MEM Manufacturing and Engineering

Release: 2.1

CONTENTS

MEM10119 Certificate I in Engineering....27
MEM20219 Certificate II in Engineering – Production Technology....32
MEM30119 Certificate III in Engineering – Production Systems....40
MEM30219 Certificate III in Engineering - Mechanical Trade....54
MEM30319 Certificate III in Engineering - Fabrication Trade....64
MEM30619 Certificate III in Jewellery Manufacture....82
MEM30719 Certificate III in Marine Craft Construction....87
MEM30819 Certificate III in Locksmithing....93
MEM30919 Certificate III in Boating Services....98
MEM31019 Certificate III in Watch and Clock Service and Repair....102
MEM31119 Certificate III in Engineering - Composites Trade....107
MEM31219 Certificate III in Engineering - Industrial Electrician....112
MEM31319 Certificate III in Refrigeration and Air Conditioning....116
MEM31419 Certificate III in Engineering - Fixed and Mobile Plant Mechanic....122
MEM31519 Certificate III in Engineering - Toolmaking Trade....128
MEM31719 Certificate III in Engineering - Casting and Moulding Trade....133
MEM40119 Certificate IV in Engineering....137
MEM50119 Diploma of Engineering – Advanced Trade....160
CPCCLDG3001A Licence to perform dogging....183
CPCCLRG3001A Licence to perform rigging basic level....193
CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level....206
CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level....218
CPPFES2027A Inspect, test and maintain non-gaseous pre-engineered fire-suppression systems....229
CPPFES3042A Install and commission pre-engineered fire-suppression systems....239
CPPSEC2021A Install security equipment and systems....249
CPPSEC3036A Program security equipment and system....259
CPPSEC3037A Test installed security equipment and system....269
CPPSEC3038A Commission and decommission security equipment and system....279
CPPSEC3039A Identify and diagnose electronic security equipment and system fault....292
CPPSEC3041A Maintain and service security equipment and system....304
CPPSEC3047A Provide estimate and quote on security system....315
CPPSEC3049A Modify and repair security equipment and system....324
MEM03001 Perform manual production assembly....335
Assessment Requirements for MEM03001 Perform manual production assembly....339
MEM03002 Perform precision assembly....341
Assessment Requirements for MEM03002 Perform precision assembly....345
MEM03003 Perform sheet and plate assembly....347
Assessment Requirements for MEM03003 Perform sheet and plate assembly....351
MEM03004 Perform electronic/electrical assembly (production)....353
Assessment Requirements for MEM03004 Perform electronic/electrical assembly (production)....356
MEM03005 Rework and repair (electrical/electronic production)....358
Assessment Requirements for MEM03005 Rework and repair (electrical/electronic production)....361
MEM03006 Set assembly stations....363
Assessment Requirements for MEM03006 Set assembly stations....367
MEM04001 Operate melting furnaces....369
Assessment Requirements for MEM04001 Operate melting furnaces....373

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 2 of 3724
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM04002 Perform gravity die casting....375
Assessment Requirements for MEM04002 Perform gravity die casting....379
MEM04003 Operate pressure die casting machine....381
Assessment Requirements for MEM04003 Operate pressure die casting machine....385
MEM04004 Prepare and mix sand for metal moulding....387
Assessment Requirements for MEM04004 Prepare and mix sand for metal moulding....391
MEM04006 Operate sand moulding and core making machines....393
Assessment Requirements for MEM04006 Operate sand moulding and core making machines....397
MEM04007 Pour molten metal....399
Assessment Requirements for MEM04007 Pour molten metal....403
MEM04008 Fettle and trim metal castings/forgings....405
Assessment Requirements for MEM04008 Fettle and trim metal castings/forgings....409
MEM04010 Develop and manufacture wood patterns....411
Assessment Requirements for MEM04010 Develop and manufacture wood patterns....416
MEM04011 Produce polymer patterns....418
Assessment Requirements for MEM04011 Produce polymer patterns....422
MEM04012 Assemble plated patterns....424
Assessment Requirements for MEM04012 Assemble plated patterns....428
MEM04013 Develop and manufacture polystyrene patterns....430
Assessment Requirements for MEM04013 Develop and manufacture polystyrene patterns434
MEM04014 Develop and manufacture production patterns....436
Assessment Requirements for MEM04014 Develop and manufacture production patterns440
MEM04015 Develop and manufacture vacuum forming moulds and associated equipment442
Assessment Requirements for MEM04015 Develop and manufacture vacuum forming moulds and associated equipment....446
MEM04016 Develop and manufacture precision models....448
Assessment Requirements for MEM04016 Develop and manufacture precision models .453
MEM04017 Develop and manufacture gear, conveyor screw and propeller patterns....455
Assessment Requirements for MEM04017 Develop and manufacture gear, conveyor screw and propeller patterns....459
MEM04018 Perform general woodworking machine operations....461
Assessment Requirements for MEM04018 Perform general woodworking machine operations....465
MEM04019 Perform refractory installation and repair....467
Assessment Requirements for MEM04019 Perform refractory installation and repair....471
MEM04020 Supervise individual ferrous melting and casting operation....473
Assessment Requirements for MEM04020 Supervise individual ferrous melting and casting operation....478
MEM04021 Supervise individual non-ferrous melting and casting operation....481
Assessment Requirements for MEM04021 Supervise individual non-ferrous melting and casting operation....486
MEM04022 Examine appropriateness of methoding for mould design....489
Assessment Requirements for MEM04022 Examine appropriateness of methoding for mould design....493
MEM04023 Undertake prescribed tests on foundry-related materials....496
Assessment Requirements for MEM04023 Undertake prescribed tests on foundry-related materials....501
MEM04024 Produce moulds and cores by hand....504
Assessment Requirements for MEM04024 Produce moulds and cores by hand....509
MEM04025 Produce moulds and cores by hand (advanced)....511
Assessment Requirements for MEM04025 Produce moulds and cores by hand (advanced)516
MEM05001 Perform manual soldering/desoldering - electrical/electronic components....518

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 3 of 3724
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM05001 Perform manual soldering/desoldering - electrical/electronic components....522
MEM05002 Perform high reliability soldering and desoldering....524
Assessment Requirements for MEM05002 Perform high reliability soldering and desoldering....528
MEM05003 Perform soft soldering....530
Assessment Requirements for MEM05003 Perform soft soldering....533
MEM05004 Perform routine oxy fuel gas welding....535
Assessment Requirements for MEM05004 Perform routine oxy fuel gas welding....539
MEM05005 Carry out mechanical cutting....541
Assessment Requirements for MEM05005 Carry out mechanical cutting....545
MEM05006 Perform brazing and/or silver soldering....547
Assessment Requirements for MEM05006 Perform brazing and/or silver soldering....551
MEM05007 Perform manual heating and thermal cutting....553
Assessment Requirements for MEM05007 Perform manual heating and thermal cutting557
MEM05008 Perform advanced manual thermal cutting, gouging and shaping....559
Assessment Requirements for MEM05008 Perform advanced manual thermal cutting, gouging and shaping....562
MEM05009 Perform automated thermal cutting....564
Assessment Requirements for MEM05009 Perform automated thermal cutting....568
MEM05010 Apply fabrication, forming and shaping techniques....570
Assessment Requirements for MEM05010 Apply fabrication, forming and shaping techniques....575
MEM05011 Assemble fabricated components....577
Assessment Requirements for MEM05011 Assemble fabricated components....582
MEM05012 Perform routine manual metal arc welding....584
Assessment Requirements for MEM05012 Perform routine manual metal arc welding..587
MEM05013 Perform manual production welding....589
Assessment Requirements for MEM05013 Perform manual production welding....592
MEM05014 Monitor quality of production welding/fabrications....594
Assessment Requirements for MEM05014 Monitor quality of production welding/fabrications....598
MEM05015 Weld using manual metal arc welding process....600
Assessment Requirements for MEM05015 Weld using manual metal arc welding process605
MEM05016 Perform advanced welding using manual metal arc welding process....607
Assessment Requirements for MEM05016 Perform advanced welding using manual metal arc welding process....612
MEM05017 Weld using gas metal arc welding process....614
Assessment Requirements for MEM05017 Weld using gas metal arc welding process 619
MEM05018 Perform advanced welding using gas metal arc welding process....621
Assessment Requirements for MEM05018 Perform advanced welding using gas metal arc welding process....626
MEM05019 Weld using gas tungsten arc welding process....628
Assessment Requirements for MEM05019 Weld using gas tungsten arc welding process633
MEM05020 Perform advanced welding using gas tungsten arc welding process....635
Assessment Requirements for MEM05020 Perform advanced welding using gas tungsten arc welding process....639
MEM05022 Perform advanced welding using oxy acetylene welding process....641
Assessment Requirements for MEM05022 Perform advanced welding using oxy acetylene welding process....646
MEM05023 Weld using submerged arc welding process....648
Assessment Requirements for MEM05023 Weld using submerged arc welding process..653
MEM05024 Perform welding supervision....655

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 4 of 3724
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM05024 Perform welding supervision 659
MEM05025 Perform welding/fabrication inspection 661
Assessment Requirements for MEM05025 Perform welding/fabrication inspection 665
MEM05026 Apply welding principles 668
Assessment Requirements for MEM05026 Apply welding principles 672
MEM05027 Perform aluminothermic welding 674
Assessment Requirements for MEM05027 Perform aluminothermic welding 680
MEM05036 Repair, replace and/or modify fabrications 682
Assessment Requirements for MEM05036 Repair, replace and/or modify fabrications 687
MEM05037 Perform geometric development 689
Assessment Requirements for MEM05037 Perform geometric development 694
MEM05038 Perform advanced geometric development - cylindrical/rectangular 696
Assessment Requirements for MEM05038 Perform advanced geometric development - cylindrical/rectangular 701
MEM05039 Perform advanced geometric development - conical 703
Assessment Requirements for MEM05039 Perform advanced geometric development - conical 708
MEM05040 Perform advanced geometric development - transitions 710
Assessment Requirements for MEM05040 Perform advanced geometric development - transitions 715
MEM05041 Weld using flame powder spraying 717
Assessment Requirements for MEM05041 Weld using flame powder spraying 722
MEM05042 Perform welds to code standards using flux core arc welding process 724
Assessment Requirements for MEM05042 Perform welds to code standards using flux core arc welding process 728
MEM05043 Perform welds to code standards using gas metal arc welding process 730
Assessment Requirements for MEM05043 Perform welds to code standards using gas metal arc welding process 734
MEM05044 Perform welds to code standards using gas tungsten arc welding process 736
Assessment Requirements for MEM05044 Perform welds to code standards using gas tungsten arc welding process 740
MEM05045 Perform pipe welds to code standards using manual metal arc welding process 742
Assessment Requirements for MEM05045 Perform pipe welds to code standards using manual metal arc welding process 746
MEM05046 Perform welds to code standards using manual metal arc welding process 748
Assessment Requirements for MEM05046 Perform welds to code standards using manual metal arc welding process 752
MEM05047 Weld using flux core arc welding process 754
Assessment Requirements for MEM05047 Weld using flux core arc welding process 758
MEM05048 Perform advanced welding using flux core arc welding process 760
Assessment Requirements for MEM05048 Perform advanced welding using flux core arc welding process 764
MEM05049 Perform routine gas tungsten arc welding 766
Assessment Requirements for MEM05049 Perform routine gas tungsten arc welding 770
MEM05050 Perform routine gas metal arc welding 772
Assessment Requirements for MEM05050 Perform routine gas metal arc welding 776
MEM05051 Select welding processes 778
Assessment Requirements for MEM05051 Select welding processes 783
MEM05052 Apply safe welding practices 785
Assessment Requirements for MEM05052 Apply safe welding practices 792
MEM05053 Set and edit computer controlled thermal cutting machines 794

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 5 of 3724
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM05053 Set and edit computer controlled thermal cutting machines 798
MEM05054 Write basic NC/CNC programs for thermal cutting machines 800
Assessment Requirements for MEM05054 Write basic NC/CNC programs for thermal cutting machines 804
MEM05055 Weld using oxy fuel gas welding process 806
Assessment Requirements for MEM05055 Weld using oxy fuel gas welding process 811
MEM05056 Perform routine flux core arc welding 813
Assessment Requirements for MEM05056 Perform routine flux core arc welding 817
MEM05057 Perform routine submerged arc welding 819
Assessment Requirements for MEM05057 Perform routine submerged arc welding 823
MEM05058 Perform welds to code standards using oxy fuel gas welding process 825
Assessment Requirements for MEM05058 Perform welds to code standards using oxy fuel gas welding process 829
MEM06001 Perform hand forging 831
Assessment Requirements for MEM06001 Perform hand forging 835
MEM06002 Perform hammer forging 837
Assessment Requirements for MEM06002 Perform hammer forging 841
MEM06003 Carry out heat treatment 843
Assessment Requirements for MEM06003 Carry out heat treatment 847
MEM06004 Select heat treatment processes and test finished product 849
Assessment Requirements for MEM06004 Select heat treatment processes and test finished product 853
MEM06005 Perform drop and upset forging 855
Assessment Requirements for MEM06005 Perform drop and upset forging 859
MEM06006 Repair springs 861
Assessment Requirements for MEM06006 Repair springs 865
MEM06007 Perform basic incidental heat/quenching, tempering and annealing 867
Assessment Requirements for MEM06007 Perform basic incidental heat/quenching, tempering and annealing 871
MEM06008 Hammer forge complex shapes 873
Assessment Requirements for MEM06008 Hammer forge complex shapes 877
MEM06009 Hand forge complex shapes 879
Assessment Requirements for MEM06009 Hand forge complex shapes 883
MEM07001 Perform operational maintenance of machines/equipment 885
Assessment Requirements for MEM07001 Perform operational maintenance of machines/equipment 888
MEM07002 Perform precision shaping/planing/slotting operations 890
Assessment Requirements for MEM07002 Perform precision shaping/planing/slotting operations 894
MEM07003 Perform routine machine setting 896
Assessment Requirements for MEM07003 Perform routine machine setting 899
MEM07004 Perform complex machine setting 901
Assessment Requirements for MEM07004 Perform complex machine setting 905
MEM07005 Perform general machining 907
Assessment Requirements for MEM07005 Perform general machining 912
MEM07006 Perform lathe operations 914
Assessment Requirements for MEM07006 Perform lathe operations 918
MEM07007 Perform milling operations 920
Assessment Requirements for MEM07007 Perform milling operations 924
MEM07008 Perform grinding operations 926
Assessment Requirements for MEM07008 Perform grinding operations 930
MEM07009 Perform precision jig boring operations 932

Approved Page 6 of 3724
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM07009 Perform precision jig boring operations 935
MEM07010 Perform tool and cutter grinding operations 937
Assessment Requirements for MEM07010 Perform tool and cutter grinding operations 941
MEM07011 Perform complex milling operations 943
Assessment Requirements for MEM07011 Perform complex milling operations 947
MEM07012 Perform complex grinding operations 949
Assessment Requirements for MEM07012 Perform complex grinding operations 952
MEM07013 Perform machining operations using horizontal and vertical boring machines954
Assessment Requirements for MEM07013 Perform machining operations using horizontal and vertical boring machines 957
MEM07014 Perform electro-discharge machining (EDM) operations 959
Assessment Requirements for MEM07014 Perform electro-discharge machining (EDM) operations 963
MEM07015 Set computer controlled machines and processes 965
Assessment Requirements for MEM07015 Set computer controlled machines and processes 969
MEM07016 Set and edit computer controlled machines and processes 971
Assessment Requirements for MEM07016 Set and edit computer controlled machines and processes 975
MEM07018 Write basic NC and CNC programs 977
Assessment Requirements for MEM07018 Write basic NC and CNC programs 981
MEM07019 Program NC and CNC machining centre 983
Assessment Requirements for MEM07019 Program NC and CNC machining centre 987
MEM07020 Program multiple spindle and multiple axis NC and CNC machining centre989
Assessment Requirements for MEM07020 Program multiple spindle and multiple axis NC and CNC machining centre 993
MEM07021 Perform complex lathe operations 996
Assessment Requirements for MEM07021 Perform complex lathe operations 1000
MEM07022 Program CNC wire cut machines 1002
Assessment Requirements for MEM07022 Program CNC wire cut machines 1006
MEM07023 Program and set up CNC manufacturing cell 1009
Assessment Requirements for MEM07023 Program and set up CNC manufacturing cell1013
MEM07024 Operate and monitor machine and process 1015
Assessment Requirements for MEM07024 Operate and monitor machine and process 1019
MEM07025 Perform advanced machine and process operation 1021
Assessment Requirements for MEM07025 Perform advanced machine and process operation 1026
MEM07026 Perform advanced plastic processing 1028
Assessment Requirements for MEM07026 Perform advanced plastic processing 1032
MEM07027 Perform advanced press operations 1034
Assessment Requirements for MEM07027 Perform advanced press operations 1038
MEM07028 Operate computer controlled machines and processes 1040
Assessment Requirements for MEM07028 Operate computer controlled machines and processes 1043
MEM07029 Perform routine sharpening and maintenance of production tools and cutters1045
Assessment Requirements for MEM07029 Perform routine sharpening and maintenance of production tools and cutters 1049
MEM07030 Perform basic metal spinning lathe operations 1051
Assessment Requirements for MEM07030 Perform basic metal spinning lathe operations1055
MEM07031 Perform complex metal spinning lathe operations 1057
Assessment Requirements for MEM07031 Perform complex metal spinning lathe operations 1062
MEM07032 Use workshop machines for basic operations 1064

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
Approved Page 7 of 3724
© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM07032 Use workshop machines for basic operations1068
MEM07033 Operate and monitor basic boiler....1070
Assessment Requirements for MEM07033 Operate and monitor basic boiler 1075
MEM07039 Write programs for industrial robots 1078
Assessment Requirements for MEM07039 Write programs for industrial robots....1082
MEM07040 Set multistage integrated processes....1085
Assessment Requirements for MEM07040 Set multistage integrated processes....1089
MEM07041 Perform production machining 1091
Assessment Requirements for MEM07041 Perform production machining....1097
MEM07042 Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems 1100
Assessment Requirements for MEM07042 Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems....1105
MEM07043 Identify causes of faulty aluminium extrusions....1109
Assessment Requirements for MEM07043 Identify causes of faulty aluminium extrusions1113
MEM07044 Test a new aluminium extrusion die....1117
Assessment Requirements for MEM07044 Test a new aluminium extrusion die 1121
MEM08001 Perform wire, jig and barrel load/unload work....1123
Assessment Requirements for MEM08001 Perform wire, jig and barrel load/unload work1127
MEM08002 Pre-treat work for subsequent surface coating....1129
Assessment Requirements for MEM08002 Pre-treat work for subsequent surface coating1133
MEM08003 Perform electroplating operations....1135
Assessment Requirements for MEM08003 Perform electroplating operations 1140
MEM08004 Finish work using wet, dry and vapour deposition methods 1142
Assessment Requirements for MEM08004 Finish work using wet, dry and vapour deposition methods 1146
MEM08005 Prepare and produce specialised coatings 1148
Assessment Requirements for MEM08005 Prepare and produce specialised coatings...1151
MEM08006 Produce clear and/or coloured and/or sealed anodised films on aluminium1153
Assessment Requirements for MEM08006 Produce clear and/or coloured and/or sealed anodised films on aluminium....1156
MEM08007 Control surface finish production and finished product quality....1158
Assessment Requirements for MEM08007 Control surface finish production and finished product quality....1161
MEM08008 Operate and control surface finishing waste treatment process....1163
Assessment Requirements for MEM08008 Operate and control surface finishing waste treatment process....1167
MEM08009 Make up solutions 1169
Assessment Requirements for MEM08009 Make up solutions....1172
MEM08010 Manually finish/polish materials 1174
Assessment Requirements for MEM08010 Manually finish/polish materials....1178
MEM08011 Prepare surfaces using solvents and/or mechanical means....1180
Assessment Requirements for MEM08011 Prepare surfaces using solvents and/or mechanical means 1184
MEM08012 Prepare surfaces by abrasive blasting (basic) 1186
Assessment Requirements for MEM08012 Prepare surfaces by abrasive blasting (basic)1190
MEM08013 Prepare surfaces by abrasive blasting (advanced)....1192
Assessment Requirements for MEM08013 Prepare surfaces by abrasive blasting (advanced) 1196
MEM08014 Apply protective coatings (basic)....1198
Assessment Requirements for MEM08014 Apply protective coatings (basic) 1203
MEM08015 Apply protective coatings (advanced) 1206
Assessment Requirements for MEM08015 Apply protective coatings (advanced)....1211

MEM08016 Control blast coating by-products, materials and emissions 1214
Assessment Requirements for MEM08016 Control blast coating by-products, materials and emissions.....1217
MEM08018 Electroplate engineering coatings.....1219
Assessment Requirements for MEM08018 Electroplate engineering coatings 1225
MEM08019 Electroplate protective finishes.....1227
Assessment Requirements for MEM08019 Electroplate protective finishes 1232
MEM08020 Electroplate decorative finishes.....1234
Assessment Requirements for MEM08020 Electroplate decorative finishes.....1240
MEM09002 Interpret technical drawing 1242
Assessment Requirements for MEM09002 Interpret technical drawing.....1245
MEM09003 Prepare basic engineering drawing.....1247
Assessment Requirements for MEM09003 Prepare basic engineering drawing 1251
MEM09004 Perform electrical or electronic detail drafting.....1253
Assessment Requirements for MEM09004 Perform electrical or electronic detail drafting1256
MEM09005 Perform basic engineering detail drafting.....1258
Assessment Requirements for MEM09005 Perform basic engineering detail drafting...1261
MEM09006 Perform advanced engineering detail drafting 1263
Assessment Requirements for MEM09006 Perform advanced engineering detail drafting1266
MEM09007 Perform advanced mechanical detail drafting 1268
Assessment Requirements for MEM09007 Perform advanced mechanical detail drafting1271
MEM09008 Perform advanced structural detail drafting 1273
Assessment Requirements for MEM09008 Perform advanced structural detail drafting1276
MEM09009 Create 2-D drawings using computer-aided design system.....1278
Assessment Requirements for MEM09009 Create 2-D drawings using computer-aided design system.....1282
MEM09010 Create 3-D models using computer-aided design system 1284
Assessment Requirements for MEM09010 Create 3-D models using computer-aided design system.....1287
MEM09011 Apply basic engineering design concepts.....1289
Assessment Requirements for MEM09011 Apply basic engineering design concepts.....1292
MEM09021 Interpret and produce drawings of curved 3-D shapes.....1294
Assessment Requirements for MEM09021 Interpret and produce drawings of curved 3-D shapes.....1298
MEM09022 Create 2-D code files using computer-aided manufacturing system 1300
Assessment Requirements for MEM09022 Create 2-D code files using computer-aided manufacturing system 1304
MEM09023 Create 3-D code files using computer-aided manufacturing system 1306
Assessment Requirements for MEM09023 Create 3-D code files using computer-aided manufacturing system 1310
MEM10001 Erect structures.....1312
Assessment Requirements for MEM10001 Erect structures 1317
MEM10002 Terminate and connect electrical wiring 1319
Assessment Requirements for MEM10002 Terminate and connect electrical wiring.....1323
MEM10003 Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c. 1325
Assessment Requirements for MEM10003 Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.....1330
MEM10004 Enter and change programmable controller operational parameters 1333
Assessment Requirements for MEM10004 Enter and change programmable controller operational parameters 1337
MEM10005 Commission programmable controller programs.....1339

Assessment Requirements for MEM10005 Commission programmable controller programs....1342
MEM10006 Install machine/plant....1344
Assessment Requirements for MEM10006 Install machine/plant....1348
MEM10007 Modify control systems....1350
Assessment Requirements for MEM10007 Modify control systems....1359
MEM10008 Undertake commissioning procedures for plant and/or equipment....1361
Assessment Requirements for MEM10008 Undertake commissioning procedures for plant and/or equipment....1366
MEM10009 Install refrigeration and air conditioning plant and equipment....1368
Assessment Requirements for MEM10009 Install refrigeration and air conditioning plant and equipment....1373
MEM10010 Install pipework and pipework assemblies....1375
Assessment Requirements for MEM10010 Install pipework and pipework assemblies .1379
MEM10011 Terminate and connect specialist cables....1381
Assessment Requirements for MEM10011 Terminate and connect specialist cables....1385
MEM10013 Install split air conditioning systems and associated pipework....1387
Assessment Requirements for MEM10013 Install split air conditioning systems and associated pipework....1392
MEM10016 Terminate and test electrical wiring and accessories....1394
Assessment Requirements for MEM10016 Terminate and test electrical wiring and accessories....1398
MEM10018 Select cable types and sizes to suit loads and electrical installation environment....1401
Assessment Requirements for MEM10018 Select cable types and sizes to suit loads and electrical installation environment....1405
MEM10019 Select circuit protection devices by type and rating, fit to switchboards and install earthing....1408
Assessment Requirements for MEM10019 Select circuit protection devices by type and rating, fit to switchboards and install earthing....1413
MEM10020 Install low voltage cabling and fit-off accessories, appliances and equipment1417
Assessment Requirements for MEM10020 Install low voltage cabling and fit-off accessories, appliances and equipment....1424
MEM10021 Inspect, test and verify electrical installations....1429
Assessment Requirements for MEM10021 Inspect, test and verify electrical installations1434
MEM10022 Commission and decommission high and low voltage equipment or installations....1437
Assessment Requirements for MEM10022 Commission and decommission high and low voltage equipment or installations....1442
MEM10023 Design and connect control switching of circuits for building services and industrial equipment....1445
Assessment Requirements for MEM10023 Design and connect control switching of circuits for building services and industrial equipment....1449
MEM10024 Install and troubleshoot luminaires and ancillary equipment....1453
Assessment Requirements for MEM10024 Install and troubleshoot luminaires and ancillary equipment....1458
MEM10025 Undertake a capstone assessment....1462
Assessment Requirements for MEM10025 Undertake a capstone assessment....1469

Assessment Requirements for MEM11003 Coordinate erection/dismantling of complex scaffolding/equipment 1494
MEM11004 Undertake dogging.....1496
Assessment Requirements for MEM11004 Undertake dogging 1501
MEM11005 Pick and process order 1503
Assessment Requirements for MEM11005 Pick and process order.....1507
MEM11006 Perform production packaging.....1509
Assessment Requirements for MEM11006 Perform production packaging 1512
MEM11007 Administer inventory procedures.....1514
Assessment Requirements for MEM11007 Administer inventory procedures 1517
MEM11008 Package materials (stores and warehouse) 1519
Assessment Requirements for MEM11008 Package materials (stores and warehouse)..1523
MEM11009 Handle/move bulk fluids/gases.....1525
Assessment Requirements for MEM11009 Handle/move bulk fluids/gases 1529
MEM11010 Operate mobile load shifting equipment.....1531
Assessment Requirements for MEM11010 Operate mobile load shifting equipment 1537
MEM11011 Undertake manual handling 1539
Assessment Requirements for MEM11011 Undertake manual handling.....1542
MEM11012 Purchase materials.....1544
Assessment Requirements for MEM11012 Purchase materials 1547
MEM11013 Undertake warehouse receival process 1549
Assessment Requirements for MEM11013 Undertake warehouse receival process.....1553
MEM11014 Undertake warehouse dispatch process 1555
Assessment Requirements for MEM11014 Undertake warehouse dispatch process.....1559
MEM11015 Manage warehouse inventory system.....1561
Assessment Requirements for MEM11015 Manage warehouse inventory system 1564
MEM11016 Order materials.....1566
Assessment Requirements for MEM11016 Order materials 1569
MEM11017 Organise and lead stocktakes.....1571
Assessment Requirements for MEM11017 Organise and lead stocktakes 1574
MEM11018 Organise and maintain warehouse stock receival and dispatch system.....1576
Assessment Requirements for MEM11018 Organise and maintain warehouse stock receival and dispatch system.....1580
MEM11019 Undertake tool store procedures 1582
Assessment Requirements for MEM11019 Undertake tool store procedures.....1586
MEM11020 Perform advanced warehouse computer operations 1588
Assessment Requirements for MEM11020 Perform advanced warehouse computer operations 1591
MEM11021 Perform advanced operation of load shifting equipment.....1593
Assessment Requirements for MEM11021 Perform advanced operation of load shifting equipment 1596
MEM11022 Operate fixed/moveable load shifting equipment.....1598
Assessment Requirements for MEM11022 Operate fixed/moveable load shifting equipment 1602
MEM11023 Operate a bridge and gantry crane 1604
Assessment Requirements for MEM11023 Operate a bridge and gantry crane.....1612
MEM11024 Undertake basic rigging 1614
Assessment Requirements for MEM11024 Undertake basic rigging 1624
MEM11025 Operate a non-slewing mobile crane of greater than three tonnes capacity1626
Assessment Requirements for MEM11025 Operate a non-slewing mobile crane of greater than three tonnes capacity 1636

MEM10119 Certificate I in Engineering

Modification History

Release 1. Supersedes but is not equivalent to MEM10105 Certificate I in Engineering

Qualification Description

This qualification defines entry-level skills and knowledge to assist workers entering employment as engineering/manufacturing employees within the metal, engineering, manufacturing and associated industries.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license. Licensing information is included in the relevant units of competence.

No other descriptor can be used.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM10119 Certificate I in Engineering units of competency to a value of 16 points must be achieved, chosen as outlined below:

- core unit of competency listed below (totalling 2 points) and
- elective units of competency to a value of 14 points from Group A.

Appropriate elective units to the value of 4 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate I. Only select units that would be suitable for occupational outcomes in an engineering/manufacturing environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Pre req
MEM13015	Work safely and effectively in manufacturing and engineering	2	

Elective units of competency

Group A

Unit code	Unit title	P	Pre req
MEM03001	Perform manual production assembly	4	*
MEM03003	Perform sheet and plate assembly	4	*
MEM03004	Perform electronic/electrical assembly (production)	8	*
MEM04004	Prepare and mix sand for metal moulding	4	*
MEM04008	Fettle and trim metal castings/forgings	4	*
MEM05001	Perform manual soldering/desoldering - electrical/electronic components	4	*
MEM05003	Perform soft soldering	2	*
MEM05004	Perform routine oxy fuel gas welding	2	*
MEM05005	Carry out mechanical cutting	2	*
MEM05006	Perform brazing and/or silver soldering	2	*
MEM05007	Perform manual heating and thermal cutting	2	*
MEM05012	Perform routine manual metal arc welding	2	*
MEM05013	Perform manual production welding	2	*
MEM07001	Perform operational maintenance of machines/equipment	2	*
MEM07003	Perform routine machine setting	4	*
MEM07024	Operate and monitor machine and process	4	*
MEM07028	Operate computer controlled machines and processes	2	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Pre req
MEM07029	Perform routine sharpening and maintenance of production tools and cutters	4	*
MEM07032	Use workshop machines for basic operations	2	*
MEM08002	Pre-treat work for subsequent surface coating	4	*
MEM08004	Finish work using wet, dry and vapour deposition methods	4	*
MEM08009	Make up solutions	2	*
MEM08010	Manually finish/polish materials	6	*
MEM08011	Prepare surfaces using solvents and/or mechanical means	2	*
MEM08014	Apply protective coatings (basic)	4	*
MEM11005	Pick and process order	4	*
MEM11006	Perform production packaging	2	*
MEM11008	Package materials (stores and warehouse)	2	*
MEM11011	Undertake manual handling	2	*
MEM11013	Undertake warehouse receival process	4	*
MEM11016	Order materials	2	*
MEM12001	Use comparison and basic measuring devices	2	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	*
MEM13001	Perform emergency first aid	1	*
MEM13003	Work safely with industrial chemicals and materials	2	*
MEM15001	Perform basic statistical quality control	2	*
MEM15003	Use improvement processes in team activities	4	*
MEM16004	Perform internal/external customer service	2	*
MEM16005	Operate as a team member to conduct manufacturing, engineering or	2	*

Unit code	Unit title	P	Pre req
	related activities		
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*
MEM18001	Use hand tools	2	*
MEM18002	Use power tools/hand held operations	2	*
MEM18013	Perform gland packing	2	*
MEM19002	Prepare jewellery illustrations	4	*
MEM19003	Handle gem materials	2	*
MEM19006	Replace watch batteries	1	*
MEM19010	Produce rubber moulds for lost wax casting process	2	*
MEM19011	Perform wax injection of moulds for lost wax casting process	2	*
MEM19014	Perform hand engraving	4	*
MEM20001	Produce keys	4	*
MEM20002	Assemble and test lock mechanisms	6	*
MEM20003	Install and upgrade locks and hardware	4	*
MEM27029	Maintain wheels and tyres	2	*
MEM50002	Work safely on marine craft	1	*
MEM50003	Follow work procedures to maintain the marine environment	1	*

MEM20219 Certificate II in Engineering – Production Technology

Modification History

Release 1. Supersedes and is equivalent to MEM20205 Certificate II in Engineering – Production Technology

Qualification Description

This qualification defines the skills and knowledge required of an engineering/manufacturing employee within metal, engineering, manufacturing and associated industries.

The skills associated with this qualification are intended to apply to a wide range of engineering/manufacturing work, including production, distribution, stores and warehousing. It provides the skills and knowledge for a person to be responsible for the quality of their own work, work from complex instructions and procedures, coordinate work in a team environment or work individually under general supervision and assist in the provision of on-the-job training of other workers.

This qualification is specifically designed to cover the skills and knowledge required of workers employed as Engineering/Manufacturing Employees - Level IV as defined in the Manufacturing and Associated Industries and Occupations Award.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and/or materials to cover the scope of application of those units. All outcomes must reflect the standard of performance required of the work associated with the Unit/s.

This qualification is not suited and should not be used for people who are not employed in an engineering production or manufacturing environment, nor should it be used for school students unless they are formally engaged in a traineeship in accordance with the Australian Apprenticeships policy.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM20219 Certificate II in Engineering – Production Technology units of competency to the value of 64 points must be achieved, chosen as outlined below:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- core units of competency listed below (totalling 18 points)
- elective units of competency to the value of 46 points from Group A.

Appropriate elective units to the value of 11 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate II. Only select units that would be suitable for occupational outcomes in an engineering/manufacturing environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit code	Unit title	P	Pre req
MEM11011	Undertake manual handling	2	*
MEM12023	Perform engineering measurements	5	*
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM16006	Organise and communicate information	2	*
MEM17003	Assist in the provision of on-the-job training	2	*
MEM18001	Use hand tools	2	*
MSMENV272	Participate in environmentally sustainable work practices	3	

Elective units of competency

Group A

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Pre req
MEM03001	Perform manual production assembly	4	*
MEM03002	Perform precision assembly	4	*
MEM03003	Perform sheet and plate assembly	4	*
MEM03004	Perform electronic/electrical assembly (production)	8	*
MEM03005	Rework and repair (electrical/electronic production)	8	*
MEM03006	Set assembly stations	2	*
MEM04001	Operate melting furnaces	4	*
MEM04002	Perform gravity die casting	2	*
MEM04003	Operate pressure die casting machine	4	*
MEM04004	Prepare and mix sand for metal moulding	4	*
MEM04006	Operate sand moulding and core making machines	8	*
MEM04007	Pour molten metal	4	*
MEM04008	Fettle and trim metal castings/forgings	4	*
MEM04018	Perform general woodworking machine operations	4	*
MEM04019	Perform refractory installation and repair	4	*
MEM05001	Perform manual soldering/desoldering - electrical/electronic components	4	*
MEM05002	Perform high reliability soldering and desoldering	4	*
MEM05003	Perform soft soldering	2	*
MEM05004	Perform routine oxy fuel gas welding	2	*
MEM05005	Carry out mechanical cutting	2	*
MEM05006	Perform brazing and/or silver soldering	2	*
MEM05007	Perform manual heating and thermal cutting	2	*
MEM05009	Perform automated thermal cutting	2	*

Unit code	Unit title	P	Pre req
MEM05012	Perform routine manual metal arc welding	2	*
MEM05013	Perform manual production welding	2	*
MEM05014	Monitor quality of production welding/fabrications	2	*
MEM05027	Perform aluminothermic welding	2	*
MEM05049	Perform routine gas tungsten arc welding	2	*
MEM05050	Perform routine gas metal arc welding	2	*
MEM05057	Perform routine submerged arc welding	2	*
MEM06001	Perform hand forging	4	*
MEM06007	Perform basic incidental heat/quenching, tempering and annealing	2	*
MEM07001	Perform operational maintenance of machines/equipment	2	*
MEM07003	Perform routine machine setting	4	*
MEM07004	Perform complex machine setting	8	*
MEM07015	Set computer controlled machines and processes	2	*
MEM07024	Operate and monitor machine and process	4	*
MEM07028	Operate computer controlled machines and processes	2	*
MEM07029	Perform routine sharpening and maintenance of production tools and cutters	4	*
MEM07030	Perform basic metal spinning lathe operations	8	*
MEM07032	Use workshop machines for basic operations	2	*
MEM07033	Operate and monitor basic boiler	6	*
MEM07041	Perform production machining	8	*
MEM08001	Perform wire, jig and barrel load/unload work	4	*
MEM08002	Pre-treat work for subsequent surface coating	4	*
MEM08003	Perform electroplating operations	6	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Pre req
MEM08004	Finish work using wet, dry and vapour deposition methods	4	*
MEM08005	Prepare and produce specialised coatings	4	*
MEM08006	Produce clear and/or coloured and/or sealed anodised films on aluminium	2	*
MEM08007	Control surface finish production and finished product quality	4	*
MEM08008	Operate and control surface finishing waste treatment process	3	*
MEM08009	Make up solutions	2	*
MEM08010	Manually finish/polish materials	6	*
MEM08011	Prepare surfaces using solvents and/or mechanical means	2	*
MEM08012	Prepare surfaces by abrasive blasting (basic)	4	*
MEM08013	Prepare surfaces by abrasive blasting (advanced)	4	*
MEM08014	Apply protective coatings (basic)	4	*
MEM08015	Apply protective coatings (advanced)	4	*
MEM08016	Control blast coating by-products, materials and emissions	1	*
MEM08018	Electroplate engineering coatings	6	*
MEM08019	Electroplate protective finishes	6	*
MEM09002	Interpret technical drawing	4	*
MEM10002	Terminate and connect electrical wiring	3	*
MEM10013	Install split air conditioning systems and associated pipework	6	*
MEM11001	Erect/dismantle scaffolding and equipment	4	*
MEM11002	Erect/dismantle intermediate scaffolding and equipment	4	*
MEM11004	Undertake dogging	4	*
MEM11005	Pick and process order	4	*
MEM11006	Perform production packaging	2	*

MEM30119 Certificate III in Engineering – Production Systems

Modification History

Release 1. Supersedes and is equivalent to MEM30105 Certificate III in Engineering – Production Systems

Qualification Description

This qualification defines the skills and knowledge required of an engineering/manufacturing employee within metal, engineering, manufacturing and associated industries.

The skills associated with this qualification are intended to apply to a wide range of engineering/manufacturing work including production, distribution, stores and warehousing. It provides the skills and knowledge for a person to understand and apply quality control techniques, exercise good interpersonal and communications skills, work from complex instructions and procedures, exercise discretion within the scope of responsibility, perform work under limited supervision either individually or in a team environment, be responsible for assuring the quality of their own work, perform work which, while primarily involving the skills of the employee's qualification, is incidental or peripheral to the primary task and facilitate the completion of the whole task, inspect products and/or materials for conformity with established operational standards and assists in the provision of on-the-job training of other workers.

This qualification is designed to provide an industry recognised skills profile related to production work as an Engineering/ Manufacturing Employee - Level V. Competency development would typically be undertaken through an Australian Apprenticeships arrangement where the integration of on and off-the-job training would be specified in the Training Plan associated with the Contract of Training between the employer and trainee.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and/or materials to cover the scope of application of those units. All outcomes must reflect the standard of performance required of the work associates with the Unit/s.

This qualification is not suited and should not be used for people who are not employed in an engineering production or manufacturing environment. It is not suited and should not be used for school students unless they are formally engaged in a traineeship in accordance with the Australian Apprenticeships policy.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM30119 Certificate III in Engineering – Production Systems, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A Production Stream
- elective units of competency to a maximum value of 23 points from Group B to bring the total value to 96 points.

Appropriate Group B elective units to the value of 16 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in an engineering/manufacturing environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the qualification

MEM30219 Certificate III in Engineering - Mechanical Trade

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM30205 Certificate III in Engineering – Mechanical Trade.

Qualification Description

This qualification defines the skills and knowledge required of an engineering tradesperson – mechanical within metal, engineering, manufacturing and associated industries. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of mechanical trade work, including undertaking fitting, assembly, manufacture, installation, modification, testing, fault finding, maintenance and service of mechanical equipment, machinery and the use of machine tools.

This qualification is designed to provide an industry recognised skills profile related to trade work as an Engineering Tradesperson - Mechanical.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM30219 Certificate III in Engineering - Mechanical Trade, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Groups A, B and C electives as described below
- elective units of competency to a maximum value of 23 points from Group D to bring the total value to 96 points.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

To be awarded the MEM30219 Certificate III in Engineering - Mechanical Trade (Machining), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A electives as described below
- elective units of competency to a maximum value of 23 points from Group D to bring the total value to 96 points.

To be awarded the MEM30219 Certificate III in Engineering - Mechanical Trade (Fitting), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group B electives as described below
- elective units of competency to a maximum value of 23 points from Group D to bring the total value to 96 points.

To be awarded the MEM30219 Certificate III in Engineering - Mechanical Trade (Fitting/machining), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group C electives as described below
- elective units of competency to a maximum value of 23 points from Group D to bring the total value to 96 points.

Appropriate Group D elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a mechanical trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit code	Unit title	P	Pre req
MEM09002	Interpret technical drawing	4	*
MEM11011	Undertake manual handling	2	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	*
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM14006	Plan work activities	4	*
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*
MEM17003	Assist in the provision of on-the-job training	2	*
MEM18001	Use hand tools	2	*
MEM18002	Use power tools/hand held operations	2	*
MSMENV272	Participate in environmentally sustainable work practices	3	

Elective units of competency

- Packaging for a generic qualification – choose a minimum value of 40 points in **any combination** from Groups A, B and C
- Packaging for a trade specialisation – choose a minimum value of 40 points from **one of either** Group A or B or C

Group A – Machining Trade specialisation

Unit code	Unit title	P	Pre req

MEM30319 Certificate III in Engineering - Fabrication Trade

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM30305 Certificate III in Engineering - Fabrication Trade.

Qualification Description

This qualification defines the skills and knowledge required of an engineering tradesperson - fabrication within metal, engineering, manufacturing and associated industries. The qualification has been specifically developed to meet the needs of apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of fabrication work, including undertaking metal fabrication, structural steel erection, sheetmetal work, welding, blacksmithing and surface finishing.

This qualification is designed to provide an industry recognised skills profile related to trade work as an Engineering Tradesperson - Fabrication.

Assessment of some units of competency must, where indicated, include evidence of the candidate’s performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Groups A, B, C, D, E, F and G as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 96 points.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade (Boilermaking), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group B as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 96 points.

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade (Welding), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group C as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 96 points.

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade (Boilermaking/Welding), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group D as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 6 points.

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade (Sheetmetal working), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group E as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 96 points.

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade (Blacksmithing), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- elective units of competency to a minimum value of 40 points from Group F as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 96 points.

To be awarded the MEM30319 Certificate III in Engineering – Fabrication Trade (Surface Finishing), units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group G as described below
- elective units of competency to a maximum value of 23 points from Group H to bring the total value to 96 points.

Appropriate Group H elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a fabrication trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

MEM30619 Certificate III in Jewellery Manufacture

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM30605 Certificate III in Jewellery Manufacture.

Qualification Description

This qualification defines the skills and knowledge required of a jewellery manufacture tradesperson within the jewellery industry. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of jewellery manufacture work, including undertaking designing and making jewellery and small objects using a wide range of materials, including metals, stones, woods, plastics and fibres.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM30619 Certificate III in Jewellery Manufacture, units of competency to a minimum value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A
- elective units of competency to a maximum value of 23 points from Group B to bring the total value to 96 points.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate Group B elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a jewellery manufacture trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit code	Unit title	P	Pre req
MEM09002	Interpret technical drawing	4	*
MEM11011	Undertake manual handling	2	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	*
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM14006	Plan work activities	4	*
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*
MEM17003	Assist in the provision of on-the-job training	2	*
MEM18001	Use hand tools	2	*
MEM18002	Use power tools/hand held operations	2	*
MSMENV272	Participate in environmentally sustainable work practices	3

MEM30719 Certificate III in Marine Craft Construction

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM30705 Certificate III in Marine Craft Construction.

Qualification Description

This qualification defines the skills and knowledge required of a marine craft construction tradesperson within the marine craft construction industry. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of marine craft construction work, including undertaking manufacturing and repairs of boats in fibre-reinforced plastics, timber and metal and marine/boat yard operations, fitting out of internal and external components of vessels and installation of engineering drive systems.

This qualification is designed to provide an industry recognised skills profile related to trade work as in Marine Craft Construction.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

MEM30819 Certificate III in Locksmithing

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM30805 Certificate III in Locksmithing.

Qualification Description

This qualification defines the skills and knowledge required of a locksmithing tradesperson within the locksmithing industry. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of locksmithing work, including undertaking the repair, manufacture and installation of locking and security systems in domestic, automotive and industrial applications.

This qualification is designed to provide an industry recognised skills profile related to trade work as a locksmithing tradesperson.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license or relate to regulatory requirements. Licensing and regulatory information is included in the relevant units of competence.

No other descriptor can be used.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM30819 Certificate III in Locksmithing, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A
- elective units of competency to a maximum value of 23 points from Group B to bring the total value to 96 points.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate Group B elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a locksmithing trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit Code	Unit Title	Points	Prereq
MEM09002	Interpret technical drawing	4	*
MEM11011	Undertake manual handling	2	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	*
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM14006	Plan work activities	4	*
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*
MEM17003	Assist in the provision of on the job training	2	*
MEM18001	Use hand tools	2	*
MEM18002	Use power tools/hand held operations	2	*

MEM30919 Certificate III in Boating Services

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM30905 Certificate III in Boating Services.

Qualification Description

This qualification defines the skills and knowledge required of an employee working within the boating services industry.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of boating services work, including the general maintenance of structures, hulls, engines and on-board mechanical work. It also includes maintaining the marine environment.

This qualification should not be undertaken by people who are not employed or seeking employment in a boating services marine environment. It should not be undertaken by school students unless they are formally engaged in a Training Contract associated with an Australian Traineeship.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM30919 Certificate III in Boating Services, a total of nineteen (19) units of competency must be achieved, chosen as outlined below:

- six (6) core units of competency listed below
- a minimum of thirteen (13) elective units of competency from Group A.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Up to four (4) appropriate elective units may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a boating services environment.

Prerequisites

Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit code	Unit title	Prereq
MEM13015	Work safely and effectively in manufacturing and engineering	
MEM16006	Organise and communicate information	*
MEM50001	Classify recreational boating technologies and features	*
MEM50002	Work safely on marine craft	*

MEM31019 Certificate III in Watch and Clock Service and Repair

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM31010 Certificate III in Watch and Clock Service and Repair.

Qualification Description

This qualification defines the skills and knowledge required of a watch and clock service and repair tradesperson within a variety of watch and clock service related industries, including retail stores, manufacturer service centres and specialist watch and clock service and repair businesses. This also includes self-employment.

This qualification has been specifically developed for apprentices in trades related to watch and clock servicing and repair and describes the skills and knowledge required to perform trade work in watch and clock service and repair.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of watch and clock service and repair work, including undertaking the disassembly, assembly, installation, adjustment, replacement, modification, testing, fault finding, and maintenance and service of watch and clock cases, mechanisms and other relevant components.

This qualification is designed to reflect the industry recognised skills profile associated with trade work as a watch and clock service and repair tradesperson.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31019 Certificate III in Watch and Clock Service and Repair, units of competency to the value of 96 points must be achieved, chosen as outlined below:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A
- elective units of competency to a maximum value of 23 points from Group B to bring the total value to 96 points.

Appropriate Group B elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a watch and clock service and repair trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

MEM31119 Certificate III in Engineering - Composites Trade

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM31112 Certificate III in Engineering - Composites Trade.

Qualification Description

This qualification defines the skills and knowledge required of a composites tradesperson within the metal, engineering, manufacturing and associated industries, or other industries where composites tradespersons work. The qualification has been specifically developed to meet the needs of apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of composites work, including laying up composites, selecting, handling, using and storing materials and components, undertaking repairs and modifications, adjusting resin chemicals and selecting and using joining techniques.

This qualification is designed to provide an industry recognised skills profile related to working as a composites tradesperson.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may relate to licensing or regulatory requirements. Local regulations should be checked.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31119 Certificate III in Engineering – Composites Trade, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 6 points from Group A
- elective units of competency to a minimum value of 34 points from Group B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- elective units of competency to a maximum value of 23 points from Group C to bring the total value to 96 points.

Appropriate Group C elective units to the value of 8 points may be chosen from other MEM qualifications and other endorsed Training Packages where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a composites trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

MEM31219 Certificate III in Engineering - Industrial Electrician

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. Supersedes and is equivalent to MEM31215 Certificate III in Engineering - Industrial Electrician. Updated unit codes.

Qualification Description

This qualification provides competencies in the ability to select, set up and install, test, fault-find, repair and maintain electrical systems and equipment in buildings and industrial environments, including oil/gas installations, mine sites, processing plants and the like. The qualification covers the Essential Performance Capabilities as required by electrical regulators and includes a capstone assessment.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

Persons engaged in training towards this qualification must provide evidence of workplace experience to assist assessment against the units of competency and for any license application.

This qualification is designed to provide an industry recognised skills profile related to working as an Engineering Tradesperson – Industrial Electrician.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

This qualification is designed to support an application in each state and territory for a license to practise as an electrician. Other supporting documentation may be required. Local regulations should be checked for details.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31219 Certificate III in Engineering – Industrial Electrician, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 90 points) and
- elective units of competency to the value of 6 points, to bring the total value to 96 points.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to individual units for details). All prerequisites have been included in the units listed.

Core units of competency

Select all of the units from this list

Unit code	Unit title	Points	*P
MEM10016	Terminate and test electrical wiring and accessories	4	*
MEM10018	Select cable types and sizes to suit loads and electrical installation environment	4	
MEM10019	Select circuit protection devices by type and rating, fit to switchboards and install earthing	2	*
MEM10020	Install low voltage cabling and fit-off accessories, appliances and equipment	4	*
MEM10021	Inspect, test and verify electrical installations	4	*
MEM10022	Commission and decommission high and low voltage equipment or installations	2	
MEM10023	Design and connect control switching of circuits for building services and industrial equipment	4	*
MEM10024	Install and troubleshoot luminaires and ancillary equipment	2	*
MEM10025	Undertake a capstone assessment	1	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM13017	Apply safety practices, procedures and compliance standards associated with licensed electrical work	2	*
MEM14006	Plan work activities	4	*
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*
MEM17003	Assist in the provision of on the-job-training	2	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18001	Use hand tools	2	*
MEM18100	Fault-find, test and rectify AC machines and circuits	4	*
MEM18102	Fault-find, test and rectify single and three-phase transformers	4	*
MEM18103	Fault-find, test and rectify electrical circuits and equipment	4	*
MEM18104	Dismantle, replace and assemble electrical components and equipment	3	*
MSMENV272	Participate in environmentally sustainable work practices	3	
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	2	
UEENEEE104A	Solve problems in d.c. circuits	5	*
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	4	*
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	5	*
UEENEEG102A	Solve problems in low voltage a.c. circuits	5	*

Elective units of competency

Select units to the value of 4 points from the list below or from any MEM Certificate III qualification.

Unit code	**Unit title**	**Points**	**P***
MEM05001	Perform manual soldering/desoldering - electrical/electronic components	4	*
MEM05012	Perform routine manual metal arc welding	2	*
MEM05050	Perform routine gas metal arc welding	2	*
MEM07032	Use workshop machines for basic operations	2	*
MEM13016	Work in hazardous areas	2	*
MEM18105	Disconnect and reconnect high voltage fixed wired	3	*

MEM31319 Certificate III in Refrigeration and Air Conditioning

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. New qualification. Supersedes but is not equivalent to MEM30205 Certificate III in Engineering – Mechanical Trade.

Qualification Description

This qualification defines the skills and knowledge required of a heating, ventilation, air conditioning and refrigeration (HVAC/R) tradesperson within metal, engineering, manufacturing and associated industries. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range HVAC/R work, including assembling, installing, maintaining and repairing industrial, commercial and domestic air conditioning and refrigeration systems and equipment.

This qualification is designed to provide an industry recognised skills profile related to trade work as a refrigeration and air conditioning tradesperson.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 and the Ozone Protection and Synthetic Gas Management Regulations 1995 apply to this qualification which incorporates national refrigerant handling licences and refrigerant trading authorisations. Refer to the Australian Refrigeration Council website for required units of competency to meet the refrigerant handling licence requirements. Licensing and regulatory information is included in the relevant units of competence.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31319 Certificate III in Refrigeration and Air Conditioning, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- elective units of competency to a maximum value of 23 points from Group B to bring the total value to 96 points.

Appropriate Group B elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a refrigeration and/or air conditioning trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

MEM31419 Certificate III in Engineering - Fixed and Mobile Plant Mechanic

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. New qualification. Supersedes but is not equivalent to MEM30205 Certificate III in Engineering – Mechanical Trade.

Qualification Description

This qualification defines the skills and knowledge required of an engineering tradesperson - mechanical specialising in diesel fitting and plant mechanics within metal, engineering, manufacturing and associated industries. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of trade work including manufacturing, assembly and commissioning of mobile and stationary plant, servicing, diagnosis and rectification of faults, condition monitoring, and preventative maintenance.

This qualification is designed to provide an industry recognised skills profile related to trade work as a fixed and/or mobile plant mechanic.

Assessment of some units of competency must, where indicated, include evidence of the candidate’s performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license or relate to regulatory requirements. Licensing and regulatory information is included in the relevant units of competence.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31419 Certificate III in Engineering – Fixed and Mobile Plant Mechanic, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- all core units of competency listed below (totalling 63 points)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- units to a value of 33 points from Group A electives

Appropriate Group A elective units to the value of 8 points may be chosen from other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a fixed and/or mobile plant mechanic trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

MEM31519 Certificate III in Engineering - Toolmaking Trade

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. New qualification. Supersedes but is not equivalent to MEM30205 Certificate III in Engineering – Mechanical Trade.

Qualification Description

This qualification defines the skills and knowledge required of an engineering tradesperson - toolmaking within metal, engineering, manufacturing and associated industries. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of toolmaking trade work, including the manufacture, modification and maintenance of tooling.

This qualification is designed to provide an industry recognised skills profile related to trade work as a toolmaking tradesperson.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license or relate to regulatory requirements. Licensing and regulatory information is included in the relevant units of competence.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31519 Certificate III in Engineering – Toolmaking Trade, units of competency to the value of 108 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 82 points)
- elective units of competency to a minimum value of 8 points from Group A
- elective units of competency to a maximum value of 18 points from Group B to bring the total value of the qualification to 108 points.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate Group B elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a toolmaking trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

MEM31719 Certificate III in Engineering - Casting and Moulding Trade

Modification History

Release 2. Mandatory training contract pathway added.

Release 1. New qualification. Supersedes but is not equivalent to MEM30305 Certificate III in Engineering – Fabrication Trade.

Qualification Description

This qualification defines the skills and knowledge required of an engineering tradesperson - casting and moulding within the metal, engineering, manufacturing and associated industries. The qualification has been specifically developed for apprentices in the above trade.

This qualification must be undertaken through a Training Contract or through formal trade recognition assessment processes.

The skills associated with this qualification are intended to apply to a wide range of casting and moulding work, including producing sand moulds by hand or using moulding machines, pouring and trimming castings and operating and monitoring melting furnaces.

This qualification is designed to provide an industry recognised skills profile related to trade work as a casting and moulding tradesperson.

Assessment of some units of competency must, where indicated, include evidence of the candidate's performance in a functioning workplace where there is a sufficient range of appropriate tasks and materials to cover the scope of application of those units. All outcomes must reflect the standard of performance inherent in the job.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license or relate to regulatory requirements. Licensing and regulatory information is included in the relevant units of competence.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM31719 Certificate III in Engineering – Casting and Moulding Trade, units of competency to the value of 96 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 40 points from Group A

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- elective units of competency to a maximum value of 23 points from Group B to bring the total value to 96 points.

Appropriate Group B elective units to the value of 8 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Certificate III. Only select units that would be suitable for occupational outcomes in a casting and moulding trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the qualification

Core units of competency

Unit code	Unit title	P	Pre req
MEM09002	Interpret technical drawing	4	*
MEM11011	Undertake manual handling	2	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	*
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM14006	Plan work activities	4	*
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*
MEM17003	Assist in the provision of on-the-job training	2	*
MEM18001	Use hand tools	2	*
MEM18002	Use power tools/hand held operations	2	*

MEM40119 Certificate IV in Engineering

Modification History

Release 1. Supersedes and is equivalent to MEM40105 Certificate IV in Engineering

Qualification Description

This qualification defines the skills and knowledge required for a higher engineering tradesperson within metal, engineering, manufacturing and associated industries.

The skills associated with this qualification are intended to apply to a wide range of engineering work undertaken in the fields of refrigeration and air conditioning, casting and moulding, computer numerically controlled (CNC) programming, fluid power, heavy fabrication, instrumentation, maintenance, plant mechanics, marine electronics, mechatronics, patternmaking, robotics, toolmaking, welding and watch and clock services and repair, including post-trade work.

It provides the skills and knowledge for a person to understand and implement quality control techniques, exercise good interpersonal and communications skills, work from complex instructions and procedures, exercise discretion within the scope of responsibility, perform work under limited supervision either individually or in a team environment, be responsible for assuring the quality of their own work, provide trade guidance and assistance as part of a work team, perform non-trade tasks which are incidental or peripheral to the primary tasks and facilitate the completion of the whole task, inspect products and/or materials for conformity with established operational standards, operate lifting equipment incidental to their work and assists in the provision of training in conjunction with supervisors and trainers.

This qualification may be accessed by direct entry. While there is no qualification entry requirement, it is assumed that the learner is either already a tradesperson with access to structured on and off-the-job training or is an apprentice under an Australian Apprenticeship arrangement. It should not be used as a pre-employment or pre-apprenticeship program. It is specifically designed to cover the skills and knowledge required of workers employed as Engineering/Manufacturing Tradesperson – Special Class Level II as defined in the Manufacturing and Associated Industries and Occupations Award.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license. Licensing information is included in the relevant units of competence.

The following additional descriptors are approved for use with this qualification:

- Casting and Moulding
- CNC Programming
- Fluid Power
- Boilermaking
- Instrumentation
- Maintenance
- Fixed and Mobile Plant Mechanic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Mechatronics
- Patternmaking
- Refrigeration and Air Conditioning
- Marine Craft Construction
- Robotics
- Sheet Metal
- Toolmaking
- Watch and Clock Service and Repair
- Welding

No other descriptor can be used.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM40119 Certificate IV in Engineering units of competency to a value of 132 points must be achieved, chosen as outlined below:

- core units of competency listed below (totalling 33 points)
- elective units of competency to a minimum value of 12 points from Group A
- elective units of competency to a maximum value of 87 points from Group B to bring the total value to 132 points.

Appropriate Group B elective units to the value of 14 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion in Certificate III and Certificate IV qualifications. Only select units that would be suitable for occupational outcomes in a higher engineering trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit code	Unit title	P	Pre req
MEM05026	Apply welding principles	4	*
MEM05042	Perform welds to code standards using flux core arc welding process	6	*
MEM05043	Perform welds to code standards using gas metal arc welding process	6	*
MEM05044	Perform welds to code standards using gas tungsten arc welding process	6	*
MEM05045	Perform pipe welds to code standards using manual metal arc welding process	6	*
MEM05046	Perform welds to code standards using manual metal arc welding process	6	*
MEM05053	Set and edit computer controlled thermal cutting machines	4	*
MEM05054	Write basic NC/CNC programs for thermal cutting machines	4	*
MEM05058	Perform welds to code standards using oxy fuel gas welding process	6	*
MEM07016	Set and edit computer controlled machines and processes	4	*
MEM07018	Write basic NC and CNC programs	4	*
MEM07019	Program NC and CNC machining centre	2	*
MEM07020	Program multiple spindle and multiple axis NC and CNC machining centre	2	*
MEM07022	Program CNC wire cut machines	2	*
MEM07023	Program and set up CNC manufacturing cell	6	*
MEM07039	Write programs for industrial robots	4	*
MEM09004	Perform electrical or electronic detail drafting	8	*
MEM09006	Perform advanced engineering detail drafting	4	*
MEM09007	Perform advanced mechanical detail drafting	4	*
MEM09008	Perform advanced structural detail drafting	4	*
MEM09009	Create 2-D drawings using computer-aided design system	8	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Pre req
MEM09010	Create 3-D models using computer-aided design system	4	*
MEM09023	Create 3-D code files using computer-aided manufacturing system	6	*
MEM10007	Modify control systems	6	*
MEM10008	Undertake commissioning procedures for plant and/or equipment	4	*
MEM12003	Perform precision mechanical measurement	2	*
MEM12004	Perform precision electrical/electronic measurement	4	*
MEM12005	Calibrate measuring equipment	6	*
MEM12025	Use graphical techniques and perform simple statistical computations	2	*
MEM12026	Perform advanced trade calculations in a manufacturing, engineering or related environment	4	*
MEM14001	Schedule material deliveries	8	*
MEM14002	Undertake basic process planning	8	*
MEM14003	Undertake production scheduling	8	*
MEM15007	Conduct product and/or process capability studies	6	*
MEM15008	Perform advanced statistical quality control	2	*
MEM15010	Perform laboratory procedures	8	*
MEM15011	Exercise external quality assurance	6	*
MEM15012	Maintain/supervise the application of quality procedures	4	*
MEM15015B	Examine trading practices	5	*
MEM15016B	Inspect pre-packed articles	8	*
MEM15017B	Use and maintain reference standards	3	*
MEM15018B	Investigate consumer complaints	6	*
MEM15019B	Conduct a field inspection	12	*
MEM15020C	Perform verification/certification or in-service inspection	12	*

MEM50119 Diploma of Engineering – Advanced Trade

Modification History

Release 1. Supersedes and is equivalent to MEM50105 Diploma of Engineering – Advanced Trade

Qualification Description

This qualification defines the skills and knowledge required for employment as an Advanced Engineering Tradesperson - Level II within the metal, engineering, manufacturing and associated industries or at equivalent levels in other industries where engineering tradespersons work. The qualification has been specifically developed to meet the needs of apprentices in an engineering trade who choose to study at a higher level during their apprenticeship, or for people who are existing engineering tradespersons.

It provides the skills and knowledge for a person to undertake quality control, exercise good interpersonal and communications skills, work from complex instructions and procedures, provide technical guidance or assistance within the scope of responsibility, prepare reports of a technical nature on specific tasks or assignments, exercise broad discretion within the scope of responsibility, perform work under limited supervision either individually or in a team environment, be responsible for assuring the quality of their own work, provide trade guidance and assistance as part of a work team, perform non-trade tasks which are incidental or peripheral to the primary tasks and facilitate the completion of the whole task, inspect products and/or materials for conformity with established operational standards, operate lifting equipment incidental to their work and assists in the provision of training in conjunction with supervisors and trainers.

This qualification may be accessed by direct entry. While there is no qualification entry requirement it is assumed that the learner is either already a tradesperson with access to structured on and off-the-job training or is an apprentice under an Australian Apprenticeship arrangement. It should not be used as a pre-employment or pre-apprenticeship program.

For pathways information, refer to the MEM R2 Companion Volume Implementation Guide.

No licensing, legislative or certification requirements apply to this qualification at the time of publication. However, in some jurisdictions units in this qualification may require a license. Licensing information is included in the relevant units of competence.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To be awarded the MEM50119 Diploma of Engineering – Advanced Trade, units of competency to the value of 156 points must be achieved, chosen as outlined below:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- core units of competency listed below (totalling 49 points)
- elective units of competency to a maximum value of 87 points from Group A
- elective units of competency to a minimum value of 8 points from Group C
- elective units of competency from Group B to bring the total value to 156 points.

Appropriate Group A elective units to the value of 18 points may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion in Certificate III, Certificate IV and Diploma qualifications. Only select units that would be suitable for occupational outcomes in an advanced engineering trade environment.

Registered Training Organisations (RTOs) must seek a determination from the industry parties in respect of the allocation of points values for units of competency drawn from other Training Packages or accredited courses. Determination of points requests are to be submitted to the industry parties through Innovation and Business Skills Australia (IBSA) Manufacturing. Refer to the MEM Companion Volume Implementation Guide for information on determination of unit points values.

Prerequisites

Points associated with prerequisites count towards the total. Units with prerequisite requirements are marked with an asterisk (refer to the individual units for details). All prerequisites are included in the units listed.

