- identifying incidental masters in a key system, selecting a group of codes to form a maisioned cylinder, determining the maximum number of codes that can be produced and identifying any unused codes in an existing system
- expanding the existing key system by using multi-broached plugs/barrels and by converting the progression from even cut to rotating constant
- checking system for interchange, including accidental interchange in accordance with SOPs
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ethical considerations in locksmithing work
- record keeping and management
- manufacturers'/Australian/building standards
- product knowledge and limitations
- key matrixes and schedules
- allowances for expansion
- operation and limitations of masterkey systems
- tiers of systems (KD, KA, MK, GMK, GGMK)
- door handing and cylinder types
- principles of construction keying, sub-masterkeying, cross-keying, selective keying and maison keying
- criteria for key code selection
- strategies for checking key systems for interchange and incidental masters
- strategies for using incidental masters to create sub-masterkeys, cross-keys and selective keys
- strategies for selecting groups of codes to form a maisioned cylinder.

Assessment Conditions

- Assessors must:
  - have vocational competency in developing and implementing a masterkey system at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20009 Gain entry and reinstate fire and security containers

Modification History

Release 1. Supersedes and is equivalent to MEM20009A Gain entry and reinstate fire and security containers

Application

This unit of competency defines the skills and knowledge required to gain entry to fire and security containers that are fitted with mechanical and electronic safe locking systems. It covers straightforward reinstatement of the locking system by removal and replacement of component parts. Containers may be used for commercial or domestic use.

Where welding skills are required then see the appropriate units.

Where the use of fuel gas cutting equipment is required, unit MEM05007 Perform manual heating and thermal cutting should also be selected.

Where repairs to fire and security containers are required see unit MEM20011 Service and repair fire and security containers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM20001	Produce keys

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM20004 Gain entry

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Establish entry requirements, authorisations and ownership**	2.1	Establish safe ownership, contents and ownership of contents and verify in accordance with organisational and industry procedures
		2.2	Establish safe type, locking mechanism and other relevant information from appropriate sources and in accordance with organisational and customer requirements
		2.3	Establish nature of problem and circumstances of prior operation in accordance with SOPs, inspection/diagnostic techniques and original specifications
		2.4	Select appropriate entry method in accordance with specific circumstances, customer requirements and SOPs
		2.5	Determine appropriate location of work and arrange safe removal, as necessary
3	**Gain entry to fire**	3.1	Identify site access requirements and make appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	and security containers		arrangements
		3.2	Identify potential and existing risks and hazards and manage, make area secure, and ensure privacy/security of environment in accordance with organisational and legislative requirements
		3.3	Observe safe work practices to minimise risk of injury to self or others in accordance with procedures and organisational requirements
		3.4	Select appropriate tools, equipment, materials and consumables for entry requirements and check for serviceability in accordance with manufacturers' specifications and SOPs
		3.5	Gain entry in accordance with applicable legislation, codes, regulations and standards
4	**Reinstate fire and security container**	4.1	Select, where applicable, replacement and/or repaired parts as appropriate for reassembly
		4.2	Dismantle/remove lock assemblies and components using appropriate SOPs, industry practices, tools and equipment
		4.3	Inspect sub-assemblies, test and adjust for compliance to original factory assembly and function
		4.4	Prepare components, assemble and adjust using fastening equipment and methods that ensure conformance to specifications, correct functioning, quality and safety of the completed assembly
		4.5	Select lubrication, packing, sealing materials and apply correctly in accordance with job specifications
		4.6	Inspect locking system, test and adjust as necessary for compliance to original factory assembly and functioning
5	**Finalise entry and reinstatement**	5.1	Complete documentation and process in accordance with legislative and organisational requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
process	5.2 Clean work area, tools and equipment and store in accordance with SOPs
	5.3 Clean safe and return to serviceable condition
	5.4 Advise customer of work undertaken and further recommended actions and any other relevant information
	5.5 Instruct customer, as necessary, in accordance with organisational procedure and manufacturer recommendations

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

PPE includes one (1) or more of:

- face shields, goggles and safety glasses
- hearing protection
- dust masks and respirators
- high visibility vests or clothing
- head protection
- sun protection, hats and sun screen
- gloves and knee pads
- safety footwear
- witches hats
- warning signs and warning tapes
- temporary safety barriers
- fire extinguisher
- first aid kit

Safe types include one (1) or more of the following:

- plate safes
- slab safes
- fire
- data
- cash and/or jewellery
- under-floor
- wall
- free standing
- bank safes and vaults

Appropriate sources of information include one (1) or more of the following:

- catalogues
- manufacturer manuals
- drawings
- detailed/technical sketches
- associated data sheets
- colleague/industry expert
- specifications
- charts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Basis for entry includes one (1) or more of the following:	• lost combination • lockout (keys inside) • lost keys (rekeys) • malfunction • damage caused by burglary or user • requirement to safely remove, replace and reinstate original and replacement components and locking systems
Customer requirements include one (1) or more of the following:	• function and capabilities • access issues • service and maintenance requirements • product operation and warranty information • costings
Entry method includes one (1) or more of the following:	• mechanical drilling and cutting • safe lever lock - impressioning reading • safe lever lock - picking • safe lock picking • manipulation of mechanical combination locks • manipulation of electro-mechanical combination locks • alternative methods
Risks and hazards include one (1) or more of the following:	• safe construction • chemical, environmental and material hazards • lifting and handling • use of mechanical and fuel gas cutting equipment • electrical wiring • exposure to asbestos, dust, noise, live power, vermin, water and glass fibre

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment include one (1) or more of the following:	• hand and power tools and accessories specific to gaining entry:
	  • hardened drill bits
	  • special-purpose equipment
	  • borescope, flexi-light and fibre optical scope
	  • automatic dialler (soft drill)
	  • listening devices and manipulation aids
	  • magnetic or vacuum based drills and lever rigs
	• measuring equipment:
	  • vernier callipers
	  • rules
	  • squares
	  • templates
	  • gauges

Materials and consumables include one (1) or more of the following:	• lubricants:
	  • machine oil
	  • general purpose grease
	  • graphite powder
	  • lithium grease
	• adhesives and sealants
	• cleaning materials
	• wire and cable
	• security seals and replacement barrier materials
	• replacement parts

Lock assemblies and components include one (1) or more of the following:	• keylocks • keyless combination locks • electronic digital • electronic and mechanical time delay
Documentation includes one (1) or more of the following:	• historical records • procedures and measurements for opening specific safes • job sheets • invoices • warranties

Assessment Requirements for MEM20009 Gain entry and reinstate fire and security containers

Modification History

Release 1. Supersedes and is equivalent to MEM20009A Gain entry and reinstate fire and security containers

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- interpreting information specific for gaining entry
- establishing ownership of container and its contents prior to commencing gaining entry
- questioning, confirming and clarifying customer requirements
- communication with the customer as required throughout the entry and reinstatement process
- identifying the safe type and associated equipment and checking function of safe locking systems
- tracing faults and selecting the appropriate entry method
- gaining entry using appropriate tools and equipment
- identifying actual and potential risks and hazards and implementing control measures
- undertaking numerical operations and calculations associated with gaining entry and reinstating fire and security containers
- disassembling/ reassembling lock assemblies and components and selecting materials and consumables
- identifying alternative servicing and repair options in accordance with SOPs
- cleaning worksite in accordance with original presentation, client requirements, industry standards and SOPs
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- legislation, codes, regulations and standards applicable to gaining entry to fire and security containers
- sources of specifications and other relevant information for safe locking systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types and classes of safes and locks
- barrier materials used
- tools and equipment to suit entry to specific safes
- components of safe locking systems
- principles of safe systems and component function
- operating principles and technical terminology of safes
- ethical considerations in locksmithing work
- operation of specific locks
- common safe design problems and servicing issues and faults arising from vandalism, misuse and wear
- checks and tests to confirm service requirements
- organisational procedures for establishing service requirements
- procedures to establish and verify safe and contents ownership and obligations, responsibilities, disclaimers and reasons for verifying ownership
- factors impacting on feasibility of repair or replacement
- dismantling and assembly procedures for a range of safe locks and reasons for care and precision
- procedures for replacing worn and damaged parts, removing foreign objects and lubricating, packing and sealing components
- SOPs for cleaning and storage
- key blanks to suit model and mechanical/electronic part of lock
- programming and operating procedures for electronic locks
- documentation and recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in gaining entry and reinstating fire and security containers at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20010 Gain entry and reinstate automotive locking systems

Modification History

Release 1. Supersedes and is equivalent to MEM20010A Gain entry and reinstate automotive locking systems

Application

This unit of competency defines the skills and knowledge required to gain entry to all types of automobiles fitted with mechanical and/or electronic locking systems, and covers straightforward reinstatement of the vehicle locking system by removal and replacement of component parts.

Where interpretation of detailed, complex manufacturer information and specifications is required unit MEM16012 Interpret technical specifications and manuals should also be selected.

Where repairs greater than straightforward remove and replace are required unit MEM20012 Service and repair mechanical automotive locking systems should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM20001	Produce keys
MEM20002	Assemble and test lock mechanisms
MEM20004	Gain entry

MEM20011 Service and repair fire and security containers

Modification History

Release 1. Supersedes and is equivalent to MEM20011A Service and repair fire and security containers

Application

This unit of competency defines the skills and knowledge required to dismantle, inspect, repair, replace, service and assemble fire and security safes or containers and their components. It applies to service and repair work on commercial and domestic fire and security containers and can apply to regular servicing or call-out work and also be required after entry has been gained.

Where interpretation of detailed, complex manufacturer information and specifications is required unit MEM16012 Interpret technical specifications and manuals should also be selected.

Where gaining entry and reinstatement by straightforward replacement of existing or replacement parts is required unit MEM20009 Gain entry and reinstate fire and security containers should also be selected.

Where welding skills are required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **6**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18001	Use hand tools

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify service requirements**	2.1	Establish ownership of safe/container and contents and verify in accordance with organisational, legal and industry procedures
		2.2	Obtain type of safe and lock mechanism specifications from appropriate sources and in accordance with SOPs and customer requirements
		2.3	Establish nature of any damage or malfunction to exterior, interior and lock components in accordance with organisational procedures, established inspection/diagnostic techniques and original specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.4	Establish service and repair requirements and other information relevant to task in accordance with customer needs, organisational and manufacturer specifications and legislation, codes, regulations and standards
		2.5	Determine appropriate location of work and arrange removal of safe, as necessary
3	**Repair, replace and service safe components**	3.1	Identify risks and hazards and make area secure
		3.2	Inspect safe/container locking components and establish further specific repair/service requirements, options and recommend actions in accordance with organisational requirements and factors impacting on feasibility of repair
		3.3	Dismantle lock assemblies and components using appropriate organisational procedures, industry practices, tools and equipment
		3.4	Repair/replace/service components as necessary and practicable
		3.5	Select appropriate lubrication and sealing materials and apply in conformance to standard locksmithing procedures
		3.6	Inspect boltwork and internal lock components, test and adjust as necessary for compliance to original factory assembly and functioning
4	**Finalise servicing/ repair process**	4.1	Test function of specific components and entire locking system for compliance with operational specifications and adjust, as necessary
		4.2	Complete and process documentation in accordance with legislative, assignment and organisational requirements
		4.3	Clean work area, tools and equipment and store in accordance with SOPs
		4.4	Clean safe/container and return to service according to

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Other information includes one (1) or more of the following:

- schedules
- timeframes
- access and site information
- products
- installation and upgrade requirements
- specific client requests
- materials
- costings
- warranties and service information
- legislation
- codes and regulatory requirements
- WHS requirements

Risks and hazards include one (1) or more of the following:

- safe construction
- chemical and material hazards
- lifting and handling
- use of mechanical and fuel gas cutting equipment
- exposure to asbestos, dust, noise, live power, vermin, water and glass fibre

Tools and equipment include one (1) or more of the following:

- hand tools relating to safe service and repair
- power tools and accessories
- drop sheets and vacuum cleaner
- various change keys to suit the safe

Materials and consumables include one (1) or more of the following:

- lubricants
- adhesives and sealants
- cleaning materials
- wire and cable
- security seals and replacement barrier materials
- replacement parts

Assessment Requirements for MEM20011 Service and repair fire and security containers

Modification History

Release 1. Supersedes and is equivalent to MEM20011A Service and repair fire and security containers

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- establishing ownership of container and its contents prior to commencing service and repair
- interpreting information specific to servicing and repairing fire and security containers
- questioning, confirming and clarifying customer requirements
- identifying the type of safe and checking function of locking mechanism
- tracing faults and using appropriate tools and equipment to service and repair fire and security containers
- identifying actual and potential risks and hazards and implementing control measures
- dismantling lock assemblies using appropriate tools, equipment and procedures and using materials and consumables in accordance with SOPs
- inspecting work to confirm compliance to original factory assembly and functioning
- cleaning safe/container and returning it to service according to organisational and customer requirements
- completing all documentation, including historical records, procedures and measurements for opening specific safes, job sheets, invoices and warranties in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- legislation, codes, regulations and standards applicable to servicing and repairing fire and security containers
- sources of specifications and other relevant information for safe locking systems
- components of safe locking systems
- principles of system and component function
- operating principles and technical terminology relating to safes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- rating system
- manipulation-proof ratings (classes)
- operation of specific locks
- common safe design problems and servicing issues and faults arising from vandalism, misuse and wear
- fault-finding techniques
- checks and tests to confirm service requirements
- procedures for establishing service requirements
- procedures to establish and verify safe and contents ownership and obligations, responsibilities, disclaimers and reasons for verifying ownership
- environmental, physical and behavioural hazards in relation to safe and surrounds
- factors impacting on feasibility of repair/replacement
- dismantling and assembly procedures for a range of safe locks and reasons for care and precision
- procedures for replacing worn and damaged parts, removing foreign objects and lubricating (non-dry/non grease), packing and sealing components
- organisational requirements for cleaning and storage
- key blanks to suit model and mechanical/electronic part of lock
- programming and operating procedures for electronic locks
- documentation and recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing fire and security containers at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20012 Service and repair mechanical automotive locking systems

Modification History

Release 1. Supersedes and is equivalent to MEM20012A Service and repair mechanical automotive locking systems

Application

This unit of competency defines the skills and knowledge required to identify service and repair requirements for mechanical automotive locking systems on commercial and private use vehicles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM20001	Produce keys
MEM20002	Assemble and test lock mechanisms
MEM20006	Maintain and service mechanical locking devices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify service and repair requirements**	2.1	Establish ownership and verify in accordance with organisational and industry procedures
		2.2	Obtain system and component specifications and other relevant information from appropriate sources and in accordance with organisational and customer requirements
		2.3	Establish nature of damage in accordance with organisational procedures, established inspection/diagnostic techniques and original specifications
		2.4	Establish service and repair requirements and other information relevant to task in accordance with customer needs, organisational and manufacturer specifications and legislation, codes, regulations and standards
3	**Repair, replace and service automotive locking system**	3.1	Identify risks and hazards and make area secure
		3.2	Apply specific isolation and safety measures with special regard to associated equipment
		3.3	Select tools, equipment, materials and consumables, check for serviceability and use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.4	Inspect lock assemblies and components and remove, repair, service and replace as appropriate and practicable, in accordance with SOPs, industry practices and factors impacting on feasibility of repair
	3.5	Inspect sub-assemblies and assemblies, test and adjust as necessary for compliance to original factory assembly and functioning
4 **Finalise servicing process**	4.1	Check function of entire locking system for compliance with operational specifications and adjust, as necessary
	4.2	Complete documentation and process in accordance with legislative, assignment and organisational requirements
	4.3	Clean work area, tools and equipment and store in accordance with SOPs
	4.4	Clean vehicle and return to serviceable condition according to customer and organisational requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

PPE includes one (1) or more of the following:

- face shields, goggles and safety glasses
- hearing protection
- dust masks and respirators
- high visibility vests or clothing
- head protection
- sun protection, hats and sun screen
- gloves and knee pads
- safety footwear
- witches hats
- warning signs and warning tapes
- temporary safety barriers
- fire extinguisher
- first aid kit

Appropriate sources of information include one (1) or more of the following:

- catalogues
- manufacturer manuals
- drawings
- detailed/technical sketches
- computer software/internet
- colleagues/industry experts
- associated data sheets

Other information includes one (1) or more of the following:

- schedules
- timeframes
- access and site information
- products
- installation and upgrade requirements
- specific client requests
- materials
- costings
- warranties and service information
- legislation, codes and regulatory requirements
- WHS requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Customer requirements include one (1) or more of the following:	• function and capabilities • access issues • service and maintenance requirements • product operation and warranty information • costings
Risks and hazards include one (1) or more of the following:	• accidental triggering of supplemental restraint systems (SRS) (air bags) • unique dangers arising from working on the roadside • non-compliance with manufacturer recommendations, materials handling, chemical and environmental • physical hazards
Associated equipment includes one (1) or more of the following:	• air bags and other SRS equipment • steering locking devices • anti-theft devices
Lock assemblies and components include one (1) or more of the following:	• in-line pin • single and double sided wafer • 2 and 4 track • tibbe (rotating disc) • dimple • sidebar • split wafer • new and other mechanisms
Tools and equipment include one (1) or more of the following:	• hand tools • power tools and accessories • security driver bits • fixing tools • special-purpose equipment • trim removal tools • fibre optic scope • soldering iron • vacuum cleaner

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials and consumables include one (1) or more of the following:	• lubricants • adhesives and sealants • cleaning materials • wire and cable • insulation tape/shrink tube/electrical connectors • solder • electronic components
Documentation includes one (1) or more of the following:	• historical records • procedures and measurements for opening specific vehicles • job sheets • invoices • warranties

Assessment Requirements for MEM20012 Service and repair mechanical automotive locking systems

Modification History

Release 1. Supersedes and is equivalent to MEM20012A Service and repair mechanical automotive locking systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- establishing ownership of vehicle contents prior to commencing service and repair
- interpreting information specific for servicing and repairing mechanical automotive locking systems
- questioning, confirming and clarifying customer requirements
- identifying the type of locking components and checking functioning of locking systems
- tracing faults and using appropriate tools and equipment to service and repair mechanical automotive locking systems
- identifying actual and potential risks and hazards
- repairing/replacing/servicing locking assemblies using appropriate tools, equipment and procedures
- cleaning vehicle in accordance with original presentation, client requirements, industry standards and SOPs
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- attachment methods for window winders, internal handles, snibs, trims, cylinders, locks and external handles
- system and component specifications
- sources of specifications and other relevant information for mechanical automotive locking systems
- components of locking system
- principles of system and component function
- operating principles and technical terminology of specific locks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- common design problems and faults arising from vandalism, misuse and wear
- checks and tests to confirm service requirements
- organisational procedures for establishing service requirements
- procedures to establish and verify vehicle ownership and reasons for verifying ownership
- operating principles, release positions and isolation techniques for air bags
- factors impacting on feasibility of repair or replacement
- dismantling procedures for a range of automotive locks and reasons for care and precision
- procedures for replacing worn and damaged parts, removing foreign objects and lubricating, packing and sealing components
- organisational requirements for cleaning and storage
- documentation and recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing mechanical automotive locking systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20013 Service automotive transponder systems

Modification History

Release 1. Supersedes and is equivalent to MEM20013A Service automatic transponder systems

Application

This unit of competency defines the skills and knowledge required to identify, analyse, encode and re-encode (programme) automotive transponder security systems on commercial and private use vehicles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C5 (AQF level V).

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM20001	Produce keys

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

Assessment Requirements for MEM20013 Service automotive transponder systems

Modification History

Release 1. Supersedes and is equivalent to MEM20013A Service automatic transponder systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- establishing and verifying ownership in accordance with organisational and industry procedures
- interpreting information specific for servicing automotive transponder systems
- questioning, confirming and clarifying customer requirements
- recognising personal limitations in assessing requirements for automotive transponder systems and seeking assistance from appropriate person(s) in accordance with SOPs
- identifying automotive locking components and associated equipment and checking functioning of locking systems
- tracing faults and using appropriate tools and equipment to service automotive transponder systems
- identifying actual and potential risks and hazards
- establishing program requirements, programming keys to correct specification, and testing system for conformance
- cleaning worksite in accordance with SOPs
- completing all documentation in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- system and component specifications and principles of operation
- sources of specifications and other relevant information for automotive transponder systems
- types of transponders and technical terminology used
- common design problems and faults arising from vandalism, misuse and wear
- checks and tests to confirm service requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- organisational procedures for establishing service requirements
- procedures to establish and verify vehicle ownership and reasons for verifying ownership
- operating principles, release positions and isolation techniques for air bags
- operation and function of transponder and engine immobiliser systems
- factors impacting on feasibility of repair or replacement
- dismantling procedures for a range of automotive locks and reasons for care and precision
- procedures for replacing worn and damaged parts, removing foreign objects and lubricating, packing and sealing components
- organisational requirements for cleaning and storage
- key blanks to suit model and mechanical/electronic part of lock
- different types of transponder technologies
- programming and operating procedures for encoder/diagnostic machine
- documentation and recording procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing automatic transponder systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM20014 Perform a site security survey

Modification History

Release 1. Supersedes and is equivalent to MEM20014A Perform a site security survey

Application

This unit of competency defines the skills and knowledge required to examine and assess security requirements across commercial, industrial and domestic applications and requires the ability to source relevant information, establish security risk and use appropriate assessment methods to ensure an accurate determination of security equipment/system options to meet client needs.

