and alloys
		2.2	Weigh out metals and alloys in correct wax-to-metal ratios
		2.3	Record data according to SOPs
3	**Conduct pre-casting operations**	3.1	Prepare equipment according to SOPs, including checking required inert gas supply, delivery and vacuum systems
		3.2	Carry out required pre-heating and glazing
		3.3	Maintain temperature of invested flask
4	**Melt jewellery metal and cast metals**	4.1	Apply protective coating, including borax, fluxes and inert gases to jewellery metal
		4.2	Heat jewellery metal to achieve casting temperature
		4.3	Position burn-out flask
		4.4	Tap molten metal, making allowance for adequate solidification time
		4.5	Operate furnace in accordance with SOPs
5	**Perform post-casting operations**	5.1	Remove casting flask and store in a safe manner
		5.2	Clean, store and dispose of casting materials and consumables

Assessment Requirements for MEM19001 Perform jewellery metal casting

Modification History

Release 1. Supersedes and is equivalent to MEM19001B Perform jewellery metal casting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for performing jewellery metal casting
- undertaking numerical operations and calculations associated with performing jewellery metal castings
- identifying and weighing metals and their alloys appropriate to the correct wax-to-metal ratios
- setting up, checking and operating equipment
- heating metals and alloys and maintaining furnace temperatures to achieve jewellery metal casting temperature
- applying safe casting procedures working within heating timeframe constraints and tapping molten metal, making allowances for adequate solidification time
- cleaning, storing and disposing of casting materials and consumables in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- identification of precious metals and alloys
- properties of jewellery metals in relation to casting
- calculations for proportions and quantities of alloys
- data recording procedures
- consequences of poor work practices
- equipment preparation and operating procedures
- burn-out cycles and testing procedures for heat register or control device
- procedures for checking and maintaining inert gas supply and delivery seals and vacuum systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- melting points of various metals and alloys
- furnace start-up and shutdown procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing jewellery metal casting at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19002 Prepare jewellery illustrations

Modification History

Release 1. Supersedes and is equivalent to MEM19002B Prepare jewellery illustrations

Application

This unit of competency defines the skills and knowledge required to produce illustrations for manufacture, modification or repair of jewellery items.

Where computerised storage and retrieval systems are used unit MEM16008 Interact with computing technology should also be selected.

Where a computer-aided design (CAD) system is required to be used appropriate units should also be selected.

Where interpersonal and customer/client service skills are required to be used the appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Jewellery and horological

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Determine job requirements from specifications, job sheets or work instructions
2	**Prepare or modify drawing**	2.1	Select tools and equipment for drawing
		2.2	Generate illustrations consistent with enterprise SOPs
		2.3	Render illustration
		2.4	Approve illustration and accompanying documentation in accordance with SOPs
		2.5	Use, store, file, copy and issue working and reference drawings and illustrations

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Job specifications, job sheets or work	• stone inclusions and sizes • customer sizing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

instructions include one (1) or more of the following:	• special requests e.g. engraving • material requirements • collection arrangements • design information • customer ideas and concepts • sketches • preliminary layouts • work instructions • job packets • associated documents
Tools and equipment include one (1) or more of the following:	• compass • set square • ruler • range of graphite or colour pencils • cartridge paper • computer • software program
Accompanying documentation includes one (1) or more of the following:	• quotation • specific design information • recommendations

Assessment Requirements for MEM19002 Prepare jewellery illustrations

Modification History

Release 1. Supersedes and is equivalent to MEM19002B Prepare jewellery illustrations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications
- selecting equipment appropriate to the illustrating method and requirements and preparing or modifying drawing
- setting up and safely operating equipment
- using colour, shadow and highlight techniques for emphasis to display jewellery design concept, and rendering illustration
- approving final illustration as per design information and processing in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- workplace documentation, storage and retrieval processes
- isometric and orthographic drawing perspectives
- drawing equipment and applications, storage and maintenance
- drawing methods
- rendering applications and techniques and tools for the creation of illustration effects
- jewellery designs, including shanks, settings styles, shoulders, decorative finishes
- working properties of jewellery metals used in practical manufacturing applications.

Assessment Conditions

- Assessors must:
  - have vocational competency in preparing jewellery illustrations at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19003 Handle gem materials

Modification History

Release 1. Supersedes and is equivalent to MEM19003B Handle gem materials

Application

This unit of competency defines the skills and knowledge required to safely handle a variety of gem materials and identify the condition and features of gem materials.

Emphasis is placed on knowledge of the principles of gemmology, gemstone and diamond nomenclature, gemstone processing enhancement and repair, and appreciation of gemstone qualities.

This unit applies to an individual working autonomously in a jewellery manufacturing environment and guided by strict rules of procedure.

Note: The competencies covered by this unit do not include the requirement to perform accurate and positive gemstone identifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Jewellery and horological

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Handle gem materials**	2.1	Select tools and equipment to observe gem materials
		2.2	Observe the physical properties, techniques and results of gem materials
		2.3	Identify requirements for protection and storage of gem materials
		2.4	Handle gem materials to minimise risk of damage
3	**Record and compare general observations**	3.1	Record observations and compare with reference materials
		3.2	Interpret results

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Gem materials include one (1) or more of the following:	• natural (including diamonds) • composite • synthetic • imitation • treated
Tools and equipment include one (1) or more of the following:	• tweezers and 10x loupe • ultrasonic cleaner • measuring gauges
Techniques and results include one (1) or more of the following:	• prior enhancing treatments • imperfections • weaknesses
Reference material includes one (1) or more of the following:	• charts • lists • graphs • diagrams • other control material

Assessment Requirements for MEM19003 Handle gem materials

Modification History

Release 1. Supersedes and is equivalent to MEM19003B Handle gem materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting relevant tools and equipment to handle and observe gem materials
- using gemstone measuring devices
- using a loupe
- identifying gem condition and characteristics
- comparing data with reference material.

Knowledge Evidence

Essential knowledge required to effectively handle and observe gemstone materials outlined in elements and performance criteria of this unit includes:

- safe work practices and procedures and use of personal protective equipment (PPE)
- gemstone types, including selections of all the major gemstone materials as well as composite, synthetic and imitation gemstones, and diamonds
- gemstone weaknesses and imperfections
- effects of manufacturing and repairing techniques on various gem materials
- effects of gem properties and treatments on handling
- function and limitations of selected equipment
- handling procedures for gem materials
- gemstone and diamond nomenclature.

Assessment Conditions

- Assessors must:
  - have vocational competency in handling and examining gemstone materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM19004 Handle and examine gemstone materials

Modification History

Release 1. Supersedes and is equivalent to MEM19004B Handle and examine gemstone materials

Application

This unit of competency defines the skills and knowledge required to safely handle a variety of gem materials and examine gems to determine physical and chemical properties.

Emphasis is placed on knowledge of the principles of gemmology, gemstone and diamond nomenclature, gemstone processing enhancement and repair, and appreciation of gemstone qualities.

This unit applies to an individual working autonomously in a jewellery manufacturing environment and guided by strict rules of procedure.

Note: The competencies covered by this unit do not include the requirement to perform accurate and positive gemstone identifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Assessment Requirements for MEM19004 Handle and examine gemstone materials

Modification History

Release 1. Supersedes and is equivalent to MEM19004B Handle and examine gemstone materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting relevant tools and equipment to handle and examine gem materials
- setting up and safely operating equipment, including preparing, pre-setting, balancing, calibrating and levelling of equipment, for examination of gem materials
- undertaking numerical operations and calculations associated with handling and examining gem stones
- identifying relevant physical and optical properties of gemstones
- recording results and comparing results with known control items, charts, lists, graphs, diagrams and resource materials
- reading valuation documents, making comparisons and verifying outcomes
- selecting and applying handling measures and precautions in relation to gem materials, work processes, tools and equipment
- investigating and reporting examination results, including assessing need for further examination, cross referencing other records and cross referencing valuation documents.

Knowledge Evidence

Essential knowledge required to effectively handle and examine gemstone materials outlined in elements and performance criteria of this unit includes:

- safe work practices and procedures and use of personal protective equipment (PPE)
- examination methods for gem materials in relation to the properties and features that may affect specific materials during jewellery manufacture, repair or alteration
- equipment required for examination and the function of each
- limitations of the selected equipment and methods
- SOPs for selected equipment
- definitions of processes and features
- physical and optical properties and qualities of relevant gemstones
- principles of gemmology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- gemstone and diamond nomenclature
- process for verifying results
- handling measures and precautions for specific gem materials during jewellery manufacture, repair or alteration
- evidence used in support of conclusions.

Assessment Conditions

- Assessors must:
  - have vocational competency in handing and examining gemstone materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate

MEM19005 Produce three-dimensional precision items

Modification History

Release 1. Supersedes and is equivalent to MEM19005B Produce three-dimensional precision items

Application

This unit of competency defines the skills and knowledge required to produce one-off, three-dimensional handmade precision jewellery items using a range of metals and techniques common to industry practice.

Where soldering is required to be used unit MEM05006 Perform brazing and/or silver soldering should also be selected.

Where lathes are required to be used unit MEM07005 Perform general machining should also be selected.

Where production of three-dimensional precision jewellery masters is required unit MEM19013 Produce jewellery metal masters should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for production**	2.1	Select process and technique for production of item
		2.2	Select item materials, tools and equipment
3	**Produce one-off item**	3.1	Develop construction plan to meet specifications and stages of process
		3.2	Prepare item components using appropriate techniques and procedures
		3.3	Produce and assemble item
4	**Finish and inspect work**	4.1	Check item for compliance with specifications and make repairs/adjustments as required
		4.2	Record product data using appropriate documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.3 Apply final finish and storage procedure

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Items include one (1) or more of the following:	• rings • broaches • bracelets • neckpieces • pendants • earrings • other decorative pieces
Materials include one (1) or more of the following:	• precious and non-precious metals • solders and fluxes • drills and blades • polishing compounds • cleaning and finishing materials • adhesives
Tools and equipment include the following:	• all hand and power tools appropriate to construction and repair of jewellery items • PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate preparation and fabrication techniques include one (1) or more of the following:	• cutting • folding • bending • curving • dapping • drawing • rolling • doming • annealing • melting • granulation • brazing • silver soldering • riveting
Documentation includes one (1) or more of the following:	• work instructions • SOPs • reference material for parts and components • records of materials and consumables used • time and record sheets • drawings and illustrations • customer verbal and written specifications
Final finish includes one (1) or more of the following:	• filing • emery finishing • high and satin polish • embellishment finishes (sandblasting, brushed, burring, reticulation and burnishing) • electroplating

Assessment Requirements for MEM19005 Produce three-dimensional precision items

Modification History

Release 1. Supersedes and is equivalent to MEM19005B Produce three-dimensional precision items

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, job sheets or work instructions to produce three-dimensional items
- selecting materials to meet design specifications
- selecting tools and equipment, including all hand and power tools appropriate to construction and repair of jewellery items
- applying appropriate fabrication procedures
- applying final finish to design item in accordance with design specifications
- completing documentation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting particular metals, construction methods, manufacturing and finishing techniques
- tools and equipment required for processes
- planning and process stages
- working properties of precious and non-precious metals
- fine detail manufacturing processes
- components of jewellery items
- types and uses of measuring devices and recording methods
- procedures for final treatment, safe handling and storage of items.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in producing three-dimensional precision items at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19006 Replace watch batteries

Modification History

Release 1. Supersedes and is equivalent to MEM19006B Replace watch batteries

Application

This unit of competency defines the skills and knowledge required to replace digital or analog watch batteries and arrange water resistance and pressure testing.