Core units of competency

Unit code	Unit title	P	Prereq
MEM09002	Interpret technical drawing	4	*
MEM11011	Undertake manual handling	2	*
MEM12023	Perform engineering measurements	5	*
MEM12024	Perform computations	3	*
MEM12025	Use graphical techniques and perform simple statistical computations	2	*
MEM12026	Perform advanced trade calculations in a manufacturing, engineering or related environment	4	*
MEM13015	Work safely and effectively in manufacturing and engineering	2	
MEM14006	Plan work activities	4	*
MEM16006	Organise and communicate information	2	*
MEM16008	Interact with computing technology	2	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM16009	Research and analyse engineering information	2	*
MEM16011	Communicate with individuals and small groups	2	*
MEM16012	Interpret technical specifications and manuals	4	*
MEM16014	Report technical information	2	*
MEM17003	Assist in the provision of on-the-job training	2	*
MEM18001	Use hand tools	2	*
MEM18002	Use power tools/hand held operations	2	*
MSMENV272	Participate in environmentally sustainable work practices	3	

Elective units of competency

Group A

Unit code	Unit title	P	Prereq
MEM03001	Perform manual production assembly	4	*
MEM03002	Perform precision assembly	4	*
MEM03003	Perform sheet and plate assembly	4	*
MEM03004	Perform electronic/electrical assembly (production)	8	*
MEM03005	Rework and repair (electrical/electronic production)	8	*
MEM03006	Set assembly stations	2	*
MEM04001	Operate melting furnaces	4	*
MEM04002	Perform gravity die casting	2	*
MEM04003	Operate pressure die casting machine	4	*
MEM04004	Prepare and mix sand for metal moulding	4	*
MEM04006	Operate sand moulding and core making machines	8	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM04007	Pour molten metal	4	*
MEM04008	Fettle and trim metal castings/forgings	4	*
MEM04010	Develop and manufacture wood patterns	20	*
MEM04011	Produce polymer patterns	8	*
MEM04012	Assemble plated patterns	8	*
MEM04013	Develop and manufacture polystyrene patterns	2	*
MEM04014	Develop and manufacture production patterns	8	*
MEM04015	Develop and manufacture vacuum forming moulds and associated equipment	6	*
MEM04016	Develop and manufacture precision models	6	*
MEM04017	Develop and manufacture gear, conveyor screw and propeller patterns	4	*
MEM04018	Perform general woodworking machine operations	4	*
MEM04019	Perform refractory installation and repair	4	*
MEM04024	Produce moulds and cores by hand	4	*
MEM04025	Produce moulds and cores by hand (advanced)	12	*
MEM05001	Perform manual soldering/desoldering - electrical/electronic components	4	*
MEM05002	Perform high reliability soldering and desoldering	4	*
MEM05003	Perform soft soldering	2	*
MEM05004	Perform routine oxy fuel gas welding	2	*
MEM05005	Carry out mechanical cutting	2	*
MEM05006	Perform brazing and/or silver soldering	2	*
MEM05007	Perform manual heating and thermal cutting	2	*
MEM05008	Perform advanced manual thermal cutting, gouging and shaping	2	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM05009	Perform automated thermal cutting	2	*
MEM05010	Apply fabrication, forming and shaping techniques	8	*
MEM05011	Assemble fabricated components	8	*
MEM05012	Perform routine manual metal arc welding	2	*
MEM05013	Perform manual production welding	2	*
MEM05014	Monitor quality of production welding/fabrications	2	*
MEM05015	Weld using manual metal arc welding process	4	*
MEM05016	Perform advanced welding using manual metal arc welding process	4	*
MEM05017	Weld using gas metal arc welding process	4	*
MEM05018	Perform advanced welding using gas metal arc welding process	4	*
MEM05019	Weld using gas tungsten arc welding process	4	*
MEM05020	Perform advanced welding using gas tungsten arc welding process	4	*
MEM05022	Perform advanced welding using oxy acetylene welding process	6	*
MEM05023	Weld using submerged arc welding process	4	*
MEM05036	Repair, replace and/or modify fabrications	4	*
MEM05037	Perform geometric development	6	*
MEM05038	Perform advanced geometric development - cylindrical/rectangular	2	*
MEM05039	Perform advanced geometric development - conical	2	*
MEM05040	Perform advanced geometric development - transitions	4	*
MEM05041	Weld using flame powder spraying	4	*
MEM05047	Weld using flux core arc welding process	4	*
MEM05048	Perform advanced welding using flux core arc welding process	4	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM05049	Perform routine gas tungsten arc welding	2	*
MEM05050	Perform routine gas metal arc welding	2	*
MEM05051	Select welding processes	2	*
MEM05052	Apply safe welding practices	4	*
MEM05055	Weld using oxy fuel gas welding process	4	*
MEM05056	Perform routine flux core arc welding	2	*
MEM05057	Perform routine submerged arc welding	2	*
MEM06001	Perform hand forging	4	*
MEM06002	Perform hammer forging	4	*
MEM06003	Carry out heat treatment	6	*
MEM06004	Select heat treatment processes and test finished product	6	*
MEM06005	Perform drop and upset forging	4	*
MEM06006	Repair springs	4	*
MEM06007	Perform basic incidental heat/quenching, tempering and annealing	2	*
MEM06008	Hammer forge complex shapes	4	*
MEM06009	Hand forge complex shapes	4	*
MEM07001	Perform operational maintenance of machines/equipment	2	*
MEM07002	Perform precision shaping/planing/slotting operations	4	*
MEM07003	Perform routine machine setting	4	*
MEM07004	Perform complex machine setting	8	*
MEM07005	Perform general machining	8	*
MEM07006	Perform lathe operations	4	*
MEM07007	Perform milling operations	4	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM07008	Perform grinding operations	4	*
MEM07009	Perform precision jig boring operations	4	*
MEM07010	Perform tool and cutter grinding operations	4	*
MEM07011	Perform complex milling operations	4	*
MEM07012	Perform complex grinding operations	4	*
MEM07013	Perform machining operations using horizontal and vertical boring machines	4	*
MEM07014	Perform electro-discharge machining (EDM) operations	4	*
MEM07015	Set computer controlled machines and processes	2	*
MEM07021	Perform complex lathe operations	4	*
MEM07024	Operate and monitor machine and process	4	*
MEM07025	Perform advanced machine and process operation	6	*
MEM07026	Perform advanced plastic processing	6	*
MEM07027	Perform advanced press operations	6	*
MEM07028	Operate computer controlled machines and processes	2	*
MEM07029	Perform routine sharpening and maintenance of production tools and cutters	4	*
MEM07030	Perform basic metal spinning lathe operations	8	*
MEM07031	Perform complex metal spinning lathe operations	4	*
MEM07032	Use workshop machines for basic operations	2	*
MEM07033	Operate and monitor basic boiler	6	*
MEM07040	Set multistage integrated processes	6	*
MEM08001	Perform wire, jig and barrel load/unload work	4	*
MEM08002	Pre-treat work for subsequent surface coating	4	*
MEM08003	Perform electroplating operations	6	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM08004	Finish work using wet, dry and vapour deposition methods	4	*
MEM08005	Prepare and produce specialised coatings	4	*
MEM08006	Produce clear and/or coloured and/or sealed anodised films on aluminium	2	*
MEM08007	Control surface finish production and finished product quality	4	*
MEM08008	Operate and control surface finishing waste treatment process	3	*
MEM08009	Make up solutions	2	*
MEM08010	Manually finish/polish materials	6	*
MEM08011	Prepare surfaces using solvents and/or mechanical means	2	*
MEM08012	Prepare surfaces by abrasive blasting (basic)	4	*
MEM08013	Prepare surfaces by abrasive blasting (advanced)	4	*
MEM08014	Apply protective coatings (basic)	4	*
MEM08015	Apply protective coatings (advanced)	4	*
MEM08016	Control blast coating by-products, materials and emissions	1	*
MEM08018	Electroplate engineering coatings	6	*
MEM08019	Electroplate protective finishes	6	*
MEM08020	Electroplate decorative finishes	6	*
MEM09003	Prepare basic engineering drawing	8	*
MEM09005	Perform basic engineering detail drafting	8	*
MEM09011	Apply basic engineering design concepts	6	*
MEM09021	Interpret and produce drawings of curved 3-D shapes	4	*
MEM09022	Create 2-D code files using computer-aided manufacturing system	4	*
MEM10001	Erect structures	4	*
MEM10002	Terminate and connect electrical wiring	3	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	P	Prereq
MEM10004	Enter and change programmable controller operational parameters	2	*
MEM10005	Commission programmable controller programs	4	*
MEM10006	Install machine/plant	4	*
MEM10009	Install refrigeration and air conditioning plant and equipment	4	*
MEM10010	Install pipework and pipework assemblies	4	*
MEM10011	Terminate and connect specialist cables	3	*
MEM10013	Install split air conditioning systems and associated pipework	6	*
MEM11001	Erect/dismantle scaffolding and equipment	4	*
MEM11002	Erect/dismantle intermediate scaffolding and equipment	4	*
MEM11003	Coordinate erection/dismantling of complex scaffolding/equipment	4	*
MEM11004	Undertake dogging	4	*
MEM11005	Pick and process order	4	*
MEM11006	Perform production packaging	2	*
MEM11007	Administer inventory procedures	4	*
MEM11008	Package materials (stores and warehouse)	2	*
MEM11009	Handle/move bulk fluids/gases	4	*
MEM11010	Operate mobile load shifting equipment	4	*

CPCCLDG3001A Licence to perform dogging

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform slinging techniques, including the selection and inspection of lifting gear and/or the directing of the crane operator in the movement of the load when the load is out of view of the crane/ operator for licensing purposes.

Application of the Unit

Application of the unit

This unit covers the scope of work to demonstrate competency in the application of slinging techniques, selection and inspection of lifting gear and/or the directing of the crane/ operator in the movement of the load.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	1.1. ***Site information*** is obtained and related to the task. 1.2. ***Hazard*** s and potential hazards associated with the slinging and directing of loads are identified. 1.3. ***Hazard control measures*** consistent with ***appropriate standards*** are identified to ensure the safety of personnel and equipment. 1.4. The weight, dimensions and centre of gravity of the load are identified and assessed. 1.5. Suitable lifting/slinging points on the load are identified. 1.6. Appropriate ***lifting equipment*** needs are assessed. 1.7. Appropriate ***communication methods*** are assessed with ***crane***/ operators and other ***appropriate personnel***. 1.8. Manufacturer's specifications/information is obtained for special loads where necessary.
2. Select and inspect equipment.	2.1. Lifting equipment appropriate to the task is selected. 2.2. Lifting equipment is inspected for serviceability. 2.3. Damaged or excessively worn lifting equipment is identified, labelled and rejected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4. Appropriate communication methods for the crane/operator and appropriate personnel are selected. 2.5. Appropriate ***communication equipment*** is selected and its serviceability is checked. 2.6. Appropriate ***personal protective equipment*** (PPE) is selected and checked.
3. Prepare site and equipment.	3.1. Hazard prevention/control measures are applied consistent with appropriate standards to ensure the safety of personnel and equipment. 3.2. Appropriate slinging method is selected. 3.3. Lifting equipment is prepared and assembled where appropriate. 3.4. Load destination is prepared.
4. Perform task.	4.1. Lifting equipment is attached and secured to the lifting hook using appropriate techniques. 4.2. Lifting hook is positioned over the load centre of gravity. 4.3. Lifting equipment is attached and secured to the load in an appropriate manner. 4.4. Tag line is attached and secured where appropriate. 4.5. Test lift is conducted to ensure security of load. 4.6. Load is moved maintaining stability and control at all times. 4.7. Appropriate communication methods and ***communication signals*** are applied to safely coordinate the load movement both within sight and out-of-sight of crane operator. 4.8. The load is landed to ensure that it is stable and secure from movement. 4.9. Lifting equipment is removed or disconnected from load and prepared for next task or storage.
5. Shut down job and clean up.	5.1. Unserviceable lifting equipment inspected and rejected. 5.2. ***Defective equipment*** is isolated and tagged. 5.3. Lifting equipment is stored in accordance with procedures and appropriate standards. 5.4. Hazard prevention/control measures are removed where appropriate. 5.5. Excess materials from the work area are removed (where applicable).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.6. Defects are reported and recorded according to procedures and appropriate action is taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes
- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/ operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	undertaken either in the workplace or in a realistically simulated workplace setting
	• Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
	• Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities
	• Applicants must have access to:
	  • personal protective equipment (PPE) for the purpose of the performance assessment.
	  • four different loads as prescribed in the endorsed assessment instrument
	  • lifting and associated equipment
	  • suitable slewing crane
	  • communication equipment (eg. fixed channel, two-way radios) as applicable.

Method of assessment	Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment. Assessment may be in conjunction with the assessment of other units of competency. The use of **'simulators'** in the assessment of this unit of competency is **not acceptable**. Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site informationmay include but not be limited to	• local conditions such as access and egress • work method statements.
Hazards may include but not limited to:	• ground stability (eg. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. power lines, service pipes, trees, buildings, etc) • insufficient lighting • traffic (e.g. pedestrians, vehicles, plant) • weather (e.g. wind, lightning, storms) • other specific hazards (e.g. trip hazards, heights, radio interference, etc).
Hazard prevention/control measures	The systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of controls, including: 1. elimination. 2. substitution. 3. isolation. 4. engineered control measures. 5. safe work practices. 6. personal protective equipment.
Appropriate standard s may include:	• codes of practice • legislation • Australian Standards • manufacturer's specifications • industry standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Lifting Equipment may include but not limited to:	• fibre ropes • wire ropes • chain • wire and synthetic slings • shackles • eyebolts • beam clamps • plate clamps • spreader beams • lifting beams • pallet forks and cages • concrete kibbles • personnel boxes.
Communication Methods may include but are not limited to:	• written instructions • signage, • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol.
Cranes may include but not limited to:	• tower cranes (including self erecting) • portal boom cranes • vehicle loading cranes • slewing mobile cranes • non-slewing cranes • derrick cranes.
Appropriate personnel may include but are not limited to:	• supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations.
Communication Equipment may include but not limited to:	• fixed channel two-way radios • whistles • bells.
Personal protective equipment (PPE) may include but not limited to:	• hard hat • safety boots • gloves • high visibility clothing • reflective vest • relevant breathing, hearing, sight, skin and sun protection.
Load destination may include but	• ground

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

not limited to:	• loading platforms • suspended floors • vehicles.
Communication signals may include but not limited to:	• stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle • slew left - hand • slew left - whistle • slew right - hand • slew right - whistle.
Defective Equipment may include but not limited to:	• excessive wear • damage • stretched • broken wires • cut/damaged fibres.

CPCCLRG3001A Licence to perform rigging basic level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform basic rigging work associated with movement of plant and equipment, steel erections, hoists (including mast climbing hoists), placement of pre-cast concrete, safety nets and static lines, perimeter safety screens and shutters; and cantilever crane loading platforms for licensing purposes.

Application of the Unit

Application of the unit

This unit requires the applicant to be able plan the work, select and inspect equipment, set up task, erect structures and plant and dismantle structures and plant.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit *CPCCLDG3001A Licence to perform dogging* or holding a valid licence for dogging.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	1.1. Task to be undertaken is assessed. 1.2. Potential workplace ***hazards*** are identified. 1.3. ***Hazard control measures*** are identified consistent with ***appropriate standards*** to ensure the safety of personnel and equipment. 1.4. Site information is obtained. 1.5. All ***forces and loads*** associated with erecting and dismantling ***structures*** and ***associated plant*** are considered in consultation with ***appropriate personnel***. 1.6. ***Rigging equipment*** and ***associated equipment*** are identified in consultation with appropriate personnel according to ***procedures*** and site information.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.7. *Safety equipment* is identified.
	1.8. Appropriate ***communication methods*** are identified with appropriate personnel.
2. Select and inspect equipment.	2.1. Rigging equipment and associated equipment are selected and inspected according to procedures and the appropriate standard.
	2.2. Safety equipment is selected and inspected according to procedures.
	2.3. All defective rigging equipment, associated equipment and safety equipment is isolated, reported and recorded according to procedures.
	2.4. ***Communication equipment*** is selected and inspected for serviceability (where applicable.
3. Set up task.	3.1. Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to procedures.
	3.2. ***Ground suitability*** is inspected and checked (where appropriate).
	3.3. Site information is reviewed, interpreted and communicated to appropriate personnel and ***appropriate personnel***.
	3.4. All forces and loads associated with erecting and dismantling structures and associated plant are determined in consultation with appropriate personnel.
	3.5. Safety equipment is fitted and worn correctly (where appropriate).
	3.6. Rigging equipment and associated plant are positioned for work application and stability according to procedures.
	3.7. Methods of applying ***temporary connections*** using fibre rope are applied according to procedures and the appropriate standard.
4. Erect structures and plant.	4.1. Structures and associated plant are erected according to procedures and site information.
	4.2. Stability of structures and associated plant is maintained during erection according to procedures.
	4.3. Work is conducted safely at heights including safe and effective use of safety equipment.
	4.4. Appropriate communication methods and communication equipment, are used to co-ordinate the tasks.
	4.5. Associated plant and rigging equipment is used

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	according to procedures and the appropriate standard. 4.6. Temporary guys, ties, propping and shoring, including ***flexible steel wire rope***, and tubing, are connected where required. 4.7. Associated equipment is used in a safe and appropriate manner. 4.8. The completed task is inspected according to the appropriate standard. 4.9. Excess materials are removed from the work area (where applicable).
5. Dismantle structures and plant.	5.1. Structures and associated plant are dismantled according to procedures and the appropriate standard. 5.2. Work is conducted safely at heights including safe and effective use of safety equipment. 5.3. Stability of structures and associated plant is maintained during dismantling according to procedures. 5.4. Rigging equipment, associated equipment, safety equipment and associated plant are inspected for damage and defects. 5.5. All defective rigging equipment, associated equipment, associated plant and safety equipment are isolated reported and recorded according to procedures. 5.6. Rigging equipment and associated equipment are stored. according to procedures and the appropriate standard. 5.7. Hazard prevention/control measures are removed (where appropriate).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:-
  - inspection of all plant and equipment, and
  - installation of a fall arrest system (Static line), and
  - use of a safety harness / fall arrest system, and
  - installation of crane loading platforms and
  - installation of a safety net, and
  - installation of a shutter and safety screen, and
  - demonstrated ability to work safely at heights, and
  - erection of structural steel, and
  - erection of precast panel, and
  - set up and operation of a winch for load movement, and
  - installation of a materials hoist, or
  - installation of a mast climber.
- effectively demonstrate the following knots,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	bends and hitches:- • Sheet bend, • Becket hitch, • Running bowline, • Double bowline. • effectively demonstrate the following splices and whippings:- • Eye splice, • Back splice, • Short splice, • Sail makers whipping, • Common whipping, • West countryman's
Context of and specific resources for assessment	Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument. Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace. Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints. Assessment is to comply with the requirements of any relevant Standards or operating procedures for basic rigging. Applicants must have access to: • personal protective equipment (PPE) for the purpose of the Performance Assessment. • appropriate safety equipment in safe condition • appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument • communication equipment (e.g. two-way

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	radios) where applicable • appropriate materials as required for safe erection of structures • appropriate materials for conducting fibre rope slicing, whipping, knots, bends and hitches.
Method of assessment	Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application. The use of **'simulators'** in the assessment of this unit of competency is **not acceptable**. Assessment may be in conjunction with the assessment of other units of competency. Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:	• ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. power lines, service pipes) (**NB**: minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	electrical supply authority.) • traffic (e.g. pedestrians, vehicles, other plant) • insufficient lighting • environmental conditions (e.g. wind, lightning, storms) • other specific hazards (e.g. dangerous materials).
Hazard control measures:	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk: • elimination • substitution • isolation • engineering control measures • using safe work practices • personal protective equipment.
Appropriate standards may include:	• codes of practice • legislation • Australian Standards • manufacturer's specifications • industry standards (where applicable).
Site Information may include, but not limited to:	• local conditions such as access and egress, • work method statements, • site specific job safety analyses and other site specific documentation as required. • task plans / Schedules and structural plans.
Forces and Loads may include, but not limited to:	• dead loads • live loads • static load • dynamic loads • wind loads.
Structures may include but are not limited to:	• structural steel • precast panels.
Associated plant may include but not limited to:	• static lines • safety nets • hoists

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• mast climbers • loading platforms.
Appropriate personnel may include:	• engineers • supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations.

Rigging Equipment may include but is not limited to:	• scaffolds
	• elevated work platforms
	• personnel box
	• cantilevered crane loading platforms
	• mast climbers.
	• safety screens and shutters
	• cranes including but not limited to:
	  • non-slewing cranes
	  • mobile slewing cranes
	  • vehicle loading cranes
	  • tower cranes
	  • self-erecting tower cranes
	  • portal boom cranes
	  • derrick cranes
	  • bridge and gantry cranes.

Associated equipment may include but is not limited to:	• all types of power and manually operated lifting gear • fibre ropes • flexible steel wire rope (FSWR) • chains • wire and synthetic slings • shackles • terminations • wedge sockets • eye bolts • beam clamps • plate clamps • rope grips • turnbuckles • rigging screws • chain blocks • lever blocks • lever-action winches

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• sheaves • spreader bars • lifting beams • jacks • levers • skates • wedges • rollers • girder trolley
Procedures may include but is not limited to:	• manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures, relevant codes of practice • workplace procedures (work instructions, operating procedures, checklists).
Safety Equipment may include but not limited to:	• safety harness • energy absorber • lanyard • inertia reel • static safety lines • safety nets.
Communication Methods may include but is not limited to:	• verbal and non-verbal language • written instructions • signage • hand signals • listening, • questioning to confirm understanding, and appropriate worksite protocol. **NB**: Mobile phones are not to be used for signalling purposes during the rigging process.
Communication equipment may include but is not limited to:	• fixed channel two-way radios
Hazard prevention/control measures may include but is not limited to:	• safety tags on electrical switches/isolators • powerlines are insulated • safety observer used inside exclusion zone • power disconnected • traffic barricades and control • pedestrian barricades • trench covers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• movement of obstructions • personal protective equipment • adequate illumination • safety shutters and screens.
Ground suitability may include but is not limited to:	• rough uneven ground • backfilled ground • soft soils • hard compacted soil • rock • bitumen • concrete • suspended concrete floors • building roofs • landings • ground bearing pressure.
Appropriate personnel may include but not limited to	• other riggers • doggers • crane operators.
Temporary connections may include but not limited to:	• knots • bends • hitches • spicing • whipping.
Flexible Steel Wire Rope (***FSWR***) includes:	• identification, uses and connections. May include termination for: • static lines, • guys, • purchase systems, • lashing, • cranes, • hoist and winch ropes.

CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to erect, alter and dismantle scaffolding at the basic level, consisting of scaffolding work connected with the operation or use of modular or pre-fabricated scaffolds, cantilevered materials hoists with a maximum working load of 500kg, ropes and gin wheels, safety nets and static lines, and bracket scaffolds (tank and formwork) for licensing purposes.

Application of the Unit

Application of the unit This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffold equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form it state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

ELEMENT	PERFORMANCE CRITERIA
	with appropriate personnel.
2. Select and inspect plant and equipment.	2.1. Scaffold, associated equipment and scaffold equipment are selected and inspected according to ***procedures*** and site information. 2.2. Safety equipment is selected and inspected according to procedures. 2.3. All defective Scaffold, associated equipment, scaffold equipment and safety equipment are isolated according to procedures. 2.4. All defective Scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures. 2.5. ***Communication equipment*** is selected and inspected for serviceability (where applicable).
3. Set up task	3.1. Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to procedures. 3.2. Ground suitability is checked. 3.3. Appropriate footings are prepared to support scaffold and scaffold equipment according to procedures and the appropriate standard. 3.4. Scaffold and scaffold equipment are prepared for erection according to procedures and the appropriate standard. 3.5. Safety equipment is fitted and secured according to procedures (where applicable). 3.6. Scaffold and scaffold equipment are positioned for work application and ***stability*** according to procedures and the appropriate standard.
4. Erect scaffold and scaffold equipment.	4.1. Scaffold and scaffold equipment are erected according to procedures and the appropriate standard. 4.2. Work is conducted safely at heights including safe and effective use of safety equipment. 4.3. Scaffold and scaffold equipment are erected consistent with site information. 4.4. Appropriate communication methods are used to coordinate the tasks. 4.5. Completed tasks are inspected for compliance with the appropriate standard. 4.6. Handover certificate is completed as required and handed to appropriate personnel. 4.7. Excess materials from the work area are removed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	(where applicable).
5. Dismantle scaffold and scaffold equipment.	5.1. Scaffold and scaffold equipment are dismantled according to procedures and the appropriate standard. 5.2. Work is conducted safely at heights including safe and effective use of safety equipment. 5.3. Scaffold, associated equipment and scaffold equipment are inspected for damage and defects. 5.4. All damaged and defective scaffold, associated equipment and scaffold equipment are tagged and isolated according to procedures. 5.5. Hazard prevention/control measures are removed (where appropriate). 5.6. All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect scaffold within the scope of the basic scaffolder
- ability to erect, level, plumb and stabilise cantilever hoists and scaffolds
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- ability to set up fall arrest systems, including safety nets
- ability to work safely in confined spaces
- accurate interpretation of basic structural charts and structural plans
- applying methods for making temporary connection using fibre ropes
- correct application of all scaffolding equipment
- methods for making temporary connection of guy ropes and static lines using Flexible Steel Wire Rope (FSWR)
- verify problems and equipment faults and demonstrate appropriate response.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking basic scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffolding erection and dismantling techniques
- knowledge of types of hoists, plant and equipment associated with basic scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- estimation of bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for basic scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work. State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of

EVIDENCE GUIDE

	this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
	• comply with OHS licensing requirements.
	• effectively communicate and work safely with others in the work area.
	• effectively apply risk assessment and hazard management procedures at a basic scaffolder level.
	• effectively complete the planning, erection and dismantling of a scaffolding system, in accordance with procedures, including a minimum of erect and dismantle:
	  • Modular Scaffold with return and ladder access and platform brackets (hop-up brackets)
	  • Bracket Scaffold
	  • Mobile Scaffold
	  • gin wheel
	  • Cantilever Hoist
	  • safety net and static line
	  • safety screen
	Scaffold to be of a minimum height of at least 5.0 metres above the supporting surface with full edge protection (includes safety screen) for each work platform including toe boards and handrails.
	• correctly demonstrate fibre rope bends and hitches.
	• effectively conduct pre and post operational checks of basic scaffolding.
	• complete handover certificate as required.

Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting • .Assessors must ensure that the assessment in

RANGE STATEMENT

	• site-specific job safety analyses and other documentation as required • task plans.

Scaffold may include but not limited to:	• mobile scaffolding
	• bracket scaffolding
	• modular scaffolding, including:
	  • steel
	  • fibreglass and
	  • aluminium frame scaffolding
	• prefabricated scaffolding.

Associated equipment may include but not limited to:	• planks
	• flexible steel wire rope and fittings.
	NB: including identification, uses and connections which may include termination for static lines and guys for cantilever hoists.
	• ladders
	• tie tubes and fittings
	• fibre rope
	NB: including identification and uses (natural and synthetic), and connections associated with bends and hitches.
	• stairways and screening
	• hand tools, including, but not limited to:
	  • box spanners
	  • hammers
	  • spirit levels
	  • tape measures
	  • scaffold belts
	  • podgers
	  • hammers
	  • wire nips
	  • wrenches
	  • torpedo levels
	  • shovels
	  • spanners
	  • cutters
	  • hammer drills
	  • sledge hammers

RANGE STATEMENT

	• wheel barrows and • relevant maintenance equipment.
Scaffolding equipment may include but not limited to:	• materials hoists • gin wheels • safety nets • static lines and fittings.
Appropriate personnel may include, but are not limited to:	• supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations • other scaffolders • other site personnel as applicable.
Safety equipment may include but not limited to:	• safety harness • energy absorber • lanyard • inertia reel.
Forces and Loads may include, but are not limited to:	• dead loads • live loads • static load • dynamic loads • wind loads.
Communication Methods may include but not limited to:	• verbal and non-verbal language • written instructions • signage • communication signals • listening • questioning to confirm understanding, and appropriate worksite protocol.
Procedures may include but not limited to:	• manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures, relevant codes of practice • workplace procedures (work instructions, operating procedures, checklists) • reporting and recording procedures such as e.g. equipment defect/s.
Communication equipment may include but is not limited to:	• fixed frequency two way radios • mobile phones.
Hazard prevention/control measures may include but not	• safety tags on electrical switches/isolators • safety observer used inside exclusion zone

CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit specifies the outcomes required to erect, alter and dismantle scaffolding at the Intermediate level which includes use and operation of Cantilevered crane-loading platforms, Cantilevered and spurred scaffolds, Barrow ramps and sloping platforms, perimeter safety screens and shutters Mast climbers, and tube and coupler scaffolds (including tube and coupler covered ways and gantries) for licensing purposes.

Application of the Unit

Application of the unit

This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffolding equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit *CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level* or holding a valid licence for basic scaffolding.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	1.1. Task to be undertaken is assessed. 1.2. Potential workplace ***hazards*** are identified. 1.3. ***Hazard control measures*** are identified consistent with ***appropriate standards*** to ensure the safety of personnel and equipment. 1.4. Site information is obtained.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.5. ***Scaffold***, ***associated equipment*** and ***scaffold equipment*** are identified from site information and in consultation with appropriate ***personnel*** (where applicable). 1.6. ***Safety equipment*** is identified. 1.7. All ***forces and loads*** exerted on and by the scaffold and/or scaffolding equipment are determined and calculated. 1.8. Appropriate ***communication methods*** are identified with appropriate personnel.
2. Select and inspect equipment.	2.1. Scaffold, associated equipment and scaffold equipment are selected and inspected according to ***procedures*** and site information. 2.2. Safety equipment is selected and inspected according to procedures. 2.3. All defective scaffold, associated equipment, scaffold equipment and safety equipment are isolated according to procedures. 2.4. All defective scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures. 2.5. ***Communication equipment*** is selected and inspected for serviceability (where applicable).
3. Set up task.	3.1. Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to procedures. 3.2. Ground suitability is checked. 3.3. Appropriate footings are prepared to support scaffold and scaffold equipment according to procedures and the appropriate standard. 3.4. Scaffold and scaffold equipment are prepared for erection 3.5. Fit safety equipment and secure according to procedures (where applicable). 3.6. Scaffold and scaffold equipment are positioned for work application and ***stability*** according to procedures and the appropriate standard.
4. Erect scaffold and scaffolding equipment.	4.1. Scaffold and scaffold equipment are erected according to procedures and the appropriate standard. 4.2. Work is conducted safely at heights including safe and effective use of safety equipment. 4.3. Scaffold and scaffold equipment are erected

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	consistent with site information. 4.4. Appropriate communication methods are used to coordinate the tasks. 4.5. Completed tasks are inspected for compliance with the appropriate standard. 4.6. Handover certificate is completed as required and handed to appropriate personnel. 4.7. Excess materials from the work area are removed (where applicable).
5. Dismantle scaffold and scaffolding equipment.	5.1. Scaffold and scaffold equipment are dismantled according to procedures and the appropriate standard. 5.2. Work is conducted safely at heights including safe and effective use of safety equipment. 5.3. Scaffold, associated equipment and scaffold equipment are inspected for damage and defects. 5.4. All damaged and defective scaffold, associated equipment and scaffold equipment are tagged and isolated according to procedures. 5.5. Hazard prevention/control measures are removed (where appropriate). 5.6. All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to erect scaffold and scaffolding equipment within the scope of the intermediate scaffolder
- ability to erect, level, plumb and stabilise scaffolds and scaffold equipment within the scope of the intermediate scaffolder
- ability to interpret manufacturer's specifications for plant and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- ability to work safely at heights
- accurate interpretation of basic structural charts and structural plans
- correct application of all scaffolding equipment
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking intermediate scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffold and scaffold equipment erection and dismantling techniques
- knowledge of types of scaffold and scaffold equipment, associated with intermediate scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- application of safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for intermediate scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work. State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
	• Effectively communicate and work safely with others in the work area.
	• Effectively apply risk assessment and hazard management procedures at an intermediate scaffolder level.
	• Effectively complete the planning, erection and dismantling of scaffolding systems, in accordance with procedures, including a minimum of erect and dismantle the following:
	  • Cantilevered and spurred scaffolds
	  • Barrow ramps and/ or sloping platforms
	  • Tube and coupler scaffolds
	  • Cantilevered crane-loading platforms
	  • Mast climbers
	Cantilevered, spurred and tube and coupler scaffolds to be of a minimum height of 5.0 metres above the supporting surface with full edge protection, for each work platform including toe boards and handrails.
	• Apply safety screen to tube and coupler scaffold.
	• Effectively conduct compliance inspections of scaffold and scaffold equipment for intermediate scaffolding.
	• Complete handover certificate as required.

Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument. • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	suitable working area is made available to suit the assessment and the workplace.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for intermediate scaffolding.
	• Applicants must have access to:
	  • personal protective equipment (PPE) for the purpose of the Performance Assessment
	  • appropriate safety equipment in safe condition
	  • appropriate scaffold and scaffold equipment in safe condition
	  • site information as described in the mandated assessment instrument
	  • communication equipment (e.g. fixed channel two way radios) where applicable
	  • appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment	Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application. Assessment may be in conjunction with the assessment of other units of competency. The use of **'simulators'** in the assessment of this unit of competency is **not acceptable**. Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	Further information about endorsed assessment instruments may be obtained from state/territory OHS regulators.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:	• ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes) • overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority.) • traffic (e.g. pedestrians, vehicles, other plant) • insufficient lighting • environmental conditions (e.g. wind, lightning, storms) • other site specific hazards (e.g. hazardous materials).
Hazard control measures:	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk: • elimination • substitution • isolation • engineering control measures • using safe work practices • personal protective equipment.
Appropriate standards may include:	• codes of practice • legislation • Australian Standards • manufacturer's specifications • industry standards (where applicable).
Site Information may include, but not limited to:	• local conditions such as access and egress • work method statements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• site-specific job safety analyses and other documentation as required • task plans.
Scaffold may include but not limited to:	• all scaffolds at the basis level • cantilevered and spurred scaffolds • barrow ramps and sloping platforms • tube and coupler scaffolds (including tube and coupler covered ways and gantries) • cantilever loading platforms.
Associated equipment may include but not limited to:	• all associated equipment from basic scaffolding level • independent adjustable props.
Scaffold equipment may include but not limited to:	• all scaffold equipment at the basic level • mast climbers • screen and shutters.
Appropriate personnel may include, but are not limited to:	• supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations • other scaffolders • other site personnel as applicable.
Safety equipment may include but not limited to:	• safety harness • energy absorber • lanyard • inertia reel.
Forces and Loads may include, but are not limited to:	• dead loads • live loads • static load • dynamic loads • wind loads.
Communication Methods may include but not limited to:	• verbal and non-verbal language • written instructions • signage • communication signals • listening • questioning to confirm understanding, and appropriate worksite protocol.
Procedures may include but not limited to:	• manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures, relevant codes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	of practice • workplace procedures (work instructions, operating procedures, checklists) • reporting and recording procedures such as e.g. scaffold and scaffold equipment defects.
Communication equipment may include but not limited to:	• fixed frequency two way radios • mobile phones.
Hazard prevention/control measures may include but not limited to:	• safety tags on electrical switches/isolators • safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails) • power disconnected by competent authority where applicable. • traffic and pedestrian barricades and controls • safe and adequate access / egress is established • personal protective equipment • adequate illumination.
Ground suitability may include but not limited to:	• rough uneven ground • backfilled ground • soft soils • hard compacted soil • rock • bitumen • concrete.
Stability may include but not limited to:	• ground bearing pressure • sole plates/boards • screw jacks • levelling • ties/guys.

CPPFES2027A Inspect, test and maintain non-gaseous pre-engineered fire-suppression systems

Modification History

Revised unit

Element structure and performance criteria changed to incorporate outcomes of deleted units:

- PRMPFES29B Inspect, test and maintain pre-engineered powder fire suppression systems
- PRMPFES30B Inspect, test and maintain pre-engineered wet chemical fire suppression systems
- PRMPFES31B Inspect, test and maintain pre-engineered water mist fire suppression systems

Skills and knowledge requirements and the range statement are more comprehensive

Unit based on PRMPFES27B Inspect, test and maintain pre-engineered aqueous fire suppression systems

Unit Descriptor

This unit of competency specifies the outcomes required to inspect, test and maintain non-gaseous pre-engineered fire-suppression systems.

Application of the Unit

This unit of competency supports fire protection technicians responsible for regularly inspecting, testing and maintaining pre-engineered, foam, wet chemical, powder or water mist fire-suppression systems.

This unit does not apply to any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).

Licensing/Regulatory Information

Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including occupational health and safety (OHS) policies and procedures.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	**Prepare for inspection, testing and maintenance.**	1.1	***Legislative and industry requirements*** are interpreted, ***confirmed*** and applied to ***organisational requirements***.
		1.2	***Non-gaseous pre-engineered fire-suppression systems*** are ***checked for compliance*** with legislative and industry requirements, and ***action*** is taken according to organisational requirements.
		1.3	Preparations for inspection, testing and maintenance work are made according to organisational requirements.
		1.4	***Safety procedures*** are followed according to organisational, manufacturer and ***customer requirements***.
		1.5	Work permits are obtained prior to entering customer premises.
		1.6	***Relevant persons*** are consulted before commencing procedures.
2	**Inspect and survey installed non-gaseous**	2.1	Type of **non-gaseous** pre-engineered fire-suppression system and ***extinguishing agent*** is identified according to operation and application.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	pre-engineered fire-suppression systems.	2.2	***System components*** are identified, located and inspected according to function and manufacturers' manuals.
		2.3	***Auxiliary shutdown devices*** of fire-suppression system or equipment interfaces and alarm devices forming part of the fire-suppression system are identified and inspected.
		2.4	Changes to non-gaseous pre-engineered fire-suppression system, the protected space or its use are identified according to relevant state and territory regulations, manufacturers' documentation and Australian standards.
3	**Test an installed non-gaseous pre-engineered fire-suppression system.**	3.1	***Testing procedures*** are completed and recorded according to relevant ***maintenance schedule***, Australian standards and manufacturers' documentation.
		3.2	***Documentation*** for recording test and inspection results is completed according to organisational, customer and manufacturers' requirements.
4	**Maintain and repair an installed non-gaseous pre-engineered fire-suppression system.**	4.1	System is maintained according to requirements of relevant maintenance schedule, customer requirements, Australian standard and manufacturers' documentation.
		4.2	Faulty equipment or extinguishant is reported, and rectified or replaced according to ***work procedures***, customer requirements and manufacturers' technical specifications.
		4.3	System is reinstated as fully operational as specified in manufacturers' documentation and system design standards.
		4.4	Documentation for recording maintenance and repairs is completed and distributed according to organisational, customer and manufacturers' requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required skills

- customer service skills
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - read and comply with work instructions and specifications
  - read and record measurements
  - record and report information neatly and legibly
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- skills to work safely when:
  - applying workplace housekeeping procedures
  - handling and transporting containers according to legislation, manufacturers' procedures and work practices
  - using hand and power tools
- technical skills to:
  - operate standard controls on proprietary systems to verify system operation to manufacturers' requirements
  - pressurise containers in situ, using pressure regulators connected to gaseous containers, such as a nitrogen cylinder
  - replace extinguishing agents and components in a manner that conforms to OHS requirements, environmental requirements and manufacturers' specifications
  - test system components according to manufacturers' requirements

Required knowledge

- action to take when a breach of health, safety or other policy occurs
- identification and purpose of the major components in **non-gaseous** pre-engineered fire-suppression systems for different manufacturers' proprietary systems
- key features of legislation and regulations relevant to **non-gaseous** pre-engineered fire-suppression systems, including:
  - implications of:
    - not applying legislative requirements to job functions
    - not following safety procedures
    - incorrect inspection, testing and maintenance functions
  - limitations of maintenance and repair functions that may be conducted by the fire protection technician
- manufacturers' requirements and standards applicable to inspecting, testing and maintaining non-gaseous pre-engineered fire-suppression systems
- procedures for inspecting, testing and maintaining system to verify operation in line with manufacturers' requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose of fire-suppression system shutdown and isolation during maintenance
- purpose of **non-gaseous** pre-engineered fire-suppression systems
- types of extinguishing agents, their characteristics and use

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed by observation of practical demonstration of inspecting, testing and maintaining **non-gaseous** pre-engineered fire-suppression systems.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit for at least one type of **non-gaseous** pre-engineered fire-suppression system in two different installation locations.
	In particular the person should demonstrate the ability to:
	• locate, interpret and apply relevant information, standards and specifications
	• comply with organisational policies and procedures, including quality requirements
	• conduct inspection, testing, and preventive maintenance according to the relevant Australian standard and manufacturers' documents on at least two installed systems
	• replace or repair system components, such as:
	  • detector
	  • fire alarm panel
	• replace (recharge) extinguishing agent and pressurise or reinstate systems to fully operational condition according to manufacturers' documentation, working on systems with at least two different extinguishing agents
	• replace or repair system components, such as:
	  • actuator
	  • nozzle
	  • pipe fitting
	  • system container.

Context of and specific resources for assessment	Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Resource implications for assessment include: • access to customer premises or a simulated workplace environment • assessment documentation • necessary tools, specialist equipment, manuals and relevant documentation • training and assessment record book.
Method of assessment	Assessment methods must: • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. This unit could be assessed on its own or in combination with other units relevant to the job function.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:	• dangerous goods regulations • environmental regulations • fire risk management section of AS 5062 Fire protection for mobile and transportable equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• licensing arrangements
	• manufacturers' system manuals
	• OHS legislation, regulations and codes
	• relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA)
	• relevant Australian standards, such as:
	  • AS 5062 Fire protection for mobile and transportable equipment
	  • AS 3772-2008 Pre-engineered fire protection systems for cooking equipment
	  • AS 1851 Maintenance of fire protection systems and equipment
	  • note: Australian standards are frequently revised and users must always check for currency and amendments
	• other relevant legislation relating to fire protection equipment, including:
	• international shipping codes
	• marine codes for different Australian States
	• system approval listing, such as:
	  • CSIRO ActivFire
	  • Factory Mutual (FM)
	  • Underwriters Laboratories (UL).

Requirements may be ***confirmed*** with:	• colleagues • managers • supervisors • team leaders.
Organisational requirements may include:	• job scheduling systems and communication devices • personnel practices and guidelines outlining work roles, responsibilities and delegations • recording and reporting documentation and systems • relevant OHS policies, procedures and programs • relevant rules and regulations • standard operating procedures, work instructions and manuals.

Non-gaseous pre-engineered fire-suppression systems are:	• fire protection systems consisting of:
	  • pipework with nozzle arrangement installed up to a maximum permitted design according to manufacturers' pre-engineered limitation requirements and applicable Australian standard (note: no hydraulic calculations are required to size pipework or nozzles)
	  • supply of extinguishing agent of predetermined quantity
	• fitted to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• commercial cooking equipment, including:
	  • exhaust plenums
	  • exhaust systems
	  • associated ducts and filters
	• fixed plant used in a range of industry sectors, such as mining, marine, and power generation, including:
	  • engine bays
	  • fuel pumping skids
	  • generators
	• industrial vehicles used in a range of industry sectors, such as mining, forestry and waste management, including:
	  • draglines
	  • earthmovers
	  • graders
	  • trucks
	  • loaders.

Checking system compliance may include:	• applying inspection, test and survey requirements to equipment or systems to determine that they are:
	  • capable of operating as originally installed
	  • still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the system was installed or last modified
	  • providing the coverage and protection needed to meet original design or performance requirements.

Action may include:	• advising customer • documenting non-compliance • making equipment safe • reporting, as required.

Safety procedures may include:	• awareness of electrical hazards
	• emergency procedures
	• first aid
	• following confined spaces procedures
	• recognising hazards and risks
	• using personal protective equipment (PPE), including:
	  • safety glasses or goggles
	  • safety boots or shoes
	  • hard hats
	  • ear muffs or plugs
	• working safely:
	  • around electrical wiring, cables and overhead powerlines
	  • around tools and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• on ladders and raised platforms.
Customer requirements may include:	• confirming or varying service instructions • following sign-in and sign-out procedures for entry to or exit from premises • industry requirements • insurance requirements • providing non-routine or urgent services • providing routine services • providing written or verbal confirmation of services provided and/or future maintenance schedule • sighting work permits • system specification.
Relevant persons may include:	• colleagues • managers • supervisors • team leaders.
Extinguishing agents may be:	• foam • powder • water mist • wet chemical • combination of any of the above when compatible.

System components may include:	• actuators:
	  • mechanical
	  • pyrotechnic
	  • solenoid
	• agent discharge nozzles
	• agent distribution pipework and hose
	• container valves
	• control equipment
	• detection devices
	• extinguishing agent containers, such as tanks and cylinders
	• support brackets.

Auxiliary shutdown devices transmit signals and may include:	• air conditioning shutdown signal to an electrical contactor to stop air conditioning • cooking fuel line shutdown signal to a gas solenoid valve on main inlet pipe supply to cooking appliances • cooking power supply shutdown signal to an electrical contactor to isolate main electrical supply to cooking appliances • signal from fire system to shut off valve, relay or solenoid to isolate fuel and oil supplies or release pressure from hydraulic tanks • vehicle or plant engine shutdown signal to engine emergency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	shutdown circuitry.
Testing procedures may include:	• discharge • leaks • pressure • recharging • visual inspections.
Maintenance schedules may include:	• Australian standards • customer schedules • system manufacturers.
Documentation may include:	• certificates of inspection • corrective action reports • customer recommendation forms • equipment recommendation forms • logbooks • maintenance record system • product documentation • service agreements • service reports • system manufacturer's documentation.
Work procedures may include:	• assignment instructions • equipment manufacturers' requirements • instructions from colleagues, supervisor or manager • PPE requirements • reporting and documentation requirements • specific customer requirements.

CPPFES3042A Install and commission pre-engineered fire-suppression systems

Modification History

Revised unit

Element structure and performance criteria changed to incorporate outcomes of deleted unit PRMFES41A Install pre-engineered fixed plant fire suppression systems

Unit based on PRMPFES42A Install, inspect, test and maintain pre-engineered fire system for transportable equipment

Unit Descriptor

This unit of competency specifies the outcomes required for a fire system technician to install and commission a pre-engineered fire-suppression system.

Application of the Unit

This unit of competency supports fire protection technicians responsible for installing pre-engineered fire-suppression systems. The person would often be employed by the system's manufacturer or the manufacturer's agent as an endorsed installer.

Individuals operate within the scope of their defined roles and responsibilities and verify according to work procedures and Australian standards that pre-engineered fire-suppression system is installed and operates as intended.

The unit must be applied strictly according to relevant state or territory legislative and industry requirements.

Licensing/Regulatory Information

Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including occupational health and safety (OHS) policies and procedures.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Note: Some manufacturers provide endorsement of suitably trained personnel, which permits fire system technicians to undertake installation and commissioning work on particular pre-engineered systems.

Pre-Requisites

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret and comply with legal and industry requirements relating to fire system operations.	1.1	***Legislative and industry requirements*** are interpreted, confirmed and applied in addition to ***organisational requirements***.
		1.2	Installation requirements of ***pre-engineered fire-suppression systems*** are ***checked for compliance*** with legislative and industry requirements and ***action*** is taken according to organisational requirements.
		1.3	Preparations for installation work are made according to organisational requirements.
2	Conduct pre-installation inspections and checks.	2.1	Necessary work permits are obtained prior to entering customer premises.
		2.2	Risk assessment review of equipment is conducted and additional risk reduction measures are reviewed with customer according to legislative and industry requirements and type of ***extinguishing agent***.
		2.3	Installation design is confirmed as appropriate according to ***customer requirements*** and manufacturers' specifications.
		2.4	Scope of protection, operational parameters, and system and equipment interfaces are determined according to organisational and customer requirements, Australian standards and manufacturers' specifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Installation and location of equipment are planned to satisfy customer requirements and manufacturers' specifications.
		2.6	Materials are assembled ready for installation according to manufacturers' specifications.
3	Install a pre-engineered fire-suppression system.	3.1	***System components*** are installed according to customer and organisational requirements, Australian standards and manufacturers' instructions.
		3.2	***Auxiliary shutdown*** fire system and equipment interface and alarm device connections are installed according to customer requirements, Australian standards and manufacturers' specifications.
		3.3	System is charged according to customer and organisational requirements, Australian standards and manufacturers' specifications.
		3.4	Installation site is left clean and tidy on completion of work.
		3.5	Installation ***documentation*** is completed according to Australian standards and legislative and manufacturers' requirements.
4	Commission an installed fire-suppression system.	4.1	Safety procedures are followed according to customer, organisational and manufacturers' requirements.
		4.2	***Commissioning procedures and tests*** are conducted on componentry according to Australian standards and manufacturers' requirements.
		4.3	System is reinstated as fully operational status as specified in manufacturers' documentation and organisational requirements.
		4.4	Commissioning results are recorded according to relevant ***commissioning schedule***, Australian standards and manufacturers' documentation.
		4.5	Documentation on installed system and commissioning is completed according to organisational, customer and manufacturers' requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- skills to work safely when:
  - applying workplace housekeeping procedures
  - handling and transporting containers
  - using hand and power tools
- effective customer service skills
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - interpret risk assessment documents to verify system requirements and identify fire hazards not considered in initial design risk assessment
  - read and comply with work instructions and specifications
  - read and record measurements
  - record and report information neatly and legibly
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- technical skills to:
  - install and test system components according to manufacturers' requirements
  - install brackets and high-pressure hose and metal tubing to meet manufacturers' requirements
  - locate nozzles, pipe runs, containers, actuators, fire detectors and other system components to meet manufacturers' requirements
  - operate standard controls on proprietary systems to verify system operation to manufacturers' requirements
  - pressurise containers in situ, using pressure regulators connected to gaseous containers, such as a nitrogen cylinder
  - replace extinguishing agent and components
  - terminate or join flexible high-pressure hose and metal tubing to meet manufacturers' requirements

Required knowledge

- features of legislation and regulations relevant to the application, for example fire protection of:
  - mobile and transportable equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - commercial cooking equipment
  - marine engine compartments
- importance of adhering to legislative requirements, safety procedures and workplace procedures, including implications for plant warranty or safety issues of:
  - not applying legislative requirements to job functions
  - not adhering to safety procedures and action to take when a breach of health, safety or other policy occurs
  - not involving customer or not referencing plant manufacturer's documentation before working on fixings, access holes or component location
- limitations of maintenance and repair activities that may be conducted by the service technician
- pre-engineered fire-suppression systems, including:
  - design, installation and commissioning requirements and limitations of the manufacturers' proprietary system
  - identification and purpose of the major components in the fire-suppression system for different manufacturers' proprietary systems
  - key installation design requirements for pre-engineered systems
  - manufacturers' requirements and standards applicable to design, installation, commissioning, inspecting, testing and maintaining a pre-engineered fire-suppression system
  - procedures for inspecting, testing and maintaining the system to verify operation to manufacturers' requirements
  - purpose of installing the system
  - purpose of fire-suppression systems
  - reasons for commissioning after installation
  - types of fire-extinguishing agents used in pre-engineered systems and their uses

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed by observation of practical demonstrations of installing and commissioning a proprietary pre-engineered system, conducted at the customer's work site or simulated workplace.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit for at least one type of the pre-engineered fire-suppression system listed in the range statement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	In particular the person should demonstrate the ability to: • locate, interpret and apply relevant information, standards and specifications • comply with organisational policies and procedures, including quality requirements • communicate and work effectively and safely with others • conduct service operations according to customer, manufacturer and organisational requirements • install, commission and provide documentation on at least two complete systems according to the current Australian standard relevant to installation. Note: Evidence of the manufacturer's endorsement of installation and commissioning of installed systems to meet the current Australian standard must also be provided.
Context of and specific resources for assessment	Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements. Resource implications for assessment include: • access to customer premises or a simulated workplace environment • assessment documentation • necessary tools, specialist equipment, manuals and relevant documentation • training and assessment record book.
Method of assessment	Assessment methods must: • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	the candidate in relation to the competency being assessed. This unit could be assessed on its own or in combination with other units relevant to the job function, for example: • CPPFES2027A Inspect, test and maintain non-gaseous pre-engineered fire-suppression systems.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:	• building surveyor requirements
	• manufacturers' system manuals
	• relevant legislation relating to installing and commissioning fire protection equipment, including:
	  • dangerous goods regulations
	  • environmental regulations
	  • licensing arrangements
	  • international shipping codes
	  • marine codes for different Australian States
	  • OHS legislation, codes and regulations
	• relevant commonwealth and state or territory building Acts, regulations or codes, such as Building Code of Australia (BCA)
	• relevant Australian standards, including:
	  • risk assessment section of AS 4360 Risk management
	  • note: Australian standards are frequently revised and users must always check for currency and amendments
	• system approval listing, such as:
	  • CSIRO ActivFire
	  • Factory Mutual (FM)
	  • Underwriters Laboratories (UL).

Organisational requirements may be located in quality assurance and procedures manuals relating to:	• documentation and information systems and processes • legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations • legislation relevant to service operation • OHS policies, procedures and programs • using electronic job scheduling and communication devices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-engineered fire-suppression systems are:	• fire protection systems consisting of:
	  • supply of extinguishing agent of pre-determined quantity
	  • pipework with nozzle arrangement installed up to a maximum permitted design according to manufacturer's pre-engineered limitation requirements and applicable Australian standard (note: no hydraulic calculations are required to size pipework or nozzles)
	• fitted to a wide variety of fixed and mobile plant and equipment, such as:
	  • commercial cooking equipment, including:
	  • associated ducts and filters
	  • exhaust plenums
	  • exhaust systems
	  • fixed plant used in a range of industry sectors, such as mining, marine and power generation, including:
	  • engine bays
	  • fuel pumping skids
	  • generators
	  • industrial vehicles used in a range of industry sectors, such as mining, forestry and waste management, including:
	  • draglines
	  • earthmovers
	  • graders
	  • loaders
	  • trucks.

Checking for compliance may include:	• undertaking commissioning tests detailed in Australian standards and manufacturers' documentation to verify performance of an installed, repaired or altered piece of equipment or system
	• applying inspection, test and survey requirements to equipment or systems, according to Australian standards, to determine that they are:
	  • capable of operating as originally installed
	  • providing the coverage and protection needed to meet original design or performance requirements
	  • still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified
	• reviewing documentation to verify that the systems are installed according to legislative and industry requirements, such as:
	  • equipment listing
	  • relevant commonwealth and state or territory building Acts,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	regulations and codes • relevant Australian standards listed for that system.
Action may include:	• advising customer • documenting non-compliance • making equipment safe • reporting, as required.
Extinguishing agents may include:	• foam • powder • water mist • wet chemical • combination of any of the above when compatible.
Customer requirements may include:	• confirming or varying service instructions • following sign-in and sign-out procedures for entry to or exit from premises • industry requirements • insurance requirements • providing non-routine or urgent services • providing routine services • providing written or verbal confirmation of services provided or future maintenance schedule • sighting work permits • system specifications.
System components may include:	• actuators • agent discharge nozzles • agent distribution, pipework and hoses • container valves • control equipment • detection devices • extinguishing agent containers, such as tanks and cylinders • support brackets.
Auxiliary shutdown may include:	• air conditioning shutdown signal to an electrical contactor to stop air conditioning • cooking fuel line shutdown signal to a gas solenoid valve on main inlet pipe supply to cooking appliances • cooking power supply shutdown signal to an electrical contactor to isolate main electrical supply to cooking appliances • vehicle or plant engine shutdown signal to engine emergency shutdown circuitry.
Documentation may include:	• certificates of inspection • corrective action reports • customer recommendation forms • equipment recommendation forms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• installation drawings and schedules • maintenance record systems • manufacturers' system documentation • product documentation • service agreements • service and maintenance manuals.
Commissioning procedures and tests may include:	• discharges • leaks • pressure • recharging • visual inspections.
Commissioning schedules may include:	• customer schedules • schedules in Australian standards • system manufacturer's schedules.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to install a range of security equipment and systems. It requires the ability to select and use materials, tools and equipment to install security equipment and systems using approved termination methods and procedures. This work applies in extra low voltage as defined through the Australian Standards AS 2201 (1986) environments.

This unit may form part of the licensing requirements for persons responsible for installing networked security systems in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application in those work roles involving the installation of networked security systems. Competency requires legal and operational knowledge applicable to relevant sectors of the security industry. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for installation.	1.1 Applicable provisions of ***legislative*** and ***organisational requirements*** relevant to installing ***security equipment and systems*** are identified and complied with. 1.2 ***Assignment instructions*** are obtained, reviewed and confirmed as required with ***relevant persons***. 1.3 Security equipment and system to be installed is identified and confirmed. 1.4 ***Tools***, ***equipment*** and ***materials*** needed to carry out the work are selected and checked for correct operation and safety. 1.5 Potential and existing ***risks and hazards*** in the work area are identified and controlled in accordance with ***Occupational Health and Safety*** (***OHS***) requirements and own role, competence and authority.
2 Install security equipment and system.	2.1 ***Personal protection equipment*** is selected and used in accordance with OHS requirements. 2.2 Security equipment and system is correctly positioned in accordance with installation specifications and assignment instructions. 2.3 Security equipment and system is securely fixed, terminated and connected to cabling using appropriate methods and procedures. 2.4 Security equipment and system is installed without damage or distortion to the surrounding environment or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	services.
	2.5 Safe workplace practices are applied throughout installation process in accordance with OHS requirements.
	2.6 Changing circumstances and ***factors*** affecting the achievement of assignment instructions are identified and recommendations for variation to installation plans are approved by relevant persons.
3 Complete installation.	3.1 Installed security equipment and system is inspected to confirm operational effectiveness in accordance with assignment instructions.
	3.2 Checks are conducted to confirm that all terminations are electrically and mechanically sound.
	3.3 Work area is restored to original condition, waste disposed of and tools and equipment cleaned and stored in accordance with organisational requirements.
	3.4 Malfunctions, faults, wear or damage to tools or equipment is documented and reported for repair or replacement in accordance with organisational procedures.
	3.5 Notification of work completion is made to relevant persons in accordance with organisational procedures.
	3.6 Relevant ***documentation*** is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- apply safe and environmentally aware work practices
- carry out basic carpentry
- carry out soldering and drilling
- communicate in a clear and concise manner
- complete documentation
- estimate and organise materials, tools and equipment requirements
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and follow routine workplace safety procedures
- identify and report faulty equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- identify, terminate and connect cables
- install and fix a range of security equipment and systems
- organise and prioritise work tasks
- read and interpret plans and specifications
- restore work area to pre-installation condition
- solve routine problems
- test and confirm operational effectiveness of security equipment and system
- use suitable tools and equipment, including hand and power tools
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- cable identification, termination and connection procedures
- earthing systems arrangements and requirements
- electrical concepts
- emergency procedures
- installation methods and procedures relevant to security equipment and systems
- methods of fixing security equipment and systems
- methods of sealing cable entries
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- reporting and documentation requirements
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards
- requirements for working in a confined space
- risks and hazards associated with installation procedures
- safe workplace procedures
- technical terminology
- types, functions and features of security equipment and systems
- waste disposal procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- applying appropriate methods and using suitable tools and equipment to position, fix and install a range of security equipment and systems
- cleaning and storing tools and equipment and reinstating work site to a clean and safe condition
- completing documentation related to installation
- interpreting and complying with all applicable legislative and licensing requirements and Australian Standards
- methodically organising own work tasks
- safely following installation procedures and carrying out checks to ensure integrity, security and safety of security equipment and system.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements and monitoring centre records.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures
- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements may relate to:

- applicable commonwealth, state and territory legislation which affects work such as:
  - workplace safety
  - environmental issues
  - equal employment opportunity
  - industrial relations
  - anti-discrimination and diversity
- Australian building codes and regulations
- Australian Communications Authority cabling standards
- Australian standards and quality assurance requirements
- award and enterprise agreements
- evidence collection
- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- telecommunications
- trade practices.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- own role, responsibility and authority
- personal and professional development
- privacy and confidentiality of information
- quality assurance and continuous improvement processes and standards
- resource parameters and procedures
- roles, functions and responsibilities of security personnel
- storage and disposal of information.

Security equipment and systems may include:

- access control systems
- audible and visual warning devices
- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electric and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- specialised access control systems eg biometrics.

***Assignment instructions* may include**:

- access to site and specific site requirements
- equipment and systems location and positioning information
- equipment, tools and material requirements
- personal protection clothing and equipment
- requirements reporting requirements
- security equipment and system information:
  - features, functions and capabilities
  - installation procedures
  - manufacturer's instructions
  - service and maintenance requirements
  - type
  - warranties and guarantees
- specific client requirements
- timeframes
- work schedules
- work tasks and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

***Relevant persons* may include**:	• clients • colleagues • engineers and technicians • equipment and systems manufacturers • security consultants • security personnel • site managers or project managers • supervisor.
***Tools and equipment* may include**:	• cable testing equipment • communications equipment • consumable items, eg batteries • crimp tools • fixing tools • hand tools • IDS tools • ladder • multimeter • personal protection equipment • power tools • soldering iron • templates.

***Materials* may include**:	• electrical components
	• fixings
	  • saddles
	  • conduit
	  • loxins
	  • girderclips
	  • wall plugs
	  • hollow wall anchors
	  • silicon
	  • screws
	  • parts and components
	• insulation tape
	• sealing compounds
	• solder
	• wire and cable

***Risks and hazards* may relate to**:	• chemical hazards eg battery corrosion
	• exposed electrical wiring
	• exposure to
	  • asbestos
	  • building debris

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- dust
- glass fibre
- live power
- natural and other gas build-up
- noise
- vermin
- water

- manual handling
- non-compliance with building codes and regulations.

Occupational Health and Safety **(*OHS*) *requirements* may relate to**:

- emergency procedures
- following confined spaces procedures
- implementation of safety policies and procedures
  - chemicals, gas and vapour
  - isolation procedures
  - monitoring and testing procedures
  - use of personal protection equipment and clothing
  - work clearance procedures
- risk and hazard recognition
- safety training
- working with electrical wiring and cables
- working with tools and equipment.

Personal protection equipment **may include**:

- breathing apparatus
- fire extinguisher
- first aid kit
- gloves
- head protection
- hearing protection
- knee pads
- masks
- safety boots
- safety glasses
- warning signs and tapes
- witches hats.

Factors may relate to:

- budget constraints
- codes of practice
- environment eg time, weather
- health, safety and welfare
- non-availability of resources and materials
- regulations and limitations
- risks and hazards
- site conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

***Documentation* may include**:	• technology, tools or equipment breakdowns. • adjustments to original installation plan • faulty or malfunctioning tools and equipment • materials used, parts and components replaced • security equipment and system positioning • testing and inspection results • written and electronic reports.

ELEMENT	PERFORMANCE CRITERIA
	with manufacturer's instructions.
	2.4 Configuration of security equipment and system is tested and checked using approved procedures.
	2.5 Required adjustments to programming instructions are determined and confirmed with relevant persons.
	2.6 Safe workplace practices are applied throughout programming process in accordance with OHS requirements.
3 Complete programming activities.	3.1 Programmed security equipment and system is inspected to confirm operational effectiveness and conformance with assignment instructions.
	3.2 Work area is restored to original condition, waste disposed of and tools and equipment cleaned and stored in accordance with organisational requirements.
	3.3 Malfunctions, faults, wear or damage to tools or equipment is documented and reported for repair or replacement in accordance with organisational procedures.
	3.4 Notification of work completion is made to relevant persons in accordance with organisational procedures.
	3.5 Relevant ***documentation*** is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- accurately identify and handle cables
- apply safe and environmentally aware work practices
- communicate in a clear and concise manner
- complete documentation
- download and upload digital information
- estimate and organise materials, tools and equipment requirements
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and follow routine workplace safety procedures
- identify and report faulty equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- operate security equipment and systems
- organise and prioritise work tasks
- power security systems
- program and configure security equipment and systems
- read a multimeter
- read and interpret plans and specifications
- solve routine problems
- test security equipment and systems
- use suitable tools and equipment, including hand and power tools
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- building construction methods and types
- cable identification methods and techniques
- earthing systems arrangements and requirements
- electrical concepts
- emergency procedures
- keypad and control panel types and functions
- methods of equipment and system programming
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- procedures to power systems
- reporting and documentation requirements
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards
- requirements for working at height and in a confined space
- risks and hazards associated with programming procedures
- safe workplace procedures
- technical terminology
- types and functions of computer software
- types of security equipment and system configurations
- types, functions and features of security equipment and systems
- waste disposal procedures.

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- interpreting and complying with all applicable legislative and licensing requirements for programming work
- accessing security equipment and systems with minimal disruption to client, services or normal work routines
- accurately determining programming requirements and configuration parameters of security equipment and systems
- applying appropriate methods to program and configure security equipment and systems
- cleaning and storing tools and equipment and reinstating work site to a clean and safe condition
- following safe and efficient work practices in the use of tools and equipment and managing risks and hazards in the work area
- organising own work tasks within specified programming timeframes and completing documentation related to programming services
- carrying out checks to ensure the integrity, security and safety of security equipment and system.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

- site managers or project managers
- supervisor.

Security equipment and systems may include:

- access control systems
- audible and visual warning devices
- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electric and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- specialised access control systems eg biometrics.

Security systems may be:

- computerised
- electronic
- mechanical
- procedural.

***Tools, equipment and materials* may include**:

- cable testing equipment
- communications equipment
- computer disks
- crimp tools
- hand tools
- ladder
- multimeter
- personal protection equipment
- power tools
- templates.

***Risks and hazards* may relate to**:

- chemical hazards eg battery corrosion
- exposed electrical wiring
- exposure to:
  - asbestos
  - building debris
  - dust
  - glass fibre
  - live power
  - natural and other gas build-up
  - noise
  - vermin
  - water

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to test a range of security equipment and systems including cable systems, equipment components and programming. It requires the ability to select and carry out tests suitable to confirm the integrity, security and safety of the security equipment and system. This work applies in extra low voltage as defined through the Australian Standards AS 2201 (1986) environments.

This unit may form part of the licensing requirements for persons responsible for testing security systems and equipment in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application in those work roles involving the testing of security equipment and systems. Competency requires legal and operational knowledge applicable to relevant sectors of the security industry. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for testing.	1.1 Applicable provisions of ***legislative*** and ***organisational requirements*** relevant to ***assignment instructions*** are identified and complied with. 1.2 Assignment instructions are obtained, reviewed and confirmed as required with ***relevant persons***. 1.3 ***Security equipment and system*** to be ***tested*** is identified and confirmed. 1.4 Testing parameters appropriate to the security equipment and system are confirmed in accordance with manufacturer's instructions. 1.5 ***Tools***, ***equipment and materials*** needed to carry out the work are selected and checked for correct operation and safety. 1.6 Potential and existing ***risks and hazards*** in the work area are identified and controlled in accordance with ***Occupational Health and Safety*** (***OHS***) requirements and own role, competence and authority.
2 Test security equipment and system.	2.1 ***Personal protection equipment*** is selected and used in accordance with OHS requirements. 2.2 Parts or connections of security equipment and system are removed in accordance with approved procedures and safely stored to protect against loss or damage. 2.3 Tests are conducted in accordance with approved procedures and manufacturer's instructions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Tests provide reliable and accurate test data on the operation and functioning of security equipment and system.
	2.5 Security equipment and system is reassembled and returned to pre-test condition in accordance with manufacturer's instructions.
	2.6 Safe workplace practices are applied throughout programming process in accordance with OHS requirements.
	2.7 Personal limitations in conducting testing procedures are identified and assistance is sought from relevant persons in accordance with organisational procedures.
3 Complete testing.	3.1 Security equipment and system is checked to confirm operational effectiveness.
	3.2 Operational errors or deficiencies in security equipment and system is documented and reported in accordance with organisational procedures.
	3.3 Test results are accurately recorded and processed in accordance with organisational procedures.
	3.4 Work area is restored to original condition, waste disposed of and tools and equipment cleaned and stored in accordance with organisational requirements.
	3.5 Malfunctions, faults, wear or damage to tools or equipment is documented and reported for repair or replacement in accordance with organisational procedures.
	3.6 Notification of work completion is made to relevant persons in accordance with organisational procedures.
	3.7 Relevant ***documentation*** is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- accurately identify and handle cables
- apply safe and environmentally aware work practices
- communicate in a clear and concise manner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- complete documentation
- download and upload digital information
- estimate and organise materials, tools and equipment requirements
- evaluate test results
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and follow routine workplace safety procedures
- identify and report faulty equipment
- identify, isolate, test and tag cables
- operate security equipment and systems
- organise and prioritise work tasks
- power security systems
- read a multimeter
- read and interpret plans and specifications
- solve routine problems
- test security equipment and systems
- use keypads and control panels
- use suitable tools and equipment, including hand and power tools and testing devices
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- building construction methods and types
- cable identification methods and techniques
- circuit protection requirements
- earthing systems arrangements and requirements
- electrical concepts
- electrical connections and types of electrical circuits
- emergency procedures
- isolating and testing procedures
- keypad and control panel types and functions
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- procedures to power systems
- reporting and documentation requirements
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards
- requirements for working at height and in a confined space
- risks and hazards associated with programming procedures
- safe workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- technical terminology
- types and functions of computer software
- types of security equipment and system configurations
- types, functions and features of security equipment and systems
- types, functions and features of tools and equipment including testing devices
- waste disposal procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- determining testing parameters appropriate to type of security equipment and system and accurately interpreting test results
- following safe and efficient work practices in the use of tools and equipment and managing risks and hazards in the work area
- interpreting and complying with applicable legislative and licensing requirements for testing work
- organising own work tasks within specified testing timeframes and completing documentation related to testing services
- using appropriate methods and approved procedures to disassemble and reassemble components of security equipment and system
- cleaning and storing tools and equipment and reinstating work site to a clean and safe condition
- using appropriate procedures to carrying out tests to check and confirm security equipment and system performance and operational effectiveness.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures
- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Legislative requirements* may**

- applicable commonwealth, state and territory legislation which affects work such as:
  - workplace safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

relate to:

- environmental issues
- equal employment opportunity
- industrial relations
- anti-discrimination and diversity
- Australian building codes and regulations
- Australian Communications Authority cabling standards
- Australian standards and quality assurance requirements
- award and enterprise agreements
- evidence collection
- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- telecommunications
- trade practices.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- own role, responsibility and authority
- personal and professional development
- privacy and confidentiality of information
- quality assurance and continuous improvement processes and standards
- resource parameters and procedures
- roles, functions and responsibilities of security personnel
- storage and disposal of information.

***Assignment instructions* may include**:

- access to site and specific site requirements
- equipment and system location information
- equipment, tools and material requirements
- personal protection clothing and equipment requirements
- reporting requirements
- security equipment and system information:
  - features, functions and capabilities
  - installation procedures
  - manufacturer's instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- service and maintenance requirements
- type
- warranties and guarantees
- specific client requirements
- timeframes
- work schedules
- work tasks and procedures.

***Relevant persons* may include**:

- clients
- colleagues
- engineers and technicians
- equipment and systems manufacturers
- security consultants
- security personnel
- site managers or project managers
- supervisor.

Security equipment and systems may include:

- access control systems
- audible and visual warning devices
- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electric and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- specialised access control systems eg biometrics.

Security systems may be:

- computerised
- electronic
- mechanical
- procedural.