Where estimates and quotes are required unit CPPSEC3047A Provide estimate and quote on security system should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Locksmithing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare to assess security requirements**	2.1	Review job requirements and clarify with appropriate person(s) in accordance with organisational requirements
		2.2	Conduct discussions with customer to establish actual and potential security risks and clarify scope of work
		2.3	Apply effective interpersonal techniques when interacting with customer
		2.4	Identify site access and specific site requirements and make appropriate arrangements, as required, in accordance with client and organisational requirements
		2.5	Identify personal limitations in assessing security requirements and seek assistance from appropriate person(s)
3	**Assess security requirements**	3.1	Identify site restrictions, regulations and requirements in accordance with client and organisational requirements
		3.2	Gather relevant information from identified sources and apply to assignment requirements
		3.3	Carry out a site assessment to facilitate an accurate determination of security requirements, where possible
		3.4	Review client assets, activities and existing security arrangements to assess the level and range of security risk to client operations
		3.5	Identify weak points, risk areas and environmental factors affecting the security risk of the site and assess in accordance with organisational procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Document security assessment**	4.1 Record information and store in accordance with organisational procedures
	4.2 Complete a comprehensive assessment of client security requirements within designated timeframes and present for review to appropriate person(s)
	4.3 Prepare a security survey in accordance with industry and organisational standards of style, format and accuracy
	4.4 Make recommendations for security equipment/systems and provide alternative options in accordance with organisational requirements
	4.5 Process documentation in accordance with legislative, assignment and organisational requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Job requirements include one (1) or more of the following:	• instructions from supervisor/management • work schedules and completion dates • specific client requirements • site requirements • security clearance and access requirements • reporting and documentation requirements • budget allocations • national construction code • fire regulations
Appropriate person(s) includes one (1) or more of the following:	• clients • site managers • project managers • engineers and technicians • technical experts • line managers/supervisors • colleagues • regulatory personnel • security consultants
Customer includes one (1) or more of the following:	• owner • property/other agent • tenant • building supervisor • manager • project manager • architect • government and legal instruments/agencies
Scope of work includes one (1) or more of the following:	• personal protection • access requirements • property or assets • conformance with insurance • legislative or other requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Interpersonal techniques include one (1) or more of the following:	• verbal or non-verbal language • two-way interaction • constructive feedback • active listening • questioning to clarify and confirm understanding • interpreting non-verbal and verbal messages • observation techniques • use of positive, confident and cooperative language • control of tone of voice and body language • use of language and concepts appropriate to cultural differences • clear presentation of options and consequences • demonstrating flexibility and willingness to compromise
Site access and specific site requirements include one (1) or more of the following:	• access and egress points • time of access • access codes • keys and passes • security clearances • union requirements • WHS requirements • building codes and regulations • heritage listings • noise control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Security threats and risks include one (1) or more of the following:

- vandalism
- sabotage
- trespass
- break-in
- burglary
- assault or harm
- unauthorised access
- accidents
- theft
- pilferage
- terrorist acts
- theft of information
- rioting and civil disorder
- natural disasters
- power loss
- deliberate/accidental damage to people, property and premises

Weak points and risk areas include one (1) or more of the following:

- unsecured or poorly secured entry points
- entry points screened from public view
- entry points with old or worn locks
- external doors without deadlocks or with hinges opening outward
- flimsy building materials and client habits

Environmental factors include one (1) or more of the following:

- adequacy of street lighting
- traffic flow
- neighbourhood crime rating
- proximity of other buildings

Assessment includes involving one (1) or more of the following:

- discussions with client
- crime prevention through environmental design (CPTED) site inspection
- visual inspections
- review of client floor plans and supporting documentation
- police/insurance companies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Information includes one (1) or more of the following:	• value or importance of assets • insurance policy agreements • special rooms or areas requiring higher level of protection • current/proposed operating environments • assets and systems • activities and functions • existing security systems/equipment • existing management strategies • business and operational plans • incident history
Site assessment includes one (1) or more of the following:	• type and condition of building structures • identification of risk areas/weak points • site restrictions • regulations and requirements • access and egress patterns • floor plan • existing security equipment/systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Security equipment and systems include one (1) or more of the following:	• detection devices • audible/visual warning devices • cameras • monitors and control equipment • control panels • intercoms • wireless equipment • car alarms • electronic readers • electronic recognition controls • locks and locking systems • grills • lighting • boom gates • turnstiles • bank pop-up screens • smoke detection devices • electric/mechanical fire safety and fire locking systems • power supplies • batteries • security doors and door controls
Documentation includes one (1) or more of the following:	• checklists • reports • floor plans • client briefs • specifications • schedules • site survey

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM20014A Perform a site security survey

Assessment Requirements for MEM20014 Perform a site security survey

Modification History

Release 1. Supersedes and is equivalent to MEM20014A Perform a site security survey

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- using effective interpersonal techniques when interacting with customer
- identifying site access and specific site requirements
- identifying security threats and risks
- recognising personal limitations in assessing requirements for surveying site security and seeking assistance from appropriate person(s) in accordance with SOPs
- carrying out a site assessment and identifying weak points and risk areas affecting the security risk to the site
- preparing a security survey, including environmental factors that impact on the type of security system to be fitted
- making recommendations for security equipment and systems
- completing all documentation in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- risk assessment methods and procedures
- risks and threats to site security
- available security equipment/system options and basic requirements for installation
- types and functions of security equipment and systems
- building construction methods and types
- organisational and client confidentiality requirements
- basic problem solving strategies
- operational principles of information technology
- interpersonal techniques
- documentation requirements and processes.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing a site security survey at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21001 Replace watch batteries, capacitors and bands

Modification History

Release 1. Supersedes and is equivalent to MEM21001A Replace watch batteries, capacitors and bands

Application

This unit of competency defines the skills and knowledge required to select and replace electronic watch power sources and bands and includes conducting any required water-resistance testing.

It applies to work conducted in a watch service and repair workshop, kiosk or jewellery store with access to the appropriate equipment.

Where additional servicing of watch cases is to be performed unit MEM21003 Perform watch case servicing, repair and refurbishment should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with standard operating procedures
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Establish servicing requirements and liaise with customer**	2.1	Inspect watch condition and type and discuss performance concerns with customer
		2.2	Verify and agree on servicing requirements with customer
		2.3	Carry out pre-repair tests to verify water resistance
		2.4	Prepare watch for handover
		2.5	Record and document repair process
3	**Open and close watch cases**	3.1	Select and use appropriate workshop tools and equipment
		3.2	Identify watch and band construction and components
		3.3	Open and close watch cases
		3.4	Inspect parts and report and record results
		3.5	Verify gasket condition and replace, as required
		3.6	Clean cases and bands, as required, during and after repair
4	**Select and replace power sources**	4.1	Remove power sources using appropriate tools and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		4.2	Inspect watch for battery leakage damage and clean or refer for further service, as appropriate
		4.3	Assess physical condition of existing cell and its operation under load
		4.4	Select, replace and secure appropriate replacement power sources
		4.5	Perform integrated circuit resetting or all clear operations, as required
		4.6	Handle, store and dispose of power sources in accordance with environmental guidelines
5	**Perform electrical testing**	5.1	Set up and use multimeters in a correct manner
		5.2	Test cell terminal voltage under load using correct methods and equipment
		5.3	Test watch circuitry for current consumption using correct methods and equipment
		5.4	Confirm results against manufacturer specifications
6	**Select and replace bands**	6.1	Identify band attachment and removal method
		6.2	Remove and replace bands and components, as necessary, using appropriate methods, tools and equipment
		6.3	Determine dimensions and type of replacement bands/components required
7	**Conduct water-resistance testing**	7.1	Identify watches requiring water-resistance or pressure testing
		7.2	Select appropriate water-resistance testing methods and equipment according to watch type
		7.3	Set up and use equipment to verify results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Preparing watch for handover includes one (1) or more of the following:	• confirming watch keeping on time • function checking (calendar, light, chronograph and alarm) • confirming display setting (time, calendar and other multi-functions)
The time keeping element in electronic watches includes one (1) or more of the following:	• quartz crystal • kinetic mechanism • tuning fork • electronic balance
Watch construction and components include one (1) or more of the following:	• mechanical • electronic • digital • analog • duo • kinetic • auto quartz
Band construction and components include one (1) or more of the following:	• bracelets • bands • clasps • straps

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workshop tools and equipment include one (1) or more of the following:	• hand tools appropriate to watch case construction and repair of watches • PPE • non-conductive tweezers • case opening and closing tools • glass and case press • plastic sheet protection • cleaning brushes • rodico
Power sources include one (1) or more of the following:	• primary and secondary cells • silver oxide cells, including high, low and multi-drain types • capacitors • lithium batteries
Record and document repair includes one (1) or more of the following:	• date and extent of repairs completed • cost of components replaced or used • time spent on procedure • marking the date of fitting for replacement cell/code • electrical testing results (current consumption/ running time calculated) • water-resistance test results
Band attachment and removal includes one (1) or more of the following:	• springlug • tapered pin • cotter pin • screwed
Multimeters include one (1) or more of the following:	• analog • digital • external power supplies • ampere • volts • Ohms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Water-resistance testing methods include one (1) or more of the following:	• Australian Standard for watches and water-resistant/divers watches • vacuum or over pressure • air leak • water immersion • condensation test

Unit Mapping Information

Assessment Requirements for MEM21001 Replace watch batteries, capacitors and bands

Modification History

Release 1. Supersedes and is equivalent to MEM21001A Replace watch batteries, capacitors and bands

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer and carrying out pre-repair tests on watches, and recording and documenting repair process
- opening and closing watch cases using appropriate watch repairers' tools and confirming watch movement's performance
- identifying, handling and storing power cells
- performing electrical testing using electrical test equipment and confirming results against manufacturers' specifications
- removing bands and band attachments using appropriate methods, tools and equipment
- determining dimensions of band width
- applying water-resistance testing methods and verifying results
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- watch and band construction, components and materials
- operating principles of power cells, batteries, capacitors and voltages (1.55v d.c. – 3v d.c.)
- methods of identifying watches requiring water-resistance or pressure testing
- how to confirm battery capacity
- handling, storage and disposal procedures for watch power sources
- removal procedures for watch glasses, gaskets and other components
- environmental guidelines and regulations relevant to the disposal of watch power sources
- multimeter types and how to set up, use and record values
- Australian Standards for water-resistant watches
- methods of identifying watches requiring water-resistance or pressure testing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods of water-resistance testing for watches and advantages and disadvantages of each method.

Assessment Conditions

- Assessors must:
  - have vocational competency in replacing watch batteries, capacitors and bands at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21002 Perform watch movement exchange

Modification History

Release 1. Supersedes and is equivalent to MEM21002A Perform watch movement exchange

Application

This unit of competency defines the skills and knowledge required to repair watches through replacement of quartz and mechanical watch movements.

Where water-resistance testing is required see unit MEM21003 Perform watch case servicing, repair and refurbishment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

			required
		4.5	Remove and replace movements without damaging, marking or leaving fingerprints
		4.6	Verify correct replacement movement is selected
5	**Remove and replace hands and dials**	5.1	Identify release mechanism for watch dials
		5.2	Remove and replace hands and dials without marking or damaging components
		5.3	Check and service hands and dials, as required
		5.4	Fit hands to synchronise with each other, dial batons and calendar
		5.5	Use correct workshop tools and equipment taking precautions for removal and replacement
		5.6	Check hands and dial clearances
6	**Conduct final inspections**	6.1	Inspect watch for cleanliness and rectify imperfections and faults
		6.2	Check functionality of crown, stems and pushbuttons
		6.3	Confirm watch performance, hand alignment and calendar function and synchronisation
		6.4	Record and document repair

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Record and document repair includes the following:	• date and extent of repair • cost of replacement part • time spent on procedure
Workshop tools and equipment include one (1) or more of the following:	• specialised hand removers • case opening tools • cutting tools • files • hand fitting tools • general hand tools • cleaning media and lubricants
Appropriate working environment includes one (1) or more of the following:	• suitable watchmaker's bench • clean and orderly work area (precautions taken to minimise dust) • adequate lighting • ergonomic chair with adjustable height
Case fixings include one (1) or more of the following:	• case screws • movement rings • stem
Custom replacement includes one (1) or more of the following:	• determining custom stem length • cutting and filing stem end and securing crown • replacing screw or friction fitted worn or damaged pendants • servicing, cleaning and replacing pushbutton • inspecting all crown, pendant, pushbutton gaskets for condition, and replacing and lubricating, as required
Check and service hands and dials include one (1) or more of the following:	• luminance of hands • dial feet condition • rust and contamination • water marks • damage and wear to hands

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Clearances include one (1) or more of the following:	• hand clearance from each other • hand clearance from dials • hand clearance from glass

Assessment Requirements for MEM21002 Perform watch movement exchange

Modification History

Release 1. Supersedes and is equivalent to MEM21002A Perform watch movement exchange

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer and verifying condition and performance, identifying repair costs and recording and documenting repair process
- opening and closing watch cases for watch movement exchange using appropriate workshop tools and equipment
- cleaning watch components in accordance with procedures
- replacing watch movements for both quartz and mechanical watches in an appropriate work environment without damage or marking movement
- selecting and fitting replacement case parts, crown and stems without damage and performing custom replacement, as required
- removing and replacing hands and dials without damaging or marking components and checking and servicing hands and dials
- ensuring correct dial, hand alignment and clearances
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of watch construction
- methods of identifying watches requiring water-resistance or pressure testing
- types of stems and crowns
- hand tools
- stem position for removal
- various watch case components
- various types, styles and materials of dials and hands
- various watch crown types, styles and materials.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing watch movement exchange at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Watch case auxiliary components include one (1) or more of the following:	• watch glasses • pendants • pushbuttons and correctors • bezels • case backs • gaskets • crowns and bands • straps or bracelets
Watch case types include (1) one or more of the following:	• pocket watch • wrist watch • ring watch • necklace • specialist watches • non water-resistant (two piece case) • non water-resistant (three piece case) • water-resistant (two piece case) • monocoque (one piece case)
Watch materials include one (1) or more of the following:	• precious metals • stainless steel • ceramic • titanium • others

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Watch construction includes one (1) or more of the following:	• case body • bezel glass • case back • pushbutton • case ring • gaskets
Watch case/band condition includes one (1) or more of the following:	• completeness • scratches, dents and worn plating • general wear and tear • water-resistance performance
Recommended service procedures include the following:	• replace worn or damaged components • repair • refurbish • case refurbishment to customer requirements
Record and document repair includes the following:	• extent and date of repair • cost of replacement parts • time spent on procedure
Appropriate working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • tools and equipment organised and in good condition • ergonomic seating • dust extraction
Case components and movement sub-assemblies include one (1) or more of the following:	• glass • spring fit • armoured • mineral and sapphire • bezel • case back and gaskets • crown • pendant (friction fit or screwed) • gaskets

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Inspect condition includes one (1) or more of the following:	• originality of components • cleanliness • wear • damage • corrosion
Watch case assembly inspections and precautions include one (1) or more of the following:	• use plastic protection whilst opening and closing • alignment of components • security of pendants • pushbutton operation • screw crowns and stem length • damage to stem when securing crown • cleanliness
Water-resistance rating includes one (1) or more of the following:	• minimum standard of 20 metres, or additionally to 30 metres and 50 metres • minimum standards for divers watch of 100 metres or up to 3000 metres
Methods to test water-resistance include one (1) or more of the following:	• vacuum • over pressure • combined test • water immersion method • air leak method • condensation test
Hand tools and equipment include one (1) or more of the following:	• pin vices and case holders • case opening and closing tools • glass press and vigor tool • adhesives • polishing machines and various grades of buff wheels • polishing and graining (3M media in various grades)

Assessment Requirements for MEM21003 Perform watch case servicing, repair and refurbishment

Modification History

Release 1. Supersedes and is equivalent to MEM21003A Perform watch case servicing, repair and refurbishment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer and verifying condition and performance, identifying repair costs and recording and documenting service/repair process
- servicing, inspecting, repairing and replacing watch case components in an appropriate work environment
- selecting and using appropriate workshop tools, equipment and media for watch case servicing, polishing and graining
- determining and conducting appropriate tests for water-resistant watches
- safely cleaning watch cases and bands.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of construction of watch cases by style, design, material and quality
- types of watch glass materials, construction and fitting procedures, including use of adhesives, as required
- types of crown construction by style, design, material and quality
- types of case gasket materials and construction fitting procedures
- types of crown styles, materials and construction
- types of pushbutton construction
- standards for water-resistance ratings
- standards for water-resistance testing methods
- procedures for testing water-resistant and divers watches
- function and operating principles for water-resistance testing
- tools and equipment for servicing watch cases and components
- watch case cleaning methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types of band construction, components and materials.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing watch case servicing, repair and refurbishment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21004 Clean watch and clock components

Modification History

Release 1. Supersedes and is equivalent to MEM21004A Clean watch and clock components

Application

This unit of competency defines the skills and knowledge required to apply cleaning techniques for watch and clock movements, cases and other components by manual, mechanical and electronic methods, using a range of media.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Horology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Identify job requirements from specifications, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Apply principles of WHS to cleaning activities**	2.1	Select and use appropriate personal protective equipment (PPE) based on information in relevant safety data sheet (SDS)
		2.2	Identify hazards associated with cleaning equipment and media
		2.3	Follow emergency response procedures
3	**Select and prepare appropriate methods, equipment and solutions**	3.1	Select cleaning methods, processes and equipment according to type and size of mechanisms, components and cases
		3.2	Select cleaning solutions appropriate to component, finish, surface coating and material
		3.3	Decant, mix and prepare solutions for use
		3.4	Dispose of chemicals according to manufacturer guidelines, legislation and regulations
4	**Prepare parts and components for cleaning**	4.1	Dismantle watch or clock and component parts to optimise cleaning
		4.2	Pre-clean components, as required, for inspection
		4.3	Arrange components during machine cleaning to prevent damage
		4.4	Arrange and sequence parts and components for cleaning to assist subsequent identification, reassembly and to optimise cleaning
5	**Perform cleaning operations**	5.1	Set up and operate cleaning equipment using correct and safe work practices
		5.2	Monitor and control exposure of components to solutions during cleaning process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		5.3 Remove residues, dry and handle cleaned components, as appropriate
		5.4 Arrange storage of cleaned components to maintain finish and cleanliness
6	**Assess outcomes of cleaning process**	6.1 Verify condition of cleaned components and identify remaining residues and contaminants, damage to surface coatings and other component damage
		6.2 Account for all components

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

PPE includes one (1) or more of the following:	• protective masks • gloves for handling chemicals • fire blankets and extinguishers • ventilation of cleaning area • clothing (dustcoats and aprons)
Emergency response procedures include one (1) or more of the following:	• safe selection and use of fire extinguishers • use of safety blankets and other methods of suppressing solvent-based fires • emergency treatment of eye splashes and chemical burns • emergency treatment of chemical inhalation and absorption

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Cleaning methods, processes and equipment include one (1) or more of the following:	• rotational mechanical processes • vibrational mechanical processes • electronic (ultrasonic) • steam cleaning • cleaning machines • cleaning baskets • hand cleaning
Cleaning solutions include one (1) or more of the following:	• number 1 degreasing and cleaning solution (WF1) • customised solutions • ammonia • oleic acid • acetone • water-based solutions • commercial grade ammonia concentrates • rinsing solutions • hydrocarbon solvents

Unit Mapping Information

Assessment Requirements for MEM21004 Clean watch and clock components

Modification History

Release 1. Supersedes and is equivalent to MEM21004A Clean watch and clock components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting appropriate cleaning methods, processes and equipment appropriate to the work being carried out
- selecting cleaning solutions appropriate to component, finish, surface coating and material
- working safely with chemicals and equipment based on information in relevant safety data sheet (SDS)
- sorting and tracking components during cleaning process
- cleaning components without damage and verifying components have been effectively cleaned
- following emergency response procedures, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- cleaning solutions and uses
- cleaning procedures for different components and finishes
- watch case cleaning methods (ultrasonic and vibrationary)
- cleaning machine types, uses, function and operation
- potential for damage to components by chemicals or cleaning operations
- chemical storage and disposal.

Assessment Conditions

- Assessors must:
  - have vocational competency in cleaning watch and clock components at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21005 Diagnose faults in quartz watches

Modification History

Release 1. Supersedes and is equivalent to MEM21005A Diagnose faults in quartz watches

Application

This unit of competency defines the skills and knowledge required to test and diagnose faults in electronic quartz watches.

It applies to diagnosing faults where the power cell performance has already been tested and its condition is assessed as good or the correct terminal voltage under load, but the watch continues to indicate faults or is stopped.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM21001	Replace watch batteries, capacitors and bands

Competency Field

Horology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Establish servicing requirements and liaise with customer**	2.1	Verify watch condition and performance concerns with customer
		2.2	Prepare written and verbal quotations
		2.3	Confirm customer agreement on recommended service procedures to remedy faults
		2.4	Record and document repair process
3	**Open and close watch cases**	3.1	Determine need to open case for further testing
		3.2	Select and use appropriate workshop tools and equipment
		3.3	Open and close watch cases
		3.4	Inspect parts and report and record results
		3.5	Verify gasket condition and replace, as required
		3.6	Clean cases and bands during and after repair, as required
4	**Perform test**	4.1	Select appropriate tests for the type of quartz watch
		4.2	Select and use appropriate workshop testing equipment
		4.3	Test quartz watch output signals using industry-specific equipment
		4.4	Assess mechanical condition, including freedom of gear train, as applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	4.5	Maintain testing equipment
	4.6	Record test results
5 **Analyse results and determine faults**	5.1	Interpret test results
	5.2	Carry out further testing to locate faulty components, as required
	5.3	Confirm results against manufacturer specifications
	5.4	Identify faults from test information
	5.5	Evaluate record and communicate recommended servicing requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Types of quartz watches include one (1) or more of the following:	• analog, digital and duo displays • anadigi • calendar and/or moon phase • chronograph and perpetual calendar • alarm and kinetic • auto quartz

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Record and document repair process includes one (1) or more of the following:	• reference to manufacturers' technical guides • customer written quotation detailing faults • recommendations of most appropriate service procedure • estimation of replacement part • time spent on procedure

Tools and equipment include one (1) or more of the following:	• watch case opening and closing tools
	• hand tools, including:
	  • tweezers
	  • screwdrivers
	  • eyeglasses

Tests include one (1) or more of the following:	• acoustic, capacitive and inductive pick-ups/sensors • quartz crystal oscillating signals (32 KHz) • voltage, resistance and current consumption • output pulses (integrated circuits) • pulse generation of step motor • lower working limit • capacitive rate • inhibition rate
Workshop testing equipment includes one (1) or more of the following:	• quartz timing machines with acoustic and capacitive pick-up • inductive pick-up sensors • multimeters • variable voltage supplies • pulse generators
Faulty components include one (1) or more of the following:	• quartz crystal • integrated circuits • electronic circuits • coils • step motors • gear train • dial train • dials and hands

Assessment Requirements for MEM21005 Diagnose faults in quartz watches

Modification History

Release 1. Supersedes and is equivalent to MEM21005A Diagnose faults in quartz watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer and verifying condition and performance, identifying repair costs, and recording and documenting repair process
- opening and closing watch cases using appropriate workshop tools and equipment
- using workshop testing equipment
- selecting and performing appropriate tests and analysing test results
- determining faults and faulty components based on test results and visual inspection.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of quartz watch construction and components
- function/operating principles of electronic quartz watches
- types of cells, power sources, capacitors and electronic storage units
- observation and inspection techniques
- work health and safety (WHS) regulations and procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing faults in quartz watches at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM21006 Service quartz watches

Modification History

Release 1. Supersedes and is equivalent to MEM21006A Service quartz watches

Application

This unit of competency defines the skills and knowledge required to service quartz analog and digital display watches, including modules and case components.

This unit is a common servicing requirement for watch repairers and can extend, in some cases, to the work of service technicians.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM21001	Replace watch batteries, capacitors and bands
MEM21002	Perform watch movement exchange
MEM21005	Diagnose faults in quartz watches

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with customer**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify watch functions and features
		1.4	Prepare written quotation and inform customer of watch condition and performance concerns
		1.5	Outline recommended service procedures to be undertaken to remedy identified faults
		1.6	Verify and agree on servicing requirements with customer
		1.7	Prepare watch for handover
		1.8	Record and document repair process
2	**Disassemble watch case and movement components for servicing**	2.1	Establish appropriate working environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Select and use appropriate workshop tools and equipment
		2.4	Open and close watch cases
		2.5	Remove case movement and components without damaging or marking
		2.6	Verify gasket condition and replace, as required
		2.7	Clean cases and bands, as required
3	**Service watch case and movement**	3.1	Inspect condition of watch case and movement components
		3.2	Confirm servicing requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	components	3.3	Replace faulty or worn component parts
		3.4	Clean components and parts
		3.5	Inspect watch case and movement components for cleanliness and rectify imperfections/faults
		3.6	Use correct tools and equipment for handling and servicing
4	**Reassemble and test watch case and movement components**	4.1	Reassemble watch case and movement components according to manufacturer specifications
		4.2	Confirm correct assembly of gear train and other components
		4.3	Use correct types and amounts of lubricant according to manufacturer specifications
		4.4	Use tools and equipment appropriately taking precautions for correct reassembly
		4.5	Verify/confirm watch functioning according to manufacturer specifications
		4.6	Verify watch performance including rate testing and adjust according to manufacturer specifications, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM21006 Service quartz watches

Modification History

Release 1. Supersedes and is equivalent to MEM21006A Service quartz watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer and verifying condition and performance, identifying service costs, and recording and documenting repair process
- diagnosing and fault finding quartz analog and digital watches in an appropriate work environment
- dismantling and reassembling quartz watch digital modules, movements, gear trains and sub-assemblies using appropriate workshop tools and equipment
- using appropriate watch movement/components cleaning techniques without damage or marking to case movement and components
- applying correct type and amount of lubrication according to manufacturers' specifications
- performing watch function and electrical performance testing, including current consumption, according to manufacturer specifications and rate testing.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- quartz watch construction and components (i.e. analog, digital and duo displays)
- quartz watch operating principles (analog and digital)
- quartz watch lubrication techniques
- watch case and band construction and components
- testing procedures to confirm watch function
- watch servicing requirements
- repair process recording procedures
- watch handover procedures
- client liaison techniques
- power sources
- power cells, batteries, capacitors and electronic storage units.