Some knowledge of watch glasses and seals is required, however specific replacement functions for these are not covered by this unit and testing functions relate only to the measurement of voltage, consumption and resistance.

This unit does not apply to diver and other water-resistant watch types and water resistance and pressure testing is not covered by this unit, however identification of watches requiring testing as well as procedures for arranging testing are a requirement of this unit.

Where power cell replacements in these two categories are of common practice with associated testing and/or identification/cleaning/supply/fitting of waterproofing/water resistance components appropriate horological units should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **1**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify watch construction**	2.1	Identify case material and construction
		2.2	Identify case types and their function
		2.3	Identify associated parts and consumables
3	**Open and close watches**	3.1	Select and use workshop tools and equipment
		3.2	Open and close watch cases
		3.3	Inspect parts and report or record results
4	**Select and replace batteries**	4.1	Perform general inspection of surface areas
		4.2	Select battery and install
		4.3	Measure voltage, consumption and resistance
		4.4	Handle and store batteries according to SOPs
5	**Arrange water**	5.1	Identify watches requiring water resistance or pressure testing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
resistance and pressure testing	5.2 Arrange water resistance and pressure testing

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

No range of conditions provided for this unit.

Assessment Requirements for MEM19006 Replace watch batteries

Modification History

Release 1. Supersedes and is equivalent to MEM19006B Replace watch batteries

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, job sheets or work instructions to replace watch batteries in digital and analog watches
- selecting and using appropriate tools and equipment, including all hand and power tools appropriate to opening and closing watch cases
- handling and cleaning case, movement and other watch parts and inspecting for obvious damage, wear and moisture intrusion
- inserting and removing batteries
- measuring voltage, resistance and consumption for correct values in accordance with manufacturers' data
- arranging water resistance and pressure testing.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- applicable horological terminology
- design of case types, including water resistant, dustproof and diver's, and their functions
- types of batteries and their functions and battery cell construction
- analog, digital, multi-function and mechanical watch functions
- wear and the possible effects on glass and adjustors
- watch-specific tools and equipment
- manufacturers' information, specifications and SOPs
- location and cause of moisture and corrosion effects
- handling, cleaning and adjustment procedures
- work health and safety (WHS) issues for mercury and lithium batteries
- appropriate symbols and other identifying relevant standards information and their location

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- battery features, identification codes and parts associated with battery function
- procedures to confirm battery status
- relevant internal and external water resistance and pressure testing bodies or personnel
- arrangements and procedures for dispatch and receipt of watches.

Assessment Conditions

- Assessors must:
  - have vocational competency in replacing watch batteries at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19007 Perform gemstone setting

Modification History

Release 1. Supersedes and is equivalent to MEM19007B Perform gemstone setting

Application

This unit of competency defines the skills and knowledge required to perform manual setting of gemstones in a range of metals and design styles.

The unit is not intended to cover the work of a specialist gemstone setter and do not select this unit for the setting of stones into wax, rubber and resin.

Where production setting is required unit MEM07024 Operate and monitor machine and process should also be selected.

Where annealing and tempering is required unit MEM19005 Produce three-dimensional precision items should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM19003 Handle gem materials

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare materials and equipment and perform gemstone setting**	2.1	Identify metal and setting requirements
		2.2	Assess gemstone status
		2.3	Select, prepare and maintain tools to achieve desired outcome
		2.4	Prepare metal for setting
		2.5	Handle and secure gemstones in a correct manner
		2.6	Ensure setting metal is finished and burnished to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools include one (1) or more of the following:	• holding and securing devices • pliers • burrs • scaupers • burnishers • emery • beaders • electronic tools • mechanical tools
Setting styles include one or more of the following:	• claw • grain • rub-over

Unit Mapping Information

Assessment Requirements for MEM19007 Perform gemstone setting

Modification History

Release 1. Supersedes and is equivalent to MEM19007B Perform gemstone setting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, job sheets or work instructions to identify gemstone features and setting requirements, including the type of setting and specific product handling measures
- selecting and using tools to prepare metals for setting and securing gemstones to achieve desired outcome in accordance with specifications
- adjusting, sharpening and maintaining tools to achieve optimum performance.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- setting processes and terminology
- gemstone features and handling procedures
- suitability of metal for carving and setting
- maintenance requirements of tools
- setting techniques, processes and procedures
- working properties of materials.

Assessment Conditions

- Assessors must:
  - have vocational competency in preforming gemstone setting at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM19008 Prepare jewellery designs

Modification History

Release 1. Supersedes and is equivalent to MEM19008B Prepare jewellery designs

Application

This unit of competency defines the skills and knowledge required to prepare designs and associated documentation required to inform manufacture of jewellery items.

Where computer-aided design (CAD) is required to be used appropriate units should also be selected.

Where jewellery illustrations only are prepared unit MEM19002 Prepare jewellery illustrations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, design documentation, illustrations, design drawings, job sheets or work instructions
2	**Identify design requirements**	2.1	Determine design requirements, purpose and needs
		2.2	Undertake further research and idea development
		2.3	Consolidate information and analyse
		2.4	Advise customer on design considerations and limitations and gain further clarification, as necessary
3	**Develop design concept**	3.1	Develop concept, employing design principles
		3.2	Document design process
		3.3	Establish basic forms and proportion
		3.4	Apply required decorative aesthetics
		3.5	Confirm design concept
4	**Produce drawings for item manufacture**	4.1	Select appropriate manufacturing technologies
		4.2	Apply drawing techniques in drawing development
		4.3	Produce working technical and finished drawings
		4.4	Specify production requirements and instructions and communicate to appropriate persons

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Design requirements include one (1) or more of the following:	• materials • stone specifications • special requirements • size • budgetary range • end-use • special customer requirements
Design principles include one (1) or more of the following:	• correct construction techniques • construction limitations of materials • drawing to scale • form, function, harmony and line definition (interpretive and actual)
Design concept includes one (1) or more of the following:	• balance • proportion • highlights • shadowing • texturing effects • decorative aesthetics
Sources of information for jewellery design include one (1) or more of the following:	• specifications • design documentation • illustrations • design drawings • job sheets • work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Decorative aesthetics include one (1) or more of the following surface finishing techniques:	• sandblasting • polishing • electroplating
Manufacturing technologies include one (1) or more of the following:	• hand-fabrication techniques • computer numerically controlled (CNC) processes • mass finishing activities
Drawing techniques include one (1) or more of the following:	• cones • cylinders • cube • rectangle • sphere • 3-D concept • axis lines • conversion of 2-D to 3-D concepts • depth • perspective • scale (1,2 and 3 point) • use of drawing media, including paper, watercolour, pastel, ink and pencil • use of drawing tools, including stencils and rubbers
Preparation of designs includes one (1) or more of the following:	• manual drawing techniques • 2-D CAD applications • 3-D CAD applications

Assessment Requirements for MEM19008 Prepare jewellery designs

Modification History

Release 1. Supersedes and is equivalent to MEM19008B Prepare jewellery designs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting requirements from supplied information to prepare jewellery designs
- identifying and confirming the design requirements with the customer
- developing research and idea to sufficient level in order to determine customer expectations and design outcomes, and evaluating abstract and applied concepts for use in a commercial environment
- undertaking numerical operations and calculations associated with preparing jewellery designs
- applying design principles in concept development
- documenting design concept and selecting technologies suitable for manufacture of item
- producing drawings that accurately reflect design concept and specify production requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- design resources and where to locate them
- research techniques and available resources
- social trends, cultural, environmental and social context
- relevant industry literature and applicable industry standards or regulations
- existing designs, ethical and competitive considerations
- brainstorming techniques for research and idea development
- design principles
- design documentation
- form drawing development
- geometric forms and drawing techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- enhancement techniques
- available manufacturing technologies and their suitability for jewellery manufacture
- types of working drawings and their uses
- interrelation between technical and design drawings
- industry requirements and availability of industry expertise.

Assessment Conditions

- Assessors must:
  - have vocational competency in preparing jewellery designs at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19009 Perform investment procedures for lost wax casting process

Modification History

Release 1. Supersedes and is equivalent to MEM19009B Perform investment procedures for lost wax casting process

Application

This unit of competency defines the skills and knowledge required to prepare investment flasks using manual and automatic equipment for jewellery casting procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **1**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Plus, one or more of the following

MEM07024	Operate and monitor machine and process
MEM13003	Work safely with industrial chemicals and materials

Competency Field

Jewellery and horological

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Invest flask**	2.1	Prepare and check materials
		2.2	Select and prepare casting methods, tools and equipment
		2.3	Assemble flask for casting
		2.4	Mix investment and prepare curing stage
3	**Operate ‘lost wax’ sequence and clean site**	3.1	Evacuate ‘low melt’ wax by steam process
		3.2	Position and store investment flask
		3.3	Select and apply 'burn-out' procedure
		3.4	Clean tools, equipment and site area

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Casting methods include one (1) or more of the following:	• centrifugal casting • vacuum casting
Tools and equipment include one (1) or more of the following:	• flasks and base • investment • scales • mixers • bowls • vacuum

Unit Mapping Information

Assessment Requirements for MEM19009 Perform investment procedures for lost wax casting process

Modification History

Release 1. Supersedes and is equivalent to MEM19009B Perform investment procedures for lost wax casting process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, job sheets or work instructions in performing investment procedures for lost wax casting process
- checking pre-assembled wax for security, size and weight and selecting, checking and cleaning sprue and investment materials and recording weights
- calculating and weighing out proportions of investment material and water and selecting and assembling appropriate flask size
- performing mixing, vibrating and vacuum procedures and operating steamer and process to evaluate ‘low melt’ wax
- inspecting flasks for residue prior to burn-out, positioning, storing flask and selecting appropriate burn-out procedure and equipment, including inspecting and adjusting oven or kiln cavity
- cleaning investment equipment of residue and disposing in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for checking built wax
- casting methods and equipment and processes
- sprue and investment tools, equipment and materials
- techniques for sprue or tree styles and selection and application of the processes
- selection of flask and components for specific casting processes
- procedures and computations for mixing proportions, time calculations, volume and weights
- appropriate gloss off and set time allowance prior to base removal
- requirements for curing and set stage
- sequence and values for time, temperature and cam settings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- steamer process
- suitability of flask and investment for burn-out
- sequence, procedures, adjustments for variables
- procedures for storage and positioning
- procedures for cleaning, storage and removal of materials and reasons for housekeeping functions
- recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing investment procedures for lost wax casting process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19010 Produce rubber moulds for lost wax casting process