Tests may involve:

- alarm tests
- calibration tests
- correct relaying of information and data
- coverage tests
- detection tests
- functional tests
- safety tests
- testing of cables
- testing of wiring and connections:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- continuity
- resistance
- earth leakage
- voltage

- testing to specifications
- walk tests.

Tools**, **equipment and materials **may include**:

- cable testing equipment
- communications equipment
- computers and computer software
- crimp tools
- hand tools
- ladder
- multimeter
- personal protection equipment
- power tools
- templates
- test board
- test tape.

Risks and hazards **may relate to**:

- chemical hazards eg battery corrosion
- exposed electrical wiring
- exposure to:
  - asbestos
  - building debris
  - dust
  - glass fibre
  - live power
  - natural and other gas build-up
  - noise
  - vermin
  - water
- manual handling
- non-compliance with building codes and regulations.

Occupational Health and Safety** (**OHS**) **requirements **may relate to**:

- emergency procedures
- following confined spaces procedures
- implementation of safety policies and procedures:
  - chemicals, gas and vapour
  - isolation procedures
  - monitoring and testing procedures
  - use of personal protection equipment and clothing
  - work clearance procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- risk and hazard recognition
- safety training
- working with electrical wiring and cables
- working with tools and equipment.

***Personal protection equipment* may include**:

- breathing apparatus
- fire extinguisher
- first aid kit
- gloves
- head protection
- hearing protection
- knee pads
- masks
- safety boots
- safety glasses.
- warning signs and tapes
- witches hats.

***Documentation* may include**:

- adjustments to original cable plan
- cable identification records
- faulty or malfunctioning tools and equipment
- location of security equipment and system
- materials used
- testing and inspection results
- work activity report
- written and electronic reports.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to commission and decommission a range of security equipment and systems. It requires the ability to apply appropriate procedures and use suitable tools and equipment to commission and decommission security equipment and systems. This work applies in extra low voltage as defined through the Australian standards AS 2201 (1986) environments.

This unit may form part of the licensing requirements for persons responsible for commissioning and decommissioning security systems and equipment in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application in those work roles involving security equipment and systems. Competency requires legal and operational knowledge applicable to relevant sectors of the security industry. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for commissioning or decommissioning activities.	1.1 Applicable provisions of ***legislative*** and ***organisational requirements*** relevant to ***assignment instructions*** are identified and complied with. 1.2 Assignment instructions are obtained, reviewed and confirmed as required with ***relevant persons***. 1.3 ***Security equipment and system*** to be ***commissioned*** or ***decommissioned*** is identified and confirmed. 1.6 ***Tools***, ***equipment and materials*** needed to carry out the work are selected and checked for correct operation and safety. 1.7 ***Site access and specific site requirements*** are confirmed and organised in accordance with organisational procedures. 1.8 Appropriate ***interpersonal techniques*** are used to consult with relevant persons to ensure the work is coordinated effectively with others in the work area. 1.9 Potential and existing ***risks and hazards*** in the work area are identified and controlled in accordance with ***Occupational Health and Safety*** (***OHS***) requirements and own role, competence and authority.
2 Commission security equipment and	2.1 ***Personal protection equipment*** is selected and used in accordance with OHS requirements.

ELEMENT	PERFORMANCE CRITERIA
decommissioning activities.	in accordance with organisational procedures. 4.3 Notification of work completion is made in accordance with organisational procedures. 4.4 Work area is cleaned and restored in accordance with organisational procedures. 4.5 ***Disposal*** of decommissioned security equipment and system or components is arranged in accordance with site and organisational procedures. 4.6 Waste from commissioning and decommissioning procedures is collected, treated and disposed of in accordance with organisational procedures. 4.7 All relevant ***documentation*** is completed and securely maintained with due regard to confidentiality in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- accurately identify and correctly handle cables
- communicate in a clear and concise manner
- confirm systems are ready to be commissioned
- confirm that systems and their performance meet the required operational specification
- customise equipment and systems to client requirements
- demonstrate the operation of systems during hand-over
- download and upload digital information
- effectively operate a range of security systems and networks
- estimate and organise resource requirements
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and follow routine workplace safety procedures
- identify and report faulty equipment
- methodically prioritise and organise work tasks
- minimise disruption to surrounding work activities
- read and interpret plans and specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- safely disable security equipment and systems
- select and use suitable tools and equipment
- solder, weld and carry out basic carpentry
- solve routine problems
- source relevant commissioning and decommissioning information
- test security equipment systems and read a multimeter.
- use keypads and control panels
- use suitable tools and equipment, including hand and power tools and testing devices
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- building construction methods and types
- cable identification methods and techniques
- circuit protection requirements
- earthing systems arrangements and requirements
- electrical concepts
- electrical connections and types of electrical circuits
- emergency procedures
- isolating and testing procedures
- keypad and control panel types and functions
- methods and procedures to commission and decommission security equipment and systems
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- reporting and documentation requirements
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards
- requirements for working at height and in a confined space
- risks and hazards associated with commissioning and decommissioning procedures
- safe workplace procedures
- technical terminology
- types and functions of computer software
- types, functions and features of security equipment and systems
- types, functions and features of tools and equipment including testing devices
- waste disposal procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- accessing security equipment and systems and methodically carrying out commissioning and decommissioning procedures with minimal disruption to client services, existing structures or normal work routines
- clearly identifying commissioning and decommissioning requirements of security equipment and systems from assignment instructions and organising appropriate tools, equipment and materials to carry out work
- following safe and efficient work practices in the use of tools and equipment and accurately identifying and managing risks and hazards in the work area
- handing over security equipment and system to client ensuring a full and complete understanding of systems and network operations and functions through the provision of clear and effective instructions, information and training
- reinstating work area to a clean and safe condition, and preparing and submitting all required documentation in an accurate and prompt manner.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures
- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Legislative requirements* may relate to**:

- applicable commonwealth, state and territory legislation which affects work such as:
  - workplace safety
  - environmental issues
  - equal employment opportunity
  - industrial relations
  - anti-discrimination and diversity
- Australian building codes and regulations
- Australian Communications Authority cabling standards
- Australian standards and quality assurance requirements
- award and enterprise agreements
- evidence collection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- telecommunications
- trade practices.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- own role, responsibility and authority
- personal and professional development
- privacy and confidentiality of information
- quality assurance and continuous improvement processes and standards
- resource parameters and procedures
- roles, functions and responsibilities of security personnel
- storage and disposal of information.

***Assignment instructions* may include**:

- access to site and specific site requirements
- equipment and system location information
- equipment, tools and material requirements
- personal protection clothing and equipment requirements
- reporting requirements
- security equipment and system information:
  - features, functions and capabilities
  - installation procedures
  - manufacturer's instructions
  - service and maintenance requirements
  - type
  - warranties and guarantees
- specific client requirements
- timeframes
- work schedules
- work tasks and procedures.

***Relevant persons* may include**:

- clients
- colleagues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- engineers and technicians
- equipment and systems manufacturers
- security consultants
- security personnel
- site managers or project managers
- supervisor.

Security equipment and systems may include:

- access control systems
- audible and visual warning devices
- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electric and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- specialised access control systems eg biometrics.

Security systems may be:

- computerised
- electronic
- mechanical
- procedural.

***Commission requirements* may relate to**:

- customisation requirements
- hand over information and documentation
- monitoring and response procedures
- scheduling of commissioning
- training requirements
- type, functions and features of equipment and system.

***Decommissioning* may involve**:

- adjustments to equipment and system
- changes to hardware and software
- default system-held information
- disablement
- disconnection
- downloading system information
- reconnecting components
- removal of components.

***Tools*, *equipment and materials* may include**:

- cable testing equipment
- communications equipment
- computer disks
- computer leads and cables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- computers and computer software
- crimp tools
- drop sheet
- file
- fixing tools
- flexible rods
- hand tools
- hand-held programmers
- insulation mega
- interface PCBs
- keypads
- ladder
- multimeter
- personal protection equipment
- power tools
- router
- soldering iron
- spirit level
- strippers
- templates
- welder.

***Site access and specific site requirements* may relate to**:

- access and egress points
- access codes, keys or passes
- building codes and regulations
- obtaining security clearance
- OHS requirements
- time of access to site
- union requirements.

Interpersonal techniques may involve:

- active listening
- being non-judgemental
- being respectful and non-discriminatory
- constructive feedback
- control of tone of voice and body language
- culturally aware and sensitive use of language and concepts
- demonstrating flexibility and willingness to negotiate
- effective verbal and non-verbal communication
- maintaining professionalism
- providing sufficient time for questions and responses
- reflection and summarising
- two-way interaction
- use of plain English

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- use of positive, confident and cooperative language.

***Risks and hazards* may relate to**:

- chemical hazards eg battery corrosion
- exposed electrical wiring
- exposure to:
  - asbestos
  - building debris
  - dust
  - glass fibre
  - live power
  - natural and other gas build-up
  - noise
  - vermin
  - water
- manual handling
- non-compliance with building codes and regulations.

***Occupational Health and Safety* (*OHS*) *requirements* may relate to**:

- emergency procedures
- following confined spaces procedures
- implementation of safety policies and procedures:
  - chemicals, gas and vapour
  - isolation procedures
  - monitoring and testing procedures
  - use of personal protection equipment and clothing
  - work clearance procedures
- risk and hazard recognition
- safety training
- working with electrical wiring and cables
- working with tools and equipment.

***Personal protection equipment* may include**:

- breathing apparatus
- fire extinguisher
- first aid kit
- gloves
- head protection
- hearing protection
- knee pads
- masks
- safety boots
- safety glasses.
- warning signs and tapes
- witches hats.

***Customisation* may**

- adding system functions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

relate to:
- changing password or user code
- changing volume or length of alarms
- modifying system functions.

***Hand-over* procedures may involve**:
- a comprehensive explanation and demonstration of security equipment and system operations and functions
- clear instructions on security equipment and system maintenance
- effective user training:
  - demonstration
  - practice
  - question and answer session
  - verbal and written explanations
- provision of all relevant information and documentation:
  - company contact details
  - keying plan
  - maintenance requirements
  - manufacturer's instructions and user manuals
  - monitoring procedures
  - warranty requirements.

***Removal* procedures may involve**:
- disconnection
- dismantling
- reconnecting components
- removal.

***Results of commissioning* may include**:
- customisation of equipment and system
- date and time of commissioning
- information and documentation provided to client during hand-over
- persons equipment and system commissioned to
- type of commissioning undertaken.

***Disposal* may involve**:
- destruction
- return to client
- return to manufacturer
- return to store
- special disposal requirements for hazardous components eg radioactive components and batteries
- special storage or disposal requirements for classified or high security equipment and systems.

***Documentation* may include**:
- adjustments made to security equipment and system
- cable identification records
- client authorisations
- faulty or malfunctioning tools and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- location of security equipment and system
- materials used
- records of decommissioning procedures
- results of commissioning
- testing and inspection results
- work activity report
- written and electronic reports.

CPPSEC3039A Identify and diagnose electronic security equipment and system fault

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to identify and diagnose faults in electronic security equipment and systems. It requires the ability to conduct fault-finding inspections and checks against normal operational performance and identify and diagnose faults. This work applies in extra low voltage as defined through the Australian Standards AS 2201 (1986) environments.

This unit may form part of the licensing requirements for persons responsible for inspecting and testing security systems and equipment in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application in those work roles involving the inspection and testing of security equipment and systems. Competency requires legal and operational knowledge applicable to relevant sectors of the security industry. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for diagnosis of faults.	1.1 Applicable provisions of ***legislative*** and ***organisational requirements*** relevant to ***assignment instructions*** are identified and complied with.
	1.2 Assignment instructions and other ***relevant information*** is obtained and reviewed.
	1.3 Appropriate ***interpersonal techniques*** are used to consult with ***relevant persons*** to determine extent of ***faults***.
	1.4 Normal operational functions and performance parameters of ***security equipment and system*** are confirmed against specifications.
	1.5 ***Tools***, ***equipment and materials*** are organised and checked for correct operation and safety.
	1.6 ***Site access and specific site requirements*** are identified and confirmed with relevant persons in accordance with organisational procedures.
	1.7 Potential and existing ***risks and hazards*** in the work area are identified and controlled in accordance with ***Occupational Health and Safety*** (***OHS***) requirements and own role, competence and authority.
2 Diagnose faults.	2.1 Suitable ***personal protection equipment*** is selected, used and maintained in accordance with OHS and organisational requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.2 Equipment and system isolation requirements are complied with in accordance with OHS guidelines.
	2.3 Networked security system components are checked and tested for operational performance in accordance with manufacturer's instructions.
	2.4 Logical diagnostic and ***systematic fault-finding methods*** are applied to diagnose faults employing measurements and estimations of system operating parameters.
	2.5 Suspected fault scenarios are tested as being the source of system problems.
	2.6 Faults are diagnosed on the basis of an accurate assessment of test results, historical information and ***operational data***.
	2.7 Specialist advice is sought as required to assist with fault diagnosis in accordance with organisational procedures.
3 Complete and report diagnosis.	3.1 Findings of fault diagnosis are documented and presented to relevant persons in accordance with organisational procedures.
	3.2 Recommendations include options for fault rectification and are supported by verifiable data.
	3.3 Presented information uses clear and concise language and meets organisational standards for style, format and accuracy.
	3.4 Complex faults are referred for specialist advice in accordance with organisational procedures.
	3.5 Work area is cleaned and restored in accordance with organisational procedures.
	3.6 Waste is collected, treated and disposed of in accordance with organisational procedures.
	3.7 Relevant ***documentation*** is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- accurately identify and diagnose faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- accurately identify and handle cables
- communicate in a clear and concise manner
- complete documentation
- demonstrate basic logic and lateral thinking processes
- download and upload digital information
- estimate and organise materials, tools and equipment requirements
- evaluate test results
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and follow routine workplace safety procedures
- identify and report faulty equipment
- operate security equipment and systems
- organise and prioritise work tasks
- read a multimeter
- read and interpret plans and specifications
- solve routine problems
- test security equipment and systems
- use keypads and control panels
- use suitable tools and equipment, including hand and power tools and testing devices
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- basics of circuit diagrams
- building construction methods and types
- cable identification methods and techniques
- circuit protection requirements
- common equipment and system faults
- earthing systems arrangements and requirements
- electrical concepts
- emergency procedures
- fault-finding techniques
- isolating and testing procedures
- keypad and control panel types and functions
- operational principles of data transmission networks
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- reporting and documentation requirements
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- requirements for working at height and in a confined space
- risks and hazards associated with working with security equipment and systems
- safe workplace procedures
- technical terminology
- tests to confirm equipment and system operation
- types and functions of computer software
- types of security equipment and system configurations
- types, functions and features of security equipment and systems
- types, functions and features of tools and equipment including testing devices
- waste disposal procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of: • ascertaining normal performance of security equipment and systems against specification schedules • cleaning and storing tools and equipment, reinstating work area in a clear and safe condition, and updating and submitting all required documentation in an accurate and prompt manner • conducting inspections and tests of security equipment and systems in a methodical manner and accurately identifying and diagnosing faults based on an assessment of test data, site variables, operational and historical information • following safe and efficient work practices in the use of tools and equipment and effectively managing risks and hazards in the work area • organising appropriate tools, equipment and materials to carry out checks and testing of a range of security equipment and systems • preparing and presenting accurate and concise documentation detailing fault diagnosis and repair recommendations based on verifiable data.
Context of and specific	Context of assessment includes:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

resources for assessment	• a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement. Resource implications for assessment include: • access to plain English version of relevant statutes and procedures • access to a registered provider of assessment services • access to a suitable venue and equipment • assessment instruments including personal planner and assessment record book • work schedules, organisational policies and duty statements. Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment	This unit of competency could be assessed using the following methods of assessment: • observation of processes and procedures • questioning of underpinning knowledge and skills.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge. Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical. Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Legislative requirements* may relate to**:

- applicable commonwealth, state and territory legislation which affects work such as:
  - workplace safety
  - environmental issues
  - equal employment opportunity
  - industrial relations
  - anti-discrimination and diversity
- Australian building codes and regulations
- Australian Communications Authority cabling standards
- Australian standards and quality assurance requirements
- award and enterprise agreements
- evidence collection
- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- telecommunications
- trade practices.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- own role, responsibility and authority
- personal and professional development
- privacy and confidentiality of information
- quality assurance and continuous improvement processes and standards
- resource parameters and procedures
- roles, functions and responsibilities of security personnel
- storage and disposal of information.

***Assignment instructions* may include**:

- access to site and specific site requirements
- equipment and system location information
- equipment, tools and material requirements
- personal protection clothing and equipment requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reporting requirements
- security equipment and system information:
  - features, functions and capabilities
  - installation procedures
  - manufacturer's instructions
  - service and maintenance requirements
  - type
  - warranties and guarantees
- specific client requirements
- timeframes
- work schedules
- work tasks and procedures.

***Relevant information* may relate to**:

- historical performance information
- operational data
- site variables:
  - equipment and system usage
  - environmental conditions
  - building structures
  - client habits.

Interpersonal techniques may involve:

- active listening
- being non-judgemental
- being respectful and non-discriminatory
- constructive feedback
- control of tone of voice and body language
- culturally aware and sensitive use of language and concepts
- demonstrating flexibility and willingness to negotiate
- effective verbal and non-verbal communication
- maintaining professionalism
- providing sufficient time for questions and responses
- reflection and summarising
- two-way interaction
- use of plain English
- use of positive, confident and cooperative language.

***Relevant persons* may include**:

- clients
- colleagues
- engineers and technicians
- equipment and systems manufacturers
- security consultants
- security personnel
- site managers or project managers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- supervisor.

***Faults* may be**:

- due to operational misuse
- due to previous installation
- electronic
- environmental
- mechanical
- procedural
- software-related.

Security equipment and systems may include:

- access control systems
- audible and visual warning devices
- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electric and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- specialised access control systems eg biometrics.

Security systems may be:

- computerised
- electronic
- mechanical
- procedural.

***Tools*, *equipment and materials* may include**:

- cable testing equipment
- circuit board cleaner
- communications equipment
- computer cables and leads
- computers and computer software including back-up disks
- crimp tools
- drop sheet
- file
- glass break tester
- hand tools
- interface PCBs
- ladder
- multimeter
- personal protection equipment
- power tools
- routers
- spirit level.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

***Site access and specific site requirements* may relate to**:	• access and egress points • access codes, keys or passes • building codes and regulations • heritage requirements • noise control • obtaining security clearance • OHS requirements • time of access to site • union requirements.

***Risks and hazards* may relate to**:	• chemical hazards eg battery corrosion
	• exposed electrical wiring
	• exposure to:
	  • asbestos
	  • building debris
	  • dust
	  • glass fibre
	  • live power
	  • natural and other gas build-up
	  • noise
	  • vermin
	  • water
	• manual handling
	• non-compliance with building codes and regulations.

***Occupational Health and Safety* (*OHS*) *requirements* may relate to**:	• emergency procedures
	• following confined spaces procedures
	• implementation of safety policies and procedures:
	  • chemicals, gas and vapour
	  • isolation procedures
	  • monitoring and testing procedures
	  • use of personal protection equipment and clothing
	  • work clearance procedures
	• risk and hazard recognition
	• safety training
	• working with electrical wiring and cables
	• working with tools and equipment.

***Personal protection equipment* may include**:	• breathing apparatus • fire extinguisher • first aid kit • gloves • head protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• hearing protection • knee pads • masks • safety boots • safety glasses • warning signs and tapes • witches hats.
***Systematic fault-finding* methods may involve**:	• identifying fault in shortest time possible • progressively isolating fault • reviewing all available information • using a methodical approach • using testing equipment • verifying continued existence of problem.
Operational data may be found in:	• back-up information • central monitoring station records • maintenance documentation • manufacturer's instructions • software records • visual inspections.
***Documentation* may include**:	• faulty or malfunctioning tools and equipment • location of security equipment and system • materials used • recommendations for repair • security equipment and system faults • testing and inspection results • warranty conditions • work activity report • written and electronic reports.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to carry out routine servicing of a range of security equipment, systems, plant and equipment. It requires the ability to identify maintenance requirements, follow correct procedures, use safe and efficient work practices, maintain a hazard-free work area, accurately document and maintain information systems. This work applies in extra low voltage as defined through the Australian standards AS 2201 (1986) environments.

This unit may form part of the licensing requirements for persons responsible for maintaining security equipment and systems in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application in those work roles involving the maintenance of security equipment and systems. Competency requires legal and operational knowledge applicable to relevant sectors of the security industry. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for maintenance.	1.1 Applicable provisions of ***legislative*** and ***organisational requirements*** relevant to ***assignment instructions*** are identified and complied with. 1.2 Assignment instructions are obtained, reviewed and confirmed as required with ***relevant persons***. 1.3 ***Maintenance*** requirements of ***security equipment and system*** are confirmed. 1.4 Security equipment and systems to be inspected and serviced are identified and confirmed. 1.5 ***Tools***, ***equipment and materials*** needed to carry out the work are selected and checked for correct operation and safety. 1.6 Faulty or unsafe tools are identified and segregated for repair or replacement in accordance with organisational procedures. 1.7 Potential and existing ***risks and hazards*** in the work area are identified and controlled in accordance with ***Occupational Health and Safety*** (***OHS***) requirements and own role, competence and authority.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2 Carry out service of security equipment and systems.	2.1 ***Personal protection equipment*** is selected and used in accordance with OHS requirements. 2.2 Security equipment and system identified for maintenance is ***accessed*** with minimal ***disruption*** to services and others in the work area. 2.3 Inspections and checks are conducted to identify any damage, obstruction or component wear. 2.4 Routine servicing of security equipment and system is carried out in accordance with manufacturer's instructions. 2.5 Common faults in security equipment and system are diagnosed and appropriate adjustments made in accordance with manufacturer's instructions. 2.6 Complex faults and repair requirements are identified and reported for specialist attention.
3 Complete maintenance activities.	3.1 Serviced security equipment and system is checked and confirmed for correct operation and serviceability. 3.2 Work area is restored and tools and equipment are cleaned, maintained and stored in accordance with organisational procedures. 3.3 Waste from service activities is collected, treated and disposed of or recycled in accordance with organisational procedures. 3.4 Malfunctions, faults, wear or damage to tools or equipment is documented and reported for repair or replacement in accordance with organisational procedures. 3.5 Notification of work completion is made to relevant persons in accordance with organisational procedures. 3.6 Relevant ***documentation*** is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- apply safe and environmentally aware work practices
- carry out maintenance of a range of security equipment and systems
- communicate in a clear and concise manner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- complete documentation
- estimate and organise materials, tools and equipment requirements
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and diagnose faults and malfunctions
- identify and follow routine workplace safety procedures
- maintain an inventory of equipment and consumables associated with maintenance activities
- measure and calculate volumes, consumption and servicing requirements
- read and interpret a multimeter
- read and interpret plans and specifications
- recognise routine and complex faults and malfunctions of a range of security equipment and systems
- solve routine problems
- test and confirm operational effectiveness of security equipment and systems
- use suitable tools and equipment, including hand and power tools
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- cable identification, termination and connection procedures
- common security equipment and system faults
- earthing systems arrangements and requirements
- electrical concepts
- emergency procedures
- equipment calibration requirements
- fault-finding techniques
- maintenance schedules and procedures relevant to security equipment and systems
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- reporting and documentation requirements
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards
- requirements for working in a confined space
- risks and hazards associated with maintenance procedures
- safe workplace procedures
- technical terminology
- tests to confirm security equipment and system operation
- types of faults associated with security equipment and systems
- types, functions and features of security equipment and systems
- waste disposal procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- accessing security equipment and system functioning with minimal disruption to others in the work area and normal services
- accurately diagnosing and rectifying security equipment and system irregularities and referring complex faults for specialist advice
- applying appropriate methods and using suitable tools and equipment to carry out maintenance of a range of security equipment and systems
- cleaning and storing tools and equipment and reinstating work site to a clean and safe condition
- organising own work tasks within specified maintenance timeframes and completing documentation related to maintenance services
- determining and implementing maintenance strategies and support processes to maintain the continuity of operations
- interpreting and complying with all applicable legislative and licensing requirements.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures
- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Legislative requirements* may relate to**:

- applicable commonwealth, state and territory legislation which affects work such as:
  - workplace safety
  - environmental issues
  - equal employment opportunity
  - industrial relations
  - anti-discrimination and diversity
- Australian building codes and regulations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian Communications Authority cabling standards
- Australian standards and quality assurance requirements
- award and enterprise agreements
- evidence collection
- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- telecommunications
- trade practices.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- own role, responsibility and authority
- personal and professional development
- privacy and confidentiality of information
- quality assurance and continuous improvement processes and standards
- resource parameters and procedures
- roles, functions and responsibilities of security personnel
- storage and disposal of information.

***Assignment instructions* may include**:

- access to site and specific site requirements
- equipment, tools and material requirements
- personal protection clothing and equipment requirements
- reporting requirements
- security equipment and system information:
  - features, functions and capabilities
  - manufacturer's instructions
  - service and maintenance requirements
  - warranties and guarantees
- security equipment and system location information
- specific client requirements
- timeframes
- work schedules
- work tasks and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

***Relevant persons* may include**:	• clients • colleagues • engineers and technicians • equipment and systems manufacturers • security consultants • security personnel • site managers or project managers • supervisor.
Maintenance may include:	• back-ups • changing user codes • cleaning • confirmation of operational effectiveness • identification and replacement of worn parts • inspections • lubrication • minor modifications and adjustments • servicing.
Security equipment and systems may include:	• access control systems • audible and visual warning devices • cameras and monitors • commercial and residential alarm systems • detection devices • electric and mechanical fire safety and fire locking systems • electronic locks and locking systems • electronic readers • electronic screen equipment • intercoms and control panels • security doors and door controls • specialised access control systems eg biometrics.
***Tools*, *equipment and materials* may include**:	• cable testing equipment • communications equipment • computer and software • diagnostics and testing equipment eg multimeter • extension cords • fixing tools • generators • hand tools • installation tools • ladder • materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cable
- fixings
- grease
- patch materials
- screws
- sealants
- wiring
- solder

- personal protection equipment
- power tools
- staple guns
- torches and lighting.

***Risks and hazards* may relate to**:

- chemical hazards eg battery corrosion
- exposed electrical wiring
- exposure to:
  - asbestos
  - building debris
  - dust
  - glass fibre
  - live power
  - natural and other gas build-up
  - noise
  - vermin
  - water
- manual handling
- non-compliance with building codes and regulations.

***Occupational Health and Safety* (*OHS*) *requirements* may relate to**:

- emergency procedures
- following confined spaces procedures
- implementation of safety policies and procedures:
  - chemicals, gas and vapour
  - isolation procedures
  - monitoring and testing procedures
  - use of personal protection equipment and clothing
  - work clearance procedures
- risk and hazard recognition
- safety training
- working with electrical wiring and cables
- working with tools and equipment.

***Personal protection equipment* may**

- breathing apparatus
- fire extinguisher

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

include:

- first aid kit
- gloves
- head protection
- hearing protection
- knee pads
- masks
- safety boots
- safety glasses.
- warning signs and tapes
- witches hats.

***Access* may relate to**:

- disablement of system
- modem access
- phone line access
- removal of housing
- use of access code
- use of access token
- use of keys.

***Disruptions* may affect**:

- access
- business operations
- noise
- security
- time
- use of equipment.

***Documentation* may include**:

- adjustments, modifications and servicing undertaken
- faulty or malfunctioning tools and equipment
- materials used, parts and components replaced
- operational checks and maintenance conducted
- recommended repairs or disposal of equipment
- security equipment and system faults and diagnosis
- testing and inspection results
- warranty conditions
- written and electronic reports.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to provide an estimate and quote on security systems to clients. It requires the ability to identify client security requirements and prepare an accurate quote which provides full details of security equipment and system provisions. It also requires an ability to interpret plans, designs and specifications and calculate labour and material costs.

This unit may form part of the licensing requirements for persons engaged in the provision and installation of security equipment or systems in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application to a range of technical security work roles in the security industry. Work is performed under limited supervision and competency requires some judgement and decision-making. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify client requirements.	1.1 Security ***assessment*** is undertaken to identify client requirements in accordance with organisational procedures. 1.2 ***Security system*** and ***installation requirements*** are identified to meet client requirements. 1.3 Relevant ***Occupational Health and Safety*** (***OHS***), ***legislative*** and ***organisational requirements*** are identified and interpreted to ensure compliance. 1.4 ***Appropriate information*** is interpreted to identify correct ***resources*** for estimate and quote. 1.5 Ability to provide appropriate security system is assessed in accordance with client requirements.
2 Estimate costs.	2.1 ***Organisational rate schedules*** are identified and used to establish pricing information. 2.2 Quotations for resources are obtained to ensure fair comparison between suppliers. 2.3 Resource availability and delivery dates are confirmed with supplier in accordance with organisational procedures. 2.4 Site inspection is conducted to identify ***installation requirements*** and contingencies for ***possible problems*** considered.
3 Finalise quotation.	3.1 ***Quotation*** is prepared providing an accurate and concise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	summary of security system supply and installation costs.
	3.2 Quotation is presented to client in accordance with agreed timeframes and organisational requirements for language, style and format.
	3.3 Required ***changes or variations*** are negotiated to meet client and organisational requirements
	3.4 Client file is created and ***documentation*** regularly updated and maintained in accordance with legislative requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- basic analysis of information to identify problems and contingencies
- complete workplace documentation and reports
- information technology
- literacy skills to understand and communicate security information (reading, writing, speaking, numeracy and listening)
- numeracy skills to compare prices and accurately calculate estimates and quotations to return a profit where possible
- personal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- present a professional image
- problem solving and negotiation
- questioning to check understanding
- read and interpret plans, drawings and specifications.

Required knowledge

- difference between negative and positive language
- differences between written and spoken English
- duty of care requirements
- how to read and use body language to gain confidence of clients
- how to safeguard confidential information
- how to use business equipment to present information
- legislation, regulations and contractual obligations applicable to the provision of quotations and installation of security systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- organisational policies and standards relating to the presentation of information for clients
- organisational standards and procedures for client service
- organisational standards for the presentation and maintenance of written information
- procedures and channels for reporting information
- rights and responsibilities of clients
- types and functions of security equipment and systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- complying with organisational policies and procedures and relevant legislation in the development of quotations for the provision of security systems
- conducting an assessment of client security needs to identify appropriate security system and installation requirements
- confirming client requirements and system options from information gathered and discussing potential problems and contingencies
- preparing and documenting accurate and detailed estimates and quotations for the provision and installation of security systems within agreed timeframes
- using appropriate communication skills to liaise and negotiate system requirements and prices with clients and suppliers.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to a registered provider of assessment services
- access to a suitable venue and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- access to plain English version of relevant statutes and procedures
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency should be assessed using questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment may involve:

- discussions with client
- questioning of police, insurance companies, government agencies and other relevant bodies
- review of client floor plans and supporting documentation
- visual inspections of client premises or building.

***Security system* may**

- computerised

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

be:	• electronic • mechanical • procedural • specialised (eg biometric).
***Installation requirements* may relate to**:	• cherry picker • commercial and residential alarm systems • drill • electronic equipment (eg screen equipment, video cameras and monitors) • ladder • scaffolding • specialist tools or equipment • sub-contract labour.
***Organisational requirements* may relate to**:	• access and equity policies, principles and practices • business and performance plans • client service standards • code of conduct, code of ethics • communication and reporting procedures • complaint and dispute resolution procedures • emergency and evacuation procedures • employer and employee rights and responsibilities • OHS policies, procedures and programs • own role, responsibility and authority • personal and professional development • privacy and confidentiality of information • quality assurance and continuous improvement processes and standards • resource parameters and procedures • roles, functions and responsibilities of security personnel • storage and disposal of information.

***Occupational Health and Safety* (*OHS*) *requirements* may relate to**:	• controlling and minimising risks
	• correct manual handling including shifting, lifting and carrying
	• first aid
	• identifying and reporting hazards and risks
	• knowledge of emergency and evacuation procedures
	• transporting and storing dangerous goods
	• using and maintaining equipment:
	  • business equipment and technology
	  • communications equipment and technology
	  • personal protection equipment
	  • security equipment and technology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• using and storing hazardous materials and substances.

***Legislative requirements* may relate to**:	• applicable commonwealth, state and territory legislation which affects work such as:
	  • workplace safety
	  • environmental issues
	  • equal employment opportunity
	  • industrial relations
	  • anti-discrimination and diversity
	• Australian building codes and regulations
	• Australian Communications Authority cabling standards
	• Australian standards and quality assurance requirements
	• award and enterprise agreements
	• evidence collection
	• freedom of information
	• licensing arrangements and certification requirements
	• privacy requirements
	• relevant industry codes of practice
	• telecommunications
	• trade practices.

***Appropriate information* may be**:	• drawings • plans and schematics • texts.
***Resources* may be**:	• equipment • labour • materials.
***Organisational rate schedules* may relate to**:	• industry based labour rates • insurance • organisational labour rates • standard equipment costs • standard installation costs • standard materials costs • standard monitoring costs • standard service costs • standard unit costs.
***Installation requirements* may relate to**:	• cherry picker • commercial and residential alarm systems • drill • electronic equipment (eg screen equipment, video cameras and monitors) • ladder • scaffolding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specialist tools or equipment
- sub-contract labour.

***Possible problems* may relate to**:

- availability, delivery
- cash flow
- crowds
- equipment or system faults
- insurance, time penalties, disputes
- limited access to assistance and resources
- own skills and knowledge
- problems with security or communication equipment
- restricted site access, building progress
- risks and hazards
- vehicles
- weather and environment conditions.

***Quotations* are written and may include**:

- client brief
- company identification information
- contractual arrangements
- cost breakdown
- equipment or system locations and positions
- equipment or system type
- parameters of system capabilities
- recommended and agreed security system
- results of security assessment
- service and maintenance needs
- suitable sign-off arrangements
- system capabilities
- system specifications and configuration
- terms of trade
- timelines for provision and installation
- warranty, guarantee, liability and terms and conditions.

***Changes or variations* may relate to**:

- changes in cost
- delays
- exclusions
- installation
- monitoring
- revised or additional services
- revised or new equipment or system needs
- service and product warranty, guarantee, liability and terms and conditions
- service commencement or completion dates
- terms of trade.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

***Documentation* may include**:	• client details • documented quotation • records of client and supplier communication including actions taken • security equipment or system options and costs • supplier information.

CPPSEC3049A Modify and repair security equipment and system

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to conduct minor modifications and repairs on a range of security equipment and systems. It requires the ability to diagnose and rectify common basic faults and refer more complex faults for specialist attention. This work applies to extra-low voltage environments.

This unit may form part of the licensing requirements for persons responsible for maintaining security equipment and systems in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency has application in those work roles involving the maintenance of security equipment and systems. Competency requires legal and operational knowledge applicable to relevant sectors of the security industry. The knowledge and skills described in this unit are to be applied within relevant legislative and organisational guidelines.

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for maintenance.	1.1 Applicable provisions of ***legislative*** and ***organisational requirements*** relevant to ***assignment instructions*** are identified and complied with.
	1.2 Assignment instructions are obtained, reviewed and confirmed as required with ***relevant persons***.
	1.3 ***Maintenance*** requirements of ***security equipment and system*** are confirmed.
	1.4 Security equipment and system to be ***modified*** or ***repaired*** is identified and confirmed.
	1.5 ***Tools***, ***equipment and materials*** needed to carry out the work are selected and checked for correct operation and safety.
	1.6 Potential and existing ***risks and hazards*** in the work area are identified and controlled in accordance with ***Occupational Health and Safety*** (***OHS***) requirements and own role, competence and authority.
2 Carry out maintenance.	2.1 ***Personal protection equipment*** is selected and used in accordance with OHS requirements.
	2.2 Security equipment and system identified for maintenance is ***accessed*** with minimal ***disruption*** to services and others in the work area.
	2.3 Security equipment and system is inspected and assessed for operational effectiveness against normal operating criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Common faults in security equipment and system are diagnosed and appropriate repairs or modifications are carried out in accordance with manufacturer's instructions.
	2.5 Complex faults and repair requirements are identified and reported for specialist attention.
	2.6 Routine servicing of security equipment and system is carried out in accordance with manufacturer's instructions.
	2.7 Safe workplace practices are applied throughout maintenance and repair procedures in accordance with OHS requirements.
3 Complete and document maintenance activities.	3.1 Security equipment and system components are reassembled and tested for correct operation in accordance with approved procedures.
	3.2 Work area is restored and tools and equipment are cleaned, maintained and stored in accordance with organisational procedures.
	3.3 Waste from service and repair activities is collected, treated and disposed of or recycled in accordance with organisational procedures.
	3.4 Malfunctions, faults, wear or damage to tools or equipment is documented and reported for repair or replacement in accordance with organisational procedures.
	3.5 Notification of work completion is made to relevant persons in accordance with organisational procedures.
	3.6 Relevant ***documentation*** is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- apply safe and environmentally aware work practices
- carry out maintenance, modifications and repairs on a range of security equipment and systems
- commission security equipment and systems
- communicate in a clear and concise manner
- complete documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- conduct basic carpentry and fitting, soldering, welding, and drilling
- estimate and organise materials, tools and equipment requirements
- identify and comply with applicable legislative requirements including licensing
- identify and control workplace hazards
- identify and diagnose faults and malfunctions
- identify and follow routine workplace safety procedures
- maintain an inventory of equipment and consumables associated with maintenance activities
- measure and calculate volumes, consumption and servicing requirements
- read and interpret a multimeter
- read and interpret plans and specifications
- recognise routine and complex faults and malfunctions of a range of security equipment and systems
- solve routine problems
- test and confirm operational effectiveness of security equipment and systems
- use suitable tools and equipment, including hand and power tools
- work in confined spaces.

Required knowledge

- applicable legislative requirements including licensing and client confidentiality
- cable identification, termination and connection procedures
- earthing systems arrangements and requirements
- electrical concepts
- emergency procedures
- fault-finding techniques
- maintenance procedures relevant to security equipment and systems
- procedures for accessing and storing tools, equipment and materials
- procedures for reporting malfunctioning or faulty tools and equipment
- reporting and documentation requirements
- requirements for commissioning of security equipment and systems
- requirements for compliance with Australian building codes and regulations and Australian Communications Authority cabling standards
- requirements for working in a confined space
- risks and hazards associated with maintenance procedures
- safe workplace procedures
- security equipment and system configurations and methods of programming
- security equipment and system repair techniques
- technical terminology
- types of faults associated with security equipment and systems
- types, functions and features of security equipment and systems
- waste disposal procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- welding, grinding and oxy-acetylene cutting principles and procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- interpreting and complying with all applicable legislative and licensing requirements for repair work
- accessing security equipment and system with minimal disruption to others in the work area and normal services
- applying appropriate methods and using suitable tools and equipment to carry out maintenance, repairs and modifications on a range of security equipment and systems
- cleaning and storing tools and equipment and reinstating work site to a clean and safe condition
- organising own work tasks within specified repair timeframes and completing documentation related to modification or repair
- inspecting and testing security equipment and system for correct operation and accurately identifying faults and malfunctions
- safely following maintenance and repair procedures and carrying out checks to ensure integrity and security of security equipment and system.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures
- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Legislative requirements* may relate to**:

- applicable commonwealth, state and territory legislation which affects work such as:
  - workplace safety
  - environmental issues
  - equal employment opportunity
  - industrial relations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- anti-discrimination and diversity
- Australian Communications Authority cabling standards
- Australian building codes and regulations
- Australian standards and quality assurance requirements
- award and enterprise agreements
- evidence collection
- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- telecommunications
- trade practices.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- OHS policies, procedures and programs
- own role, responsibility and authority
- personal and professional development
- privacy and confidentiality of information
- quality assurance and continuous improvement processes and standards
- resource parameters and procedures
- roles, functions and responsibilities of security personnel
- storage and disposal of information.

Maintenance may include:

- cleaning
- minor modifications and adjustments
- routine repairs
- servicing.

***Assignment instructions* may include**:

- access to site and specific site requirements
- equipment, tools and material requirements
- personal protection clothing and equipment requirements
- reporting requirements
- security equipment and system information:
  - features, functions and capabilities
  - manufacturer's instructions
  - service and maintenance requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- warranties and guarantees
- security equipment and system location information
- specific client requirements
- timeframes
- work schedules
- work tasks and procedures.

***Relevant persons* may include**:
- clients
- colleagues
- engineers and technicians
- equipment and systems manufacturers
- security consultants
- security personnel
- site managers or project managers
- supervisor.

***Maintenance* may include**:
- minor modifications
- repairs
- servicing.

Security equipment and systems may include:
- access control systems
- audible and visual warning devices
- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electric and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- specialised access control systems eg biometrics.

***Modifications* may relate to**:
- change in system capabilities and functions
- locations, placement and positions
- monitoring requirements.

***Repairs* may be made**:
- on-site
- remotely.

***Tools*, *equipment and materials* may include**:
- cable testing equipment
- communications equipment
- computer and software
- fixing tools
- hand tools
- ladder

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- materials:
  - cable
  - fixings
  - grease
  - patch materials
  - screws
  - sealants
  - wiring
  - solder
- multimeter
- personal protection equipment
- power tools.

***Risks and hazards* may relate to**:

- chemical hazards eg battery corrosion
- exposed electrical wiring
- exposure to:
  - asbestos
  - building debris
  - dust
  - glass fibre
  - live power
  - natural and other gas build-up
  - noise
  - vermin
  - water
- manual handling
- non-compliance with building codes and regulations.

***Occupational Health and Safety* (*OHS*) *requirements* may relate to**:

- emergency procedures
- following confined spaces procedures
- implementation of safety policies and procedures:
  - chemicals, gas and vapour
  - isolation procedures
  - monitoring and testing procedures
  - use of personal protection equipment and clothing
  - work clearance procedures
- risk and hazard recognition
- safety training
- working with electrical wiring and cables
- working with tools and equipment.

***Personal protection equipment* may**

- breathing apparatus
- fire extinguisher

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

include:	• first aid kit • gloves • head protection • hearing protection • knee pads • masks • safety boots • safety glasses. • warning signs and tapes • witches hats.
***Access* may relate to**:	• disablement of system • modem access • phone line access • removal of housing • use of access code • use of access token • use of keys.
***Disruptions* may affect**:	• access • business operations • noise • security • time • use of equipment.
***Documentation* may include**:	• faulty or malfunctioning tools and equipment • materials used, parts and components replaced • operational checks conducted • recommended repairs or disposal of equipment • repairs, adjustments or servicing undertaken • security equipment and system faults and diagnosis • testing and inspection results • written and electronic reports.

MEM03001 Perform manual production assembly

Modification History

Release 1. Supersedes and is equivalent to MEM03001B Perform manual production assembly

Application

This unit of competency defines the skills and knowledge required by production workers to assemble components and/or sub-assemblies in a production environment, and applies to assembly operations that are manual in nature and do not require complex adjustments.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of manual handling is required unit MEM11011 Undertake manual handling should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

Where the selection and use of power tools is required unit MEM18002 Use power tools/hand held operations should also be selected.

This unit should not be selected when unit MEM18055 Dismantle, replace and assemble engineering components has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Assembly

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Select assembly equipment and components**	2.1	Select assembly equipment according to instructions or job sheets
		2.2	Obtain components/sub-assemblies and arrange for assembly process
		2.3	Use equipment and tools in a safe manner
3	**Perform assembly and tests**	3.1	Assemble components in the correct sequence to meet specifications
		3.2	Test and check assembly for compliance to job sheet requirements, taking appropriate action for non-compliance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
4	**Store and protect assembly**	4.1 Handle and store components and/or assemblies safely and in a manner least likely to cause damage
		4.2 Record information on assembly data production schedules, job sheets, checklists and other standard forms and templates

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components/sub-assemblies include:	• parts that make up the sub-assembly and components
Recorded/input includes one or more of the following:	• production schedules • job sheets • checklists
Tested/check includes:	• testing/checking according to specification of assembled product

Unit Mapping Information

Assessment Requirements for MEM03001 Perform manual production assembly

Modification History

Release 1. Supersedes and is equivalent to MEM03001B Perform manual production assembly

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate tools, components, sub-assemblies and equipment for required assembly tasks
- using appropriate handling procedures to minimise damage to components and/or assemblies
- assembling components in a production environment
- testing and/or checking assemblies against specifications
- recognising and taking appropriate remedial action for any out-of-specification assembly
- storing components and assemblies following SOPs
- completing production records as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- correct application, use and storage of assembly tools and equipment
- sequence in which the assemblies are to be performed
- storage location of component/sub-assemblies
- required tests and/or checks for assembly compliance with specifications and required action for non-conformance
- component assembly documentation procedures
- potential damage that can occur to components and assemblies through the use of inappropriate handling and/or unsafe storage procedures.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in this unit at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM03002 Perform precision assembly

Modification History

Release 1. Supersedes and is equivalent to MEM03002B Perform precision assembly

Application

This unit of competency defines the skills and knowledge required to assemble and test complex engineering components and mechanical assemblies in a production manufacturing environment.

Assembly activities typically involve build-to-order work and/or low volume and/or complex assemblies and/or long assembly timeframes.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of manual handling is required unit MEM11011 Undertake manual handling should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Plan precision assembly**	2.1	Check all components/sub-assemblies against job sheet, assembly list or equivalent instructions
		2.2	Carry out fitting requirements and sequential assembly planning where applicable
		2.3	Select tools, equipment and components/sub-assemblies to meet job requirements
3	**Assemble engineering components**	3.1	Identify any defective or faulty components/sub-assemblies and take action according to SOPs
		3.2	Prepare functional components/sub-assemblies for assembly
		3.3	Apply assembly techniques and principles appropriate to the job requirements
		3.4	Fit components of assembly to ensure correct positioning and conformance with specifications
		3.5	Test assembly to ensure that components interface/interact according to operational specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Adjust mechanical assemblies**	4.1 Perform final adjustments on assembly to ensure it meets operational specifications using predetermined standards of quality and safety
	4.2 Identify any faulty assemblies for rework by operator or, where the fault is outside the scope of the workstation, take appropriate action for fault correction by others
	4.3 Mark the completed assembly following SOPs
5 **Protect assembly from damage and complete documentation**	5.1 Handle and store components and/or assemblies according to procedures and in a manner least likely to cause damage
	5.2 Record information on assembly data production schedules, job sheets, checklists and other standard forms and templates

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM03002 Perform precision assembly

Modification History

Release 1. Supersedes and is equivalent to MEM03002B Perform precision assembly

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing a sequential assembly plan of components and sub-assemblies, including the selection of appropriate tools to meet job requirements
- using appropriate handling procedures to minimise damage to components and/or assemblies
- fitting, assembling and testing engineering components or mechanical assemblies to operational specifications
- identifying any faulty components or assembly and taking action according to SOPs
- storing components and assemblies following SOPs
- completing production records as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- precision assembly techniques and fitting requirements
- characteristics, use and storage requirements of relevant tools and equipment used in precision assembly of components
- sources of the component/sub-assemblies
- correct sequence in which precision assembly is performed
- procedures for testing and checking assembled components
- identification of non-conformance in precision assemblies and procedures for correction
- relevant assembly production record keeping requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in precision assembly at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM03003 Perform sheet and plate assembly

Modification History

Release 1. Supersedes and is equivalent to MEM03003B Perform sheet and plate assembly

Application

This unit of competency defines the skills and knowledge required to assemble prefabricated/formed components using a range of joining techniques in a production assembly environment.

Where soft soldering is required unit MEM05003 Perform soft soldering should also be selected.

Where brazing and/or silver soldering is required unit MEM05006 Perform brazing and/or silver soldering should also be selected.

Where production welding skills are required unit MEM05013 Perform manual production welding should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Assembly

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements
2	**Select and use sheet and plate assembly equipment**	2.1	Select assembly equipment to suit application in accordance with job requirements
		2.2	Use equipment in a safe manner according to SOPs
3	**Assemble fabrications**	3.1	Assemble products and verify against job requirements
		3.2	Produce assembly following correct sequence of operations
		3.3	Join assemblies/fabrications to job requirements using specified joining techniques
		3.4	Test/check assembly for compliance with job requirements using SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Protect assembly from damage**	4.1 Handle and store assemblies/fabrications according to SOPs and in a manner least likely to cause damage

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Job requirements can be identified from one (1) or more of the following:	• specifications • sketches • job sheets • work instructions • verbal instructions
Assembly equipment includes one (1) or more of the following:	• jigs • fixtures • other appropriate tools
Application includes one (1) or more of the following:	• manufacture of white goods • appliances • electrical cabinets • metal furniture • cladding and shelving • box trailer bodies • ductwork • other sheet and plate assemblies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Joining techniques include one (1) or more of the following:	• seaming • bonding • riveting

Assessment Requirements for MEM03003 Perform sheet and plate assembly

Modification History

Release 1. Supersedes and is equivalent to MEM03003B Perform sheet and plate assembly

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting job requirements from verbal or written job instructions for sheet and plate assembly
- selecting appropriate tools, components and equipment for required assembly tasks
- using appropriate handling procedures to minimise damage to components and/or assemblies
- using equipment safely to assemble and join products to job requirements using specified assembly and joining techniques
- checking assembly to ensure compliance
- handling and storing components, fabrications and assemblies.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- purpose of a sequence of operations
- application and function of assembly equipment, including jigs, fixtures and other appropriate tools
- safety precautions and operating characteristics of assembly equipment and tools
- application and limitations of different joining techniques
- surface preparation and joining techniques
- assembly tests/checks
- safe handling and storage procedures applicable to components, fabrications and/or assemblies
- potential damage that can occur to components, fabrications and assemblies through the use of inappropriate handling and/or unsafe storage procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in perform sheet and plate assembly at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM03004 Perform electronic/electrical assembly (production)

Modification History

Release 1. Supersedes and is equivalent to MEM03004B Perform electronic/electrical assembly (production)

Application

This unit of competency defines the skills and knowledge required to identify and assemble electronic/electrical components and to test the assembled components for conformance to job sheets/specifications. It includes the use of automatic wave soldering machines.

Where the selection and use soldering skills is required unit MEM05001 Perform manual soldering/desoldering - electrical/electronic components and unit MEM05002 Perform high reliability soldering and desoldering, should also be selected as appropriate.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of manual handling is required unit MEM11011 Undertake manual handling should also be selected.

Where the selection and use of measurement skills is required unit MEM12002 Perform electrical/electronic measurement should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM03004 Perform electronic/electrical assembly (production)

Modification History

Release 1. Supersedes and is equivalent to MEM03004B Perform electronic/electrical assembly (production)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate tools, components/devices and cables and equipment for required assembly tasks
- identifying and selecting correct electronic/electrical components
- preparing components/devices for soldering and other termination methods using appropriate techniques according to SOPs
- connecting cables to a variety of plug and socket combinations
- using appropriate anti-static handling procedures and techniques to handle and store components safely
- following correct sequence of operations to produce assembling, including testing and checking to ensure compliance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- Correct application of assembly tools and equipment and hazards associated with misuse
- polarity indicators on common electronic and electrical components and the consequences of connecting them incorrectly
- preparation and termination methods for components/devices including soldering and non-soldering techniques
- connection requirements of a variety of plugs and sockets
- anti-static procedures and techniques and the safe handling and storage requirements of electrical and electronic components
- potential damage that can occur by not following the correct sequence of operations
- specifications against which the assembly is to be checked/tested using appropriate procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing electronic/electrical assembly (production) at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM03005 Rework and repair (electrical/electronic production)

Modification History

Release 1. Supersedes and is equivalent to MEM03005B Rework and repair (electrical/electronic production)

Application

This unit of competency defines the skills and knowledge required to test electrical/electronic assemblies against functional requirements, identify faults, and repair or rework the assemblies to rectify the faults and applies to work undertaken on a range of components and printed circuit boards.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of manual handling is required unit MEM11011 Undertake manual handling should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools for hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM03005 Rework and repair (electrical/electronic production)

Modification History

Release 1. Supersedes and is equivalent to MEM03005B Rework and repair (electrical/electronic production)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- following SOPs to test assembly for functional requirements and identify faults to be rectified
- rectifying faults and completing repair and/or rework according to appropriate instructions from job cards, sketches and assembly specifications
- using appropriate anti-static handling procedures and techniques to handle and store components safely.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- functional requirements of the assembly
- assembly tests and methods
- common causes of faults in connections and components and their symptoms
- dangers of static electricity to electrical and electronic components
- anti-static procedures and techniques and the safe handling and storage requirements of electrical and electronic components.

Assessment Conditions

- Assessors must:
  - have vocational competency in reworking and repairing (electrical/electronic production) at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM03006 Set assembly stations

Modification History

Release 1. Supersedes and is equivalent to MEM03006B Set assembly stations

Application

This unit of competency defines the skills and knowledge required to set up, adjust and test assembly stations according to defined procedures, it also includes routine maintenance of the equipment.

Where the assembly station involves manual production assembly unit MEM03001 Perform manual production assembly should also be selected.

Where the assembly station involves the assembly of sheet and plate unit MEM03003 Perform sheet and plate assembly should also be selected.

Where the assembly station involves the assembly of electrical and/or electronic components in a production environment unit MEM03004 Perform electronic/electrical assembly (production) should also be selected.

Where the selection and use of machine setting skills is required unit MEM07003 Perform routine machine setting and unit MEM07004 Perform complex machine setting, should also be selected as appropriate.

Where the setting of automated assembly processes is required unit MEM07040 Set multistage integrated processes should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of powered tools for hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Assessment Requirements for MEM03006 Set assembly stations

Modification History

Release 1. Supersedes and is equivalent to MEM03006B Set assembly stations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- using hand tools and equipment for setting assembly stations in a safe and effective manner according to instructions and SOPs
- setting up and adjusting assembly stations for a range of processes and operations according to defined procedures and specifications whilst observing safe work practices
- testing assembly stations to ensure correct operation in accordance with specifications
- carrying out routine maintenance and identifying and changing worn or damaged components.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures to be followed in setting up assembly stations to meet production order or schedule
- specifications applicable to the assembly station
- effect of various adjustments that can be made to the assembly station
- routine maintenance requirements
- effect of worn or damaged components on the operational requirements and specifications of the assembly station.

Assessment Conditions

- Assessors must:
  - have vocational competency in setting assembly stations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. MEM04001 Operate melting furnaces

Modification History

Release 1. Supersedes and is equivalent to MEM04001B Operate melting furnaces

Application

This unit of competency defines the skills and knowledge required to operate melting furnaces.

It applies to the operation and operational maintenance of furnaces primarily used for continuous or staged bulk melting/smelting of a range of metals, holding of hot liquids, or the melting of metals for production processes, such as casting, moulding and galvanising.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Select materials**	2.1	Complete requisitions as required according to SOPs
		2.2	Undertake charge analysis and convert the charge analysis to furnace charge weight and weigh charge in accordance with SOPs
		2.3	Enter routine and familiar information onto proformas and standard workplace forms
3	**Start up furnace**	3.1	Inspect furnace for any defects or damage
		3.2	Identify faults and areas for routine repair of the furnace
		3.3	Undertake routine operational maintenance of furnace
		3.4	Start up furnace according to procedures
		3.5	Report all start-up faults in accordance with procedures
4	**Charge furnace**	4.1	Identify and follow emergency/safety procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	4.2	Pre-heat materials if required
	4.3	Charge materials into furnace
	4.4	Identify and keep available suitable areas for emergency unloading of molten metal
5 **Monitor furnace**	5.1	Maintain furnace at optimum operating condition
	5.2	Take sample for chemical analysis and apply remedial action as required
	5.3	Dross and/or degas furnace
	5.4	Check temperature of metal and adjust if necessary
6 **Tap or unload the furnace**	6.1	Identify the quantity of the required metal
	6.2	Carry out tap rate
	6.3	Undertake tapping or unloading safely according to procedures
7 **Shut down furnace**	7.1	Complete shutdown of furnace
	7.2	Undertake routine operational maintenance of furnace in accordance with procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Furnaces include one (1) or more of the following:	• singular or multi • coke • oil • gas fired • electric induction • arc • resistance
Operational maintenance includes one (1) or more of the following:	• routine lubrication • cleaning • routine repair/repointing of refractory

Assessment Requirements for MEM04001 Operate melting furnaces

Modification History

Release 1. Supersedes and is equivalent to MEM04001B Operate melting furnaces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and relevant test data sheets for furnace operation
- completing materials requisitions as required
- undertaking charge analysis and converting charge analysis to furnace charge weight and weighing the weight in accordance with procedures
- completing the start-up procedures for the applicable furnace, including completing routine operational maintenance and inspection for any:
  - defects
  - damage
  - faults
  - areas for routine repair
- starting up and charging applicable furnace whilst following emergency/safety procedures, including identifying suitable areas for emergency unloading of molten metal
- maintaining the furnace at optimum operating condition, including:
  - taking sample for chemical analysis and applying remedial action as required
  - drossing and/or degassing furnace
  - checking temperature of metal and adjusting if necessary
- undertaking tapping or unloading of furnace by identifying the quantity of required metal to SOPs
- completing shutdown and performing routine operational maintenance.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- refractory conditions, faults, and routine repair and maintenance
- condition of cooling water supply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- starting procedures for different types of furnaces
- metallic charge materials and alloying elements
- weighing procedures and scale types
- correct order of loading of different charge materials
- thermocouple condition monitoring and adjustment mechanism for furnace
- interpretation of carbon equivalent and wedge test results
- degassing procedures, including tablet, lance and other procedures
- coagulant agents, application procedures and slag removal procedures
- shutdown procedures
- applicable industry standards, national/Australian Standards, Safe Work Australia guidelines, and state/territory regulatory codes of practice/standards.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating melting furnaces at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04002 Perform gravity die casting

Modification History

Release 1. Supersedes and is equivalent to MEM04002B Perform gravity die casting

Application

This unit of competency defines the skills and knowledge required to perform gravity die casting into permanent dies.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Casting and moulding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) and apparatus in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare equipment**	2.1	Mix die coat in correct proportion in accordance with SOPs
		2.2	Lift and maintain die temperatures at the appropriate level
		2.3	Apply die coat in the correct sequence
		2.4	Locate and close die
		2.5	Place die on machine and attach and tighten toggle clamps to required torque
		2.6	Attach air cooling to the die as specified if required
3	**Carry out manual pouring**	3.1	Undertake pour in a manner which reduces porosity and lamination
		3.2	Identify conditions that contribute to inferior castings or rejects
		3.3	Allow adequate cooling time
		3.4	Pour at a continuous and appropriate rate during filling
		3.5	Monitor condition of die coating condition and re-spray as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Remove materials**	4.1	Remove parts in a manner that minimises damage
		4.2	Remove any flash from the die surface
		4.3	Store parts in a manner that minimises damage
5	**Clean die**	5.1	Operate shot blaster according to procedures
		5.2	Take chemical analysis of melt and apply remedial action as required
		5.3	Dross and/or degas furnace
		5.4	Clean work area of coating and shot residue
		5.5	Complete reports/records in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Metals include one (1) or more of the following:	• aluminium • aluminium alloys • non-ferrous • ferrous
Appropriate safety clothing and apparatus includes one (1)	• Aluminium Association safety status sheet recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

or more of the following:

- glasses
- aluminised suits
- masks
- gloves
- gauntlet

Assessment Requirements for MEM04002 Perform gravity die casting

Modification History

Release 1. Supersedes and is equivalent to MEM04002B Perform gravity die casting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and other applicable reference documents for gravity die casting operation
- preparing equipment for gravity die casting, including:
  - mixing and applying die coat in correct proportion and sequence
  - lifting and maintaining die temperatures at the correct level
  - locating, placing securing die on machine and attaching air cooling if required
- carrying out manual pouring in a continuous and appropriate rate that reduces porosity and lamination, avoiding conditions that can contribute to inferior castings or rejects
- removing and storing components and removing any flash from the die surface
- cleaning die using a shot blaster in a safe manner
- taking chemical analysis of melt and applying remedial action as required
- drossing and/or degassing furnace to SOPs
- completing records as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE) and apparatus
- die coat function(s) in gravity die casting
- correct proportions and consistency of die coats as determined by manufacturers' specifications
- correct identification of die coat materials
- procedures for raising the temperature of the die to the correct level and maintaining the required temperature in accordance with SOPs
- procedures to be followed when pouring molten metal to produce sound castings
- causes of defects in castings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- curing times for castings of various volumes and materials
- timing of die coat application and quantity of die coat to be used for different applications
- correct procedures for removing castings from the die and storing of castings
- die condition and need for shot blasting
- shot blaster operating procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing gravity die casting at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04003 Operate pressure die casting machine

Modification History

Release 1. Supersedes and is equivalent to MEM04003B Operate pressure die casting machine

Application

This unit of competency defines the skills and knowledge required to start, operate and shut down pressure die casting machines.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Conduct pre-operational checks**	2.1	Conduct start-up procedure
		2.2	Adjust the shot size if required
		2.3	Check nitrogen and/or vacuum systems if applicable
		2.4	Undertake a functional check of the picking robot, and adjust the component gripper if required
		2.5	Adjust die spray nozzles
		2.6	Carry out planning to ensure efficient flow of finished product
3	**Operate machine to produce castings**	3.1	Apply appropriate knowledge of die casting process to the operation, adjustment and monitoring of machine functions
		3.2	Operate a die casting machine to SOPs, including maintenance of liquid metal and die operating conditions
		3.3	Break runners off in an appropriate manner
		3.4	Inspect castings visually for defects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.5	Handle castings in a manner that minimises risk of damage to the casting and injury to personnel
	3.6	Produce first-off castings, inspect visually and submit for checking against job requirements
4 **Monitor furnace**	4.1	Maintain furnace at optimum operating condition
	4.2	Shut down furnace following SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Plan for efficient flow of finished product includes one (1) or more of the following:	• breaking off runners • stacking baskets • bins • conveyors
Defects include one (1) or more of the following:	• porosity • cracks • tears • splits • sinks • cold shuts • tinning and die surface crazing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEM04003 Operate pressure die casting machine

Modification History

Release 1. Supersedes and is equivalent to MEM04003B Operate pressure die casting machine

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and other applicable reference documents for operating pressure die casting machine
- starting and operating pressure die casting machine, including conducting start-up procedures and all functions of the control panel
- operating machine to produce castings and carrying out visual inspection of first-off castings and submitting for checking against specifications
- maintaining furnace at optimum operating temperature
- completing shutdown procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for pre-start checks
- procedures for adjusting the shot size and the effect of incorrect shot size on the quality of the die casting
- procedures for starting up the die casting machine and adjustments to be made to ensure correct operation
- removing runners from the die casting
- common faults in die castings and their probable causes
- procedures for inspecting die castings for common faults and probable causes
- checking first-off castings for conformance to specification
- shutting down the machine
- function of nitrogen and vacuum systems in the die casting process and the procedures for checking and adjusting
- function of a picking robot and the component gripper and procedures for adjusting the picking robot and effects that this can cause

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reasons for spraying the die and procedures for adjusting the die spray nozzles
- operations to be performed subsequent to die casting the product
- tools and equipment used in die casting
- methods of transporting and conveying the die cast product
- die casting process, including the effects of the adjustment of each machine control has on the quality of the die casting produced
- die casting machine operation, including operating parameters and maintenance of liquid levels
- damage that can be caused to castings through inappropriate handling and storage
- specifications of the die cast product.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating pressure die casting machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04004 Prepare and mix sand for metal moulding

Modification History

Release 1. Supersedes and is equivalent to MEM04004B Prepare and mix sand for metal moulding

Application

This unit of competency defines the skills and knowledge required to prepare and mix sand for metal moulding in continuous and batch type mills.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where calculations are required unit MEM12024 Perform computations should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Load mixer**	2.1	Perform all pre start-up checks according to procedures
		2.2	Determine formula for sand mix according to specifications
		2.3	Measure and load materials according to formula specification
3	**Mix sand**	3.1	Mix sand for correct time to specifications
		3.2	Monitor the performance of mixer and the condition of the sand
		3.3	Maintain material supply
		3.4	Report faults
4	**Take and test samples**	4.1	Extract sample in an appropriate manner
		4.2	Apply test in accordance with procedures
		4.3	Compare test results against specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		4.4	Adjust mix as required to meet specifications
5	**Discharge mixture**	5.1	Charge load according to SOPs
		5.2	Dispose of unwanted treated sand according to SOPs
6	**Clean mixer**	6.1	Shut down mixer to standard safety and operating procedures
		6.2	Clean mixer

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• sand • silica • zircon • chromite • mixtures and water
Faults include:	• chemical ratios – acid, binder and water

Assessment Requirements for MEM04004 Prepare and mix sand for metal moulding

Modification History

Release 1. Supersedes and is equivalent to MEM04004B Prepare and mix sand for metal moulding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and applicable reference documents in preparing and mixing sand for metal pouring
- loading moulding sand mixer, conducting pre-start checks, measuring and loading materials according to instructions
- mixing sand for correct time, monitoring performance of mixer and condition of sand, reporting any faults
- extracting sample and applying test and comparing against specifications, and adjusting mix if required
- charging load correcting and disposing of unwanted treated sand according to SOPs
- shutting down and cleaning mixer.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics, safe handling procedure and mixture applications of the sand and binding agent
- moulding requirements
- mixers, applications, loading, operating and unloading procedures
- volumes, quantities, ratios and percentages
- sampling, testing and acceptance criteria for mixed sand
- procedures for cleaning and shutting down mixer
- environmental requirements for the disposal of unwanted sand.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in preparing and mixing sand for metal moulding at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Assessment Requirements for MEM04006 Operate sand moulding and core making machines

Modification History

Release 1. Supersedes and is equivalent to MEM04006B Operate sand moulding and core making machines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and other applicable reference documents to operate sand moulding and core making machines
- selecting and inspecting pattern/core box for damage against specifications
- setting up pattern/core box in bolster and core box
- operating relevant machine to produce moulds/cores, including selecting appropriate moulding media
- filling moulds/cores to specifications
- unloading machine according to SOPs
- stripping, inspecting and painting moulds/cores as required
- assembling moulds/cores as required by specifications
- disposing of unwanted treated sand according to SOPs
- shutting down and cleaning machine
- completing all proformas and standard workplace forms as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics and applications of sand and binding agents
- sand moulding and core making machine operation, fault identification, analysis and rectification procedures
- core selection and loading procedures.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in operating sand moulding and core making machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04007 Pour molten metal

Modification History

Release 1. Supersedes and is equivalent to MEM04007B Pour molten metal

Application

This unit of competency defines the skills and knowledge required to manually pour molten metal as part of metal casting and moulding processes.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Where lifting and moving of ladles requires the use of overhead cranes, applicable units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Casting and moulding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare for pouring molten metal**	2.1	Select equipment as required
		2.2	Check the condition of the mould and ladle according to procedures
		2.3	Check the temperature of molten metal for conformance to specification
		2.4	Sequence pouring method to procedures
		2.5	Identify the capacity of the required pour against specification
		2.6	Preheat and prepare the ladle to receive molten metal
3	**Transfer ladle to furnace**	3.1	Check safety clips in accordance with safety procedures
		3.2	Fill and transfer the ladle to the pouring area
		3.3	Determine additives from specification and add to molten metal as required
4	**Maintain quality of metal as required**	4.1	Remove slag and/or dross where necessary
		4.2	Monitor the temperature as required
		4.3	Undertake chemical analysis and apply remedial action

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	as required

5	**Pour molten metal**	5.1	Inform personnel in the immediate area of the metal pour that pour is to take place
		5.2	Pour metal safely to specification
		5.3	Pour metal at an appropriate and continuous rate
		5.4	Pour a test bar as required
6	**Empty excess metal from ladle and return ladle**	6.1	Pour and tag pigs
		6.2	Empty, clean and maintain the ladle according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Ladle includes one (1) or more of the following:	• lip pour • tea pot • bottom pour • barrel • bull ladles of varying capacity
Additives include one (1)	• alloys

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

or more of the following:

- inoculants
- spheroidisers
- coagulants

Unit Mapping Information

Assessment Requirements for MEM04007 Pour molten metal

Modification History

Release 1. Supersedes and is equivalent to MEM04007B Pour molten metal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, SOPs and standard test data sheets
- preparing manual pour of molten metal, including selecting equipment as required, and checking condition of mould and appropriate ladle
- checking temperature of molten metal for conformance against specification, sequencing pouring method and identifying the capacity of the required pour
- transferring ladle to furnace after preheating/preparing to receive molten metal
- filling and transferring the ladle to the pouring area in a safe and effective manner and adding additives as required to molten metal
- maintaining quality of metal by removing slag/dross, monitoring temperature and undertaking chemical analysis and applying any remedial action
- pouring molten metal safely at an appropriate and continuous rate after informing personnel in immediate area that a pour is to take place to required specifications, pouring a test bar as required
- emptying excess metal and cleaning and maintaining ladle.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types and pouring characteristics of metals
- types and characteristics of ladles
- procedures for maintaining condition and integrity of ladle
- procedures for safe handling and transference of molten metal
- metal treatments, applications and procedures for making additions to molten metal
- slag and dross removing procedures
- techniques for sampling and testing molten metal
- pouring procedures
- metal identification and tagging procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in pouring molten metal at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04008 Fettle and trim metal castings/forgings

Modification History

Release 1. Supersedes and is equivalent to MEM04008B Fettle and trim metal castings/forgings

Application

This unit of competency defines the skills and knowledge required to fettle, trim and assess quality of metal castings/forgings in production and jobbing environments.