Assessment Requirements for MEM21007 Service complex quartz watches

Modification History

Release 1. Supersedes and is equivalent to MEM21007A Service complex quartz watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer and verifying condition and performance, identifying service costs, and recording and documenting repair process
- dismantling complex quartz watches, chronographs and perpetual calendars using appropriate workshop tools and equipment
- servicing multiple step motors in quartz chronograph and perpetual calendar watches in an appropriate work environment
- fault finding complex quartz watches and identifying faulty or worn components and replacing in accordance with manufacturers' specifications
- reassembling, lubricating, performance testing and adjusting complex quartz watches
- re-programming and resetting integrated circuits and synchronising analog displays for quartz chronographs and perpetual calendars.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- quartz watch construction, components and operating principles, including calendars and motor drive systems
- service procedures for complex analog and digital quartz watches
- client liaison techniques
- fault-finding techniques for quartz watches
- performance testing equipment/procedures
- types of calendar displays
- service procedures to program and reset chronograph and perpetual calendar circuits.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in servicing complex quartz watches at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21008 Service mechanical watches

Modification History

Release 1. Supersedes and is equivalent to MEM21008A Service mechanical watches

Application

This unit of competency defines the skills and knowledge required to service mechanical watches, including movements, sub-assemblies and components. It covers common servicing requirements for mechanical watches undertaken by all watch repairers.

Where work beyond normal servicing requirements is required unit MEM21009 Inspect, diagnose, adjust and repair mechanical watches should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with customer**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify watch type, functions, construction and components
		1.4	Carry out pre-repair tests to verify water resistance, as required
		1.5	Prepare written quotation and inform customer of watch condition, completeness and performance concerns
		1.6	Outline recommended service procedures to be undertaken to remedy identified faults
		1.7	Verify and agree on servicing requirements with customer
		1.8	Prepare watch for handover
		1.9	Record and document repair process
2	**Disassemble watch, case and movement components for servicing**	2.1	Establish an appropriate clean and safe work environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Open and close watch cases
		2.4	Use hand tools and equipment in safe and correct manner
		2.5	Remove case components and movement sub-assemblies in correct sequence without damaging or marking
		2.6	Verify condition of case gaskets and replace, as required
		2.7	Clean watch case and band, as required
3	**Service watch case, movement,**	3.1	Inspect condition of movement, sub-assemblies and case components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	sub-assemblies and components	3.2	Confirm servicing requirements
		3.3	Replace faulty or worn component parts/movement, sub-assemblies or case
		3.4	Select appropriate cleaning methods and clean components
		3.5	Inspect watch case and components for cleanliness and rectify imperfections and faults
4	**Reassemble watch, movement and case components**	4.1	Reassemble watch movement and case components according to manufacturer specifications
		4.2	Assemble motion work and verify and adjust hand setting tension
		4.3	Check and adjust component operation and watch functioning
		4.4	Lubricate components and sub-assemblies according to manufacturer specification
		4.5	Apply watch assembly inspections and precautions
5	**Test and adjust watch function and performance**	5.1	Verify function of watch movement and sub-assemblies
		5.2	Correctly set up and operate mechanical watch timing machine and interpret readings
		5.3	Verify watch performance and rate testing and adjust according to manufacturer specifications, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Watch type, function, construction and components include one (1) or more of the following:	• manual wound • shock-resistance system • regulating system • power reserve indicator • mainspring • gear train • escapement • oscillator • winding and setting
Function and operating principles of mechanical watches include the following:	• shock resistance system • regulating systems (conventional, free sprung and Etachron) • mainsprings as generators of power motive force • gear train to transmit power • escapement to release power • oscillator to control the speed of release of power • winding and setting to wind watch and set hands to time
Record and document repair includes one (1) or more of the following:	• extent and date of repair • cost of replacement part • time spent on procedure
Appropriate working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • tools and equipment are organised and in good condition • ergonomic seating • ventilation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Case components and movement sub-assemblies include one (1) or more of the following:	• glass and bezel • case back and gaskets • crown, pendant and gaskets • balance and cock assembly • pallet and escapement components • barrel and mainspring assembly • gear train • winding and setting mechanisms
Inspect condition includes inspection of the following:	• originality of components • corrosion • cleanliness • wear
Cleaning methods include one (1) or more of the following:	• conventional • ultrasonic • vibrational • hand cleaning • types of watch cleaning solutions used • precautions for handling and disposing cleaning solutions
Verify and adjust hand setting tension includes one (1) or more of the following:	• test for correct friction • conventional cannon pinions • friction driving wheel • short off centre
Watch assembly inspections and precautions include one (1) or more of the following:	• winding and setting engagement, operation and lubrication • gear train end shake, backlash and lubrication • mainspring engagement, hooking, tension and lubrication • escapement action, operation e.g. pallet jump and lubrication • oscillator end shake, balance spring condition and correct amount lubrication
Mechanical watch timing machine includes the following:	• Witschi watch expert or equivalent giving an indication of rate in seconds a day, beat error and amplitude

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Watch performance and rate testing includes one (1) or more of the following:	• in-beat under 0.5 milliseconds • rate adjustment +/- 10 seconds per day • amplitude minimum 220 - 270 degrees fully wound

Hand tools and equipment include one (1) or more of the following:	• timing machine
	• case opening/closing tools
	• oilers and oil pots
	• hand cleaning tools:
	  • pith
	  • peg wood
	  • rodico
	  • solvents jar

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM21008A Service mechanical watches

Assessment Requirements for MEM21008 Service mechanical watches

Modification History

Release 1. Supersedes and is equivalent to MEM21008A Service mechanical watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying various mechanical watches by function, escapement and quality
- liaising with customer, verifying condition and performance and identifying repair costs
- dismantling watch case and movement components for servicing in an appropriate work environment
- inspecting condition of case components and movement sub-assemblies for originality of components, corrosion, cleanliness and wear
- servicing watch case, movement, sub-assemblies by replacing faulty or worn component parts and selecting appropriate cleaning method
- using appropriate hand tools and equipment in carrying out service in a clean and safe work environment
- reassembling watch, movement and case components and verifying and adjusting hand setting tension
- applying correct amount and type of lubrication in accordance with manufacturers' specifications
- undertaking function and watch performance and rating tests
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of mechanical watches by function, escapement and quality
- function and operating principles of mechanical watches
- component parts of a mechanical watch mechanism
- manufacturer specification and tolerances for lubrication, performance and time keeping
- dismantling/reassembling techniques of watch movements according to procedures and manufacturer guidelines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- watch cleaning methods
- techniques for servicing mechanical watches
- band construction and components.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing mechanical watches at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21009 Inspect, diagnose, adjust and repair mechanical watches

Modification History

Release 1. Supersedes and is equivalent to MEM21009A Inspect, diagnose, adjust and repair mechanical watches

Application

This unit of competency defines the skills and knowledge required to inspect and evaluate the condition of mechanical watches, diagnose problems, make repairs and adjust mechanical watch movements and sub-assemblies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify watch construction, function and characteristics
		1.4	Source manufacturer technical guidance information to determine correct tolerances and specifications
		1.5	Prepare watch for handover
		1.6	Record and document repair process
2	**Inspect mechanical watches**	2.1	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.2	Undertake inspections of watch movements in accordance with manufacturer tolerances and procedures
		2.3	Make accurate observations of the condition and function of components and sub-assemblies
		2.4	Remove and replace components and sub-assemblies in a sequence designed to accurately assess condition and faults during the process of dismantling and assembling
		2.5	Inspect lubrication quantity and condition
3	**Diagnose faults in mechanical watches**	3.1	Evaluate observations and watch performance characteristics to determine appropriate repair procedure
		3.2	Analyse timekeeping performance using appropriate techniques and equipment
		3.3	Make alterations in a logical sequence to diagnose faults
4	**Repair and adjust mechanical watches**	4.1	Select and use appropriate hand tools
		4.2	Undertake dismantling and reassembling of watch movements according to industry standard procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			and manufacturer guidelines
		4.3	Make precise corrections to sub-assemblies
		4.4	Remove, dismantle, replace and reassemble sub-assemblies and components in correct order without damaging or marking
		4.5	Select appropriate replacement components
5	**Test and adjust watch function and performance**	5.1	Verify and confirm function of watch movement and sub-assemblies
		5.2	Verify watch performance and rate testing
		5.3	Adjust, as required, according to manufacturer specifications
		5.4	Repeat testing, as required, to confirm performance
6	**Apply industry workshop standards to perform work**	6.1	Use hand tools and equipment in a safe and correct manner
		6.2	Handle components without damaging or marking
		6.3	Establish a clean and safe work environment

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Watch construction, function and characteristics include one (1) or more of the following:

- mainspring variation of motive force
- gear train freedom, including:
  - end shakes
  - side shakes
  - backlash
- escapement operation performance
- oscillator amplitude, balance spring positional changes and influences
- winding and setting mechanisms

Condition and faults include one (1) or more of the following:

- end shakes, side shakes and clearances of operating components
- oscillators balance spring condition, shock protection operation, condition and component replacement
- functioning, clearances and safety action of the escapement system
- mainspring and barrel assembly condition
- gear train (including pivot, pinions or bearings conditions - wear and corrosion)
- winding and setting components (wear and end shake freedom)
- lubrication including type, application, quantity and cleanliness

Timekeeping performance includes one (1) or more of the following:

- regulating system components adjustment
- balance spring condition, including:
  - flat
  - concentric
  - beating evenly between curb pins
- beat error diagnosis and adjustment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sub-assemblies and components include one (1) or more of the following:	• balance and cock assembly • escapement components • barrel and mainspring assembly • gear train • winding and setting mechanisms, including motion work and canon pinion • hand setting tension • shock-resistance system • calendar, winding system and other mechanisms • power reserve
Watch performance/rate testing includes one (1) or more of the following:	• in-beat adjustment without movable stud holder • rate adjustment • amplitude evaluation of watches performance
Hand tools and equipment include one (1) or more of the following:	• timing machine • staking set • jewel press • eyeglass, screwdrivers and tweezers • case opening and closing tools
Appropriate working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • tools and equipment are organised and in good condition • ergonomic seating • ventilation

Assessment Requirements for MEM21009 Inspect, diagnose, adjust and repair mechanical watches

Modification History

Release 1. Supersedes and is equivalent to MEM21009A Inspect, diagnose, adjust and repair mechanical watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying various mechanical watches by construction, function and characteristics
- liaising with customer, verifying condition and performance, and identifying repair costs
- inspecting mechanical watches by manipulating components and sub-assemblies and assessing condition and faults during the process of dismantling and assembling
- interpreting readings and making accurate observations to recognise faults
- determining appropriate sequence to accurately assess condition and faults during the process of dismantling and assembly
- selecting and using appropriate bench tools when repairing and adjusting mechanical watches in a clean and safe environment
- undertaking inspection and adjustment of watch mechanisms and sub-assemblies
- performing timekeeping analysis and adjustment techniques
- undertaking function and watch performance and rate tests
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- mechanical watch faults
- sequences used to accurately assess condition and faults during the process of dismantling and assembly
- tools used to repair and adjust mechanical watches
- adjustment methods for watch mechanisms and sub-assemblies
- watch performance and rate test requirements
- repair and adjustment procedures
- repair records and documentation procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- function and operating principles of mechanical watches
- procedures for fault finding and inspection of watch mechanisms and sub-assemblies
- manufacturer specifications and tolerances for performance and timekeeping.

Assessment Conditions

- Assessors must:
  - have vocational competency in inspecting, diagnosing, adjusting and repairing mechanical watches at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21010 Service watch power generating systems

Modification History

Release 1. Supersedes and is equivalent to MEM21010A Service watch power generating systems

Application

This unit of competency defines the skills and knowledge required to service and repair mechanical self-winding (automatic) watches and quartz watch power generating systems, service components, and adjust and test mechanisms for optimum performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21008	Service mechanical watches
MEM21009	Inspect, diagnose, adjust and repair mechanical watches

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with customer**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Inspect watch condition and performance concerns
		1.4	Prepare written and verbal quotations
		1.5	Agree with customer on recommended service procedures to remedy faults
		1.6	Identify mechanical self-winding or quartz generating system type
		1.7	Prepare watch for handover
		1.8	Record and document repair process
2	**Disassemble and reassemble self-winding or quartz generating mechanisms**	2.1	Establish an appropriate clean and safe work environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Open and close self-winding or quartz generating watch cases
		2.4	Use hand tools and equipment in safe and correct manner
		2.5	Remove and replace case components, dial and hands, movements and sub-assemblies in correct sequence without damaging or marking
		2.6	Verify condition of case pushbuttons and gaskets and replace, as required
		2.7	Clean cases and bands, as required
		2.8	Apply dismantling and assembly precautions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Service and adjust self-winding or quartz generating watch mechanisms**	3.1	Inspect condition of self-winding or quartz generating watch mechanisms
		3.2	Lubricate components and sub-assemblies according to manufacturer specification
		3.3	Replace faulty or worn component parts
		3.4	Clean self-winding or quartz generating watch mechanism components
		3.5	Inspect self-winding or quartz generating mechanism for cleanliness and rectify imperfections or faults
		3.6	Adjust self-winding or quartz generating mechanism components for correct operation, end shake and clearances
4	**Test and adjust self-winding or quartz generating mechanism function and performance**	4.1	Perform pre-service inspection and fault finding of self-winding or quartz generating mechanism action, function and wrist sensitivity
		4.2	Verify watch performance/rate testing and amplitude
		4.3	Perform simulated wear and power generation tests, as appropriate

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

System type and construction include one (1) or more of the following:

- mechanical self-winding
- quartz watch power generation, including:
  - kinetic quartz
  - auto quartz
- types of construction, including:
  - rotor
  - buffer
  - pedometer
  - case winding
- features of construction, including:
  - single-way winding
  - two-way winding
- performance characteristics (constant motive force)

Record and document repair process includes one (1) or more of the following:

- extent and date of repair
- cost of replacement part
- time spent on procedure

Dismantling and assembly precautions include one (1) or more of the following:

- sequence of inspection and adjustment of self-winding or quartz generating mechanism
- verification of correct operation of oscillating weight, reversing wheel and mainspring slipping device
- correct selection, application and amount of lubrication for self-winding or quartz generating mechanism

Faulty or worn component parts include one (1) or more of the following:

- oscillating weight ball bearings
- rotor posts
- reversing wheel pivots
- clicks
- slipping bridle
- driving gear
- friction clutch
- generating rotor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Self-winding or quartz generating components include one (1) or more of the following:	• oscillating weights and rotor • transmissions, reverser wheels and wig wag • mainspring and barrel • slipping devices
Watch performance/rate testing includes one (1) or more of the following:	• beat error diagnosis and adjustment • rate adjustment • amplitude
Wear and power generation tests include one (1) or more of the following:	• machine simulation wear test • testing by wrist wearing • kinetic voltage test
Hand tools and equipment include one (1) or more of the following:	• timing machine • mainspring winders • cyclomat • case opening and closing tools
Appropriate working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • organised tools and equipment • ergonomic seating

Assessment Requirements for MEM21010 Service watch power generating systems

Modification History

Release 1. Supersedes and is equivalent to MEM21010A Service watch power generating systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying mechanical self-winding or quartz generating system type
- liaising with customer, verifying condition and performance, and identifying repair costs
- selecting and using appropriate tools and equipment in a clean and safe environment
- identifying and naming the components of a self-winding or quartz generating mechanism
- dismantling and assembling self-winding or quartz generating mechanisms using correct techniques and precautions
- inspecting, fault finding and replacing faulty or worn components
- cleaning components and applying lubricants correctly in an appropriate work environment
- servicing barrel and mainspring slipping device in accordance with procedures
- undertaking function and watch performance and rate tests
- performing wear and power generation tests
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of self-winding or quartz generating watch
- components of a self-winding or quartz generating mechanism
- inspection and fault-finding procedures of self-winding or quartz generating mechanisms
- lubrication techniques of self-winding or quartz generating mechanisms
- function of the barrel and mainspring slipping device
- performance tests for self-winding or quartz generating mechanisms.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing watch power generating systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21011 Service calendar and other dial indication mechanisms for watches

Modification History

Release 1. Supersedes and is equivalent to MEM21011A Service calendar and other dial indication mechanisms for watches

Application

This unit of competency defines the skills and knowledge required to service and repair watches with different types or combinations of calendar and other dial indications. This work is often performed in conjunction with major servicing on both mechanical and quartz watches.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21008	Service mechanical watches
MEM21009	Inspect, diagnose, adjust and repair mechanical watches
MEM21010	Service watch power generating systems

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify watch type, calendar construction and dial indicator components
		1.4	Inspect condition and functions of calendar operation and dial indicator mechanisms, including creeping, semi-instantaneous, instantaneous, retrograde and rapid corrector
		1.5	Prepare watch for handover
		1.6	Record and document repair requirements
2	**Dismantle and reassemble calendar and dial indication mechanisms**	2.1	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.2	Select and use appropriate workshop tools and equipment
		2.3	Open and close watch cases
		2.4	Dismantle and reassemble calendar and dial indication mechanisms according to design and construction constraints
3	**Service and verify calendar and dial indication mechanisms**	3.1	Identify calendar and dial indications drive mechanism
		3.2	Identify faults and repair or replace worn or damaged component parts
		3.3	Clean components using appropriate methods
		3.4	Inspect correct fitting and function of all components
		3.5	Verify sequencing and alignment of components during reassembly, including dial and hand fitting
		3.6	Lubricate components according to manufacturer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	specifications
	3.7 Test calendar and dial indications will not impact on watch performance, amplitude or timekeeping

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Watch type, calendar construction and dial indication components include one (1) or more of the following:	• date indications:
	  • day/date
	  • day/date/month
	• moon phase and year indicators
	• annual calendar
	• perpetual calendar
	• power reserve indicator
	• equation of time

Record and document repair includes one (1) or more of the following:	• date and extent of repair • cost of replacement part • time spent on procedure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workshop tools and equipment include one (1) or more of the following:	• hand tools:
	  • tweezers
	  • screwdrivers
	  • eyeglasses
	• hand fitting pushers
	• stakes
	• presses

Calendar and dial indications drive mechanism include one (1) or more of the following:	• creeping • semi-instantaneous • instantaneous • retrograde • rapid corrector
Correct fitting and functions include one (1) or more of the following:	• end shake of components • clearances of moving parts • penetrations of calendar drive wheel mechanism and finger • spaces • safety features • calendar change operation at midnight • calendar action • rapid corrector engagement and operation • calendar day and date mechanisms

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM21011A Service calendar and other dial indication mechanisms for watches

Assessment Requirements for MEM21011 Service calendar and other dial indication mechanisms for watches

Modification History

Release 1. Supersedes and is equivalent to MEM21011A Service calendar and other dial indication mechanisms for watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer, verifying condition and performance, and identifying repair costs
- dismantling, reassembling and lubricating calendar mechanisms using appropriate workshop tools and equipment
- servicing and fault finding and addressing faults in calendar watches and ensuring correct fitting and functions
- performing inspection and adjustment of calendar change mechanism
- applying correct amount and type of lubrication in accordance with manufacturer's specifications
- synchronising dial indications with calendar change mechanism
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of calendar watches
- types of calendar drive mechanism operation
- power reserve indicator construction and operation
- calendar/dial indications component part names
- repair/replacement options for calendar and dial indication mechanisms
- lubrication techniques for calendar and dial indication mechanisms
- fault-finding and inspection techniques of calendar and dial indication mechanisms.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in servicing calendar and other dial indication mechanisms for watches at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21012 Service and repair mechanical watch oscillating systems

Modification History

Release 1. Supersedes and is equivalent to MEM21012A Service and repair mechanical watch oscillating systems

Application

This unit of competency defines the skills and knowledge required to apply service and repair techniques and procedures for balance staff replacement of mechanical watch oscillating systems and components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21008	Service mechanical watches
MEM21009	Inspect, diagnose, adjust and repair mechanical watches

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify oscillator types**	2.1	Identify oscillating construction types and components
		2.2	Establish the performance characteristics of the watch oscillating system
		2.3	Record and document repair requirements
3	**Diagnose oscillator condition**	3.1	Select and use appropriate workshop tools and equipment
		3.2	Inspect oscillator components for condition, function, end shake and performance
		3.3	Record and report wear and damage to component parts
		3.4	Determine appropriate repair process to rectify faults
4	**Repair, replace and adjust oscillator components**	4.1	Remove and reassemble balance complete and oscillator components using appropriate tools, equipment and techniques
		4.2	Determine type and method of balance staff removal and replacement
		4.3	Test security of replacement balance staff and oscillator components
		4.4	Inspect condition and adjust balance wheel and oscillator components for correct operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	4.5	Determine type of roller and roller jewel and the method of removal and replacement procedures
	4.6	Inspect, diagnose and adjust balance spring to achieve optimum performance and timekeeping
	4.7	Inspect, service and replace components for shock protection devices fitted to mechanical oscillators
5 **Test and adjust oscillator**	5.1	Verify and confirm function of watch movement
	5.2	Set up and operate mechanical watch timing machine and interpret readings
	5.3	Verify watch performance and timekeeping
	5.4	Adjust in-beat and rate, as required, according to performance and design characteristics

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Oscillator construction types include one (1) or more of the following:	• roskoph • nickel • glycudur • chronometer • 2, 3, 4 arms • bi-metal compensating • annular • balance spring • tourbillion
Oscillator components include one (1) or more of the following:	• balance wheel • balance spring • balance staff • roller • roller jewel
Performance characteristics include one (1) or more of the following:	• timing and certified chronometer • effects of temperature, shocks, magnetism and position of wear • temperature compensation
Record and document repair includes one (1) or more of the following:	• extent and date of repair • cost of replacement part • time spent on procedure
Workshop tools and equipment include the following:	• hand tools • levers • roller removing tool • staking set • watchmaker's lathe • balance wheel truing tool • poising tool • figure of eight calipers • spirit lamp • presto roller jewel fitting tool

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Oscillator components include one (1) or more of the following:

- balance wheel
- balance spring
- balance staff
- roller
- roller jewel

Type of construction includes one (1) or more of the following:

- balance staff:
  - friction fitted
  - riveted
  - screwed
- roller:
  - single table
  - double table
  - incabloc
  - two piece
- roller jewel shape:
  - D shape
  - triangular
  - elliptical
- balance spring:
  - flat
  - overcoil
  - helical
  - spherical
  - conical

Wear and damage includes one (1) or more of the following:

- balance staff pivots bent, scored or worn
- balance wheel out of true, damaged or enlarged hole
- roller tables deformed or damaged
- roller jewel cracked, chipped or missing
- balance spring centred flat, at the cock and collet