Modification History

Release 1. Supersedes and is equivalent to MEM19010B Produce rubber moulds for lost wax casting process

Application

This unit of competency defines the skills and knowledge required to prepare flexible moulds for the purpose of replicating an original model.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare and pack mould frame**	2.1	Select mould frame and rubber for style of master and job requirements
		2.2	Prepare rubber and pack mould frame
3	**Cure rubber and release mould**	3.1	Select appropriate curing system
		3.2	Cure, cool and remove assembled mould
		3.3	Select tools and procedures for the release of the master pattern
		3.4	Release master pattern

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Mould frame includes one (1) or more of the following:	• solid systems • component systems
Rubber includes one (1)	• silicon • natural rubber

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

or more of the following:

Curing system includes one (1) or more of the following:	• vulcaniser • room temperature vulcaniser (RTV) • standard heat and pressure combinations
Tools include one (1) or more of the following:	• scalpel • vice

Assessment Requirements for MEM19010 Produce rubber moulds for lost wax casting process

Modification History

Release 1. Supersedes and is equivalent to MEM19010B Produce rubber moulds for lost wax casting process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, job sheets or work instructions in producing rubber moulds for lost wax casting process
- selecting appropriate frame including various shapes and sizes, solid or component systems and preparing master frame
- cutting rubber using appropriate measurements, packing into frames and selecting variables of time, temperature and pressure for the appropriate curing system
- selecting and using appropriate tools and methods for the release of master without damage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- SOPs
- procedures for assessing frame system
- specific master requirements
- features and working limitations of rubber, including shrinkage and transparency, and procedures for assessing rubber and master suitability and compatibility
- packing techniques for a range of situations
- methods for establishing the appropriate time, temperature and pressure settings for the selected process
- stages in the process for mould curing, removal and cooling
- application of tools
- sequence of procedures for release of master
- placement of mould and vent lines.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in producing rubber moulds for lost wax casting process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19011 Perform wax injection of moulds for lost wax casting process

Modification History

Release 1. Supersedes and is equivalent to MEM19011B Perform wax injection of moulds for lost wax casting process

Application

This unit of competency defines the skills and knowledge required to inject materials under pressure for investment and burn-out aspects within ‘lost wax' casting procedures.

This unit applies primarily to organic and synthetic wax injection, but can include resin and plastic materials injected under pressure for investment and burn-out aspects within 'lost wax' casting procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Perform wax injection of moulds**	2.1	Select appropriate wax material according to design specification requirements
		2.2	Prepare injection tools and equipment
		2.3	Prepare moulds
		2.4	Carry out wax injection procedures
3	**Remove and inspect patterns**	3.1	Remove wax pattern without damage and inspect
		3.2	Determine the action required when inspected wax patterns are imperfect and carry out the determined action
		3.3	Store according to SOPs and secure and clean work area

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Inspection includes checking for one (1) or more of the following:	• missing elements • alignment of rubber mould • air bubbles • shrinkage • distortion
Actions to be taken for imperfect wax patterns include one (1) or more of the following:	• repair • re-work • recycle • discard

Assessment Requirements for MEM19011 Perform wax injection of moulds for lost wax casting process

Modification History

Release 1. Supersedes and is equivalent to MEM19011B Perform wax injection of moulds for lost wax casting process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, job sheets or work instructions to select wax type according to wax, model and cavity specifications
- conducting measurements and preparing moulds, including rectifying inappropriate mould features
- completing injection and removing duplicated wax pattern
- repairing, re-working, recycling or discarding imperfect wax patterns as required.
- checking duplicate for compliance with master and specifications and identifying irregularities.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- wax types and characteristics
- procedures for wax injection equipment and processes for the given values of time, temperature and pressure
- characteristics of moulds
- injection procedures
- minor variations and adjustments to processes and equipment situations
- undamaged wax duplicate removal techniques for a range of situations
- procedures for wax duplicate inspection
- common irregularities
- causes and remedies of imperfections
- procedures for safe cleaning, disposal and safe storage.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing wax injection of moulds for lost wax casting process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19012 Produce jewellery wax model

Modification History

Release 1. Supersedes and is equivalent to MEM19012B Produce jewellery wax model

Application

This unit of competency defines the skills and knowledge required to produce one-off wax models.

This unit is not intended to include fine wire filigree work.

Where the use of computer aided equipment for modelling is required unit MEM09009 Create 2-D drawings using computer-aided design system and unit MEM09010 Create 3-D models using computer-aided design system, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work

Competency Field

Jewellery and horological

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare materials for production of wax model**	2.1	Select waxes and tools
		2.2	Cut stock materials
3	**Produce and finish wax models**	3.1	Optimise material use and production time
		3.2	Sculpt wax to specifications
		3.3	Minimise imperfections in final wax model
		3.4	Apply surface finishes
4	**Assess suitability of final wax product**	4.1	Inspect product for compliance with specifications
		4.2	Modify final product, as necessary

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Wax models include one (1) or more of the following:	• carved forms • structural forms • free-form carving
Tools include one (1) or more of the following:	• heat irons • wax guns • saws • carving tools • wax files • flaming torch
Surface finishes include one (1) or more of the following:	• fine emery • Shellite • high polishes
Stock materials include variety in one (1) or more of the following:	• colour • hardness • properties • length
Inspection includes checking one (1) or more of the following:	• tolerances • allowance for casting shrinkage • allowance for finishing processes

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM19012B Produce jewellery wax model

Assessment Requirements for MEM19012 Produce jewellery wax model

Modification History

Release 1. Supersedes and is equivalent to MEM19012B Produce jewellery wax model

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, job sheets or work instructions and select appropriate method for construction of wax model for the supplied specifications
- selecting wax to suit construction method and required finish and roughing out and sculpting shapes with minimal wastage, effort and time
- fusing joints to achieve optimum strength and quality
- conducting required measurements
- applying texture finishing and inspecting and modifying product to achieve compliance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- factors affecting construction of wax model, including type of wax, hand tools, method of construction, final finish and weight of finished product
- variations in end product and the relationship with wax type
- techniques in controlling melting wax and knowledge of effects of toxic fumes
- tools for preparing and producing wax for specific wax types and constructions
- importance of minimising material wastage and time taken during roughing and finishing and methods to be used to produce the required outcome to specifications with minimise waste
- key features and datum points for model
- purpose and requirements for selected surface finish
- evaluation of product by weight formulation
- effects of casting shrinkage and finishing processes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in producing jewellery wax model at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19013 Produce jewellery metal masters

Modification History

Release 1. Supersedes and is equivalent to MEM19013B Produce jewellery metal masters

Application

This unit of competency covers the skills and knowledge required for producing jewellery master patterns for jewellery reproduction.

Where machining is required as a major component of this manufacturing concept unit MEM07005 Perform general machining should also be selected.

Where component(s) require preparation or manufacture by numerically controlled (NC)/computer numerically controlled (CNC)/computer-aided design (CAD)/computer-aided manufacture (CAM) as an integral part of this process by the person working autonomously appropriate units should also be selected.

Where electro-deposition and/or electro-forming of metal are required unit MEM07024 Operate and monitor machine and process or unit MEM08003 Perform electroplating operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **4**

Pre-requisite Unit

MEM08010	Manually finish/polish materials
MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM19001 Perform jewellery metal casting

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Produce master**	2.1	Select technique and process to achieve quality high polish finish for masters
		2.2	Select materials, tools and equipment for task
		2.3	Mark out materials and develop construction plan to meet specifications and stages of process
		2.4	Prepare pattern materials and produce master
3	**Finish and inspect work**	3.1	Check item for compliance with specifications
		3.2	Determine the action required when item does not comply with specifications and carry out the determined action
		3.3	Record weights and measurements
		3.4	Fit sprue material, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5 Apply final finish to meet specifications and store item
	3.6 Evaluate master and compare to production sample

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• jewellery alloys • base metals
Tools and equipment include one (1) or more of the following:	• hand and power tools • lathes • non-CNC machines

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM19013B Produce jewellery metal masters

Assessment Requirements for MEM19013 Produce jewellery metal masters

Modification History

Release 1. Supersedes and is equivalent to MEM19013B Produce jewellery metal masters

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, job sheets or work instructions to produce jewellery metal masters
- selecting technique and process appropriate to the task
- applying a working knowledge of metals and materials
- selecting and using tools and equipment, including precision measuring equipment to produce master
- marking out materials and developing construction plan to meet specifications
- undertaking numerical operations and calculations associated with producing jewellery metal masters
- inspecting surface condition for pre-treatment and plating process
- positioning and securing sprue section and undertaking final treatments
- checking product for compliance to specification and original design concepts and evaluating master against production sample.
- taking appropriate action with non-compliant items

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of casting, moulding, shrinkage and wax injection
- location of information and specifications and clarification approval processes
- production processes used to finish reproductions
- wrought, forge, machine and cast techniques and applications
- properties, abilities, limitations and functions of materials
- planning and process stages
- difference between master and finished item specifications
- fine detail work processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- levels of acceptable performance and productivity outcomes
- finishing processes
- inspection and compliance checks
- appropriate actions for non-compliant items
- surface, parts and areas appropriate for post-production processes for setting, electroplating and enamelling, and for the subsequent processes of moulding and waxing
- appropriate measuring devices and recording methods and reasons for the recording of specifications
- handling and design needs associated with sprue placement
- processes of wax injection, moulding, casting, molten metal flow and solidification
- procedures for final treatment and safe handling and storage of item
- relevancy of calculations and specifications
- techniques, tools and equipment to measure machined components.

Assessment Conditions

- Assessors must:
  - have vocational competency in producing jewellery metal masters at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19014 Perform hand engraving

Modification History

Release 1. Supersedes and is equivalent to MEM19014B Perform hand engraving

Application

This unit of competency covers the skills and knowledge required for performing basic hand engraving using hand tool applications. Work includes block and script lettering and carving techniques on mostly flat surfaces to achieve patterns in relief or intaglio.