Where the interpretation of technical drawings is required Unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required Unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Casting and moulding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings/sketches, job sheets or work instructions
		1.5	Locate and arrange correct mouldings and/or castings/forgings for efficient processing
2	**Observe safety requirements**	2.1	Handle castings/forgings using manual or mechanical handling methods appropriate to the task
		2.2	Store and position castings/forgings in a safe manner
3	**Identify excess material for removal**	3.1	Remove casting from mould and/or sand media from casting as required
		3.2	Check visually castings/forgings as suitable for further processing, and identify excess metal according to procedures
4	**Select correct tools and equipment**	4.1	Select cleaning method appropriate to casting and job requirements
		4.2	Set and use rumbling/shot blast/sand blast equipment to specification and in accordance with SOPs, as required
		4.3	Select and use appropriate hand tools for the given task
		4.4	Select and use appropriate power tools and accessories for the given task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
5	**Remove excess material**	5.1	Remove excess metal (e.g. runners, risers and flashing) using methods and equipment appropriate to the task
		5.2	Identify excess metal suitable for recycling according to SOPs
		5.3	Identify and isolate excess metallic materials according to SOPs
6	**Quality assess castings/forgings**	6.1	Check visually castings/forgings for conformance with specifications
		6.2	Reject or set aside and identify for further consideration or remedial action non-conforming castings/forgings
		6.3	Report/record faults according to SOPs, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hand tools include one (1) or more of the following:	• files • chisels • hammers • other dedicated tools for fettling and trimming
Power tools include one	• saws

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

(1) or more of the following:	• croppers • grinding disks/belts (including grades) • swing grinders • pedestal grinders

Assessment Requirements for MEM04008 Fettle and trim metal castings/forgings

Modification History

Release 1. Supersedes and is equivalent to MEM04008B Fettle and trim metal castings/forgings

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings/sketches and other applicable reference documents to fettle and trim metal castings/forgings
- handling castings/forgings using manual or mechanical handling methods and storing and positioning them in a safe manner
- identifying excess metal for removal by carrying out visual inspection in accordance with procedures
- selecting and using appropriate cleaning method, including the use of rumbling/shot blast/sand blast equipment
- selecting and using appropriate hand and power tools to remove excess metal e.g. runners, risers and flashing in a safe and effective manner
- identifying excess metal suitable for recycling and metallic materials that need to be isolated
- carrying out inspection to verify against specifications and rejecting or setting aside those requiring remedial action and reporting/recording faults.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- accept/reject/rework criteria
- fettling requirements
- fettling tools
- fettling standards
- handling and storage requirements
- excess metals suitable for recycling.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in fettling and trimming metal castings and forgings at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM04010 Develop and manufacture wood patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04010 Develop and manufacture wood patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04010B Develop and manufacture wood patterns.

Application

This unit of competency defines the skills and knowledge required to develop and manufacture all types of solid, split and turned wood patterns and wood pattern component parts, including general engineering and master patterns.

Patterns are constructed by laminating timber and timber composites, stave and lag, box or frame construction or any alternative method that minimises timber shrinkage, warp and achieves required. Solid patterns are set up on a regular or irregular joint. Turned patterns are manufactured using tools and machines appropriate for shaping wood.

Where patterns are required to be set up on pattern plates then unit MEM04012 Assemble plated patterns should also be selected.

Where the development and manufacture of marine propellers, conveyor screws and cast gears is required unit MEM04017 Develop and manufacture gear, conveyor screw and propeller patterns should also be selected.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

This unit should not be selected when unit MEM18014 Manufacture press tools and gauges has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 20

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM04018	Perform general woodworking machine operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12006	Mark off/out (general engineering)
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM12026	Perform advanced trade calculations in a manufacturing, engineering or related environment
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Develop and lay out wood patterns**	2.1 Determine type of wood pattern required through application of moulding/casting techniques and foundry processes
		2.2 Select appropriate timber/timber composites to meet specification
		2.3 Calculate pattern parameters to specification e.g. angles, tapers, clearances and contractions
		2.4 Lay out pattern showing tapers, machining allowances, core prints and method of construction to specification
		2.5 Develop and manufacture jigs and fixtures to aid wood pattern manufacture as required
3	**Manufacture wood patterns**	3.1 Mark out materials and develop construction to meet specification
		3.2 Produce pattern or pattern component parts to size and shape using acceptable wood patternmaking techniques, tools, equipment and procedures
		3.3 Check pattern or pattern component parts for conformance to specifications
		3.4 Join and fix pattern component parts to meet specifications
		3.5 Mark, colour code or tag pattern to specifications or SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Master patterns include one (1) or more of the following:	• multiple contraction • skeleton • frame and strickle • wheels • pulleys • chain sheaves • impellors
Moulding/casting techniques includes:	• a variety of sand moulding techniques and sand mediums
Timber/timber composites include one (1) or more of the following:	• hardwood • softwood • laminates • plywood • veneers • bonded fibreboard
Joining and fixing includes one (1) or more of the following:	• glued • screwed • nailed • stapled

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM04010 Develop and manufacture wood patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04010B Develop and manufacture wood patterns.

Assessment Requirements for MEM04010 Develop and manufacture wood patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04010 Develop and manufacture wood patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04010B Develop and manufacture wood patterns.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, technical sketches and customer requirements to develop wood patterns
- determining type of wood pattern required through application of moulding/casting techniques and selecting the appropriate timber/timber composites to meet requirements
- preparing patterns for manufacture using the appropriate mathematical calculations for angles, tapers, clearances and determination of contraction rates
- laying out pattern showing tapers, machining allowances, core prints and method of construction
- manufacturing jigs and fixtures as required
- marking out and manufacturing all types of solid, split and turned wood patterns and wood pattern component parts using appropriate hand and power tools
- joining and fixing pattern components as required and checking conformance to specification
- marking, colour coding or tagging pattern to specifications for future use.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- timber products, including features, characteristics and applications
- moulding and casting techniques
- tooling required for casting/moulding
- methoding techniques
- use and application of jigs and fixtures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods of constructing wood patterns
- formulae and mathematical techniques required for necessary manufacturing of patterns/core boxes, i.e. contraction, taper, clearances and machining allowances
- identification coding and numbering
- pattern checking techniques
- mouldability i.e. surface finish, face taper, convex or concave perspectives and undercuts.

Assessment Conditions

- Assessors must:
  - have vocational competency in the development and manufacture of wood patterns at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04011 Produce polymer patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04011 Produce polymer patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04011B Produce polymer patterns.

Application

This unit of competency defines the skills and knowledge required to design, manufacture and finish polymer patterns.

It applies to the manufacture of investment casting dies and polymer patterns for medium production castings, core boxes, tooling aids and jigs and checking of fixtures.

Construction includes solid polymer, filled, laminated fibreglass or metal inserts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 8

Pre-requisite Unit

MEM07005	Perform general machining
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

Assessment Requirements for MEM04011 Produce polymer patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04011 Produce polymer patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04011B Produce polymer patterns.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, technical sketches and customer requirements in producing polymer patterns
- preparing to produce polymer patterns by inspecting patterns and cores for appropriate surface finish, and setting up jointline or flat board to specifications
- undertaking numerical operations, geometry and calculations/formulae, including determination of contraction rates
- selecting and mixing the appropriate polymer materials and hardener to correct ratios and proportions in a safe and effective manner
- applying polymer to specification ensuring air is not trapped, excessive heat is not generated and delamination does not occur in final use
- machining and finishing faces of polymer pattern to specifications
- applying method of location to patterns and core boxes
- carrying out maintenance and repairing of pattern/core box as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- machining for patternmaking
- parting agents
- methods of locating patterns and core boxes
- range of surface finishes
- range of polymers and their applications
- mixing ratios and calculations
- characteristics of polymer under exothermic reaction and associated control measures

MEM04012 Assemble plated patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04012 Assemble plated patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04012B Assemble plated patterns.

Application

This unit of competency defines the skills and knowledge required to assemble all types of plated patterns using a range of materials. It covers the manufacture (when appropriate) and mounting of runner systems.

Where the manufacture of polymer-plated patterns is required unit MEM04011 Produce polymer patterns should also be selected.

Where the selection and use of cast aluminium plates is required unit MEM04014 Develop and manufacture production patterns should also be selected.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where the selection and use of machining competencies is required applicable units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Inspect and layout patterns**	2.1	Inspect pattern to ensure dimensions and surface finish conforms to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.2	Lay out pattern and runner system to specifications from drawings, sketches or verbal instructions
		2.3	Align pattern in an appropriate manner
3	**Mount pattern on plates**	3.1	Attach cope and drag patterns/double sided match plate patterns to pattern plate/s according to specification
		3.2	Inspect cope and drag patterns/double sided match plate patterns for security and alignment
4	**Mount runner system**	4.1	Adjust volume of runner system to conform to specifications
		4.2	Attach runner components pattern plates to specification using appropriate fixing and joining techniques
5	**Inspect plated pattern assembly**	5.1	Inspect surface and mouldability of plated pattern assembly for compliance with specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1)
- timber

Assessment Requirements for MEM04012 Assemble plated patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04012 Assemble plated patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04012B Assemble plated patterns.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, sketches and other applicable reference documents to assemble plated patterns
- undertaking relevant engineering calculations, including the determination of contraction rates
- inspecting patterns for conformance, laying out pattern and runner system and aligning pattern to specifications
- securely attaching cope and drag patterns/double sided match plate patterns to pattern plates, inspecting for alignment according to specifications
- attaching runner components pattern plates using appropriate fixing and joining techniques and adjusting volume of runner system to conform to specifications
- inspecting plated pattern assembly including surface and mouldability for compliance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- units of measurement, numerical operations and calculations associated with assembling plated patterns
- fixing and drilling techniques
- reason for using particular layout and runner system
- all types of plated patterns using a range of materials
- techniques for avoiding cross jointing or mismatch of the pattern and their relationship to the pin-centre
- methoding systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- mouldability i.e. surface finish, face taper, convex or concave perspectives and undercuts
- moulding and casting techniques.

Assessment Conditions

- Assessors must:
  - have vocational competency in assembling plated patterns at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04013 Develop and manufacture polystyrene patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04013 Develop and manufacture polystyrene patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04013B Develop and manufacture polystyrene patterns.

Application

This unit of competency defines the skills and knowledge required to develop and manufacture all types of patterns using polystyrene, including patterns for the lost foam process and for those areas on a wood pattern and core box where polystyrene is required.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM04010	Develop and manufacture wood patterns
MEM04018	Perform general woodworking machine operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12006	Mark off/out (general engineering)
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM12026	Perform advanced trade calculations in a manufacturing, engineering or related environment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Select the appropriate grade and type of polystyrene to meet specifications
2	**Mark out pattern**	2.1	Determine contraction allowance by performing calculations
		2.2	Mark out pattern/pattern components to specifications
3	**Manufacture pattern**	3.1	Join and secure pattern components in an appropriate manner using adhesives appropriate to the task
		3.2	Select appropriate tools and techniques to manufacture

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			polystyrene patterns to specification
		3.3	Check pattern for conformance to specifications and mark for identification
4	**Protect pattern from damage**	4.1	Handle and store patterns in a safe manner least likely to cause damage using appropriate procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Grade/type includes:	• size and density of bead
Adhesives include one (1) or more of the following:	• PVA • hot glue
Tools include one (1) or more of the following:	• hot wire • knives • saws

MEM04014 Develop and manufacture production patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04014 Develop and manufacture production patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04014B Develop and manufacture production patterns.

Application

This unit of competency defines the skills and knowledge required to manufacture all types of metal patterns, master patterns, core boxes and associated equipment, including cast plates made directly or from a master pattern.

Patterns may be integral with the plate or mounted to the plates with gating and depending upon specifications, production core boxes also may be loose or mounted into core box rigs.

Where the manufacture of polymer production patterns is required unit MEM04011 Produce polymer patterns should also be selected.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM04016 Develop and manufacture precision models

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04016 Develop and manufacture precision models (Release 1).

Release 1. Supersedes and is equivalent to MEM04016C Develop and manufacture precision models.

Application

This unit of competency defines the skills and knowledge required to develop and manufacture precision models where accurate and complicated models are required to assist in the development and manufacture of production of tooling for a wide variety of processes.

This unit can also apply to the inspection/completion of items made in the stereo lithography process.

When the programming of coordinate measurement machines and/or NC/CNC machines is required appropriate machine programming units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM04016 Develop and manufacture precision models

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04016 Develop and manufacture precision models (Release 1).

Release 1. Supersedes and is equivalent to MEM04016C Develop and manufacture precision models.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning finished model design by reading, interpreting customer's specifications (verbal or written) for finish, quality and form, and selecting appropriate material
- undertaking calculations for contraction allowances, clearances and tapers to establish model parameters
- designing and manufacturing datum boards, jigs and fixtures as required
- determining sequence of manufacture, including build-up on datum board, marking out and areas to be NC/CNC machined
- selecting and using appropriate machines and machining process
- selecting and using hand and power tools as needed to shape, produce, fashion and manufacture model to fine tolerances according to specification ensuring that surface finish is appropriate to the type of model
- checking specifications by using appropriate measuring techniques, including coordinate measuring and machine checking
- recording all deviations or modifications to original tool design, prints or plans according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- consequences of selecting inappropriate materials
- various processes requiring models
- calculus, engineering calculations and formulae relating to developing and manufacturing precision models
- properties and uses of datum boards, datum holes or datum faces

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reasons for developing the sequence of manufacture
- range of machines and machining processes and their operations
- various checking procedures and devices, such as coordinate measuring and machine checking
- procedures for recording deviation or modification to original drawings or specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in the development and manufacture of precision models at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04017 Develop and manufacture gear, conveyor screw and propeller patterns

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04017 Develop and manufacture gear, conveyor screw and propeller patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04017B Develop and manufacture gear, conveyor screw and propeller patterns.

Application

This unit of competency defines the skills and knowledge required to manufacture patterns for all types of cast gears, conveyor screws and marine propellers using a full range of materials.

Gear patterns may be segmented or any other method used to minimise timber shrinkage or warpage to achieve the required strength.

Conveyor and marine screws may be built up using predetermined thicknessed timber, either over a mandrel or a layout. Patterns may be set up on a joint board or plated for ease of moulding.

Where the assembly of plated patterns is required unit MEM04012 Assemble plated patterns should also be selected.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM04010 Develop and manufacture wood patterns

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM04018	Perform general woodworking machine operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12006	Mark off/out (general engineering)
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM12026	Perform advanced trade calculations in a manufacturing, engineering or related environment
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Lay out pattern**	2.1	Select appropriate material to specifications
		2.2	Apply moulding, cast techniques and foundry processes in determining the type of pattern required
		2.3	Calculate pattern parameters
		2.4	Lay out pattern showing tapers, machining allowances, core prints and method of construction to specification
		2.5	Develop and manufacture jigs and fixtures to aid the manufacture of the pattern form as required
3	**Manufacture pattern**	3.1	Mark out material and develop construction to meet specifications
		3.2	Produce pattern or pattern component parts to size and shape using appropriate hand and hand held power tools, techniques and procedures
		3.3	Check pattern or pattern component parts for compliance to specifications
		3.4	Join and fix pattern component parts according to specifications
		3.5	Mark, colour-code and/or tag pattern in compliance with specifications or procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material includes one (1) or more of the following:

- hardwood
- softwood
- epoxy resins
- composites

Pattern parameters include one (1) or more of the following:

- pitch circles
- pressure angles
- tooth form
- left and right hand flight helix
- pitch axial dimensions
- angles
- tapers
- clearances
- contraction allowances

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM04017 Develop and manufacture gear, conveyor screw and propeller patterns (Release 1).

Release 1. Supersedes and is equivalent to MEM04017B Develop and manufacture gear, conveyor screw and propeller patterns.

Release 1. Supersedes and is equivalent to MEM04017B Develop and manufacture gear, conveyor screw and propeller patterns.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning the appropriate pattern by identifying and interpreting specifications, sketches, drawings and other applicable reference documents in determining type of pattern required
- selecting appropriate materials, applying moulding, casting techniques and foundry processes to the type of pattern required
- undertaking calculations of pattern parameters appropriate to developing various types of gear, conveyor and propeller forms
- laying out pattern according to specification showing tapers, machining allowances, core prints and method construction
- designing and manufacturing jigs and fixtures as required
- manufacturing pattern by marking out material for construction, producing pattern or pattern components to size and shape utilising appropriate hand and power tools
- joining and fixing pattern component parts as required and checking final product for compliance with specifications
- marking, colour coding and/or tagging pattern according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- timber, epoxy resin and composite product knowledge, including features, characteristics and applications
- moulding and casting techniques for cast gears, conveyor screws and marine propellers
- tooling required for casting/moulding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methoding techniques
- use and application of jigs and fixtures
- methods of construction
- techniques, tools and equipment to measure, mark out and produce gear, conveyor screw and propeller patterns
- mathematical calculations and formulae required to manufacture patterns/core boxes - contraction, taper, pitch, profiles, clearances and machining allowances
- identification coding and numbering
- pattern checking techniques
- mouldability, i.e. surface finish, face taper, convex or concave perspectives and undercuts.

Assessment Conditions

- Assessors must:
  - have vocational competency in the development and manufacture of gear, conveyor screw and propeller patterns at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04018 Perform general woodworking machine operations

Modification History

Release 1. Supersedes and is equivalent to MEM04018B Perform general woodworking machine operations

Application

This unit of competency defines the skills and knowledge required to set up and operate woodworking machines used by engineering patternmakers and marine fabricators.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of power tools for hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Note: This unit does not cover the use of woodworking machines for furniture and building construction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Job requirements include one (1) or more of the following:

- sizing
- appearance in terms of figure, grain or surface finish
- allowance of imperfections, including:
  - twist
  - bow
  - bend
  - sloping grain
  - knots
  - shakes
  - gum veins

Woodworking machines include one (1) or more of the following:

- band saws
- buzzers
- thicknesses
- disk sander
- bobbin sander
- pattern mill
- wood lathe
- pedestal router and drill

Set up includes the following:

- installation of the blades and cutters
- settings for the job including adjustments for sizing and speed

Cutting tools include one (1) or more of the following:

- blades
- outer bits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Guards/stops include:

- fixed and variable guards and stops

Assessment Requirements for MEM04018 Perform general woodworking machine operations

Modification History

Release 1. Supersedes and is equivalent to MEM04018B Perform general woodworking machine operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, sketches and other applicable reference documents to determine job requirements
- selecting and setting up appropriate woodworking machine by selecting and installing appropriate tools/cutters, and adjusting fixed and variable guards and stops as required
- operating machine by positioning and securing material effectively, machining material to specifications and optimising material use and minimising waste
- checking machined component for predetermined finish against specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- application and use of general woodworking machines
- interpreting instructions, drawings or sketches
- numerical operations and calculations associated with this unit
- machine settings, including installation of blades and cutters, clamping for the job, and adjusting for size and speed
- range of tools and cutters for different purposes
- consequences of incorrect set or cutting angles
- consequences of tool holders, tools and cutters, being incorrectly secured
- consequences of not using guards
- timber product knowledge, including features, characteristics and applications
- methods of optimising quality of appearance, retention of shape, strength, and the minimisation of waste.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing general woodworking machine operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04019 Perform refractory installation and repair

Modification History

Release 1. Supersedes and is equivalent to MEM04019B Perform refractory installation and repair

Application

This unit of competency defines the skills and knowledge required to repair and install/replace all types of refractory, including relining furnaces, treatment vessels, ladles and launders.

It applies to the installation of the heat insulating material used inside molten metal vessels and includes material which can be machine rammed, hand rammed, forked or vibrated and includes refractory bricks and fibreboard.

Where routine repair/repointing of refractory during operational maintenance is required unit MEM04001 Operate melting furnaces and MEM04007 Pour molten metal, should also be selected as appropriate.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Inspect and knock out refractory**	2.1	Identify specific areas of the refractory for repair or replacement
		2.2	Determine sequence of operations to remove refractory to meet the job specification
		2.3	Select appropriate tools and equipment to safely remove damaged refractory
		2.4	Remove and dispose of damaged refractory according to requirements
3	**Prepare refractory materials**	3.1	Select appropriate refractory materials to meet specifications
		3.2	Mix refractory media to requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

4	**Install refractory**	4.1	Determine installation of refractory sequence of operations
		4.2	Install refractory using appropriate tools, equipment and techniques
5	**Cure refractory**	5.1	Cure refractory to specifications using appropriate equipment, techniques and procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Installed includes one (1) or more of the following:

- hand ramming
- machine ramming
- forked
- internal and external vibration

Assessment Requirements for MEM04019 Perform refractory installation and repair

Modification History

Release 1. Supersedes and is equivalent to MEM04019B Perform refractory installation and repair

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- inspecting refractory by reading, interpreting and following specifications to identify specific areas for repair or replacement
- knocking out refractory by determining sequence of operations
- selecting appropriate tools and equipment to safely remove damaged material
- removing and disposing damaged material in accordance with regulatory and legislative requirements
- preparing and installing heat insulated materials used inside molten metal vessels using appropriate tools and equipment
- curing refractory to specifications using appropriate techniques, equipment and standard operating procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- repair or replacement requirements
- inspection techniques
- mixing, installing and curing techniques and equipment
- work health and safety (WHS) legislation and Environmental Protection Authority (EPA) regulations applying to working with refractory materials,

Assessment Conditions

- Assessors must:
  - have vocational competency in performing refractory installation and repair at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04020 Supervise individual ferrous melting and casting operation

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04020 Supervise individual ferrous melting and casting operation (Release 1).

Release 1. Supersedes and is equivalent to MEM04020A Supervise individual ferrous melting and casting operation.

Application

The unit of competency defines the skills and knowledge required by a foundry tradesperson to supervise ferrous melting and casting operations in a foundry to ensure specifications are met and safety procedures maintained. This work is performed under the overall direction of a metallurgist.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 4

Pre-requisite Unit

MEM04001	Operate melting furnaces
MEM04004	Prepare and mix sand for metal moulding
MEM04007	Pour molten metal
MEM04024	Produce moulds and cores by hand
MEM04025	Produce moulds and cores by hand (advanced)
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify specifications for required casting**	2.1	Identify required material specification and mould requirements
		2.2	Identify any special melting and casting requirements for the job
		2.3	Identify safety procedures for the required melting and casting operation
		2.4	Identify and follow regulations and codes of practice relevant to foundry and individual melting, pouring and casting operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Verify metal charges to melting**	3.1	Select required components to give the required metal specification
		3.2	Calculate required charge of each component
		3.3	Recommend changes and/or additions to the charge
		3.4	Monitor the preparation of the charge, including checking for contaminants
4	**Monitor furnace operation**	4.1	Check that the furnace is in good operational condition and that appropriate lining is present
		4.2	Organise for maintenance and repairs as required
		4.3	Identify metal or alloy specification for required casting
		4.4	Monitor a melt to ensure the product meets specification
5	**Monitor pouring of molten metal**	5.1	Check pouring area is secure and that all non-essential personnel are excluded
		5.2	Check all members of the pouring crew are wearing appropriate PPE
		5.3	Ensure escape routes are known in advance by all members of the pouring crew
		5.4	Check emergency pour out pit is operational and other safety measures are in place
		5.5	Ensure moulds are ready to receive liquid metal, ensure access ways and pouring ways are clear, and that there are appropriate spaces between each mould
		5.6	Check pouring is undertaken at correct temperature and in efficient order
		5.7	Ensure pouring basin and moulds are ready to receive liquid metal
		5.8	Take required samples for analysis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
6 **Control hazards**	6.1 Identify hazards in the metal melting/pouring process
	6.2 Assess the risks arising from those hazards
	6.3 Implement procedures to control those hazards in line with procedures and duty of care

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Moulds include one (1) or more of the following:	• sand • die • investment
Contaminants include one (1) or more of the following:	• non-specified metal • rubber • grease • water • paint and non-metallics • closed containers or pipes • pressure containers, including aerosols
Material specification includes one (1) or more of the following:	• ferrous metals • ferrous alloys • contaminants

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Unit Mapping Information

Assessment Requirements for MEM04020 Supervise individual ferrous melting and casting operation

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04020 Supervise individual ferrous melting and casting operation (Release 1).

Release 1. Supersedes and is equivalent to MEM04020A Supervise individual ferrous melting and casting operation.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, safety procedures and codes of practice/standards for the required melting and casting operation
- checking for contaminates when verifying metal changes to melting and recommending changes and/or additions to the charge as required
- providing evidence from castings that were made using different alloys and moulds
- monitoring melting and casting operations of ferrous metal
- operating a melting furnace safely and monitoring and supervising the operation of a furnace by other employees
- handling pouring equipment and monitoring safely and supervising the operation of pouring equipment by other employees.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- charge calculations – importance of composition control, methods used to calculate for additions and types of alloy additions and their effects on casting behaviour and finished product
- steel – induction furnace melting, principles, refractories suitable for steelmaking and their characteristics, arc furnace melting; acid, basic, single slag, double slag, deoxidisation and hydrogen control and ladle refining
- cast iron – types of cast iron, influence of carbon and silicon contents, carbon equivalent, effect of cooling rate, microstructure and classification of graphite, carbide stabilisers and graphite, inoculation and types of inoculant, spheroidal graphite formation and treatment methods and casting characteristics of grey, S.G (ductile) and malleable cast irons

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ferrous alloys – definitions of ferrous metals, grades of iron and their applications, including S.G. iron, ductile iron, grey and white irons, alloy cast irons, chilled and malleable iron, grades of steel and their applications, including carbon steel and alloys steels, methods of controlling physical properties, advantages/disadvantages of density of each type of ferrous metal, methods of controlling tensile strength of ferrous metals, methods of controlling the hardness of ferrous metals, the influence of melting points on production processes, shrinkage percentage of the types of ferrous metals, how to control metal fluidity, use of degassing to control gas defects, be able to take action to control grain size, casting temperature, make a selection of ferrous metal based on required properties, conduct metal analysis on ferrous metal and use Australian Standards (or other appropriate standard) for ferrous metals
- types of furnaces and their relative advantages and disadvantages – blast furnace, cupola, induction, direct arc, indirect arc, open hearth, reverberatory, rotary and maintenance
- refractory types and purposes, including dolomite, silica brick, chrome brick, ganister, fireclay, firebrick, magnesite, kyanite and fused alumina
- linings types and purposes, including monolithic, castable, rammable, bricks, basic, acid and neutral
- types of ladles – lip, tea pot and bottom pour
- safe working with ladles – pre-heat ladles, ladle maintenance and checking mechanical condition of ladles including gearboxes and safety locks
- use of lifting and handling equipment including – tongs, shanks, cranes, hoists, bogey ladles and maintenance
- supervision of other staff in melting and casting safety, including housekeeping, PPE, dry area and tools, pre-heating of ladles and safe working load of overhead cranes
- furnace operation procedures, including ensuring a dry and safe charge, warm and dry equipment, pre-heating, scrap selection, housekeeping, melting schedule, pouring schedule, calculations, including volume and mass calculations, charge calculations, maintaining supply and maintenance of melting and pouring equipment
- types of control equipment – thermal analysis, pyrometers, gas analysis, chemical analysis, wet chemical analysis, spectrograph and fluidity test
- quality control and procedures for:
  - accurate weighing, correct chemical analysis, covers and fluxes, mould/metal reactions, conduct and interpretation of thermal analysis, alloying procedure, thermal analysis, degassing, deoxidising, ladle refining, chill/wedge test and customer requirements
- types of defects and prevention, including but not limited to contamination, gas absorption, metal analysis, temperature control, oxidation and other defects common to iron and steel
- tapping and pouring operations, including when to pour according to job and furnace specification, availability of emergency pour out pits and other safety equipment, availability of cranes or other transport, pour out rate, ensure mechanical test bar is available and taken if required and ensure pig pouring and tagging is performed correctly.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in the supervision of individual ferrous melting and casting operation at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04021 Supervise individual non-ferrous melting and casting operation

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04021 Supervise individual non-ferrous melting and casting operation (Release 1).

Release 1. Supersedes and is equivalent to MEM04021A Supervise individual non-ferrous melting and casting operation.

Application

The unit of competency defines the skills and knowledge required by a foundry tradesperson to supervise non-ferrous melting and casting operations in a foundry to ensure specifications are met and safety procedures maintained. This work is performed under the overall direction of a metallurgist.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 4

Pre-requisite Unit

MEM04001	Operate melting furnaces
MEM04004	Prepare and mix sand for metal moulding
MEM04007	Pour molten metal
MEM04024	Produce moulds and cores by hand
MEM04025	Produce moulds and cores by hand (advanced)
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13004	Work safely with molten metals/glass
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify specifications for required casting**	2.1	Identify required material specifications and mould requirements
		2.2	Identify any special melting and casting requirements for the job
		2.3	Identify safety procedures for the required melting and casting operation
		2.4	Identify and follow regulations and codes of practice relevant to foundry and individual melting, pouring and casting operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Verify metal charges to melting**	3.1	Select required components to give the required metal specification
		3.2	Calculate required charge of each component
		3.3	Select required components to give the required metal specification
		3.4	Recommend changes and/or additions to the charge
		3.5	Monitor the preparation of the charge, including checking for contaminants
4	**Monitor furnace operation**	4.1	Check that the furnace is in good operational condition and that appropriate lining is present
		4.2	Organise for maintenance and repairs as required
		4.3	Identify metal or alloy specification for required casting
		4.4	Monitor a melt to ensure the product meets specification
5	**Monitor pouring of molten metal**	5.1	Check pouring area is secure and that all non-essential personnel are excluded
		5.2	Check all members of pouring crew are wearing appropriate PPE
		5.3	Ensure escape routes are known in advance by all members of the pouring crew
		5.4	Check emergency pour out pit is operational and other safety measures are in place
		5.5	Ensure moulds are ready to receive liquid metal, ensure access ways and pouring ways are clear, and that there are appropriate spaces between each mould
		5.6	Check pouring is undertaken at correct temperature and in efficient order
		5.7	Ensure pouring basin and moulds are ready to receive liquid metal
		5.8	Take required samples for analysis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6	**Control hazards**	6.1	Identify hazards in the metal melting and pouring process
		6.2	Assess the risks arising from those hazards
		6.3	Implement procedures to control those hazards in line with procedures and duty of care

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Moulds include one (1) or more of the following:	• sand • die • investment
Contaminants include one (1) or more of the following:	• non-specified metal • rubber • grease • water • paint and non-metallics • closed containers or pipes • pressure containers, including aerosols
Material specification includes one (1) or more of the following:	• non-ferrous metals • non-ferrous alloys • contaminants
Furnaces include one (1) or	• crucible

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

more of the following:

- oil
- gas
- induction
- channel
- coreless
- resistance
- reverberatory

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM04021 Supervise individual non-ferrous melting and casting operation (Release 1).

Release 1. Supersedes and is equivalent to MEM04021A Supervise individual non-ferrous melting and casting operation.

Assessment Requirements for MEM04021 Supervise individual non-ferrous melting and casting operation

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04021 Supervise individual non-ferrous melting and casting operation (Release 1).

Release 1. Supersedes and is equivalent to MEM04021A Supervise individual non-ferrous melting and casting operation.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, safety procedures and codes of practice/standards for the required melting and casting operation
- checking for contaminates when verifying metal changes to melting and recommending changes and/or additions to the charge as required
- providing evidence from castings that were made using different alloys and moulds
- monitor melting and casting operations of non-ferrous metal
- operating a melting furnace safely and monitoring and supervising the operation of a furnace by other employees
- handling pouring equipment and monitoring safely and supervising the operation of pouring equipment by other employees.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- charge calculations – importance of composition control, methods used to calculate for additions, types of alloy additions and their effects on casting behaviour and finished product
- non-ferrous alloys:
  - definition of non-ferrous metals
  - methods of controlling physical properties
  - advantages/disadvantages of density of each type of non-ferrous metal
  - methods of controlling tensile strength of non-ferrous metals
  - methods of controlling the hardness of non-ferrous metals

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - influence of melting points on production processes
  - shrinkage percentage of the types of non-ferrous metals
  - how to control metal fluidity
  - refractory selection requirements for non-ferrous alloys
  - use of degassing to control gas defects
  - actions required to control grain size
  - grades of brass, bronze and gunmetal and their applications
  - the grades of other copper, aluminium, lead, zinc, and magnesium based alloys and their applications
  - how to select non-ferrous metal based on required properties
  - how to conduct metal analysis of non-ferrous metals
  - Australian standards (or other appropriate standard) for non-ferrous metals
- types of furnaces and their relative advantages and disadvantages including maintenance requirements
- selection of appropriate refractories for non-ferrous melting – silica, ganister, coatings and others common to non-ferrous melting
- selection of the form of linings for non-ferrous melting – monolithic, castable, rammable and bricks
- selection of the appropriate ladles/crucibles with regard to types, ladles, crucibles, safety and maintenance, including checking of mechanical condition of gearboxes and safety locks, and care of crucibles and porous plug
- supervision of other staff in melting and casting safety, including housekeeping, PPE, dry area and tools, pre-heating of ladles and safe working load of overhead cranes
- furnace operation, including procedures for ensuring a dry and safe charge, warm and dry equipment, pre-heating, scrap selection, scrap segregation, housekeeping, melting schedule, pouring schedule, charge calculations and calculations, including volume and mass calculations and maintenance of melting and pouring equipment
- use of lifting and handling equipment, including tongs, shanks, cranes, hoists, bogey ladles and maintenance
- types of control equipment – thermal analysis, pyrometers, gas analysis, chemical analysis, wet chemical analysis, spectrograph, fluidity test and shrinkage test
- quality control and procedures for accurate weighing, correct chemical analysis, temperature control, covers and fluxes, mould/metal reactions, conduct and interpretation of thermal analysis, degassing, deoxidising, ladle refining and customer requirements
- types of defects and prevention including – contamination, gas absorption, metal analysis, temperature control, oxidation and other defects common to non-ferrous metals
- tapping and pouring operations, including when to pour according to job and furnace specification, availability of emergency pour out pits and other safety equipment, availability of cranes or other transport, pour out rate, ensuring mechanical test bar is available and taken, if required, and ensuring pig pouring and tagging is performed correctly.

MEM04022 Examine appropriateness of methoding for mould design

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04022 Examine appropriateness of methoding for mould design (Release 1).

Release 1. Supersedes and is equivalent to MEM04022A Examine appropriateness of methoding for mould design.

Application

This unit of competency defines the skills and knowledge required to examine the methoding (gating, running and feeding of castings) for mould designs using basic metallurgical techniques and skills. This work is under the overall direction of a metallurgist.

It applies to a foundry tradesperson who has to examine the appropriateness of own or others methoding for a mould design using basic metallurgical skills and techniques supported by normal empirical trade skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 4

Pre-requisite Unit

MEM04024	Produce moulds and cores by hand
MEM04025	Produce moulds and cores by hand (advanced)
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MSATCM304A	Interpret basic binary phase diagrams

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Evaluate proposed mould design for methoding requirements**	2.1	Identify risk management strategies to minimise defect formation
		2.2	Identify desired solidification process and take into account casting design, metal composition, mould design and specifications
		2.3	Identify running, gating and feeding principles and techniques appropriate for the particular casting
		2.4	Identify methods to minimise shrinkage, porosity, segregation, hot tearing and shear
		2.5	Examine suitability of methoding, including gating and the number, placement and sizing of feeders/risers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.6	Enter data where required to facilitate the generation of a computer simulation of methoding and casting process for later comparison to actual casting
3 **Report results**	3.1	Compare casting results with computer simulated predictions
	3.2	Determine reporting requirements
	3.3	Prepare reports and circulate for feedback and file in accordance with SOPs
	3.4	Communicate suggestions for improvements directly to other team members where appropriate

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Size and number of feeder heads and gating includes the following:	• manual calculation and use of computer programs within defined design parameters

Unit Mapping Information

Assessment Requirements for MEM04022 Examine appropriateness of methoding for mould design

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04022 Examine appropriateness of methoding for mould design (Release 1).

Release 1. Supersedes and is equivalent to MEM04022A Examine appropriateness of methoding for mould design.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- calculating manually, and by use of computer programs, runner and feeding systems for casting designs within defined design parameters
- examining mould designs for suitability against job specifications
- understanding the interplay between moulds, cores, gating and feeding
- examining the resulting casting for success of gating and feeding, including calculation of the size and number of feeder heads and gating
- comparing casting results with computer simulated predictions
- preparing reports, circulating and communicating suggestions for improvements directly to other team members where appropriate and filing report in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- calculations related to methoding and feeding, including:
  - dimensions of runner systems
  - cross-sectional areas of sprue, runners and ingates
  - volumes and dimensions of feeders
- the effects on solidification of:
  - nucleation
  - growth mechanisms (crystal and interfacial)
  - dendrite coherency
  - constitutional undercooling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - superheat - effects, control and minimisation of excess heat
  - eutectic and peritectic solidification
  - grain structure
- principles underpinning the effective operation of running, gating and feeding systems, including:
  - runner and gating principles (ratios)
  - determining type and placement of sprue, runners and ingates
  - inclusion control (slag and erosion)
  - calculations and effect of metal flow (lamellar and turbulent), velocity and temperature
  - calculation of feeder size
  - principles used in the determination of the location of feeders (end and feed zones, neighbourhood effect and feeding distances), including effect on solidification, exothermic and insulating feeding aids (sleeves and topping)
  - feeding mechanisms (liquid, mass, interdendritic, burst and solid)
  - use of computer packages (runner and feeder calculations and mould simulations) including benefits and limitations and yield calculations
- risk management strategies to minimise defect formation and the methods for minimising shrinkage, porosity, segregation, hot tearing and shear.

Assessment Conditions

- Assessors must:
  - have vocational competency in examining appropriateness of methoding for mould design at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04023 Undertake prescribed tests on foundry-related materials

Modification History

Release 1. Supersedes and is equivalent to MEM04023A Undertake prescribed tests on foundry related materials

Application

This unit of competency defines the skills and knowledge required to carry out prescribed chemical analysis and mechanical (destructive) tests on foundry-related materials and compare the results against predetermined specifications. It also includes the conducting of optical emission spectroscopy (OES) testing, but not the conducting of any other tests. This work is performed under the overall direction of a metallurgist.

The foundry tradesperson may be required to draw some conclusions from the results of the specified tests regarding whether an adjustment is required within their skills and knowledge to casting or melting procedures or whether to consult on the results with a metallurgist or other authority according to standard procedures.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Select appropriate testing procedures/ standards**	2.1	Identify the need and relevant test and testing standard from prescribed range of tests and testing standards
		2.2	Arrange for external testing if appropriate
		2.3	Identify appropriate and certified laboratory and test equipment
		2.4	Select appropriate procedures/standards for the requirements of the test
		2.5	Prepare sample according to appropriate procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Undertake prescribed tests**	3.1	Check that the sample or casting has been prepared as required by the test method
		3.2	Prepare sample or casting
		3.3	Prepare instrument as required by procedures
		3.4	Test sample or casting
		3.5	Record and check test results and repeat test results if required
4	**Arrange other tests**	4.1	Identify need for tests not covered by this unit
		4.2	Arrange for internal or external test according to standard enterprise procedures
5	**Report result of tests**	5.1	Identify reporting requirements
		5.2	Source externally conducted test results from provider
		5.3	Determine implications of test results for process or product
		5.4	Undertake or recommend actions to be taken based on test results and enterprise procedures
		5.5	Prepare and circulate report in accordance with enterprise requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Prescribed range of tests include testing one (1) or more of the following:	• tensile strength • compressive strength • elongation • area reduction • yield stress • yield point • proof stress • Young's modulus • elastic/plastic region and deformation • viscoelastic deformation
Other tests include one (1) or more of the following:	• fatigue/flex testing • creep testing • strain test and measurement • static shear and bend test • ultraviolet-visible (UV-VIS) spectrophotometry • infrared spectroscopy (IR) • gas chromatography (GC) • X-ray fluorescence (XRF) • flame photometry • atomic absorption spectrometry (AAS) • scanning electron microscopy (SEM)
Prepare sample includes one (1) or more of the following:	• representative sub-samples have been taken • samples are ground and milled • the sample is ready for the test
Prepare instrument includes one (1) or more of the following:	• checking calibration • ensuring the availability of required consumables • curve generation where OES test is required • setting machine conditions • checking machine function
Materials for mechanical tests include one (1) or	• metals • polymer-based materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

more of the following:

- other solid materials on which mechanical testing is relevant

Assessment Requirements for MEM04023 Undertake prescribed tests on foundry-related materials

Modification History

Release 1. Supersedes and is equivalent to MEM04023A Undertake prescribed tests on foundry related materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting of appropriate test methods from a prescribed range of tests against predetermined specifications and standards
- preparing samples according to appropriate procedures
- ensuring the test instrument is prepared according to specifications, standards and procedures
- conducting tests either in a workplace or suitable laboratory facility, including:
  - selecting appropriate test methods
  - obtaining repeatable results
  - interpreting test results for a foundry
  - obtaining reproducible test results from testing across different samples requiring different sample preparation/test conditions
- arranging other internal/external testing as prescribed
- preparing and circulating reports and filing report in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- standards:
  - needs for standards
  - standards organisations
  - structure and operations of Standards Australia (SA)
- the role of National Association of Testing Australia (NATA):
- tensile testing, methods for tensile testing, e.g. AS 1391-2007 Metallic materials – Tensile testing at ambient temperature or equivalent international standard, and determination of tensile properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- general impact testing:
  - factors affecting impact properties of materials, impact testing (AS 1544 Methods for impact tests on metals) or equivalent international standard and drop weight tear test (AS 1330-2004 Metallic materials – Drop weight tear test for ferritic steels) or equivalent international standard
- hardness testing:
  - Vickers hardness testing (AS 1817.1-2003 Metallic materials – Vickers hardness test – Test methods) or equivalent international standard
  - Brinell Hardness Testing (AS 1816.1-2007 Metallic materials Brinell hardness test – Test method) or equivalent international standard
  - Rockwell Hardness Testing (AS 1815.1-2007 Metallic materials – Rockwell harness test – Test methods) or equivalent international standard
  - other hardness testing methods (e.g. Equotip and other rebound methods)
- principles of operation, uses and limitations of optical emission spectroscopy (OES) otherwise known as atomic emission spectroscopy (AES)
- purpose and scope of the following tests to the level required to determine the suitability or otherwise of the test but not to the level of conducting the test or interpreting the test:
  - fatigue/flex testing
  - creep testing
  - strain test and measurement
  - static shear and bend test
  - ultraviolet-visible (UV-VIS) spectrophotometry
  - infrared spectroscopy (IR)
  - gas chromatography (GC)
  - X-ray fluorescence (XRF)
  - flame photometry
  - atomic absorption spectrometry (AAS)
  - scanning electron microscopy (SEM)
- mathematics relevant to the collation and reporting of test data
- impact of chemical composition on the foundry process and product
- potential implications of the variety of adjustments that could be made in response to test results.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking prescribed tests on foundry related materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04024 Produce moulds and cores by hand

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04024 Produce moulds and cores by hand (Release 1).

Release 1. Supersedes but is not equivalent to MEM04005C Produce moulds and cores by hand (jobbing).

Application

This unit of competency defines the skills and knowledge required to use manual (jobbing) methods to produce moulds and cores to specifications for the production of metal castings. It includes the ability to match patterns to job specifications.

Where the selection and use of welding skills is required unit MEM05012 Perform routine manual metal arc welding and unit MEM05050 Perform routine gas metal arc welding, should also be selected as appropriate.

Where lifting and moving moulds and cores requires the use of mobile load shifting equipment or overhead cranes, appropriate manual handling units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Casting and moulding

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
		1.5	Determine sequence of operations, including material selection, job set up, for maximum safety, efficiency and to meet job specifications
2	**Select inspect and prepare pattern equipment**	2.1	Identify pattern and associated equipment from specifications
		2.2	Inspect pattern equipment for conformance to specifications, and identify damaged patterns for repair or replacement
		2.3	Assemble pattern to specification
		2.4	Set up pattern equipment to specification
3	**Make mould and core**	3.1	Position core in prints utilising chaplets and chills, as required, and vent to specification
		3.2	Close mould and check for compliance to component specification
		3.3	Select and position appropriate moulding/core making equipment
		3.4	Select and use appropriate moulding media to produce

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			mould and core to specification
		3.5	Secure mould
		3.6	Select or manufacture pouring basin to specification and position in accordance with procedures
		3.7	Ram up flat back and split pattern moulds and cores with single joints as required
		3.8	Use parting and stripping systems
		3.9	Position and secure vents, risers and runners as required
		3.10	Remove pattern from mould and core box safely and without causing damage to the pattern
		3.11	Inspect and repair mould as required
		3.12	Clean and paint mould and core according to specification using site procedures
4	**Complete work requirements**	4.1	Leave the worksite in a safe state, including clearing all materials/debris and cleaning the worksite
		4.2	Dispose of unwanted treated sand according to SOPs
		4.3	Complete reports/records in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• binders • hardeners • sand additives • mould coatings
Patterns include one (1) or more of the following:	• flatback • double sided plated patterns • split patterns • cored patterns • single sided drag and cope plated patterns
Moulds include one (1) or more of the following:	• flatback/split • cored moulds • plated moulds
Cores include one (1) or more of the following:	• full • half • segment
Mould securing methods include one (1) or more of the following:	• weights • clamps • bolting
Moulding media includes one (1) or more of the following:	• green sand • shell sand • chemically bonded media
Pouring basins include one (1) or more of the following:	• hand • pattern formed
Parting and stripping systems include one (1) or more of the	• dry • wet

Assessment Requirements for MEM04024 Produce moulds and cores by hand

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04024 Produce moulds and cores by hand (Release 1).

Release 1. Supersedes but is not equivalent to MEM04005C Produce moulds and cores by hand (jobbing).

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning the production of moulds and cores by hand, including identifying job requirements and materials from instructions or specifications, job set up, and sequence operations for maximum safety and efficiency
- assembling pattern to specification, including selecting, inspecting and setting up pattern equipment to conformance and identifying damaged patterns for repair or replacement
- preparing to produce moulds and cores by positioning core in prints utilising chaplets and chills and vent to specification, closing mould, selecting and positioning appropriate moulding/core making equipment, selecting appropriate moulding media and securing mould
- producing mould and core by selecting or manufacturing a pouring basin, ramming mould and cores with flat joints, using parting and stripping systems, positioning and securing loose pieces, vents, risers and runners, and removing pattern and loose pieces from mould and core box
- inspecting, cleaning, repairing and painting mould according to specification
- disposing of unwanted treated sand according to legislative requirements and SOPs
- completing all proformas and standard workplace forms as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- metal casting process
- pattern types and their application in a casting process
- pattern assembly techniques
- procedures for selecting a moulding box to match job and pattern

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles and processes for selection of ancillary components
- sand types and their bonding systems
- compaction processes
- parting and stripping systems
- mould requirements including vents, runners, risers and other methoding requirements
- finishing and closing techniques
- core placement
- pouring requirements
- securing systems
- pattern care and storage
- environmental requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in producing moulds and cores by hand at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM04025 Produce moulds and cores by hand (advanced)

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM04025 Produce moulds and cores by hand (advanced) (Release 1).

Release 1. Supersedes and is not equivalent to MEM04005C Produce moulds and cores by hand (jobbing).

Application

This unit of competency has been developed for Engineering Tradesperson – Casting and Moulding apprenticeship training and the recognition of trade-level skills in the production of moulds and cores using advanced manual (jobbing) methods. It defines the skills and knowledge required to use advanced manual (jobbing) methods to produce moulds and cores for the production of metal castings and includes the ability to match patterns, moulds and cores to meet requirements.

Where the selection and use of welding skills is required unit MEM05012 Perform routine manual metal arc welding and unit MEM05050 Perform routine gas metal arc welding, should also be selected as appropriate.

Where lifting and moving moulds and cores requires the use of mobile load shifting equipment or overhead cranes, appropriate manual handling units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM05001 Perform manual soldering/desoldering - electrical/electronic components

Modification History

Release 1. Supersedes and is equivalent to MEM05001B Perform manual soldering/desoldering – electrical/electronic components

Application

This unit of competency defines the skills and knowledge required to perform manual soldering/desoldering for the installation and fabrication of electrical/electronic components.

Where advanced specification and high reliability soldering associated with the installation of electrical/electronic components and in areas where reliability of connections is critical unit MEM05002 Perform high reliability soldering and desoldering should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05001 Perform manual soldering/desoldering - electrical/electronic components

Modification History

Release 1. Supersedes and is equivalent to MEM05001B Perform manual soldering/desoldering – electrical/electronic components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning to solder by selecting appropriate solder, tools and holding devices for protection of components
- soldering materials/components to specification and remove any excess solder
- inspecting solder joints to comply with inspection procedures and record the results
- desoldering materials/components using appropriate techniques to minimise damage and remove and clean to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- cleaning solutions and properties and cleaning procedures
- methods of joint preparation
- properties of fluxes and their uses
- heat and damage protection procedures
- procedures for preventing electrostatic discharge damage
- soldered joint testing and inspection procedures
- reworking procedures and precautions.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing manual soldering/desoldering – electrical/electronic components at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM05002 Perform high reliability soldering and desoldering

Modification History

Release 1. Supersedes and is equivalent to MEM05002B Perform high reliability soldering and desoldering

Application

This unit of competency defines the skills and knowledge required to perform soldering/desoldering for the installation and fabrication of electrical/electronic components to advanced or military specifications, or where the reliability of electrical connections is critical and where the prevention of damage through electrostatic discharge or other means is required as well as the soldering of electronic surface mount devices (SMD).

It applies to work undertaken on equipment where continuous performance is critical, and this includes work to military specifications in a workshop, laboratory or in situ.

Where manual soldering for the installation and fabrication of electrical/electronic components and where the reliability of connections is not critical unit MEM05001 Perform manual soldering/desoldering - electrical/electronic components should be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05002 Perform high reliability soldering and desoldering

Modification History

Release 1. Supersedes and is equivalent to MEM05002B Perform high reliability soldering and desoldering

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning to solder by selecting appropriate and tools and hold, setting up and/or mounting device/component to specifications using appropriate techniques
- handling printed circuit boards, assemblies and components to prevent electrostatic discharge or mechanical damage
- undertaking high-level soldering
- preventing of damage through electrostatic discharge or other means using appropriate techniques
- inspecting/testing soldered joints visually and, where required, mechanically and electrically to ensure compliance with specifications and recording the results
- reworking/repairing faulty joints to specification, including desoldering.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- cleaning solutions and properties and cleaning procedures
- methods of joint preparation
- properties of fluxes and their uses
- heat and damage protection procedures
- procedures for preventing electrostatic discharge damage
- soldered joint testing and inspection procedures
- reworking procedures and precautions.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in performing high reliability soldering and desoldering at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05003 Perform soft soldering

Modification History

Release 1. Supersedes and is equivalent to MEM05003B Perform soft soldering

Application

This unit of competency defines the skills and knowledge required to perform soft soldering applications of ferrous and non-ferrous materials, using straightforward techniques, where heat damage to components or finish of soldered joint is not critical.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Undertake soft soldering**	2.1	Assemble tools, equipment and consumables appropriate to the task and prepare for use
		2.2	Prepare, arrange and check materials to be soldered to ensure solder joint meets specifications, as required
		2.3	Use correct techniques to apply soft solder according to SOPs
		2.4	Clean and check solder joint for compliance to specifications and rectify any identified faults

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Preparation includes one (1) or more of the following:	• cleaning • deburring • twisting of conductors • fluxing
Materials include one (1) or more of the following:	• ferrous • non-ferrous
Tools include one (1) or more of the following:	• all types of soldering irons • direct flame • other heating devices

Assessment Requirements for MEM05003 Perform soft soldering

Modification History

Release 1. Supersedes and is equivalent to MEM05003B Perform soft soldering

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing to soft solder by selecting appropriate tools and preparing materials in accordance with SOPs
- applying soft solder to materials using appropriate techniques
- cleaning and checking solder joint for compliance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- effect of material to be soft soldered on the selection of consumables
- reasons for preparing surfaces prior to soldering
- procedures for rectifying defects in soldered joints.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing soft soldering at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

MEM05004 Perform routine oxy fuel gas welding

Modification History

Release 1. Supersedes and is equivalent to MEM05004C Perform routine oxy acetylene welding

Application

This unit of competency defines the skills and knowledge required to prepare materials and perform routine oxy fuel gas welding of mild/low carbon steel and cast iron where the welding is not required to meet an Australian Standard or equivalent.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements MEM05055 Weld using oxy fuel gas welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fuel gases include one (1) or more of the following:	• acetylene • liquefied petroleum gas (LPG) • hydrogen
Materials include one (1) or more of the following:	• mild/low carbon steel • cast iron
Consumables include one (1) or more of the following:	• filler rods • fluxes
Welds include the following:	• butt • fillet
Preparation includes one (1) or more of the following:	• preheating • setting up jigs • fixtures • clamps • joint preparation
Fuel gas welding equipment includes the following:	• gas cylinders • hoses • blowpipes • tips and nozzles • regulators • flashback arrestors

Assessment Requirements for MEM05004 Perform routine oxy fuel gas welding

Modification History

Release 1. Supersedes and is equivalent to MEM05004C Perform routine oxy acetylene welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- cleaning and preparing materials for welding
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- selecting settings and consumables
- butt and fillet weld materials to comply with specifications
- cleaning welds according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- preparatory requirements
- equipment and equipment settings
- purpose of, and setting up requirements, of:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors

MEM05005 Carry out mechanical cutting

Modification History

Release 1. Supersedes and is equivalent to MEM05005B Carry out mechanical cutting

Application

This unit of competency defines the skills and knowledge required to set up and operate a range of mechanical cutting and holing equipment.

Typical applications of this unit include cutting for manufacture, production cutting and cutting materials in a maintenance environment.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of power tools for hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where operational maintenance of equipment is required unit MEM07001 Perform operational maintenance of machines/equipment should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
		1.5	Plan use of material to minimise waste
2	**Select/set up machine tooling**	2.1	Select appropriate method/machines to meet specifications
		2.2	Load machines and adjust for operation according to SOPs
		2.3	Select and install tooling to match job requirements
		2.4	Set up and adjust machines according to SOPs
3	**Operate mechanical cutting machine**	3.1	Set appropriate stops and guards and adjust as required
		3.2	Secure and position material as required
		3.3	Operate machine to cut/hole material to meet specifications
		3.4	Check material and adjust machine and/or tooling as required against specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5 Check material for conformance to specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Machines include one or (1) more of the following:	• guillotines • croppers • cold saws • band saws • automatic saws • abrasive saws
Tooling includes one (1) or more of the following:	• guillotine blades • cropper punches and dies • cold saw blades • band saw blades • automatic saw blades
Materials include one (1) or more of the following:	• ferrous • non-ferrous • non-metallic products
Stops and guards include the following:	• all safety equipment/stops/guards

Assessment Requirements for MEM05005 Carry out mechanical cutting

Modification History

Release 1. Supersedes and is equivalent to MEM05005B Carry out mechanical cutting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate cutting machine and tooling and loading material to match job requirements
- setting up and safely operating equipment
- securing and positioning material using a graduated measuring device and adjusting as required in conformance with specifications
- adjusting machine/tooling as required using material in most economical way
- checking material against specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of cutting methods and machines
- effect of materials on the machine tooling, tooling defects and adjustments
- effect of adjustments on the dimensions of the cut material
- applicable tolerances
- methods of marking out materials to ensure minimum wastage.

Assessment Conditions

- Assessors must:
  - have vocational competency in carrying out mechanical cutting at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05006 Perform brazing and/or silver soldering

Modification History

Release 1. Supersedes and is equivalent to MEM05006C Perform brazing and/or silver soldering

Application

This unit of competency defines the skills and knowledge required to perform brazing (including braze welding) and/or silver soldering and includes the preparation of materials and equipment and the inspection of the completed work.

It applies to silver soldering and brazing using all grades of silver solder and braze.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required see unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05006 Perform brazing and/or silver soldering

Modification History

Release 1. Supersedes and is equivalent to MEM05006C Perform brazing and/or silver soldering

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking condition of equipment
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- preparing to braze and/or silver solder by assembling/aligning materials in an appropriate manner and applying distortion prevention methods to meet specifications
- applying consumables and brazing and/or silver soldering ferrous and non-ferrous materials
- annealing material using appropriate techniques
- inspecting joints and removing excess jointing materials and recording the results.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- potential equipment faults
- reasons for selecting specific methods of assembly/alignment
- procedures for minimising distortion of the materials being brazed/braze welded/silver soldered
- procedures for assembling and setting up the specific heating equipment and reasons for selection
- reasons for selecting specific consumables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for preheating the materials to be joined and precautions to be observed
- conducting test runs
- procedures for normalising the temperature of jointed materials and the consequences of inappropriate techniques
- typical applications of brazing/braze welding and silver soldering processes
- procedures for removing excess jointing material
- effects of the use of inappropriate techniques and quantities of jointing material on the performance of the jointed materials
- procedures for inspecting brazed/braze welded/silver soldered joints.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing brazing and or silver soldering at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Cutting includes one (1) or more of the following:	• hand held • self-propelled straight line cutters
Methods include one (1) or more of the following:	• manual • automatic
Fuel gases include one (1) or more of the following:	• acetylene • liquefied petroleum gas (LPG) • hydrogen
Material includes various thicknesses and types of one (1) or more of the following:	• ferrous • non-ferrous • non-metallic
Equipment includes the following:	• gas cylinders • hoses • blowpipes • tips and nozzles • regulators • flashback arrestors

Assessment Requirements for MEM05007 Perform manual heating and thermal cutting

Modification History

Release 1. Supersedes and is equivalent to MEM05007C Perform manual heating and thermal cutting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting equipment appropriate to the material
- checking condition of equipment
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- operating equipment to cut materials making appropriate cutting allowances to ensure material is used in most economical way
- identifying defects and taking appropriate remedial action
- heating material to specification
- checking final product for compliance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- cutting processes appropriate to various materials
- heating and cutting specifications
- purpose of, and setting up requirements, of:
  - gas cylinders
  - hoses
  - blowpipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - tips and nozzles
  - regulators
  - flashback arrestors
- tools, equipment, techniques and procedures for heating and cutting
- potential equipment faults
- assembling procedures for equipment and accessories
- equipment pre-checks and operation
- procedures for adjusting heating and cutting equipment
- cutting allowances and reasons for applying them
- procedures and reasons for minimising waste material
- cutting defects and their causes and tools, equipment and techniques required to correct defects.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing manual heating and thermal cutting at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05008 Perform advanced manual thermal cutting, gouging and shaping

Modification History

Release 1. Supersedes and is equivalent to MEM05008C Perform advanced manual thermal heating cutting, gouging and shaping

Application

This unit of competency defines the skills and knowledge required to perform advanced manual heating, thermal cutting, gouging and shaping to produce complex internal and external profiles.

Items are cut, shaped or gouged by a variety of methods to satisfy predetermined shape, size and surface finish specifications.

Where the selection and use of tools is required unit MEM18001 Use hand tools, and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM05007	Perform manual heating and thermal cutting
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Select and set up equipment for manual thermal cutting, gouging and shaping**	2.1	Select appropriate cutting process and procedure for material being worked
		2.2	Select and assemble appropriate accessories and equipment
		2.3	Ensure equipment is in safe working condition
		2.4	Set up equipment following SOPs
3	**Perform hand held thermal cutting and shaping**	3.1	Follow equipment start-up procedures
		3.2	Cut material to specifications
		3.3	Identify cutting defects and take corrective action in accordance with SOPs
		3.4	Remove material with minimum loss of sound metal
		3.5	Check final shape/profile/surface finish for compliance with specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Methods include one (1) or more of the following:	• oxy acetylene • oxy/hydrogen • plasma • carbon arc
Cutting and shaping equipment includes the following:	• gas cylinders • hoses • blowpipes • tips and nozzles • regulators • flashback arrestors

MEM05009 Perform automated thermal cutting

Modification History

Release 1. Supersedes and is equivalent to MEM05009C Perform automated thermal cutting

Application

This unit of competency defines the skills and knowledge required to set up and operate single and multi-headed automated thermal cutting machines for plate and pipe used in heavy engineering.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material includes one (1) or more of the following	• ferrous • non-ferrous
Cutting medium includes one (1) or more of the following:	• fuel gases • oxy acetylene • plasma arc • laser
Machine includes one (1) or more of the following:	• single head machines • multi-headed machines • numerically controlled (NC) driven equipment
Where NC machines are used, set up machine to specifications includes one (1) or more of the following:	• selecting programs according to predetermined instructions • loading programs according to predetermined instructions
Tracing devices include one (1) or more of the following:	• powder marking and magnetic • photoelectric tracing devices
Gas handling equipment includes the following:	• gas cylinders • hoses • blowpipes • tips and nozzles • regulators

Assessment Requirements for MEM05009 Perform automated thermal cutting

Modification History

Release 1. Supersedes and is equivalent to MEM05009C Perform automated thermal cutting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- setting up materials for stack cutting and nesting to minimise waste and selecting appropriate cutting medium and setting to specifications
- checking condition of machine and equipment
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- setting up and operating single, multi-headed or NC machines to predetermined instructions and establishing machine datum to specifications
- using tracing devices as required
- shutting down machine in accordance with SOPs
- checking final product for compliance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- purpose of and setting up requirements of:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - flashback arrestors
- potential machine and equipment faults
- material set-up procedures
- advantages of stack cutting and nesting
- procedures for establishing machine datum
- hazards associated with igniting cutting media
- safety precautions to be taken when starting and shutting down the machine
- procedures for using powder marking and other tracing devices.

Assessment Conditions

- Assessors must:
    - have vocational competency in performing automated thermal cutting at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05010 Apply fabrication, forming and shaping techniques

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05010 Apply fabrication, forming and shaping techniques (Release 1).

Release 1. Supersedes and is equivalent to MEM05010C Apply fabrication, forming and shaping techniques.

Application

This unit of competency has been developed for Engineering Tradesperson – Fabrication apprenticeship training and the recognition of trade-level skills in fabrication, forming and shaping of a wide variety of shapes and products undertaken using a variety of forming and shaping techniques.

Fabrication, forming and shaping is done to specifications interpreted from technical drawings and job specifications using a variety of tools and equipment.

Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boiler making or sheet metal work.

Where heating and thermal cutting is required unit MEM05007 Perform manual heating and thermal cutting should also be selected.

Where marking off/out skills is required unit MEM12007 Mark off/out structural fabrications and shapes should also be selected.

Where welds are required to meet legislative or regulatory requirements appropriate welding units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM05011 Assemble fabricated components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05011 Assemble fabricated components (Release 1).

Release 1. Supersedes and is equivalent to MEM05011D Assemble fabricated components.

Application

This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and recognition of trade-level skills in the assembly of general fabricated components in plate, pipe and section or sheet in typical applications either on-site or in a fabrication workplace.

Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work.

Work may be undertaken individually or as part of a team.

Where assembly involves using pre-constructed jigs unit MEM03001 Perform manual production assembly and unit MEM03003 Perform sheet and plate assembly, should also be selected as appropriate.

Where skills for the assembly of fabricated engineering components are required unit MEM18006 Perform precision fitting of engineering components should also be selected.

Where welds are required to meet legislative or regulatory requirements, then appropriate welding units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 8

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM05005	Carry out mechanical cutting
MEM05007	Perform manual heating and thermal cutting
MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Plus, one or more of the following, including their prerequisites:

MEM05015	Weld using manual metal arc welding process
MEM05017	Weld using gas metal arc welding process
MEM05019	Weld using gas tungsten arc welding process
MEM05055	Weld using oxy fuel gas welding process

Assessment Requirements for MEM05011 Assemble fabricated components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05011 Assemble fabricated components (Release 1).

Release 1. Supersedes and is equivalent to MEM05011D Assemble fabricated components.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- constructing necessary jigs
- planning fabricated component assembly tasks and sequences efficiently and effectively
- aligning material in jigs and using fixtures, tools and equipment as necessary to check the position of all assembled components visually and dimensionally
- marking datum lines in an appropriate manner
- positioning and assembling general fabricated components in accordance with drawing/specifications using accepted engineering trade techniques, practices, processes and workplace procedures either on-site or in a fabrication workshop
- applying appropriate distortion control techniques and checking to ensure compliance of the final assembly with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- methods and techniques for assembly of fabricated components
- jig construction
- effects of distortion of fabricated components and distortion prevention techniques
- uses and interpretation of drawings, specifications and material lists
- characteristics of relevant tools and equipment for determining squareness, level and alignment
- function and determination of datum lines
- fixing/joining techniques, including:
  - welding
  - adhesives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - fasteners
  - rivets
- defects associated with the assembly of fabricated components and methods of rectification of defects by rework or adjustment.

Assessment Conditions

- Assessors must:
  - have vocational competency in assembling fabricated components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05012 Perform routine manual metal arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05012C Perform routine manual metal arc welding

Application

This unit of competency defines the skills and knowledge required to carry out routine manual metal arc welding (MMAW) of low carbon mild steel where the welding is not required to meet an Australian Standard or equivalent.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare materials and equipment for welding**	2.1	Identify location of welds in accordance with procedures and job specifications
		2.2	Clean and prepare materials ready for welding
		2.3	Set up welding equipment according to SOPs
		2.4	Select correct electrodes and adjust settings to suit application
3	**Perform routine welding using MMAW**	3.1	Weld materials to job requirements
		3.2	Clean welds according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the following:	• butt • fillet
Preparing includes one (1) or more of the following:	• cleaning • setting up jigs • fixtures • clamps • joint preparation
Welding equipment includes the following:	• welding leads • welding machines • electrode holder
Cleaning includes one (1) or more of the following:	• slag and spatter • cleaning • using files • grinders

Unit Mapping Information

Assessment Requirements for MEM05012 Perform routine manual metal arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05012C Perform routine manual metal arc welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing routine manual metal arc welding (MMAW)
- cleaning and preparing materials to specifications
- setting up welding equipment, selecting appropriate electrodes and adjusting settings to suit application
- welding materials to comply with specifications
- cleaning welds for slag and splatter in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- material and equipment preparation
- equipment set-up and settings
- appropriate welding consumables consistent with standard operating procedures
- MMAW processes and properties.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing routine manual metal arc welding at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05013 Perform manual production welding

Modification History

Release 1. Supersedes and is equivalent to MEM05013C Perform manual production welding

Application

This unit of competency covers the skills and knowledge required to perform production welding, including spot welding, in a production environment.

Guidance may be required with respect to equipment settings, choice of consumables, gas mixtures and pressures.

Where automated/production welding is required to be performed unit MEM07024 Operate and monitor machine and process and unit MEM07025 Perform advanced machine and process operation, should also be selected as appropriate.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05013 Perform manual production welding

Modification History

Release 1. Supersedes and is equivalent to MEM05013C Perform manual production welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs)and safe work practices
- preparing and aligning material for welding using dedicated jigs and fixtures
- performing tacking or production welding in a production environment.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- function and use of jigs and fixtures in production welding
- function, application and operation of welding equipment within the scope of this unit
- material preparation.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing manual production welding at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM05014 Monitor quality of production welding/fabrications

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05014 Monitor quality of production welding/fabrications (Release 1).