Where the work being performed requires the item to have shaping/drilling/contour modification using power tools unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Jewellery and horological

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Select and maintain engraving equipment and accessories**	2.1	Identify sequence of procedures and select appropriate equipment
		2.2	Prepare gravers to industry standards
3	**Perform hand engraving**	3.1	Measure item and mark out for engraving
		3.2	Position work piece and hold or clamp effectively and without damage to the work piece
		3.3	Undertake work according to SOPs and industry standards

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Engraving requirements include one (1) or more of the following:	• block lettering • script lettering • pictures • carvings • size requirements • style requirements
Equipment includes one (1) or more of the following:	• scorpers • gravers

Assessment Requirements for MEM19014 Perform hand engraving

Modification History

Release 1. Supersedes and is equivalent to MEM19014B Perform hand engraving

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying the engraving sequence and selecting the gravers, scorpers and other applicable tools required to meet specifications
- measuring and marking out using datum lines or points for engraving and positioning and holding item without damage
- completing work according to work specifications
- maintaining the engravers by machining and sharpening graver shape and cutting angles in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- engraving terminology
- sources of task-related information
- securing methods and limitations
- different gravers and scorpers and their applications
- techniques for producing and maintaining cutting edges
- equipment and techniques used for maintaining gravers
- hand engraving techniques for letters and basic pictures and carvings.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing hand engraving at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19015 Perform jewellery enamelling

Modification History

Release 1. Supersedes and is equivalent to MEM19015B Perform jewellery enamelling

Application

This unit of competency defines the skills and knowledge required to perform enamelling techniques applied to precious metals and some base metals using torch and kiln methods.

This unit does not apply to complex three-dimensional forms and plique-à-jour techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare items and materials for enamelling**	2.1	Assess item materials and construction for enamelling suitability
		2.2	Select appropriate enamelling technique and materials for the required outcome
		2.3	Prepare enamels for enamelling operation
		2.4	Prepare metal surfaces for enamelling
		2.5	Carry out additional processing of item prior to enamelling
3	**Enamel jewellery items**	3.1	Set up equipment and items for firing
		3.2	Enamel items to specification and complete firing process
4	**Finish and inspect work**	4.1	Apply final finishes
		4.2	Check product for compliance to specifications
		4.3	Identify and rectify faults
		4.4	Record relevant job information

Assessment Requirements for MEM19015 Perform jewellery enamelling

Modification History

Release 1. Supersedes and is equivalent to MEM19015B Perform jewellery enamelling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing items for construction and enamelling requirements
- selecting enamelling technique and materials to suit job specification and design, item properties and construction
- washing and grinding enamels, including cleaning, polishing, burnishing and pre-treating and pickling metals by hand
- applying enamel to achieve required outcome and performing any additional process requirements prior to the firing process
- setting up equipment to the correct temperature and positioning items for firing using appropriate work holding devices, and monitoring and gauging stages
- removing from heat source at appropriate time to avoid over or under firing and applying final treatments and finishes, including final firing polishing, and checking item for conformance to specifications and design requirements
- identifying causes of non-conformance and rectifying faults
- recording job information in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- enamels, base metals and properties relating to enamelling, enamelling techniques, firing techniques and work holding devices, faults and common rectification methods
- factors for determining suitability for enamelling, including available enamelling compositions, firing temperatures, metal type and properties, and item construction
- different enamelling techniques and terms
- enamelling compositions and techniques and related to specific item properties and factors, such as metal type and properties, item construction and firing temperature
- enamels and forms of availability for purchase, including leaded and unleaded, opaque and transparent

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- use of enamel colour chart to determine suitable colours
- procedures for preparation of enamel powder
- techniques for washing and grinding enamels and reasons for doing so
- preparation of metal surfaces by hand cleaning, polishing, burnishing, chemical pre-treatment by acid, surface depletion methods and application to different metals
- additional processing techniques, including stamping, engraving, saw piercing, chasing, oxidising and roller pressing
- tools and equipment for processing and their uses
- methods of applying enamels, including wet packing and dry dusting
- melting temperatures of metals and enamels
- work-holding devices
- visual appearance of enamel at different stages of firing process
- counter-enamelling techniques and reasons for doing so
- cleaning and lapping processes between firing
- different finishes and methods for achieving specific effects
- masking out methods and final firing and polishing methods
- features and factors for compliance from original specifications and job requirements
- common enamelling faults, incorrect outcomes and their causes, including oxidation, staining and under or over firing
- actions to rectify faults using standard techniques and methods
- job data to be recorded and procedures to record data.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing jewellery enamelling at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19016 Construct jewellery components

Modification History

Release 1. Supersedes and is equivalent to MEM19016B Construct jewellery components

Application

This unit of competency defines the skills and knowledge required to transfer designs and construct jewellery components or single-piece items.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Transfer designs and produce 2-D patterns**	2.1	Identify design features and requirements
		2.2	Prepare work pieces for drawing transfer
		2.3	Transfer accurate representations of component specifications onto templates or work pieces with minimal material wastage
		2.4	Produce patterns or blanks to specification
3	**Form and finish components or item**	3.1	Follow design markings to form component or item and ensure conformity to design requirements
		3.2	Select appropriate tools and equipment for forming, joining and finishing
		3.3	Join components or formed items according to specifications
		3.4	Finish components or items to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Forming methods include one (1) or more of the following:	• cutting • folding • bending • curving • dapping
Joining methods include one (1) or more of the following:	• brazing • silver soldering • riveting
Finishing processes include one (1) or more of the following:	• filing • emery finishing • basic polishing
Transfer methods include the use of one (1) or more of the following:	• direct transfer • copied to template and adhered to work piece • carbon paper tracing
Transfer tools include one (1) or more of the following:	• permanent pen • scriber • freehand • compass • dividers • chinagraph • pencil • carbon paper

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment include one (1) or more of the following:	• compass • dividers • rules • squares • spring gauges • vernier calipers • piercing saw • files • drill press • pedestal drill • polishing equipment and compounds • ultrasonic cleaner
Metals and consumables include one (1) or more of the following:	• precious metals • non-precious metals • solders • fluxes • drills • blades • polishing compounds • cleaning materials • finishing materials • adhesives

Assessment Requirements for MEM19016 Construct jewellery components

Modification History

Release 1. Supersedes and is equivalent to MEM19016B Construct jewellery components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting jewellery illustrations and samples to identify component type, design, material type and specifications
- identifying the forming and joining methods appropriate to the design requirements
- transferring design to work piece using appropriate methods
- selecting and using tools and equipment
- following design markings to form component or item, achieving desired symmetry, angle and shape and aligning joins
- removing excess materials by filing or emery and undertaking re-forming adjustments to achieve specifications, as necessary
- finishing component or item to specification to a fine emery finish and polishing item in accordance with SOPs
- identifying and rectifying problems/errors.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- metal types, applications and properties
- methods and tools for transferring designs
- selection and uses of blades, drills and files
- tools, techniques and methods for forming and finishing
- polishing techniques
- procedures for identification and rectification of problems/errors.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in constructing jewellery components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19017 Fabricate jewellery items

Modification History

Release 1. Supersedes and is equivalent to MEM19017B Fabricate jewellery items

Application

This unit of competency defines the skills and knowledge required to use fabrication techniques to construct jewellery components, single and multiple-piece items.

Where electroplating skills are required to be used unit MEM08003 Perform electroplating operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering
MEM06007	Perform basic incidental heat/quenching, tempering and annealing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Jewellery and horological

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for fabrication**	2.1	Assess item design characteristics, dimensions, construction, composition and finish to select appropriate preparation and fabrication techniques
		2.2	Prioritise and plan work to meet designated timeframes and specific fabrication requirements
		2.3	Select and obtain components, materials and consumables in accordance with SOPs
		2.4	Prepare metals to required quality and dimensions
		2.5	Select tools and equipment appropriate to job requirements and check for operational effectiveness
3	**Fabricate and finish jewellery item**	3.1	Perform fabrication activities using safe operating practices in accordance with SOPs
		3.2	Check item to ensure construction conforms to required specifications, quality, procedures
		3.3	Conduct surface finishing to required specifications
		3.4	Conduct embellishing and polishing to required specifications
4	**Complete work**	4.1	Package and present finished item and store according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.2 Complete and process documentation
	4.3 Collect and reclaim excess materials, clean work area, tools and equipment and store in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:	• single-piece items • multiple-piece items • clips • catches • pins
Materials and consumables include one (1) or more of the following:	• precious metals • non-precious metals • solders • fluxes • drills • blades • polishing compounds • cleaning materials • finishing materials

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Preparation techniques include one (1) or more of the following:	• alloy • cutting • drawing down • rolling
Fabrication techniques include one (1) or more of the following:	• cutting • folding • bending • curving • dapping • drawing • rolling • doming • annealing • melting • granulation • brazing • silver soldering • riveting
Finishing activities include one (1) or more of the following:	• filing • emery finishing • high polish • satin polish • sandblasting • brushing • burring • reticulation • burnishing

Assessment Requirements for MEM19017 Fabricate jewellery items

Modification History

Release 1. Supersedes and is equivalent to MEM19017B Fabricate jewellery items

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, job sheets or work instructions to fabricate jewellery items
- selecting appropriate preparation and fabrication techniques and tools
- selecting and preparing materials for fabrication
- fabricating jewellery items in accordance with SOPs and specification requirements
- finishing jewellery items in conformance with specifications
- completing workplace documentation and cleaning work space
- identifying and rectifying problems/errors.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- metals and materials for fabricating a range of jewellery items and designs
- common jewellery design features, constructions and finishes
- metal preparation and fabrication techniques to suit different design requirements
- factors affecting the selection of preparation and fabrication methods
- materials and consumables for given jewellery fabrication jobs
- properties and characteristics of applicable metals
- ratios to create required grade, quality and composition of metals
- melting temperatures and preparation methods for melting applicable metals
- types of ingot moulds and their characteristics and applications
- methods, applications, equipment types and operational requirements for rolling and drawing metals
- process for annealing metals to prevent work hardening
- procedures for checking serviceability of applicable tools and equipment
- tools, techniques and materials for embellishing and polishing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for storage and packaging, presentation of finished items and security measures for protection of jewellery items
- procedures for identification and rectification of problems/errors.

Assessment Conditions

- Assessors must:
  - have vocational competency in fabricating jewellery items at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM19018 Repair jewellery items

Modification History

Release 1. Supersedes and is equivalent to MEM19018B Repair jewellery items

Application

This unit of competency defines the skills and knowledge required to establish and complete repair requirements for a range of jewellery items.

Where an estimate or quotation for repair is required to be produced unit MSTGN3003 Estimate and cost job should also be selected.

Where setting of jewellery is required unit MEM19007 Perform gemstone setting should also be selected.

If replacement components need to be manufactured for the repair, then appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **6**

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM19001	Perform jewellery metal casting
MEM19003	Handle gem materials
MEM19016	Construct jewellery components
MEM19017	Fabricate jewellery items

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess item condition**	2.1	Identify item characteristics, construction and composition
		2.2	Assess condition of item and the nature and extent of damage in accordance with SOPs
		2.3	Obtain assessment information and advice as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Establish repair requirements and materials**	3.1	Establish repair requirements, options and recommended actions in accordance with SOPs and factors impacting on feasibility of repair
		3.2	Convey recommended repairs and options to client and confirm required repair work
		3.3	Select appropriate repair techniques in accordance with item construction and condition
		3.4	Obtain or manufacture replacement components in accordance with SOPs
4	**Carry out repairs**	4.1	Select and prepare tools, equipment, materials and consumables for job requirements
		4.2	Identify and address unforeseen effects of the repair work and minimise evidence of the repair
		4.3	Ensure repaired item conforms to original specifications and identified customer requirements
5	**Finalise repair**	5.1	Package or present finished item and store safely
		5.2	Complete documentation of repair work
		5.3	Collect unused and excess materials and store
		5.4	Clean work area, tools and equipment and store in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Factors impacting on feasibility of repair include one (1) or more of the following:	• cost • time • feasibility • value
Repair techniques include one (1) or more of the following:	• retipping • reshank • restoration • new collets • chain repairs • fastening mechanism repairs
Unforeseen effects include one (1) or more of the following:	• effects which could be caused by previous construction and repair techniques • effects of the repair process on stones or other components
Tools and equipment include one (1) or more of the following:	• hand tools • power tools • PPE
Materials include one (1) or more of the following:	• precious metals • non-precious metals
Consumables include one (1) or more of the following:	• solders • fluxes • drills • blades • polishing compounds • cleaning materials • finishing materials • adhesives

Assessment Requirements for MEM19018 Repair jewellery items

Modification History

Release 1. Supersedes and is equivalent to MEM19018B Repair jewellery items

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining information and advice required to assess item and conducting condition assessment
- selecting the appropriate repair technique in accordance with item construction and identifying repair requirements
- carrying out repairs using appropriate tools and equipment
- identifying and addressing unforeseen effects and minimising evidence of repair work
- finalising the repair and documenting repair work in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- techniques and information sources available for assessing jewellery items
- limitations in capacity to repair items
- repair techniques suitable for jewellery items
- potential effects of repair work to stones and components
- reasons for selecting particular metals, construction methods, repair, manufacturing and finishing techniques.

Assessment Conditions

- Assessors must:
  - have vocational competency in repairing jewellery items at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM19020 Fault find and maintain micro-mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM19020B Fault-find and maintain micro-mechanisms

Application

This unit of competency defines the skills and knowledge required to fault find and maintains micro-mechanisms, and applies to watch and clock servicing and repair work within retail and manufacturer servicing environments.

This unit does not extend to adjusting indexing system for acoustic resonator watches, chronometer escapements and chronograph mechanisms.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Dismantle and assess components**	2.1	Dismantle micro-mechanism components for inspection using techniques and principles appropriate to the task
		2.2	Assess overall condition of micro-mechanism
		2.3	Inspect physical condition and operational functioning of components and verify with appropriate persons, as necessary
		2.4	Identify faults, damage and non-serviceable components using tools, equipment and techniques appropriate to the task
3	**Carry out maintenance**	3.1	Lubricate and clean components to specification
		3.2	Assemble, replace and install components to specification
		3.3	Check components for correct operation and make required operational adjustments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Micro-mechanisms include one (1) or more of the following:	• mechanical watches • electric watches • clocks of recent manufacture • restoration pieces • day and date systems • automatic winding systems • generating systems • alarm mechanisms • striking mechanisms • chiming mechanisms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:

- power source
- wheel trains
- mechanical oscillating systems
- motion work
- calendar systems
- balance assembly
- bridges
- mainspring
- barrel
- winding mechanism
- canon pinion
- drive train
- shock resist system
- endshake
- sideshake
- escapement
- bearing surfaces
- electronic circuit
- power reserve

Inspection includes observations of one (1) or more of the following:

- clearances
- fits and adjustments
- functioning
- operation of systems
- performance analysis
- overall condition and damage to case
- evidence of toxic contamination, pollution, chemical waste and other contaminants

Operational adjustments include one (1) or more of the following:

- regulation
- beat
- balance amplitude
- rate
- power supply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate persons include one (1) or more of the following:	• customers • supervisors • managers • suppliers • technical experts • colleagues
Tools and equipment include one (1) or more of the following:	• mechanical hand tools • electronic equipment to measure amplitude and rate • electronic timing equipment • diagnostic equipment and tools

Assessment Requirements for MEM19020 Fault find and maintain micro-mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM19020B Fault-find and maintain micro-mechanisms

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- dismantling and removing components using appropriate hand tools and reassembling components in correct sequence to required position without damage
- inspecting timepiece to check operation and determine faults, damage and unserviceable components
- cleaning and maintaining components using appropriate tools and techniques
- verifying operation of components and assemblies
- adjusting components, assemblies and mechanisms to ensure correct operation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features, nomenclature and operation of components and assemblies
- techniques, tools and procedures for handling, dismantling, removing, assembling and installing components
- common faults and maintenance requirements for timepieces
- impact of faults and maintenance requirements on performance
- required checks and verification processes to assess condition of components
- fault-finding procedures
- typical contaminants and their effects on operation of components
- lubricants and lubrication techniques
- cleaning requirements for ensuring correct operation
- procedures and techniques for adjusting components and operational specification for components and assemblies.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in fault-finding and maintaining micro-mechanisms at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM19021 Diagnose and service micro-mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM19021B Diagnose and service micro-mechanisms

Application

This unit of competency defines the skills and knowledge required to diagnose and service micro-mechanisms of clocks and watches, including the procurement and fitting of replacement parts, adjustment and checking to achieve timekeeping and water resistance of completed timepieces to specification.

Where the manufacturing of parts is required appropriate machining units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

Assessment Requirements for MEM19021 Diagnose and service micro-mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM19021B Diagnose and service micro-mechanisms

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- inspecting feature and performance characteristics for given mechanism
- performing checks and verifying functioning of mechanisms, including identifying faults affecting performance
- identifying missing and damaged components and determining remedial action
- sourcing replacement parts using parts and movement catalogues
- determining sequence required for servicing with reference to available parts, design of product and nature of servicing requirement
- determining the overall repair costs, including provision for replacement of parts
- cleaning and refinishing components and selecting and applying lubricant according to on materials used and torque requirements
- evaluating water resistance of completed watch and adjusting timekeeping to tolerance.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- methods for identifying performance characteristics
- reasons for specific performance problems and faults
- faults in design or materials and special servicing requirements
- general condition features, including obvious damage
- interchangeability of parts for specific timepiece
- factors affecting sequence and process for servicing
- techniques, tools and diagnostic equipment for diagnosing and identifying performance problems
- techniques for dismantling assemblies and subassemblies
- operation of equipment for refinishing pivot and bearing replacement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- techniques and procedures for assembling components, assemblies and subassemblies
- applications and use of different lubricants
- correct alignment of hands relating to date change mechanism and dial graduations
- adjusting timekeeping.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and servicing micro-mechanisms at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM19022 Perform precision micro-mechanism diagnosis and servicing

Modification History

Release 1. Supersedes and is equivalent to MEM19022B Perform precision micro-mechanism diagnosis and servicing

Application

This unit of competency defines the skills and knowledge required to diagnose and service precision micro-mechanisms, including chronometer watch and clock components, to achieve performance to original specifications. It includes precision adjustment and testing to achieve timekeeping and water resistance specifications of completed timepieces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM07005	Perform general machining
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18055	Dismantle, replace and assemble engineering components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM19020	Fault find and maintain micro-mechanisms
MEM19021	Diagnose and service micro-mechanisms

Competency Field

Jewellery and horological

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Adjust timing of precision micro-mechanisms**	2.1	Analyse and interpret data for precision timing of micro-mechanisms
		2.2	Make adjustments to achieve a constant rate to specifications
3	**Diagnose precision micro-mechanisms**	3.1	Select and use required high tolerance and precision tools and equipment
		3.2	Apply detailed inspection and testing techniques to diagnose and identify performance faults, condition and repair or servicing requirements
4	**Carry out precision**	4.1	Remove precision components and service and replace, as appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	micro-mechanism servicing	4.2	Adjust components to precision tolerances and specifications
5	**Repair and adjust chronograph mechanisms**	5.1	Adjust functional elements and test to ensure specifications are achieved
		5.2	Examine chronograph components and re-finish, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Micro-mechanisms include one (1) or more of the following:

- mechanical watches and clocks
- electric watches and clocks
- pieces of recent manufacture
- restoration pieces
- chronometer timepieces
- day and date systems
- automatic winding systems
- generating systems
- alarm mechanisms
- striking and chiming mechanisms
- calendar mechanisms
- balance spring
- dynamic poising
- static poising
- truing balance (flat and round)
- chronograph mechanisms

Assembly and subassembly components include one (1) or more of the following:

- balance staff
- pallet staff
- pallet jewels
- wheel trains
- power source
- mechanical oscillating systems
- motion work
- calendar systems
- escapement
- balance spring

Tools and equipment include one (1) or more of the following:

- mechanical hand tools
- electronic equipment to measure amplitude and rate
- electronic timing equipment
- diagnostic equipment and tools
- high-tolerance testing equipment
- specialist service tools for adjusting oscillating systems and chronograph mechanisms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Precision components include one (1) or more of the following:	• timekeeping elements, including:
	  • balance staff
	  • pallet staff
	  • pallet jewels
	  • wheel trains
	• power source
	• mechanical oscillating systems
	• motion work
	• calendar systems

Inspections include one (1) or more of the following:	• high-tolerance clearances • fits and adjustments • functioning • systems analysis • performance analysis

Unit Mapping Information

Assessment Requirements for MEM19022 Perform precision micro-mechanism diagnosis and servicing

Modification History

Release 1. Supersedes and is equivalent to MEM19022B Perform precision micro-mechanism diagnosis and servicing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- eliminating or minimising effects of internal and external influences and adjusting timing of micro-mechanisms
- making detailed observations using high magnification optics
- testing functioning of components to high tolerances, including functioning of escapement and oscillating system
- using appropriate tools and equipment for detailed observation diagnosis and servicing
- removing and replacing assembly and subassembly components and other precision components
- making adjustments to minimise error of performance
- repairing and adjusting chronograph mechanisms, including tensioning chronograph wheel and minute wheel, to ensure correct operation of seconds, minute and hour recording systems
- observing and adjusting depth of engagement and operating sequence of functioning elements
- applying lubricant, as required
- re-finishing and matching components to existing components to ensure correct functioning, including alignment of hands with dials
- fitting and adjusting new and repaired components to function within existing system
- determining influences in design, internal and external influences on rating variation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- physical limitations and condition of system and control factors influencing isochronism
- inherent influences in design, internal and external influences on rating variation
- adjustment procedures and techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- detailed inspection and analysis techniques for diagnosing precision micro-mechanisms
- acceptable tolerances, clearances and limits for precision components
- components suitable for precision outcomes
- effects of adjustment on performance and operation
- criteria for correct adjustment of balance spring and regulating system
- types of chronograph mechanisms and their functioning
- adjustment procedures for chronograph operation, including minute and hour recording systems.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing precision micro-mechanism diagnosis and servicing at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20001 Produce keys

Modification History

Release 1. Supersedes and is equivalent to MEM20001A Produce keys

Application

This unit of competency defines the skills and knowledge required to produce and duplicate keys for mechanical locking devices and systems. It applies to the production of keys across a range of locksmithing areas, including automotive, domestic, commercial, security containers and ancillaries.