Release 1. Supersedes and is equivalent to MEM05014C Monitor quality of production welding/fabrications.

Application

This unit of competency defines the skills and knowledge required to perform basic inspection of completed or partly completed welded fabrications produced by others in a production environment.

It is used to monitor the quality of production fabrication work where knowledge of the welding techniques and testing procedures is required. Duties are carried out in consultation with an appropriately qualified supervisor or engineer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

MEM05015 Weld using manual metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05015 Weld using manual metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05015D Weld using manual metal arc welding process.

Application

This unit of competency has been developed for Engineering Tradesperson – Fabrication apprenticeship training and the recognition of trade-level skills in manual metal arc welding (MMAW) on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level MMAW welding skills.

Weld quality would typically conform to AS 1554 General Purpose, and American Bureau of Shipping (ABS) or equivalent.

Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

Assessment Requirements for MEM05015 Weld using manual metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05015 Weld using manual metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05015D Weld using manual metal arc welding process.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs)and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for welding using manual metal arc welding process (MMAW) to the specified standard
- selecting appropriate weld and joint preparation methods
- consistently weld a range of materials to the specified standard or equivalent using AC or DC welding machines and electrodes while preventing distortion
- rectifying any defects
- completing weld records related to MMAW onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- material preparation for MMAW
- weld joint preparations
- welding electrode classification
- causes of distortion for materials when welded
- causes of weld defects and methods of rectification
- relationships between amperage, electrode and material
- standards for MMAW, including AS 1554 General Purpose any other equivalent standards.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in welding using MMAW process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05016 Perform advanced welding using manual metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05016 Perform advanced welding using manual metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05016C Perform advanced welding using manual metal arc welding process.

Application

This unit of competency defines the skills and knowledge required to carry out advanced welding using manual metal arc welding (MMAW).

Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent.

Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05016 Perform advanced welding using manual metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05016 Perform advanced welding using manual metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05016C Perform advanced welding using manual metal arc welding process.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using manual metal arc welding process (MMAW) to Australian Standard 1554 Structural Purpose
- selecting appropriate weld and joint preparation methods
- consistently weld materials to AS 1554 Structural Purpose or equivalent using AC or DC welding machines and electrodes while preventing distortion
- rectifying any defects
- completing and maintaining weld records related to MMAW Structural Purpose onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- properties and characteristics of low carbon, stainless and low alloy steel
- requirements to conform to AS 1554 Structural Purpose or equivalent
- weld specifications and requirements
- different welder identification systems, including numbering, bar coding, paint coding and letter stamps.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced welding using MMAW process at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05017 Weld using gas metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05017 Weld using gas metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05017D Weld using gas metal arc welding process.

Application

This unit of competency has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in gas metal arc welding (GMAW) on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level GMAW welding skills.

Weld quality would typically conform to Australian Standard 1554 General Purpose, and American Bureau of Shipping (ABS) or equivalent.

Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM05050	Perform routine gas metal arc welding
MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare materials for GMAW**	2.1	Prepare materials to achieve the required weld requirements
		2.2	Assemble/align materials to specification where required
3	**Select, assemble and set up**	3.1	Identify and select welding equipment and electrodes, accessories and consumables appropriate to the material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	welding equipment and consumables	3.2	Assemble and set up AC or DC welding equipment
4	**Minimise and rectify distortion**	4.1	Apply appropriate distortion prevention measures
		4.2	Rectify any distortion using appropriate techniques
5	**Weld to job specification using GMAW**	5.1	Ensure weld deposit is to specifications
		5.2	Clean joints to specifications
6	**Ensure weld conformance**	6.1	Visually inspect weld joints for conformance to specifications
		6.2	Rectify any weld defects with minimum loss of sound metal using correct techniques and tools
		6.3	Complete weld records, where required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the	• fillet and butt welds carried out in all positions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

following:

Materials include one (1) or more of the following:	• ferrous, including carbon or stainless steel • non-ferrous metals • alloys suitable for GMAW
Preparation includes one (1) or more of the following:	• pre-heating • setting up of jigs • fixtures and clamps • joint preparation (e.g. bevelling)
Distortion prevention measures include one (1) or more of the following:	• pre-heating • setting up of jigs • fixtures and clamps
Rectify includes the use of one (1) or more of the following:	• oxy acetylene • air arc equipment • grinding devices
Defects include one (1) r more of the following:	• porosity • slag inclusions • discontinuities • lack of penetration • undercut

MEM05018 Perform advanced welding using gas metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05018 Perform advanced welding using gas metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05018C Perform advanced welding using gas metal arc welding process.

Application

This unit of competency defines the skills and knowledge required to carry out advanced welding using gas metal arc welding (GMAW).

Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication using ferrous and non-ferrous materials. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent.

Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

or more of the following:	• stainless and low alloy steel • aluminium
Preparation includes one (1) or more of the following:	• pre-heating • setting up of jigs, fixtures and clamps • joint preparation (e.g. bevelling)
Distortion prevention measures include one (1) or more of the following:	• pre-heating • setting up of jigs • fixtures and clamps
Rectify includes the use of one (1) or more of the following:	• oxy acetylene • air arc equipment • grinding devices
Defects include one (1) or more of the following:	• porosity • slag inclusions • discontinuities • lack of penetration • undercut

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM05020 Perform advanced welding using gas tungsten arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05020C Perform advanced welding using gas tungsten arc welding process.

Assessment Requirements for MEM05020 Perform advanced welding using gas tungsten arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05020 Perform advanced welding using gas tungsten arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05020C Perform advanced welding using gas tungsten arc welding process.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using gas tungsten arc welding process (GTAW) to AS 1554 Structural Purpose
- selecting appropriate weld and joint preparation methods
- consistently weld materials to AS 1554 Structural Purpose or equivalent using AC or DC welding machines and electrodes while preventing distortion
- rectifying any defects
- completing and maintaining weld records related to GTAW Structural Purpose onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to AS 1554 Structural Purpose or equivalent
- weld procedures and requirements
- different welder identification systems, including numbering, bar coding, paint coding, and letter stamps.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced welding using GTAW process at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05022 Perform advanced welding using oxy acetylene welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05022 Perform advanced welding using oxy acetylene welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05022C Perform advanced welding using oxy acetylene welding process.

Application

This unit of competency defines the skills and knowledge required to perform advanced oxy acetylene welding using a range of materials for general fabrication.

Welding quality would meet AS 1554 Special Purpose or equivalent.

Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM05004	Perform routine oxy fuel gas welding
MEM05007	Perform manual heating and thermal cutting
MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM05055	Weld using oxy fuel gas welding process
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare materials for welding**	2.1	Prepare materials to achieve the required weld requirements
		2.2	Assemble/align materials to specification, where required
3	**Select, assemble and set up**	3.1	Identify and select welding equipment and consumables according to job requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	welding equipment and consumables	3.2	Assemble and set up welding equipment in accordance with SOPs
4	**Weld joints to Australian Standard 1554 SP or equivalent**	4.1	Weld materials to AS 1554 Structural Purpose or equivalent in all positions
		4.2	Interpret instructions, symbols and specifications, including bead size, bead placement and reinforcement in accordance with weld procedure sheet, if available, and SOPs
5	**Ensure weld conformance**	5.1	Inspect weld joints visually for conformance to specifications
		5.2	Remove defects with minimum loss of sound metal using correct and appropriate techniques and tools
		5.3	Complete weld records, where required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the following:	• fillet and butt in the horizontal, vertical and overhead positions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• low carbon steel, plate, pipe, tube and round bar
Fuel gases include one (1) or more of the following:	• acetylene • liquefied petroleum gas (LPG) • hydrogen
Equipment includes the following:	• cylinders • regulators • hoses • torches • tips • flash back arrestors
Consumables include the following:	• appropriate fuel gas • filler rods • fluxes
Preparing materials includes one (1) or more of the following:	• pre-heating • setting up of jigs, fixtures and clamps • joint preparation e.g. bevelling

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM05022 Perform advanced welding using oxy acetylene welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05022C Perform advanced welding using oxy acetylene welding process.

MEM05023 Weld using submerged arc welding process

Modification History

Release 1. Supersedes and is equivalent to MEM05023C Weld using submerged arc welding process

Application

This unit of competency defines the skills and knowledge required to carry out submerged arc welding (SAW) where the welds are more likely to be associated with heavy rather than with light fabrication.

Weld quality would typically conform to AS 1554 General Purpose or equivalent.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM05057	Perform routine submerged arc welding
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

Assessment Requirements for MEM05023 Weld using submerged arc welding process

Modification History

Release 1. Supersedes and is equivalent to MEM05023C Weld using submerged arc welding process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for welding using submerged arc welding (SAW) process to AS 1554 General Purpose or equivalent
- selecting appropriate weld and joint preparation methods
- consistently weld materials to the specified standard or equivalent using DC welding machines and electrodes while preventing distortion
- rectifying any defects
- completing and maintaining weld records related to SAW welding onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- main types of fluxes and flux/wire combinations
- typical applications of SAW and common materials
- application of weld metal transfer (short arc and spray)
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials
- causes of defects and methods of rectification
- requirements of AS 1554 General Purpose or equivalent.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in welding using SAW process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05024 Perform welding supervision

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05024 Perform welding supervision (Release 1).

Release 1. Supersedes and is equivalent to MEM05024B Perform welding supervision.

Application

This unit of competency has been developed for post trade training of advanced engineering fabrication trades people and the recognition of post trade skills instructing and qualifying welders in accordance with weld procedures.

It defines the skills and knowledge required to instruct and qualify welders in accordance with weld procedures, including maintaining quality and safety procedures.

Competencies in this unit are based on wide knowledge of welding science, processes, procedures and technical requirements. Individuals working in this field would hold at least one certificate satisfying the requirements of AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificate 1-9.

The supervision, training and qualification of welders in welding procedures are defined by recognised codes and standards e.g. AS 2214-2004 (R2016) Certification of welding supervisors - Structural steel welding and AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificate 10.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 12

Pre-requisite Unit

Assessment Requirements for MEM05024 Perform welding supervision

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05024 Perform welding supervision (Release 1).

Release 1. Supersedes and is equivalent to MEM05024B Perform welding supervision.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- instructing welders and determining welding parameters in accordance with procedures
- qualifying welders by training and testing against relevant procedures
- monitoring internal quality assurance plan and safety procedures ensuring materials can be traced to their source
- recording weld procedure and findings on internal quality assurance plan
- arranging for non-destructive/destructive testing appropriate to weld procedure and verifying results against specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- welding science, principles and effects of heat treatment
- welding terms, codes and symbols
- welding processes, parameters and relation to weld quality
- welding procedures defined by code and technical requirements
- non-destructive testing.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing welding supervision at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. MEM05025 Perform welding/fabrication inspection

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05025 Perform welding/fabrication inspection (Release 1).

Release 1. Supersedes and is equivalent to MEM05025C Perform welding/fabrication inspection.

Application

This unit of competency defines the skills and knowledge required to perform welding/fabrication inspection by selecting, conducting or verifying appropriate non-destructive tests, establishing and validating welding procedures, ensuring quality assurance is carried out and monitoring procedures.

It applies to welding inspection based on knowledge of welding science and metallurgy, mechanical properties of welded joints, heat treatment procedures and national and technical standards. Test procedures and the range of this standard are determined by applicable Australian and/or international standards.

Where the performance of non-destructive testing is required the appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

- following work instructions, standard operating procedures (SOPs) and safe work practices
- organising/conducting appropriate non-destructive tests or verifying results of previous test procedures
- establishing and validating welding procedures by interpreting joint design specification, organising a test piece, interpreting the results and preparing a report identifying action to be taken
- ensuring quality assurance procedures are carried out, including checking identification (material test certification numbers), movement and document material through workshop in-site
- carrying out final inspection of fabrications, including material forming and dimensional checks against specifications
- maintaining and reviewing quality records to ensure compliance.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- types of non-destructive tests, their application and procedures
- welding specifications and procedures for the given weld
- tests/checks to be conducted
- arithmetic operations, formulae and calculations for testing welding/fabrications
- procedures for:
  - initiating the weld tests and obtaining previous weld tests
  - verifying/amending previously established weld test procedures
  - documenting welding procedures and preparing a weld test piece

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - documenting/recording the movement of material through the workshop and reasons why this is necessary
  - transferring material test certification numbers
  - identifying consumables and reasons for marking consumables for identification purposes
  - using and storing consumables and the consequences of inappropriate use and/or storage of consumables
  - maintaining welding quality records
- reasons for any identified discrepancies between previous and current weld tests
- effects of testing procedures on test results
- parameters and variables affecting the performance of the weld with respect to specifications
- tools, equipment, techniques and procedures necessary to check each variable, form and dimensions of the welded components
- tools, equipment, techniques and procedures to initiate, carry out, obtain and report the prescribed tests results
- discrepancies between the test results and weld specifications and remedial action to be taken to return welds produced to specification
- reasons and methods for correctly marking/identifying weld materials
- person(s) who can witness the transfer of material test certification numbers and reasons why this is important
- storage life of consumables
- welding quality requirements of the relevant code, standard and/or welding procedure.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing welding/fabrication inspection at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05026 Apply welding principles

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05026 Apply welding principles (Release 1).

Release 1. Supersedes and is equivalent to MEM05026C Apply welding principles.

Application

This unit of competency has been developed for post-trade training of advanced engineering tradespeople and the recognition of post-trade skills in applying welding principles to meet the statutory and regulatory requirements for welding procedures generally associated with the application of one of the units satisfying *AS 1796*-2001 (R2016) *Certification of welders and welding supervisors,* Certificates 1-9.

This unit covers the underpinning knowledge required to satisfy AS 1796-2001 (R2016) *Certification of welders and welding supervisors* and includes knowledge of welding terms, codes and symbols, the effects of heat treatment on metal as it relates to welding, and the logical sequence for a welding process required to be conducted to AS 1796-2001 (R2016) *Certification of welders and welding supervisors*. It covers welding, planning and set up principles for a range of materials and processes.

This unit must be assessed in combination with one of the units satisfying the AS 1796-2001 (R2016) *Certification of welders and welding supervisors,* Certificates 1-9. These units include:

- MEM05042 Perform welds to code standards using flux core arc welding process
- MEM05043 Perform welds to code standards using gas metal arc welding process
- MEM05044 Perform welds to code standards using gas tungsten arc welding process
- MEM05045 Perform pipe welds to code standards using manual metal arc welding process
- MEM05046 Perform welds to code standards using manual metal arc welding process
- MEM05058 Perform welds to code standards using oxy fuel gas welding process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Interpret welding terms and symbols correctly
2	**Determine the effects of heat treatment on metal in relation to welding**	2.1	Identify reasons for performing heat treatment
		2.2	Apply processes, including pre-heat/post-heat treatment, stress relieving, normalising and annealing, where appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
3	**Plan the logical sequence of welding operations**	3.1 Apply statutory and safety requirements to welding 3.2 Apply principles of planning and setting up welding 3.3 Prepare welds for testing, where specified

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Statutory and safety requirements include:	• as required by AS 1796-2001 (R2016) Certification of welders and welding supervisors, welding codes
Welding is to AS 1796-2001 (R2016) Certification of welders and welding supervisors and includes one (1) or more of the following:	• flux core arc welding (FCAW) • gas metal arc welding (GMAW) • gas tungsten arc welding (GTAW) • manual metal arc welding (MMAW) • oxy fuel gas welding

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM05026 Apply welding principles (Release 1).

Release 1. Supersedes and is equivalent to MEM05026C Apply welding principles.

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05026 Apply welding principles (Release 1).

Release 1. Supersedes and is equivalent to MEM05026C Apply welding principles.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting and applying statutory and safety requirements, including welding terms, codes and symbols as required by *AS 1796*-2001 (R2016) *Certification of welders and welding supervisors,* and welding codes for welding processes
- applying appropriate pre- and post-heat treatment processes for a range of welded materials
- setting up weld sequence and preparing materials in a logical manner for welding job.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- welding terminology, including codes and symbols
- heat treatment processes and the effect of heat treatment on metal
- logical sequence for welding processes
- tools, equipment and techniques used in welding.

Assessment Conditions

- Assessors must:
  - have vocational competency in applying welding principles at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.

MEM05027 Perform aluminothermic welding

Modification History

Release 1. Supersedes and is equivalent to MEM05027A Perform aluminothermic welding

Application

This unit of competency defines the skills and knowledge required to weld using the aluminothermic welding process. It includes planning and preparing the welding method, preparing materials and the site for aluminothermic welding, carrying out the welding process in accordance with safe working/regulatory requirements and workplace procedures, checking weld conformance and completing all required documentation.

This unit applies in a maintenance or site environment where the weld quality is not required to meet an Australian Standard. The aluminothermic welding process (commonly referred to as the CADWELD process) is pre-engineered and is used to make welded connections of copper to copper or copper to steel or other metals. It is also used for header cable taps, conductor splices and terminations, and ground rod connections, or for attaching cathodic protection leads to pipes (steel or cast iron), tanks and structures in which no outside source of heat or power is required. A common use is to join copper cables (wire) for use in direct burial (grounding/earthing) applications.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Work may be undertaken in the field/on-site (as distinct from a production/manufacturing facility) and may be undertaken in a trench. In those situations, MSMOPS363 Organise on-site work, for work on site and MSMPER205 Enter confined space, for work in a trench should also be selected as appropriate. Work will often be undertaken under a permit to work system in which case MSMPER200 Work in accordance with an issued permit and possibly other related permit units should also be selected as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where the aluminothermic welding process is required for rail track welding, TLIW3015 Weld rail using aluminothermic welding process should be selected from the TLI Transport and Logistics Training Package.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Work environment includes one (1) or more of the following:	• restricted spaces • exposed conditions • controlled or open environments
Pre-site preparations include one (1) or more of the following:	• checking all required equipment and materials • identifying required personal protective equipment • loading all requirements for the job
Materials to be joined include one (1) or more of the following:	• common steel • copper-clad steel • Columbium • Niobium • brass • wrought iron • stainless steel • cast iron • galvanised and bethanised steel • bronze • silicon bronze
Assessment of weld locations include one (1) or more of the following:	• proximity to existing welds or repairs • substrate integrity issues • preparation of pre-qualification samples
Weld consumables	• aluminothermic powder

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include one (1) or more of the following:	• starting powder • metallic disc
Equipment includes one (1) or more of the following:	• mould • lute (sealant) • ignition source • handle clamps • wire brush • mould scraper • gas pre-heating/cutting equipment
PPE includes one or more of the following:	• high visibility clothing • fire retardant overalls or long sleeved shirts and long pants • hearing protection • gauntlet type gloves • welding goggles • safety glasses • safety headwear • safety footwear • portable radios/mobile phones • other safety devices
Procedures and codes include one (1) or more of the following:	• relevant state/territory WHS legislation together with any nationally approved compliance codes and/or guidelines • relevant state/territory environmental protection requirements • legislation • relevant fire regulations

Assessment Requirements for MEM05027 Perform aluminothermic welding

Modification History

Release 1. Supersedes and is equivalent to MEM05027A Perform aluminothermic welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from sketches, sketches and verbal or written job instructions for aluminothermic welding, including location of welds
- preparing site for welding by obtaining appropriate permits, identifying site/job hazards and implementing hazard control measures and assessing weld location
- selecting and setting up welding equipment and consumables
- welding materials consistently to specification
- cleaning and inspecting welds for conformance in accordance with SOPs and completing records.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- relevant safety, work health and safety (WHS) and environmental procedures and regulations
- principles of the aluminothermic welding process chemical reaction
- common types of welding imperfections and defects and their causes (e.g. cracks, porosities, mould off centre, stresses in materials, pre-heating offset, sand inclusions and moisture)
- workplace procedures for the welding of materials using the aluminothermic technique
- problems that can occur during the welding of materials using the aluminothermic technique and action that can be taken to report or resolve the problems
- contents of relevant technical manuals and instructions
- characteristics of plant and equipment, hardware and components used in welding activities
- impact on work activities of regulatory requirements
- impact of other work activities on welding integrity
- workplace documentation requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- site inspection techniques.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing aluminothermic welding at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations* 2015 or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05036 Repair, replace and/or modify fabrications

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05036 Repair, replace and/or modify fabrications (Release 1).

Release 1. Supersedes and is equivalent to MEM05036C Repair/replace/modify fabrications.

Application

This unit of competency defines the skills and knowledge required to undertake repair, replacement and/or modifications of fabrications requiring an integrated level of skills in fabrication maintenance and repair and is intended to build on skills covered by the specialist prerequisites.

Where machines and equipment for forming, bending or shaping are required unit MEM05010 Apply fabrication, forming and shaping techniques should also be selected.

Where additional or more complex marking out skills are required see MEM12007 Mark off/out structural fabrications and shapes should also be selected.

Where the selection and use of welding processes are required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM05005	Carry out mechanical cutting
MEM05007	Perform manual heating and thermal cutting
MEM05011	Assemble fabricated components
MEM05051	Select welding processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM05052	Apply safe welding practices
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Plus, one or more of the following, including their prerequisites:

MEM05015	Weld using manual metal arc welding process
MEM05017	Weld using gas metal arc welding process
MEM05019	Weld using gas tungsten arc welding process
MEM05047	Weld using flux core arc welding process
MEM05055	Weld using oxy fuel gas welding process

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Inspect fabrication and determine suitability for repair/replacement/modification
2	**Assess and process material requirements**	2.1	Assess material requirements in accordance with relevant codes, manufacturers' specifications and SOPs
		2.2	Obtain/requisition materials
		2.3	Assess and obtain tool and equipment requirements in accordance with SOPs
3	**Prepare materials**	3.1	Prepare fabrication for repair/replacement and/or modification to specification using acceptable workplace practices, tools and equipment
		3.2	Mark out and prepare to specifications with minimum wastage using appropriate principles, tools and equipment
		3.3	Ensure materials are cut, bent, rolled, shaped or formed to specifications using appropriate fabrication techniques/procedures, tools and equipment
		3.4	Mark items for identification, where required
4	**Repair, replace and/or modify fabrication**	4.1	Position/clamp materials for welding using suitable clamping methods, equipment, jigs and fixtures
		4.2	Undertake pre-tack checks and determine compliance with specifications prior to tack welding in position
		4.3	Prepare welding equipment and adjust settings according to requirements
		4.4	Tack weld material or item using appropriate distortion

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		minimisation techniques and procedures
	4.5	Check material or item against specifications prior to welding
	4.6	Weld material or item to specifications using techniques and procedures appropriate to job requirements
5 **Finish and inspect repair, replacements and/or modification**	5.1	Ensure repair, replacement and/or modification is cleaned and finished to specifications using appropriate workplace practices
	5.2	Inspect welds visually to assess weld quality against predetermined specifications
	5.3	Assess completed repair and/or replacement for compliance against specifications
	5.4	Prepare and lodge maintenance report according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fabrication inspection includes one (1) or more of the following:	• determine defects/faults • non-compliance with specifications • repair/replacement/modification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Marked for identification includes one (1) or more of the following:	• to undergo repair, replacement and/or modification • to be cut, bent, rolled, shaped or formed to specifications
Clamping methods include one (1) or more of the following:	• automatic • semi-automatic • manual methods

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM05036 Repair, replace and/or modify fabrications (Release 1).

Release 1. Supersedes and is equivalent to MEM05036C Repair/replace/modify fabrications.

Assessment Requirements for MEM05036 Repair, replace and/or modify fabrications

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05036 Repair, replace and/or modify fabrications (Release 1).

Release 1. Supersedes and is equivalent to MEM05036C Repair/replace/modify fabrications.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions and inspecting fabrication for defects/faults, non-compliance and determining suitability for repair/replacement/modification
- selecting material, marking out and safely cutting, bending, rolling, shaping or forming ensuring minimum wastage using correct principles, tools, equipment and procedures
- selecting appropriate welding equipment and preparing materials for welding, including pre-tack checks and set up jigs, fixtures and clamps
- consistently welding materials while preventing distortion and rectifying any defects and ensuring repair, replacement and/or modification is cleaned and finished and visually inspected to meet predetermined specifications
- completing and lodging maintenance report.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- characteristics of faults, defects and/or non-compliance and means of rectification by rework or additional work, or by replacement of components/materials
- effects of proposed modifications on the fabrication
- reasons for selection of specific materials, tools, equipment and consumables
- marking out principles and techniques
- material preparation processes
- clamping method(s) for the welds undertaken
- location of all materials to be welded
- weld specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment, consumables and settings required to achieve the weld specification
- distortion minimisation procedures and methods for rectifying any distortion of materials
- material cleaning and finishing processes for the repair/replacement/modification
- reporting requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in repairing, replacing and modifying fabrications at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05037 Perform geometric development

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05037 Perform geometric development (Release 1).

Release 1. Supersedes and is equivalent to MEM05037C Perform geometric development.

Application

This unit of competency has been developed for Engineering Tradesperson – Fabrication apprenticeship training and the recognition of trade-level skills in marking out general fabrications using geometric development techniques.

Marking out associated with geometric development is done to specifications interpreted from technical drawings and job specifications.

This unit applies in jobbing workshops and involves the development of templates and general fabricating using geometrical layout techniques.

Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boiler making or sheet metal work.

For skills required for marking out activities associated with general engineering and maintenance functions, see the following units:

- MEM07005 Perform general machining
- MEM12006 Mark off/out (general engineering)
- MEM18006 Perform precision fitting of engineering components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Transfer dimensions from a detail drawing to work**	2.1	Determine and apply specifications and work requirements using appropriate calculations
		2.2	Carry out development to specifications or procedures using appropriate tools and equipment
		2.3	Establish datum points and mark appropriate to task requirements
3	**Make templates as required**	3.1	Select appropriate template material
		3.2	Produce templates to specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Follow correct storage procedures, including labelling and identification to procedures
4	**Develop patterns as required**	4.1	Select and apply parallel line, radial line and triangulation development methods as appropriate to the work requirements
		4.2	Determine and transfer allowances for fabrication and assembly
5	**Interpret relevant codes, standards and symbols**	5.1	Interpret relevant standards/codes and symbols
		5.2	Interpret requirements of standards/codes and apply to materials and processes
6	**Estimate quantities of materials from detail drawings**	6.1	Identify materials
		6.2	Estimate quantities from drawings
		6.3	Minimise material wastage

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Template materials include one (1) or more of the following:	• steel plate • perspex • timber • cardboard • paper
Storage procedures include one (1) or more of the following:	• labelling • identification (e.g. template lofts)
Development methods include one (1) or more of the following:	• parallel line • radial line • triangulation
Allowances include one (1) or more of the following:	• thickness • bend • pitch • angle • circumference • perimeter
Standards/codes and symbols includes:	• carrying out all work in accordance with legislative and regulatory requirements

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM05037 Perform geometric development (Release 1).

Release 1. Supersedes and is equivalent to MEM05037C Perform geometric development.

Assessment Requirements for MEM05037 Perform geometric development

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05037 Perform geometric development (Release 1).

Release 1. Supersedes and is equivalent to MEM05037C Perform geometric development.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- examining detailed drawings for fabrication requirements and specifications, including materials, measurements and tolerances, joining methods, standards and code requirements
- calculating allowances for fabrication and assembly
- establishing and marking datum points
- selecting and using parallel line, radial line and triangulation development methods with minimum material wastage and accurate dimensions
- producing templates accurately and following storage procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications of work
- tools and equipment
- development preparation, methods and application
- datum points
- materials used for the preparation of templates
- manufacturing allowance considerations
- template development, labelling, identification and storage requirements
- fabrication and assembly allowances
- sources of data on fabrication and relevant standards and codes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing geometric development at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the Standards for Registered Training Organisations 2015 or its replacement and comply with the National Vocational Education and Training Regulator Act 2011, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05038 Perform advanced geometric development - cylindrical/rectangular

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05038 Perform advanced geometric development – cylindrical/rectangular (Release 1).

Release 1. Supersedes and is equivalent to MEM05038B Perform advanced geometric development – cylindrical/rectangular.

Application

This unit of competency defines the skills and knowledge required to mark out complex cylindrical/rectangular fabrications and reflects advanced skills required to calculate parallel line developments.

Where the skills required are for marking out activities associated with general engineering and maintenance functions, one or more of the following units should also be selected as appropriate:

- MEM07005 Perform general machining
- MEM12006 Mark off/out (general engineering)
- MEM18006 Perform precision fitting of engineering components
- MEM18014 Manufacture press tools and gauges.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM05037	Perform geometric development
MEM09002	Interpret technical drawing
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM12026	Perform advanced trade calculations in a manufacturing, engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	or related environment
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Mark off/out light/heavy gauge fabrications**	2.1	Determine and apply specifications and work requirements using appropriate calculations
		2.2	Carry out development to specifications or procedures using appropriate tools and equipment
		2.3	Establish and indicate datum points
		2.4	Determine and mark allowances
3	**Make templates as required**	3.1	Select template material appropriate to the marking out requirements
		3.2	Produce templates to meet specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Determine and transfer allowances
		3.4	Produce templates to specification
		3.5	Follow correct storage procedures, including labelling and identification to procedures
4	**Develop patterns as required**	4.1	Select and apply parallel line, radial line and triangulation development methods, as appropriate, to the work requirements
		4.2	Determine and transfer allowances
5	**Interpret relevant codes, standards and symbols**	5.1	Interpret relevant standards/codes and symbols
		5.2	Interpret and apply requirements of standards/codes to materials and processes
6	**Estimate quantities of materials from engineering drawings**	6.1	Identify materials
		6.2	Estimate quantities from drawings
		6.3	Optimise material use and ensure wastage is minimised

Foundation Skills

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Light gauge fabrications include one (1) or more of the following:

- square/rectangular ventilation ducting
- air conditioning
- cylindrical components

and include one (1) or more of the following:

- hoppers
- chutes
- other items involving compound bends and double offsets

Heavy gauge fabrications include one (1) or more of the following:

- ducting
- extraction
- piping
- cylindrical components

and include one (1) or more of the following:

- hoppers
- chutes
- other items involving compound bends and double offsets

Allowances include one (1) or more of the following:

- thickness
- bend, pitch
- angle
- circumference
- perimeter

Template material includes one (1) or more of the following:

- steel plate
- perspex
- timber

Templates produced include (1) one or more of the following:

- rolling
- bending
- pressing
- drilling
- profiling

Release 1. Supersedes and is equivalent to MEM05041B Weld using powder flame spraying

Application

This unit of competency defines the skills and knowledge required to perform flame powder spraying, on a range of heavy or light materials and applies to welding of materials using powder spraying equipment where powders are fed through the flame and are deposited onto the surface to be built up or joined.

Weld quality could include welding that conforms to Australian Standard 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent.

For remedial action using machining processes other than grinding with grinding wheels (ceramic or other) appropriate machining units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM05004	Perform routine oxy fuel gas welding
MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM05055	Weld using oxy fuel gas welding process
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Prepare work for spray welding**	2.1	Prepare materials to achieve the required weld requirements
		2.2	Assemble/align work to specifications, as required
3	**Select, assemble and set up spray welding equipment and powders**	3.1	Select appropriate spray welding equipment and consumables for materials and work requirements
		3.2	Ensure powder flame spray welding equipment is in safe working condition
		3.3	Assemble welding equipment and set up in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		with SOPs
	3.4	Adjust gas setting on spray welding equipment to task requirements
4 **Minimise and rectify distortion**	4.1	Identify distortion prevention/control measures
	4.2	Apply appropriate distortion prevention/control measures to minimise and rectify distortion
	4.3	Deposit spray weld to specification
5 **Inspect spray weld**	5.1	Inspect weld area/joints visually against specification
	5.2	Rectify any weld defects with minimum loss of sound metal using correct techniques and tools

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the following:	• fillet • butt
Weld positions include	• horizontal

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

the following:	• vertical • overhead
Materials include one (1) or more of the following:	• steels • carbon steels • cast iron • non-metallic materials (plastic/nylon)
Equipment includes the following:	• gas cylinders • hoses • blowpipes • tips and nozzles • regulators • flashback arrestors

Preparation and distortion prevention include one (1) or more of the following:	• pre-heating
	• setting up:
	  • jigs
	  • fixtures
	  • clamps
	• joint preparation

Rectify includes the use of one (1) or more of the following:	• oxy acetylene • air arc equipment • grinding devices
Defects include one (1) or more of the following:	• porosity • slag inclusions • discontinuities • lack of penetration • undercut

Assessment Requirements for MEM05041 Weld using flame powder spraying

Modification History

Release 1. Supersedes and is equivalent to MEM05041B Weld using powder flame spraying

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking condition of equipment
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- identifying and interpreting specifications from sketches and verbal or written job instructions for powder spraying using hot and/or cold processes
- selecting appropriate weld and joint preparation methods
- welding materials to job requirements while preventing distortion
- rectifying any defects.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- potential equipment faults
- correct welding equipment, hoses, tips, hand pieces and filler powder
- purpose of, and setting up requirements, of:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - flashback arrestors
- procedures and processes for material preparation
- procedures and processes for joint preparations
- causes of distortion for materials
- causes of defects and methods of rectification.

Assessment Conditions

- Assessors must:
  - have vocational competency in welding using powder flame spraying at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05042 Perform welds to code standards using flux core arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05042 Perform welds to code standards using flux core arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05042B Perform welds to code standards using flux core arc welding process.

Application

This unit of competency defines the skills and knowledge required to prepare and produce welds to code standards using flux core arc welding (FCAW) and applies to the production of butt and fillet welds in all positions on a range of materials.

Welds produced to the standard of this unit would typically conform to AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX, or equivalent. This unit, in conjunction with unit MEM05026 Apply welding principles, may satisfy the requirements of AS 1796-2006 (R2016) Certification of welders and welding supervisors, Certificate 8F.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 6

Pre-requisite Unit

MEM05007	Perform manual heating and thermal cutting
MEM05026	Apply welding principles
MEM05047	Weld using flux core arc welding process
MEM05048	Perform advanced welding using flux core arc welding process
MEM05051	Select welding processes
MEM05052	Apply safe welding practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM05056	Perform routine flux core arc welding
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare welding materials and equipment for**	2.1	Prepare materials to produce weld to code standard
		2.2	Perform routine maintenance on welding equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	FCAW welding to code standard	2.3	Set up welding equipment
3	**Weld joints using FCAW to procedure specifications**	3.1	Weld materials according to weld procedure specification
		3.2	Rectify discontinuities to ensure compliance to code requirements
		3.3	Maintain weld records according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Routine maintenance includes the following:	• ensuring gun, cable and contact tip are in good condition
Preparation includes one (1) or more of the following:	• flame cut and ground or machined • pre-heating • setting up of jigs, fixtures, clamps
Materials include (1) one or more of the following:	• carbon/manganese steel on plate, pipe and rolled sections • low alloy steel on plate, pipe and rolled steel sections

Assessment Requirements for MEM05042 Perform welds to code standards using flux core arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05042 Perform welds to code standards using flux core arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05042B Perform welds to code standards using flux core arc welding process.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing welds using flux core arc welding (FCAW) to code standards
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including performing routine maintenance
- consistently weld materials to specifications
- rectifying any discontinuities
- completing and maintaining weld records related to FCAW to code standards onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX, or equivalent
- relevant standards or codes
- methods for preparing plate and pipe for code standard welding
- pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard
- requirements for maintaining weld records to code standard.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing welds to code standards using FCAW process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05045 Perform pipe welds to code standards using manual metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05045 Perform pipe welds to code standards using manual metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05045B Perform pipe welds to code standards using manual metal arc welding process.

Application

This unit of competency defines the skills and knowledge required to prepare and produce pipe welds to code standards using manual metal arc welding (MMAW) on a range of materials.

Butt welds in pipe with the axis horizontal, vertical and/or askew would be applied to meet AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent. The unit, together with unit MEM05026 Apply welding principles, may satisfy the requirements of AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificates 2 and 4.

Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Prepare welding materials and equipment for MMAW pipe welding to code standards**	2.1	Prepare materials to produce pipe weld to code standard
		2.2	Perform routine maintenance on welding equipment
		2.3	Set up welding equipment
3	**Weld pipe using MMAW to procedure specifications**	3.1	Weld materials in accordance with weld procedure specification
		3.2	Rectify discontinuities to ensure compliance to code requirements
		3.3	Maintain weld records according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Routine maintenance includes the following:	• ensuring leads and hand pieces are in good condition and the correct current carrying capacity
Preparation includes one (1) or more of the following:	• flame cut and ground or machined • pre-heating • setting up of jigs, fixtures and clamps

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• carbon/manganese steel • stainless steel • low alloy steel

Assessment Requirements for MEM05045 Perform pipe welds to code standards using manual metal arc welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05045 Perform pipe welds to code standards using manual metal arc welding process (Release 1).

Release 1. Supersedes and is equivalent to MEM05045B Perform pipe welds to code standards using manual metal arc welding process.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing pipes welds using manual metal arc welding (MMAW) to code standards
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including performing routine maintenance
- consistently weld materials to specifications
- rectifying any discontinuities
- completing and maintaining weld records related to MMAW to code standards onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent
- relevant standards or codes
- methods for preparing pipe for code standard welding
- pre-welding and post-welding heating methods and requirements for pipe welding to code standard
- requirements for maintaining weld records to code standard.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing pipe welds to code standards using MMAW process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05047 Weld using flux core arc welding process

Modification History

Release 1. Supersedes and is equivalent to MEM05047B Weld using flux core arc welding process

Application

This unit of competency defines the skills and knowledge required to perform flux core arc welding (FCAW) on heavy or light metal fabrications.

Weld quality would conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where thermal processes, hand and/or power tools are required the appropriate specialisation units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05047 Weld using flux core arc welding process

Modification History

Release 1. Supersedes and is equivalent to MEM05047B Weld using flux core arc welding process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from sketches and verbal or written job instructions for welding using flux core arc welding process (FCAW) to the specified standard
- selecting appropriate weld and joint preparation methods
- consistently weld materials to the specified standard or equivalent using semi-automatic machines and consumables while preventing distortion
- rectifying any defects
- completing weld records related to FCAW onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- types of gases and their uses
- relationships between amperage/wire feed, voltage, gas flow, electrode, contact tip and material
- material preparation
- polarity
- electrode stickout
- joint preparations
- electrode classification
- causes of distortion for materials when welded
- causes of weld defects and methods of rectification
- standards for FCAW, including AS 1554 General Purpose and any other equivalent standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in welding using flux core arc welding process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05048 Perform advanced welding using flux core arc welding process

Modification History

Release 1. Supersedes and is equivalent to MEM05048B Perform advanced welding using flux core arc welding process

Application

This unit of competency defines the skills and knowledge required to carry out advanced welding using flux core arc welding (FCAW).

Welds are associated with a range of structural sections and/or plate and/or pipe for general fabrication using ferrous materials. Weld quality would typically conform to AS 1554 Structural Purpose or equivalent.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM05048 Perform advanced welding using flux core arc welding process

Modification History

Release 1. Supersedes and is equivalent to MEM05048B Perform advanced welding using flux core arc welding process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing advanced welding using flux core arc welding process (FCAW) to the specified standard
- selecting appropriate weld and joint preparation methods
- consistently weld materials to the specified standard or equivalent using semi-automatic welding machines and electrodes while preventing distortion
- rectifying any defects
- completing and maintaining weld records related to FCAW Structural Purpose onto standard workplace forms

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to AS 1554 Structural Propose or equivalent
- weld procedures and requirements
- purpose of pre-welding and/or post-welding heating and the methods of application
- instructions, symbols, specifications, including bead size, bead placement, reinforcement and weld procedure sheet
- discontinuities in relation to standards/requirements
- different welder identification systems, including numbering, bar coding, paint coding and letter stamps.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in performing advanced FCAW at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM05049 Perform routine gas tungsten arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05049B Perform routine gas tungsten arc welding

Application

This unit of competency defines the skills and knowledge required to prepare the materials and carry out routine gas tungsten arc welding (GTAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements Unit MEM05019 Weld using gas tungsten arc welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Prepare materials and equipment for welding**	2.1	Identify location of welds in accordance with procedures and job specifications
		2.2	Clean and prepare materials ready for welding
		2.3	Set up welding equipment to meet work requirement
		2.4	Select settings and consumables to suit application
3	**Perform routine welding using GTAW**	3.1	Weld materials to job requirements
		3.2	Clean welds according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the following:	• butt • fillet
Materials include one (1) or more of the following:	• low carbon/mild steels • aluminium
Prepared includes one (1) or more of the following:	• pre-heating • setting up jigs • fixtures • clamps • joint preparation
Welding equipment includes the following:	• hoses • welding leads and gas shrouds • electrodes • gas regulator • liners • contact tips
Consumables include the following:	• tungsten electrodes, filler wire and shielding gas
Clean includes the following:	• slag and spatter

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM05049B Perform routine gas tungsten arc welding

Assessment Requirements for MEM05049 Perform routine gas tungsten arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05049B Perform routine gas tungsten arc welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from sketches and verbal or written job instructions for performing routine gas tungsten arc welding (GTAW)
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including selecting settings and consumables to suit application
- consistently welding materials to specifications
- cleaning welds in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- preparatory requirements
- equipment and equipment settings
- shielding gas properties and applications
- weld characteristics.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing routine GTAW process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05050 Perform routine gas metal arc welding

Modification History

Release 1. Supersedes and is equivalent to MEM05050B Perform routine gas metal arc welding

Application

This unit of competency defines the skills and knowledge required to prepare materials and carry out routine gas metal arc welding (GMAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard or equivalent.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements unit MEM05017 Weld using gas metal arc welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

MEM05051 Select welding processes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05051 Select welding processes (Release 1).

Release 1. Supersedes and is equivalent to MEM05051A Select welding processes.

Application

This unit of competency defines the skills and knowledge required to identify material properties and select appropriate welding processes that would typically conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent, to achieve safe and effective welding outcomes.

This unit applies to all types of welding and includes the identification of properties and characteristics of all commonly used metals, and selection of appropriate welding techniques to ensure integrity of materials is maintained during welding processes.

This unit can only be selected in conjunction with one or more of the following units:

- MEM05015 Weld using manual metal arc welding process
- MEM05017 Weld using gas metal arc welding process
- MEM05019 Weld using gas tungsten arc welding process
- MEM05023 Weld using submerged arc welding process
- MEM05047 Weld using flux core arc welding process
- MEM05055 Weld using oxy fuel gas welding process

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify properties of commonly used metals**	2.1	Identify materials to be welded
		2.2	Identify characteristics and properties of commonly used materials
		2.3	Identify uses and purposes of commonly used materials
		2.4	Consider basic metallurgical characteristics
3	**Identify and provide for welding contingencies**	3.1	Source Information relevant to welding processes, as required
		3.2	Identify potential contingencies and consider solutions
4	**Identify appropriate welding process**	4.1	Identify and select welding processes to achieve specified outcomes with selected metals
		4.2	Identify effects of welding processes on materials
		4.3	Identify distortion prevention measures
		4.4	Identify alternative joining methods for job and assess for relevancy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Identify cleaning and preparation requirements**	5.1 Identify processes for cleaning and preparing metals
	5.2 Consider role of contaminants in welding flaws
	5.3 Identify and utilise safety requirements for chemicals and other materials in accordance with manufacturers' specifications and legislative requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Characteristics include the following:	• tensile strength, grade, heat resistance and density
Properties include the following:	• physical properties, flammable limits and melting point
Basic metallurgical characteristics include the following:	• alloys and grades of metals and different types of electrodes
Information includes one (1) or more of the following:	• steel suppliers’ handbooks • welding company materials • SOPs • safety documentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welding processes include one (1) or more of the following:	• fusion – electric arc welding, gas (oxy-fuel) welding and thermit welding • pressure welding processes – resistance welding, fire or forge welding, friction welding and explosive welding • low temperature processes – soldering and brazing • other – ultrasonic welding and electron beam welding
Effects include one (1) or more of the following:	• thermal expansion • heat affected zones • fume emissions • altered density • distortion
Distortion prevention measures include one (1) or more of the following:	• heat treatments • consolidations
Processes for cleaning and weld preparation include one (1) or more of the following:	• etching • grinding • arc gouging • thermal cutting • chemical additives • anti-corrosion treatments
Safety requirements include one (1) or more of the following:	• dry and ventilated areas • in accordance with workplace procedures • location away from heat risks • location away from incompatible substances • requirements for hazardous substances • adequate signage and labelling • appropriate sealing • routine inspections • emergency procedures • regulatory notification requirements

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05051 Select welding processes (Release 1).

Release 1. Supersedes and is equivalent to MEM05051A Select welding processes.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying properties of common used metals
- identifying potential contingencies and considering solutions
- identifying and selecting appropriate welding process and the effects of the welding process on materials
- identifying processes for cleaning and preparing metals and the role of contaminants in welding flaws.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- properties and characteristics of commonly used metals and materials
- basic metallurgy principles associated with alloys and grades of metals
- uses and purposes of various metals
- distortion prevention measures for various metals
- different types of electrodes
- hazards associated with the use of chemicals and the fumes emitted by welding processes.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting welding processes at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

WHS information includes one (1) or more of the following:	• Safe Work Australia guidelines • organisational WHS practices and procedures manuals • Australian/New Zealand and ISO standards • company risk management policy • codes of practice • Australian dangerous goods legislation • trade practices • WHS reporting requirements • weld procedures
Work-related safety information includes one (1) or more of the following:	• SOPs • safety data sheets (SDSs) • job sheets • emergency procedures • safety standards and procedures
Pollutants include one (1) or more of the following:	• nitrogen oxides • ozone • metal fumes • lead oxide • silicon oxide • calcium fluoride • calcium oxide • magnesium oxide • sodium oxide • potassium oxides • carbon dioxide

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- organics
- iron
- manganese
- calcium carbonate
- zirconium oxide
- titanium oxide
- hexavalent chromium

Occupational diseases and injuries include one (1) or more of the following:

- eye injuries
- skin damage
- respiratory irritations
- chronic effects
- allergies

Factors include one (1) or more of the following:

- gas leakage from cylinders
- type of consumable and metals used
- type of welding processes
- type of electrodes
- welding current
- voltage and amperage
- ventilation
- contamination
- interaction of chemicals
- exposure levels
- flammability

Exposure levels include one (1) or more of the following:

- time weighted average
- short term exposure limit (STEL)
- maximum allowable concentration (MAC) or threshold limit value - ceiling (TLV-C)
- skin notation

Specific metals include one (1) or more of the following:

- aluminium
- antimony
- arsenic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- beryllium
- boron
- cadmium
- chromium
- copper
- cobalt
- iron
- lead
- lithium
- magnesium
- manganese
- mercury
- molybdenum
- nickel
- platinum
- selenium
- silver
- thorium
- tin
- titanium
- tungsten
- vanadium
- zinc
- zirconium

Gases include one (1) or more of the following:

- acetylene
- argon
- carbon dioxide
- carbon monoxide
- helium
- nitrogen oxides
- ozone
- phosgene
- phosphine
- stibine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Other hazards include one (1) or more of the following:

- fluxes
- electro-magnetic radiation
- electric shock
- sparks
- spatter
- contaminated and coated metals
- gas cylinder and electrical hazards
- confined spaces
- noise
- chemical exposure
- solvents
- musculoskeletal, back and overuse injuries
- vibration
- dusts
- heat stress
- ultraviolet radiation
- airborne pollutants
- flammable gases
- infrared radiation
- thermal damage

Manual handling techniques include one (1) or more of the following:

- housekeeping practices
- lifting weight limits
- appropriate storage
- use of lifting devices
- appropriate training
- hazardous materials storage standards and procedures

PPE includes one (1) or more of the following:

- respirators
- ear muffs
- protective clothing
- gloves
- boots
- helmets
- eye protection
- face shields

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures to control hazards include one (1) or more of the following:	• substituting hazardous materials with safer materials • changing workplace design to eliminate hazards • modifying work practices to reduce exposure • using PPE • using adequate and appropriate ventilation
Workplace safety measures include one (1) or more of the following:	• shielding requirements • ventilation • general and diluted • local exhaustion • use of PPE • checking equipment condition • equipment maintenance • correct operation of equipment • correct voltage and electrical connections • good posture • fire safety, plant and equipment isolation • communications with appropriate personnel

Assessment Requirements for MEM05052 Apply safe welding practices

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05052 Apply safe welding practices (Release 1).

Release 1. Supersedes and is equivalent to MEM05052A Apply safe welding practices.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting work health and safety (WHS) information and legislation
- identifying risks and hazards associated with welding
- implementing risk control measures and procedures, including using appropriate manual handling techniques and personal protective equipment (PPE)
- reporting workplace non-compliances in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of PPE
- characteristics and properties of common metals and welding materials
- effect of gas and electrical welding operations on metals
- effect of various treatments on a range of commonly used metals
- WHS information and sources
- work-related safety information
- pollutants present as a result of welding activities
- all the welding processes, including equipment and material requirements
- hazards associated with welding processes and methods to minimise those hazards.

Assessment Conditions

- Assessors must:
  - have vocational competency in applying safe welding practices at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05053 Set and edit computer controlled thermal cutting machines

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05053 Set and edit computer controlled thermal cutting machines (Release 1).

Release 1. Supersedes and is equivalent to MEM05053A Set and edit computer controlled thermal cutting machines.

Application

The unit of competency defines the skills and knowledge required to set up and edit any computer or numerically controlled thermal cutting machine or process and applications, including NC/CNC thermal cutting machines and industrial robots performing thermal cutting.

Where manual heating and thermal cutting is required, unit MEM05007 Perform manual heating and thermal cutting should also be selected.

Where advanced manual thermal cutting, gouging and shaping is required unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected.

Where setting and editing other computer controlled machines is required unit MEM07016 Set and edit computer controlled machines and processes should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: 4

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.4	Set gas and nozzle controls according to type and thickness of material to be cut and to minimise distortion
3 **Trial program**	3.1	Trial program observing all safety procedures
	3.2	Check sample cut for compliance with specifications
	3.3	Edit program to ensure job conforms to specification
4 **Complete setting process**	4.1	Replace worn or damaged nozzles, regulators and work holding devices/tools, where appropriate, or take other corrective action in accordance with SOPs
	4.2	Instruct operator, if necessary, ensuring that all safety procedures and devices are in place

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Program editing includes the following:	• identifying and accessing program in edit mode in situ in order to make changes associated with: • gas mixtures • nozzle or work piece feed speed • operational sequence

Assessment Requirements for MEM05053 Set and edit computer controlled thermal cutting machines

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05053 Set and edit computer controlled thermal cutting machines (Release 1).

Release 1. Supersedes and is equivalent to MEM05053A Set and edit computer controlled thermal cutting machines.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing thermal cutting machine for work according to the thickness of material and minimisation of distortion
- trialling program by checking sample cut for compliance and undertaking program editing to ensure job conforms with specifications
- instructing operator, if necessary, including ensuring all safety procedures and devices are in place
- replacing worn or damaged nozzles, regulators, fixtures, devices and tools.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- ancillary equipment and its applications
- procedures for attaching the ancillary device(s) to the NC/CNC machine
- work holding devices, their application and procedures for mounting them
- location of work holding fixtures/devices/tools relative to the machine zero or datum
- operating procedures
- safety features and equipment
- measuring devices/ techniques for checking the parts or product
- effects of changes to gas mixtures and nozzle or work piece speed
- impact of changes to the sequence of operations on the part or product to be produced
- procedures for editing programs via the machine controller
- sequence of operations of the machine/process
- corrective action to be taken for worn or damaged tooling.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in setting and editing computer controlled thermal cutting machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05054 Write basic NC/CNC programs for thermal cutting machines

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05054 Write basic NC/CNC programs for thermal cutting machines (Release 1).

Release 1. Supersedes and is equivalent to MEM05054A Write basic NC/CNC programs for thermal cutting machines.

Application

This unit of competency defines the skills and knowledge required to identify computer controlled machine program elements, write a basic program and operation sheet, and trial the program for thermal cutting machines.

This unit extends to writing a program to describe simple thermal cutting machine operations, including cutting paths, using appropriate software for machines which incorporates single or multiple nozzles and material loaders.

Where basic programming of other computer controlled machines is required unit MEM07018 Write basic NC and CNC programs should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 4

Pre-requisite Unit

MEM05007	Perform manual heating and thermal cutting
MEM05008	Perform advanced manual thermal cutting, gouging and shaping
MEM05009	Perform automated thermal cutting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM05053	Set and edit computer controlled thermal cutting machines
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Write basic NC/CNC machine program**	2.1	Select appropriate program elements for machine controller
		2.2	Interpret engineering drawings to define basic machine function and cutting path geometry
		2.3	Calculate co-ordinates for cutting path
		2.4	Write program in standard code format in accordance with procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3 **Write NC/CNC operation sheet and trial program**	3.1 Produce operation sheets to specification in accordance with SOPs
	3.2 Operate machine in manual mode to test and prove program
	3.3 Edit program if necessary to adjust operation
	3.4 Check components for compliance to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Basic machine programming includes:	• NC/CNC thermal cutting machines which do not require programming using canned cycles and sub-routines
Standard code format includes:	• common M and G codes

Unit Mapping Information

Assessment Requirements for MEM05054 Write basic NC/CNC programs for thermal cutting machines

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05054 Write basic NC/CNC programs for thermal cutting machines (Release 1).

Release 1. Supersedes and is equivalent to MEM05054A Write basic NC/CNC programs for thermal cutting machines.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting basic NC/CNC thermal cutting machines controller elements which do not require programming using canned cycles and sub-routines
- writing program in standard code format by interpreting drawings to define basic machine function and cutting path geometry and calculating co-ordinates for cutting path and producing operation sheets to specifications
- trialling and editing program by operating machine in manual mode to test and proving program and adjusting operation as required
- checking components for compliance against specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of a basic NC/CNC program
- function of elements in controlling the operation of an NC/CNC machine
- types of NC/CNC thermal cutting and welding machines and their applications
- thermal cutting operations controlled by program
- cutting paths to be followed when cutting a part or product and the reasons for selecting cutting paths and sequence of operations
- zero point of the NC/CNC machine
- standard codes, applications and procedures used in the writing of NC/CNC programs
- procedures and information to be included for completing NC/CNC operation sheets
- procedures for manual operation of the NC/CNC machine and reasons for testing and proving the NC/CNC program

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for editing the NC/CNC program via the machine controller
- Effects of editing on the operation of the NC/CNC machine and the part or product to be cut
- measuring equipment/techniques used to check for conformance to specification.

Assessment Conditions

- Assessors must:
  - have vocational competency in writing basic NC/CNC programs for thermal cutting machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.

MEM05055 Weld using oxy fuel gas welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05055 Weld using oxy fuel gas welding process (Release 1).

Release 1. New unit.

Application

This unit has been primarily developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade-level skills in oxy fuel gas welding on heavy or light metal fabrications. It may also apply to other trade occupations requiring higher level oxy fuel gas welding skills.

Weld quality would typically conform to AS 1554 General Purpose and American Bureau of Shipping (ABS) or equivalent.

Where manual thermal processes associated with preparation, pre-heat and/or post-heat is required unit MEM05007 Perform manual heating and thermal cutting and unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM05004	Perform routine oxy fuel gas welding
MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare materials for oxy fuel gas welding oxy fuel gas**	2.1	Prepare materials to achieve the required weld requirements
		2.2	Assemble/align materials to specification, where required
3	**Select, assemble and set up**	3.1	Identify and select welding equipment and consumables appropriate to job requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	welding equipment and consumables	3.2	Assemble welding equipment and set up in accordance with SOPs
4	**Minimise and rectify distortion**	4.1	Apply appropriate distortion prevention measures
		4.2	Rectify any distortion using appropriate techniques
5	**Weld to job specification using oxy fuel gas**	5.1	Ensure weld deposit is to specifications
		5.2	Clean joints to specifications
6	**Ensure weld conformance**	6.1	Inspect weld joints visually for conformance to specifications
		6.2	Rectify any weld defects with minimum loss of sound metal using correct techniques and tools
		6.3	Complete weld records, where required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Welds include the	• fillet • butt

following:

Weld positions include the following:

- horizontal
- vertical
- overhead

Materials include one (1) or more of the following:

- ferrous materials
- non-ferrous metals
- alloys suitable for oxy fuel gas welding

Preparation of materials includes one (1) or more of the following:

- pre-heating
- setting up of jigs
- fixtures and clamps
- joint preparation (e.g. bevelling)

Distortion prevention measures include one (1) or more of the following:

- pre-heating
- setting up:
  - jigs
  - fixtures
  - clamps

Equipment includes the following:

- gas cylinders
- hoses
- blowpipes
- tips and nozzles
- regulators
- flashback arrestors

Defects include one (1) or more of the following:

- porosity
- slag inclusions
- discontinuities
- lack of penetration
- undercut

Assessment Requirements for MEM05055 Weld using oxy fuel gas welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05055 Weld using oxy fuel gas welding process (Release 1).

Release 1. New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for oxy fuel gas to AS 1554 General Purpose or equivalent
- selecting appropriate weld and joint preparation methods
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- weld materials to AS 1554 General Purpose or equivalent using oxy fuel gas welding equipment while preventing distortion
- rectifying any defects
- completing weld records related to oxy fuel gas onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- purpose of and setting up requirements of:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - flashback arrestors
- material preparation for oxy fuel gas welding
- weld joint preparations
- filler rod materials
- causes of distortion for materials when welded
- causes of weld defects and methods of rectification
- standards for oxy fuel gas welding, including AS 1554 General Purpose or equivalent.

Assessment Conditions

- Assessors must:
  - have vocational competency in oxy fuel gas welding at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05056 Perform routine flux core arc welding

Modification History

Release 1. New unit

Application

This unit of competency defines the skills and knowledge required to prepare the materials and carry out routine flux core arc welding (FCAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements unit MEM05047 Weld using flux core arc welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05058 Perform welds to code standards using oxy fuel gas welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05058 Perform welds to code standards using oxy fuel gas welding process (Release 1).

Release 1. New unit.

Application

This unit of competency defines the skills and knowledge required to prepare and produce welds to code standards using oxy fuel gas welding on a range of materials.

Butt and fillet welds in the flat, horizontal, vertical and overhead positions would be applied to meet AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent. This unit, together with Unit MEM05026 Apply welding principles, may satisfy the requirements AS 1796-2001 (R2016) Certification of welders and welding supervisors, Certificate 6.

Where advanced manual thermal cutting, gouging and shaping is required Unit MEM05008 Perform advanced manual thermal cutting, gouging and shaping should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 6

Pre-requisite Unit

MEM05004	Perform routine oxy fuel gas welding
MEM05007	Perform manual heating and thermal cutting
MEM05022	Perform advanced welding using oxy acetylene welding process
MEM05026	Apply welding principles
MEM05051	Select welding processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM05052	Apply safe welding practices
MEM05055	Weld using oxy fuel gas welding process
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare welding**	2.1	Prepare materials to produce weld to code standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
	materials and equipment for GW welding to code standard	2.2 Perform routine maintenance on welding equipment
		2.3 Set up welding equipment
3	**Weld joints using GW to procedure specifications**	3.1 Weld materials in accordance with weld procedure specification
		3.2 Rectify discontinuities to ensure compliance to code requirements
		3.3 Maintain weld records according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Routine maintenance includes the following:

- ensuring oxy fuel gas welding equipment is in good condition

Equipment includes the following:

- gas cylinders
- hoses
- blowpipes
- tips and nozzles
- regulators
- flashback arrestors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Preparation includes one (1) or more of the following:	• joint preparation:
	  • flame cut and ground
	  • machined
	• preheating
	• setting up:
	  • jigs
	  • fixtures
	  • clamps

Materials include one (1) or more of the following:	• carbon/manganese steel • stainless steel • low alloy steel

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM05058 Perform welds to code standards using oxy fuel gas welding process (Release 1).

Release 1. New unit.

Assessment Requirements for MEM05058 Perform welds to code standards using oxy fuel gas welding process

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM05058 Perform welds to code standards using oxy fuel gas welding process (Release 1).

Release 1. New unit.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from drawings, sketches and verbal or written job instructions for performing welds using oxy fuel gas welding to code standards
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including performing routine maintenance
- consistently weld materials to specifications
- rectifying any discontinuities
- completing and maintaining weld records related to oxy fuel gas welding to code standards onto standard workplace forms.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- requirements to produce welds to quality of AS 1210-2010 Pressure vessels, AS 4041-2006 (R2016) Pressure piping, and American Society of Mechanical Engineers (ASME) IX or equivalent
- relevant standards or codes
- purpose of and setting up requirements of:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- methods for preparing plate for code standard welding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- causes of weld defects and methods of rectification
- pre-welding and post-welding heating methods and requirements for plate welding to code standard
- requirements for maintaining weld records to code standard.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing welds to code standards using oxy fuel gas welding process at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM06001 Perform hand forging

Modification History

Release 1. Supersedes and is equivalent to MEM06001B Perform hand forging

Application

This unit of competency defines the skills and knowledge required to use hand tools and formers, apply hand forging techniques and operate heat treatment equipment.

Where simple manual heating and bending is required unit MEM05007 Perform manual heating and thermal cutting should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawings should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Forging

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Apply hand forging techniques**	2.1	Select and use hand tools and formers for specific forging techniques
		2.2	Select and apply appropriate hand forging technique to produce articles to specification
		2.3	Adhere to forging temperatures and heat specifications for various materials
		2.4	Make allowance for material shrinkage and oxidisation
3	**Operate heating equipment**	3.1	Set up and correctly operate the appropriate heating equipment, required for the job
		3.2	Operate equipment in a manner that minimises oxidisation
		3.3	Control heat to specified areas

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Hand tools and formers include one (1) or more of the following:	• flatters • set hammers • hot/cold sets • ball peen hammer • swages
Hand forging techniques include one (1) or more of the following:	• drawing • swaging • bending • upsetting • spreading • punching • drifting
Materials include one (1) or more of the following:	• low to medium carbon steels • low to medium alloy steels
Heating equipment includes one (1) or more of the following:	• diesel • electric and gas furnaces • coke fires • gaseous oxygen/fuel equipment

Assessment Requirements for MEM06001 Perform hand forging

Modification History

Release 1. Supersedes and is equivalent to MEM06001B Perform hand forging

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using hand tools and formers
- selecting and applying hand forging techniques
- determining correct forging temperatures
- operating heat treatment equipment safely and effectively to hand forge materials to specification.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features and use of the range of hand tools, formers used in hand forging
- hand forging techniques, including drawing, swaging, bending, upsetting, spreading, punching and drifting
- calculations used to determine mean diameter, length and circumference
- sources of information on forging temperatures
- heat specifications for various materials
- effects of and allowances for material shrinkage and oxidisation
- application, set up and means of adjustment of diesel, electric and gas furnaces; coke fires and gaseous oxygen/fuel heating equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing hand forging at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM06002 Perform hammer forging

Modification History

Release 1. Supersedes and is equivalent to MEM06002B Perform hammer forging

Application

This unit of competency defines the skills and knowledge required to use hammer and power hammer tools and formers, apply hammer forging techniques and operate heating devices.

Equipment used does not include drop and upset machinery, vacuum furnaces or rolling and extruding mill machinery.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM06002 Perform hammer forging

Modification History

Release 1. Supersedes and is equivalent to MEM06002B Perform hammer forging

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- calculating material requirements for hammer forging allowing for thermal expansion and wastage
- selecting and using hammer tools and formers
- setting up and operating forging machines
- using hammer forging techniques to forge material to specification
- detecting forging defects and rectifying forging techniques
- operating heating equipment and safely handling hot metal.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- hammer forging techniques
- set up and operation of forging machines
- safe techniques for handling hot metal
- oxidisation/shrinkage allowances for forging material
- calculations and formulae for determining the volume and weight of material
- forging material specifications

Assessment Conditions

- Assessors must:
  - have vocational competency in performing hammer forging at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM06003 Carry out heat treatment

Modification History

Release 1. Supersedes and is equivalent to MEM06003C Carry out heat treatment

Application

This unit of competency defines the skills and knowledge required to carry out heat treatment using a variety of equipment for cast metal products, machine tooling, and forged and machined components.

Where simple heat treatment applications like annealing and/or heat/quench processes undertaken as incidental to trade work (e.g. toolmaking) is required unit MEM06007 Perform basic incidental heat/quenching, tempering and annealing should be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM06003 Carry out heat treatment

Modification History

Release 1. Supersedes and is equivalent to MEM06003C Carry out heat treatment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing required heat treatment appropriate materials
- selecting, setting up and safely using appropriate equipment for heat treatment processes
- undertaking necessary preparation process and heat treating material to specifications working safely with hot metals at all times.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- heat treatment work specifications
- treatment material features and characteristics
- heat treatment applications, equipment and processes
- emergency procedures
- material preparation, quenching, preheating requirements
- material condition during heat treating process
- safe loading and batch and/or piece loading of furnaces.

Assessment Conditions

- Assessors must:
  - have vocational competency in carrying out heat treatment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring State as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM06004 Select heat treatment processes and test finished product

Modification History

Release 1. Supersedes and is equivalent to MEM06004B Select heat treatment processes and test finished product

Application

This unit of competency defines the skills and knowledge required to select the appropriate process to achieve the desired result, record and maintain heat treatment information, and test treated materials.

Equipment used does not include drop and upset machinery, vacuum furnaces or rolling and extruding mill machinery.

Where destructive and/or non-destructive testing is required units defining the appropriate skills and knowledge should also be selected.

Where heat treatment is required appropriate heat treatment units should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and tools are required, unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Select heat treatment process**	2.1	Determine appropriate heating processes and equipment suited to the metal composition and the effects of heat and cooling on that metal composition
		2.2	Determine heat treatment process to achieve specified result using reference material, metallurgist's report, and consultation with technical specialists or other appropriate personnel
		2.3	Enter selection into production documentation
3	**Test material**	3.1	Prepare material for testing, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.2 Carry out destructive and/or non-destructive testing of material properties using appropriate testing equipment
	3.3 Identify any heat treatment faults and report, if appropriate
	3.4 Rectify heat treatment faults, where possible
	3.5 Record and maintain information relating to equipment, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Heat treatment processes include one (1) or more of the following:	• coatings and packings • preheating • soaking • quenching • tempering • annealing • normalising • carburising • sintering
Metal composition includes one (1) or more of the following:	• high/low carbon steel • ferrous/non-ferrous

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• salt baths • vacuum furnace • induction heating • kilns • gas fired furnaces
Materials include one (1) or more of the following:	• ferrous metals • non-ferrous metals
Testing includes the following:	• destructive methods • non-destructive methods
Heat treatment faults include one (1) or more of the following:	• thermal fractures • distortion • shrinkage • oxidisation

Assessment Requirements for MEM06004 Select heat treatment processes and test finished product

Modification History

Release 1. Supersedes and is equivalent to MEM06004B Select heat treatment processes and test finished product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, reports and other applicable reference documents in selecting heat treatment process and testing of finished product
- determining the heat treatment process to achieve the desired result for the composition of the material
- identifying and rectifying heat treatment faults
- testing the treated material using destructive and non-destructive testing methods
- maintaining heat treatment and testing work documentation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- treatment material features and characteristics
- heat treatment processes and effects of heat on material characteristics
- material preparation including quenching, preheating, temperature requirements for different materials and processes
- types of destructive and non-destructive testing and their use
- heat treatment faults and corrections.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting heat treatment processes and testing finished product at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM06005 Perform drop and upset forging

Modification History

Release 1. Supersedes and is equivalent to MEM06005B Perform drop and upset forging

Application

This unit of competency defines the skills and knowledge required to select, set up and operate drop and upset forging equipment where material is forged to specified dimensional accuracy and finish.

Where routine, repetitive cold upset forging is required unit MEM07024 Operate and monitor machine and process should be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM06002	Perform hammer forging
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Forging

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Identify and select drop and upset forging equipment and tools for specific operation**	2.1	Select appropriate equipment suitable for the size of material and forging procedures
		2.2	Select dies and punches for specific operations and equipment
		2.3	Determine die replacement with regard to relief allowances, cracking and dimensions
3	**Set up and operate drop and upset forging equipment**	3.1	Set up equipment, adjust and operate
		3.2	Apply correct die setting techniques in setting appropriate die and punch alignment
		3.3	Apply correct die preheating procedures
4	**Prepare material**	4.1	Prepare materials and heat in accordance with job requirements and/or specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Drop and upset forge material**	5.1 Calculate material amounts with allowance for heat wastage and flash or fin
	5.2 Drop forge material using the correct procedures and techniques
	5.3 Apply correct lubricant for die wear and forging release
	5.4 Determine correct grain flow
	5.5 Identify and correct galls, folds and cracks
	5.6 Carry out removal of flash or fin in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• drop forging hammer/press • open die forging hammer using closed loose die or horizontal upsetting machine (heading machine)
Materials include one (1) or more of the following:	• ferrous materials (steel) • non-ferrous material (copper and aluminium bronze)
Lubricants include one (1) or more of the following:	• graphite bearing oils/greases • cellulose granules • waxes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Correct removal includes one (1) or more of the following:	• ejector pins • drafts in die (angle)

Assessment Requirements for MEM06005 Perform drop and upset forging

Modification History

Release 1. Supersedes and is equivalent to MEM06005B Perform drop and upset forging

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- setting up and using a range of drop forging and upset (and cold upset) forging equipment
- performing preparation and forging of materials using drop and upset methods, including using lubricants for forged material release
- performing material finishing and correction of forging galls, folds and cracks as necessary.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- drop or upset forging techniques
- characteristics of forging equipment
- reasons and remedies for incorrect/correct alignment of dies and punches
- preparation of dies (pre-heating, preparation, lubrication, defects, conformance and replacement)
- techniques for materials pre-heating
- relevant forging tools, techniques and equipment
- techniques for setting, adjusting and operating forging equipment
- features of defects in drop/upset forged articles, including galls, folds, cracks and ways of correcting defects and removing flash, fins from drop/upset forged articles
- calculations for material volume, weight, allowances, heat wastage and flash/fin.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing drop and upset forging at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM06006 Repair springs

Modification History

Release 1. Supersedes and is equivalent to MEM06006C Repair springs

Application

This unit of competency defines the skills and knowledge required to assess spring condition, set and reset springs for repair, set up and operate spring forming equipment, form and shape material and test components.

Equipment use does not include automated spring making equipment.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM06001	Perform hand forging
MEM06003	Carry out heat treatment

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Assess spring condition**	2.1	Check springs for correct operation and identify defects in accordance with SOPs
		2.2	Identify springs suitable for rework and the appropriate repair procedure
3	**Set and reset springs for repair**	3.1	Apply correct stripping procedure
		3.2	Allow for setting tolerances in set/reset of springs to specification
		3.3	Control correct temperature for setting/resetting springs
4	**Set up and operate spring forming equipment**	4.1	Set up and use equipment in accordance with procedures
		4.2	Position spring material and safety guards
		4.3	Select forming equipment and tools for given application

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Form and shape material**	5.1 Determine material lengths
	5.2 Taper, roll and bend material to conform to specifications
	5.3 Adopt correct procedure for hot and cold forming
	5.4 Make allowance for relief and spring-back
6 **Test components**	6.1 Determine spring compression from specifications
	6.2 Determine any defects and confirm dimensional accuracy
	6.3 Re-set non-conforming springs and adjust spring forming equipment as necessary
	6.4 Nest springs to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Springs include one (1) or more of the following:	• laminated • compression/coil • plate
Equipment includes one (1) or more of the	• tapering • coiling

Assessment Requirements for MEM06006 Repair springs

Modification History

Release 1. Supersedes and is equivalent to MEM06006C Repair springs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least (2) two occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing spring condition and selecting suitable set and reset repair methods
- setting up and operating spring forming equipment and tools to form and shape spring material
- testing spring components and adjusting, as necessary, to meet specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures to test springs for correct operation/malfunction
- causes of deviations from specifications and/or defects in springs
- effects of annealing, hardening, tempering, soaking and setting on spring operation
- repair and rework procedures for a range of spring defects
- procedures for tapering, rolling and bending materials
- features and application of hot and cold forming processes
- allowances to be made for relief and spring-back
- procedures for recording spring test results
- procedures for nesting springs.

Assessment Conditions

- Assessors must:
  - have vocational competency in repairing springs at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM06007 Perform basic incidental heat/quenching, tempering and annealing

Modification History

Release 1. Supersedes and is equivalent to MEM06007B Perform basic incidental heat/quenching, tempering and annealing

Application

This unit of competency defines the skills and knowledge required to perform straightforward heating/quenching, tempering and annealing materials to specifications.

Work would normally be one-off processes or processes incidental to trade work (e.g. toolmaking and metal spinning).

Where more comprehensive or complex heating treatment is required unit MEM06003 Carry out heat treatment and MEM06004 Select heat treatment processes and test finished product, should also be selected as appropriate.

Where continuous or batch heat treatment of materials is required unit MEM07024 Operate and monitor machine and process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM06008 Hammer forge complex shapes

Modification History

Release 1. Supersedes and is equivalent to MEM06008A Hammer forge complex shapes

Application

This unit of competency defines the skills and knowledge required to forge complex shapes using a power hammer where specialised methods of holding, positioning and lifting complex forgings are required.

Where basic use of power hammer is required unit MEM06002 Perform hammer forging should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Assessment Requirements for MEM06008 Hammer forge complex shapes

Modification History

Release 1. Supersedes and is equivalent to MEM06008A Hammer forge complex shapes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using measuring guides
- setting up and safely operating hammer forging equipment and selecting and using complex open die tooling in accordance with procedures
- using appropriate and safe methods for holding, positioning and lifting complex shaped forged material, including hot materials
- performing hammer forging of complex shapes to meet specifications
- selecting and operating heating equipment to heat treat heavy and complex forgings.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- hammer tools and formers and their application to produce a range of hammer forged articles
- hammer forging and punching techniques
- procedures for measuring forged articles and numerical operations and calculations/formulae for complex shape tooling
- effects of material shrinkage and oxidisation on the dimensions of the forged article
- methods of overcoming/allowing for the effects of shrinkage and oxidisation when hammer forging articles
- procedures for safe handling of material to be hammer forged
- forging heating equipment and applications
- heat treatment processes for forging.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in hammer forging of complex shapes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM06009 Hand forge complex shapes

Modification History

Release 1. Supersedes and is equivalent to MEM06009A Hand forge complex shapes

Application

This unit of competency defines the skills and knowledge required to produce intricate solid forged shapes commonly forged in the forging and fabrication areas of industry.

It covers hand forging of different metals, using specialised techniques, tools and jigs where specialised methods of holding, positioning and lifting complex forgings are required.

Where hand forging of simple shapes is required unit MEM06001 Perform hand forging should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Forge complex shapes using hand tools on an anvil**	2.1	Calculate material volume, making allowances for bending, material shrinkage and oxidisation, as required
		2.2	Produce complex shapes using appropriate hand tools, procedures and techniques
		2.3	Check forging to ensure conformance to tolerances and specifications
3	**Perform splitting and bundling on anvil**	3.1	Select and use appropriate tools and equipment
		3.2	Apply hand forging techniques and procedures to forging and opening bundled and split sections making allowance for material shrinkage, distortion and oxidisation
		3.3	Apply heat and control in specified areas of the material to be forged in accordance with SOPs
		3.4	Handle forgings in a safe and correct manner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.5	Check forgings to ensure conformance to tolerances and specifications
4 **Produce jigs and tools for complex shapes**	4.1	Select tools and equipment required to taper and bend materials appropriate to task requirements
	4.2	Apply techniques for producing jigs and tools to specifications
	4.3	Bend and shape jigs and patterns to requirements
	4.4	Forge hand held tools to the cut pattern in accordance with specifications
	4.5	Perform final shaping, heat treatment and sharpening to specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Complex hand forging includes one (1) or more of the following:	• shaping • reverse tapering • jump up section for bends
Hand forging techniques include one (1) or more	• spreading • surface chasing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

of the following:	• hot splitting
Equipment includes one (1) or more of the following:	• diesel • electric and gas furnaces • coke fires • gaseous oxygen/fuel equipment

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM06009A Hand forge complex shapes

Assessment Requirements for MEM06009 Hand forge complex shapes

Modification History

Release 1. Supersedes and is equivalent to MEM06009A Hand forge complex shapes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using measuring guides
- calculating allowances for material volume, bending, shrinkage and oxidisation
- selecting and using hand forging tools to forge complex shapes on anvil to meet specifications
- forging open and bundled split sections safely using heating equipment, as required, to meet specifications
- producing jigs and tools for complex shapes
- performing heat treatment processes for forgings.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- forging hand tools and their applications
- techniques and procedures for hand forging complex shapes
- procedures for measuring forged articles and numerical operations and calculations/formulae for complex shapes
- forging temperatures and heat specifications for multiple pieces
- tools, techniques and equipment required to taper and bend materials
- effects of material shrinkage and oxidisation on the dimensions of the forged article
- methods of overcoming/allowing for the effects of shrinkage and oxidisation when hand forging articles
- procedures for handling forgings
- heating equipment and applications and appropriate heat treatment processes for forging different materials.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in hand forging complex shapes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07001 Perform operational maintenance of machines/equipment

Modification History

Release 1. Supersedes and is equivalent to MEM07001B Perform operational maintenance of machines/equipment

Application

This unit of competency defines the skills and knowledge required to carry out programmed safety and maintenance checks on machines/equipment.

It applies in a manufacturing setting where routine programmed operational maintenance to machines/equipment is required. It is not intended to be used where higher level maintenance activities are performed.

This unit should not be selected when any of the following are selected:

- MEM07005 Perform general machining
- MEM18006 Perform precision fitting of engineering components
- MEM18055 Dismantle, replace and assemble engineering components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Undertake programmed maintenance**	2.1	Remove/replace consumable components according to procedures
		2.2	Make adjustments to meet specifications following SOPs
		2.3	Replace and/or top up fluids and lubricants

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Machines/equipment include one (1) or more of the following:	• manual • semi-automatic and automatic machines of a stand-alone, continuous production or process nature

Checks include one (1) or more of the following:	• programmed safety and maintenance checks
	• adjustments of a limited nature, including:
	  • safety guards
	  • stops
	  • wear pads and tool holders
	  • nipping up glands
	  • adjustment of scrappers and aprons

Consumable components include one (1) or more of the following:	• air filters • oil wipers • grease containers • tool tips • indicator globes • fluids and lubricants • guides • limit switch actuators

Unit Mapping Information

Assessment Requirements for MEM07001 Perform operational maintenance of machines/equipment

Modification History

Release 1. Supersedes and is equivalent to MEM07001B Perform operational maintenance of machines/equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying necessary maintenance requirements on a range of machines and equipment used in a manufacturing environment
- carrying out programmed maintenance to meet specifications according to SOPs
- reporting/recording on necessary routine maintenance carried out according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- programmed operational maintenance and safety check procedures for the specified machine/equipment
- recording and reporting requirements for programmed operational maintenance.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing operational maintenance of machines and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07002 Perform precision shaping/planing/slotting operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07002 Perform precision shaping/planing/slotting operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07002B Perform precision shaping/planing/slotting operations.

Application

This unit of competency defines the skills and knowledge required to perform precision shaping/planing/slotting operations.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07005	Perform general machining
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18001 Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Perform precision shaping/ planing/ slotting operations**	2.1	Determine cutting parameters
		2.2	Carry out precision operations using appropriate tools, equipment, techniques and procedures to meet specifications
3	**Check component**	3.1	Check components for compliance with specifications
		3.2	Rectify non-compliant product in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Tools include the following:	• cutting tools • tool holders
Cutting parameters include one (1) or more of the following:	• feeds • speeds • depth of cut • length of cut
Shaping operations include one (1) or more of the following:	• precision flat surfaces • shoulders • slots • keyways • angles • dovetails
Planing operations include one (1) or more of the following:	• horizontal surfaces • vertical surfaces • angles
Slotting operations include one (1) or more of the following:	• feathered keyways • tapered keyways • slotting internal cavities • dovetails • slotting circular surfaces • internal splines

Assessment Requirements for MEM07002 Perform precision shaping/planing/slotting operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07002 Perform precision shaping/planing/slotting operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07002B Perform precision shaping/planing/slotting operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting engineering specifications and drawings for precision shaping, planing and slotting operations
- determining the appropriate tools, equipment and sequence of operations for a range of precision operations
- carrying out precision operations to meet specifications
- checking components for conformance to specifications and making required adjustments to cutting parameters
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting a chosen sequence of operations
- procedures for setting up the work piece
- tool type and geometry to achieve the required specifications on different materials
- shaping techniques and procedures for machining the following:
  - flat surfaces
  - shoulders
  - slots
  - keyways
  - angles
  - dovetails
- planing techniques and procedures for machining the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - horizontal and vertical surfaces
- slotting techniques and procedures for machining the following:
    - feathered keyways
    - tapered keyways
    - slotting internal cavities
    - dovetails
    - slotting circular surfaces
    - slotting internal splines
- appropriate techniques, tools and equipment to measure machined components.

Assessment Conditions

- Assessors must:
    - have vocational competency in performing precision shaping, planing and slotting operations at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07003 Perform routine machine setting

Modification History

Release 1. Supersedes and is equivalent to MEM07003B Perform machine setting (routine)

Application

This unit of competency defines the skills and knowledge required to set a range of non-numerical control (NC) and non-computer numerical control (CNC) equipment, including manual, semi-automatic and automatic machines.

Where setting skills for NC/CNC is required unit MEM07015 Set computer controlled machines and processes should also be selected.

Where setting automated assembly processes is required unit MEM07040 Set multistage integrated processes should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM07003 Perform routine machine setting

Modification History

Release 1. Supersedes and is equivalent to MEM07003B Perform machine setting (routine)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting job/operation sheets, specifications and other reference material for routine machine setting
- setting machines using appropriate tools and equipment to meet specifications for the machine operation, including measuring first-off samples for compliance with specifications
- identifying and rectifying worn or damaged tooling
- instructing machine operators on correct use of the machine and safety procedures to be followed.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- strategies for conveying routine instructions
- sequences of machine setting operations
- techniques, tools and equipment used to measure samples
- characteristics of machines and machine processes
- tools and equipment for routine machine setting
- applicable machine tooling and accessories
- symptoms of tool wear.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing routine machine setting at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for MEM07004 Perform complex machine setting

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07004 Perform complex machine setting (Release 1).

Release 1. Supersedes and is equivalent to MEM07004B Perform machine setting (complex).

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting job sheets, specifications and other applicable reference documents for complex machine setting
- setting machines using appropriate tools and equipment to meet specifications for the machine operation, including measuring first-off samples for compliance with specifications
- identifying and rectifying worn or damaged tooling
- instructing machine operators on correct use of complex machines and correct safety procedures to be followed.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics and hazards of complex machines and machine processes
- tooling, equipment and timing requirements of machine operations
- common product faults or defects and adjustments required to rectify
- strategies for instructing the machine operator and conveying routine instructions.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing complex machine setting at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. MEM07005 Perform general machining

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07005 Perform general machining (Release 1).

Release 1. Supersedes and is equivalent to MEM07005C Perform general machining.

Application

This unit of competency has been developed for Engineering Tradesperson – Mechanical apprenticeship training and the recognition of trade-level skills in non-computer numerical controlled (CNC) machining of ferrous and non-ferrous materials.

Where high level production machining applications are undertaken unit MEM07041 Perform production machining should be selected.

Where set-up and operation of electro-discharge machines (EDM) is required unit MEM07014 Perform electro-discharge machining (EDM) operations should also be selected.

Where machining is undertaken without undertaking any set up, including mounting of tools, setting of speeds, feeds and other operational parameters unit MEM07024 Operate and monitor machine and process and unit MEM07025 Perform advanced machine and process operation, should be selected as appropriate.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where substantial marking out is required unit MEM12006 Mark off/out (general engineering) should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine sequence of**	2.1	Determine sequence of operations to meet job specifications

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	operations	2.2	Select appropriate material and establish datum, as required
3	**Select and mount tools**	3.1	Select appropriate tools for job, sharpen and shape, as required
		3.2	Mount and position tools to meet requirements
4	**Perform machining operations**	4.1	Transfer dimensions to determine machining parameters
		4.2	Set machining parameters to meet job requirements and maximise tool life
		4.3	Ensure work is securely held to avoid damage to product, and meet safety requirements
		4.4	Perform machining to produce product to meet specifications
		4.5	Carry out routine maintenance and adjustments, as required
5	**Check components**	5.1	Check components for compliance with specifications
		5.2	Rectify non-compliant product in accordance with SOPs as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Operations include one (1) or more of the following:	• parallel cutting • slotting • planing • drilling • knurling • cutting flats • non-precision surface grinding operations
Materials include one (1) or more of the following:	• ferrous • non-ferrous
Measuring instruments include one (1) or more of the following:	• micrometres • vernier calipers • calipers • steel rules • dividers • scribers
Tools include the following:	• cutting tools • tool holders
Machining parameters include one (1) or more of the following:	• speeds • feeds • stops • coolant and cutting lubricants
Machines include one (1) or more of the following:	• lathes • mills • planers • shapers • slotters • surface grinder

Assessment Requirements for MEM07005 Perform general machining

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07005 Perform general machining (Release 1).

Release 1. Supersedes and is equivalent to MEM07005C Perform general machining.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning a job including identifying job requirements from drawings, instructions or specifications and a sequence of operations
- identifying any required tooling, measuring equipment and accessories
- selecting and mounting required tooling
- selecting material and marking out, as required
- performing machining to meet specifications
- checking machined components for conformance to specifications and identifying adjustments to be made to settings/tooling
- rectifying non-compliant components
- carrying out routine maintenance and adjustments, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of operations
- methods of work holding for machining operations
- transferring dimensions, including establishing datum points/lines
- geometry of cutting tools for a range of materials and applications
- reasons for maintaining properly sharpened cutting tools
- principles underpinning machining operations
- selection of feeds and speeds to suit a range of materials and operations
- methods of mounting a range of cutting tools
- safety precautions associated with clamping materials, guards and shields
- tolerances and limits of size

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- machine adjustment, lubrication and cleaning
- measurement techniques, tools and devices
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing general machining at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07006 Perform lathe operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07006 Perform lathe operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07006C Perform lathe operations.

Application

This unit of competency has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in performing machining operations on a lathe to produce components to required tolerances and specifications using all types of accessories.

Skills covered by this unit are generally applied in occupational and work situations associated with trade-level fitting and machining work.

This unit does not cover turning of multi-start threads or use of taper turning attachment, copy turning attachment or multi-start threads.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07005	Perform general machining
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

Assessment Requirements for MEM07006 Perform lathe operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07006 Perform lathe operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07006C Perform lathe operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting engineering drawings to AS 1100,401-1884 (R2014) Technical drawing to determine job requirements for lathe operations, including quantity, material, measurements and tolerances
- selecting cutting tools using International Standard Organisation (ISO) standards or according to SOPs from drawings, sketches, specifications and instructions, as appropriate
- fixing of job and tooling to specifications
- calculating and setting required speeds and feeds
- undertaking turning operations to specifications
- checking components for conformance to specifications
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sequence of lathe operations to achieve job requirements
- tool type and geometry to achieve required specifications and for work pieces of different materials
- numerical operations, geometry and calculations/formulae for lathe operations
- consequences of varying speeds and feeds from the optimum rates calculated
- characteristics of different materials and their effects on cutting speeds and feeds
- application of lathe accessories
- techniques, tools and equipment to measure materials and machined components
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Requirements for MEM07008 Perform grinding operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07008 Perform grinding operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07008D Perform grinding operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining requirements for grinding job, including quantity, material, measurements and tolerances
- planning a job, including identifying required measuring instruments and equipment, safety equipment, holding devices, grinding wheels, accessories and sequence of operations
- identifying guard, coolant and dust extraction requirements and checking equipment and coolant before grinding operation
- securely hold job for grinding operations
- performing grinding operation to specifications
- checking components for conformance to specifications
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of grinding operations
- application of a range of holding devices/accessories
- reasons for selecting specific work holding devices, tools, techniques and equipment
- coolant selection and function
- standard grinding wheel shapes
- range of abrasive materials used in grinding wheels
- factors impacting grinding wheel selection, including:
  - grain size of abrasive particles
  - grade or strength of bond

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - bond material
- grinding wheel dressing tools and their application
- internal/external cylindrical grinding process
- principles of effective clamping
- grinding operations and procedures
- function of grinding accessories
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Conditions

- Assessors must:
    - have vocational competency in performing grinding operations at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.

MEM07009 Perform precision jig boring operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07009 Perform precision jig boring operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07009B Perform precision jig boring operations.

Application

This unit of competency defines the skills and knowledge required to perform precision jig boring operations using a range of jig boring and milling machines.

It applies to operations where a range of jig boring and milling machine tools and accessories are used to achieve a high level of precision in finished products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Tools and accessories include one (1) or more of the following:	• cutting tools • tool attachments • harts and nomograms • rotary table • tilting rotary table
Instruments include one (1) or more of the following:	• dial test indicators • digital read out equipment
Appropriate techniques include the following:	• measuring techniques and comparison methods

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM07009 Perform precision jig boring operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07009B Perform precision jig boring operations.

Assessment Requirements for MEM07009 Perform precision jig boring operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07009 Perform precision jig boring operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07009B Perform precision jig boring operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning a job, including identifying job requirements from drawings, instructions or specifications and sequence of operations
- identifying any required tooling, measuring equipment and accessories
- selecting and mounting required material for jig boring operations
- performing jig boring to specifications
- checking machined components for conformance to specifications and making required adjustments to machining parameters
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of operations
- application of rotary and tilting rotary tables to jig boring operations
- checks to be conducted for conformance to specifications
- appropriate techniques, tools and equipment to measure machined components
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in performing precision jig boring operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07010 Perform tool and cutter grinding operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07010 Perform tool and cutter grinding operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07010B Perform tool and cutter grinding operations.

Application

This unit of competency defines the skills and knowledge required to perform a range of tool and cutter grinding operations, including the use of precision measuring instruments.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07005	Perform general machining
MEM07008	Perform grinding operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to undertake work**	2.1	Determine sequence of operations
		2.2	Check machine guards, coolant and dust extraction devices
		2.3	Select, balance and dress tool and cutter grinding wheels based on shape and grit/bond composition
		2.4	Select accessories to facilitate production to specification
3	**Perform tool and cutter grinding**	3.1	Operate universal tool and cutter grinding machines to sharpen and shape tools and cutters
		3.2	Carry out parallel internal and/or external grinding
		3.3	Carry out internal and/or external taper grinding to drawing specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Check components for conformance to specification using appropriate techniques, tools and equipment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Tools and cutters include one (1) or more of the following:	• side and face cutters • end mill • form relieved milling cutters • flat • vee and circular form tools and hobs • slitting saws • drills

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM07010 Perform tool and cutter grinding operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07010B Perform tool and cutter grinding operations.

Assessment Requirements for MEM07010 Perform tool and cutter grinding operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07010 Perform tool and cutter grinding operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07010B Perform tool and cutter grinding operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting drawings and job specifications to determine required tool and cutting grinding requirements
- selecting suitable equipment and tools to carry out the cutting and grinding operation
- operating the cutting and grinding machines to ensure the job is completed to specifications using appropriate testing and measuring techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of cutting and grinding operations
- function of coolant and dust extraction devices
- criteria for grinding wheel selection, including:
  - grain size of abrasive particles
  - grade or strength of bond
  - bond material
- grinding wheel dressing procedures and wheel dressing tools
- sources of data on tool geometry for the full range of tools and cutters, including the terminology used to describe the tool geometry
- procedures to be followed when parallel grinding on a tool and cutter grinder
- procedures to be followed when grinding tapers on a tool and cutter grinder
- tools, techniques and equipment used to check ground components for conformance with the following specifications:
  - dimensions and tolerances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- geometry and tolerances
- surface finish.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing tool and cutter grinding operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring State as the case requires
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07011 Perform complex milling operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07011 Perform complex milling operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07011B Perform complex milling operations.

Application

This unit of competency defines the skills and knowledge required to perform complex milling operations on a range of materials, including non-standard metals and alloys.

It applies to a range of complex milling operations, including jobs requiring high precision or quality and operations requiring complex calculations.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07005	Perform general machining
MEM07007	Perform milling operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Select milling cutters**	2.1	Select correct milling cutter/s for required operation
		2.2	Select correct cutter inserts using International Standard Organisation (ISO) standards as required, and mount in cutter blank
		2.3	Mount cutter to machine spindle and check for concentricity
3	**Set up work**	3.1	Determine the cutting parameters and steps required to mill components
		3.2	Set up machine with appropriate accessories for milling operations, as required
		3.3	Set up work to required level of accuracy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Perform complex milling**	4.1 Perform calculations as necessary to achieve specifications for component to be milled
	4.2 Check components for compliance with specifications
	4.3 Rectify non-compliant product in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Complex milling operations include one (1) or more of the following:	• cutting of one or more of the following:
	  • spur gears
	  • racks
	  • helical gears
	  • radial uniform rise cam lobes

Milling cutter/cutters include one (1) or more of the following:	• ganged cutters • form cutters
Set up includes the following:	• verifying using instruments, including dial test indicators and sine bars
Appropriate accessories	• omniversal tables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

include the following:
- differential dividing heads

Assessment Requirements for MEM07011 Perform complex milling operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07011 Perform complex milling operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07011B Perform complex milling operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to carry out complex milling operations
- selecting appropriate cutter inserts for cutting operations according to specifications and ISO standards
- calculating cutting parameters, including speeds, feeds and ratios
- setting up gear trains according to calculations and standard operating procedures
- perform complex milling using dividing heads and omniversal tables to specifications
- checking components for conformance to specifications using precision measuring instruments
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- precision measuring equipment and their applications
- procedures for accurately setting up work
- ISO standards applicable to milling cutter inserts
- procedures for milling components, such as racks and gears
- calculations, geometry and formulae relating to complex milling activities
- accessories used for complex milling
- applications and use of omniversal tables and differential dividing heads to complex milling operations
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Requirements for MEM07012 Perform complex grinding operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07012 Perform complex grinding operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07012B Perform complex grinding operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to carry out complex grinding operations
- dressing grinding wheel to form and size
- setting up work pieces for the operations and selecting suitable tools and accessories
- undertaking numerical operations, geometry and calculations for specialised complex grinding operations
- carrying out a range of complex grinding operations
- checking components for conformance to specifications using precision measuring instruments
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of complex grinding operations
- function and application of work holding devices/accessories appropriate to complex grinding
- appropriate techniques, tools and equipment to measure machined components
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in performing complex grinding operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.

Assessment Requirements for MEM07013 Perform machining operations using horizontal and vertical boring machines

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07013 Perform machining operations using horizontal and vertical boring machines (Release 1).

Release 1. Supersedes and is equivalent to MEM07013B Perform machining operations using horizontal and/or vertical boring machines.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to carry out boring operations
- selecting, mounting and positioning cutting tools
- calculating and selecting cutting parameters, including speeds and feeds
- performing horizontal and vertical boring operations to specified cutting parameters
- checking components for conformance to specifications using precision measuring instruments
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of boring operations
- geometry of cutting tools for a range of materials
- calculations for determining cutting parameters and checking tolerances
- consequences of varying the speeds and feeds from the optimum rates
- procedures and techniques for carrying out horizontal and vertical boring operations
- appropriate techniques, tools and equipment to measure machined components
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing machining operations using horizontal and vertical boring machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07014 Perform electro-discharge machining (EDM) operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07014 Perform electro-discharge machining (EDM) operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07014B Perform electro-discharge (EDM) machining operations.

Application

This unit of competency defines the skills and knowledge required to perform electro-discharge machining (EDM) operations and applies to a range of EDM operations and engineering materials.

This unit has been primarily developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade-level skills in performing EDM operations.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where electrodes are required to be manufactured see appropriate machining units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to undertake work**	2.1	Determine sequence of operations
		2.2	Select correct electrode to ensure finished component conforms to drawing specifications
		2.3	Calculate electrode surface area and set process parameters to give safe, accurate and efficient operation
		2.4	Set up job relative to electrode to ensure required position is obtained
3	**Perform EDM**	3.1	Operate electro-discharge machine to produce

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	components to drawing specifications
	3.2 Check components for compliance with specifications
	3.3 Rectify non-compliant product in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Electrodes include the following:	• all types and grades of graphite electrodes
Job set up includes the following:	• correct use of work holding devices and selection of EDM fluids, spark generation, cycle time, power settings and dielectric fluids for the requirement of a particular job

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM07014 Perform electro-discharge machining (EDM) operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07014B Perform electro-discharge (EDM) machining operations.

Assessment Requirements for MEM07014 Perform electro-discharge machining (EDM) operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07014 Perform electro-discharge machining (EDM) operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07014B Perform electro-discharge (EDM) machining operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings and other applicable reference documents with respect to performing electro-discharge machining (EDM) operations
- determining the coordinates of the work pieces relative to the machine datum
- calculating machining parameters necessary in achieving the safe, accurate and efficient machining of the work piece
- calculating the electrode surface area and selecting the correct electrodes for the job
- setting up job using appropriate holding devices and accessories
- performing EDM operations to produce components to specifications
- checking components for conformance to specifications using precision measuring instruments
- rectifying non-compliant product.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sequence of operations to achieve the EDM job requirements
- electrode types and geometry required to achieve the specified outcome
- effects of material to be machined on the electrode material and geometry
- procedures for producing electrodes for the electro-discharge machining process
- coordinates of the feature(s) to be machined
- coordinates of the electrode relative to the machine datum
- procedures for operating the electro-discharge machine to produce components
- tools, techniques and equipment appropriate to the checking of machined components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components
- reasons for selecting the tools, techniques and equipment to be used.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing electro-discharge machining (EDM) operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07015 Set computer controlled machines and processes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07015 Set computer controlled machines and processes (Release 1).

Release 1. Supersedes and is equivalent to MEM07015B Set computer controlled machines and processes.

Application

This unit of competency defines the skills and knowledge required to set computer controlled machines and processes.

All technical difficulties are resolved in consultation with appropriate technical advisers.

Where the setting of non-computer controlled machines or processes is required unit MEM07003 Perform routine machine setting should be selected.

Where the selection and use of general machining is required unit MEM07005 Perform general machining should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Plus, one or more of the following, including their prerequisites:

MEM07005	Perform general machining
MEM07028	Operate computer controlled machines and processes

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Mount work holding fixtures/devices/tools**	2.1	Prepare machine to accept work holding fixtures/devices/ tools
		2.2	Mount pre-set tooling into machine/equipment, as required
		2.3	Set work holding fixtures/devices on machine
		2.4	Identify/verify tool offset or datum settings against job sheet
		2.5	Load and select program and verify in accordance with

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		job instructions
3 **Conduct pre-start checks**	3.1	Undertake pre-start checks
	3.2	Observe correct safety procedures and check safety equipment for correct operation
4 **Set machine**	4.1	Set/adjust machine to meet operational requirements and specifications
	4.2	Check production samples for compliance with specifications
	4.3	Replace pre-set tools, adjust tool offsets or take other corrective action in accordance with SOPs, as required
	4.4	Instruct operator, if necessary, ensuring that all safety procedures and devices are in place

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Machines include one (1) or more of the following:

- numerically controlled (NC) machines
- computer numerically controlled (CNC) machines
- industrial robots

Assessment Requirements for MEM07015 Set computer controlled machines and processes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07015 Set computer controlled machines and processes (Release 1).

Release 1. Supersedes and is equivalent to MEM07015B Set computer controlled machines and processes.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents with respect to setting computer controlled machines and processes
- selecting appropriate tool and work piece holding fittings and fixtures
- mounting pre-set tooling and verifying tool offsets and/or datum settings against job sheets or instructions
- undertaking numerical operations and calculations in carrying out setting of machines and processes
- loading and verifying programs
- conducting pre-start checks, including checking safety features and safety equipment, for correct operation
- setting and adjusting machine
- measuring and verifying first-off samples for conformance with specifications
- identifying worn or damaged tooling and taking appropriate corrective action
- instructing machine operator on the sequence of operations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- work holding fixtures/devices/tools and pre-set tooling for different machines and processes
- procedures for mounting work holding fixtures/devices/tools
- location of work holding fixtures/devices/tools relative to the machine datum or zero
- reasons for establishing tool offsets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose of datum settings and sources of information on tool offsets and datum settings
- procedures to locate, load and verify programs
- pre-start checks, processes and procedures
- purpose and function of machine safety features and/or safety equipment
- machine/process, setting and operating procedures
- adjustments that can be made to the machine/process and the effect of adjustments on machine and operational specifications
- product or part specifications in relation to the machining process
- measuring devices for checking parts or products
- examples, effects and corrective action for worn or damaged tooling.

Assessment Conditions

- Assessors must:
  - have vocational competency in setting computer controlled machines and processes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07016 Set and edit computer controlled machines and processes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07016 Set and edit computer controlled machines and processes (Release 1).

Release 1. Supersedes and is equivalent to MEM07016C Set and edit computer controlled machines and processes.

Application

This unit of competency defines the skills and knowledge required to set and edit computer controlled machines and processes.

Work is performed to established processes, practices and specifications and machine operations, including welding, metal cutting, forming and shaping.

Technical difficulties are resolved in consultation with appropriate technical advisers.

Where setting and editing of computer controlled thermal cutting machines is required unit MEM05053 Set and edit computer controlled thermal cutting machines should also be selected.

Where additional machining skills in excess of unit MEM07005 Perform general machining are required then appropriate units should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: 4

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM07015	Set computer controlled machines and processes
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents for computer controlled machine setting and editing
- attaching ancillary devices in accordance with procedures
- selecting appropriate tool and work piece holding fittings and fixtures
- measuring, entering and verifying tool offsets
- undertaking numerical operations and calculations in setting and editing machines and processes
- conducting pre-start checks
- producing and checking first-off samples for conformance with specifications
- editing programs to ensure compliance with specifications
- identifying worn or damaged tooling and taking appropriate corrective action
- instructing machine operator on the sequence of operations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- ancillary equipment and their applications
- procedures for attaching the ancillary devices to the numerically controlled (CN) and computer numerically controlled (CNC) machines
- work holding devices, their application and procedures for mounting them
- location of work holding fixtures/devices/tools relative to the machine zero or datum
- reasons for establishing tool offsets
- procedures and devices for measuring tool offsets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for entering, verifying and adjusting tool offset
- operating procedures
- safety features and equipment
- measuring devices/ techniques for checking the parts or product
- effects of changes to cutting feeds and speeds and the impact of changes to the sequence of operations on the part or product to be produced
- procedures for editing programs via the machine controller
- the sequence of operations of the machine/process
- examples of, effects and corrective action to be taken for worn or damaged tooling.

Assessment Conditions

- Assessors must:
  - have vocational competency in setting and editing computer controlled machines and processes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. MEM07018 Write basic NC and CNC programs

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07018 Write basic NC and CNC programs (Release 1).

Release 1. Supersedes and is equivalent to MEM07018C Write basic NC/CNC programs.

Application

This unit of competency defines the skills and knowledge required to write basic numerically controlled (NC) and computer numerically controlled (CNC) machine programs.

It extends to writing a program to describe simple machine operations, including tool paths, using appropriate software for machines. The program may use common M and G codes but does not include the programming of advanced operations using canned cycles and sub-routines. Technical difficulties are resolved in consultation with appropriate technical advisers.

Where basic programming of computer controlled thermal cutting machines is required unit MEM05054 Write basic NC/CNC programs for thermal cutting machines should also be selected.

Where additional machining skills in excess of unit MEM07005 Perform general machining are required appropriate units should also be selected.

Where programming of advanced operations using canned cycles and sub-routines is required unit MEM07019 Program NC and CNC machining centre should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM07018 Write basic NC and CNC programs

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07018 Write basic NC and CNC programs (Release 1).

Release 1. Supersedes and is equivalent to MEM07018C Write basic NC/CNC programs.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in writing basic numerically controlled (NC) and computer numerically controlled (CNC) programs
- calculating coordinates for tooling and producing operation sheets for the program and process
- writing NC and CNC machine programs using standard code format
- producing NC/CNC operation sheets
- operating the machine to test it operates to specification undertaking any required editing of the program
- checking parts or products for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of a basic NC and CNC program and the function of elements in controlling the operation of NC and CNC machine
- machining operations
- types of NC and CNC machines and their applications
- machining operations controlled by program
- tool paths to be followed when producing a part or product
- sequence of machining operations and the reasons for selecting tool paths and sequence of operations
- purpose of the zero point of the NC and CNC machine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard codes and procedures for writing used in NC and CNC programs and their applications
- procedures for completing NC and CNC operation sheets and the information to be included in NC and CNC operation sheets
- procedures for manual operation of the NC and CNC machine
- reasons for testing and proving the NC and CNC program
- procedures for editing the NC and CNC program via the machine controller and the effects of editing on the operation of the NC and CNC machine and the part or product to be produced
- measuring equipment/techniques used to check for conformance to specification.

Assessment Conditions

- Assessors must:
  - have vocational competency in writing basic NC and CNC programs at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Select appropriate NC and CNC program elements for machine controller
2	**Write basic NC and CNC machine program**	2.1	Interpret engineering drawings to define machine function and tool path geometry
		2.2	Calculate coordinates for tool path or machine functions, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.3	Select advanced operations using canned cycles and sub-routines and apply
	2.4	Write program in standard code format in accordance with SOPs
	2.5	Produce operation sheets to specification in accordance with SOPs which includes appropriate Australian Standards, where required
3 **Trial program**	3.1	Operate machine in manual mode to test and prove program
	3.2	Edit program, if necessary to adjust operation, as required
	3.3	Check components to conform to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Basic machines incorporate one (1) or more of the following:	• single spindles • single tools turrets • B axis angular • tool changers • component loaders of a pallet type, but excludes multiple spindles and multiple axis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM07019 Program NC and CNC machining centre (Release 1).

Release 1. Supersedes and is equivalent to MEM07019C Program NC/CNC machining centre.

Assessment Requirements for MEM07019 Program NC and CNC machining centre

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07019 Program NC and CNC machining centre (Release 1).

Release 1. Supersedes and is equivalent to MEM07019C Program NC/CNC machining centre.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in programming numerically controlled (NC) and computer numerically controlled (CNC) machining centres
- calculating coordinates for tooling and producing operation sheets for the program and process
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheets in accordance with SOPs
- operating the machine centre to test it operates to specification including undertaking any required editing of the program
- checking components or products for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of NC and CNC program and the function of elements in controlling the operation of NC and CNC machines
- machining operations to be performed in the manufacture of the given part or product
- appropriate types of NC and CNC machines to perform the required machining operations
- machining operations to be controlled by the program to be written
- tool paths to be followed when producing the part or product and the sequence and reasons for selecting the sequence of machining operations to be programmed
- zero point of the NC and CNC machine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- canned cycles and sub-routines accessible in a particular NC and CNC machine and the application of each canned cycle and sub-routine available
- canned cycles and/or sub-routines to be used in the NC and CNC program and reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes and their application used in the writing of NC and CNC programs
- procedures for writing NC and CNC programs in standard code format
- procedures for completing NC and CNC operation sheets and information to be included
- relevant Australian Standards for programming of NC and CNC machine centres
- procedures for manual operation of the NC and CNC machine
- reasons for testing and proving the NC and CNC program
- procedures for editing the NC and CNC program via the machine controller and the effects of editing on the operation of the NC and CNC machine and the part or product to be produced
- specifications of the part or product and measuring equipment/techniques to be used to check for conformance with specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in programming NC and CNC machining centre at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07020 Program multiple spindle and multiple axis NC and CNC machining centre

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07020 Program multiple spindle and multiple axis NC and CNC machining centre (Release 1).

Release 1. Supersedes and is equivalent to MEM07020C Program multiple spindle and/or multiple axis NC and CNC machining centre.

Application

This unit of competency defines the skills and knowledge required to identify numerically controlled (NC) and computer numerically controlled (CNC) machine program elements, write and trial a machine program for multiple spindle and multiple axis NC and CNC machining centres, and prepare an operation sheet.

The program may use common M and G codes and include the programming of advanced operations, using canned cycles and sub-routines. Programs are trialled and edited as necessary to adjust operation of centre. Technical difficulties are resolved in consultation with appropriate technical advisers.

Where additional machining skills in excess of MEM07005 Perform general machining are required appropriate units should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 2

Pre-requisite Unit

MEM07015	Set computer controlled machines and processes
MEM07016	Set and edit computer controlled machines and processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM07018	Write basic NC and CNC programs
MEM07019	Program NC and CNC machining centre
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Plus, one or more of the following, including their prerequisites:

MEM07005	Perform general machining
MEM07028	Operate computer controlled machines and processes

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.5	Select appropriate program elements for machine controller
2	**Write NC and CNC machine program**	2.1	Interpret engineering drawings to define machine function and tool path geometry
		2.2	Calculate coordinates for tool path or machine functions, as required
		2.3	Select advanced operations using canned cycles and sub-routines and apply
		2.4	Write program in standard code format in accordance with SOPs
		2.5	Produce operation sheets to specification in accordance with SOPs which includes appropriate Australian Standards, where required
3	**Trial program**	3.1	Operate machine in manual mode to test and prove program
		3.2	Edit program, if necessary to adjust operation, as required
		3.3	Check components to conform to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07020 Program multiple spindle and multiple axis NC and CNC machining centre

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07020 Program multiple spindle and multiple axis NC and CNC machining centre (Release 1).

Release 1. Supersedes and is equivalent to MEM07020C Program multiple spindle and/or multiple axis NC and CNC machining centre.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in programming multiple spindle and multiple axis numerically controlled (NC) and computer numerically controlled (CNC) machining centres
- calculating coordinates for tooling and producing operation sheets for the program and process
- writing NC and CNC programs in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC and CNC operation sheets in accordance with SOPs
- operating the multiple spindle and multiple axis NC and CNC machining centre to test it operates to specification undertaking any required editing of the program
- checking components or products for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- elements of NC and CNC program and the function of elements in controlling the operation of NC and CNC machine
- machining operations to be performed in the manufacture of the given part or product
- appropriate types of NC and CNC machines to perform the required machining operations
- machining operations to be controlled by the program to be written
- tool path(s) to be followed when producing the part or product
- sequence of machining operations to be programmed and reasons for selecting the chosen tool path(s) and sequence of operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- zero point of the NC and CNC machine
- canned cycles and sub-routines accessible in the particular NC and CNC machine and the application of each canned cycle and sub-routine available
- canned cycles and/or sub-routines to be used in the NC and CNC program and reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes and their application used in the writing of NC and CNC programs
- procedures for writing NC and CNC programs in standard code format
- procedures for completing NC and CNC operation sheets and the information to be included
- relevant Australian Standards for programming multiple spindle and multiple axis NC and CNC machining centres
- procedures for manual operation of a NC and CNC machine
- reasons for testing and proving a NC and CNC program
- procedures for editing the NC and CNC program via the machine controller and the effects of editing on the operation of the NC and CNC machine and the part or product to be produced
- specifications of the part or product and measuring equipment/techniques to be used to check for conformance with specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in programming multiple spindle and multiple axis NC and CNC machining centres at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07021 Perform complex lathe operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07021 Perform complex lathe operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07021B Perform complex lathe operations.

Application

This unit of competency defines the skills and knowledge required to perform complex turning operations on a range of materials, including non-standard metals and alloys.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07005	Perform general machining
MEM07006	Perform lathe operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information

MEM18001 Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Set up work on lathe**	2.1	Determine sequence of operations, including job set-up, for maximum efficiency to meet job specifications
		2.2	Set up work on the lathe to required level of accuracy using precision instruments, including dial test indicators
		2.3	Balance work piece when using face plates to ensure accuracy in machining, as required
		2.4	Set up work piece to ensure that work piece is free of distortion following completion of machining
3	**Select and prepare tooling**	3.1	Select tooling, accessories and consumables appropriate to task, specifications and material
		3.2	Determine cutting tool modifications required to perform complex turning operations, where appropriate
		3.3	Prepare tooling and accessories and modify, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.4	Apply International Standard Organisation (ISO) standards for cutting tools or other appropriate standards to suit cutting parameters
4 **Perform complex turning**	4.1	Calculate speeds and feeds using appropriate mathematical techniques and reference material
	4.2	Undertake complex turning to specifications and workplace procedures
	4.3	Measure work piece and verify in accordance with specifications using precision measuring equipment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Tooling includes one (1) or more of the following:	• cutting tools • form tools • boring bars • drills • reamers • thread chasers • tapping heads • taps
Complex turning	• single-start and multi-start thread cutting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

includes one (1) or more of the following:

- internal blind hole thread cutting
- eccentrics
- copy and taper turning
- counterbalancing work on face plates
- mandrel work
- trepanning
- heavy (multi-tonne) shafts

Assessment Requirements for MEM07021 Perform complex lathe operations

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07021 Perform complex lathe operations (Release 1).

Release 1. Supersedes and is equivalent to MEM07021B Perform complex lathe operations.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in performing complex lathe operations
- setting and supporting work to avoid distortion on release of clamping devices
- selecting and setting up cutting tooling or inserts as appropriate to turning operation
- calculating cutting parameters, speeds and feeds to meet job requirements
- modifying tooling and accessories, as required
- performing complex turning operations according to specifications
- checking machined components for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- precision measuring equipment and measuring techniques used in complex turning operations and reasons for selecting different measuring equipment
- procedures for accurately setting up work for a variety of techniques
- International Standards Organisation (ISO) or other standards applicable to cutting tool inserts
- cutting parameters for the given task
- feeds and speeds for complex turning operations
- formulae and data relating to feeds and speeds
- techniques and procedures for carrying out the following turning operations:
  - single-start thread cutting
  - multi-start thread cutting
  - internal blind hole thread cutting

Assessment Requirements for MEM07022 Program CNC wire cut machines

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07022 Program CNC wire cut machines (Release 1).

Release 1. Supersedes and is equivalent to MEM07022C Program CNC wire cut machines.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in programming computer numerically controlled (CNC) wire cutting machines
- calculating coordinates of all relevant points on the part or product to be produced
- writing a CNC wire cut program tool path using advanced operations, canned cycles and sub-routines
- storing the program and producing an operations sheet in accordance with SOPs for the programs use
- downloading program and setting parameters
- loading, aligning and operating machine to test the program
- checking components or products for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operations to be controlled by the program to be written
- tool path(s) to be followed when producing the part or product and the sequence of operations to be programmed with reasons for selecting the chosen tool path(s) and sequence of operations
- techniques for determining the zero point of a wire cut machine
- canned cycles and sub-routines accessible in the particular CNC wire cut machine and the application of each canned cycle and sub-routine available
- canned cycles and/or sub-routines to be used in the CNC wire cut program and reasons for selecting the chosen canned cycles and/or sub-routines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard codes used in the writing of CNC wire cut programs and their application
- procedures for writing and storing CNC wire cut programs in standard code format
- procedures for completing CNC wire cut operation sheets and the information to be included
- procedures for downloading and verifying CNC wire cut programs
- machining parameters that may be entered into the machine controller and the effect of varying the machining parameters on the product or part produced
- work holding fixtures/devices/tools and procedures for mounting work holding fixtures/devices tools
- location of the required work holding fixtures/devices/tools relative to the machine datum or zero
- purpose of datum setting
- pre-start checks and the purpose and function of safety features and equipment of the CNC wire cut machine
- machine mode appropriate to the testing and proving of the CNC wire cut program and the checking of the position of the work piece and procedures to be followed when using the machine in this mode
- relative position of the work piece to the machine datum or zero
- specifications of the part or product and measuring equipment/techniques to be used to check for conformance to specification.

Assessment Conditions

- Assessors must:
  - have vocational competency in programming CNC wire cutting machines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07023 Program and set up CNC manufacturing cell

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07023 Program and set up CNC manufacturing cell (Release 1).

Release 1. Supersedes and is equivalent to MEM07023C Program and set up CNC manufacturing cell.

Application

This unit of competency defines the skills and knowledge required to program operations, set up and test the operation of a cell and extends to computer numerically controlled (CNC) machines and associated integrated equipment/robots used in flexible manufacturing cell and other advanced operations.

Where additional machining skills in excess of unit MEM07005 Perform general machining are required appropriate units should also be selected.

Where the selection and use of precision mechanical measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 6

Pre-requisite Unit

MEM07015	Set computer controlled machines and processes
MEM07016	Set and edit computer controlled machines and processes
MEM07018	Write basic NC and CNC programs
MEM07019	Program NC and CNC machining centre

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM07020	Program multiple spindle and multiple axis NC and CNC machining centre
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Plus, one or more of the following including their prerequisites:

MEM07005	Perform general machining
MEM07028	Operate computer controlled machines and processes

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Program operations**	2.1	Interpret engineering drawings and manufacturing specifications to determine required equipment
		2.2	Program equipment/cell schedule
		2.3	Link controllers for integration
3	**Set up cell**	3.1	Configure manufacturing cell machines and equipment to meet production specifications
		3.2	Install tooling and work holding devices and adjust to meet specifications
		3.3	Operate cell and adjust to produce components to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

CNC manufacturing cell includes (1) one or more of the following:	• multi-spindle machines • 4 and 5 axis machines • pallet loaded machining centres

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM07023 Program and set up CNC manufacturing cell (Release 1).

Release 1. Supersedes and is equivalent to MEM07023C Program and set up CNC manufacturing cell.

Assessment Requirements for MEM07023 Program and set up CNC manufacturing cell

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM07023 Program and set up CNC manufacturing cell (Release 1).

Release 1. Supersedes and is equivalent to MEM07023C Program and set up CNC manufacturing cell.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents in programming and setting up computer numerically controlled (CNC) manufacturing cell
- loading/downloading CNC programs into individual machine controllers
- writing CNC programs
- linking machine controllers of CNC machines and transferring devices
- positioning machines and equipment to optimise manufacturing cell performance
- selecting and installing tooling and operating the cell to produce components
- checking components or products for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operations to be performed in producing a given part or product
- appropriate types of CNC machines to perform required machining operations
- appropriate means of part or product transfer between machines and reasons for selecting the chosen equipment and machinery
- CNC programs for use in each of the cell components
- sequence of machining and transfer operations and the means of coordinating the operations of all components within the cell
- communication requirements between components of the cell and methods of linking machine controllers
- precautions to be taken when linking machine controllers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- optimum physical relationship between the machines and equipment within a cell
- reasons for selecting a configuration of machines and equipment and appropriate tooling for each component of the cell with reasons for tooling selection
- appropriate work holding devices for each component of the cell and reasons for selecting the chosen work holding devices
- effects of adjustments to tooling and/or work holding devices on the part or product specifications
- operating procedures for a manufacturing cell
- measurements to be taken to check a part or product for conformance to specification and the techniques/equipment to be used to measure the part or product
- effect of adjustments on cell performance
- causes of non-essential dwell times and action to be taken to minimise dwell times.

Assessment Conditions

- Assessors must:
  - have vocational competency in programming and setting up a CNC manufacturing cell at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07024 Operate and monitor machine and process

Modification History

Release 1. Supersedes and is equivalent to MEM07024B Operate and monitor machine/process

Application

This unit of competency defines the skills and knowledge required to operate and monitor a machine and process and applies to a range of production operations or continuous processes.

The work is performed in accordance with clear step-by-step instructions and procedures documented on job sheets or similar process instruction documents.

Operational adjustments to the machine or process by the operator are made using external controls. Basic operation (excluding setting and tool adjustments) of computer numerically controlled (CNC) machines is also covered by this unit.

Where operational maintenance is required to be performed unit MEM07001 Perform operational maintenance of machines/equipment should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where production packaging and labelling of the finished goods or product is required unit MEM11006 Perform production packaging should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

This unit should not be selected with any of the following units unless the skills of this unit are being applied to an additional and different type of machine and or process:

- MEM04001 Operate melting furnaces
- MEM04002 Perform gravity die casting
- MEM04003 Operate pressure die casting machine
- MEM04006 Operate sand moulding and core making machines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- MEM06001 Perform hand forging
- MEM06002 Perform hammer forging
- MEM08001 Perform wire, jig and barrel load/unload work
- MEM08004 Finish work using wet, dry and vapour deposition methods
- MEM08008 Operate and control surface finishing waste treatment process

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, job sheets or work instructions

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Conduct pre-start checks**	2.1	Undertake pre-start checks to SOPs
		2.2	Observe safety procedures and check all safety equipment for correct operation
3	**Operate machine/process**	3.1	Start up machine or process in accordance with SOPs
		3.2	Operate machine or process in accordance with job instructions
		3.3	Load components/feed stock and maintain consistent with production requirements
		3.4	Unload machine or process
		3.5	Handle machine or process output and store in a manner not likely to cause damage
		3.6	Record production data to SOPs
4	**Monitor machine/process**	4.1	Monitor machine or process for safe and correct operation
		4.2	Identify deviations and faults and report in accordance with procedures
		4.3	Follow emergency procedures in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07024 Operate and monitor machine and process

Modification History

Release 1. Supersedes and is equivalent to MEM07024B Operate and monitor machine/process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting machine/process instruction and setting up for production
- conducting pre-start checks
- operating the machine or process, loading and unloading in accordance with procedures
- following emergency procedures, as required
- completing production data onto applicable workplace forms
- monitoring the machine or process, identifying any faults or out-of-specification operation and reporting, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of Personal Protective Equipment (PPE)
- machine pre-start checks
- machine or process start-up and unloading procedures
- component/feed stock levels to ensure continuous process
- production recording and reporting requirements
- types of product faults and deviations
- consequences of improper handling and storing of finished work
- procedures to be followed in emergency situations.

Assessment Conditions

- Assessors must:
  - have vocational competency in operating and monitoring machine and process at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07025 Perform advanced machine and process operation

Modification History

Release 1. Supersedes and is equivalent to MEM07025B Perform advanced machine or process operation

Application

This unit of competency defines the skills and knowledge required to perform advanced operation and monitor a machine or process recognising and rectifying deviations and faults.

It relates to where the output of the machine or process can be varied at the discretion of the operator and where recognition/rectification skills are applied based upon product/material/process knowledge to achieve specified outcomes.

Where operational maintenance is required to be performed unit MEM07001 Perform operational maintenance of machines/equipment should also be selected.

Where diagnosis and rectification of advanced plastic processes is required unit MEM07026 Perform advanced plastic processing should also be selected.

Where diagnosis and rectification of advanced press operations is required unit MEM07027 Perform advanced press operations should also be selected.

When production packaging and labelling of the finished goods or product is required unit MEM11006 Perform production packaging should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM07026 Perform advanced plastic processing

Modification History

Release 1. Supersedes and is equivalent to MEM07026B Perform advanced plastic processing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other workplace documents in performing advanced plastic processing
- undertaking pre-start checks of a machine or process, including checking of safety equipment and guards
- undertaking appropriate manual handling in loading, unloading and storing of finished work without damage
- operating a machine or process and determining required adjustments to process
- recording production data in accordance with SOPs
- identifying and rectifying faults/deviations in product, raw materials, tooling and machine/process.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- safety features of the machine or process equipment being operated
- programmed operational maintenance requirements of the machine or process
- pre-start checks and start-up/shutdown procedures
- operating procedures for plastic processing machinery and equipment
- unloading procedures for plastics processing and procedures for handling and storing finished work
- consequences of improper handling and storing
- recording requirements for plastic processing operations
- emergency procedures
- plastic product fault/deviations and corrective action to rectify types of product fault/deviations, raw material faults/deviations and tooling faults/deviations

		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions, including machine or process selection and settings
2	**Conduct pre-start checks**	2.1	Check safety equipment and guards for correct position and operation
		2.2	Undertake programmed operational maintenance according procedures
		2.3	Undertake pre-start checks to SOPs
		2.4	Verify the match task requirements against equipment, raw material and tooling
3	**Operate machine/ process**	3.1	Start up and operate machine/process in accordance with job instructions and SOPs
		3.2	Load components/feed stock and maintain consistent with production requirements
		3.3	Unload machine/process output using appropriate manual handling techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.4	Handle machine/process output and store in a manner not likely to cause damage
		3.5	Record production data to SOPs
4	**Monitor machine/process**	4.1	Monitor machine/process for safe and correct operation
		4.2	Follow emergency procedures in accordance with SOPs
5	**Recognise and rectify deviations and faults in product/output, raw material/feed stock, tooling and machine/ process**	5.1	Recognise faults/deviations from SOPs, job sheets or other documentation
		5.2	Rectify faults/deviations in accordance with standard operating procedures, job sheets or other documentation
		5.3	Adjust machine/process settings within parameters, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Metal working press operations include one (1) or more of the following:	• drawing • blanking • bending • coining • sizing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

- extruding
- forming and shaping

Faults/deviations include one (1) or more of the following:

- splits
- warping
- deformation
- dimensional errors
- gauge variation
- hardness
- colour variation
- marks
- missing detail
- distortion

Unit Mapping Information

Assessment Requirements for MEM07027 Perform advanced press operations

Modification History

Release 1. Supersedes and is equivalent to MEM07027B Perform advanced press operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other workplace documents in performing advanced press operations
- undertaking pre-start checks of a machine or process, including checking of safety equipment and guards
- undertaking appropriate manual handling in loading, unloading and storing of finished work without damage
- operating press machine or process and determining required adjustments to process
- recording production data in accordance with SOPs
- identifying and rectifying faults/deviations in product, raw materials, tooling and machine/process.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics and properties of materials used in pressing operations and consequences of selecting incorrect processes for nominated materials
- documentation, production recording and reporting requirements for press operations
- pre-start checks and press machine/process start-up and unloading procedures
- types of product, process, tooling and machine faults/deviations and corrective actions
- procedures to be followed in emergency situations
- consequences of improper handling and storing of finished work
- component/feed stock levels to ensure continuous process
- programmed operational maintenance requirements.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in performing advanced press operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07028 Operate computer controlled machines and processes

Modification History

Release 1. Supersedes and is equivalent to MEM07028B Operate computer controlled machines/processes

Application

This unit of competency defines the skills and knowledge required to operate and monitor a range of numerically controlled (NC), computer numerically controlled (CNC) and robot operated machines or processes in a production environment.

Technical difficulties are resolved in consultation with appropriate technical advisers.

Where operational maintenance is required to be performed unit MEM07001 Perform operational maintenance of machines/equipment should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM07024	Operate and monitor machine and process
MEM11011	Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Conduct pre-start checks**	2.1	Undertake pre-start checks to SOPs
		2.2	Check all safety equipment for correct operation
3	**Operate computer controlled machine/process**	3.1	Select installed computer controlled program and verify in accordance with job instructions
		3.2	Operate computer controlled machine to product specifications
		3.3	Identify and report machine malfunctions
		3.4	Check production samples for compliance to specification
4	**Monitor**	4.1	Monitor tool wear and, where appropriate, replace pre-set

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
machine/process	tools and identify tool offsets in computer controlled program and adjust, or take other corrective action according to procedures
	4.2 Report product deviation from specification in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07028 Operate computer controlled machines and processes

Modification History

Release 1. Supersedes and is equivalent to MEM07028B Operate computer controlled machines/processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other applicable reference documents for computer controlled machine and process operations
- safely undertaking pre-start checks of the machine/process
- selecting appropriate program for the specified work and operating the machine, identifying any malfunctions and checking completed work to ensure it meets specifications
- monitoring the machine or process operation, adjusting and rectifying any tooling settings, as required
- reporting malfunctions or out-of-specification operation, where necessary.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pre-start checks for machines and process
- safety equipment, features and procedures associated with the machine or process
- procedures for accessing and verifying computer controlled programs installed in the machine controller
- computer controlled machine operating procedures
- typical machine malfunctions and procedures for reporting
- measuring instruments/techniques
- examples of tool wear and the effect on product or part specifications and procedures to be followed once tool wear has been detected
- techniques for replacing pre-set tools
- adjustments to tool offsets and the effect of adjustments on part or product specifications
- procedures for reporting product or part deviations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in operating computer controlled machines and processes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07029 Perform routine sharpening and maintenance of production tools and cutters

Modification History

Release 1. Supersedes and is equivalent to MEM07029B Perform routine sharpening/maintenance of production tools and cutters

Application

This unit of competency defines the skills and knowledge required to prepare, grind, check and reassemble production tooling and applies to the routine sharpening and maintenance of production tools/cutters in a production machining environment.

Where machine setting is required unit MEM07003 Perform routine machine setting should also be selected.

Where more advanced tool and cutter grinding operations is required unit MEM07010 Perform tool and cutter grinding operations should be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

This unit should not be selected when unit MEM07010 Perform tool and cutter grinding operations has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011 Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare for tool and cutter grinding**	2.1	Disassemble production tooling, as required to facilitate sharpening in accordance with SOPs
		2.2	Select tool and cutter grinding wheels, balance and dress in accordance with job instructions
		2.3	Mount fixtures or locating tools/cutters to be sharpened in accordance with procedures
3	**Set up machine and perform tool and cutter grinding**	3.1	Mount tools and cutters to be sharpened in predetermined fixtures
		3.2	Sharpen tools and cutters in accordance with defined procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Check tools/cutters for conformance to specification**	4.1 Inspect, check and measure tools/cutters for conformance to specifications
	4.2 Inspect, check and measure assembled tooling for conformance to specifications
	4.3 Reassemble production tooling and install inserts in accordance with job instructions

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Production tooling includes one (1) or more of the following:	• inserted boring bars • face cutters • gear cutters • grinding machines and accessories
Grinding wheel properties include one (1) or more of the following:	• cup, dish and diamond • grain size of abrasive particles • grade or strength of bond • structure of grain spacing
Fixtures/equipment include one (1) or more of the following:	• clamps • vices • magnetic chucks

Assessment Requirements for MEM07029 Perform routine sharpening and maintenance of production tools and cutters

Modification History

Release 1. Supersedes and is equivalent to MEM07029B Perform routine sharpening/maintenance of production tools and cutters

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting tool and cutter sharpening and maintenance job instructions
- selecting and mounting appropriate grinding equipment and cutters to perform the sharpening task
- undertaking the sharpening and maintenance of tools and cutters checking that the finished work meets specifications
- reassembling the sharpened/maintained tooling and inspecting for conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sequence of tooling sharpening and maintenance operations to be performed
- function of coolant and dust extraction devices
- standard grinding wheel shapes
- range of abrasive materials used in grinding wheels
- effect of the following grinding wheel features on wheel selection and application:
  - grain size of abrasive particles
  - grade or strength of bond material
  - structure of grain spacing and dressing processes
- function and application of grinding accessories used for routine sharpening of production tools and cutters
- preparation requirements for tool maintenance
- requirements for checking:
  - dimensions and tolerances
  - geometry and tolerances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- surface finish specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing routine sharpening and maintenance of production tools and cutters at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07030 Perform basic metal spinning lathe operations

Modification History

Release 1. Supersedes and is equivalent to MEM07030C Perform metal spinning lathe operations (basic)

Application

This unit of competency defines the skills and knowledge required to perform basic metal spinning lathe (excluding computer numerically controlled [CNC]) operations.

It applies to manual metal spinning of sheet metals of varying thicknesses but does not include hot spinning procedures. Tool use will include either hand and/or slide tooling of varying design and materials.

Where annealing is required unit MEM05007 Perform manual heating and thermal cutting should also be selected.

Where disc blanks are required to be cut out using a dedicated circle cutter or similar unit MEM07032 Use workshop machines for basic operations should also be selected.

Where operational maintenance requires dismantling and replacing components unit MEM18055 Dismantle, replace and assemble engineering components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 8

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Perform spinning operations**	2.1	Select tools to produce components to specifications
		2.2	Determine disc size in accordance with procedures
		2.3	Calculate spinning speeds for various metals and metal thicknesses using appropriate mathematical techniques and reference materials
		2.4	Select correct back centre and form chucks and mount in accordance with procedures and specifications
		2.5	Mount prepared disc for forming
		2.6	Perform spinning operations using a full range of spinning accessories

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.7	Carry out routine maintenance
3 **Check components for conformance to specifications, remove and store them**	3.1	Check components for conformance to specifications using appropriate techniques, tools and equipment
	3.2	Make adjustments, as required
	3.3	Remove components from the spinning lathe without marking or any deformation
	3.4	Store components and package to avoid oxidation and damage

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Tools include one (1) or more of the following:	• spinning tools • planishing tools • backstick • trimming • beading tools
Spinning accessories include one (1) or more of the following:	• back centre • various chucks • trimming accessories • blank centre equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

	• tee-rest
Metals include one (1) or more of the following:	• steel • aluminium • monel • copper • brass • zinc • pewter • silver • gold • tin
Spinning operations include one (1) or more of the following:	• spinning • beading • trimming • finishing • annealing • pickling
Maintenance and adjustments include the following:	• cleaning and lubrication

Assessment Requirements for MEM07030 Perform basic metal spinning lathe operations

Modification History

Release 1. Supersedes and is equivalent to MEM07030C Perform metal spinning lathe operations (basic)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and other applicable reference documents for spinning lathe operations
- calculating disc size and spinning speeds
- selecting chucks and mounting disc for forming
- performing spinning operation using appropriate accessories to produce finished work that meets specifications
- removing finished work and storing to minimise damage
- performing operational maintenance on the lathe and related equipment and making any required adjustments to lubrication levels.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- correct sequence of spinning operation
- types of spinning tools, their functions and requirements for maintaining tools
- types of damage and defects (e.g. tool marks, cracking, stress marks, thinning and incorrect finish)
- spinning lathe operation
- why and how lathe speed is calculated
- reasons for types of form chuck mounting
- function and operation of accessories for basic spinning and methods used for each process
- correct methods for stacking and protecting finished product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing basic metal spinning lathe operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM07031 Perform complex metal spinning lathe operations

Modification History

Release 1. Supersedes and is equivalent to MEM07031C Perform metal spinning lathe operations (complex)

Application

This unit of competency defines the skills and knowledge required to perform complex metal spinning operations (excluding computer numerically controlled [CNC]) operations, using advanced processes, spinning tools and accessories.

Where there is a requirement to join spun materials or products in addition to, or instead of, (the spinning operation of) swaging, the following units should also be selected as appropriate:

- MEM05003 Perform soft soldering
- MEM05006 Perform brazing and/or silver soldering; or
- MEM05004 Perform routine oxy fuel gas welding; or
- MEM05012 Perform routine manual metal arc welding

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Ba**nd: A**

Unit Weight: 4

Pre-requisite Unit

MEM07030	Perform basic metal spinning lathe operations
MEM07032	Use workshop machines for basic operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

Assessment Requirements for MEM07031 Perform complex metal spinning lathe operations

Modification History

Release 1. Supersedes and is equivalent to MEM07031C Perform metal spinning lathe operations (complex)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings and other applicable reference documents for performing complex spinning lathe operations
- calculating disc size and lathe speed including angles and radius
- selecting chucks and mounting disc for forming
- coordinating the use of multi-slides and tools, feeds and speeds
- performing complex spinning operation using a range of accessories to produce finished work that meets specifications
- removing finished work and storing to minimise damage
- performing operational maintenance on the lathe and related equipment and making any required adjustments to lubrication levels.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- complex spinning operations, processes and techniques
- requirements for maintaining lathe spinning tools and manufacturing form chucks
- types of damage and defects including tool marks, cracking, stress marks, thinning and incorrect finish
- function and operation of lathe accessories
- methods used for complex spinning processes
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components
- methods for stacking and protecting finished product.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing complex metal spinning lathe operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07032 Use workshop machines for basic operations

Modification History

Release 1. Supersedes and is equivalent to MEM07032B Use workshop machines for basic operations

Application

This unit of competency defines the skills and knowledge required to use workshop machines for basic operations in maintenance or jobbing environment.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Set up machine**	2.1	Select appropriate machine and tools to meet work requirements
		2.2	Sharpen cutting tools, as required
		2.3	Install tools according to procedures
		2.4	Set guards and adjust, as required
3	**Operate machine**	3.1	Mount material to be machined and secure using clamping device/ appropriate to the material and work requirements
		3.2	Operate machine to suit work and material requirements
		3.3	Check machined component against work requirements and predetermined finish
		3.4	Make adjustments, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Machines include one (1) or more of the following:	• lathe • radial arm drill • mill
Cutting tools include one (1) or more of the following:	• lathe tools • milling cutters • drills
Materials include one (1) or more of the following:	• ferrous • non-ferrous
Clamping devices include one (1) or more of the following:	• chucks • vices • clamps • bars and packing

Assessment Requirements for MEM07032 Use workshop machines for basic operations

Modification History

Release 1. Supersedes and is equivalent to MEM07032B Use workshop machines for basic operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and work instructions for machine operations
- setting up machines and selecting, sharpening and mounting tools required for the required job
- mounting the material to be processed and safely operating the machine
- checking machined components to ensure it meets specifications and making adjustments, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- cutting tool sharpening methods and techniques
- units of measurement, tool geometry and numerical operations required for basic machining operations
- safe operation of tool sharpening equipment and consequences of incorrect sharpening
- machine set-up and consequences of incorrect speeds and feeds
- procedures for operating workshop machines
- reasons for poor surface finish.