Where other programming of high-security transponders is required unit MEM20013 Service automotive transponder systems should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Determine job requirements from specifications, drawings, work instructions or existing samples
		1.5	Select appropriate method for cutting/duplicating according to key type and system, and other applicable factors
		1.6	Confirm signatories, as required
2	**Prepare materials and equipment**	2.1	Select appropriate tools and equipment
		2.2	Select correct key blank for the given application
		2.3	Set up equipment and accessories in an appropriate manner for cutting/duplicating
3	**Produce and duplicate keys**	3.1	Ensure key fits and operates lock in a correct manner
		3.2	Ensure key dimensions meet manufacturer specifications
		3.3	Use hand tools and equipment safely and in accordance with SOPs
		3.4	Finish key according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Method for cutting/duplicating includes one (1) or more of the following:

- hand
- machine
- computer and book code equipment
- programming of read/write transponders

Key types include one (1) or more of the following:

- inline pin tumbler
- single and double sided wafer
- 2 and 4 track
- lever:
  - pin
  - pipe
  - mortice
  - flat steel
  - double bitted
- warded
- pre-cut
- rotating pin
- rotating disc
- axial pin (dimple)
- tubular
- cruciform

Key systems include one (1) or more of the following:

- restricted, semi-restricted and non-restricted system numbers
- manufacturer restricted
- factory restricted
- locksmith restricted/managed
- association restricted

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Requirements for key production includes one (1) or more of the following:	• specific client requirements and quantities • completion times and dates • job requirements and tasks • signature authorities • WHS requirements • company requirements • compliance with relevant manufacturer requirements • warranties and service information
Tools and equipment include one (1) or more of the following:	• manual and computerised code machines • milling machines, tubular machines and duplicating machines • crimpers, hand files and bridge support • measuring equipment, including standard gauges and vernier callipers

Assessment Requirements for MEM20001 Produce keys

Modification History

Release 1. Supersedes and is equivalent to MEM20001A Produce keys

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting conversion charts, reference books and samples to identify blank requirements for keys used across a wide range of industries
- selecting appropriate cutting/duplicating method for key type and system
- measuring key dimensions and identifying key type appropriate to the task
- setting up and safely using cutting and duplicating equipment to produce keys
- testing and adjusting key operation, checking calibration and finishing keys.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- different techniques for cutting and duplicating
- tools and equipment for hand and machine key cutting
- key systems and blanks
- spacings, depths, angles, shapes and other measurements relevant to cutting keys
- terminology for key production
- requirements of key restrictions
- workplace method for confirming signatory to key order
- key blank storage and classification systems
- identification marking procedures
- key storage and packaging procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in producing keys at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM20002 Assemble and test lock mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM20002A Assemble and test lock mechanisms

Application

This unit of competency defines the skills and knowledge required to assemble and test lock mechanisms. Mechanisms are essentially manual in nature and may be built to order, low volume or complex assemblies.

This unit applies to assembly of cylinders within a masterkey system or to individually keyed cylinders and requires application of locksmithing principles and practices.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements or unit MEM12003 Perform precision mechanical measurement should also be selected as appropriate.

No licensing, licensing or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Determine job requirements from specifications, drawings, job sheets or work instructions
		1.5	Obtain appropriate authorisation, check signatures and confirm order
		1.6	Plan appropriate assembly sequence/method in accordance with specifications and SOPs
2	**Prepare to assemble lock mechanisms**	2.1	Disassemble lock mechanisms, as necessary
		2.2	Compile components and parts in accordance with assembly specifications
		2.3	Select tools, equipment and materials to suit job requirements
		2.4	Prepare work area and arrange components in accordance with SOPs and selected assembly technique
		2.5	Identify defective or faulty parts and process according to SOPs
3	**Assemble lock mechanisms and decode assembled mechanisms**	3.1	Apply locksmithing techniques and principles appropriate to assembly activity
		3.2	Maintain records or process in accordance with SOPs
		3.3	Fit component parts to ensure correct positioning and conformance with specifications
		3.4	Mark/tag/identify locking mechanism as appropriate in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.5	Handle and store components and/or assembly in a manner least likely to cause damage and in accordance with SOPs
	3.6	Identify the lock mechanism using appropriate method
	3.7	Decode lock mechanism (internal locking components)
4 **Check finished products and mark, package and label products**	4.1	Check operation of the lock mechanism and key for conformance to specifications
	4.2	Identify and rectify faults in lock mechanism or key operation
	4.3	Select stamping equipment and stamp products with correct door and key reference information in accordance with SOPs
	4.4	Group, package and label products for installation in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assembly specifications include one (1) or more of the following:	• required components and parts • door handing • timeframe for completion • keying instructions • fitting requirements
Documentation includes one (1) or more of the following:	• door and key schedules • job sheet • pinning charts • hardware charts • manufacturer documentation • manufacturer warranties
Lock mechanisms include one (1) or more of the following:	• pin and disc tumbler cylinders • wafer tumbler cylinders • lever and warded locks • rotating pin • rotating disc • axial pin (tubular) • radial pin (dimple) • cruciform
Components and parts include one 91) or more of the following:	• wafers • pins • discs • levers • springs • key blanks • barrels • cylinder housings • cams and screws • circlips and tails

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment include one (1) or more of the following:	• jigs • followers • tweezers • screwdrivers • circlip pliers • files • wire wheel

Materials include one (1) or more of the following:	• graphite:
	  • powder
	  • based lubricants
	• Teflon
	• silicone based lubricants

Reference information includes one (1) or more of the following:	• system member • rank • key issue • dealer identification

Stamping equipment includes one (1) or more of the following:	• dedicated marking machine:
	  • stamp
	  • engrave
	• hand stamps
	• stamping block

Assessment Requirements for MEM20002 Assemble and test lock mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM20002A Assemble and test lock mechanisms

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining appropriate authorisation, checking signatures and confirming order
- planning the assembly sequence/method in accordance with specifications and SOPs
- checking components/parts against key schedule and job instructions
- assembling lock mechanisms and checking key operates the lock
- using tools and equipment to assemble lock mechanisms
- marking products with correct door and reference information using appropriate stamping equipment
- identifying and rectifying faults in lock mechanism or key operation
- grouping, packaging and labelling products and completing and processing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of mechanical locking devices
- information on handwritten and computer-generated pinning charts, key and door schedules, hardware chart, mechanical locking devices, mechanisms and components
- importance of obtaining authorisations
- difference between levers
- difference between key blanks
- fitting requirements and sequence of assembly
- tools, equipment and materials for assembling lock mechanisms
- door and key reference information and stamping methods.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in assembling and testing lock mechanisms at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20003 Install and upgrade locks and hardware

Modification History

Release 1. Supersedes and is equivalent to MEM20003A Install and upgrade locks and hardware

Application

This unit of competency defines the skills and knowledge required to install and upgrade locks/locking systems and lock furniture, including providing advice on installation and upgrade requirements and instructing clients on the use of the product. It applies across commercial, industrial and domestic applications and work would mainly be carried out off-site.

Where fitting of door control devices is required unit MEM20005 Install and maintain door control devices/systems should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Determine job requirements from specifications, drawings, job sheets or work instructions
		1.4	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.5	Advise customer of products, product options and possible upgrade options in accordance with SOPs and customer requirements
		1.6	Establish installation procedure in accordance with work order and with minimal disruption to customer, services or normal work routines
2	**Organise and prepare installation**	2.1	Select and obtain appropriate and serviceable tools, equipment, and materials in accordance with SOPs and fitting requirements
		2.2	Establish access to site and specific site requirements, and make appropriate arrangements in accordance with client and organisational requirements
		2.3	Establish and maintain a safe worksite in accordance with legislative and organisational requirements
3	**Install and upgrade locks and hardware**	3.1	Prepare installation location, measure and mark out, as appropriate
		3.2	Fit locks and hardware in accordance with manufacturer specifications and SOPs
		3.3	Check lock and hardware for correct functioning and rectify operational problems
		3.4	Carry out work using safe work procedures and practices and in accordance with applicable legislation, codes,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		regulations and standards
	3.5	Identify problems affecting the installation and discuss and resolve variations with appropriate persons
4 **Complete the installation**	4.1	Ensure work site is cleaned and left in presentable condition in accordance with original presentation, client requirements, industry standards and SOPs
	4.2	Undertake final inspections and rectify non-conformance to ensure installation conforms to industry, legislative and order requirements
	4.3	Notify client of job completion and obtain client acceptance in accordance with SOPs
	4.4	Instruct client on use of product in accordance with SOPs and manufacturer specifications
	4.5	Complete relevant documentation and process in accordance with industry, legislative and organisational requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Customer requirements include one (1) or more of the following:	• product type, function and capabilities • access issues, installation locations and positions • upgrade information • service and maintenance requirements • product operation • warranty information • costs
Organisational requirements include one (1) or more of the following:	• quality assurance standards and procedures • service standards • safety and WHS practices and obligations • resource storage and use • organisational processes and procedures • documentation processes • product and process training
Tools, equipment and other materials include one (1) or more of the following:	• hand tools • power tools and accessories • fixing tools • special-purpose equipment • lubricants, adhesives and sealants • cleaning materials • wire and cable • vacuum • drop sheet • door, window and frame materials • morticers • routers • jigs • cherry centre

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

PPE includes one (1) or more of the following:

- night hats
- safety barriers
- face shields
- dust masks and respirators
- goggles and safety glasses
- earmuffs and ear plugs
- high visibility vests/work wear
- hard hats and head protection
- gloves
- knee pads
- safety foot wear
- warning signs and tapes
- fire extinguisher
- first aid kit

Locks and hardware include one (1) or more of the following:

- cylinder night latches and deadlocks
- lever and cylinder mortice locks
- tubular deadbolts
- key in knob and key in lever
- tie bolts
- combination sets
- mechanical digital locks
- drawer and cam locks
- door protective plates
- door control devices
- exit devices
- lockable bolts
- door viewers
- window locks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Access and installation factors and potential issues include one (1) or more of the following:	• site safety issues • out-of-hours access • disruption to client work routines • installation environment • building codes • breakdowns • environmental conditions • physical, time and cost restrictions • product supply problems
Documentation includes one (1) or more of the following:	• installation details • costings • materials used • records of faults and damage • installation problems and factors • testing and inspection results

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM20003A Install and upgrade locks and hardware

Assessment Requirements for MEM20003 Install and upgrade locks and hardware

Modification History

Release 1. Supersedes and is equivalent to MEM20003A Install and upgrade locks and hardware

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- communication with clients as required throughout the installation/upgrading process
- establishing access and maintaining safe worksite
- identifying existing fixtures and fittings, including type and quality of construction, and establishing customer requirements for installing and upgrading locks and hardware
- measuring and marking out with tape measures, rules, squares and templates in an accurate manner
- selecting and safely using appropriate tools for the type of products, materials and conditions whilst identifying and assessing hazards associated with installing locks and hardware
- identifying problems affecting the installation and discussing and resolving variations with appropriate persons
- assessing potential for unforeseen problems and incidents to affect the installation and testing and confirming the function of locks and hardware to meet customer requirements
- cleaning worksite in accordance with original presentation, client requirements, industry standards and SOPs
- completing and processing all documentation in accordance with SOPs.

Knowledge Evidence

Essential knowledge required to effectively install and upgrade locks and hardware outlined in elements and performance criteria of this unit includes:

- safe work practices and procedures and use of personal protective equipment (PPE)
- utility and application of locks, hardware and accessories
- fixtures (doors, frames and windows) and their type of construction, including foam fill, hollow, clad, steel, aluminium and other materials
- types and functions of locks, hardware and accessories to suit different fixtures and materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- factors for determining suitable options to meet customer requirements, including intended use, cost and compatibility with existing hardware
- installation procedures for locks, hardware and accessories
- terminology relating to lock products and installation
- tools and equipment for installing locks, hardware and lock furniture
- materials, parts and components for installation of locks and lock furniture
- applicable legislation and local regulations
- individual responsibilities and duty of care
- access and installation factors and potential issues
- procedures for measuring, marking lock and lock furniture positions and installation procedures
- effects of incorrect installation and common installation problems
- troubleshooting and lock testing methods
- strategies for resolving problems and incidents
- manufacturer specifications, uses, limitations and warranties for relevant product/s
- procedures to complete and process relevant documentation
- environmentally safe disposal procedures for packaging and other waste
- procedures and organisational requirements for final inspection and client notification and acceptance of job completion
- hazards and control measures associated with installing and upgrading locks and hardware, including housekeeping.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing and upgrading locks and hardware at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20004 Gain entry

Modification History

Release 1. Supersedes and is equivalent to MEM20004A Gain entry

Application

This unit of competency defines the skills and knowledge required to gain entry and the straightforward return-to-service of general types of commercial and domestic mechanical locks. The basis for entry includes lockout (keys inside), lost keys (rekeys) and malfunction of locks in doors and windows.

Where specialised skills are required to gain entry and to reinstate both mechanical and electronic locking systems in automotive or fire and security containers, appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM20001	Produce keys
MEM20002	Assemble and test lock mechanisms
MEM20003	Install and upgrade locks and hardware

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Establish entry requirements, authorisation and ownership**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Establish reason for entry, nature and urgency of problem
		1.5	Verify evidence relating to ownership and/or legal possession and authenticity of request
		1.6	Provide company and individual identifications to the customer
		1.7	Identify construction and mechanism information, including lock type, manufacturer, model, date, restrictions and limitations
		1.8	Confirm entry requirements and process with customer
2	**Gain entry to mechanical locking system**	2.1	Select appropriate tools, equipment and entry methods for the given mechanism, problem, conditions, customer and organisational requirements
		2.2	Establish a safe and secure working environment according to industry, organisational and legislative requirements
		2.3	Use selected tools to gain entry with minimal damage using appropriate industry practices
		2.4	Identify limitations and problems and seek advice or assistance as appropriate
		2.5	Replace locks and components, as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	2.6 Manufacture keys, as required
3 **Finalise and document entry process**	3.1 Check functioning of locking system and adjust as necessary for correct operation
	3.2 Identify operational problems for further service or repair
	3.3 Fit temporary or replacement lock, if necessary
	3.4 Give customer job details and recommendations for any further action according to SOPs
	3.5 Instruct customer on use of new components, if necessary
	3.6 Ensure completed documentation is accurate and process in accordance with legislative, industry and organisational requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Evidence for legal possession includes one (1) or more of the following:	• photo identification • letters of authority • proof of ownership papers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Lock types include one (1) or more of the following:

- pin tumbler (4.5.6.7 pin)
- wafer tumbler – e.g. L + F
- warded lock
- lever tumbler
- mechanical digital, exposed wheel combination
- axial pin tumbler
- radial pin tumbler
- rotating pin tumbler
- disc tumbler

Tools and equipment include one (1) or more of the following:

- specialised files and impression tools
- pick gun
- hand tools relating to gaining access
- picks, including:
  - curved, rake and hooks
  - tension wrenches (turning)
  - lever lock picks
  - tubular lock picks
- custom tools
- scope

Entry methods include one (1) or more of the following:

- pick
- impressioning
- reading
- bypass
- manipulation
- drilling

Keys include one (1) or more of the following:

- blank recognition
- keys to code
- keys to sample
- use of key machines
- use of computer code programs
- use of book codes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Documentation includes one (1) or more of the following:	• disclaimer documents • receipt/invoice • job sheets

Assessment Requirements for MEM20004 Gain entry

Modification History

Release 1. Supersedes and is equivalent to MEM20004A Gain entry

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- communicating with the customer as require throughout the process
- establishing legal possession of property prior to commencing gaining entry
- identifying construction and mechanism of the lock type and confirming entry requirements and process with the customer
- selecting and using the appropriate tools and equipment to gain access
- gaining entry with causing minimal damage and in accordance with SOPs
- reading assembly drawings and using catalogues and resources
- manufacturing keys, as required
- completing all documentation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- products and product identification
- methods of gaining access to mechanical locks
- tools and equipment for gaining access to mechanical locks
- operation and assembly of mechanical locks
- procedures to establish legal possession and legal obligations and ethical requirements
- procedures to deal with fraudulent requests
- requirements and procedures for fitting temporary locks
- hazards and control measures associated with gaining entry.

Assessment Conditions

- Assessors must:
  - have vocational competency in gaining entry at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20005 Install and maintain door control devices/systems

Modification History

Release 1. Supersedes and is equivalent to MEM20005A Install and maintain door control devices/systems

Application

This unit of competency defines the skills and knowledge required to select, install, fault find and adjust a range of door control devices and door control systems. It applies to work conducted in commercial, industrial and domestic environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Review work order and clarify with appropriate person(s), as required
2	**Prepare for installation and service**	2.1	Select appropriate tools, equipment and materials to meet job requirements and check for operational effectiveness in accordance with manufacturers' specification
		2.2	Identify faulty or unsafe tools and segregate for repair or replacement in accordance with SOPs
		2.3	Identify potential and existing risks and hazards associated with maintenance activities and control in accordance procedures and SOPs
3	**Install door control devices/ systems**	3.1	Select the appropriate door control device/systems for the given door type and specifications
		3.2	Install door control devices/systems in accordance with manufacturers' specifications, work order and legislative requirements and SOPs
		3.3	Check door control devices/systems for correct operation and adjust, as necessary
4	**Service door control device**	4.1	Conduct checks on door control devices/systems and components to identify any damage, friction or sticking in accordance with manufacturers' specifications
		4.2	Assess viability for continued operation or replacement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		of door control device
	4.3	Adjust door control devices/systems and/or components in accordance with manufacturers' specifications, work order and legislative requirements and SOPs
5 **Complete installation or service**	5.1	Make notification of work completion to appropriate person(s) in accordance with SOPs
	5.2	Complete documentation and process in a prompt and accurate manner in accordance with SOPs
	5.3	Clean work area, tools and equipment and store in accordance with SOPs
	5.4	Report malfunctions, faults, wear or damage to tools for repair or replacement
	5.5	Collect waste from service and repair activities, treat and dispose or recycle in accordance with organisational and environmental requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Risks and hazards include one (1) or more of the following:

- non-compliance with building codes and regulations
- exposed electrical wiring
- manual handling
- exposure to asbestos, dust, noise, live power, vermin, water, glass fibre, building debris, natural and other gas build-up

Maintenance includes one (1) or more of the following:

- cleaning
- inspection
- lubrication
- routine repairs
- identification of worn parts
- confirming operation
- adjustments
- key cutting
- replacement of worn parts

Door control devices/systems include one (1) or more of the following:

- surface mounted door closers
- semi concealed door closers
- concealed closers
- semi-automatic/automatic door control devices
- exit devices

Documentation includes one (1) or more of the following:

- completion of work log
- mechanical lock/locking system problems/faults
- warranty conditions and allowances
- recommendation for repairs
- operational checks and maintenance conducted
- testing and commissioning results
- parts and components replaced
- materials used
- masterkey plans:
  - code matrix
  - key and door schedules
- recommendations for future operation and maintenance
- costings

Assessment Requirements for MEM20005 Install and maintain door control devices/systems

Modification History

Release 1. Supersedes and is equivalent to MEM20005A Install and maintain door control devices/systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting and following specifications, charts and diagrams and communicating in a clear and concise manner when installing and maintaining door control devices/systems
- identifying work health and safety (WHS) hazards and risks and implementing appropriate risk control measures and procedures
- selecting the appropriate tools and equipment to complete the task
- carrying out routine maintenance on door control devices/systems
- adjusting door control devices in accordance with manufacturers' and organisational requirements
- cleaning worksite in accordance with original presentation, client requirements, industry standards and SOPs
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types, functions, specifications and operational principles of door control devices/systems
- correct selection of door control devices
- common door control devices/systems faults
- maintenance requirements of door control devices/systems
- tests to confirm door control devices/systems operation
- procedures to disassemble/reassemble
- technical terminology
- types of doors and windows and mechanical system applications
- hazards and control measures associated with installing and maintaining door control devices/systems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in installing and maintaining door control devices/systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20006 Maintain and service mechanical locking devices

Modification History

Release 1. Supersedes and is equivalent to MEM20006A Maintain and service mechanical locking devices

Application

This unit of competency defines the skills and knowledge required to carry out maintenance of a range of mechanical locks and locking systems in commercial, industrial and domestic environments.

Where maintenance and servicing of safes is required unit MEM20011 Service and repair fire and security containers should also be selected.

Where maintenance and servicing of automotive locks is required unit MEM20012 Service and repair mechanical automotive locking systems and unit MEM20013 Service automotive transponder systems, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Review work order and clarify with appropriate person(s), as required
2	**Prepare for maintenance**	2.1	Identify mechanical locks/locking systems to be serviced or repaired and confirm in accordance with work order
		2.2	Select tools, equipment and materials appropriate to job requirements and check for operational effectiveness in accordance with manufacturers' specifications
		2.3	Identify faulty or unsafe tools and segregate for repair or replacement in accordance with SOPs
		2.4	Identify potential and existing risks and hazards associated with maintenance activities and control in accordance with SOPs
3	**Maintain mechanical lock/locking system**	3.1	Access mechanical locks/locking systems identified for maintenance with minimal disruption to client, services or normal work routines
		3.2	Conduct checks on mechanical locks/locking systems and components to identify any damage, friction or sticking in accordance with manufacturers' specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.3	Service mechanical locks/locking systems and components and repair in accordance with manufacturers' specifications and work order
	3.4	Identify worn keys and replace, as required, to ensure effective operational capability in accordance with work order, legislative requirements and SOPs
	3.5	Report complex faults or repair requirements outside area of responsibility or competence to appropriate person(s) for specialist advice in accordance with SOPs
4 **Complete maintenance**	4.1	Reassemble serviced and repaired mechanical locks/locking systems and check for correct operation and serviceability in accordance with manufacturers' specifications
	4.2	Make notification of work completion to appropriate person(s) in accordance with SOPs
	4.3	Complete and process documentation in a prompt and accurate manner in accordance with industry and legislative requirements and SOPs
	4.4	Clean work area, tools and equipment and store in accordance with SOPs
	4.5	Report malfunctions, faults, wear or damage to tools for repair or replacement in accordance with SOPs
	4.6	Collect waste from service and repair activities, treat and dispose or recycle in accordance with organisational and environmental requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

PPE includes one (1) or more of the following:

- face shields, goggles and safety glasses
- hearing protection
- dust masks and respirators
- high visibility vests or clothing
- head protection
- sun protection, hats and sun screen
- gloves and knee pads
- safety footwear
- witches hats
- warning signs and warning tapes
- temporary safety barriers
- fire extinguisher
- first aid kit

Work order includes one (1) or more of the following:

- work schedules, completion dates, job requirements and tasks
- specific client requirements
- access to site and specific site requirements
- resource requirements
- WHS requirements and compliance with relevant legislation
- budget allocations and warranties
- service information

Appropriate person(s) includes one (1) or more of the following:

- installer
- subcontractor
- technician
- supervisor
- manager/director
- client

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Mechanical locks/locking systems include one (1) or more of the following:	• night latches • deadlocks • lever and cylinder mortice locks • tubular deadbolts • key in knob • key in lever • tie bolts • exit devices • door control devices • lockable bolts • window locks • high security cylinders for commercial applications • exposed wheel combination locks • mechanical digital • Lockwood digital • tubular locks
Tools and equipment include one (1) or more of the following:	• hand tools • fixing tools • strippers • router • file • drill and power saw • spirit level • soldering iron and welder • ladder and hoist • drop sheet • batteries • masterkey plans • personal protective equipment • communications equipment • cleaning equipment

Assessment Requirements for MEM20006 Maintain and service mechanical locking devices

Modification History

Release 1. Supersedes and is equivalent to MEM20006A Maintain and service mechanical locking devices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting and following specifications, charts and diagrams and communicating in a clear and concise manner when maintaining and servicing mechanical locking devices
- identifying work health and safety (WHS) hazards and risks and implementing appropriate risk control measures and procedures
- selecting the appropriate tools and equipment to complete the task
- accessing mechanical locking devices to client or normal work routines
- carrying out routine maintenance on mechanical locking devices
- cleaning worksite in accordance with original presentation, client requirements, industry standards and SOPs
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types, functions and specifications and operational principles of mechanical locks/locking systems
- maintenance requirements of mechanical locks and locking systems
- common mechanical lock and locking system faults
- tests to confirm lock operation
- procedures to disassemble/reassemble mechanical locks
- technical terminology
- types of doors and windows and mechanical locking system applications
- hazards and control measures associated with maintaining and servicing mechanical locking devices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining and servicing mechanical locking devices at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20007 Plan and prepare a masterkey system

Modification History

Release 1. Supersedes and is equivalent to MEM20007A Plan and prepare a masterkey system

Application

This unit of competency defines the skills and knowledge required to create a new masterkey system for in-line pin tumbler cylinders up to and including a hierarchical great grand masterkey (GGMK) system and maisoning. It applies to manually developing a standard (even cut) progression in-line masterkey system and using a computer masterkeying package.

Where a security survey/site assessment is required unit MEM20014 Perform a site security survey should also be selected.

Where cross keying, sub-masterkeying and selective keying is required unit MEM20008 Develop and implement a masterkey system should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM20001	Produce keys
MEM20002	Assemble and test lock mechanisms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Assess customer requirements**	2.1	Discuss customer needs and clarify according to SOPs
		2.2	Review appropriate levels of security/access with respect to customer assets, activities and existing security arrangements
		2.3	Interpret architectural plans, floor plans and charts when planning and preparing a masterkey system as required
		2.4	Prepare door and lock schedules and other appropriate documentation according to SOPs
		2.5	Match customer requirements to the mechanical possibilities and limitations of masterkey systems
		2.6	Identify options and advise customer on options and alternatives
		2.7	Identify personal limitations in assessing requirements for key systems and masterkey systems and seek assistance from appropriate person(s) in accordance with SOPs
3	**Design masterkey**	3.1	Develop keying matrix to customer requirements, allowing for future system expansion and mechanical

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	system		capabilities of system
		3.2	Produce key codes (code matrix) from mathematical permutations and calculations according to customer requirements
		3.3	Select key codes from matrix that maximise system security
		3.4	Develop key cutting and cylinder pinning charts
		3.5	Identify incidental masterkeys within progression charts
		3.6	Check and confirm there are no phantoms in the system
		3.7	Apply principles of masterkeying in accordance with industry practice and organisational requirements
4	**Finalise system design**	4.1	Review final system design and keying requirements and confirm with appropriate person(s) in accordance with SOPs
		4.2	Prepare documentation and process and store in accordance with client, legislative and organisational requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Reviewed includes one (1) or more of the following:	• physically • off the plan
Customer requirements include one (1) or more of the following:	• specific client requirements and quantities • completion times and dates • job requirements and tasks • signature authorities • WHS requirements • company requirements • compliance with relevant manufacturer requirements • warranties and service information

Key systems include one (1) or more of the following:	• restricted, semi-restricted and non-restricted system numbers
	• manufacturer restricted and factory restricted
	• locksmith restricted/managed
	• association restricted
	• tiers, including:
	  • keyed different (KD)
	  • keyed alike (KA)
	  • masterkey (MK)
	  • grand masterkey (GMK)
	  • great grand masterkey (GGMK)

System expansion includes creation of excess codes to allow for one (1) or more of the following:	• lost keys • unusable codes • future customer requirements • multibroaching

Documentation includes one (1) or more of the following:	• materials used
	• masterkey plans:
	  • key and door schedules
	  • code matrices
	  • pinning charts
	• job sheets
	• manufacturer documentation
	• identified faults
	• warranties and recommendations

Assessment Requirements for MEM20007 Plan and prepare a masterkey system

Modification History

Release 1. Supersedes and is equivalent to MEM20007A Plan and prepare a masterkey system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- discussing customer requirements and reviewing appropriate levels of security/access
- interpreting architectural plans, floor plans and charts when planning and preparing a masterkey system
- recognising personal limitations in assessing requirements for key and masterkey systems and seeking assistance from appropriate person(s) in accordance with SOPs
- identifying the appropriate key system and levels according to customer requirements
- undertaking numerical operations and calculations, including mathematical patterns associated with planning and preparing a masterkey system
- developing a masterkey system and key matrix allowing for future expansion
- developing and reading code matrix and selecting codes that maximise system security
- identifying incidental masters in a key system and selecting a group of codes to form a maisioned cylinder
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- record keeping and management
- manufacturers'/Australian/building standards
- product knowledge and limitations
- code matrixes, key and door schedules
- allowances for expansion
- operation and limitations of masterkey systems
- tiers of systems (KD, KA, MK, GMK and GGMK)
- door handing and cylinder types

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- criteria for key code selection
- strategies for checking key systems for interchange and incidental masters
- strategies for checking key systems for phantoms
- principles of maison keying
- strategies for code selection.

Assessment Conditions

- Assessors must:
  - have vocational competency in planning and preparing a masterkey system at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20008 Develop and implement a masterkey system

Modification History

Release 1. Supersedes and is equivalent to MEM20008A Develop and implement a masterkey system

Application

This unit of competency defines the skills and knowledge required to create new commercial masterkey systems and expand existing keying systems, using even cut and rotating constant progression methods.

It applies to masterkey systems written manually and using a computer masterkeying package for high security cylinders, primarily for commercial operations.

Where standard hierarchical keying is required unit MEM20007 Plan and prepare a masterkey system should also be selected.

Where a security survey/site assessment is required unit MEM20014 Perform a site security survey should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **6**

Pre-requisite Unit

MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM20001	Produce keys
MEM20002	Assemble and test lock mechanisms
MEM20007	Plan and prepare a masterkey system

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Assess customer requirements**	2.1	Consider physical characteristics of existing locks and other security devices and determine requirement for additional site inspection
		2.2	Discuss customer access and task requirements and clarify according to SOPs
		2.3	Interpret architectural plans, floor plans and charts when planning and preparing a masterkey system as required
		2.4	Evaluate customer requirements with respect to current capacity, and make recommendations for the design of new/expanded system
		2.5	Identify personal limitations in assessing requirements for masterkey system and seek assistance from appropriate person(s) in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Design masterkey system and system modifications**	3.1	Design commercial masterkey system to meet customer complex access requirements
		3.2	Check system for interchange
		3.3	Apply principles and processes of masterkeying in accordance with industry practice and organisational requirements
4	**Finalise system design**	4.1	Review final system design and keying requirements and confirm with appropriate person(s) in accordance with organisational requirements
		4.2	Prepare documentation to allow for future interpretation and design requirements
		4.3	Prepare documentation and process and store in accordance with client, legislative requirements and SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Task requirements include one (1) or more of the following:	• specific client requirements and quantities • completion times and dates • job requirements and tasks • signature authorities • WHS requirements • company requirements • compliance with relevant manufacturer requirements, warranties and service information
System expansion includes creation of excess codes to allow for one (1) or more of the following:	• lost keys • unusable codes • future customer requirements • multi-broaching
Commercial masterkey systems include one (1) or more of the following:	• multi-profile inline pin tumbler cylinders • rotating disc tumbler (Abloy) • rotating pin tumbler (Medeco) • radial pin tumbler (Kaba, Mul-T-lock) • pin tumbler sidebar (Bilock, Twin) • slider sidebar (Evva)
Complex access requirements include one (1) or more of the following:	• cross-keying • sub-masterkeying • incidental masterkeying • selective keying • construction keying • maisoning

Documentation includes one (1) or more of the following:	• materials used
	• masterkey plans:
	  • code matrix
	  • key and door schedules
	• job sheets
	• manufacturer documentation
	• identified faults
	• warranties and recommendations
	• costs