Assessment Conditions

- Assessors must:
  - have vocational competency in using workshop machines for basic operations at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07033 Operate and monitor basic boiler

Modification History

Release 1. Supersedes and is equivalent to MEM07033B Operate and monitor basic boiler

Application

This unit of competency defines the skills and knowledge required to perform start-up, take-over/handover, monitor, shutdown and storage of a basic boiler used for all purposes, including the generation of steam.

All work is carried out to applicable state/territory and national work health and safety (WHS) legislation, standards and codes of practice.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, as appropriate should also be selected.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Machine and process operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Carry out pre-operational checks**	2.1	Undertake pre-operational checks of boiler to plant operating procedures
		2.2	Identify maintenance requirements and report in accordance with procedures
3	**Maintain health and safety standards in work area**	3.1	Identify hazards and potential hazards and report according to SOPs
		3.2	Select hazard prevention/control measures, as required
4	**Start boiler and conduct hand-over/take-over procedures**	4.1	Start boiler and bring online safely, consistent with workplace procedures and production requirements
		4.2	Confirm operating status of boiler
		4.3	Maintain operating log and communicate boiler status/operation according to workplace procedures
5	**Operate, monitor and shut down boiler**	5.1	Operate boiler and monitor consistent with production and safety requirements
		5.2	Conduct boiler water quality tests and adjust boiler water quality to manufacturers' recommendations and workplace procedures, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		5.3	Act upon boiler failures/emergencies according to workplace procedures and notify downstream users, if necessary
		5.4	Shut down boiler consistent with workplace procedures, production and safety requirements
6	**Carry out boiler shutdown for an internal inspection**	6.1	Shut down boiler for internal inspection
		6.2	Clean boiler internally and externally to manufacturers' recommendations and workplace procedures
7	**Store boiler in shutdown mode**	7.1	Identify manufacturers' recommendations and workplace procedures required for shutdown storage mode
		7.2	Store boiler in identified shutdown mode

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Pre-operational checks include one or more of the following:

- feed water supply
- boiler water level
- fuel supply/heat source
- boiler valves - their operation and position
- combustion air supply
- combustion equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Boilers include the following:	• single fixed combustion air supply, non-modulating single heat source and fixed firing rate
Hazards include one (1) or more of the following:	• chemical • thermal • manual handling • guarding of machinery • illumination of work area • rubbish and combustibles • leakage of steam and fuel
Monitor includes one (1) or more of the following:	• steam pressure • flame and combustion conditions • feed system and condensate returns • fuel system • water level • combustion management system • water management system • boiler and steam manifold fittings • soot blowers
Handover includes the following:	• previous load requirements • maintenance issue, including equipment isolated for maintenance • operational incidences • completing/reading operating log • general inspection of boiler to detect any defects • accept responsibility of boiler • noted equipment malfunctions • required equipment tests
Storage mode includes one (1) or more of the following:	• wet • dry • open condition • closed condition

Assessment Requirements for MEM07033 Operate and monitor basic boiler

Modification History

Release 1. Supersedes and is equivalent to MEM07033B Operate and monitor basic boiler

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- safely conducting pre-operational checks of the boiler and reporting any faults or hazards
- starting and bringing the boiler online and confirming its operating status
- monitoring the boiler operation and conducting water quality tests, as required
- reacting effectively to any boiler emergency situations
- shutting down the boiler in the required condition, cleaning and putting into storage mode.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pre-operational checks, including:
  - feed water supply
  - boiler water level
  - fuel supply/heat source
  - boiler valves their operation and position
  - combustion air supply
  - combustion equipment
- procedures for identifying and reporting maintenance
- statutory requirements and workplace procedures for identifying and reporting hazards in the work area
- processes for starting a boiler, including:
  - heat input
  - warm up of the reticulation system
  - steam traps and steam line purge
  - systems operation
  - reticulation line pressure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - steam usage
  - supply
- processes for confirming operational status of boiler
- procedures for maintaining boiler operating log
- procedures for communicating boiler status and operation
- principles of boiler operation
- boiler fittings
- preparing boiler for inspection
- procedures for monitoring a boiler, including:
  - steam reticulation line pressure
  - usage, supply and quality of steam
  - combustion/heat source system
  - feed water system
  - fuel system combustion air supply
  - water level
  - boiler steam pressures
- operation of boiler control/safety devices
- location of inspection and explosion doors
- procedures for conducting boiler water quality tests
- feed water systems and treatment
- emergency procedures, including:
  - identification of emergency
  - isolation of heat source
  - selection and application of appropriate fire-fighting equipment
  - notification of downstream users
- processes and procedures, including:
  - confirming water level
  - cooling down
  - boiler pressure/vacuum
  - fuel/heat source isolation
  - removal of combustion equipment and water from boiler
  - isolation from any common connection
  - the opening of all access points required for inspection
- procedures for cleaning the boiler internally and externally
- various modes of boiler storage
- procedures for storing the boiler in open or closed condition.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in operating and monitoring a basic boiler at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07039 Write programs for industrial robots

Modification History

Release 1. Supersedes and is equivalent to MEM07039A Write programs for industrial robots

Application

This unit of competency defines the skills and knowledge required to plan and write computer programs for robot operations to achieve operating specifications. Programs are in accordance with manufacturers' operating procedures, manufacturer specific language and the functional parameters of the robot.

Where setting of robot cells is required unit MEM07040 Set multistage integrated processes should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 4

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM10004	Enter and change programmable controller operational parameters
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM16008	Interact with computing technology

Competency Field

Machine and process operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify robot requirements**	2.1	Identify robot features and specifications
		2.2	Identify robot language appropriate to the robot type
		2.3	Identify robot safety features
		2.4	Interpret manufacturers' operating procedures and engineering drawings to define robot function and tool path geometry
		2.5	Determine required operations for robot and end effectors in conjunction with appropriate technical experts or other technical reference sources
3	**Plan robot program**	3.1	Identify programming requirements
		3.2	Calculate coordinates for tool path or robot functions
		3.3	Select programming method
		3.4	Develop program plan
4	**Write basic program**	4.1	Prepare robot and computer equipment
		4.2	Write program in required language and in accordance with SOPs
		4.3	Incorporate safety features in robot program

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.4 Prepare operation sheet
5 **Trial program**	5.1 Trial program by operating robot in manual mode in conjunction with operator, as appropriate
	5.2 Verify program performance against required specifications and with appropriate technical experts or other technical reference sources
	5.3 Edit program if necessary to adjust operation, as required
	5.4 Check components for conformance to specifications, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Features and specifications include one (1) or more of the following:

- components
- capabilities
- speed
- reach
- load carrying capacity
- accuracy/repeatability
- classification
- polar coordinate
- cylindrical coordinate
- Cartesian coordinate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

- jointed elbow
- SCARA
- movements
- base
- shoulder
- elbow
- pitch
- roll
- yaw
- applications
- required operating conditions
- limitations
- justification
- safety features

Language includes the following:

- language appropriate to robot type

Safety features include one (1) or more of the following:

- AS 2939-1987 Industrial robot safety - Safe design and usage
- physical design
- enclosures
- layout
- programming
- sensing
- personnel

Assessment Requirements for MEM07039 Write programs for industrial robots

Modification History

Release 1. Supersedes and is equivalent to MEM07039A Write programs for industrial robots

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, engineering drawings and other applicable reference documents to write programs for industrial robots
- identifying required robot operations in determining programming requirements
- planning the programming methodology appropriate to the robot type and operation
- calculating coordinates of all relevant points on the part or product to be produced
- writing the robot program in the correct programming language and drafting a robot operation sheet
- trialling the program ensuring the robot operates safely and correctly and produces work that meets specification
- editing the program as necessary to ensure compliance with specifications
- undertaking program storage and filing procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- classifications/applications of industrial robots, including:
  - welding
  - thermal cutting
  - machining
  - forming and shaping
  - pick and place
  - palletising
  - machine loading/unloading
- end effectors, including:
  - grippers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - tools and tool changes
- features and specifications of robots and components
- joint movements of a robot
- drive systems used to generate robot movement
- robot programming methods and procedures
- function of elements in controlling operation of a robot
- safety features and requirements of robots
- type(s) of robots and end effectors and their applications
- robot operations controlled by programs
- tool path(s) when producing a part or product
- sequence of robot operations, including movements
- zero point of the robot
- standard codes and languages for robot programs
- procedures for completing robot operation sheets
- procedures for manual operation of the robot
- reasons for testing and proving the robot program
- procedures for editing the robot program
- effects of editing on the operation of the robot and the part or product to be produced
- measuring equipment/techniques used to check for conformance to specification.

Assessment Conditions

- Assessors must:
  - have vocational competency in writing programs for industrial robots at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07040 Set multistage integrated processes

Modification History

Release 1. Supersedes and is equivalent to MEM07040A Set multistage integrated processes

Application

This unit of competency defines the skills and knowledge required to set, according to defined procedures, a wide range of continuous process lines and processes, where operations are performed by machines and equipment that are sequentially linked and involves process lines and robot cells.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where setting or adjustment of numerical control (NC) and computer numerical control (CNC) or programmable logic control (PLC) is required appropriate units should also be selected.

Where robot operation, editing and/or programming skills is required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM07040 Set multistage integrated processes

Modification History

Release 1. Supersedes and is equivalent to MEM07040A Set multistage integrated processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings and other applicable reference documents relating to setting multistage continuous process lines
- using appropriate hand tools and equipment
- setting the process line and trialling to ensure it operates safely and to specifications, adjusting as required
- entering routine and familiar information onto proformas and standard workplace forms
- instructing process line operators on correct operational procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- communication strategies for giving clear instruction to process line operators
- specifications and sequencing that apply to given process lines
- interpretation of feedback from machine process
- specifications applicable to the sensors, process links, displays, monitors and feedback loops incorporated in the process line
- correct operation and specification for all safety apparatus incorporated in the process line
- product specifications and quality and production requirements
- effect of process line adjustments on product and operational specifications
- process line operator procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in setting multistage integrated processes at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07041 Perform production machining

Modification History

Release 1. Supersedes and is equivalent to MEM07041A Perform production machining

Application

This unit of competency defines the skills and knowledge required to perform production machining using engineering machinery.

Production machining refers to use of workshop machines for volume production of parts or components made of metal or other machinable materials where the machine operator has responsibility for the setting up of the machine, including tooling, grinding wheels, and other accessories within defined parameters. It does not include one-off jobbing on workshop machines or complex calculations. Tolerances and tool paths will normally have been set in advance.

Where trade machining applications are undertaken unit MEM07005 Perform general machining should be selected.

Where set up and operation of electro-discharge machines (EDM) is required unit MEM07014 Perform electro-discharge machining (EDM) operations should also be selected.

Where machining is undertaken without the need for any set up, including mounting of tools, setting of speeds, feeds and other operational parameters then unit MEM07024 Operate and monitor machine and process and unit MEM07025 Perform advanced machine and process operation, should also be selected as appropriate.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 8

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Follow required sequence of operations**	2.1	Confirm number of items to be produced
		2.2	Plan the operation for required run rate, efficiency and minimisation of waste
		2.3	Select correct material for operation from pre-determined stock range
		2.4	Establish starting point on stock for operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.5	Maintain process and quality logs
3	**Select and mount tools**	3.1	Select appropriate tooling from pre-selected range
		3.2	Select appropriate stock and grind to required tool shape using pre-set jigs and fixtures to achieve pre-determined angles and clearances
		3.3	Monitor tooling and sharpen tools and drills to pre-determined specifications, as required
4	**Perform production machining operations**	4.1	Use basic marking out techniques to pre-determined specifications on stock or components
		4.2	Set machining parameters for job requirements
		4.3	Monitor tool or cutter performance life
		4.4	Clamp or hold work without damage to product and ensuring all safety requirements are met
		4.5	Perform machining utilising all guards and safety procedures
5	**Perform production grinding operations**	5.1	Select appropriate grinding wheel for required operation from pre-selected options
		5.2	Mount and tighten grinding wheels to required sequence and specification
		5.3	Dress and true grinding wheel using given range of dressing tools
		5.4	Check grinding wheel for balance and safety
		5.5	Adjust coolant flow and position
		5.6	Undertake grinding operation utilising all guards and safety procedures
		5.7	Monitor grinding wheel performance and life according

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			to SOP
6	**Measure components**	6.1	Select instruments or gauges appropriate to the measurement requirements
		6.2	Check machined or ground items for compliance with specifications
		6.3	Identify out-of-specification items and check if settings or tooling require adjustment
7	**Adjust and maintain machine**	7.1	Carry out routine maintenance and adjustments, as required
		7.2	Report and log malfunctions according to enterprise procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Operations include one (1) or more of the following:	• parallel cutting • slotting • drilling • knurling • cutting flats • centred and centreless grinding operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• ferrous • non-ferrous metals • other machinable materials
Tooling includes one (1) or more of the following:	• carbide • ceramic and high speed steel machine tooling • cutting tool accessories • holding devices
Measuring devices include one (1) or more of the following:	• rulers • gauges • verniers and micrometres (digital or analogue)
Basic marking out techniques include using one (1) or more of the following:	• calipers • steel rules • dividers and scribers
Machining parameters include one (1) or more of the following:	• speeds • feeds • stops • coolant and cutting lubricants
Machines include one (1) or more of the following:	• lathes • mills • planers • shapers • radial and pedestal drills • slotters • grinders
Maintenance and adjustments include one (1) or more of the	• slide and collar adjustment • cleaning and lubrication

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

following:

Types and features of industrial grinding wheels include one (1) or more of the following:	• wheel make-up • wheel hubs • wheel classification • types of grits and bonds
Dressing tools include one (1) or more of the following:	• industrial diamond • dressing wheels • dressing sticks
Balancing of grinding wheels includes the following:	• checks and identification for balance only

Unit Mapping Information

Assessment Requirements for MEM07041 Perform production machining

Modification History

Release 1. Supersedes and is equivalent to MEM07041A Perform production machining

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings and other applicable reference documents to perform production machining
- selecting appropriate tooling, measuring equipment, material and accessories and determining sequencing of operations
- sharpening and shaping cutting tools and drills
- selecting and mounting required tooling or grinding wheels
- setting machining parameters, including using appropriate coolant and lubricants
- checking machined components for conformance to specifications and identifying adjustments to be made to settings/tooling.
- rectifying non-compliant product
- carrying out routine maintenance and adjustments, as required
- reporting/logging malfunctions according to SOPs

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of operations
- methods of work holding
- basic marking out techniques, including datum points/lines
- benefits of using correctly sharpened cutting tools
- machine operation
- selection of feeds and speeds to SOPs
- correct methods of mounting selected cutting tools to sops
- safety issues with regard to correct clamping, guards and shields
- tolerances and limits of size
- situations indicating the need for machine adjustment, lubrication and cleaning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- techniques, tools and equipment to measure materials and machined components
- types and features of industrial grinding wheels, including:
  - international grinding wheel identification system
  - grinding wheel make-up, including bonds and grits
  - purpose and procedure for grinding wheel trueing
  - indicators of a need for grinding wheel dressing, including:
    - wheel glazing
    - wheel loading
    - wheel dresses
    - wheel drilling
- difference between centred and centreless grinding
- indicators of need for dressing, including:
  - loading
  - dulling
  - glazing
  - burn/thermal damage
  - surface finish
- grinding wheel storage and handling
- wheel safety checking, including checks for:
  - cracks
  - defects, including holes, moisture and deterioration
- grinding wheel blotters
- typical range of industrial drills and classification
- drilling machines
- drill sharpening procedures
- drill clamping arrangements
- common reasons for machining failure, including:
  - incorrect speed
  - faulty positioning of work
  - incorrect feed
  - rotation
  - incorrect coolant selection and positioning
- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing production machining at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07042 Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems

Modification History

Release 1. Supersedes and is equivalent to MEM07042A Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems

Application

This unit of competency defines the skills and knowledge required to undertake corrections to aluminium extrusion solid and hollow dies and die support systems after faulty extrusions have been examined and causes of faults identified.

Where the use of mobile load shifting equipment is required unit MEM11010 Operate mobile load shifting equipment should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07001	Perform operational maintenance of machines/equipment
MEM07003	Perform routine machine setting
MEM07004	Perform complex machine setting
MEM07024	Operate and monitor machine and process
MEM07025	Perform advanced machine and process operation
MEM07032	Use workshop machines for basic operations
MEM07043	Identify causes of faulty aluminium extrusions
MEM07044	Test a new aluminium extrusion die
MEM09002	Interpret technical drawing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for die correction**	2.1	Identify regulatory requirements and risk management procedures relevant to die access and handling, extruder operation and die correcting procedures
		2.2	Identify extrusion specifications, extruder operating procedures and other information relevant to die

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			correction task
		2.3	Consult with die designer on intended correction, where required
		2.4	Select appropriate hand tools, hand held power tools, or workshop machines to carry out die corrections
3	**Correct solid dies**	3.1	Calculate intended change in extrusion flow or speed
		3.2	Determine bearing choke angles or length of bearing shortening as appropriate for required correction
		3.3	Speed up flow through appropriate shortening of bearing
		3.4	Slow down flow through appropriate choking of bearing
		3.5	Relieve clearances
		3.6	Supervise or run trial extrusions to test corrections
4	**Correct hollow dies**	4.1	Assess if shortening or choking of mandrel bearings is required and select bearings to be corrected
		4.2	Determine choke angles and length of shortening as appropriate for required corrections
		4.3	Undercut mandrel to widen chambers
		4.4	Increase depth of chamber back into bridge
		4.5	Adjust mandrel stems
		4.6	Adjust weld bridges
		4.7	Speed up flow through appropriate shortening of bearing
		4.8	Slow down flow through appropriate choking of bearing
5	**Undertake basic maintenance of**	5.1	Monitor case and assess when re-nitriding is required
		5.2	Prepare die for re-nitriding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	dies	5.3	Clean and polish dies
		5.4	Repair fine bearing damage
		5.5	Maintain bearing angle and flatness during polishing and repairs
		5.6	Monitor fittings and devices for lifting die and die support components and arrange replacement or repair as necessary
6	**Adjust die support system and components**	6.1	Ensure toolstack components are flat and square with die and specified toolstack dimensions that will support dies, according to the force the extruder can exert are used
		6.2	Check for and replace any coined bolsters
		6.3	Check die slide alignment is within tolerance and re-align if necessary
		6.4	Report persistent die support related faults after adjustment and recommend redesign or stiffening as appropriate
7	**Maintain die records**	7.1	Record details of all die corrections, including trial extrusions
		7.2	Recommend any simple die design changes that increase productivity and recovery

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07042 Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems

Modification History

Release 1. Supersedes and is equivalent to MEM07042A Undertake corrections and basic maintenance to aluminium extrusion dies and die support systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- complying with work health and safety (WHS), regulatory requirements and risk management associated with extruder operation and die handling
- relating intended changes to bearings, apertures, other die components and toolstack components to particular extrusion faults
- adjusting metal flow using workshop machines, hand tools and hand held power tools to correct bearings
- maintaining bearings and other die components to specification
- identifying situations where die or other components must be either scrapped or returned to die manufacturer
- supervising or conducting trial extrusions to verify corrections
- reporting and documenting results of corrections.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- die technology:
  - construction:
    - solid dies
    - hollow dies
    - die support components
    - composition and characteristics of various die steels
    - die manufacturing process
    - nitriding process and purpose
    - extrusion design process and behaviour of typical shapes during extrusion

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

    - bearings:
        - shape and definition
        - bearing deflections
        - bearing wash
        - bearing choke where entrance to die aperture is wider than the exit angle
        - negative bearing (entrance is narrower than the exit angle) increases speed of flow
- die support technology and common faults:
    - bolsters:
        - matching of dies to bolsters
        - typical faults in extrusions related to poor bolster selection or fit
    - backers:
        - softening
        - dishing
    - feeder plates:
        - tolerances too close can cause heat related surface defects on extrusions
        - tolerances not matched to bearings in die can cause shape loss
- extrusion process:
    - shape behaviour of typical extrusion products
    - channel shapes and tongue movement faults and typical distortions and corrections
    - runout length variations and possible causes:
        - recycled and unevenly cooled billets
        - out of alignment die slides
        - bearings worn or polished unevenly
    - operator variables:
        - incorrect heat settings
        - incorrect selection of bolster for die
        - poor breakthrough management
    - principles of flow:
        - variation of flow speed through local details and thicknesses
        - variation across container diameter
        - variation due to length of bearing
        - speed of metal through die along with temperature determines how metal flow fills die
    - source and purpose of heating of:
        - billet
        - die
        - extrusion and extrusion created heat
- surface defects and their causes:
    - die lines caused by roughness at surface edges, damaged bearing edges, bearing wash or flaking of nitriding

© Commonwealth of Australia, 2025
Manufacturing Industry Skills Alliance

  - pick up (surface tearing)
  - streaking
  - blisters
  - inclusions in billets
  - nitriding flaking off die face
- effects of incorrect heat:
  - collapsing of thin walled sections due to over heating
  - blocking of the die
  - surface breakdown and faults:
    - roughness
    - streaking
    - tearing
- dangers of welding extrusion dies
- die efficiency considerations:
  - monitor die performance over time using examine die and extrusion records
  - balance die correction against tonnage, speed and recovery rates
- when to recommend new die or major re-work by die manufacturer where required.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking corrections and basic maintenance to aluminium extrusion dies and die support systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07043 Identify causes of faulty aluminium extrusions

Modification History

Release 1. Supersedes and is equivalent to MEM07043A Identify causes of faulty aluminium extrusions

Application

This unit of competency defines the skills and knowledge required to systematically examine aluminium extrusions produced on solid and hollow dies for faults that are both die, and non-die related and tracing the reasons for the faults.

It includes determining the most appropriate corrective action for the fault and, where appropriate, providing recommendations to extruder operators, die designers and die manufacturers.

Where the selection and use of power tools/hand held operations is required Unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Collect information on faulty extrusion**	2.1	Liaise with extruder operator on die service or fault correction requests
		2.2	Access and examine die in accordance with procedures
		2.3	Examine extruder records and identify any previous die corrections
		2.4	Consult with die designer on faults, where required
		2.5	Examine extruder maintenance records and liaise with maintenance department
3	**Interpret die drawing and specifications**	3.1	Identify layout and pre-forming of die apertures
		3.2	Identify bearing and pocket design/specification
		3.3	Identify measurements and tolerances for bearings, die components and die support system
		3.4	Identify bolster and spacer specification for die

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.5	Identify press specifications
		3.6	Identify speed estimate for die
		3.7	Identify ports and bridges for hollow dies
4	**Examine faulty extrusions**	4.1	Check extrusions for shape distortion
		4.2	Check extrusion measurements are to specification
		4.3	Inspect surface finish of extrusions for defects
		4.4	Identify whether faults apply from the start to the end of extrusion runouts
		4.5	Make a preliminary assessment as to whether faults are related to die or die support system or other factors
5	**Check for faults not related to die or die support system**	5.1	Examine die and billet heating and temperature records and confirm heating and temperature was to specification
		5.2	Confirm extruder was run at correct speed and other settings were to specification
		5.3	Examine billet history and determine if billet was recycled or faulty
		5.4	Confirm with maintenance department that extruder is free of mechanical, electrical, control or structural faults
6	**Identify die and die support related faults**	6.1	Access die and die support system
		6.2	Inspect die for overall wear, dishing, damage and other defects
		6.3	Inspect bearings for shortening, surface defects, loss of specified angle and clearances
		6.4	Determine if die can be corrected, scrapped or returned to manufacturer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		6.5	Inspect die support system and components for defects and die slide misalignment
7	**Record cause of fault and communicate as required**	7.1	Prepare recommendations for die correction and obtain any required approvals
		7.2	Prepare recommendations for any changes to process or temperature settings and distribute, as appropriate

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07043 Identify causes of faulty aluminium extrusions

Modification History

Release 1. Supersedes and is equivalent to MEM07043A Identify causes of faulty aluminium extrusions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- complying with work health and safety (WHS), regulatory requirements and risk management procedures
- identifying bearings, apertures, components, and critical measurements and tolerances on die drawing
- liaising with extruder operators, die designers die makers and maintenance personnel to obtain information to assist in the identification of causes of faults
- identifying root cause of faults in both hollow and solid die extrusions
- identifying die, die support, process and temperature-related shape and surface faults
- identifying appropriate action to take to remedy extrusion faults
- accessing, analysing and adding to die history records.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- die components in an extrusion machine:
  - die
  - die support
  - container
  - support tooling
  - die holder
  - bolsters – single and split systems
  - die slide
  - tool stack
  - bearing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - feeder plate
    - backer
    - platen plate
- aluminium extrusion process, including:
    - die heating
    - billet heating
    - loading of dies and billets
    - breakthrough control
    - flow speed
    - rolling
    - quenching
    - stretching
- aluminium extrusion alloys and their extrusion performance
- extruder components and controls
- requirements of AS/NZS 1866:1997 Aluminium and aluminium alloys – Extruded rod, bar, solid and hollow shapes for extruded products
- causes of die deformation, including:
    - damaged or die
    - poor or incorrect die support due to:
        - poor manufacture
        - wear
        - incorrect component placement/selection
- die and die support design and die manufacturing related faults, including:
    - tolerances and clearances too tight and beyond range of realistic correction by die corrector
    - tolerances and clearances too great causing components to move out of position during extrusion leading to flow blockage
- reasons for die blockage, including:
    - die damage
    - over polishing or incorrect die polishing
    - tongue bending
    - bearing clearances too tight
    - overheating of billet
- indicators of die support faults, including:
    - deflecting mandrels
    - die dishing
    - die movement during extrusion
- check for metal extruding inwards or outwards
- effects of nitriding and re-nitriding on die performance
- billet composition and billet heating procedures
- changes in billet composition caused by re-heating

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- process related faults:
  - incorrect temperature settings for pre-heating of billet
  - bad breakthrough control by operator (setting too fast or too high a pressure):
    - poor extruder settings
    - speed through die too fast/slow
    - fouling of section on relief
    - unsuitable support of extrusion after exiting die
    - poor/incorrect quenching
    - faults not subject to action by die corrector
    - poor quality billet
    - mechanical/electrical fault with extruder
- types of extrusion faults and their relationship to die correction techniques and die correction limitations, including:
  - shape distortion:
    - during extrusion
    - on exit from die
    - loss during quenching
  - length overruns
  - section collapse
  - surface faults including:
    - breakdown
    - pickup
    - tearing
    - streaking
- die lines.

Assessment Conditions

- Assessors must:
  - have vocational competency in identifying causes of faulty aluminium extrusions at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM07044 Test a new aluminium extrusion die

Modification History

Release 1. Supersedes and is equivalent to MEM07044A Test a new aluminium extrusion die

Application

This unit of competency defines the skills and knowledge required for die correctors working in an aluminium extrusion workplace who are required to undertake the initial testing of new extrusion solid and hollow dies. It includes liaison with die designers and makers on the performance of the new die and making corrections to the die to ensure optimal performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM07043	Identify causes of faulty aluminium extrusions
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Interpret die drawing and die specifications relevant to die trial**	2.1	Identify regulatory requirements and risk management requirements associated with extruder operation and die handling
		2.2	Identify layout and pre-forming of die apertures
		2.3	Identify bearing and pocket design/specification
		2.4	Identify measurements and tolerances for bearings, die components and die support system
		2.5	Identify bolster and spacer specification for die
		2.6	Identify press specifications
		2.7	Identify speed estimate for die
		2.8	Identify ports and bridges for hollow dies
3	**Liaise with die designer**	3.1	Clarify die drawing and die specifications with die designer where design information is not clear
		3.2	Determine if die requires finishing off and clarify final design measurements, tolerances and speed specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Obtain any special instructions from die designer for conduct of test extrusions
4	**Finish off die, if required**	4.1	Finish lands and bearings to specified tolerances
		4.2	Finish ports, bridges and mandrels of hollow dies, if required
		4.3	Undertake any final polishing
		4.4	Confirm all measurements are to design specification after finishing off
5	**Analyse trial extrusions**	5.1	Check extruder and surrounds for compliance with operation safety requirements
		5.2	Operate or supervise operation of extrusion press to produce trial extrusions
		5.3	Check hot extrusions for shape distortion
		5.4	Check thickness of extrusions are to specification
		5.5	Check surface finish of extrusions
		5.6	Identify whether faults apply from the start to the end of the run-out of the extrusions
		5.7	Conduct additional trial extrusions to confirm extrusion faults occur consistently
		5.8	Record extruder settings for each trial extrusion
6	**Identify appropriate remedy for out-of-specification results**	6.1	Examine faulty extrusions and determine if fault relates to die design, incorrect process or temperature settings, or faulty die support system
		6.2	Determine fault is die related and able to be eliminated through correction of die
		6.3	Determine if fault can be corrected through adjustments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			to die supports
		6.4	Determine if fault can be eliminated through adjusted process control or billet heating
		6.5	Recommend either return of die for re-design or manufacture of a new die where faults are unable to be corrected
7	**Re-test die after correction**	7.1	Conduct trial extrusions after correction of die, die support adjustment or process or temperature adjustment
		7.2	Return die to die manufacturer if faulty extrusions persist
		7.3	Record adjustments to die on die design drawings ensuring correct feedback codes are used
		7.4	Record adjustments made to die support system, process and temperature settings

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07044 Test a new aluminium extrusion die

Modification History

Release 1. Supersedes and is equivalent to MEM07044A Test a new aluminium extrusion die

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- complying with relevant work health and safety (WHS), regulatory requirements and risk management
- identifying bearings, apertures, and critical measurements and tolerances on die drawing
- supervising and conducting trial extrusions
- using workshop machines and hand tools to finish off a die to design specifications
- identifying cause of extrusion faults from both hollow and solid die extrusions
- identifying appropriate action to take to remedy extrusion faults
- reporting and documenting results.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- aluminium extrusion die construction and the extrusion process
- effects of nitriding and re-nitriding on tool performance
- requirements of AS/NZS 1866:1997 Aluminium and aluminium alloys - Extruded rod, bar, solid and hollow shapes
- techniques for correcting solid and hollow dies
- die support system, including role and types of feeder plates, bakers, bolsters and spacers
- characteristics and use of extruder components, including:
  - container
  - container liner
  - billet
  - die slide
  - pressure rings
  - platen

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics and use of hollow die components, including:
  - weld chamber
  - mandrel
  - die holder
  - weld feeds
  - bridges
  - ports
- die and extruder performance and adjustment records.

Assessment Conditions

- Assessors must:
  - have vocational competency in testing new aluminium extrusion dies at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08001 Perform wire, jig and barrel load/unload work

Modification History

Release 1. Supersedes and is equivalent to MEM08001B Perform wire, jig and barrel load/unload work

Application

This unit of competency defines the skills and knowledge required to load barrels for mass finishing processes, undertake jig work for non-electrolytic processes, undertake wire jig and rack work for electrolytic processes, and unload and remove jigs after finishing.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, as appropriate should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPS
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Load barrels for mass finishing processes**	2.1	Load machinery taking into account load mass
		2.2	Secure machine access openings in accordance with SOPs
3	**Undertake jig work for non-electrolytic processes**	3.1	Secure components appropriately using SOPs
4	**Undertake wire jig and rack work for electrolytic processes**	4.1	Select type and size of wire or rack and inspect for conformance to specification
		4.2	Identify damaged racks for repair or replacement
		4.3	Secure components presenting appropriate faces according to procedures
5	**Unload and remove jigs after finishing**	5.1	Unload and stack components without causing damage to the finish following SOPs
		5.2	Remove and store jigs following SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Non-electrolytic processes include one (1) or more of the following:

- degreasing
- de-scaling
- surface blasting
- flame cleaning
- wet blasting
- grinding
- polishing
- wet coating
- powder coating
- electroplating
- anodising
- electroless plating
- electrophoretic coating
- hot dip metallising

Damaged racks include one (1) or more of the following:

- damage to plastic coating or contact points
- ensuring good electrical contact
- positioning to facilitate optimum thickness on significant surfaces
- avoidance of gas entrapment
- position of contact marks

Assessment Requirements for MEM08001 Perform wire, jig and barrel load/unload work

Modification History

Release 1. Supersedes and is equivalent to MEM08001B Perform wire, jig and barrel load/unload work

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- loading into surface finishing machinery safely and with correct material load mass
- securing and positioning components to minimise damage and securing machine access openings
- unloading and stacking components to minimise damage
- selecting the correct type and size of wire or rack
- identifying damaged racks for repair or replacement
- undertaking jig work for non-electrolytic processes in conformance to specifications
- undertaking wire jig and rack work for electrolytic processes in conformance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for loading machinery for mass finishing processes
- distribution of the components in the machinery and reasons for distributing the components in a particular manner
- procedures for securing machine access openings and consequences of not securing machine access openings
- procedures for jigging work for non-electrolytic processes
- precautions to be taken when jigging work for non-electrolytic finishing processes
- appropriate types and sizes of wire or racks used in conjunction with surface finishing using electrolytic processes
- different faces to be surface finished/coated
- procedures for securing the components to be surface finished using electrolytic processes
- procedures for unloading and stacking surface finished components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- damage that can be caused by inappropriate handling and storing of surface finished components.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing wire, jig and barrel loading and unloading work at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08002 Pre-treat work for subsequent surface coating

Modification History

Release 1. Supersedes and is equivalent to MEM08002C Pre-treat work for subsequent surface coating

Application

This unit of competency defines the skills and knowledge required to carry out pre-treatment of common ferrous and non-ferrous work for finishing by a wide variety of processes and involves adjustments to apparatus/ equipment/ controls.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

This unit should not be selected if unit MEM08003 Perform electroplating operations has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Common metals include one (1) or more of the following:

- steel
- copper
- brass
- zinc
- cast iron
- stainless steel

Processes include (1) one or more of the following:

- wet coating
- powder coating
- electroplating
- anodising
- electroless plating
- electrophoretic coating
- hot dip metallising

Surface soils and conditions include one (1) or more of the following:

- oils
- greases
- drawing compounds
- cutting lubricants
- buffing lubricants
- rust
- scale

Pre-treatment processes include one (1) or more of the following:

- solvent degreasing
- alkaline cleaning
- pickling
- acid dipping

Process parameters include one (1) or more of the following:

- temperature
- time
- current/voltage
- solution compositions

Assessment Requirements for MEM08002 Pre-treat work for subsequent surface coating

Modification History

Release 1. Supersedes and is equivalent to MEM08002C Pre-treat work for subsequent surface coating

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- recognising common surface soils and conditions from given samples
- carrying out pre-treatment processes
- monitoring and adjusting the pre-treatment process parameters within specified limits.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of common metals, alloys and non-metals and procedures and techniques for identifying them
- common surface soils and conditions and the procedures for identifying the type(s) of soil on surfaces to be finished
- simple tests that can be used to assist in identifying surface soils and conditions
- pre-treatment processes and procedures applicable to a range of materials, surface soils and conditions
- parameters and procedures for monitoring pre-treatment processes.

Assessment Conditions

- Assessors must:
  - have vocational competency in pre-treating work for subsequent surface coating at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08003 Perform electroplating operations

Modification History

Release 1. Supersedes and is equivalent to MEM08003C Perform electroplating operations

Application

This unit of competency defines the skills and knowledge required to perform a range of metal plating processes in the electroplating, electronics, jewellery manufacture and metal fabrication industries.

It includes the general operation, monitoring and adjustment of manual, semi and automatic electroplating processes and applies to volume production and 'jobbing' involving rack and barrel type processes.

Where simple operating and monitoring of the electroplating process is required unit MEM07024 Operate and monitor machine and process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

This unit should not be selected if unit MEM07025 Perform advanced machine and process operation has already been selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MEM07001	Perform operational maintenance of machines/equipment
MEM08001	Perform wire, jig and barrel load/unload work
MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
		1.5	Identify untreated materials and the required electroplating treatment
2	**Prepare for electroplating process**	2.1	Check materials and racking arrangement for non-conformance to specifications/job requirements
		2.2	Check all plant and equipment relevant to process for compliance with safety and operational requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	2.3	Check instrumentation and gauges for operation
	2.4	Check condition of solution
3 **Perform electroplating operations**	3.1	Carry out operations in the correct sequence according to work instructions and SOPs
	3.2	Ensure compliance with process operating parameters
	3.3	Make adjustments to rectify any process deviation
	3.4	Report uncontrollable variances to appropriate persons
	3.5	Carry out a visual inspection of finished products for compliance to specification

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Electroplating requirements include one (1) or more of the following:	• coating thickness • appearance • ductility • hardness • corrosions resistance • wear
Untreated materials	• steel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

include one (1) or more of the following:	• copper • brass • cast iron • stainless steel
Electroplating treatment includes one (1) or more of the following:	• pre-treatment • electroplating operations • post treatment
Check includes (1) one or more of the following:	• componentry • electrodes • circuitry equipment
Instruments and gauges include one (1) or more of the following:	• volt meters • ammeters • temperature recorders/indicators • AMP per hour meters
Electroplating operations include one (1) or more of the following:	• engineering coatings • protective finishes • decorative plating
Adjustment includes one (1) or more of the following:	• time • temperature • current density • voltage
Visual inspection includes one (1) or more of the following:	• surface texture • brightness • free from roughness • pitting • cracking • machining marks

Assessment Requirements for MEM08003 Perform electroplating operations

Modification History

Release 1. Supersedes and is equivalent to MEM08003C Perform electroplating operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying all materials and the process to be used to electroplate products
- preparing all equipment, instrumentation/gauges and materials for the electroplating process
- starting up, operating, monitoring and regulating the electroplating equipment and process
- rectifying process deviations within the operator's scope of control
- inspecting electroplated products to ensure they meet specification.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of a variety of base materials that can be plated
- electroplating process, machine components, treatment solutions and process parameters and operational requirements of all plant and equipment
- electroplating solutions and handling procedures
- electroplating treatment stages and information relevant to plating products, treatment baths and settings
- electroplating pre-treatment, treatments and post-treatments in relation to task requirements
- electroplating equipment checks
- purpose and typical settings of different instruments/gauges
- sequences and requirements involved in moving materials and reasons for rejecting incorrectly loaded work
- the range of adjustments permissible for electroplating operating parameters, including voltage, current and temperature
- common electroplated product faults and imperfections/deviations and adjustments that can be made to suit specific process deviations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- variances in electroplated products that are outside the control of the operator
- effects of rust, corrosion and other contaminants on electroplated products.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing electroplating operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08004 Finish work using wet, dry and vapour deposition methods

Modification History

Release 1. Supersedes and is equivalent to MEM08004B Finish work using wet, dry and vapour deposition methods

Application

This unit of competency defines the skills and knowledge required to finish work using a range of wet and dry organic coatings by hand or utilising a wide range of machines or semi or fully automatic plant.

Where straightforward monitoring of semi or automatic machine or process is undertaken unit MEM07024 Operate and monitor machine and process should be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Assess and prepare components for required coating process**	2.1	Identify coating specifications from operation sheets/work procedures
		2.2	Check suitability of pre-treated components for finishing process according to enterprise procedures
		2.3	Prepare components for finishing application, as required
		2.4	Position/locate components for finishing according to enterprise procedures
3	**Perform simple mixing and estimating operations**	3.1	Calculate mixing ratios and mix and thin a range of wet coatings to SOPs, as required
		3.2	Estimate required coating quantities using simple surface area calculations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Perform coating operation**	4.1 Set up equipment to specification
	4.2 Monitor coating and applied curing technique
	4.3 Check coating application, thickness and colour and maintain for compliance with specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Coating includes one (1) or more of the following:	• electrostatic powder coating • electrophoretic coating • industrial spray coating and lacquering • electroless (auto catalytic) nickel or copper plating • phosphating • chromating • galvanising • hot tinning • sputter deposition • vacuum evaporation • ion plating • paints • stains • other liquid finishes
Prepared includes one (1) or more of the	• visual inspection for contamination • masking out

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

following:	• racking • identification of correct materials to be used • ensuring cleanliness of work area and equipment • operational testing of equipment
Coating operation includes one (1) or more of the following:	• spray application • dip coating

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM08004B Finish work using wet, dry and vapour deposition methods

Assessment Requirements for MEM08004 Finish work using wet, dry and vapour deposition methods

Modification History

Release 1. Supersedes and is equivalent to MEM08004B Finish work using wet, dry and vapour deposition methods

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying components for coating, checking their condition and suitability for coating to accurately determine the process and materials required
- preparing and locating components for coating
- calculating surface area of components to be coated to determine the required coating quantities
- setting up and operating coating equipment, coating products and curing the coating
- checking that the thickness and colour meets specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- coating work and the correct process to be used for given components
- coating specifications
- appropriate type of racking for the coating process and reasons for selecting the chosen rack type
- procedures for racking components to be coated
- source of data on mixing ratios for wet coatings to determine mixing ratios for given tasks
- function of thinners as applied to the application of wet coatings
- procedures to be followed when mixing wet coatings
- calculation techniques to determine the surface area to be coated and the coverage rate of the coating material to be applied
- procedures for estimating quantities of coating materials
- types of equipment used for a variety of coating processes and reasons for selecting the chosen equipment for given coating tasks
- operating procedures applicable to the selected coating equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- coating and curing techniques and reasons for selecting the chosen coating and curing techniques
- monitoring coating procedures to be followed
- examples of coating defects and their causes
- procedures for rectifying and/or reporting coating defects
- coating thickness and colour to be achieved and the means of checking this including the frequency of checks to be undertaken.

Assessment Conditions

- Assessors must:
  - have vocational competency in finishing work using wet, dry and vapour deposition methods at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08005 Prepare and produce specialised coatings

Modification History

Release 1. Supersedes and is equivalent to MEM08005B Prepare and produce specialised coatings

Application

This unit of competency defines the skills and knowledge required to undertake masking and jig work, determine operational parameters, and pre-treat and treat work for an application of specialised production of industrial films on a variety of work pieces, often on a one-off basis.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Undertake mask and jig work**	2.1	Manufacture necessary jigs and shields, as required
		2.2	Secure jigs and ensure masking is adherent and stable
		2.3	Incorporate necessary auxiliary anodes and shields to specifications
3	**Pre-treat and treat work**	3.1	Use plating information and/or specifications to calculate operating times, currents and/or voltages
		3.2	Treat work in accordance with specifications using SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Coatings include one (1) or more of the following:	• heavy (hard) chromium or nickel • heavy electroless nickel • 'hard' anodising • selective (brush) plating
Auxiliary electrodes and shields include one (1) or more of the following:	• soluble auxiliary anodes • insoluble auxiliary anodes • bi polar electrodes • shields • robbers

Assessment Requirements for MEM08005 Prepare and produce specialised coatings

Modification History

Release 1. Supersedes and is equivalent to MEM08005B Prepare and produce specialised coatings

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- using and/or making jigs and shields and masking up for a variety of work pieces prior to application of specialised coatings
- setting up auxiliary anodes and shields as necessary for the coating application
- calculating coating parameters and pre-treating and applying coatings to meet specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for pre-electroplating and post-electroplating treatment of surfaces
- processes and techniques for masking work being electroplated and the range of materials used for masking purposes
- procedures for securing the masking
- procedures for mounting/setting up auxiliary electrodes and shields and reasons for using them
- electrode position of 'difficult' metals such as iron and certain alloys
- specifications and procedures of jigs and shields to be manufactured
- procedures and formulae for calculating operating times, currents and voltages
- specifications of surface finishes
- procedures and specifications for pre-treating specialised coating work and for treating the work after electroplating.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in preparing and producing specialised coatings at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08006 Produce clear and/or coloured and/or sealed anodised films on aluminium

Modification History

Release 1. Supersedes and is equivalent to MEM08006B Produce clear and/or coloured and/or sealed anodised films on aluminium

Application

This unit of competency defines the skills and knowledge required to produce clear or coloured sealed anodised films on aluminium and its alloys in applicable applications. Colouring is produced by dyeing or by 'in-bath' processes.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM08002	Pre-treat work for subsequent surface coating
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare for anodising**	2.1	Apply taping and waxing masking techniques, where required
		2.2	Minimise contact marks and shielding
3	**Assess preparation of work for correct jigging/loading**	3.1	Connect work correctly for the required current flow with minimum contact marks and shielding
		3.2	Reject all incorrectly loaded work
4	**Anodise work**	4.1	Carry out anodising treatment steps following SOPs
		4.2	Carry out sealing or dyeing and sealing steps following SOPs
		4.3	Maintain process parameters within specified limits

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Applications include one (1) or more of the following:	• electrical • decorative • mechanical • architectural purposes
Anodising steps include (1) one or more of the following:	• pre treatment • anodising • dyeing • sealing
Masking techniques include one (1) or more of the following:	• taping • waxing
Process parameters include one (1) or more of the following:	• temperature • current density • time

Assessment Requirements for MEM08006 Produce clear and/or coloured and/or sealed anodised films on aluminium

Modification History

Release 1. Supersedes and is equivalent to MEM08006B Produce clear and/or coloured and/or sealed anodised films on aluminium

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing aluminium and aluminium alloy work pieces for anodising, including masking up
- loading work and carrying out pre-treatment steps, including connecting the work to the required electrical current
- producing clear and coloured and sealed anodised films on aluminium and its alloys by maintaining process parameters
- sealing and dying anodised work to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- process for anodising aluminium
- materials, techniques and procedures for masking materials during anodising
- causes of contact marks and shielding during the anodising process and procedures for minimising contact marks and shielding
- procedures for connecting the work to the electrical current and the electrical current required for the anodising process
- methods for correctly loading work and recognising incorrectly loaded work
- reasons for rejecting incorrectly loaded work
- steps to be carried out in the seal/dye and seal process
- procedures and reasons for monitoring and maintaining the process parameters within the specified limits.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in producing clear and/or coloured and/or sealed anodised films on aluminium at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08007 Control surface finish production and finished product quality

Modification History

Release 1. Supersedes and is equivalent to MEM08007B Control surface finish production and finished product quality

Application

This unit of competency defines the skills and knowledge required to apply the principles of quality assurance, research and quality information to the production process, and perform quality tests to industry standards where analyses are confined to the use of basic instruments.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM08007 Control surface finish production and finished product quality

Modification History

Release 1. Supersedes and is equivalent to MEM08007B Control surface finish production and finished product quality

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- applying quality standards to production processes in order to meet enterprise/industry specifications
- safely handling surface finished products when undertaking quality testing and control
- undertaking testing of surface finishes in the production environment to industry standards
- liaising effectively with internal/external control laboratory
- analysing results and other data to implement effective process changes/corrections
- using appropriate tests, test equipment and techniques to test the surface coating for conformance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- enterprise and industry quality assurance standards that apply to surface finish production and product quality
- role of the control laboratory and procedures for liaising with internal/external control laboratories
- surface finish specifications
- characteristics of deviations of test/production data and their causes
- procedures, calculations and formulae for determining surface finish process parameters
- effect of varying process parameters on the specification of the surface finish
- surface coating tests and the procedures, equipment and techniques necessary to carry out those tests
- manual handling techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in controlling surface finish production and finished product quality at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08008 Operate and control surface finishing waste treatment process

Modification History

Release 1. Supersedes and is equivalent to MEM08008B Operate and control surface finishing waste treatment process

Application

This unit of competency defines the skills and knowledge required to treat and purify metal finishing effluent waters which typically contain cyanides, hexavalent chromium, heavy metal cations, certain anions and greases using appropriate pre-determined waste treatment processes.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 3

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Load waste product**	2.1	Obtain waste from production process via established procedures
		2.2	Load waste in accordance with standard operating procedures for waste/effluent
3	**Monitor effluent water treatment process**	3.1	Monitor all process parameters and record to identify waste/effluent
		3.2	Check recording devices for correct/continuous operation
4	**Adjust process**	4.1	Apply knowledge of waste treatment processes in determining appropriate adjustments
		4.2	Check process parameters to ensure they remain within specified limits
		4.3	Make all adjustments to accord with regulatory requirements regarding waste
		4.4	Undertake appropriate corrective action in the event of any mechanical failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Waste/effluent includes one (1) or more of the following:	• rinse waters • spent solutions • spills • leaks
Recording devices include one (1) or more of the following:	• pH meter • oxidising/reduction/potential probes (redox) • flow rate
Waste treatment processes include one (1) or more of the following:	• chemical treatments • neutralisation • metal precipitation • solid separation (gravity, centrifuging) • oxidation • reduction • grease entrapment • ion exchange • reverse osmosis • gas scrubbing
Process parameters include one (1) or more of the following:	• solution flow • pH • redox (oxidising /reduction/potential) which typically contain cyanides, hexavalent chromium, heavy metal cations, certain anions and greases

Assessment Requirements for MEM08008 Operate and control surface finishing waste treatment process

Modification History

Release 1. Supersedes and is equivalent to MEM08008B Operate and control surface finishing waste treatment process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- loading and monitoring surface finishing waste products safely
- applying correct procedures to control the treatment and purification of waste products
- maintaining waste product treatment processes and outcomes to meet regulatory and enterprise/industry standards
- taking corrective action in response to mechanical failure.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- hazards and control measures associated with handling waste products, including possible effects of surface finishing waste on the environment
- safety precautions to be taken when handling/loading the waste/effluent
- process parameters to be monitored and the procedures for monitoring these and identifying waste/effluent
- procedures for checking process parameter recording devices and recording process parameters
- adjustments that can be made to the waste treatment process and their effect on the condition of the waste
- procedures for adjusting process parameters and the specified limits for each parameter
- legislative and regulatory requirements relating to waste management
- corrective actions that can be taken in treating waste products and the reasons for taking proposed corrective actions.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in operating and controlling surface finishing waste treatment processes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08009 Make up solutions

Modification History

Release 1. Supersedes and is equivalent to MEM08009C Make up solutions

Application

This unit of competency defines the skills and knowledge required to make up solutions and maintain process specific equipment, including probes and electrodes.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

This unit should not be selected if any the following units have been selected:

- MEM08018 Electroplate engineering coatings
- MEM08019 Electroplate protective finishes; and/or
- MEM08020 Electroplate decorative finishes

Maintenance of solution ratio and purity is covered by other units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare solution**	2.1	Identify appropriate solutions for application requirements or specifications
		2.2	Calculate volumes, density and solution concentration for effective operation
		2.3	Make up suitable volume of solution from supplier's instructions and/or manual in accordance with SOPs
		2.4	Refer spent solutions to waste treatment processing in accordance with procedures
3	**Maintain process specific equipment**	3.1	Carry out inspection of probes and electrodes
		3.2	Rectify faults or defects, as required
		3.3	Recalibrate meter probes, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM08009 Make up solutions

Modification History

Release 1. Supersedes and is equivalent to MEM08009C Make up solutions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, standards, codes, legislation, and company and customer requirements for making up solutions
- calculating solution parameters and quantities to meet specifications
- preparing appropriate solutions for the required operation
- ensuring waste solution products are provided for treatment to meet regulatory and enterprise/industry standards
- maintaining process-specific equipment, including probes and electrodes.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications, standards, codes, legislation, and company and customer requirements for making up solutions
- reasons for selecting an appropriate sequence of operations for making up solutions
- solution concentrations
- procedures for making up solution
- procedures for inspecting probes and electrodes
- procedures and techniques for recalibrating meter probes and equipment.

Assessment Conditions

- Assessors must:
  - have vocational competency in making up solutions at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08010 Manually finish/polish materials

Modification History

Release 1. Supersedes and is equivalent to MEM08010B Manually finish/polish materials

Application

This unit of competency defines the skills and knowledge required to finish and polish materials using appropriate media and equipment.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

This unit is not intended to apply to touch-up finishing related to maintenance or assembly activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify job materials and surface condition**	2.1	Identify common metals, alloys and non-metals for finishing
		2.2	Identify common surface imperfections
3	**Select appropriate finishing/polishing procedure**	3.1	Determine surface finish specifications and select appropriate finishing or polishing method/technique for the work requirements
		3.2	Select appropriate finishing or polishing equipment for the work material and work requirements
		3.3	Select appropriate media for work requirements
4	**Install and set up grinding and polishing devices according to standard operating procedures**	4.1	Fit endless belt linishers
		4.2	Fit and dress grinding wheels and mops
		4.3	Install and set up polishing mops

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Grind, finish, brush and/or polish job**	5.1 Identify hazards and implement risk control measures and procedures
	5.2 Finish job surface to specification according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Applications include one (1) or more of the following:	• pre-decorative and post decorative plating • jewellery production • component manufacture and machining • marine vessel construction
Material includes one (1) or more of the following:	• cast iron • steel • zinc and its alloys • copper • aluminium and its alloys • bronzes • sterling silver • gold • plastics
Common surface imperfections include one (1) or more of the	• pitted surface • machining lines • scale

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

following:	• rust
Finish includes one (1) or more of the following:	• brightness • texture • roughness comparison
Finishing/polishing equipment includes one (1) or more of the following:	• endless belt grinders • table linishers • pedestal grinders and polishers • felt wheels • fabric mops and brushes with underhand and overhand techniques • flexible drive appliances • buffing compounds • cutting compounds • abrasive belts
Finishing/polishing media includes the following:	• solid and liquid compositions containing alumina, silicon carbide, diamond dust, tripoli, calcium oxide and iron oxides
Hazards include one (1) or more of the following:	• airborne dust inhalation • unsecured components

Assessment Requirements for MEM08010 Manually finish/polish materials

Modification History

Release 1. Supersedes and is equivalent to MEM08010B Manually finish/polish materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate finishing process, media and equipment to manually finish metal and plastic materials
- installing and setting up grinding and polishing devices and equipment
- assessing the surface condition of materials to determine the necessary finishing treatment
- safely applying techniques, including grinding, brushing and/or polishing to meet specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- surface finishing specifications
- procedures, tools and techniques for fitting and adjusting endless belts on linishing machines
- procedures, tools and techniques required to fit and dress grinding wheels and mops
- procedures tools and techniques for installing and setting up polishing mops
- characteristics of common metals, alloys and plastics relevant to finishing work
- finishing and polishing methods/techniques and the appropriate polishing media to be used in finishing/polishing for different types of materials
- effect of different types and grades of polishing media on the surface finish
- reasons for selecting a specific method/technique
- common surface imperfections/defects and how they can be removed/repaired by manual finishing/polishing procedures
- procedures for handling components with surface imperfections/defects that cannot be removed/repaired
- methods and techniques to check for conformance to finishing specifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in manually finishing and polishing materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM08011 Prepare surfaces using solvents and/or mechanical means

Modification History

Release 1. Supersedes and is equivalent to MEM08011B Prepare surfaces using solvents and/or mechanical means

Application

This unit of competency defines the skills and knowledge required to select the appropriate preparation process, select and set up the equipment, undertake blasting or application of solvents on metal and non-metal materials, and check the finished surface.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify surface preparation requirements from specifications, job sheets or work instructions
2	**Prepare to undertake work**	2.1	Select appropriate solvent and solvent application to meet job specification
		2.2	Select appropriate mechanical equipment to meet job specification
		2.3	Prepare worksite for surface cleaning activities
3	**Set up equipment**	3.1	Set up and prepare appropriate equipment and any required consumables in accordance with manufactures' specifications and SOPs
4	**Prepare surfaces using solvents as required**	4.1	Establish safe working environment for solvent use according to regulatory requirements and SOPs
		4.2	Apply solvent in accordance with procedures
		4.3	Neutralise treated surface and make it safe to handle
5	**Prepare surfaces using mechanical**	5.1	Establish safe working environment for mechanical surface preparation according to regulatory requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	means as required		and procedures
		5.2	Prepare surfaces using mechanical means
		5.3	Clean mechanical equipment and check for damage and operational faults, in accordance with procedures
		5.4	Record any equipment faults and report in accordance with SOPs
6	**Inspect prepared surface**	6.1	Check surface preparation for cleanliness and conformance to specifications
		6.2	Rectify faults or defects where required and record/report in accordance with procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Surface preparation includes the following:	• new surfaces and restoration work
Solvents include one (1) or more of the following:	• acids • chlorinated solvents • hydrocarbons
Solvent application methods include one (1) or	• spraying • wiping

Assessment Requirements for MEM08011 Prepare surfaces using solvents and/or mechanical means

Modification History

Release 1. Supersedes and is equivalent to MEM08011B Prepare surfaces using solvents and/or mechanical means

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining the type of surface preparation required for a range of surfaces
- selecting and setting up surface preparation equipment and consumables for the job
- undertaking mechanical preparation or application of solvents, as required
- inspecting the finished surface to ensure it meets specifications
- rectifying faults or defects, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- common surface contaminates, conditions
- features of and reasons for selecting solvents
- characteristics and uses of mechanical equipment required for surface preparation and procedures for setting up equipment
- specifications applying to surfaces to be prepared
- methods for neutralising solvents
- tools, equipment, abrasives and other materials used in surface preparation
- procedures for maintaining/storing mechanical equipment and for recording/reporting faulty equipment
- procedures for checking prepared surfaces and rectification techniques where necessary to meet specifications.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in preparing surfaces using solvents and/or mechanical means at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM08012 Prepare surfaces by abrasive blasting (basic)

Modification History

Release 1. Supersedes and is equivalent to MEM08012B Prepare surfaces by abrasive blasting (basic)

Application

This unit of competency defines the skills and knowledge required to follow pre-determined procedures to perform, at a basic level of skill, surface preparation/cleaning on both ferrous and non-ferrous masonry and cementatious materials/components.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM08012 Prepare surfaces by abrasive blasting (basic)

Modification History

Release 1. Supersedes and is equivalent to MEM08012B Prepare surfaces by abrasive blasting (basic)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, supplier information, and Australian and international standards for abrasive blasting
- preparing surfaces by abrasive blasting
- setting up, using and maintaining surface blasting equipment safely and effectively, reporting any faults
- using the correct media for the blasting operation and preparing surfaces
- demonstrating emergency shutdown procedures
- disposing of abrasive media in accordance with regulatory and legislative requirements
- inspecting to ensure the prepared surface meets specifications and rectifying any non-conformance, as necessary.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reason for selecting the chosen sequence of operations
- blasting equipment and media required for various surface preparation methods
- importance of using an appropriate rust inhibitor
- process for undertaking pre-operational checks and procedures or using abrasive blasting equipment
- reasons for an emergency shutdown
- emergency shutdown procedures
- procedures for abrasive media disposal to meet environmental regulations
- procedures for maintaining and storing blasting equipment and recording/reporting procedures for any faulty equipment
- techniques for checking prepared surfaces and rectification techniques, as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in preparing surfaces by abrasive blasting (basic) at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08013 Prepare surfaces by abrasive blasting (advanced)

Modification History

Release 1. Supersedes and is equivalent to MEM08013B Prepare surfaces by abrasive blasting (advanced)

Application

This unit of competency defines the skills and knowledge required to perform, at an advanced level of skill, surface preparation using abrasive blasting.

The operation and maintenance of compressed air systems and associated items, including emergency shutdown procedures is included.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, as appropriate should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Blasting process includes one (1) or more of the following:	• wet • dry • vacuum automatic rotary • centrifugal • water blasting (including HP and UHP)
Blasting media includes one (1) or more of the following:	• garnet • ilmenite • slags • steel grit • steel shot • water • glass bead • soda
Equipment includes one (1) or more of the following:	• blast nozzles • compressors • blast and helmet ventilation • air hoses • blast pots • nozzles • safety equipment

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM08012B Prepare surfaces by abrasive blasting (advanced)

Assessment Requirements for MEM08013 Prepare surfaces by abrasive blasting (advanced)

Modification History

Release 1. Supersedes and is equivalent to MEM08013B Prepare surfaces by abrasive blasting (advanced)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, supplier information and Australian and international standards for advanced abrasive blasting
- determining the appropriate means of preparing surfaces by abrasive blasting
- selecting, setting up, using and maintaining surface blasting equipment safely and effectively, reporting any faults
- demonstrating emergency shutdown procedures
- selecting and using the correct media for the blasting operation and preparing surfaces
- disposing of abrasive media in accordance with regulatory and legislative requirements
- inspecting to ensure the prepared surface meets specifications and rectifying any non-conformance, as necessary.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- calculations and numerical operations for surface preparation using advanced blasting operations
- blasting media features and uses
- equipment for the selected method
- inspection procedures for surface preparation
- procedures for using abrasive blasting equipment
- reasons for an emergency shutdown
- emergency shutdown procedures
- specifications, supplier information and Australian and international standards for advanced abrasive blasting
- procedures for abrasive media disposal to meet environmental requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in preparing surfaces by abrasive blasting (advanced) at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08014 Apply protective coatings (basic)

Modification History

Release 1. Supersedes and is equivalent to MEM08014B Apply protective coatings (basic)

Application

This unit of competency defines the skills and knowledge required to follow pre-determined procedures to spray pre-treatments and protective coatings at a basic level where an understanding of specific health and safety matters is required. It covers single and two-pack coatings not containing isocyanates.

Where isocyanates are present unit MEM08015 Apply protective coatings (advanced) should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of mobile load shifting equipment is required unit MEM11004 Undertake dogging and unit MEM11010 Operate mobile load shifting equipment, should also be selected as appropriate.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM11011 Undertake manual handling

MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
		1.4	Identify and interpret supplier information, product details, Australian and international standards, regulatory and legislative requirements relevant to the work to be undertaken
2	**Prepare to undertake work**	2.1	Obtain required protective coating materials according to job requirements
		2.2	Gather required protective coating application equipment according to job requirements
		2.3	Prepare worksite for application of protective coating
3	**Select and maintain personal protective equipment (PPE)**	3.1	Select and use appropriate personal protective equipment (PPE) for coating application according to job requirements and SOPs
		3.2	Identify and use ancillary support attachments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Maintain PPE in accordance with manufacturers' specification and SOPs
4	**Prepare work piece for application of protective coating**	4.1	Inspect surface condition for readiness for application of protective coating according to specification
		4.2	Identify unsuitable work pieces/surfaces and fabrication defects and undertake appropriate remedial action or report in accordance with SOPs
		4.3	Mask components where protective coating application is not specified
		4.4	Identify conditions for overspray
	Prepare equipment for application of surface coating materials	5.1	Undertake routine maintenance on plant and equipment in accordance with procedures
		5.2	Record status/report by proforma or orally in accordance with procedures
		5.3	Assemble conventional coating application equipment in accordance with equipment requirements
6	**Apply single pack coatings**	6.1	Identify coating product type, solvent, uses, mixing procedure, clean-up and safety requirements, as appropriate
		6.2	Demonstrate correct method of wet film thickness in accordance with specified dry film
		6.3	Thin coating material to suit the application method and achieve required film thickness
		6.4	Apply coating using specified application method
		6.5	Use coating schedules for metal and non-metal materials
		6.6	Monitor coating application and curing technique according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

7	**Clean and store equipment**	7.1	Clean and disassemble conventional coating application equipment and inspect for damage
		7.2	Record and report faulty equipment to appropriate personnel in accordance with SOPs
		7.3	Store coating application equipment in accordance with SOPs
8	**Inspect finish surface**	8.1	Assess surface finish for profile size differences and uses
		8.2	Determine coating thickness using appropriate instruments and compare results with job specifications
		8.3	Inspect total surface for conformance to specification in accordance with SOPs
		8.4	Record inspection results in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Equipment includes one (1) or more of the following:	• brush • roller • conventional spray equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Specific health and safety matters include one (1) or more of the following:	• interpretation of safety data sheet (SDS) warnings • materials sensitivity • hazardous goods • breathable air • introduction of compressed air into the body
PPE includes one (1) or more of the following:	• hand protection • full body protection • respirators • air fed hoods and foot protection • noise and heat protection

Assessment Requirements for MEM08014 Apply protective coatings (basic)

Modification History

Release 1. Supersedes and is equivalent to MEM08014B Apply protective coatings (basic)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, supplier information, product details, Australian and international standards, regulatory, legislative requirements and other applicable reference documents in applying protective coatings
- determining the procedures, equipment and processes for applying protective coatings to work
- setting up, maintaining and using personal protective equipment (PPE) suitable for the coating work to be undertaken
- determining the condition and treatment required for the surface/s to be protective coated and masking up, as required
- setting up, operating, cleaning and maintaining coating equipment safely and effectively
- selecting, handling and using protective coating materials safely and in required quantities
- checking surface coating thickness and coverage to ensure it meets specification and rectifying any faults.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE) and use of appropriate supports
- relevant information on purposes, use and application of protective coating equipment and materials
- safety issues, adequate precautions and awareness of other site factors that could be affected by the work
- what constitutes deviation from a specified surface finish/condition and standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- how to recognise areas subject to overspray and requiring protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operation and maintenance of protective coating application plant and equipment using SOPs
- requirements for completion and processing of maintenance reports
- coating work piece assembly specifications and procedures
- procedures for identifying coating types and processing solvents, including mixing and safe handling practices
- procedures for determining the wet film thickness of a coating from the specified dry film thickness using calculations and a specified formulation
- procedures for thinning coating materials for use in applying the specified film thickness coating to a substrate
- procedures to apply protective coatings to comply with an established standard
- procedures for controlling coating application and curing techniques
- procedures for disassembly, cleaning, checking and storing/protecting coating equipment
- assessing the profile of the surface finish using procedures and other relevant standards
- features and use of dry film thickness testing instruments
- surface inspection procedures, including the extent and detail of inspection as required
- requirements for completion and processing of inspection reports
- manufacturers' specifications and procedures for inspecting and maintaining personal protective equipment in the workplace
- recording and reporting procedures for defective parts.

Assessment Conditions

- Assessors must:
  - have vocational competency in applying protective coatings (basic) at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08015 Apply protective coatings (advanced)

Modification History

Release 1. Supersedes and is equivalent to MEM08015B Apply protective coatings (advanced)

Application

This unit of competency defines the skills and knowledge required to spray pre-treatments and protective coatings when an advanced level of skill is required. It includes inspection and interpretation of the coating results using all current industry knowledge and test equipment.

Where application of basic single and two pack coatings not containing isocyanates is required unit MEM08014 Apply protective coatings (basic) should be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM08015 Apply protective coatings (advanced)

Modification History

Release 1. Supersedes and is equivalent to MEM08015B Apply protective coatings (advanced)

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, supplier information, product details, Australian and international standards, regulatory, legislative requirements and other applicable reference documents in applying protective coatings
- determining the correct coating method and application techniques for job
- preparing the surface to be coated, masking off, as required
- setting up, maintaining and using personal protective equipment (PPE) suitable for the coating work to be undertaken
- selecting, setting up and using coating application equipment and material
- adjusting coating material to provide the required finished surface coat, monitoring during application and testing that it meets specifications
- inspecting coated surface for required finish and recording test results
- cleaning, maintaining and storing coating equipment in accordance with procedures
- calculating the costs of coating work accurately.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specifications applying to protective coating work and the appropriate coating system and material required to meet job specification
- features of the various types of coating materials, including drying and curing requirements
- selection procedures for coating material and the appropriate coating process and equipment required for surface coating to meet job specification
- application features of the various types of coating materials and methods
- selection procedures for coating process and equipment, including conventional, airless and plural component

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- awareness of other site factors that could be affected by the coating work
- how to recognise deviation from specified surface finish/condition and standard workplace procedures for identifying unsuitable work items
- method of locating areas to be protected from coating process and masked
- areas subject to overspray and requiring protection
- operation of protective coating plant and equipment using SOPs
- procedures for routine maintenance of plant and equipment
- requirements for completion and processing maintenance reports
- protective coating inspection procedure to identify unsuitable work pieces in consideration of job specifications
- procedures for determining wet film thickness of a coating from the specified dry film thickness using calculations and a specified formulation
- procedures for thinning coating materials for use in applying the specified film thickness coating to a substrate
- procedures to apply protective coatings to comply with an established standard
- procedures for controlling coating application and curing techniques
- SOP for disassembly, cleaning and checking of protective coating equipment
- procedures for storage and protection of equipment
- procedures and other relevant standards for assessing the profile of the surface finish
- features and use of dry film thickness testing instruments
- procedures for surface inspection, including the extent and detail of inspection, as required, and requirements for completion and processing of inspection reports
- standard methods and procedures for determining surface area of various shapes of materials
- recording and reporting procedures for defective equipment components
- calculating, recording and reporting costs procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in applying protective coatings (advanced) at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM08016 Control blast coating by-products, materials and emissions

Modification History

Release 1. Supersedes and is equivalent to MEM08016B Control blast coating by-products, materials and emissions

Application

This unit of competency defines the skills and knowledge required to identify, evaluate and control blaster coating by-products, materials and emissions, including using common containment practices and waste removal processes.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM08016 Control blast coating by-products, materials and emissions

Modification History

Release 1. Supersedes and is equivalent to MEM08016B Control blast coating by-products, materials and emissions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- safely and effectively control blaster cleaning by-products, materials and emissions
- monitoring blaster cleaning by-products, materials and emissions using suitable monitoring devices
- directing waste products to appropriate waste treatment area and processing and treating to meet relevant authority waste requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- products, hazardous materials and processes applying to blaster coating
- regulatory and legislative requirements relating to control of blast coating by-products, materials and emissions
- procedures for collecting samples and by-product collection equipment operation methods
- waste control monitoring equipment procedures and waste treatment processes
- requirements and procedures for recording and reporting processing status reports.

Assessment Conditions

- Assessors must:
  - have vocational competency in controlling blast coating by-products, materials and emissions at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM08018 Electroplate engineering coatings

Modification History

Release 1. Supersedes and is equivalent to MEM08018B Electroplate engineering coatings

Application

This unit of competency defines the skills and knowledge required to apply engineering metallic/ceramic coatings to ferrous and non-ferrous metals and some non-metallic materials, e.g. plastics.

It applies to producing engineering coatings designed to promote wear resistance, protect against corrosion, and reclaim worn components. It also applies to manufacturing components (electroforming).

Where pre-treatment operations only are required unit MEM08002 Pre-treat work for subsequent surface coating should be selected.

Where straightforward operation of electroplating process is required unit MEM08003 Perform electroplating operations should be selected.

Where surface preparation operations are required unit MEM08011 Prepare surfaces using solvents and/or mechanical means and unit MEM08012 Prepare surfaces by abrasive blasting (basic), should also be selected as appropriate.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where basic inspection of completed or partly completed products produced by others is required unit MEM15004 Perform inspection should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where construction of anodes, shields/robbers is required appropriate fabrication units should also be selected.

Where dogging/lifting is required appropriate materials handling units to suit regulatory requirements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM07001	Perform operational maintenance of machines/equipment
MEM08001	Perform wire, jig and barrel load/unload work
MEM08003	Perform electroplating operations
MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Select treatments and processes/ equipment for producing engineering finishes**	2.1	Select appropriate treatment processes according to base metal type, the surface condition and relevant job specifications
		2.2	Select operating/process parameters to achieve required coating
		2.3	Select appropriate equipment, as required
3	**Prepare work for engineering finishes**	3.1	Mask (stop off) products for selective plating
		3.2	Construct conforming anodes and fit, where applicable
		3.3	Construct and fit shields and robbers, where applicable
		3.4	Carry out pre-treatment processes, where necessary
4	**Monitor and control operating conditions and processes for engineering coatings**	4.1	Set operating/process parameters to produce required surface conditions/specifications
		4.2	Monitor and confirm surface conditions of finished components and identify abnormalities
		4.3	Take corrective actions to rectify non-conforming conditions
5	**Maintain solutions for engineering**	5.1	Check solution compositions and confirm to specification/operating range
		5.2	Determine adjustment requirements/additions

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
finishes	5.3 Make additions to adjust solution composition to correct operating range as necessary

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Treatment processes include one (1) or more of the following:	• electroplating • electroforming • electroless plating
Operating/process parameters include one (1) or more of the following:	• treatment times and currents • bath pH temperatures and densities • anode conditions • addition agent content • cleanliness of contacts • make-up • maintenance of solution levels and purity
Coating includes one (1) or more of the following:	• hard chroming • heavy nickel • electroless nickel • nickel composites • heavy deposits of nickel, copper and bronze up to 10 mm
Equipment includes one	• wire racks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

(1) or more of the following:	• handling equipment • barrels • jigs • shields • robbers
Products include one (1) or more of the following:	Base materials, including: • cast iron • brass • steels with machine welded sections
Masking materials include one (1) or more of the following:	• wax • lacquers • tapes • foils
Anodes include one (1) or more of the following:	• soluble • insoluble auxiliary anodes
Solution compositions include one (1) or more of the following:	• cleaning • pickling • electroplating • chromate • acid dips
Checks include one (1) or more of the following:	• density • titration • pH
Adjustment includes one (1) or more of the following:	• strength of solutions • temperature range

Assessment Requirements for MEM08018 Electroplate engineering coatings

Modification History

Release 1. Supersedes and is equivalent to MEM08018B Electroplate engineering coatings

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining the composition of surfaces to be treated and selecting suitable methods and techniques for electroplated coating treatment
- preparing surfaces to be treated with pre-treatment process using masking and constructing/fitting shields/robbers, where necessary, and fitting anodes
- electroplating surfaces, monitoring the treatment process and adjusting solutions and operating parameters to meet specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- effects of plating process on different materials
- conditions affecting engineering finishes
- base metal types and the surface finish of untreated material
- mechanical/chemical and specialised electroplating pre-treatment processes
- process parameters for achieving different coatings
- characteristics of different surface finishes
- masking materials and masking techniques
- safe operation of equipment to produce engineering finishes
- current distribution principles
- methods of constructing/fabricating, fitting anodes and current capacity of conforming/auxiliary anodes
- role, construction, properties, applications, and positioning of shields and robbers
- finish requirements and permissible tolerances
- causes of electroplating process abnormalities and their related corrective actions
- purpose and application of simple tests including pH, titration and density
- calculations related to additions/adjustments to solution and of product surface area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for safe handling of chemicals.

Assessment Conditions

- Assessors must:
  - have vocational competency in electroplating engineering coatings at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08019 Electroplate protective finishes

Modification History

Release 1. Supersedes and is equivalent to MEM08019B Electroplate protective finishes

Application

This unit of competency defines the skills and knowledge required to apply protective finishes using electroplating to household fittings, hardware, artefacts and accessories made from a range of ferrous and non-ferrous materials.

It includes pre-treatment, use of plating techniques, solutions and compositions for protective finishes, recognition and assessment of impurities and imperfections and associated corrective actions.

Processing may be manual, semi or fully automatic still or barrel plating environments and may include volume production and 'one-off' components.

Where pre-treatment operations only are required unit MEM08002 Pre-treat work for subsequent surface coating should be selected.

Where straightforward operation/monitoring of electroplating processes are required unit MEM08003 Perform electroplating operations should be selected.

Where surface preparation operations are required unit MEM08011 Prepare surfaces using solvents and/or mechanical means and unit MEM08012 Prepare surfaces by abrasive blasting (basic), should also be selected as appropriate.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where basic inspection of completed or partly completed products produced by others is required unit MEM15004 Perform inspection should also be selected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where construction of anodes, shields/robbers is required appropriate fabrication units should also be selected.

Where dogging/lifting is required appropriate materials handling units to suit regulatory requirements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 6

Pre-requisite Unit

MEM07001	Perform operational maintenance of machines/equipment
MEM08001	Perform wire, jig and barrel load/unload work
MEM08003	Perform electroplating operations
MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Surface finishing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Select treatments and processes/ equipment for producing protective finishes**	2.1	Select treatment processes appropriate to the work requirements
		2.2	Select process parameters to achieve required finish
		2.3	Select appropriate equipment to achieve specified finish, as required
3	**Monitor and control protective finish processes and operating conditions**	3.1	Set operating/process parameters necessary to produce required protective finish/specifications
		3.2	Monitor and confirm surface condition of finished components and identify abnormalities
		3.3	Take corrective actions to rectify non-conforming conditions
		3.4	Carry out pre-treatment processes, where applicable
4	**Maintain solutions for protective finishes**	4.1	Check solution compositions and confirm to specification/operating range
		4.2	Identify adjustment requirements/additions
		4.3	Make additions to adjust solution composition to correct operating range
		4.4	Carry out purification procedures, as necessary
		4.5	Maintain anodes to ensure correct operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Maintain equipment for protective finishes**	5.1 Check performance of ancillary equipment and take remedial action, as necessary
	5.2 Maintain electrical contacts, anode condition and process transfer equipment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, accessibility of the item, and local industry and regional contexts) are included.

Treatment processes include one (1) or more of the following:	• zinc • zinc alloys • tin
Process parameters include one (1) or more of the following:	• dwell time • current density • current temperature
Equipment includes one (1) or more of the following:	• wire racks • handling equipment • barrels • jigs • shields • robbers

Assessment Requirements for MEM08019 Electroplate protective finishes

Modification History

Release 1. Supersedes and is equivalent to MEM08019B Electroplate protective finishes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining the correct electroplating treatment, method and process for a range of ferrous and non-ferrous components to have a protective coating applied
- selecting, setting up and using electroplating equipment and masking up components to be plated, as necessary
- carrying out the electroplating process, monitoring solutions and other parameters, adjusting as necessary to meet the specified surface finish
- cleaning and maintaining electroplating equipment, reporting any faults.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- effects of plating process on different materials
- basic principles of chemistry, electro chemistry and metallurgy related to the process, including:
  - importance of maintaining satisfactory electrical contact
  - methods for detecting unsatisfactory contact
  - effects of build-up on cathode contacts
  - properties of different base materials
  - different pre-treatment processes and their application
  - process parameters and their relation to each other
  - differences between chromate conversion coatings
- types of defects, their causes and related corrective actions
- mechanical/chemical pre-treatment processes
- purpose and application of simple tests including ph and concentration
- operating parameters of solutions, including temperature, agitation rate and similar parameters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- acceptable appearances for each stage of the electroplating operation and common abnormalities
- application of different equipment to the type of work processed and correct operation and cleaning requirements, including cleaning filters
- solutions, solution compositions and operating ranges for processes relative to protective finishes, including cleaning/pre-treatment, electroplating and post-treatment
- procedures for testing plate thickness
- safe working procedures for handling chemicals relative to protective finishes and for safely adding to baths
- procedures for measuring out materials, including use of scales and volumetric measurement devices
- level of impurities and permissible limits, effects of impurities and purification procedures for protective finish solutions
- different anode arrangements, including use of baskets and bags, and conforming anodes
- correct operation of anodes and appropriate remedial action
- effect of maintenance schedules on plant performance and performance requirements and basic maintenance checks for rectifier, bus bars, agitation, heating/cooling, extraction and tank linings.

Assessment Conditions

- Assessors must:
  - have vocational competency in electroplating protective finishes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM08020 Electroplate decorative finishes

Modification History

Release 1. Supersedes and is equivalent to MEM08020B Electroplate decorative finishes

Application

This unit of competency defines the skills and knowledge required to apply decorative finishes to household fittings, hardware, artefacts and accessories made from a range of ferrous and non-ferrous materials.

It includes pre-treatment, use of plating techniques, solutions and compositions for decorative finishes, recognition and assessment of impurities and imperfections and associated corrective actions.

Processing may be manual, semi or fully automatic still or barrel plating environments and may include volume production and 'one-off' components.

Where straightforward operation/monitoring of electroplating processes are required unit MEM08003 Perform electroplating operations should be selected.

Where surface preparation operations are required unit MEM08011 Prepare surfaces using solvents and/or mechanical means and unit MEM08012 Prepare surfaces by abrasive blasting (basic), should also be selected as appropriate.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where basic inspection of completed or partly completed products produced by others is required unit MEM15004 Perform inspection should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where construction of anodes, shields/robbers is required appropriate fabrication units should also be selected.

Where dogging/lifting is required appropriate materials handling units to suit regulatory requirements should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM08020 Electroplate decorative finishes

Modification History

Release 1. Supersedes and is equivalent to MEM08020B Electroplate decorative finishes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining the correct decorative finish electroplating treatment, method and process for a range of ferrous and non-ferrous components
- selecting, setting up and using electroplating equipment for decorative finishes and applying surface pre-treatment, as required
- carrying out the electroplating process, monitoring solutions and other parameters, adjusting as necessary to meet the specified surface finish
- cleaning and maintaining electroplating equipment, reporting any faults.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- specific decorative electroplating pre-treatment processes (common base metals/soils and chemical/mechanical)
- effect of decorative treatment on different metals
- functions of strikes/activation treatment
- process parameters for decorative electroplating, including current computations
- effects of process parameters on performance
- post treatment processes
- relevant Australian standards for electroplating work
- application of different equipment to the type of work processed
- acceptable appearances including final specification/quality
- abnormalities in electroplating including types of defects and requirements for post treatment
- factors affecting plate distribution
- purpose and application of simple control tests
- calculations for additions/adjustments to decorative electroplating solutions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effects of adding chemicals too quickly
- purification procedures/treatments
- operation of anodes, arrangements and remedial action
- effects of build-up on cathode contacts, damage to rack coatings
- effect of maintenance schedules on plant performance and performance requirements and basic maintenance checks for rectifier, bus bars, agitation, heating/cooling, extraction and tank linings.

Assessment Conditions

- Assessors must:
  - have vocational competency in electroplating decorative finishes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09002 Interpret technical drawing

Modification History

Release 1. Supersedes and is equivalent to MEM09002B Interpret technical drawing

Application

This unit of competency defines the skills and knowledge required to interpret technical drawings.

Technical drawings may utilise perspective, exploded views or hidden view techniques and may include symbol glossaries. Drawings are provided to AS 1100 Technical drawing or AS 1102 Graphical symbols and their equivalents from the full range of engineering disciplines.

Where any technical drawing, sketch, chart, diagram is only used as a technique for communication, then this unit does not apply: unit MEM12023 Perform engineering measurements or unit MEM16006 Organise and communicate information should be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Drawing, drafting and design

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1.	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Identify job requirements from specifications, job sheets or associated work instructions
2.	**Interpret technical drawing**	2.1 Check drawing and version and validate against job requirements
		2.2 Recognise components and assemblies or objects
		2.3 Identify dimensions, instructions and material requirements
		2.4 Recognise symbols used in the drawing
		2.5 Compile list of required materials

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Drawing interpretation includes recognising the following:	• relationship between the views contained in the drawing • objects • units of measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- dimensions of the key features
- symbols

Assessment Requirements for MEM09002 Interpret technical drawing

Modification History

Release 1. Supersedes and is equivalent to MEM09002B Interpret technical drawing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting, checking and validating technical drawing against job requirements or equipment
- interpreting technical drawing through recognition of components, assemblies, objects and symbols
- identifying dimensions
- applying drawing conventions appropriate to engineering discipline
- compiling a materials list.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- application of AS 1100 Technical drawing or AS 1102 Graphical symbols
- conventions used in technical drawings
- correct interpretation of instructions contained in drawings
- materials from which drawing object(s) are made and their features and manufacturing and assembly requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in interpreting technical drawings at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. MEM09003 Prepare basic engineering drawing

Modification History

Release 1. Supersedes and is equivalent to MEM09003B Prepare basic engineering drawing

Application

This unit of competency defines the skills and knowledge required to prepare basic engineering drawings across mechanical, electrical/electronic, fabrication and fluid power applications, and includes preparing new drawings or changing existing drawings. Manual and computer aided drafting and drawing equipment can be used. Preparation of parts lists and issuing of drawing documents is included.

Specifications for drawings are pre-determined and are obtained from design information, customer requirements, sketches and preliminary layouts.

Where a more extensive computer-aided design (CAD) system is used for design, unit MEM09009 Create 2-D drawings using computer-aided design system should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Drawing, drafting and design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements and purpose of drawing from specifications, associated documents or work instructions
		1.5	Identify and collect all data necessary to produce the drawing
		1.6	Confirm drawing requirements and method with relevant personnel and establish timeframes for completion
2	**Prepare or make changes to engineering drawing**	2.1	Select drafting equipment appropriate to the drawing method chosen
		2.2	Apply drafting principles to produce a drawing that is consistent with SOPs, in consultation with supervisor, as required
		2.3	Ensure completed drawing is approved in accordance with SOPs
3	**Prepare engineering parts list**	3.1	Identify components parts and organise by component type in accordance with SOPs and customer requirements
4	**Issue drawing**	4.1	Complete drawings and parts lists records in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.2 Copy approved drawings and parts lists and issue to relevant personnel
	4.3 Store approved drawings and parts lists, and catalogue in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Relevant personnel include one (1) or more of the following:	• technical personnel • supervisors • manufacturers • suppliers • contractors • customers
Drafting principles include the following:	• interpreting AS 1100.101-1992 (R2014) Technical drawing – General principles as required to prepare drawing • preparing drawings in accordance with AS 1100.101-1992 (R2014) Technical drawing – General principles, or equivalent, as required
Completing records include one (1) or more of the following:	• cataloguing • issuing security classifications • filing • preparing distribution lists

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Issued includes one (1) or more of the following:	• hard copy • photographic • slide or transparency form • presentation as a single drawing or with other drawings • presentation as a package

Assessment Requirements for MEM09003 Prepare basic engineering drawing

Modification History

Release 1. Supersedes and is equivalent to MEM09003B Prepare basic engineering drawing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and confirming drawing requirements and purpose through consultation with relevant personnel, and establishing timeframes for completion
- setting up and using drafting equipment
- applying drafting principles in accordance with AS 1100.101-1992 (R2014) Technical drawing – General principles or equivalent
- resolving any issues in the preparation of engineering drawing in consultation with a supervisor
- undertaking numerical operations, geometry and calculations and formulae associated with preparing basic engineering drawings
- compiling an engineering parts list by component type
- issuing completed drawing and parts list to relevant personnel
- storing and cataloguing approved drawing and parts list in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- requirements and purpose of drawing and engineering parts list to be produced
- sources and standards of relevant data and information to which drawing is to be produced
- person(s) who can confirm drawing requirements and timeframe for completion
- method of drawing preparation and reasons for selecting the chosen drawing method
- procedures for:
  - producing an initial drawing
  - changing an existing drawing
  - checking and approving drawings and persons responsible
  - copying, issuing and recording approved drawings and or parts lists

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - safe handling and storage and filing of drawings and/or parts lists and consequences of using inappropriate techniques
- drafting principles to be applied to the production and changing of a drawing
- consequences of inappropriate and incomplete components parts lists
- personnel to whom copies of approved drawings and or parts lists can be issued.

Assessment Conditions

- Assessors must:
    - have vocational competency in preparing basic engineering drawing at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09004 Perform electrical or electronic detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09004B Perform electrical/electronic detail drafting

Application

This unit of competency defines the skills and knowledge required to produce or make changes to electrical or electronic drawings under supervision using manual drafting or drawing equipment. It applies to all electrical and electronic areas, with drawings completed to AS 1102 Graphical symbols, or equivalent, and in accordance with predetermined design specifications and instructions.

Where a computer-aided drafting (CAD) system is used unit MEM09009 Create 2-D drawings using computer-aided design system and MEM09010 Create 3-D models using computer-aided design system, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM09004 Perform electrical or electronic detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09004B Perform electrical/electronic detail drafting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing or making changes to electrical or electronic schematics and drawings to AS 1102 Graphical symbols, or equivalent, indicating relative positioning of components
- undertaking numerical operations, geometry, calculations and formulae associated with performing electrical or electronic detail drafting
- determining and selecting components and materials according to design specification
- completing documentation according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- relative position of electrical or electronic components
- symbols used in electrical or electronic schematics and drawings
- specifications of all components
- circuit specifications
- requirements of AS 1102 Graphical symbols or equivalent with respect to electrical or electronic schematics and drawings
- design specifications of the circuit and components
- appropriate components and materials from supplier catalogues
- reasons for selecting the chosen components and materials.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing electrical or electronic detail drafting at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09005 Perform basic engineering detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09005B Perform basic engineering detail drafting

Application

This unit of competency defines the skills and knowledge required to produce drawings to AS 1100 Technical drawing or equivalent using manual drafting or drawing equipment, where the critical dimensions, associated tolerances and design specifications are predetermined.

Where a computer-aided design (CAD) system is used unit MEM09009 Create 2-D drawings using computer-aided design system and MEM09010 Create 3-D models using computer-aided design system, should be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM09005 Perform basic engineering detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09005B Perform basic engineering detail drafting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing layout, assembly and component drawings to AS 1100 Technical drawing in line with SOPs in plane orthogonal, isometric projection or equivalent, including auxiliary views and sections
- applying dimensions and labelling using supplied tolerances
- producing drawings to specifications using standard symbols to AS 1100 Technical drawing or equivalent
- undertaking numerical operations, geometry, calculations and formulae associated with performing basic engineering detail drafting
- compiling a component and materials list
- completing documentation according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- appropriate projection for the drawing purpose and reasons for selection
- reasons for including auxiliary views in drawings
- requirements of AS 1100 Technical drawing or equivalent with respect to dimensions, tolerances and labels
- procedures for producing component, layout and assembly drawings, and uses of drawings
- numerical operations, geometry, calculations and formulae associated with performing basic engineering detail drafting
- common symbols used in drawings to AS 1100 Technical drawing or equivalent
- design specifications of components
- appropriate components and materials from supplier catalogues and reasons for selection.

Assessment Requirements for MEM09006 Perform advanced engineering detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09006B Perform advanced engineering detail drafting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing layout, assembly and detail drawings to AS 1100 Technical drawing or equivalent according to specifications including undertaking calculations to determine all dimensions appropriate to ensure functional operation and suitability
- undertaking numerical operations, geometry, calculations and formulae associated with performing advanced engineering detail drafting
- interpreting data sheets and supplier catalogues to select material, components or assemblies to meet specifications
- checking drawing for compliance with specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- specifications and requirements of the component, assembly or layout to be drawn
- numerical operations, geometry, calculations and formulae associated with performing advanced engineering detail drafting
- functional operation of the component or assembly to be drawn
- surfaces which are to be in contact or separated
- appropriate type of fit for contacting surfaces and reasons for selection
- effect of surface finish on the performance and operation of surfaces
- appropriate datum points
- procedures for determining all appropriate lineal, diametric and geometric tolerances
- requirements of AS 1100 Technical drawing or equivalent for the drawings to be produced
- specifications of the materials, components or assemblies
- appropriate components and materials from supplier catalogues and reasons for selection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures and reasons for checking the drawings to ensure that manufacturing or assembly is possible, efficient and cost effective
- drawing specifications
- methods of manufacture or assembly from the drawings
- unnecessary or inappropriate tolerances.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced engineering detail drafting at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09007 Perform advanced mechanical detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09007B Perform advanced mechanical detail drafting

Application

This unit of competency defines the skills and knowledge required to use manual drafting or drawing equipment to produce mechanical assembly and layout detail drawings to AS 1100 Technical drawing or equivalent.

Skills covered by this unit are applied individually or in a team environment where comprehensive responsibility for the production of the drawing is exercised, and critical dimensions and associated tolerances are determined where required.

Where a computer-aided design (CAD) system is used unit MEM09009 Create 2-D drawings using computer-aided design system and unit MEM09010 Create 3-D models using computer-aided design system, should also be selected as appropriate.

Where advanced structural detail drafting skills are required, unit MEM09008 Perform advanced structural detail drafting should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM09003	Prepare basic engineering drawing
MEM09005	Perform basic engineering detail drafting
MEM09006	Perform advanced engineering detail drafting
MEM12023	Perform engineering measurements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Drawing, drafting and design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements job sheets or other associated work instructions
2	**Prepare mechanical detail drawings**	2.1	Produce all drawings to AS 1100 Technical drawing or equivalent
		2.2	Determine dimensions of various components and insert appropriate symbols for limits and fits, surface texture and geometric tolerances

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM09007 Perform advanced mechanical detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09007B Perform advanced mechanical detail drafting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- producing mechanical detail drawings to AS 1100 Technical drawing or equivalent including undertaking numerical operations, geometry and formula and calculations
- inserting appropriate symbols for all aspects of drawings including limits and fits, surface texture and geometric tolerances
- determining dimensions for various components to meet requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- the application of AS1100 Technical drawings or equivalent to mechanical detail drawings
- function of each component within the assembly or layout
- manufacturing, fabrication and assembly procedures to be used in producing the components or assemblies
- reason for ensuring that all components are correctly orientated to existing or proposed structures and services
- reasons for updating or modifying drawings to incorporate changes to specifications, production, assembly and fabrication methods and availability of standard hardware items.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced mechanical detail drafting at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Modification History

Release 1. Supersedes and is equivalent to MEM09008B Perform advanced structural detail drafting

Application

This unit of competency defines the skills and knowledge required to use manual drafting or drawing equipment to produce fabrication, structural assembly and layout drawings to AS 1100 Technical drawing or equivalent.

Skills covered by this unit are applied individually or in a team environment where comprehensive responsibility for the production of the drawing is exercised, and critical dimensions and associated tolerances are determined where required.

Where a computer-aided design (CAD) system is used unit MEM09009 Create 2-D drawings using computer-aided design system and unit MEM09010 Create 3-D models using computer-aided design system, should also be selected as appropriate.

Where advanced mechanical detail drafting skills are required, unit MEM09007 Perform advanced mechanical detail drafting should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Drawing, drafting and design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements job sheets or other associated work instructions
2	**Prepare structural detail drawing**	2.1	Produce all drawings to AS 1100 Technical drawing or equivalent
		2.2	Determine dimensions of various components and insert appropriate symbols for limits and fits, surface texture and geometric tolerances

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM09008 Perform advanced structural detail drafting

Modification History

Release 1. Supersedes and is equivalent to MEM09008B Perform advanced structural detail drafting

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- producing structural detail drawings to AS 1100 Technical drawing or equivalent, including undertaking numerical operations, geometry and formula and calculations
- inserting appropriate symbols for all aspects of drawings including limits and fits, surface texture and geometric tolerances
- determining dimensions for various components to meet requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- the application of AS1100 Technical drawings or equivalent to structural detail drawings
- function of each component within the assembly or layout
- manufacturing, fabrication and assembly procedures to be used in producing the components or assemblies
- reason for ensuring that all components are correctly orientated to existing or proposed structures and services
- reasons for updating or modifying drawings to incorporate changes to specifications, production, assembly and fabrication methods and availability of standard hardware items.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced structural detail drafting at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09009 Create 2-D drawings using computer-aided design system

Modification History

Release 1. Supersedes and is equivalent to MEM09009C Create 2D drawings using computer aided design system

Application

This unit of competency defines the skills and knowledge required to produce 2-D drawings using a computer-aided design (CAD) system. Skills include producing linked bills of material, file management and associated customisation of installed software, including the use of macros, menus and default settings. 2-D drawings can be produced from 3-D models created using CAD system.

The unit primarily applies to the fields of mechanical, electrical or electronic, fabrication and fluid power.

This unit covers CAD skills only. Where detail drafting skills are required see the following units:

- MEM09004 Perform electrical or electronic detail drafting
- MEM09005 Perform basic engineering detail drafting
- MEM09006 Perform advanced engineering detail drafting

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM16008	Interact with computing technology

Competency Field

Drawing, drafting and design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or associated work instructions
2	**Prepare CAD environment**	2.1	Customise system variables, menus and drawing defaults to suit standard operating procedures
		2.2	Develop macros to specifications
3	**Create 2-D drawings**	3.1	Create drawings using the available software system
		3.2	Link drawing entities to database attributes to suit job requirements
		3.3	Create detailed views using various scales to meet job requirements
4	**Produce output**	4.1	Save files in various formats according to procedures
		4.2	List linked entities in a bill of materials format to meet job requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.3 Extract supplementary data from drawing to meet job requirements, as necessary

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Drawing includes one (1) or more of the following:	• plans • diagrams • charts • electrical or electronic circuits
File formats include one (1) or more of the following:	• IGES • DXF • HPGL
Entities mean any single item created on the screen and include one (1) or more of the following:	• lines • arcs • circles • text • hatch • dimensions
Attributes include mean properties associated with an	• layer • level

Assessment Requirements for MEM09009 Create 2-D drawings using computer-aided design system

Modification History

Release 1. Supersedes and is equivalent to MEM09009C Create 2D drawings using computer aided design system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing computer-aided design (CAD) systems to create 2-D drawings by customising system variables, menus and drawing defaults and developing macros to specifications and SOPs
- creating 2-D drawings using CAD with the full capacity of the software system and linking drawing entities
- undertaking numerical operations, geometry and calculations or formulae associated with creating 2-D drawings using CAD system
- linking entities to data attributes including mean properties associated with an entity and creating detailed views using appropriate scales to suit specifications
- producing and saving files in various formats, listing link entities in a bill of materials format and extracting supplementary data from drawing to meet job requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- CAD software system
- system variables that can be customised
- procedures for:
  - customising identified system variables and reasons why
  - customising menus, system defaults and developing macros and reasons why
  - linking drawing entities to database attributes
  - printing drawing files
  - creating additional views of the object being drawn
  - saving drawing files
  - producing bills of material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - extracting data with respect to drawn shapes and features
- applicable drafting standards and procedures
- drawing features of the CAD software system
- reasons for using specialised software features
- appropriate drawing scales
- various formats in which drawing files can be saved and reasons for using different formats when saving drawing files
- properties of shapes, sections and features that can be extracted from the drawing file.

Assessment Conditions

- Assessors must:
    - have vocational competency in creating 2-D drawings using computer-aided design system at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate

MEM09010 Create 3-D models using computer-aided design system

Modification History

Release 1. Supersedes and is equivalent to MEM09010C Create 3D models using computer aided design system

Application

This unit of competency defines the skills and knowledge required to prepare the 3-D computer-aided design (CAD) environment, create and modify 3-D models, and produce output from the 3-D model using computer equipment and industrial software. It applies to the fields of mechanical, electrical or electronic, fabrication and fluid power.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 4

Assessment Requirements for MEM09010 Create 3-D models using computer-aided design system

Modification History

Release 1. Supersedes and is equivalent to MEM09010C Create 3D models using computer aided design system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing computer-aided design system (CAD) to create 3-D models, including establishing coordinate system, orientation and views to specifications and job requirements
- creating and modifying 3-D models using CAD by creating and manipulating entities in 3-D space, creating ruled and revolved surfaces and modifying existing 3-D model to suit job requirements
- undertaking numerical operations, geometry and calculations or formulae associated with creating 3-D models using CAD system
- producing and saving files in various formats for retrieval and extracting physical properties to meet job requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- purpose for which the 3-D model is to be developed
- reasons for selecting the appropriate coordinate system for the job
- orientation of the model with respect to the coordinate system
- number of views required to establish the model
- procedures for:
  - creating and manipulating entities in 3-D space
  - modifying existing 3-D models
  - saving drawing files
  - extracting data with respect to the physical properties of shapes created in 3-D space
- entities that can be created and manipulated in 3-D space
- applications and procedures for creating ruled and revolved surfaces in 3-D space

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- various formats in which drawing files can be saved and reasons for using different formats when saving drawing files
- physical properties of shapes created in 3-D space that can be extracted from the drawing file.

Assessment Conditions

- Assessors must:
  - have vocational competency in creating 3-D models using computer-aided design system at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09011 Apply basic engineering design concepts

Modification History

Release 1. Supersedes and is equivalent to MEM09011B Apply basic engineering design concepts

Application

This unit of competency defines the skills and knowledge required to apply in situ design skills to determine design requirements and create a design for application within the engineering fields of mechanical, production, electrical or electronic, fabrication and fluid power. Design concepts may be applied to the fabrication and modification of structures, plant and equipment, and design of tooling and gauges, production control systems, fluid power layouts and electrical circuits.

This unit is suitable for application by personnel who are responsible for the manufacture of the design outcome, either individually or as part of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Drawing, drafting and design

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify design requirements from specifications, job sheets or associated work instructions
2	**Determine design concepts**	2.1	Establish design concepts with regard to design considerations
		2.2	Consult codes, regulations and technical documentation to establish design limitations in accordance with SOPs, where appropriate
		2.3	Identify sources of expert assistance and use, as required
3	**Create design**	3.1	Ensure design meets end use requirement
		3.2	Ensure design meets all legislative and regulatory requirements
		3.3	Verify design concept in accordance with SOPs
		3.4	Produce design outcome in accordance with job requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Design considerations include one (1) or more of the following:

- location
- assembly requirements
- process
- material
- quantity
- cost
- outcome
- impact of the design on other equipment, processes or personnel

Design outcome includes one (1) or more of the following:

- sketch
- drawing
- prototype
- document
- model
- finished product

Assessment Requirements for MEM09011 Apply basic engineering design concepts

Modification History

Release 1. Supersedes and is equivalent to MEM09011B Apply basic engineering design concepts

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining design requirements to establish design concepts
- consulting on relevant codes, regulations, and technical documentation in consultation with appropriate personnel to establish design limitations and verifying design
- creating design concepts to meet requirements
- undertaking numerical operations, geometry and formula and calculations to ensure design meets end use requirement whilst complying with all legislative and regulatory requirements
- producing design outcome to meet end use requirement.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- design requirements
- functional requirements of the design
- materials appropriate to the environment in which the object to be designed is to operate
- processes to be used and the costs associated in the manufacture of the object
- reasons for selecting the chosen design concept
- all relevant codes, standards and regulations applying to the object to be designed and the impact on the design requirements
- sources of expert assistance in the design process
- end-use requirements of the design
- checks to ensure the design complies with the relevant codes, standards, legislative and regulatory requirements
- procedures for verifying design concepts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- means by which the design concept is to be presented and requirements for achieving design outcome.

Assessment Conditions

- Assessors must:
  - have vocational competency in applying basic engineering design concepts at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09021 Interpret and produce drawings of curved 3-D shapes

Modification History

Release 1. Supersedes and is equivalent to MEM09021B Interpret and produce curved 3-dimensional shapes

Application

This unit of competency defines the skills and knowledge required to produce and interpret lines plan drawings manually or using computer-aided design (CAD) equipment complying with industry standards.

It applies to drawing and lofting principles used to produce lines plan drawings and loftings and common applications of this unit are in marine vessel construction.

In a marine setting, tasks may relate to drawings for hull designs, section development, including curved and raking transom, conical development and camber development methods.

Where a CAD system is used for basic drawing unit MEM09003 Prepare basic engineering drawing should also be selected.

Where more extensive CAD system is used for design unit MEM09009 Create 2-D drawings using computer-aided design system should be selected.

Where straightforward take-offs from lofted drawings, or where transfer of lines to lofting floor or other surface is required to be carried out, unit MEM12007 Mark off/out structural fabrications and shapes should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM09021 Interpret and produce drawings of curved 3-D shapes

Modification History

Release 1. Supersedes and is equivalent to MEM09021B Interpret and produce curved 3-dimensional shapes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- determining drawing requirements
- applying drafting procedures to produce curved 3-D shapes using appropriate drawing equipment ensuring they are consistent with operation procedures and industry requirements
- undertaking numerical operations, geometry, calculations and formula associated with interpreting and producing curved 3-D shapes
- submitting completed drawings to applicable personnel and supplying altered offset measurements and all relevant information.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- vessel design characteristics, including performance, stability and construction methods
- data requirements for producing lines plan drawings
- numerical operations, geometry, calculations and formulae
- spatial concepts
- drawing techniques and procedures and use of equipment
- industry standards, terminology and symbols applying to lines plan drawings.

Assessment Conditions

- Assessors must:
  - have vocational competency in interpreting and producing curved 3-D shapes at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09022 Create 2-D code files using computer-aided manufacturing system

Modification History

Release 1. Supersedes and is equivalent to MEM09022A Create 2D code files using computer aided manufacturing system

Application

This unit of competency defines the skills and knowledge required to produce 2-D computer-aided manufacturing (CAM) code files from existing computer-aided design (CAD) model. It includes managing files and tools, and customising installed software.

The unit typically applies in a manufacturing setting where components are machined or processed within a CAM environment.

Where 2-D CAD models are required to be produced unit MEM09009 Create 2-D drawings using computer-aided design system should also be selected.

Where components are machined following development of code files then appropriate computer numerically controlled (CNC) machining units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 4

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16008 Interact with computing technology

Competency Field

Drawing, drafting and design

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or associated work instructions
2	**Prepare for computer aided manufacture**	2.1	Customise system variables, user interface and software defaults to suit procedures
		2.2	Develop manufacturing data according to procedures
3	**Manipulate 2-D models**	3.1	Import models using a variety of file formats
		3.2	Orient and manipulate models using the full capability of the software system
		3.3	Link model entities to database attributes to suit job requirements
		3.4	Apply manufacturing data to detailed models to suit various applications and job requirements
4	**Produce output from 2-D model**	4.1	Save files in a variety of formats according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.2 Verify CAM model for logical sequencing and correct manufacturing procedures
	4.3 Produce code from the 2-D CAM model

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Customising includes the use of one (1) or more of the following:	• macros • menus • default settings
Entities refer to any single item created on the screen and include one (1) or more of the following:	• lines • arcs • circles • text
Attributes are properties associated with an entity and include one (1) or more of the following:	• layer • level • line type • colour • text

Assessment Requirements for MEM09022 Create 2-D code files using computer-aided manufacturing system

Modification History

Release 1. Supersedes and is equivalent to MEM09022A Create 2D code files using computer aided manufacturing system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing for computer-aided manufacture (CAM) by customising system variables, user interface and software defaults and developing manufacturing data to suit specifications and procedures
- importing 2-D models using various file formats, orienting and manipulating them and linking model entities to data attributes
- applying manufacturing data to detailed models to suit requirements
- producing and saving files in various formats and verifying CAM model for logical sequencing and correct manufacturing procedures
- producing code from completed 2-D CAM model.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- model features of the CAM software system
- operation of the CAM software system
- system variables and procedures for customising user interface and system defaults
- procedures for developing macros
- procedures for linking model entities to database attributes
- CAD file conversion
- CAM file formats
- procedures for saving and managing CAM files.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in creating 2-D code files using computer-aided manufacturing system at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09023 Create 3-D code files using computer-aided manufacturing system

Modification History

Release 1. Supersedes and is equivalent to MEM09023A Create 3D code files using computer aided manufacturing system

Application

This unit of competency defines the skills and knowledge required to produce 3-D computer-aided manufacturing (CAM) code files from existing computer-aided design (CAD) models or from data collected by sample measurement. It includes managing files and tools and customising installed software.

This unit typically applies in a manufacturing setting where components are machined or processed within a CAM environment.

Where a CAD system is also used then unit MEM09009 Create 2-D drawings using computer-aided design system and unit MEM09010 Create 3-D models using computer-aided design system, should also be selected as appropriate.

Where components are machined following development of code files then appropriate computer numerically controlled (CNC) machining units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: 6

Assessment Requirements for MEM09023 Create 3-D code files using computer-aided manufacturing system

Modification History

Release 1. Supersedes and is equivalent to MEM09023A Create 3D code files using computer aided manufacturing system

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- preparing to produce 3-D computer-aided manufacture (CAM) code files by coordinating system, orientation and views to suit specifications and procedures
- importing 3-D models using various file formats and orienting and manipulating them, and linking model entities to data attributes to suit job requirements
- developing manufacturing data from 3-D CAM model to suit requirements
- producing and saving files in various formats for retrieval and verifying CAM model for logical sequencing and correct manufacturing procedures
- producing code from completed 3-D CAM model.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- coordinate systems
- orientation of the model with respect to the coordinate system
- procedures for customising system defaults and user interface
- entities that can be manipulated in 3-D space
- procedures for manipulating entities in 3-D space
- procedures for using the post processor
- procedures for saving and storing CAM files
- CAD file conversions
- CAM file formats.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in creating 3-D code files using computer-aided manufacturing system at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM10001 Erect structures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10001 Erect structures (Release 1).

Release 1. Supersedes and is equivalent to MEM10001C Erect structures.

Application

This unit of competency defines the skills and knowledge required to inspect and prepare the erection site, erect structures and applies to structures that are exclusively/predominantly steel metal and are load-bearing of substantial size made out of steel and/or other metals.

Specifications for the structure would be supplied via engineering drawings or the like and would include site location information.

Where workshop assembly techniques are required see unit MEM05011 Assemble fabricated components.

Where design skills are required see unit MEM09011 Apply basic engineering design concepts.

Where lifting or rigging skills are required see appropriate units.

Where welds are required to meet legislative or regulating requirements then see appropriate welding units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM05007 Perform manual heating and thermal cutting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM05051	Select welding processes
MEM05052	Apply safe welding practices
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12007	Mark off/out structural fabrications and shapes
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Plus, one or more of the following, including their prerequisites:

MEM05015	Weld using manual metal arc welding process
MEM05017	Weld using gas metal arc welding process

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Inspect and prepare erection site**	2.1	Check site for correct location, dimensions and levels
		2.2	Report non-compliance with specifications to appropriate authority
		2.3	Undertake minor alterations, corrections or adjustments with approval of appropriate authority
		2.4	Prepare all surfaces and materials/components for use
		2.5	Identify and check structure components against specifications
3	**Erect structures**	3.1	Carry out all work in a safe manner and in accordance with defined procedures
		3.2	Prepare structure components for correct sequential erection
		3.3	Erect components and fix according to specifications
		3.4	Adjust structures to specifications
		3.5	Ensure all reports and documentation is completed to required specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Levels include the following:	• straightforward levelling and alignment using plumb bob/lines and levels
Appropriate authority includes one (1) or more of the following:	• site supervisor • building inspector • contractor

Materials/components include one (1) or more of the following:	• ferrous and non-ferrous materials of a:
	  • variety of material sizes
	  • variety of borne loads
	  • variety of joining systems
	  • variety of component profiles

Prepared includes one (1) or more of the following:	• cleaning • assembly sequencing • surface finishing
Structures include one (1) or more of the following:	• metal frameworks • portals • stairways • walkways • vessels • tanks • platforms • conveyors • moving lines • associated railings
Reports and documentation include one (1) or more of the following:	• contract documents • building inspection documentation • compliance reports

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM10001 Erect structures (Release 1).

Release 1. Supersedes and is equivalent to MEM10001C Erect structures.

Assessment Requirements for MEM10001 Erect structures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10001 Erect structures (Release 1).

Release 1. Supersedes and is equivalent to MEM10001C Erect structures.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for erecting structures for on-site or off-site locations
- ensuring the site is level and prepared to specifications
- preparing structural components for correct sequential erection
- erecting structures and adjusting structures to specifications
- completing all reports and documentation and compliance reports to required specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- site management requirements
- site preparation and levelling requirements
- range of technique/equipment which can be used to check the site levels
- procedures to be followed if the location, dimensions and/or levels of the site do not comply with specifications
- procedures for making a range of alterations/corrections using appropriate methods/techniques
- procedures for checking the components of the structure
- legislative and regulatory guidelines
- materials specifications, applications, properties and characteristics
- correct erection sequence
- methods and selection of fixing/fastening the components of the structure
- methods and selection of lifting/moving the components of the structure
- methods and selection of locating/holding the components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- adjustments which can be made to bring the structure into specification
- approval process for final alterations
- procedures for checking the structure for conformance and procedures to be followed if the structure does not comply
- procedures for completing required documentation and compliance reports.

Assessment Conditions

- Assessors must:
  - have vocational competency in erecting structures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10002 Terminate and connect electrical wiring

Modification History

Release 1. Supersedes and is equivalent to MEM10002B Terminate and connect electrical wiring

Application

This unit of competency defines the skills and knowledge required to terminate, disconnect or reconnect electrical wiring, including all types of cords and cables and circuits, excluding specialist cables.

All testing is undertaken on completed circuits where these are not connected to main supply, using appropriate methods including continuity and resistance checks.

Where soldering/desoldering of electrical/electronic components is required see unit MEM05001 Perform manual soldering/desoldering - electrical/electronic components and unit MEM05002 Perform high reliability soldering and desoldering, as appropriate.

Where termination and connection of specialist cables such as mineral insulated, steel wire and armoured cables is required see unit MEM10011 Terminate and connect specialist cables.

This unit does not cover the competencies required for energising and testing of the circuit.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: **A**

Unit Weight: **3**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM12002	Perform electrical/electronic measurement
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for electrical wiring termination and connection**	2.1	Undertake all work safely and to workplace procedures and state/territory regulations and legislative requirements
		2.2	Check materials for correct specifications
		2.3	Undertake preparation of work or check/inspect for correct location and specifications of cable trays, brackets and trenches
3	**Connect electrical wiring**	3.1	Ensure terminations/connections are made to specifications, manufacturers' requirements and to safety and state/territory regulations and legislative requirements
		3.2	Adjust and fix all brackets, clamps and holders to specifications
		3.3	Ensure all cables, wires, conductors and connections are marked/tagged and labelled to specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Test terminated cables to ensure continuity and insulation resistance readings comply with requirements
	3.5 Complete all reports and documentation correctly to required specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Electrical wiring includes one (1) or more of the following:	• wiring associated with:
	  • control wiring
	  • machinery
	  • other electrical apparatus

Terminations/connections include one (1) or more of the following:	• clamping • crimping • pin connection • soldered joints • plugs • sockets • clamping of cables and wires and sealing entry points where required

Assessment Requirements for MEM10002 Terminate and connect electrical wiring

Modification History

Release 1. Supersedes and is equivalent to MEM10002B Terminate and connect electrical wiring

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, drawings, regulatory and legislative requirements for terminating and connecting electrical wiring
- connecting and terminating electrical wiring utilising a range of methods and sealing entry points, where required, and marking/tagging and labelling wiring to specifications
- using test equipment to locate various faults
- inspecting and testing terminated cables to ensure they comply with continuity and insulation resistance and are safely intended for use
- completing all reports and documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- statutory and regulatory requirements associated with the termination and connection of electrical wiring including AS/NZS 3000:2000, Electrical Installations (known as the Australian/New Zealand Wiring Rules), other Australian/International Standards and codes of practice
- different types of electrical cables and cords and their applications
- structural components of cables and their purpose (conductor material, stranding, insulation type, voltage rating, screening, sheathing, armour and serving)
- identifying the Australian and international colour standards for cables and cords
- factors affecting cable current-carrying capacity including current requirements for the circuit, cable installation method to be used and environmental conditions in the vicinity of cable installation
- wiring support and/or protection requirements and specifications
- relevant manufacturer requirements
- specifications and methods for terminating different materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- wiring support techniques and alternatives
- marking, tagging and labelling requirements for cables, wires, conductors and connections
- test requirements to ensure compliant continuity and insulation resistance
- data to be recorded/reported and the frequency of recording/reporting
- requirements for approval to work.

Assessment Conditions

- Assessors must:
  - have vocational competency in terminating and connecting electrical wiring at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10003 Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM10003B Install and test electrical wiring and circuits up to 1000 volts a.c and 1500 volts d.c

Application

This unit applies engineering tradesperson involved in installation of electrical wiring/systems and/or enclosures, including specialist cables, using a full range of installation materials and techniques to any wiring circuits which are directly or indirectly connected to a power supply system of electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c used for heating, ventilation, air conditioning and refrigeration (HVAC/R).

The scope of work includes modifying existing electrical work and electrical equipment work to relevant specifications/regulations and drawings.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Band: **A**

Unit Weight: **12**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM10002	Terminate and connect electrical wiring
MEM12002	Perform electrical/electronic measurement
MEM12023	Perform engineering measurements
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18049	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Ensure emergency first aid equipment, documentations and procedures are in place and understood
		1.4	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.5	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan the installation**	2.1	Determine special work, hazard and safety requirements and incorporate in plan
		2.2	Devise work plan/strategy and confirm in accordance with legislative and regulatory requirements and procedures
3	**Prepare for electrical installation**	3.1	Undertake all work safely and to workplace procedures, state/territory regulations and legislative requirements
		3.2	Check materials for correct specifications
		3.3	Determine the need to test or measure live in strict accordance with WHS requirements and when necessary conducted within established safety procedures
		3.4	Check that circuits/machines/plant is isolated where necessary in strict accordance WHS requirements and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Install the wiring/enclosures and/or support systems**	4.1	Ensure all cables/conductors/conduit/enclosures and support systems are installed to specifications using correct appropriate techniques, tools and equipment
		4.2	Terminate cables and conductors to accessories and appliances in accordance with manufacturer's specifications and regulatory requirements
		4.3	Mark cabling or label for identification and to specification
5	**Commission and test the installed wiring system**	5.1	Test all completed wiring/systems and enclosures for compliance with specifications, regulations, and legislative requirements, utilising appropriate test procedures and equipment
		5.2	Energise the installation and test for compliance with specifications
		5.3	Rectify faults as required to meet specification
		5.4	Complete documentation to required specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Installation includes the following:	• electrical installation work and electrical equipment work 1000 volts a.c. and 1500 volts d.c. to existing HVAC/R system and involving utilisation of a range of methods,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

	tools and equipment appropriate to the work
Specifications/regulations and drawings include one (1) or more of the following:	• legislative acts • Wiring Rules • other standards • specifications • electrical and architectural drawings
Cables/conductors include one (1) or more of the following:	• single insulated • thermoplastic insulated and sheathed • flat and circular • MIMS • steel wire armoured • flexible cords and cables • copper and aluminium • catenary systems • shielded
Conduit/enclosures include the following:	• metallic and non-metallic
Support systems include one (1) or more of the following:	• trunking • ducting • cable tray/ladder • catenaries
Documentation includes one (1) or more of the following:	• work documentation • short reports required to meet regulatory requirements • safe work method statements (SWMS) • job safety analysis (JSA) • work permits

Assessment Requirements for MEM10003 Install and test electrical wiring and circuits up to 1000 volts a.c. and 1500 volts d.c.

Modification History

Release 1. Supersedes and is equivalent to MEM10003B Install and test electrical wiring and circuits up to 1000 volts a.c and 1500 volts d.c

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking emergency first aid equipment, documentations and procedures are in place according to site/legislative requirements
- using appropriate personal protective equipment (PPE) in accordance with site/legislative requirements
- identifying and interpreting specifications and drawings for installing and testing electrical wiring and circuits for existing heating, ventilation, air conditioning and refrigeration (HVAC/R) system
- coordinating the installation effectively with others affected by the work in accordance with legislative and customer requirements
- checking materials conform to specifications and customer requirements
- assessing the need the need to test or measure live in strict accordance with work health and safety (WHS) requirements, and when necessary, conducting within established safety procedures
- ensuring HVAC/R system is isolated where necessary in strict accordance with WHS requirements
- planning the cable routes and obtaining the installation materials including accessories and appliances
- installing the wiring, including routing, placing and securing cables in compliance with requirements
- terminating cables and conductors to accessories and appliances in accordance with manufacturer specifications and regulatory requirements
- marking or labelling cabling as required to specification
- inspecting and testing installed and terminated circuits and rectifying any defects and retesting to ensure compliance
- documenting ‘as installed’ wiring, accessories and appliances in accordance with established procedures and regulatory requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- work permit requirements, including safe work method statement (SWMS) or job safety analysis (JSA)
- statutory and regulatory requirements associated with the installing and testing of electrical wiring and circuits, including AS/NZS 3000:2000 Electrical Installations (known as the Australian/New Zealand Wiring Rules), other Australian/International Standards and codes of practice
- AS/NZS 3008.1.2:2010 Electrical installations - Selection of cables - Cables for alternating voltages up to and including 0.6/1 kV and other related standards in regard to the cable selection/support fit for purpose
- other legislative and regulatory requirements appropriate to the work to be done
- work planning procedures
- procedures to be followed if materials and or supports do not conform to specification
- techniques, tools and equipment required to install cables, wires, conduit, enclosures and support systems
- marking and/or labelling requirements for cabling and reasons for marking and/or labelling cables
- procedures and equipment to test before and after energising wiring and systems
- reasons for carrying out all tests
- common wiring system faults and method(s) for rectifying faults
- documentation to be completed
- dangers present in electrical rescue
- local emergency services
- appropriate standards and procedures for recording of first aid treatment
- recognised procedures for the movement and treatment of injured persons
- requirements for approval to work.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing and testing electrical wiring and circuits up to 1000 volts a.c and 1500 volts d.c used in existing HVAC/R systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10004 Enter and change programmable controller operational parameters

Modification History

Release 1. Supersedes and is equivalent to MEM10004B Enter and change programmable controller operational parameters

Application

This unit of competency defines the skills and knowledge required to enter and change programmable controller operational parameters.

Work is generally undertaken at location of programmable controllers including, programmable logic controller (PLC) and distributed control system (DCS) or similar devices but could be undertaken with data link offsite.

Where the selection and use of engineering measuring equipment is required see unit MEM12023 Perform engineering measurements.

Where routine downloading of PLC, robot, computer numerically controlled (CNC) or numerically controlled (NC) programs from disk, tape or direct means not requiring program or data adjustment or checks against specification is required see unit MEM16008 Interact with computing technology.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM16008	Interact with computing technology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Install program**	2.1	Download software, as required
		2.2	Undertake appropriate checks during and after downloading to ensure data transfer is accurate and complete
3	**Verify machine/system/ process operation**	3.1	Undertake appropriate checks after downloading to ensure machine operation or process output is accurate to specification
		3.2	Ensure specific problems in machine operation or process output being controlled by the programmable controller are identified in accordance with SOPs
		3.3	Ensure specific changes required to operating parameters within the software program are derived in accordance with manufacturers' specifications and procedures
		3.4	Make adjustments/changes to operating parameters in accordance with manufacturers' specifications
		3.5	Take final check of machine operation and/or process output to ensure that they are in accordance with specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.6 Report changes and adjustments in accordance with SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Verify includes the following:	• verification of machine/process/system operation, including interpreting the program, excluding multi-loop and control sequencing programs

Operating parameters include one (1) or more of the following:	• timer settings
	• counter settings
	• set point settings
	• specifications and procedures gained from:
	  • a range of circuit drawings
	  • engineering data sheets
	  • step print out
	  • manufacturers' procedure
	  • data books

Assessment Requirements for MEM10004 Enter and change programmable controller operational parameters

Modification History

Release 1. Supersedes and is equivalent to MEM10004B Enter and change programmable controller operational parameters

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for downloading software programs for a programmable logic controller (PLC) and/or distributed control system (DCS), and undertaking appropriate checks ensuring data transfer is accurate and completed according to specifications
- verifying system operation and making adjustments to the operating parameters, as required
- completing final check of machine operation and/or processing for compliance to specifications
- reporting all changes and adjustments according to standard operating procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- appropriate and correct program loading techniques and reasons for selecting the chosen program loading technique
- checks to be undertaken during and after downloading
- reasons for checking that the data transfer is accurate and complete
- action to be taken if data transfer is inaccurate and/or incomplete
- specifications relating to the transferred data
- correct operation of the machine or process
- specific machine operations or process outputs being controlled by the programmable controller
- specific problems in accordance with SOPs
- operating parameters within the software program

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- SOPs, including industry standards, production schedules, safety data sheets (SDS), work notes and plans, product labels, manufacturers' specifications, operator manuals, enterprise policies and procedures, supervisors' oral and written instructions, current state/territory work health and safety (WHS) legislation, standards and codes of practice
- specification to be met and functions to be controlled and machine operation or process output
- reporting process
- procedures to change parameters and their implications.

Assessment Conditions

- Assessors must:
  - have vocational competency in entering and changing programmable controller operational parameters at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10005 Commission programmable controller programs

Modification History

Release 1. Supersedes and is equivalent to MEM10005B Commission programmable controller programs

Application

This unit of competency defines the skills and knowledge required to adjust and commission the programmable controller program to specification. It applies to all programmable controller programs include single and multi-loop programs and control sequencing of processes.

Work is undertaken on location and it is assumed that this unit will normally be accessed in conjunction with units of skill that relate to the operational processes controlled by the programmable controllers, including programmable logic controller (PLC) and distributed control system (DCS) or similar devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Commission programmable controller program**	2.1	Determine and understand program format and operational intent
		2.2	Check program instructions for compliance with specifications using appropriate techniques
		2.3	Set software timers and counters to specifications, where required
		2.4	Ensure program is stepped through manually and outputs are checked and measured for compliance with specifications
		2.5	Edit program to meet specifications, where applicable
		2.6	Check external inputs for compliance with specifications utilising correct and appropriate techniques
		2.7	Run program and check total operation for compliance with specifications, where applicable
		2.8	Undertake final adjustments to meet operational specifications using procedures, where applicable

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM10005 Commission programmable controller programs

Modification History

Release 1. Supersedes and is equivalent to MEM10005B Commission programmable controller programs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications for commissioning programmable controller programs for compliance using appropriate checks
- commissioning single and multi-loop programs and control sequencing of processes for compliance with specifications using appropriate techniques
- editing program and making final adjustments to meet operational specification, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- format and specifications of the program
- procedures for checking that program instructions comply with specifications and procedures for dealing with any non-conformances with specifications and techniques used
- procedures for manually stepping through the program
- function of software timers and counters and procedures for setting them
- techniques and checks to be used in checking program outputs
- measurements to be taken during the checking of program outputs
- instruments to be used to take measurements
- checks to be made to ensure that the external inputs comply with specifications
- techniques and equipment to be used in checking external inputs
- specifications and operational processes controlled by the programmable logic controller
- techniques and equipment to be used to check the operational process
- procedures for running and editing programs
- procedures to be followed when adjusting programs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- adjustments that can be made to the program
- effects of adjustments on the operational processes controlled by the program.

Assessment Conditions

- Assessors must:
  - have vocational competency in commissioning programmable controller programs at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10006 Install machine/plant

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10006 Install machine/plant (Release 1).

Release 1. Supersedes and is equivalent to MEM10006B Install machine/plant.

Application

This unit of competency defines the skills and knowledge required to install machine/plant where the equipment being installed requires substantial modification to the existing site and/or connecting equipment and excludes minor modifications.

Work is undertaken utilising new or existing external and internal locations and sites and foundations, footings, beds and frameworks are completed prior to installation and commissioning.

Installation covered by this unit also excludes electrical installation.

Where design skills are required see unit MEM09011 Apply basic engineering design concepts.

Where existing machines/plant are replaced by the same or similar machine/plant see unit MEM18006 Perform precision fitting of engineering components.

Where balancing skills or manufacture of gaskets is required see appropriate units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18003	Use tools for precision work
MEM18006	Perform precision fitting of engineering components
MEM18009	Perform precision levelling and alignment of machines and engineering components
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Inspect and prepare installation site**	2.1	Check site for correct location, dimension and levels utilising appropriate measuring equipment
		2.2	Report non-compliance with specification to appropriate authority
		2.3	Undertake alteration/correction with approval of appropriate authority
		2.4	Prepare all surfaces, materials and components for use
3	**Install machine/plant**	3.1	Ensure all work is carried out safely and in accordance with site procedures and to Australian Standards
		3.2	Prepare machine components for correct sequential installation
		3.3	Install machine/plant in accordance with manufacturers' and site specifications
		3.4	Undertake routine modifications/alterations according to procedures, where required
		3.5	Ensure machine/plant is levelled, aligned, coupled and connected (excluding electrical connections) in accordance with specifications
		3.6	Clean site and clear all debris and leave in safe state
		3.7	Ensure all reports and documentation is completed to required specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Machine/plant includes one (1) or more of the following:	• pumps • blowers • compressors • drive units • production equipment and plant • process equipment • plant and machinery • engineering plant • machine tools
Routine modifications/alterations include one (1) or more of the following:	• fitting of spacers • relocation of brackets • alignment of holes

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM10006 Install machine/plant (Release 1).

Release 1. Supersedes and is equivalent to MEM10006B Install machine/plant.

Assessment Requirements for MEM10006 Install machine/plant

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10006 Install machine/plant (Release 1).

Release 1. Supersedes and is equivalent to MEM10006B Install machine/plant.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for installing machine/plant and confirming site is level utilising appropriate measuring equipment and all surfaces, materials and components are prepared in accordance with manufacturers' and site specifications
- installing machine/plant in accordance with specifications
- levelling, aligning, coupling and connecting machine/plant in accordance with specifications
- undertaking routine modifications/alterations in accordance with procedures, as required
- completing all reports and documentation to required specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- installation specification of the machine/plant
- procedures to follow if the location, dimensions and/or levels of the site do not comply with the specifications
- procedures for checking whether the installed machine/plant conforms to specifications
- materials and components to be used in the installation of the machine/plant
- applicable codes and standards
- installation sequence
- methods to locate, fix/fasten machine/plant
- methods of lifting/moving machine/plant and components
- techniques, tools and equipment to measure site and machine/plant installation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in installing machine and plant at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Competency Field

Installation and commissioning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Plan commissioning procedure**	2.1	Determine control system format and understand operational intent
		2.2	Sequence commissioning procedures effectively to meet requirement of components and control application
3	**Check control system installation**	3.1	Verify correct installation of system components against specifications
		3.2	Ensure appropriate test equipment is functional and calibrated before use
		3.3	Ensure components or control loop/system is powered up and checked for correct supply in accordance with specifications
		3.4	Ensure all readings/measurements are obtained, interpreted and recorded
4	**Adjust control system and assess performance**	4.1	Adjust control loop/system components to meet control characteristics, application and process specifications utilising appropriate techniques
		4.2	Make final verifications including any operational adjustments to ensure required performance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Commission modifications**	5.1 Ensure necessary modifications to change performance in order to meet manufacturers' or operational specifications or safety and legislative requirements are undertaken or actioned
	5.2 Provide reports on system/process characteristics for warranty, handover and legislative purposes
	5.3 Document all modifications and record result according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Commissioning includes:	• the development of a commissioning procedure, testing of operation and adjustment to conform to specification
Control system includes:	• closed or open on continuous or step process control systems. Loop/system control can incorporate the use of pneumatics, electrical, electronics, hydraulics or a combination

System components include one (1) or more of the following:	• all instruments and devices which make up or control a loop/system, including:
	  • sensing devices
	  • control devices

Assessment Requirements for MEM10007 Modify control systems

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10007 Modify control systems (Release 1).

Release 1. Supersedes and is equivalent to MEM10007C Modify control systems.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for determining control system to meet specifications and control application
- planning commissioning procedure involving the development of a commissioning procedure, testing of operation and adjustment to conform to specification
- verifying control system components, including all instruments and devices which make up or control a loop/system against specifications
- using appropriate test equipment to check control system installation in accordance with specifications in a safe and effective manner
- adjusting control loop/system components and making final verifications to ensure required performance of control application
- making modifications to change performance to meet specifications and safety and legislative requirements
- providing reports where required and documenting all modifications in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- control system format
- operational intent of the processes being controlled by the control system
- specifications of the control system and the processes being controlled
- regulatory and legislative requirements associated with the commissioning procedure
- procedures for commissioning the control system
- procedures for ensuring that control characteristics, application and process specifications are achieved
- components of the operational processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- installation specifications for each component of the operational processes
- measuring techniques and equipment appropriate to the measurements to be taken
- test equipment and techniques appropriate to the commissioning of the control
- calibration procedures for the selected test equipment
- procedures for energising components and/or the control loop/system
- supply requirements of components and the control loop/system
- recording requirements for readings/measurements taken
- adjustments that can be made to the control loop/system components and effects of adjustments on the control characteristics and operational processes
- measurements/tests to be undertaken to verify control system and process operation and reasons for selecting the chosen measurements/tests
- procedures to be followed if the operational specifications of the control system and/or process cannot be achieved
- effect of changes to control system components on system performance
- appropriate authority to approve any modifications
- reporting requirements associated with the commissioning of control systems
- requirements and reasons for recording modifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in modifying control systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM10008 Undertake commissioning procedures for plant and/or equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10008 Undertake commissioning procedures for plant and/or equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM10008B Undertake commissioning procedures for plant and/or equipment.

Application

This unit of competency defines the skills and knowledge required to undertake commissioning work on internally or externally located plant and/or equipment that is new, or replaced, or has been extensively modified (by people usually outside of the commissioning individual or team).

Where reports are required to be completed see unit MEM16010 Write reports.

Where additional specialist applications are required in undertaking commissioning procedures e.g. fluid power, instrumentation and programmable logic controller (PLC), see appropriate units.

This unit is not intended to be used by maintenance personnel completing their own work, including return to service work, as these activities are covered in the following units:

- MEM09011 Apply basic engineering design concepts
- MEM18004 Maintain and overhaul mechanical equipment
- MEM18006 Perform precision fitting of engineering components
- MEM18054 Fault find, test and calibrate instrumentation systems and equipment

Some jurisdictions may require the holder of this unit using the refrigeration and air conditioning pathways to be licensed or certified and users should check with the relevant authorities.

Assessment Requirements for MEM10008 Undertake commissioning procedures for plant and/or equipment

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM10008 Undertake commissioning procedures for plant and/or equipment (Release 1).

Release 1. Supersedes and is equivalent to MEM10008B Undertake commissioning procedures for plant and/or equipment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings for undertaking commissioning procedures for plant and equipment that are new, or replaced or extensively modified
- planning the commissioning procedure in consultation with appropriate personnel and ensuring approvals are obtained in accordance with procedures
- assessing system performance by taking necessary measurements and readings using appropriate test equipment in a safe and effective manner and recording all variances from specifications
- adjusting plant/system performance to specifications and resolving technical difficulties with appropriate personnel
- providing reports in accordance with SOPs, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sequence of events in the commissioning of the machine/plant
- performance tests appropriate to the machine/plant to be commissioned
- measurements required to ensure conformance to specifications and correct points at which measurements are to be taken
- appropriate adjustments to bring the machine/plant into line with operational specifications based on engineering principles or appropriate technical advice
- reporting requirements relevant to the machine/plant being commissioned.

MEM10009 Install refrigeration and air conditioning plant and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM10009B Install refrigeration and air conditioning plant and equipment

Application

This unit of competency defines the skills and knowledge required to install refrigeration/air conditioning systems in commercial, industrial, marine and transport applications in accordance with all relevant Commonwealth, state or territory legislation and regulatory requirements.

Work is undertaken using new or existing internal or external locations and sites and footings, foundations, beds and frameworks are completed prior to installation.

This unit should not be selected with unit MEM10006 Install machine/plant.

Where extensive fitting and alignment are required then see the following units:

- MEM18006 Perform precision fitting of engineering components
- MEM18009 Perform precision levelling and alignment of machines and engineering components

Where modifications involve electrical disconnection and reconnection see unit MEM18049 Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.

A Refrigerant Handling Licence must be held by any person who carries out work in relation to refrigeration and air conditioning equipment.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM05006	Perform brazing and/or silver soldering
MEM09002	Interpret technical drawing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM10010	Install pipework and pipework assemblies
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM18086	Test, recover, evacuate and charge refrigeration systems

Competency Field

Installation and commissioning

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Inspect and prepare installation site**	2.1	Check site for correct location, dimension and levels using appropriate measuring equipment and standard refrigeration/air conditioning practices
		2.2	Report non-compliance with specification to appropriate authority

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.3	Undertake alteration/correction with approval of appropriate authority
		2.4	Prepare all surfaces, materials and components for use
3	**Install refrigeration/air conditioning plant and equipment**	3.1	Carry out all work safely and in accordance with site procedures and to relevant standards
		3.2	Organise refrigeration/air conditioning plant and equipment/components for correct sequential installation
		3.3	Install refrigeration/air conditioning plant and equipment/components in conformance with manufacturers' and site specifications
		3.4	Undertake routine modifications/alterations of the refrigeration/air conditioning plant and equipment according to procedures, as required
		3.5	Ensure refrigeration/air conditioning plant and equipment are levelled, aligned, coupled and connected in accordance with specifications
		3.6	Ensure the refrigeration system is charged with refrigerant and lubricant in accordance with procedures
		3.7	Clean the site and clear all debris and leave in a safe state
4	**Start up refrigeration/ air conditioning plant and equipment and check operation**	4.1	Develop start-up procedure for the refrigeration/air conditioning plant and equipment
		4.2	Ensure the refrigeration/air conditioning plant and equipment are operated and assessed for conformance to specification
		4.3	Identify non-conformances and system faults and take appropriate action/adjustments to specification
		4.4	Complete all reports and documentation to required specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance