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate repair process includes one (1) or more of the following:	• consideration of component cost and availability • replace balance complete and balance staff • repair or replace balance spring and roller • dismantling and reassembling techniques • inspections adjustments of components • lubrication techniques, type and quantity • use of stop oil treatments
Type and method of balance staff removal and replacement includes one (1) or more of the following:	• friction fit • riveted • screwed • turning rivet/hub on lathe • knock out staking set • grinding molfre tool • shock-resistance
Correct operation includes one (1) or more of the following:	• balance staff secure fitting/tightness • roller aligned and secure • balance wheel true and static poised • balance spring stud location in-beat • balance spring adjusting and balance staff end shakes
Type of roller and roller jewel includes one (1) or more of the following:	• single and double tables • two piece, shock-resistance • D shaped, triangular or elliptical roller jewels
Components of shock protection devices include one (1) or more of the following:	• jewels • endstones • combined setting • shock spring
Watch performance includes one (1) or more of the following:	• in-beat 0.5 ms • amplitude (minimum 220 – 270 degrees, variations in positional errors) • rate +/- 5 – 10 seconds a day

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MEM21012 Service and repair mechanical watch oscillating systems

Modification History

Release 1. Supersedes and is equivalent to MEM21012A Service and repair mechanical watch oscillating systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- liaising with customer, verifying condition and performance, and identifying repair costs
- identifying different types and grades of mechanical watch oscillating systems
- diagnosing faults in mechanical watch oscillating systems for wear and damage and determining appropriate repair action
- inspecting and repairing faults in mechanical watch oscillating systems using appropriate workshop tools and equipment
- repairing a mechanical watch with broken or worn balance staff utilising type and method of balance staff removal and replacement
- inspecting and adjusting oscillator components for optimum performance in accordance with specifications
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types and grades of balance wheel construction
- types of balance staffs construction
- types of balance spring construction
- types of rollers and roller jewels construction
- balance staff replacement techniques and workshop procedures
- performance characteristics of balance wheel completes
- balance spring adjusting techniques
- operating principles of shock protection devices
- construction of shock protection devices
- watch servicing procedures and techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing mechanical watch oscillating systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21013 Service, test and adjust watch escapements

Modification History

Release 1. Supersedes and is equivalent to MEM21013A Service, test and adjust watch escapements

Application

This unit of competency defines the skills and knowledge required to inspect watch escapement components and operation, diagnose and rectify faults, replace components and adjust action to achieve optimum timekeeping performance for a watch escapement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21008	Service mechanical watches
MEM21009	Inspect, diagnose, adjust and repair mechanical watches
MEM21012	Service and repair mechanical watch oscillating systems

Competency Field

Horology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Inspect watch escapement condition**	2.1	Identify escapement type and construction
		2.2	Inspect escapement components and condition
		2.3	Observe escapement action for faults
		2.4	Perform and confirm safety test action
		2.5	Record and document repair process
3	**Repair, replace and adjust watch escapement components**	3.1	Establish an appropriate clean and safe work environment
		3.2	Use hand tools and equipment in safe and correct manner
		3.3	Handle components without damaging or marking
		3.4	Adjust or replace components, as necessary
		3.5	Adjust pallet stones and banking pins for optimum performance
		3.6	Reconfirm safety test action
4	**Test and adjust escapement function and**	4.1	Verify and confirm escapement function and lubrication
		4.2	Confirm escapement performance by assessing oscillator amplitude to manufacturer specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
performance	4.3 Reconfirm safety test action
	4.4 Assess watch in various states of winding and position
	4.5 Make adjustments to achieve performance within specification, as necessary

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Equipment type and construction includes one (1) or more of the following:	• recoil • frictional rest • detached • lever (Swiss or English) • co-axial • dual direct • chronometer (spring or pivoted detent) • cylinder • pin pallet • verge • duplex • semi-tangential • equidistant • circular

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Escapement components and conditions include one (1) or more of the following:	• escape wheel • lever • jewel pallet stones • fork • guard pin • roller and jewel • banking pins • alignment, division and end shake of escapement components
Safety test action includes one (1) or more of the following:	• clearance of horns • clearance of guard pin
Record and document repair includes one (1) or more of the following:	• extent and date of repair • cost of replacement part • time spent on procedure

Hand tools and equipment include one (1) or more of the following:	• escapemeter
	• pallet stone warmer (spirit lamp or electric warmer)
	• shellac
	• banking pin adjusting tools
	• timing machine
	• staking tool
	• watch servicing hand tools:
	  • roller remover
	  • escapement files
	  • burnishers
	  • levers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • tools and equipment are organised and in good condition • ergonomic seating • ventilation

Assessment Requirements for MEM21013 Service, test and adjust watch escapements

Modification History

Release 1. Supersedes and is equivalent to MEM21013A Service, test and adjust watch escapements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying escapement type and construction
- liaising with customer, verifying condition and performance, and identifying repair costs
- establishing a clean and safe work environment
- identifying faults in escapement components and condition
- rectifying escapement action by replacement and adjustment using appropriate hand tools and equipment
- servicing/lubricating escapement in accordance with manufacturer's specifications
- reconfirming safety test action including clearance of horns and clearance of guard pin and assessing watch in various states of winding and position
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- watch construction
- historic development and common types of escapements
- lever escapement function, operation, action, inspection and adjustment
- escapement safety tests
- techniques for replacement/adjustment of pallet stones
- techniques for assessing watch escapement performance/timekeeping.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in servicing, testing and adjusting watch escapements at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21014 Service mechanical chronograph watches

Modification History

Release 1. Supersedes and is equivalent to MEM21014A Service mechanical chronograph watches

Application

This unit of competency defines the skills and knowledge required to apply servicing techniques to mechanical chronograph watches, including sub-assemblies and case components, to ensure optimum performance and timekeeping.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 6

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21008	Service mechanical watches
MEM21009	Inspect, diagnose, adjust and repair mechanical watches
MEM21010	Service watch power generating systems
MEM21011	Service calendar and other dial indication mechanisms for watches

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with customer**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify type of chronograph watch mechanisms and components
		1.4	Prepare written quotation and inform customer of watch condition and performance concerns, outlining recommended service procedures to be undertaken to remedy identified faults
		1.5	Verify and agree on servicing requirements with customer
		1.6	Prepare watch for handover
		1.7	Record and document repair process
2	**Disassemble and reassemble chronograph watches**	2.1	Establish an appropriate clean and safe work environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Open and close chronographs watch cases
		2.4	Use hand tools and equipment in safe and correct manner
		2.5	Remove and replace case components, dials and hands, movements and sub-assemblies in correct sequence without damaging or marking
		2.6	Verify condition of case pushbuttons, operation and gaskets and replace, as required
		2.7	Clean cases and bands, as required
		2.8	Apply dismantling and assembly precautions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Service and adjust chronograph mechanisms**	3.1	Inspect condition of chronograph components
		3.2	Lubricate chronograph mechanism with correct type and amount according to manufacturer specifications
		3.3	Replace faulty or worn components
		3.4	Clean chronograph components
		3.5	Inspect chronograph watch for cleanliness and rectify imperfections and faults
		3.6	Adjust chronograph components for correct end shake, clearances and penetrations
4	**Test and adjust chronograph watch function and performance**	4.1	Perform pre-service inspection and fault-finding of chronograph action, function and depthings
		4.2	Verify and confirm dial and hand fitting, and casing up of chronograph
		4.3	Verify watch performance and rate testing
		4.4	Perform final adjustment and correction of recording and zeroing mechanism

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Chronograph watch mechanisms include one (1) or more of the following:

- types - application of dial scale indications:
  - tachymeter
  - telemeter
- chronograph operating systems:
  - pillar wheel actuated
  - cam controlled
- features:
  - minute record
  - hour record
  - automatic
  - split second

Appropriate working environment includes the following:

- adequate lighting and ventilation
- clean bench and working area
- tools and equipment organised and in good condition
- ergonomic seating

Record and document repair includes one (1) or more of the following:

- date and extent of repair
- cost of replacement part
- time spent on procedure

Dismantling and assembly precautions include one (1) or more of the following:

- inspection of condition and adjustments of chronograph assembly functions
- verification of correct recording system operation:
  - engagement
  - depthing
  - end shake
  - penetration
- correct selection, application and amount of lubrication for chronograph mechanisms
- adjustment of timekeeping performance and balance amplitude during chronograph function

Chronograph components include one (1) or more of the following:

- operating mechanism (single or double pusher action)
- clutch system for chronograph engagement
- transmission (minute or hour record)
- flyback and zeroing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Chronograph action includes one (1) or more of the following:	• start, stop, reset to zero • hand zeroing • indexing minute and hour record
Dial and hand fitting includes one (1) or more of the following:	• hand fitting tools and supports • alignments and synchronisation
Watch performance and rate testing includes one (1) or more of the following:	• beat error diagnosis and adjustment • rate adjustment/positional errors • amplitude (chronograph start - maximum variation +/- 40 degrees)
Hand tools and equipment include one (1) or more of the following:	• movement holders for operating chronograph functions • timing machine • rose cutters • tools for removing chronograph driving wheel • hand staking and fitting tools and supports • case opening and closing tools

Unit Mapping Information

Assessment Requirements for MEM21014 Service mechanical chronograph watches

Modification History

Release 1. Supersedes and is equivalent to MEM21014A Service mechanical chronograph watches

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying type of chronograph watch mechanisms and components
- liaising with customer, verifying condition and performance, and identifying repair costs
- dismantling, assembling and cleaning chronograph watches using correct techniques in an appropriate work environment
- inspecting, fault finding and adjusting chronograph mechanisms and components
- using appropriate hand tools and equipment to carry out service in accordance with procedures
- performing function and performance testing of chronograph action
- performing chronograph dial and hand fitting, including hand fitting tools and supports, and alignment and synchronisation
- selecting and applying lubricants in accordance with manufacturers' specifications
- verifying watch
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- basic functions and operations of the chronograph or stop watch
- identification of the component parts of a chronograph watch mechanism
- pre-service inspection and fault-finding techniques for chronograph action, function and depthings
- inspections and adjustments techniques of mechanical chronograph mechanisms
- dismantling/reassembling techniques for mechanical chronograph watches in accordance with procedures and manufacturer guidelines
- manufacturer specification and tolerances for lubrication, performance and timekeeping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- chronograph watch case construction, and pushbuttons and pendants servicing
- band construction and components.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing mechanical chronograph watches at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21015 Perform precision watch timing and adjustment

Modification History

Release 1. Supersedes and is equivalent to MEM21015A Perform precision watch timing and adjustment

Application

This unit of competency defines the skills and knowledge required to make fine adjustments to high-grade mechanical watches in order to achieve precision timing (chronometer performance).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 6

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21008	Service mechanical watches
MEM21009	Inspect, diagnose, adjust and repair mechanical watches
MEM21012	Service and repair watch oscillating systems
MEM21013	Service, test and adjust watch escapements

Competency Field

Horology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with customer**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify high-grade mechanical watch characteristics
		1.4	Prepare written quotation and inform customer of watch condition and performance concerns, outlining recommended service procedures to be undertaken to remedy identified faults and accuracy of timekeeping
		1.5	Verify and agree on servicing requirements with customer
		1.6	Prepare watch for handover
		1.7	Record and document repair process
2	**Analyse watch performance**	2.1	Establish an appropriate clean and safe work environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Use hand tools and equipment in safe and correct manner
		2.4	Handle components without damaging or marking
		2.5	Assess condition and ability of watch to achieve chronometer performance
		2.6	Conduct performance analysis of mechanical watch
		2.7	Adapt servicing techniques to meet manufacturer performance specifications (chronometer certified rating)
		2.8	Assess oscillator and balance spring condition
		2.9	Analyse positional errors in mechanical watch

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Adjust mechanical watch performance**	3.1	Adjust mechanical watch to minimise positional errors
		3.2	Adjust mechanical watch to minimise variations in balance amplitude/performance/rate
		3.3	Adjust oscillator and balance spring to minimise positional errors and perform dynamic poising
		3.4	Repeat and confirm all adjustments
4	**Test mechanical watch function and performance**	4.1	Verify instantaneous watch performance and rate testing
		4.2	Perform longitudinal testing to confirm watch performance
		4.3	Determine intermittent timing faults and adjustments

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

High-grade mechanical watch characteristics include one (1) or more of the following:

- finish of components:
  - bevelling
  - graining
  - level of polish
- type of materials used for movement and case construction:
  - non-magnetic alloys
  - precious metals
- quality of components used:
  - balance spring
  - escapement
  - balance wheel
- certification chronometer
- brand name
- number of jewels

Record and document repair includes one (1) or more of the following:

- date and extent of repair
- cost of replacement part
- time spent on procedure

Performance analysis includes one (1) or more of the following:

- watch subjected to various testing positions:
  - dial up
  - dial down
  - crown up
  - crown down
  - crown right
  - left
- states of winding:
  - partly wound
  - half wound
  - fully wound
- temperature variation
- factors affecting isochronism (equal time of vibration)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Oscillator and balance spring condition includes one (1) or more of the following:	• static poise of balance wheel:
	  • balance spring condition
	  • concentric
	  • flatness
	  • beating evenly between curb pins

Dynamic poising includes one (1) or more of the following:	• set up and determine out-of-poise/balance wheel using a timing machine • identify and locate point of adjustment • methods of adjustment (with cutters or milling tools)
Confirm all adjustments includes the following:	• ensuring required accuracy is obtained and timekeeping is in accordance with manufacturer specifications
Watch performance and rate testing includes one (1) or more of the following:	• in-beat • rate adjustment • amplitude • effect or influence of escapement • temperature • effect of positional errors • effect of balance wheel poise • effect of balance spring • states of winding
Longitudinal testing includes the following:	• testing over extended time period by wearing or simulator machine
Hand tools and equipment include one (1) or more of the following:	• mechanical watch timing machine • poising tools • balance wheel cutters • case opening and closing tools
Working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • tools and equipment organised and in good condition • ergonomic seating

Assessment Requirements for MEM21015 Perform precision watch timing and adjustment

Modification History

Release 1. Supersedes and is equivalent to MEM21015A Perform precision watch timing and adjustment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying high-grade mechanical watch characteristics
- liaising with customer and verifying condition and performance
- identifying repair costs and preparing written quotation for service/repair
- servicing high-grade mechanical watches to achieve original manufacturer timekeeping standards and specifications in an appropriate work environment
- using appropriate hand tools and equipment to carry out precision watch timing and adjustments
- conducting watch performance testing and longitudinal testing
- analysing and interpreting results of watch performance testing and adjusting and rectifying errors in watch oscillating system
- conducting dynamic poising adjustment of balance wheel
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of high-grade mechanical watches by brand and complications
- characteristics of high-grade mechanical watch movements/components
- timekeeping accuracy for chronometers
- watch construction and components
- oscillator pivot friction and end shake adjustment
- positional error variation adjustments for mechanical watches
- balance amplitude/performance/rate variation adjustments for mechanical watches
- influence of out-of-poised balance wheel
- influence of the escapement on timekeeping
- influence of the balance spring design/characteristics on timekeeping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- balance spring inspection and adjustment techniques
- performance testing procedures for mechanical watches
- factors affecting isochronism
- workshop procedures for conducting dynamic poising.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing precision watch timing and adjustment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21016 Install and set up clocks

Modification History

Release 1. Supersedes and is equivalent to MEM21016A Install and set up clocks

Application

This unit of competency defines the skills and knowledge required to set up and assemble pendulum clocks on site. It also covers testing and making running adjustments to ensure correct function and performance and applies to any clock repairer or vendor required to install, set up and test pendulum clocks on site, including in domestic residences and commercial buildings.

The most common application is usually a set-up and installation of new (long-case, wall or shelf) clocks or a set-up and installation after the return of serviced clocks to a customer's premises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 2

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Handle clocks, shipment and delivery**	2.1	Verify and agree clock location requirements (environmental and architectural) with customer
		2.2	Prepare the clock for shipment/transport
		2.3	Arrange delivery, as required
		2.4	Pack parts to avoid damage in transit
		2.5	Complete clock handover with customer
3	**Assemble and install clocks**	3.1	Select and use appropriate tools and equipment
		3.2	Unpack components and verify completeness
		3.3	Install and stabilise clock case using appropriate methods and fixings
		3.4	Assemble clock and verify clock functions
4	**Determine in-beat and adjust pendulum oscillating systems**	4.1	Conduct in-beat assessment
		4.2	Identify in-beat adjustment method and perform adjustments
		4.3	Evaluate pendulum amplitude and action
5	**Verify additional**	5.1	Test and confirm correct striking and chiming sequence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	clock functions	5.2	Adjust, as required, to ensure correct tone and harmony
		5.3	Set clock to time and confirm correct functioning of calendar and automatic night shut-off
6	**Conduct basic clock regulation techniques**	6.1	Set up and use timing equipment in a correct manner
		6.2	Verify pendulum rate
		6.3	Perform rate adjustments to achieve accurate timekeeping

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Prepare the clock includes the following:	• separating and packaging of components • partial dismantling of clock (pendulum and weights) • secure gong rods/hammers
Clock handover includes the following:	• informing customer of features and characteristics of clock • demonstrating winding and setting procedures for clock • informing customer of operation/switching of any automatic night silent/shut-off for chiming/striking mechanism • warranty information • recording date of installation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment include one (1) or more of the following:

- hand tools
- drills
- spirit level
- power tools
- safety equipment, including personal protective equipment
- cleaning equipment

Verify completeness includes the following:

- all components checked against packing slip/component list
- case parts, pendulum, weights and key
- striking and chiming rods, bells or tubes

Appropriate methods and fixings include one (1) or more of the following:

- suitable location/position identified:
  - level
  - stable
  - drafts
  - people traffic
- wedges
- floor and wall fixings

Clock functions include one (1) or more of the following:

- pendulum in-beat
- striking and chiming
- winding and setting
- calendar-moon phase

In-beat assessment includes the following:

- clock secure and level position
- pendulum assembly complete and correctly attached
- listen for evidence of even tick

In-beat adjustment method includes one (1) or more of the following:

- friction crutch
- cam wheel
- bending crutch
- automatic beat adjuster

Rate adjustments include one (1) or more of the following:

- effect of changing pendulum length

(shortening = gain, lengthening = loss)

- methods of adjusting bob position
- French devices
- weight trays

Assessment Requirements for MEM21016 Install and set up clocks

Modification History

Release 1. Supersedes and is equivalent to MEM21016A Install and set up clocks

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- verifying and agreeing on clock location requirements and preparing the clock for shipment/transport
- setting up and installing pendulum clocks using appropriate methods and fixings
- using appropriate tools and equipment to set up and install clocks
- unpacking components and verifying contents against packing slip/component list in accordance with manufacturer's specifications
- testing and adjusting clock functions
- interpreting timing test results and making rate adjustments to achieve accurate timing and performance.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of clocks
- implications for correct set-up
- assessments, tests and correct operational function confirmation processes required
- set up and adjustment techniques
- wall and floor fixing methods
- tools and equipment for installation
- packaging methods and materials
- techniques to prevent transit damage
- types of power sources used in clocks
- precautions when handling clock cases
- major sections of mechanical clocks
- components and function of clocks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in installing and setting up clocks at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21017 Service and repair clock timepieces

Modification History

Release 1. Supersedes and is equivalent to MEM21017A Service and repair clock timepieces

Application

This unit of competency defines the skills and knowledge required to service wall, floor or shelf clock timepieces that have a running time of eight days or thirty hours.

Where the clock is to be installed at the client's premises after service and repair unit MEM21016 Install and set up clocks should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 6

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	customer	1.3	Identify clock origin and case and movement construction and function
		1.4	Verify clock condition and performance concerns with customer
		1.5	Prepare written and verbal quotations
		1.6	Agree with customer on recommended service procedures
		1.7	Prepare clock for handover
		1.8	Record and document repair process
		1.9	Source replacement parts from industry suppliers
2	**Disassemble clock, case and movement components for servicing**	2.1	Establish an appropriate clean and safe work environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Handle components without damaging or marking
		2.4	Remove clock movements in sequence considering case design and construction
		2.5	Select and use appropriate hand and bench tools
		2.6	Verify condition and completeness of clock case
		2.7	Perform power release in a safe manner
		2.8	Dismantle clock movement in correct sequence
3	**Service and repair movement, sub-assemblies and components**	3.1	Inspect movement, sub-assemblies and components, and identify condition and faults
		3.2	Confirm servicing and repair requirements
		3.3	Replace or repair faulty or worn component parts, movement or sub-assemblies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.4	Use appropriate hand tools and equipment for servicing and repair
		3.5	Clean clock components at appropriate stages using cleaning and finishing methods
		3.6	Verify condition of components after cleaning
4	**Service clock cases**	4.1	Verify completeness of clock case
		4.2	Repair and replace missing or damaged components
		4.3	Clean internals and refinish/refurbish exterior with appropriate materials and techniques
5	**Reassemble clock movement and case components**	5.1	Reassemble clock movement and case components
		5.2	Assemble motion work and verify and adjust hand setting tension
		5.3	Check and adjust component operations and clock functioning
		5.4	Select and apply lubricants according to component design and estimated frictional load
		5.5	Apply clock assembly inspections and precautions
		5.6	Install and secure movement in case
6	**Bench test and adjust clock functions**	6.1	Verify function of clock movement
		6.2	Set up, operate mechanical clock timing machine and interpret readings
		6.3	Verify clock performance and rate testing
		6.4	Adjust rate according to performance and design characteristics

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Clock origin, case and movement construction and function includes one (1) or more of the following:	• clocks from all countries of manufacture • clocks manufactured during the 19th and 20th Centuries • clock cases made from timber, metal, natural stone and composite materials • movement components made from brass and steel • pendulum or balance oscillating systems • timepiece only mechanisms • motive force (mainspring or weight driven) • gear train for transmitting of power • escapement for release power • oscillator for controlling the speed of release of power • winding (by key) • time setting (by key or direct movement of hands)
Clock handover includes the following:	• informing customer of features and characteristics of clock • demonstrating winding and setting procedures for clock • inform customer of operation and switching of any automatic night silent, or shut-off for chiming or striking mechanism • warranty information • date of installation
Record and document repair process includes one (1) or more of the following:	• extent and date of repair recorded • tracking of subcontractors • cost of replacement parts • time spent on procedure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate working environment includes the following:

- clean bench and working area
- adequate lighting and ventilation
- tools and equipment organised and in good condition
- ergonomic seating, including bench height

Condition and faults include one (1) or more of the following:

- originality of components
- corrosion
- cleanliness
- wear
- damaged or failed components

Faulty or worn components include one (1) or more of the following:

- barrel and mainspring:
  - hooking
  - teeth
  - bearings
- gear trains:
  - bearings
  - pivots
  - pinions
- pendulum escapements:
  - pallets and escape wheels engagement drop
  - locking and impulse
- oscillators pendulum type:
  - rod
  - crutch engagement
  - suspension spring fittings
  - bob security
- oscillators balance type:
  - balance spring
  - balance staff
  - roller
- winding mechanisms:
  - key fitting
  - click
  - ratchet wheel
  - click spring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- setting hand tension or centre wheel friction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hand tools and equipment include one (1) or more of the following:	• clock repairers' hand tools:
	  • tweezers
	  • screwdrivers
	  • eyeglasses
	• clock mainspring winder
	• clock re-bushing tool
	• reamers and smoothing broaches
	• lathe
	• oilstones and burnishers
	• movement supports for clock movements
	• oilers and oil pots
	• cleaning brushes, peg wood, solutions, rinses and solvents
	• clock timing machine (this includes any type of machine that provides frequency count or indication of daily rate)

Verify and adjust hand setting tension includes one (1) or more of the following:	• test for correct friction (power to escape wheel) • adjustment of motion work friction
Select and apply lubricants include one (1) or more of the following:	• correct lubricants for escapements, bearings, barrels and mainsprings • techniques for lubricating
Clock assembly inspections and precautions include one (1) or more of the following:	• gear train end shake, backlash, lubrication • mainspring engagement, hooking, tension, lubrication • escapement operation, depthing, lubrication • pendulum oscillator (amplitude, crutch engagement or suspension function) • balance oscillators (end shake or balance spring condition, correct lubrication)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Performance and design characteristics include one (1) or more of the following:	• source of motive force • escapement type • oscillator and pendulum construction

Assessment Requirements for MEM21017 Service and repair clock timepieces

Modification History

Release 1. Supersedes and is equivalent to MEM21017A Service and repair clock timepieces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying clock origin, case and movement
- liaising with customer and verifying condition and performance
- identifying repair costs and preparing written quotation
- dismantling and reassembling clock movement and components in an appropriate work environment
- identifying and rectifying wear and faults in escapement, bearings, arbors, wheels and pinions
- safely handling of clock mainsprings, including using mainspring handling equipment
- using appropriate hand tools and equipment for servicing and repairs
- safely cleaning clock components using appropriate methods and media
- selecting and applying correct lubricants for escapements, bearings, barrels and mainsprings and using appropriate lubrication techniques
- performing function and performance testing
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures and safe work practices
- identifying clock origin, case and movement
- liaising with customer and verifying condition and performance
- identifying repair costs and preparing written quotation
- dismantling and reassembling clock movement and components in an appropriate work environment
- identifying and rectifying wear and faults in escapement, bearings, arbors, wheels and pinions
- safely handling of clock mainsprings, including using mainspring handling equipment

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Identify escapement and oscillator type**	2.1	Identify clock escapements/oscillating systems and applications
		2.2	Establish the performance characteristics of the clock according to escapement and oscillating system
		2.3	Record and document repair requirements
3	**Diagnose clock escapements and oscillators**	3.1	Select and use appropriate workshop tools and equipment
		3.2	Inspect clock escapement and oscillators for correct function, engagement and performance
		3.3	Record and report wear and damage to parts
		3.4	Determine appropriate repair process to rectify faults
4	**Repair and adjust clock escapements and oscillators**	4.1	Remove and reassemble escapement/oscillators using appropriate tools, equipment and techniques
		4.2	Determine theoretical length of replacement pendulum
		4.3	Repair or replace escapement and oscillator components
		4.4	Adjust escapement and oscillator components for correct operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
5	**Service and adjust torsional pendulums**	5.1	Remove and reassemble torsional pendulums and oscillator components using appropriate tools, equipment and techniques
		5.2	Inspect torsional pendulum components and identify condition and wear
		5.3	Repair and replace torsional pendulum
		5.4	Adjust torsional pendulum for correct operation (in-beat)
6	**Service and set up platform escapements**	6.1	Remove and reassemble platform escapement using appropriate tools, equipment and techniques
		6.2	Inspect platform escapement and identify condition/wear
		6.3	Repair and replace platform escapement
		6.4	Adjust platform escapement and correct depthing with contrate wheel
7	**Test and adjust rate**	7.1	Verify and confirm function of clock movement
		7.2	Set up and operate mechanical clock timing machine and interpret readings
		7.3	Verify clock performance and rate testing
		7.4	Adjust rate, as required, according to performance and design characteristics

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Clock escapements/ oscillator systems include one (1) or more of the following:	• verge • recoil escapement • deadbeat escapement • cylinder • platform (lever escapement or cylinder) • simple pendulum • compound pendulum • compensating pendulum • torsion pendulum • floating balance • suspension systems (spring blade, knife edge or silk)
Record and document repair includes one (1) or more of the following:	• extent and date of repair • cost of replacement part • time spent on procedure
Adjust escapement and oscillator includes one (1) or more of the following:	• condition amount of drop • condition and extent of lockings • condition and amount of impulse • pendulum action and amplitude • in-beat
Torsional pendulums include one (1) or more of the following:	• 400 day clocks • Atmos clocks • suspension spring

Assessment Requirements for MEM21018 Service clock escapements and oscillating systems

Modification History

Release 1. Supersedes and is equivalent to MEM21018A Service clock escapements and oscillating systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying different types of clock escapements/oscillating systems
- liaising with customer, verifying condition and performance, and identifying repair costs
- diagnosing and repairing faults in clock escapement action and fault finding oscillating systems
- calculating length of replacement pendulum and repairing, replacing and adjusting pendulum
- repairing, replacing and adjusting escapement and oscillator components
- setting up and adjusting clock escapements for optimum performance
- adjusting platform escapement and correct depthing with contrate wheel
- verifying and confirming function of clock movement and adjusting rate of timepiece using appropriate timing machine in accordance with procedures
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- clock escapement types
- oscillator types
- torsional pendulums and oscillator components
- performance characteristics of escapements and oscillators
- escapement adjusting techniques
- clock servicing procedures and techniques
- calculations and formulas for length of pendulum and geometry of escapements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing clock escapements and oscillating systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21019 Service and repair clock striking mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM21019A Service and repair clock striking mechanisms

Application

This unit of competency defines the skills and knowledge required to service and repair mechanical floor, wall and shelf clocks fitted with rack or count wheel striking mechanisms.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit weight: 4

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM21017	Service and repair clock timepieces

Competency Field

Horology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
	customer	1.3 Identify function and type of striking mechanism
		1.4 Verify clock condition and performance concerns with customer
		1.5 Prepare written and verbal quotations
		1.6 Agree with customer on recommended service procedures
		1.7 Prepare clock for handover
		1.8 Record and document repair process
		1.9 Source replacement parts from industry suppliers
2	**Service and repair strike mechanisms**	2.1 Establish an appropriate clean and safe work environment
		2.2 Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3 Remove and replace movement from case, considering case design and strike mechanism employed
		2.4 Handle components without damaging and marking
		2.5 Use appropriate hand, bench tools and equipment in a safe and correct manner
		2.6 Confirm operation of strike mechanism
		2.7 Dismantle and reassemble strike components in correct sequence
		2.8 Verify orientation of gear trains and strike detents
		2.9 Inspect strike release, activation and sound generation and identify wear, condition and faults
		2.10 Confirm servicing and repair requirements
		2.11 Repair and rectify faults in strike components
		2.12 Clean and reassemble mechanism and verify correct

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	set-up, operation and performance
	2.13 Select and apply lubricants to strike components
3 **Bench test and adjust striking mechanism**	3.1 Verify correct operation and function of striking mechanism
	3.2 Verify clock operation over 24-hour period
	3.3 Determine and rectify striking faults

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Function and type of striking mechanism includes one (1) or more of the following:	• motive force (mainspring or weight driven) • gear train (transmits power) • ways of producing striking sound (metal gongs, chime rods, bells or air bellows) • count wheel striking movements (European or American manufacture) • rack striking movements (European or American manufacture)
Record and document repair process includes one (1) or more of the following:	• date and extent of repair • cost of replacement parts • time spent on procedure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Operation of strike mechanism includes one (1) or more of the following:	• hour struck corresponds with hands • release mechanism synchronised with hands • warning set-up correctly • function of release mechanism • sound generation (gongs, rods or hammer engagement)
Striking mechanism components include one (1) or more of the following:	• release mechanism • gathering pallet • detents • counting mechanism (snail or count wheel) • rack • gongs, chime rods and bells • hammers
Faults in striking mechanism components include one (1) or more of the following:	• incorrect striking • continuous striking • striking mechanism stops clock or impacts on timekeeping • warning set-up • gong security • pin security • gathering pallet engagement with rack teeth, tightness and positioning • rack tail engagement position with snail • hammer inserts (condition - worn or aged) • security of gongs, rods and attachment to case
Correct set-up includes one (1) or more of the following:	• synchronised strike release with hands • amount of warning • correct sequence • sound of strike
Lubricants to striking mechanism components include the following:	• correct lubricants for cams and detents • techniques for lubricating

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hand and bench tools and equipment includes one (1) or more of the following:	• clock repairers' hand tools:
	  • tweezers
	  • screwdrivers
	  • eyeglasses
	• universal shifter, sockets and spanners
	• pliers, end cutters and files
	• stakes for supporting removal or replacement of gathering pallet and cannon pinions
	• oilers and oil pots and greases
	• cleaning brushes, peg wood, solutions, rinses and solvents

Appropriate working environment includes the following:	• clean bench and working area • adequate lighting and ventilation • tools and equipment organised and in good condition • ergonomic seating, including bench height

Assessment Requirements for MEM21019 Service and repair clock striking mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM21019A Service and repair clock striking mechanisms

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying function and type of striking mechanism
- liaising with customer, verifying condition and performance, and identifying repair costs
- dismantling and reassembling clocks with count wheel striking mechanisms in an appropriate work environment
- dismantling and reassembling clocks with rack striking mechanisms in accordance with manufacturer's specifications and procedures
- using appropriate hand and bench tools and equipment for servicing and repairing
- adjusting striking clock mechanisms for correct operation and synchronisation with hands and sound generation and tonality and verifying correct set-up
- selecting and applying correct lubricants for cams and detents and using appropriate lubrication techniques
- performing operation and performance testing of striking clocks
- diagnosing faults relating to strike mechanisms
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of clock striking systems
- difference between designs from various manufacturers
- application of gong rods, bells and hammers to achieve correct resonant sound generation
- strike fault-finding techniques
- fault-finding techniques for ensuring strike does not impact on clock operation
- service and repair techniques for striking mechanisms
- dismantling and reassembling techniques for striking mechanisms.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing clock striking mechanisms at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	liaise with customer		requirements at all times
		1.3	Identify functions and types of chiming system
		1.4	Verify clock condition and performance concerns with customer
		1.5	Prepare written and verbal quotations
		1.6	Agree with customer on recommended service procedures
		1.7	Prepare clock for handover
		1.8	Record and document repair process
		1.9	Source replacement parts from industry suppliers
2	**Service and repair chiming mechanisms**	2.1	Establish an appropriate clean and safe work environment
		2.2	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.3	Remove and replace movement considering case design and chiming system employed
		2.4	Handle components without damaging and marking
		2.5	Use appropriate hand, bench tools and equipment in a safe and correct manner
		2.6	Confirm design and operation of the chime corrector mechanism
		2.7	Determine service procedure for particular movement design
		2.8	Inspect condition of chime release, activation and sound generation, and identify wear and faults
		2.9	Dismantle and clean chiming components
		2.10	Verify orientation of gear trains, strike and chime detents

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.11	Confirm servicing and repair requirements
		2.12	Repair and rectify faults in chiming components
		2.13	Reassemble chiming mechanism and verify correct set-up, operation and performance
		2.14	Select and apply lubricants to chime components
3	**Bench test and adjust chime functions**	3.1	Verify and confirm function of chiming mechanism
		3.2	Verify clock operation over 24 hour period
		3.3	Determine and rectify faults in chiming mechanism

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Functions and types of chiming system include one (1) or more of the following:	• chiming clocks of various movement design (count wheel or locking plate, rack or combinations of control systems) • long case and mantle clocks • motive force (mainsprings or weights) • gear trains (components of each train) • chime release mechanism (control functions - chime and strike) • chime and strike fans (control speed of trains) • hand setting and synchronisation with chimes and strike • winding systems in chiming clocks • night shut-off switch types • chime correcting mechanisms • types of chimes by hammers and sequences for tunes (4 or 8 hammer) • tunes played (Westminster, St. Michaels or Whittington) • chiming media (gongs, tubes or bells)
Record and document repair process includes one (1) or more of the following:	• date and extent of repair • cost of replacement parts • time spent on procedure
Design and operation of chiming corrector mechanism includes one (1) or more of the following:	• double detent • spring loaded catch • rocking locking plate • bell crank • pivoted detent

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Inspect condition includes one (1) or more of the following:

- originality of components
- corrosion
- cleanliness
- wear
- hand setting tension
- function and safety of winding mechanism
- gear train end shake/backlash/lubrication
- mainspring engagement/hooking/tension/ lubrication
- adjustment of chime and striking functions
- verification of chime corrector functions
- synchronised chime release with operations of hands at the four quarters
- amount of warning for chime train
- strike release mechanism operation
- sound of chimes and strike monitored
- gong rods, bells, tubes alignment and security including attachment to case
- hammer head inserts (condition - worn or aged)

Chime components include one (1) or more of the following:

- four quarter cam
- lifter
- chime flirt or detents
- strike flirt or detent
- chime locking plate
- chime corrector
- chime gear train
- ratio wheel
- chime pin barrel
- gong rods, bells and tubes
- hammers

Faults in chime components include one (1) or more of the following:

- mounting security (gong rods, bells or tubes)
- warning and locking pin security and detent mountings
- hammer condition
- worn arbors and bearings
- broken or worn chime components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Correct set-up includes the following:

- synchronised chime release with hands
- amount of warning
- chime corrector operation
- correct tune sequence
- sounds of chime

Hand tools and equipment include one (1) or more of the following:

- clock repairers' hand tools:
  - tweezers
  - screwdrivers
  - eyeglasses
- universal shifter, sockets and spanners
- pliers, end cutters, files and levers
- movement holders, stands and wall brackets
- stakes for supporting removal/replacement of components
- lathe for pivot and arbor repairs and finishing
- clock bushing tool and replacement bushes
- lubrication (oiler, oil pots and greases)
- cleaning brushes, peg wood, solutions, rinses and solvents

Appropriate working environment includes the following:

- clean bench and working area
- adequate lighting and ventilation
- tools and equipment organised and in good condition
- ergonomic seating, including bench height

Assessment Requirements for MEM21020 Service and repair clock chiming mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM21020A Service and repair clock chiming mechanisms

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying country of origin with respect to count wheel or locking plate chiming mechanism
- liaising with customer, verifying condition and performance, identifying repair costs and preparing written and verbal quotations
- dismantling and reassembling clocks with chiming mechanisms in an appropriate work environment
- fault finding clocks with chiming mechanisms
- repairing/replacing worn or damaged components using appropriate hand tools and equipment
- performing correct set-up of chiming mechanisms
- adjusting clock chiming mechanisms for correct operation/synchronisation with hands and sound generation/tonality
- applying lubrication techniques (correct type and amount)
- diagnosing and rectifying faults relating to chime mechanisms and verifying operation of chime correctors
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of clock chiming systems and chime correcting mechanisms
- differences between designs from various manufacturers
- application of gong rod, bells and hammers to achieve correct resonant sound generation
- dismantling and reassembling techniques for chiming mechanisms
- correct amount of warning and chime corrector operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- clock chiming mechanism fault-finding techniques
- fault-finding techniques for ensuring chime does not impact on clock operation
- service and repair techniques for chiming mechanisms.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing and repairing clock chiming mechanisms at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21021 Restore clockwork mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM21021A Restore clockwork mechanisms

Application

This unit of competency defines the skills and knowledge required to restore and repair clock components by manufacturing parts using hand skills and machine tools and also covers servicing power equalisation systems.

Application includes restoration and repair work to antique clocks where parts are no longer available.

Where machine manufacture of clock components is required unit MEM21022 Manufacture watch and clock components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit weight: 6

Pre-requisite Unit

MEM06007	Perform basic incidental heat/quenching, tempering and annealing
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21017	Service and repair clock timepieces
MEM21019	Service and repair clock striking mechanisms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM21020 Service and repair clock chiming mechanisms

Competency Field

Horology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify clock restoration requirements**	2.1	Identify missing, damaged or worn parts
		2.2	Identify prior modifications and repairs, including non-standard or non-original components
		2.3	Plan repairs in consideration of original clock design and manufacture
		2.4	Record and document repair
3	**Service and repair power equalisation devices**	3.1	Identify fusee and stopwork device
		3.2	Release mainspring power
		3.3	Diagnose system faults
		3.4	Replace fusee chains or cables
		3.5	Set up fusee and stopwork systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Produce clock parts by hand**	4.1	Prepare working drawings and templates of replacement parts
		4.2	Plan suitable method and sequence of production
		4.3	Select materials suitable for manufacturing
		4.4	Transfer designs and mark out templates and work pieces
		4.5	Select appropriate hand tools to undertake process
		4.6	Produce components by hand to required specifications
		4.7	Conduct finishing, heat treatment and polishing of components
		4.8	Verify function of manufactured components
5	**Refinish and polish clock components**	5.1	Select appropriate refinishing process to repair worn or corroded clock components
		5.2	Refinish parts to replicate original finish
		5.3	Adjust refinished components for correct function
6	**Repair gears, wheels and arbors**	6.1	Identify worn or damaged teeth
		6.2	Fit, file and shape replacement teeth
		6.3	Re-pivot arbors
		6.4	Secure replacement part using appropriate fixing method
		6.5	Test-run with matched component

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Clock design and manufacture includes one (1) or more of the following:	• remaining faithful to original design and finish • accounting for value and provenance • maintaining originality of parts
Record and document repair includes one (1) or more of the following:	• date and extent of repair • cost of replacement part • time spent on procedure
Working drawings and templates include one (1) or more of the following:	• sketch or illustration by hand • photocopy original component then adhere to stock
Appropriate tools and equipment include one (1) or more of the following:	• files • burnishers • oil stones • jewellers saw • finishing papers • needle files • marking out equipment • lathe/drilling tailstock
Produce components by hand includes the use of one (1) or more of the following:	• pallets • striking and chiming levers • ratchet wheels • clickwork • taper pins
Heat treatment includes one (1) or more of the following:	• annealing • hardening • tempering (bluing)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Refinishing process includes one (1) or more of the following:	• filing • honing • graining • polishing
Clock components include one (1) or more of the following:	• arbors and pinions • clicks • pallets • screws • taper pins
Fixing method includes one (1) or more of the following:	• Loctite • low melting solder • electronic soldering iron • spirit lamp

Assessment Requirements for MEM21021 Restore clockwork mechanisms

Modification History

Release 1. Supersedes and is equivalent to MEM21021A Restore clockwork mechanisms

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying missing damaged or worn parts
- liaising with customer, identifying restoration costs and planning and conducting repairs to maintain originality of timepiece
- servicing and repairing power equalisation devices, including dismantling, assembling and setting up fusee systems
- using appropriate tools and equipment for restoration work
- preparing and using working drawings and templates to manufacture components by hand
- applying appropriate heat treatment process and refinish manufacture process to achieve desired result and verifying correct function of manufactured components
- repairing gears, wheels and arbors and test run with matched component
- recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- clock design and manufacture
- design and drawing of replacement parts
- techniques for manufacturing replacement parts
- gear forms (cycloidal and involute)
- gear terminology (pitch and root diameter)
- types and uses of files, including shapes and cuts
- jeweller saws and blades
- metal types and applications to clock components
- power equalisation devices and their function
- finishing and polishing techniques and media.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in restoring clockwork mechanisms at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21022 Manufacture watch and clock components

Modification History

Release 1. Supersedes and is equivalent to MEM21022A Manufacture watch and clock components

Application

This unit of competency defines the skills and knowledge required to manufacture replacement watch and clock components using general and specialist machines and engineering techniques as required. It applies when replacement parts are not available and there is a need to manufacture a suitable replacement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit weight: 6

Pre-requisite Unit

MEM06007	Perform basic incidental heat/quenching, tempering and annealing
MEM07005	Perform general machining
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM21017	Service and repair clock timepieces

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM21019	Service and repair clock striking mechanisms
MEM21020	Service and repair clock chiming mechanisms
MEM21021	Restore clockwork mechanisms

Competency Field

Horology

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine servicing requirements and liaise with customer**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify the need for a replacement component
		1.4	Establish that replacement parts are not available and advise customer of the need to manufacture in-house
		1.5	Prepare written and verbal quotations
		1.6	Agree with customer on recommended procedures to remedy faults, including servicing requirements
		1.7	Prepare watch or clock for handover
		1.8	Record and document repair process
		1.9	Source material for manufacture of parts
2	**Plan and organise the project**	2.1	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.2	Prepare working drawings of replacement parts
		2.3	Plan suitable method of production
		2.4	Select materials suitable for manufacture

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.5	Perform marking out of components
		2.6	Select appropriate equipment and tools to undertake process
3	**Produce components using a watch and clockmaker's lathe**	3.1	Set up and mount the material to be turned in appropriate chuck
		3.2	Select and prepare the appropriate cutting tool for the turning operation
		3.3	Perform turning or drilling operation to produce replacement parts
		3.4	Undertake measurements to task tolerances
4	**Produce components using milling attachments on a clockmaker's lathe or bench-mounted mill**	4.1	Set up and mount the material to be milled in appropriate fixture or chuck
		4.2	Select and prepare the appropriate tool or cutter for milling operation
		4.3	Perform milling operation to produce replacement parts
		4.4	Undertake measurements to task tolerances
5	**Produce wheels and pinions**	5.1	Select the index head and appropriate index plate to produce the required tooth count, as appropriate
		5.2	Set up gear blank in dividing head
		5.3	Select appropriate gear cutter and mount in milling spindle ensuring cutter is on centre
		5.4	Machine teeth to correct depth
6	**Finish manufactured**	6.1	Cross out wheel to match original component
		6.2	Remove any burrs and finish with appropriate media

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
components	6.3 Carry out heat treatment to suit function of replacement part
	6.4 Verify function of manufactured component

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Record and document repair includes one (1) or more of the following:	• date and extent of repair • cost of replacement part • time spent on procedure
Working drawings include one (1) or more of the following:	• sketch • illustration by hand, including dimensions
Appropriate chuck includes one (1) or more of the following:	• collet • three jaw • four jaw
Appropriate cutting tool includes one (1) or more of the following:	• graver • cutting tool angle • parting off tool

Assessment Requirements for MEM21022 Manufacture watch and clock components

Modification History

Release 1. Supersedes and is equivalent to MEM21022A Manufacture watch and clock components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying the need for replacement component parts, liaising with customer and determining costs
- interpreting watch and clock working drawings, manuals and other documentation that provide information on part design and tolerances
- setting up and mounting the material to be turned using appropriate chuck and manufacturing, finishing and fitting replacement watch or clock components to original tolerances using a watch and clockmaker’s lathe
- performing milling operations using indexing and milling attachments on the lathe or bench-mounted milling machine to dimension and tolerances
- selecting and preparing appropriate tool or cutter to produce replacement parts
- producing replacement parts, including wheels and pinions with their teeth machined to the correct depth
- finishing manufactured components and recording and documenting repairs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- typical materials used in watch and clockmaking
- types of watch and clockmakers' lathes and attachments
- lathe accessories and tooling
- set up and safe operation of watch and clockmakers' lathes and attachments
- documentation requirements
- set up and safe operation of milling machines and attachments
- calculate speeds, feeds and indexing requirements
- surface finish requirements for clock and watch parts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- heat treatment requirements for replacement parts
- milling procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in manufacturing watch and clock components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM21023 Plan, set up and operate horological workshop or service centre

Modification History

Release 1. Supersedes and is equivalent to MEM21023A Plan, set up and operate horological workshop or service centre

Application

This unit of competency defines the skills and knowledge required to plan, equip and set up a functional horological workshop or service centre.

It has been developed for post-trade training and the recognition of advanced trade-level skills in planning, equipping and setting up a functional horological workshop or service centre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit weight: 4

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan workshop**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	layout	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Prepare sketches of workshop layout
		1.4	Plan work zones
		1.5	Source suppliers of fixtures and furnishings
2	**Source and purchase tools and equipment**	2.1	Establish a budget
		2.2	Determine major plant equipment for after sales service
		2.3	Establish an adequate supply of tools for each workbench
		2.4	Source suppliers of tools and equipment
		2.5	Establish costs and initiate purchase
3	**Set up workshop or service centre**	3.1	Purchase and set up furnishings and fittings
		3.2	Install major plant bench tools and machinery
		3.3	Implement ventilation, extraction and climate control systems
		3.4	Establish repair administration systems
		3.5	Establish spare parts systems and controls
		3.6	Implement control and security measures for repair process
4	**Prepare quotations and orders**	4.1	Calculate profitability
		4.2	Establish hourly rate
		4.3	Establish service and repair requirements
		4.4	Determine availability and cost of spare parts
		4.5	Provide customer with estimate
		4.6	Prepare spare parts and other orders

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
5 **Monitor workshop operations**	5.1 Establish maintenance procedures for premises, major plant, equipment and tools
	5.2 Review systems for efficiency and effectiveness
	5.3 Implement improvements to operations

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workshop layout includes the following:	• orientation for adequate natural/artificial light • ventilation control • humidity and dust • appropriately positioned power points • consideration of work zone layout
Work zones include the following:	• customer reception • administration • dismantling and reassembling • cleaning • polishing • storage (solvents, spare parts or technical guides)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fixtures and furnishings include the following:	• workbenches • chairs • lights • ventilation, extraction and dust suppression • climate control • desks • point of sale and cash control devices
Major plant and equipment includes the following:	• watch and clock servicing equipment • testing equipment • electronic testers for control of timing and water-resistance testing • machinery • lathe • bench equipment • drill press • staking set
Supply of tools include the following:	• comprehensive assortment of watch and clockmakers' hand tools • reference catalogues and publications
Ventilation, extraction and climate control systems include the following:	• air conditioning and ventilation • dust extraction and trapping • chemical storage • decanting areas • fume cupboards
Repair administration systems include the following:	• job envelope system • repair tracking software • quotations • security of goods held in trust • spare parts and repair administration procedures
Other orders include the following:	• supplies • tools and equipment • consumables • materials and solutions

Assessment Requirements for MEM21023 Plan, set up and operate horological workshop or service centre

Modification History

Release 1. Supersedes and is equivalent to MEM21023A Plan, set up and operate horological workshop or service centre

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning horological service centre layout
- planning the work zones
- sourcing suppliers for fixtures and furnishings
- sourcing and setting up major plant and equipment and establishing an adequate supply of tools
- implementing ventilation, extraction and climate control systems
- setting up repair systems and administration procedures
- preparing quotes, estimates and orders
- monitoring and reviewing operations, procedures and systems.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- horological workshop and service centre layouts, zoning of areas and other considerations
- work health and safety (WHS) issues for watch and clock trade
- handling and storage/disposal of solvents and other chemicals
- administration procedures and systems
- job control systems and methods of monitoring work flow
- horological tools and equipment/suppliers
- ergonomics, ventilation, dust control, lighting and climate control requirements for horological industry.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in planning, setting up and operating horological workshop or service centre at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM24001B Perform basic penetrant testing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic penetrant testing procedures in a range of industrial applications.

Application of the Unit

Application of the unit	This unit applies to basic penetrant testing techniques on fabrications, structures and components across a wide range of industries and restricted to basic visible dye and/or process penetrant line methods. The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions. Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures. Penetrant testing is performed on critical component or structural zones. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits and must be stored and used in accordance with safe work practices. This unit should not be selected when Unit MEM24002B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	(Perform penetrant testing) has already been selected. Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected. **Band**: **A** **Unit Weight**: **2**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic penetrant testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic penetrant testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Test media is selected and applied in accordance with workplace practices and specifications. 2.4. Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements. 2.5. Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of penetrant test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • preparing inspection areas • identifying discontinuities • applying procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- applying test media
- applying principles of penetrant testing techniques
- identifying defects
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- precleaning methods and their areas of use - solvents, vapour degrease, etching, detergents, paint removers, mechanical methods
- consequences of incorrect preparation
- procedures and OH&S requirements in relation to the preparation process
- basic concepts and principles of NDT; general terms, purpose of NDT and areas of application of NDT
- scope and basic description of test
- general properties of penetrants - penetrability, removability, visibility
- emulsifier types
- developer types
- use of standard test panels
- established inspection procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out penetrant testing
- penetrant application
- dwell times
- penetrant removal
- developer application
- dry powder
- development time
- factors affecting indications
- non-relevant indications
- post-cleaning methods and their areas of use
- basic maintenance and storage procedures for testing equipment
- OH&S requirements including storage requirements
- definition of a defect and common basic defects
- methods/procedures for reporting test results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform basic penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic penetrant testing or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures,

	product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Preparation processes	Surface cleaning and drying
Obvious discontinuities	Observed changes in material homogeneity
Reported	Accurate identification of location and size of discontinuities

MEM24002B Perform penetrant testing

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers performing penetrant testing in a range of industrial applications.

Application of the Unit

Application of the unit	This unit applies to penetrant testing techniques on fabrications, structures and components across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent by portable penetrant testing, processing on a dedicated penetrant line, visible dye and fluorescent methods. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions. Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Penetrant tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices.

	statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for penetrant testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform penetrant testing	2.1. The most appropriate penetrant test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Appropriate test media is selected and applied in accordance with workplace/industry practices. 2.4. Penetrant test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.5. Penetrant test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of penetrant test(s)	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- conducting visual inspections
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- using decision making skills
- assessing risk
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- planning, sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- procedure, statutory and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- penetrant testing techniques and procedures for a range of situations
- tools, equipment, techniques
- principles and applications of penetrant testing techniques
- hazards and safety requirements associated with penetrant testing
- maintenance and storage procedures for test equipment
- common faults and damage
- range of defects
- meaning and application of national and international codes and standards
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Preparation processes	Surface cleaning and drying
Obvious discontinuities	Observed changes in material homogeneity
Reported	Accurate identification of location and size of discontinuities

MEM24003B Perform basic magnetic particle testing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic magnetic particle testing procedures in a range of industrial applications. It covers the principles of magnetism and the associated application of basic magnetic particle testing techniques in the field of non-destructive testing. Knowledge of metallurgy associated with the level of application in this unit is required.

Application of the Unit

Application of the unit	This unit applies to portable and fixed ('yoke' or 'bench') basic magnetic particle testing techniques on fabrications, structures and components across a wide range of industries. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific magnetic testing equipment as specified in maintenance documentation, testing procedures or operator instructions. Actual and potential defects are considered, together with ongoing abnormalities in fabrications, components and structures. Magnetic particle testing is performed on critical component or structural zones. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits and must be stored and used in accordance with safe work practices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	This unit should not be selected when Unit MEM24004B (Perform magnetic particle testing) has already been selected. Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected. Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected. **Band**: **A** **Unit Weight**: **2**

	statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic magnetic particle testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant specifications and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic magnetic particle testing	2.1. Nominated 'yoke' or 'bench' magnetic particle testing procedure is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with relevant standards and/or procedures. 2.3. Magnetic particle test is carried out in accordance with relevant work instructions and OHS requirements. 2.4. Magnetic particle testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of magnetic particle test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- assessing risks
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, charts, lists and other reference documentation
- planning, sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- surface preparation
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- scope and basic principles of magnetic particle testing
- procedure for carrying out magnetic particle test using either the 'yoke' or 'bench'
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- methods/procedures for reporting test results
- advantages, limitations of various equipment
- magnetic particle application - methods for wet, dry particles
- recording and reporting results of simple tests
- safety precautions in testing
- use of toxic, flammable materials, electrical hazards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform basic magnetic particle testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic magnetic particle testing procedures in a range of industrial applications or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- assessing risk
- undertaking calculations using formulae
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- magnetic particle testing techniques and procedures for a range of situations
- system verification checks necessary to carry out the magnetic particle test
- principles and applications of magnetic particle testing
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- types of magnetism;
- magnetic properties
- magnetic materials
- magnetic circuits
- relative permeability of common engineering materials
- magnetic discontinuity, leakage fields
- types of equipment - portable, stationary, automated etc.
- equipment features
- nature and properties of the various types of magnetising current
- current requirements for testing
- media types - advantages and limitations of dry powders and fluid suspensions
- quality control of media, viewing conditions
- disposal procedures
- environment care
- preparation of parts

MEM24007B Perform ultrasonic thickness testing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing ultrasonic thickness testing in a range of industrial applications. Knowledge of metallurgy associated with the level of application in this unit is required.

Application of the Unit

Application of the unit	This unit applies to inspecting, interpreting and reporting on ultrasonic testing techniques of fabrications, structures and components. Testing is across a wide range of industries and includes identifying abnormalities such as thickness measurement of corrosion, laminations of non-ferrous/ferrous alloys steels, composite materials. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific ultrasonic testing equipment as specified in maintenance documentation, testing procedures or operators instructions. Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Ultrasonic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products -

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	are subject to safe work habits and must be stored and used in accordance with safe work practices. This unit should not be selected when Unit MEM24008B (Perform ultrasonic testing) has already been selected. Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected. Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected. **Band**: **A** **Unit Weight**: **2**

unit of competency.	required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for ultrasonic thickness testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed for obvious discontinuities.
2. Perform ultrasonic thickness testing	2.1. Nominated ultrasonic thickness test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Ultrasonic tests are carried out in accordance with relevant standards and OH&S requirements. 2.4. Ultrasonic test equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of ultrasonic thickness tests	3.1. Basic thicknesses are identified and explained in accordance with enterprise standards and/or procedures. 3.2. Basic thicknesses are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- performing calculations
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- basic principles of ultrasonic thickness testing
- properties and behaviour of ultrasound
- basic concepts associated with frequency, velocity, wavelength, amplitude
- generation of ultrasound
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic thickness tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic thickness test
- advantages and limitations of ultrasonic thickness testing
- hazards and safety requirements associated with ultrasonic thickness testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- indications and thicknesses
- methods/procedures for reporting test results
- ultrasonic thickness testing equipment
- types of displays:
  - a-scan display
  - b-scan display
- types of couplants, desirable characteristics
- straight beam testing method:
- calibration of thickness testing equipment
- frequency
- probe size and shape
- thickness testing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

• plate testing
  • acceptance standards within the scope of this unit
• recording and reporting:
  • job records
  • routine reports
  • codes and standards
• variables affecting test results
• methods of controlling variables
• component variables:
  • size and geometry
  • distance location from entry surface
  • orientation to entry surface
  • reflecting characteristics of back wall
• any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
• use and application of personal protective equipment
• safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform ultrasonic thickness testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not

EVIDENCE GUIDE	
	in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing ultrasonic thickness testing in a range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Preparation processes	Surface cleaning and drying

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- analysing test results
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- performing calculations relating to ultrasonic testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- principles of ultrasonic testing
- variables affecting test selection
- variables affecting test results
- ultrasound - frequency, velocity, wavelength, amplitude
- behaviour of ultrasound at interfaces
- characteristics of ultrasound in materials
- generation of ultrasound
- detection of ultrasound
- the flaw detector
- basic test methods:
  - pulse-echo and transmission methods
  - resonance methods
  - a, b, c, and p scan
  - types of coupling
  - single, dual and two-probe methods
- characteristics and applications associated with probes
- calibration methods
- variables

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform radiographic testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating radiographic testing equipment and applying testing procedures or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Unit Descriptor

Unit descriptor	This unit covers researching, analysing, developing, approving and evaluating non-destructive tests (NDT).

Application of the Unit

Application of the unit	This unit applies to research, development, approval and evaluation of applicable non-destructive tests on fabrications, structures and components across a wide range of industries to Level 3 (AS 3669 and AS 3998) or equivalent. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific testing equipment, test development procedures or guidelines. Activities should replicate 'in-service' tasks due to the high level of self-supervision and the critical nature of the work. Actual and potential defects are considered, together with ongoing abnormalities in fabrications, components, structures from a wide range of applications by the selection of relevant testing method. Tests are validated/evaluated on critical component or structural zones. All testing must be developed and completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices. This unit should not be selected when Unit MEM05025C

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for non-destructive test	1.1. Inspection area is assessed for testing and all possible failure sites are identified utilising metallurgical analysis. 1.2. Relevant information for test development is collected from available sources using accepted techniques. 1.3. Information is analysed and interpreted. 1.4. Test requirements are determined.
2. Establish non-destructive test techniques and procedures	2.1. Test methods, techniques and procedures to be used for specific NDT work are designated. 2.2. Codes, standards, specifications and procedures are interpreted. 2.3. Test procedures are developed in accordance with established techniques and metallurgical principles.
3. Validate/confirm non-destructive tests	3.1. General and specific test procedures are validated in accordance with established techniques. 3.2. Inspection results are interpreted and evaluated in terms of existing codes, standards and specifications.
4. Approve non-destructive test procedures	4.1. Procedures are approved in accordance with workplace procedures and relevant codes and standards. 4.2. Procedures are documented and distributed in accordance with workplace requirements and relevant codes and standards.
5. Evaluate non-destructive test procedures	5.1. Procedures are evaluated for effectiveness. 5.2. Evaluation results are documented and reported according to workplace requirements. 5.3. Changes/amendments to non-destructive test

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	procedures are made and distributed as necessary.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • conducting metallurgical assessment of inspection areas • designating most appropriate method, technique or procedure • referencing information • developing and validating test procedures • applying safety procedures, standard operating procedures and legislative requirements to all work • reading/interpreting/applying relative testing standards • reading/interpreting/applying relative conformance standards • documenting procedure and results
Required knowledge
Look for evidence that confirms knowledge of: • application of metallurgical analysis to assess inspection areas • NDT methods, techniques and procedures • meaning and validity of relevant codes, standards, specifications and procedures • test procedure for testing techniques and specimen • validation processes • process for approval of procedures • process for documentation/distribution of procedures • evaluation procedures • process for documentation of evaluation results • process for amending tests and distributing amendments • any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards • use and application of personal protective equipment • safe work practices and procedures • relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to establish non-destructive tests. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the research, analysis, development, approval and evaluation of non-destructive tests, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and

MEM24012C Apply metallurgy principles

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers applying basic metallurgy principles related to selecting appropriate non-destructive testing techniques (NDT) and interpreting the results of NDT tests for metallurgical processes.

Application of the Unit

Application of the unit	This unit applies to knowledge of metallurgy principles, and the relationship between the various non-destructive testing methods and their capabilities and limitations when applied to the detection of specific discontinuities in metals and alloys. The unit applies to employees other than NDT technicians such as metallurgists, welding supervisors etc. who select and order NDT tests and who interpret results provided by tests for metal manufacturing, casting, shaping, and joining processes. The unit does not apply to the conduct of NDT tests. Such variables as the type of discontinuity, manufacturing process and limitations will assist in determining the sequence of testing and the ultimate selection of one non-destructive test method in preference to another. Any testing that may be carried out must be completed with particular attention to personal and OH&S regulations. Where materials and chemicals which are subject to codes and regulations are stored and used - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - safe work habits must be considered. **Band:** This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply the principles of solidification and crystal structures in metals and alloys	1.1. Principles of solidification and crystal structures in metals and alloys are interpreted and applied in relation to NDT techniques.
2. Interpret equilibrium diagrams for metals and alloys	2.1. Equilibrium diagram for metal or alloy is correctly sourced 2.2. Equilibrium diagrams are correctly interpreted.
3. Interpret and apply the principles of fusion welding of metals and alloys	3.1. Principles and methods for fusion welding of metals and alloys are applied to NDT test selection. 3.2. Defects in weldments are identified and classified from NDT test results.
4. Interpret and apply the principles of the formation of castings	4.1. Principles and methods used to produce metal castings are applied to NDT test selection. 4.2. Defects in metal and alloy castings are identified and classified from NDT test results.
5. Interpret and apply the principles of steel forging	5.1. Principles and methods used to produce steel forgings are applied to NDT test selection. 5.2. Defects in steel forgings are identified and classified from NDT test results.
6. Interpret and apply the principles of mechanical testing	6.1. Principles of mechanical testing are applied to NDT test selection. 6.2. Defects in metal product are identified and classified from NDT test results

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • research • understanding and applying metallurgy principles • selecting NDT test appropriate to metal or alloy and manufacturing process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- principles of solidification and crystal structures in metal:
  - classification of materials
  - structure of atoms
  - process of solidification
  - crystal structures
  - defects formed during solidification
  - modification of crystal structure
  - heat treatment processes
  - defects formed during heat treatment
- meaning of equilibrium diagrams representative of a range of metals including aluminium, iron, steel and common non-ferrous alloys:
  - alloy systems
  - solid and liquid solubility
  - basic equilibrium diagrams
  - equilibrium diagrams for common alloys
- principles of fusion welding in relation to NDT testing
- defects in fusion welding:
  - processing defects
  - grinding cracks
  - pickling cracks
  - heat treatment cracks
  - service defects
  - fatigue cracks
  - corrosion and stress corrosion cracks
- principles of the formation of castings
- defects in castings
- principles of steel forging
- defects in steel forging
- principles of mechanical testing:
  - mechanical testing
  - tensile testing
  - impact testing
  - hardness testing
  - fatigue testing
- other tests

MEM25001 Apply fibre-reinforced materials

Modification History

Release 1. Supersedes and is equivalent to MEM25001B Apply fibre-reinforced materials

Application

This unit of competency defines the skills and knowledge required to apply and form/shape fibre-reinforced materials using manual and mechanical methods in marine vessel and aircraft construction applications.

It applies to application and forming operations conducted within a mould or over a former assembly and tasks include lay-up practices and sheathing applications using a variety of glass reinforcements and other fibres.

Where forming and integration work and vacuum bagging techniques are required unit MEM25002 Form and integrate fibre-reinforced structures should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare for application/ forming operations**	2.1	Select appropriate tools and equipment according to organisational requirements and instructions
		2.2	Set up and adjust equipment ready for operation
		2.3	Identify and select materials according to the required job specifications
		2.4	Make allowances for thickness to specifications
3	**Apply reinforced materials**	3.1	Position components ready for reinforcement operation
		3.2	Start up equipment, shut down and operate according to SOPs
4	**Form and shape reinforcement materials**	4.1	Roll/shape materials to specified thicknesses and/or finishes
		4.2	Laminate materials according to specifications
		4.3	Check final application and shape for compliance to specifications and adjust, as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Applications include one (1) or more of the following:

- hull
- deck
- superstructures
- bulkhead and partitions
- transverse and longitudinal frame members
- engine beds
- tanks

Materials include one (1) or more of the following:

- variety of glass reinforcements and other fibres
- types of laminating resins
- stiffening materials, including:
  - foams
  - core mat

Tools and equipment include one (1) or more of the following:

- brushes and rollers
- metal rollers
- gel coat
- resin depositors

Assessment Requirements for MEM25001 Apply fibre-reinforced materials

Modification History

Release 1. Supersedes and is equivalent to MEM25001B Apply fibre-reinforced materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting equipment for the application/forming job and setting up and operating/adjusting equipment for correct operation
- selecting materials to suit different operations and making allowances to suit conditions and specifications
- positioning components and applying reinforced materials and rolling/shaping material smoothing irregularities and laminating materials ensuring compliance with specifications and adjusting, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- tools and equipment for application/forming operations
- procedures for setting up and adjusting equipment
- terminology and information relevant to standard work instructions
- applicable codes and regulations
- different chemicals and materials and their properties, including mixing ratios
- importance and relevance of thickness allowances
- techniques for positioning components
- safety requirements and start-up/shutdown/operating procedures
- methods for rolling and shaping and problems associated with rolling and shaping and methods for rectifying
- lamination sequence
- methods of checking final application and form.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in applying fibre-reinforced materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25002 Form and integrate fibre-reinforced structures

Modification History

Release 1. Supersedes and is equivalent to MEM25002B Form and integrate fibre-reinforced structures

Application

This unit of competency defines the skills and knowledge required to apply, form and integrate fibre-reinforced components using manual and mechanical methods in marine vessel and aircraft construction applications.

It applies to component construction carried out for mould installation, and application and forming operations conducted within a mould or over a former assembly using a variety of glass reinforcements and other fibres.

Where mark off/out skills is required unit MEM12007 Mark off/out structural fabrications and shapes should also be selected.

Where straightforward application of fibre-reinforced materials and no forming or integrating is required unit MEM25001 Apply fibre-reinforced materials should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Assessment Requirements for MEM25002 Form and integrate fibre-reinforced structures

Modification History

Release 1. Supersedes and is equivalent to MEM25002B Form and integrate fibre-reinforced structures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings/templates to form and integrate fibre-reinforced structures
- selecting and gathering materials for the construction purpose
- selecting and using the appropriate hand and power tools, workshop equipment and machinery and checking component dimensions for compliance against templates/drawings in accordance with specifications
- selecting and mixing fixing/bonding materials in accordance with job specifications using appropriate tools and equipment
- selecting adhesive/filler materials and applying fixing/bonding methods for component integration and cutting and shaping/bevelling foams and timber/plywood reinforcements to specifications
- cleaning excess fixing/bonding material and disposing of waste following SOPs
- selecting post-curing method to suit job application
- disassembling, cleaning and storing equipment/accessories in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- typical components, fibre reinforcement and core materials, resins and hardeners, fillers, release agents and pigment additives, their attributes and their uses
- chemical and physical properties of resins, mixing ratios, laminate thicknesses, strengths and curing properties
- drawings and templates and their construction role
- applicable codes and regulations
- hand tools, power tools, workshop equipment and machinery and their use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- method used to check component dimensions against drawings, templates and specifications
- procedures used to install component, fixing/bondage and mixing application
- methods of component integration
- procedures required in setting up and adjusting equipment
- relevant adhesive/filler and fixing/bonding methods
- procedures for forming/shaping and tools/machinery used
- importance of cleaning excess fixing/bondage material and waste disposal obligations and regulations
- post-curing methods, procedures and applications
- storage procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in forming and integrating fibre-reinforced structures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25003 Set up marine vessel structures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25003 Set up marine vessel structures (Release 1).

Release 1. Supersedes and is equivalent to MEM25003B Set up marine vessel structures.

Application

This unit of competency defines the skills and knowledge required to set up marine vessel structures using straightforward levelling and alignment procedures.

Structures requiring a location/erection process using framework would typically be those where fairness and load bearing is critical and/or where building/marine regulations can apply. Specifications for the structure would be supplied via engineering drawings or similar and include site location information.

This unit does not include fixed structures, including jetties, wharves and moorings.

Where construction and assembly of entirely marine timber components is undertaken unit MEM25005 Construct and assemble marine vessel timber components should also be selected.

Where lifting or rigging skills are required appropriate materials handling units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM12007	Mark off/out structural fabrications and shapes
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Inspect and prepare site**	2.1	Check the site for location, dimensions and levels in accordance with industry standards
		2.2	Undertake minor alterations, corrections or adjustments with approval of appropriate authority
		2.3	Prepare surfaces and materials/components for use
		2.4	Identify structural components and materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Undertake levelling and measurement readings**	3.1	Apply principles of levelling and measurement reading
		3.2	Determine task requirements
		3.3	Identify levelling procedures
		3.4	Select levelling equipment and set up according to SOPs
		3.5	Take levelling measurements
		3.6	Complete levelling tasks to specifications
4	**Erect marine vessel structures**	4.1	Prepare components of structure for sequential erection
		4.2	Erect components and fix according to specifications
		4.3	Ensure structure alignment meets required specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Structures include one (1) or more of the following:	• composite • metal • timber
Framework includes one (1) or more of the	• hull framing • deck framing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

following:	• superstructures • jig construction • stairways • walkways • tanks • platforms • cradles composites
Materials include one (1) or more of the following:	• timber • other non-metallic materials
Levelling and alignment includes one (1) or more of the following:	• plumb bob/lines • spirit levels • water and dumpy levels • laser levels • electronic levels

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM25003 Set up marine vessel structures (Release 1).

Release 1. Supersedes and is equivalent to MEM25003B Set up marine vessel structures.

Assessment Requirements for MEM25003 Set up marine vessel structures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25003 Set up marine vessel structures (Release 1).

Release 1. Supersedes and is equivalent to MEM25003B Set up marine vessel structures.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and confirming relative structural components and materials species/types against job specifications
- checking the construction site location for dimensions and levelling and carrying out minor alterations, corrections and adjustments to ensure site is ready in consultation with the appropriate authority, including supervisor, customer and surveying agency
- undertaking levelling and alignment procedures using appropriate tools, equipment and methods and making adjustments where required to establish alignment requirements and erecting levelled structures in accordance with specifications and procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- practices used for checking construction site location, dimensions and levelling procedures
- procedures for effecting authorised minor alterations, correction or adjustment
- practices used to prepare surfaces, materials/component structures
- structural components and material species/types
- process for obtaining levelling and measurement reading
- levelling and measurement equipment/tools and methods used to level equipment/component assembly structure
- engineering principles, techniques, set-up procedures and tools for levelling and measurement
- sequence of assembly of component structure
- erecting and fixing methods.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in setting up marine vessel structures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25004 Fair and shape surfaces

Modification History

Release 1. Supersedes and is equivalent to MEM25004B Fair and shape surfaces

Application

This unit of competency defines the skills and knowledge required to fill, sand, fair and grind to achieve uniform or correct contours and surfaces on marine vessels and other transport vehicles.

Where slipping is required, or when working on a slipped craft unit MEM25014 Perform marine slipping operations should also be selected.

Where relevant units related to specific applications and materials are required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions and determine sequence of operations
2	**Prepare for filling/sanding/ grinding operations**	2.1	Set up safety equipment in accordance with procedures
		2.2	Select appropriate fillers and abrasive materials and prepare to suit job requirements and required surface finish
		2.3	Select appropriate equipment and accessories and set up ready for operation
3	**Perform filling, sanding, fairing and grinding operations**	3.1	Carry out work to specified finishes using appropriate tools and techniques
		3.2	Use power tools to optimise equipment and material use
		3.3	Check surfaces to ensure compliance to specifications
		3.4	Make adjustments and corrections as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools include one (1) or more of the following:	• electric or pneumatic disc • orbital and belt sanders • 'torture-boards' • straight and angle grinders • die grinders can be used for certain applications but should not be used as the sole tool for assessment purposes

Assessment Requirements for MEM25004 Fair and shape surfaces

Modification History

Release 1. Supersedes and is equivalent to MEM25004B Fair and shape surfaces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and selecting materials to be prepared
- setting up safety equipment, including fans and extraction unit, in accordance with procedures
- selecting and preparing appropriate fillers and abrasive materials for required surface finish
- setting up and using a selection of hand and power tools using associated safety accessories, including dust extraction assemblies and guard protection
- surface filling and internal and external sanding to achieve flat, concave and convex surfaces
- checking surfaces to ensure compliance visually and by the use of fairing battens, straightedges, stringlines, french curves and templates.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- filling and fairing specifications
- types, properties and characteristics of fillers and materials to be prepared and features/specific preparation requirements
- filler ingredient measuring and preparation techniques
- relevant safety equipment and uses/application
- filling, fairing and shaping techniques
- equipment and accessories and applications
- means of optimising life of abrasive materials and reducing waste
- compliance testing procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in fairing and shaping surfaces at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25005 Construct and assemble marine vessel timber components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25005 Construct and assemble marine vessel timber components (Release 1).

Release 1. Supersedes and is equivalent to MEM25005B Construct and assemble marine vessel timber components.

Application

This unit of competency defines the skills and knowledge required to construct and assemble marine timber components, including laminating by cold processes, and applies to marine vessel backbone components.

Where hull is to be planked, planking can include carvel, strip, clinker and double diagonal systems.

Where permanent timber bending practices are required including boiling/steam bending then see unit MEM25009 Form timber shapes using hot processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM04018	Perform general woodworking machine operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12007	Mark off/out structural fabrications and shapes
MEM12023	Perform engineering measurements
MEM12024	Perform computations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Construct marine vessel timber components**	2.1	Select appropriate tools/equipment to suit job application
		2.2	Select template/measurement to suit component construction
		2.3	Ensure material is dressed, sized and shaped to suit job requirements and specifications
		2.4	Check final form/shape of component against template/measurement specification and modify, as necessary
		2.5	Apply component identification and set-up markings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3 **Assemble components**	3.1 Set up jig support assembly to suit job requirements
	3.2 Select materials for fastening, joining and sealing and use according to job specifications and requirements
	3.3 Determine assembly and fastening sequence
	3.4 Carry out material preservation requirements, as required
	3.5 Assemble components to specified line markings and positions
	3.6 Ensure assembled component meets specifications
	3.7 Clean/prepare component assembly to suit job requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEM25005 Construct and assemble marine vessel timber components

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25005 Construct and assemble marine vessel timber components (Release 1).

Release 1. Supersedes and is equivalent to MEM25005B Construct and assemble marine vessel timber components.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting drawings, procedures, templates, construction details, assembly practices and material types to construct and assemble marine vessel timber components
- cutting/sizing and preparing and forming/shaping timber against template/measurement specifications and modifying as required and checking final form/shape against job specifications for compliance
- assembling supporting jigs to suit job requirements
- selecting and using fastening methods and determining fastening sequence
- finishing and applying preservation materials, cleaning excess material wastage and undertaking disposal of waste in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- component types/materials/templates and their uses
- characteristics, properties, specifications and uses of species, including durability, strength and appearance
- types, specification and uses of fasteners
- applicable codes and regulations
- methods used to take off measurements, mark out, construct and assemble components
- effect on access, rigidity, strength, buoyancy and resistance to stresses encountered at sea
- hand tools, power tools and workshop machinery to suit construction applications
- practices for cutting/dressing/sizing/shaping material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- measuring and marking out techniques using graduated devices, battens and templates
- procedures used in checking final form/shape
- clamping and shoring methods and the use of jigs
- procedures, codes and regulations used in applying relevant fastenings to suit assembly
- methods of cleaning, preserving and finishing components, their uses and safety precautions
- waste disposal obligations and regulations.

Assessment Conditions

- Assessors must:
  - have vocational competency in constructing and assembling marine vessel timber components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25006 Undertake marine sheathing operations

Modification History

Release 1. Supersedes and is equivalent to MEM25006B Undertake marine sheathing operations

Application

This unit of competency defines the skills and knowledge required to apply sheathing to marine structures (sheathing operations).

Tasks can be carried out on prepared new and old surface areas and sealing can involve various materials to ensure a watertight seal on a variety of components.

Where application of marine coatings is undertaken unit MEM08002 Pre-treat work for subsequent surface coating and/or unit MEM08004 Finish work using wet, dry and vapour deposition methods, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM25001	Apply fibre-reinforced materials
MEM25004	Fair and shape surfaces

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare surface areas and apply materials**	2.1	Prepare application material in accordance with manufacturer specifications
		2.2	Prepare surface area to suit job application
		2.3	Remove surface contaminants using appropriate method
		2.4	Protect non-contact surface areas, where applicable
		2.5	Apply measures to prevent external contamination in accordance with organisational procedures
		2.6	Use appropriate equipment to calibrate mixing quantities
		2.7	Select hand tools for mixing and application to suit job requirements
3	**Prepare and apply application materials**	3.1	Prepare/mix materials in accordance with manufacturer specifications
		3.2	Calculate material quantities and cut to produce minimum wastage
		3.3	Select and use application tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Carry out application procedures in accordance with manufacturer specifications
	3.5 Hold job materials securely in place until curing process is achieved, where applicable
	3.6 Remove excess material
	3.7 Clean up application tools and store
	3.8 Clean up job area to maximise safe working conditions
4 **Seal fabricated components**	4.1 Complete surface preparation in accordance with manufacturer specifications
	4.2 Apply sealant to components and secure in accordance with specifications and/or drawings
	4.3 Clean off excess sealant and test/check to ensure water tightness

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Surface materials include one (1) or more of the following:	• copper • gal sheet and other metals • fabric • sheathing resins • adhesives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- sealants
- fillers

Hand tools for mixing and application include one (1) or more of the following:

- mixing sticks
- putty/broad knives
- scales
- tins of equal size
- trowels
- squeegee
- brushes
- rollers

Assessment Requirements for MEM25006 Undertake marine sheathing operations

Modification History

Release 1. Supersedes and is equivalent to MEM25006B Undertake marine sheathing operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and clarifying sheathing application, material and other relevant specifications for undertaking marine sheathing operations
- preparing surface materials and measuring sheathing lengths to produce minimal wastage to suit job application
- preparing surface area, including removal of contaminants and shielding surface areas not being sheathed
- selecting hand and power tools to mix solutions in correct ratios and applying in accordance with manufacturer specifications
- securing matting/cloth and waste overhang and holding job materials securely in place until curing process is achieved
- removing excess materials to produce minimum sanding/finishing requirements and disposing of waste in accordance with legislative requirements
- applying sealant to components and testing/checking to ensure water tightness.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sheathing material specifications, properties and uses
- surface types, specifications, cleaning and preparation techniques
- site and sheathing preparation
- sealant types, specifications, application and finishing techniques
- masking procedures
- bonding/impregnating/reinforcing material specifications, properties and uses
- use of tools for sizing, measuring, mixing, applying sheathing and bonding/impregnating/reinforcing mixtures and finishing
- sheathing applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- waste minimisation techniques and waste disposal obligations and regulations
- methods for securing materials and waste overhang
- techniques/procedures for removal of excess resin
- methods for cleaning and storage of tools
- sanding/re-coating procedures
- water testing techniques.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking marine sheathing operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25007 Maintain marine vessel surfaces

Modification History

Release 1. Supersedes and is equivalent to MEM25007B Maintain marine vessel surfaces

Application

This unit of competency defines the skills and knowledge required to perform cosmetic maintenance/repair of marine vessel surfaces during routine maintenance-related inspection of hull and superstructure sectors, surfaces and fittings.

Where repair of marine surfaces and structures is required to be carried out unit MEM25008 Repair marine vessel surfaces and structures should also be selected.

Where slipping is required, or when working on a slipped craft unit MEM25014 Perform marine slipping operations should also be selected.

Where relevant units related to specific applications and materials are required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
		1.5	Identify sectors, surfaces and fittings requiring inspection
		1.6	Establish condition of sectors/surfaces and fittings
		1.7	Establish appropriate cosmetic maintenance/repair requirements and methods
		1.8	Identify and take action to minimise risks associated with toxic materials
2	**Clean and prepare vessel sectors and surfaces**	2.1	Select and use correct cleaning tools, equipment and materials
		2.2	Clean fittings and prepare for maintenance
		2.3	Ensure surfaces and sectors are cleaned and free of contaminants
3	**Perform cosmetic maintenance/ repair and finish surfaces**	3.1	Prepare surfaces, fill and fair ready for finishing
		3.2	Confirm compatibility of re-coating material
		3.3	Select and apply material coatings
		3.4	Maintain/replace fittings, as appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.5 Clean tools and equipment and store according to SOPs
	3.6 Re-coat surfaces, where applicable
	3.7 Sand surfaces and buff/polish to specification, where applicable

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Surfaces include one (1) or more of the following:	• fibre reinforced plastics • timber • metal
Cosmetic maintenance/ repair includes one (1) or more of the following:	• chips in fibre reinforced plastics • minor corrosion in metal • caulking in timber surfaces • wear and corrosion of fittings
Cleaning tools, equipment and materials include one (1) or more of the following:	• hand scrapers and scouring pads • hand held power tools • abrasive materials and equipment and associated dust extraction accessories • high-pressure blast cleaning equipment • chemical cleaners, including acid wash, solvent and detergents

Assessment Requirements for MEM25007 Maintain marine vessel surfaces

Modification History

Release 1. Supersedes and is equivalent to MEM25007B Maintain marine vessel surfaces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications to establish appropriate cosmetic maintenance/repair requirements, including cosmetic environmental and other damage
- identifying surface coating of different sectors of the marine vessel surfaces and detecting faults, flaws and breakdown in surface integrity
- identifying and taking actions to minimise risks associated with toxic materials
- selecting and using appropriate cleaning tools, equipment and materials to clean/etch surfaces
- removing fittings and preparing parts/sections in need of repair and carrying out repairs using and applying fillers, caulking compounds, sealants, adhesives and gel coats, where required
- preparing surfaces in readiness for application of surface finishing and protective coatings and applying/restoring in accordance with procedures and reinstalling/replacing fittings.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- structure, component, and surface type identification
- written and verbal instruction and specification
- range of cleaning/etching/cutting solutions and compounds
- protective and preservative coatings
- fault and blemish identification
- types of fillers, caulking, sealants, adhesives and their uses
- operation of hand and mechanical tools including high- pressure cleaning devices
- methods of cleaning, performing cosmetic repair and surface preparation, finishing and preservation
- environmental impact of run-off and waste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- waste disposal obligations and regulations.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining marine vessel surfaces at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25008 Repair marine vessel surfaces and structures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25008 Repair marine vessel surfaces and structures (Release 1).

Release 1. Supersedes and is equivalent to MEM25008B Repair marine vessel surfaces and structures.

Application

This unit of competency defines the skills and knowledge required to repair marine vessel structures and surfaces and chosen repair methods must take account of stresses encountered by vessels at sea.

Where mechanical systems/components/fittings are to be replaced unit MEM18055 Dismantle, replace and assemble engineering components should also be selected.

Where location/erection of structures is required unit MEM25003 Set up marine vessel structures should also be selected.

Where sheathing applications are required unit MEM25006 Undertake marine sheathing operations should also be selected.

Where cosmetic maintenance/repair of surfaces is required unit MEM25007 Maintain marine vessel surfaces should also be selected.

Where slipping is required, or when working on a slipped craft, unit MEM25014 Perform marine slipping operations should also be selected.

Where relevant units related to specific applications and materials are required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12007	Mark off/out structural fabrications and shapes
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM25004	Fair and shape surfaces
MEM25007	Maintain marine vessel surfaces

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify damaged structural areas/sectors and determine extent of damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.5	Determine repair requirements
2	**Remove and repair damaged sectors**	2.1	Reinforce/support damaged sector, where applicable
		2.2	Remove damaged sector
		2.3	Determine method of component replacement
		2.4	Repair/construct damaged components to specification using appropriate tools/equipment, materials and techniques
		2.5	Fasten components using appropriate fastening practices
		2.6	Prepare repaired surface area and re-coat to specifications
		2.7	Clean repairs in accordance with delivery requirements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Structures include one (1) or more of the following:	• hull • superstructure • decks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Surfaces include one (1) or more of the following:	• fibre reinforced plastics • timber • metal • polycarbonates • acrylics • glass
Stresses encountered by vessels at sea include one (1) or more of the following:	• hogging • sagging • wracking • sheering • panting
Damage includes one (1) or more of the following:	• foreign contact damage, including reef and jetty collision • environmental problems, including fungi, marine and insect effects on timber • variants of severe corrosion in metals, including electrolysis and galvanic corrosion • holed hull • star-cracking in fibre reinforced plastics • hull penetration causing ingress of water
Repairs include one (1) or more of the following:	• fibre reinforced plastics construction, including osmosis • structural repair, including impediments to structural and watertight integrity • replacement of hull and deck • planking • replacement of cracked hatch tops and portlight windows

Unit Mapping Information

Release 2. Supersedes and is equivalent to MEM25008 Repair marine vessel surfaces and structures (Release 1).

Assessment Requirements for MEM25008 Repair marine vessel surfaces and structures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25008 Repair marine vessel surfaces and structures (Release 1).

Release 1. Supersedes and is equivalent to MEM25008B Repair marine vessel surfaces and structures.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying the type and extent of structural damage to the area/sector
- selecting and preparing the suitable repair method and materials and appropriate tools and equipment to undertake the task
- disassembling components, where required, and undertaking repair damage to surfaces and structures to specifications
- reassembling and/or replacing components and reconnecting/refitting through-hull fittings
- preparing surface for application of surface finishes and protective coatings matching colours and textures to specifications
- testing and re-establishing watertight integrity in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- structure, component, surface and core identification
- effect of damage in relation to the integrity of the hull and structures and the capacity of the vessel to withstand stresses encountered at sea
- repair methods and materials for timber, fibre reinforced plastics, and metal surfaces and structures
- characteristics of chosen materials
- affect on structural and or watertight integrity
- tools/equipment, their specification and application
- techniques for reinforcement/shoring/support
- methods for re-constructing damaged components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- fastening methods and application procedure
- procedures used in preparing, re-finishing or re-coating and types and applications of coatings
- colour and texture matching techniques
- methods of testing and re-establishing watertight integrity
- procedures for pre-delivery clean-up of damaged sector.

Assessment Conditions

- Assessors must:
  - have vocational competency in repairing marine vessel surfaces and structures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25009 Form timber shapes using hot processes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25009 Form timber shapes using hot processes (Release 1).

Release 1. Supersedes and is equivalent to MEM25009B Form timber shapes using hot processes.

Application

This unit of competency defines the skills and knowledge required to form solid timber shapes using hot processes within a mould, existing structure or over a former assembly.

Where complex forming is required unit MEM09021 Interpret and produce drawings of curved 3-D shapes should also be selected.

Where straightforward construction and assembly of marine timber components is undertaken, including laminating by cold processes, unit MEM25005 Construct and assemble marine vessel timber components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM04018	Perform general woodworking machine operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12007	Mark off/out structural fabrications and shapes
MEM12023	Perform engineering measurements
MEM12024	Perform computations

MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to form timber shapes**	2.1	Select appropriate bending process and identify components
		2.2	Determine construction sequence
		2.3	Select and use tools and equipment appropriate to job requirements
3	**Form timber shapes**	3.1	Select standard jigs/templates to suit job application
		3.2	Construct jigs/templates to suit required shape
		3.3	Construct components to specifications using hot processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Set up laminating/heating equipment according to SOPs, where applicable
	3.5 Construct and shape components to specifications
	3.6 Ensure final components conform to specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Tools and equipment include one (1) or more of the following:	• jigs • templates • steam boxes • cramps • fasteners

Assessment Requirements for MEM25009 Form timber shapes using hot processes

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25009 Form timber shapes using hot processes (Release 1).

Release 1. Supersedes and is equivalent to MEM25009B Form timber shapes using hot processes.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications and drawings to select jig/template or fastening method relevant to form application
- selecting timber from drawing according to specifications and identifying any faults
- preparing and operating heating/steaming equipment using appropriate tools, jigs, moulds and templates to construct components to specifications
- bending, shaping, assembling and/or positioning timber components for clamping or fastening and fixing securely
- checking final component for compliance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant job specifications
- forming and component assembly practices
- heating/steaming equipment types and application
- heating times, temperatures and humidity requirements, where appropriate
- timber types, specifications and characteristics
- fault identification in material, including twist, shakes and sloping grain
- forming and component assembly practice
- jig/templates types and their application
- jig/template construction process to suit specified shape
- bending and forming processes used for constructing components
- relevant laminating/heating equipment, their use and safety procedures

MEM25010 Perform fitout procedures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25010 Perform fitout procedures (Release 1).

Release 1. Supersedes and is equivalent to MEM25010B Perform fitout procedures.

Application

This unit of competency defines the skills and knowledge required to fit out marine vessels.

It includes set out, construction, assembly and installation of a variety of components and also includes the installation of thermal, noise, vibration and fire control insulation materials.

This unit applies to both 'on the job' and 'pre-fabricated structure fitouts' and all work is carried out safely to specified industry standards for timber joinery, surface finish, appearance characteristics, dressing or plugging of fastenings.

Where lines plan drawings and loftings are required to be interpreted unit MEM09021 Interpret and produce drawings of curved 3-D shapes should also be selected.

Where straightforward installation of fittings/accessories is required unit MEM18002 Use power tools/hand held operations should also be selected.

Where construction of fibre reinforced plastics components are required to be undertaken unit MEM25002 Form and integrate fibre-reinforced structures should also be selected.

Where construction of solid timber shapes using hot processes is required to be undertaken unit MEM25009 Form timber shapes using hot processes should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, fitout plans, job sheets or work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Construct fitout components**	2.1	Identify materials for fitout from fitout plans
		2.2	Check take-off quantities and produce cutting list, if required
		2.3	Machine material to suit job scantling sizes, strength and appearance requirements
		2.4	Mark/cut out materials to specification
		2.5	Identify components requiring assembly and determine the sequence of assembly
3	**Assemble fitout components**	3.1	Identify method of assembling and fastening components
		3.2	Assemble components to specifications
		3.3	Remove waste materials in accordance with work practices and relevant legislation
		3.4	Sand surface area of assembled components for installation, where applicable
		3.5	Pre-coat component surface for preservation according to standard specifications and procedures, where applicable
4	**Install components**	4.1	Mark surface area for layout installation, where applicable
		4.2	Apply fitting and levelling practices
		4.3	Select fastenings to suit job requirements
		4.4	Fix components to meet specified job requirements
		4.5	Apply clean work practices for coating and adhesive applications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:

- timber
- composites
- fibre-reinforced plastics
- acrylics
- polycarbonates
- glass
- metal

Components include one (1) or more of the following:

- flooring/decking, partitions
- door frames
- portlights
- hatches
- windows
- windscreens
- non-structural bulkheads
- deckheads
- bunks
- cupboards and other furniture
- lining
- engine room and galley

Assessment Requirements for MEM25010 Perform fitout procedures

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25010 Perform fitout procedures (Release 1).

Release 1. Supersedes and is equivalent to MEM25010B Perform fitout procedures.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, plans and drawings to perform fitout procedures
- identifying job fixing methods, fitout components, scantling sizes, patterns and materials from fitout plans and procedures
- identifying component structure, materials and assembly procedure and determining quantities and producing cutting list
- marking out materials and selecting and using appropriate tools/equipment/machinery to produce the desired shape and appearance
- assembling, fitting, adjusting and fixing equipment and components and checking assemblies against specifications for correct sizing and construction standard
- sanding surface area of component parts and treating surface areas for preservation and testing for watertight integrity
- preparing fitout structures for coating and adhesive applications and fixing components to meet job specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures used for drawing identification and accuracy
- common structures used in boat fitout
- job fixing methods, fitout components, materials and use of patterns
- procedures used for constructing and assembling component
- typical sizing, common species, strength and appearance requirements
- practice used for machining of material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- material characteristics in terms of species, strength, appearance and grade
- marking and cutting procedures
- practices used in identification and assembly sequence
- assembly and fastening methods
- surface preservation pre-coating and application method
- practices used for fitting and levelling
- types of fastenings and methods of fixing/fastening applications and material species
- watertight integrity testing methods and their application
- waste disposal obligations and regulations.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing fitout procedures at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25011 Install marine systems

Modification History

Release 1. Supersedes and is equivalent to MEM25011B Install marine systems

Application

This unit of competency defines the skills and knowledge required to install and test engine/plant and ancillary equipment relevant to propulsion, stability, steering and fuel systems for mechanically powered marine vessels and application can apply to drive systems, including inboard/outboard, water jet and side thrusting units (excluding outboard motor installation).

Site locations can include new or existing external and internal locations for foundations, footings, beds and frameworks completed prior to installation and commissioning and tasks can be undertaken in a workshop/site, moored or in a sea-trial situation.

Where technical drawings are required to be interpreted unit MEM09002 Interpret technical drawing should also be selected.

Where load shifting equipment is required to be used unit MEM11010 Operate mobile load shifting equipment should also be selected.

Where moveable and fixed load shifting equipment is required to be used unit MEM11022 Operate fixed/moveable load shifting equipment should also be selected.

Where installation only is required unit MEM25015 Assemble and install equipment and accessories/ancillaries should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM11011	Undertake manual handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Prepare installation site**	2.1	Check site features using appropriate measuring equipment
		2.2	Report non-compliance with specification to appropriate authority
		2.3	Undertake modifications with approval of appropriate authority
		2.4	Prepare installation site and components
3	**Install marine engines/plant**	3.1	Carry out all work in accordance with site procedures and relevant Australian Standards
		3.2	Prepare engine/plant components and ancillary equipment for correct sequential installation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.3	Install engine/plant in accordance with manufacturer's site specifications
		3.4	Check engine/plant for conformance to specifications, and undertake modifications/adjustments according to procedures
		3.5	Install engine/plant in accordance with specifications
		3.6	Finalise site conditions in accordance with WHS requirements and SOPs
		3.7	Complete documentation to required specifications
4	**Test engine/plant systems and ancillary equipment**	4.1	Identify work/test requirements for engine/plant and ancillary equipment
		4.2	Test engine/plant and ancillary equipment for correct operation using instruments appropriate to the testing task
		4.3	Assess and verify operational function
5	**Collect data and localise fault conditions**	5.1	Use drawings/diagrams and operational specifications to identify and localise fault conditions
		5.2	Examine built-in fault indicators and error codes, and interpret and record results
		5.3	Localise fault condition to major component level
6	**Analyse and report test results**	6.1	Analyse/verify test results against operational specifications and confirm localised faults
		6.2	Report potential and actual faults according to SOPs
		6.3	Plan corrective action and record/document action plan

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Marine systems include the following:

- engines
- stabilisers
- steering systems
- fuel systems

Stabilisers are fin and/or tab types and include one (1) or more of the following:

- electric
- hydraulic
- mechanical

Steering system units include one (1) or more of the following:

- hydraulic
- cable
- wire-operated

Fuel systems include one (1) or more of the following:

- petrol
- diesel supply operations

Instruments include one (1) or more of the following:

- mechanical
- pneumatic/electro-pneumatic
- electronic (analog/digital)
- associated instruments that measure variables, including:
  - temperature
  - pressure
  - flow rate
  - levels
  - lights
  - density
  - any other operational variable

Assessment Requirements for MEM25011 Install marine systems

Modification History

Release 1. Supersedes and is equivalent to MEM25011B Install marine systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, supporting documentation and Australian Standards to install marine systems
- checking and preparing site for correct location, dimensions and levels and preparing surfaces, materials and components for installation
- installing engine/plant components and ancillary equipment in accordance with procedures and manufacturer's specifications
- levelling, aligning, coupling and connecting engine/plant (excluding electrical connections) in accordance with procedures and manufacturer specifications
- testing engine/plant and ancillary equipment for correct operation using appropriate test equipment
- interpreting operational data of engine/plant and ancillary equipment, faults from built-in fault indicators and error codes and localising fault condition to major component level
- analysing test results against specifications for faults and planning remedial action and recording/documenting action plan.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- equipment used to check various site features and their use
- marine systems, specifications, applications and non-compliance procedures
- relevant codes and standards
- fixing/fastening methods components
- levelling, alignment, coupling and connection requirements
- relevant person(s) for making electrical connections
- cleaning and clearing requirements
- waste disposal obligations and regulations
- reporting and recording requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operational requirements/specifications of engine/plant and ancillary equipment and testing procedures and principles
- normal operating characteristics of engine/plant and ancillary equipment
- faults and malfunctions and error indications in built-in devices
- methods of determining fault condition and procedures for reporting faults
- causes/faults in engine/plant and ancillary equipment
- procedures for recording/documenting corrective maintenance activity.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing marine systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25012 Install and test operations of marine auxiliary systems

Modification History

Release 1. Supersedes and is equivalent to MEM25012B Install and test operations of marine auxiliary systems

Application

This unit of competency defines the skills and knowledge required to install and test marine auxiliary systems.

Site locations can include external and internal locations for foundations, footings, beds and frameworks completed prior to installation and commissioning and tasks can be undertaken in a workshop/site, moored or in a sea-trial situation.

Where installation only is required unit MEM25015 Assemble and install equipment and accessories/ancillaries should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13003	Work safely with industrial chemicals and materials
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Select auxiliary system**	2.1	Identify installation and compatibility of surface and fitting materials
		2.2	Identify installation site of system
		2.3	Select auxiliary system in accordance with job requirements
		2.4	Identify material structure and installation procedures
		2.5	Identify and verify associated installation/assembly plans/instruction
3	**Install auxiliary system**	3.1	Select appropriate tools for specified installation
		3.2	Cut structural area to suit installation requirements, where applicable
		3.3	Fit structural reinforcement to suit job requirement, where applicable
		3.4	Prepare structural area for surface preparation
		3.5	Apply coating sealants and/or isolation materials to suit job requirements
		3.6	Apply fastening methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		3.7 Apply installation procedures in accordance with job specification
		3.8 Apply clean work practices
4	**Test operation of auxiliary system**	4.1 Apply pre-test checks and verify before standard testing procedures are actioned
		4.2 Identify and verify test operation procedures
		4.3 Set up and use test equipment in accordance with testing practice
		4.4 Test system in accordance with specified operational procedures
		4.5 Record/report faults to appropriate authorities
		4.6 Rectify faults and re-test for correct operation
		4.7 Record and document final test operation according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• metals • timber • resin and glass reinforcements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Auxiliary systems include one (1) or more of the following:	• bilge • freshwater • fire (water) • sanitary plumbing systems • lifting systems, including davits, crane and winch units

Test equipment includes one (1) or more of the following:	• mechanical
	• pneumatic/electro-pneumatic
	• electronic (analog/digital)
	• associated instruments that measure variables, including:
	  • temperature
	  • pressure
	  • flow rate
	  • levels
	  • lights
	  • density
	  • any other operational variable

Assessment Requirements for MEM25012 Install and test operations of marine auxiliary systems

Modification History

Release 1. Supersedes and is equivalent to MEM25012B Install and test operations of marine auxiliary systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, plans and supporting documentation to install and test operations of marine auxiliary systems
- identifying materials for installation from plans/drawings and establish compatibility of component material and structural surface
- selecting and installing auxiliary systems using appropriate tools, equipment and procedures
- selecting and applying sealants and coatings/isolation materials, including sikaflex, paints, flowcoat and nylon to suit job requirements
- modifying structural components without compromising structural and watertight integrity and assembling and installing systems utilising appropriate fastening methods in accordance with plans and specifications
- testing system using appropriate testing equipment to verify correct system operation
- recording/reporting and rectifying all faults and re-testing to ensure correct operation.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- role of plans/specification used for installation of identified components
- species/types of materials and their uses
- compatibility of species/types of construction materials of component and surface
- material species/types of structure/system and installation process
- plans/instruction relevant to installation and assembly of selected system
- tools associated with system installation and their uses
- effects of sea-going stresses on structure and components
- practices used in modifying structural components to suit system applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for applying the reinforcement to structural section
- method of sanding for surface preparation
- sealant coatings and/or isolation materials
- waste disposal obligations and regulations
- standard pre-testing checks and role, function and set-up procedure of test equipment
- practice used in testing operation of installed system
- recording procedures for fault diagnosis and identification
- methods used for rectifying faults and re-testing of system operations
- test operation checklist and recording procedure for final test clearance.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing and testing operations of marine auxiliary systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25013 Produce three-dimensional plugs/moulds

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25013 Produce three-dimensional plugs/moulds (Release 1).

Release 1. Supersedes and is equivalent to MEM25013B Produce three-dimensional plugs/moulds.

Application

This unit of competency defines the skills and knowledge required to manufacture three-dimensional plugs and, where applicable, solid and/or split moulds constructions used in marine vessel construction.

Tasks can include the use of hand and mechanical lay-up practices for plug/mould construction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band:

This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).

Unit Weight: **12**

Pre-requisite Unit

MEM04018	Perform general woodworking machine operations
MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12007	Mark off/out structural fabrications and shapes
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM25002	Form and integrate fibre-reinforced structures
MEM25003	Set up marine vessel structures

Competency Field

Marine craft construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Establish plug specifications from drawings, relevant documentation and client discussion, as appropriate
2	**Construct plug**	2.1	Select plug construction materials in accordance with job requirements and specifications
		2.2	Select plug coating materials to meet specifications in accordance with organisational procedures
		2.3	Select appropriate tooling and machinery
		2.4	Mark out plug material/s in accordance with plug construction requirements
		2.5	Carry out plug release angles/taper, flanges and rounding/concaving of corners, where applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.6	Use appropriate tools, machines and construction practices to construct plug
3	**Finish plug**	3.1	Check plug for compliance with specifications/drawing
		3.2	Apply final finish coatings to plug to comply with specifications, where required
		3.3	Prepare plug for mould manufacturing in accordance with specifications or procedures
4	**Determine mould requirements**	4.1	Interpret mould construction specifications and drawings
		4.2	Select mould construction materials in accordance with specifications
		4.3	Select appropriate tools and machinery/equipment for job application
5	**Produce mould**	5.1	Apply tooling coat to plug in accordance with standard application procedures
		5.2	Apply construction materials to plug in accordance with appropriate lay-up sequence and procedure
		5.3	Apply stiffening/bracing materials in accordance with job requirements, where applicable
		5.4	Prepare mould for production run/s, where applicable

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM25013 Produce three-dimensional plugs/moulds (Release 1).

Release 1. Supersedes and is equivalent to MEM25013B Produce three-dimensional plugs/moulds.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, plans and drawings to identify materials for producing three-dimensional plugs/moulds
- marking out dimensions on appropriate materials relevant to plug/mould components and selecting and using appropriate hand tools, hand held power tools and workshop machinery to suit construction
- constructing plugs/moulds and modifying, as required, to ensure compliance with specifications/drawings
- checking external/internal dimensions against specifications/drawings and applying final finish coatings in accordance with procedures
- preparing plug/mould for production run by fitting reinforcement components and or materials in accordance with job requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- plug/mould construction materials, characteristics and applications
- plug/mould coating materials, characteristics and applications, including tooling coats
- correct dimensions and application procedures for marking out
- release angles/tapers, flanges and rounding/concaving of corner sections
- hand tools/hand held power tools and workshop machinery and their uses
- plug/mould construction methods
- methods used to apply stiffening/bracing/reinforcement
- method of application and sequence of final finish coating

MEM25014 Perform marine slipping operations

Modification History

Release 1. Supersedes and is equivalent to MEM25014B Perform marine slipping operations

Application

This unit of competency defines the skills and knowledge required to perform slipping operations on marine vessels, including work/pleasure craft and yachts appropriate to the capacity of the slipping facility.

Where travel lifts, forklifts and/or cranes are required to be used unit MEM11010 Operate mobile load shifting equipment or other appropriate units should also be selected.

Where boat is to be moored using the vessel's engine or with the assistance of a work boat unit MEM50009 Safely operate a mechanically powered recreational boat should be selected.

Where skills for drawing interpretation, marking out and constructing structures for slipping are required appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling

1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Determine set-up of slipping facility to suit vessel in accordance with organisational and legislative requirements
2	**Set up slipping facilities**	2.1	Take measurements to suit hull structure, where applicable
		2.2	Position hull support bearers to suit hull structure, where applicable
3	**Perform hauling out procedures**	3.1	Position slipping facilities to suit slipping application
		3.2	Position vessel to suit slipping set-up
		3.3	Select vessel retaining ropes and secure in accordance with slipping facility and vessel retaining requirements
		3.4	Ground/level vessel for positioning of hull support
		3.5	Position hull support mechanics
		3.6	Carry out safety checks of vessel stability
4	**Perform launching procedures**	4.1	Check vessel support and slip devices for safety
		4.2	Apply pre-launch safety checks for vessel seaworthiness
		4.3	Carry out launch practices according to standard procedure and organisational requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.4 Re-position hull support devices to prevent obstruction during vessel removal
	4.5 Moor vessel using appropriate restraints, where applicable

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Vessel support and slip devices include one (1) or more of the following:	• slings • shoring • cables • stays • blocks • chocks

Assessment Requirements for MEM25014 Perform marine slipping operations

Modification History

Release 1. Supersedes and is equivalent to MEM25014B Perform marine slipping operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, plans and drawings to identify measurements relevant to positioning of hull structure on slipping facilities
- setting up slipping facilities to accommodate vessel and positioning relevant support bearer/blocks and arms according to design, dimensions, shape and weight
- operating slip and slipping machinery and manoeuvring vessel in accordance with the set-up of slipping facility and securing vessel in preparation for slipping
- inspecting vessel when slipped to ensure adequacy of hull support and adjusting and fixing support mechanisms, as required
- cleaning site and preparing vessel for launching, including performing safety checks to ensure vessel stability and watertight integrity
- positioning hull supports, including arms and slings to allow clear passage for removal of vessel, and mooring vessel in accordance with requirements of the mooring facility.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of slipways and operational procedures
- interpretation of ships/boats drawings, slipping specifications or instructions
- safety and legislative requirements for slipping and launching vessels
- different types of hull structures, dimensions, vessel weights and appropriate slipping arrangements
- methods of supporting/securing vessel ready for slipping
- methods of supporting hull during and after slipping
- procedures for operating slipway and slipway machinery
- procedures for positioning slip and manoeuvring vessels
- techniques for trimming and final securing of slipped vessel and disengaging slipway machinery

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- knots, lashings and their applications
- pre-launch preparation requirements and safety checks to be performed
- checks to ensure stability and watertight integrity
- procedures used in launching vessels and mooring methods
- procedures for recovering and securing slip.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing marine slipping operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM25015 Assemble and install equipment and accessories/ancillaries

Modification History

Release 1. Supersedes and is equivalent to MEM25015A Assemble and install equipment and accessories/ancillaries

Application

This unit of competency defines the skills and knowledge required to assemble and install equipment and ancillaries/accessories.

Work is undertaken using new external and internal locations and sites and foundations, footings, beds and framework are completed prior to installation practices.

It does not cover installation requiring substantial modification to the existing site or where components are replaced by the same or similar type.

Where production-related assembly work is undertaken unit MEM03002 Perform precision assembly should also be selected.

Where installation requires substantial modification to the existing site, and is being replaced by the same or similar type unit MEM10006 Install machine/plant should also be selected.

Where load shifting equipment is required to be used unit MEM11010 Operate mobile load shifting equipment should also be selected.

Where positions are determined, alignments are undertaken and testing within manufacturer specifications is required unit MEM25012 Install and test operations of marine auxiliary systems should also be selected.

This unit should not be selected if unit MEM03002 Perform precision assembly has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		appropriate authority
		2.4 Prepare all surfaces, materials and components for use
3	**Install machinery/ plant and equipment**	3.1 Carry out work in accordance with site procedures and legislative requirements
		3.2 Prepare machine/equipment components for correct sequential installation
		3.3 Install machinery/plant or equipment in accordance with manufacturer and site specifications
		3.4 Undertake routine modification/alterations to operating procedures, where required
		3.5 Level, align, connect machine/equipment or couple, where required (excluding electrical connections)
		3.6 Clean site and clear all debris and leave in safe state

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Machine/equipment components include one (1) or more of the following:	• toe rails • cleats • bollards • bow-rollers • fairleads • stanchions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- railings
- non-powered and powered winches
- engines and driving mechanisms
- auxiliary power plants
- desalinating units
- stabiliser units
- powered/non-powered davits
- pumps
- compressors

Unit Mapping Information

Assessment Requirements for MEM25015 Assemble and install equipment and accessories/ancillaries

Modification History

Release 1. Supersedes and is equivalent to MEM25015A Assemble and install equipment and accessories/ancillaries

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, plans, drawings, charts, lists and other applicable reference documents to assemble and install equipment and accessories/ancillaries
- checking site and taking dimensions and measurements and performing alterations and corrections with approval of appropriate authority
- preparing surfaces, materials and components for use and checking components against specifications for compliance
- preparing machine/equipment components for correct sequential installation
- undertaking numerical operations and calculations associated with assembling and installing equipment and accessories/ancillaries
- installing machine/plant or equipment and performing modifications/alterations as required in accordance with manufacturer and site specifications
- levelling, aligning, connecting and coupling machine/equipment to specifications and packing/sealing through-hull fittings, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- appropriate levelling and measuring equipment and benefits of choice
- procedural standards, legislative requirements and non-compliance, and the impact of such
- preparatory requirements and processes
- sequence of installation of parts and installation procedures
- reasons for modifications/alterations and impact of modifications/alterations
- procedures for levelling and aligning and impacts of misalignment
- cleaning procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in assembling and installing equipment and accessories/ancillaries at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM26001 Lay up composites using open moulding techniques

Modification History

Release 1. Supersedes and is equivalent to MEM26001A Lay up composites using open moulding techniques

Application

This unit of competency defines the skills and knowledge required to fabricate composites using open moulding techniques.

This unit is one of three units covering the basic composite fabrication techniques, the other two being unit MEM26002 Lay up composites using vacuum closed moulding techniques and unit MEM26003 Lay up composites using pressure closed moulding techniques, which together are intended to ensure the composite tradesperson can undertake a basic fabrication using these methods.

Where mechanically assisted movement of large parts is required, appropriate units should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine product requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify product requirements from specifications, job sheets or work instructions and customer requests
		1.5	Select open moulding technique most appropriate to product requirements
		1.6	Identify or develop required procedures to make product using selected process
2	**Set up equipment/ workplace and prepare materials**	2.1	Select required items of equipment and ancillary equipment
		2.2	Prepare and assemble all equipment and ancillary equipment as required by procedures
		2.3	Identify required reinforcing/reinforcing system and determine quantity of reinforcing
		2.4	Prepare reinforcing including cutting to size/shape and carry out any pre-treatment, as required
		2.5	Identify required resin system
		2.6	Determine quantity of resin components and confirm adequate quantities are available
		2.7	Mix resin with minimised waste and test resin
3	**Fabricate and adjust equipment and materials, as required**	3.1	Identify and control hazards
		3.2	Apply gel coat, resin and reinforcing in accordance with procedures
		3.3	Ensure required resin distribution

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		3.4 Cure product and remove product from mould when ready
		3.5 Identify typical problems and take appropriate remedial action
		3.6 Perform final verification to meet product requirements
4	**Clean up and maintain equipment**	4.1 Clean all moulding and mixing equipment
		4.2 Undertake minor maintenance, as appropriate
		4.3 Prepare for next use or storage
		4.4 Inspect equipment for faults and take appropriate corrective action
		4.5 Store equipment
		4.6 Minimise and dispose of waste as appropriate
		4.7 Complete required logs and reports according to SOPs

Assessment Requirements for MEM26001 Lay up composites using open moulding techniques

Modification History

Release 1. Supersedes and is equivalent to MEM26001A Lay up composites using open moulding techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets and customer requests for laying up composites using open moulding techniques
- calculating the quantity of materials required and applying gel coat and resin using rollers, brushes and/or chopper gun in accordance with procedures
- identifying and preparing reinforcement/reinforcement system
- assembling, cleaning and preparing simple and complex moulds and applying wax to release systems
- removing product from simple and complex moulds using appropriate equipment
- ensuring compliance to specifications
- identifying and rectifying any typical problems and monitoring curing cycles
- undertaking minor maintenance to chopper guns and/or pump systems (reciprocating airless pumps with air support in accordance with procedures
- minimising wastage
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- preparation schedules, terminology and information relevant to standard work instructions
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to laying up composites using open moulding techniques
- release agents surface tension
- gel coat, resin types and applications
- types of reinforcement and lay-up techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- common tools/equipment and their maintenance
- operation and maintenance requirements for solvent cleaners (filters)
- correct laminating techniques and finishing off (e.g. detail consolidation/rolling, check consistency and evenness of resin/glass, remove air entrapment and check with light)
- managing post-cure requirements (e.g. air cure and oven cure)
- production environment variables including the effect of humidity (e.g. epoxy backbone), temperature, ultraviolet (UV) light and contamination from other processes
- managing hazardous environments (e.g. styrene levels)
- function of catalysts, accelerators and promoters
- control of overspray
- storage of moulds
- waste disposal.

Assessment Conditions

- Assessors must:
  - have vocational competency in laying up composites using open moulding techniques at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Assessment Requirements for MEM26002 Lay up composites using vacuum closed moulding techniques

Modification History

Release 1. Supersedes and is equivalent to MEM26002A Lay up composites using vacuum closed moulding techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, customer requests for laying up composites using vacuum closed moulding techniques
- selecting appropriate closed moulding techniques in accordance with specifications and procedures
- introducing resin infusion into mould by applying the following:
  - tack tape
  - bag (pleats and sits well)
  - inlet and outlet plumbing (connect/disconnect)
  - managing flow medium (e.g. cloth), cores, flow and gel times (relationship to positioning and spacing of lines)
  - managing and monitoring vacuum pressure
  - monitoring cure cycles
  - checking for leaks
- performing vacuum bagging by applying the following:
  - resin infusion data and protect bag from contamination
  - breather cloth/films
  - peel ply and achieving correct ply location and orientation
- identifying and rectifying any typical problems and monitoring curing cycles
- undertaking minor maintenance to equipment and ancillary equipment in accordance with procedures
- minimising wastage
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using vacuum closed moulding techniques
- reinforcement and lay-up schedules (e.g. layers of reinforcement, direction and darts)
- release systems and processes
- tool sealing
- gel coating, times and working times
- sealing of mould (use of tack tape (e.g. butyl (or other) mastic and mechanical seals and clamps)
- vacuum and vacuum systems, adjustment and measurement, and vacuum control (e.g. switches, controls and regulators)
- resin systems applicable to process (e.g. vacuum infusion or vacuum bagging – polyester and epoxy)
- initiator/catalyst or hardener rates to temperature (hot/cold)
- free amine/amine blushes
- heat curing requirements and how it is done (e.g. ovens, hot bonders (blankets), and autoclaves) and heat curves
- TG (glass transition temperature)
- design briefs (e.g. tool design and part lines)
- Darcy's Law and its application to the flow of resins through porous media (e.g. reinforcing and cores).

Assessment Conditions

- Assessors must:
  - have vocational competency in laying up composites using vacuum closed moulding techniques at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications

MEM26004 Make basic plugs for composites fabrication

Modification History

Release 1. Supersedes and is equivalent to MEM26004A Make basic plugs for composites fabrication

Application

This unit of competency defines the skills and knowledge required to make basic plugs for routine or one-off production.

This unit does not cover the making of the plugs which require specialist patternmaking trade skills. See the relevant metals and engineering units of competency for these situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		4.5	Perform final verification to meet product requirements
5	**Clean up and maintain equipment**	5.1	Label and store plug for future use
		5.2	Clean and replace tools ready for next use
		5.3	Undertake any required minor maintenance of tools/equipment
		5.4	Complete required logs and reports according to SOPs
6	**Identify common problems**	6.1	Recognise typical process and product problem/potential problem and take appropriate action

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Routine faults include one (1) or more of the following:

- gel coat sag
- slow curing rates
- blistering
- wrinkles
- pinholes
- brush marks
- poor surface finish

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Non-routine faults include one (1) or more of the following:	• release agents failure • mould release failure • warping or cracking after moulding
Typical process and product problems include one (1) or more of the following:	• structural strength, rigidity and stability of the tooling • dimensional accuracy of the tooling • allowances in the design for shrinkage, deformations and alterations in the process from tooling to mould to finished composite product • placement of flanges, closures, fitments, supports, struts and stiffeners • variations in materials and/or contamination of materials

Unit Mapping Information

Assessment Requirements for MEM26004 Make basic plugs for composites fabrication

Modification History

Release 1. Supersedes and is equivalent to MEM26004A Make basic plugs for composites fabrication

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, product drawings, customer requests, industry codes of practice and government regulations for making basic plugs for composites fabrication
- liaising with mould maker to determine plug features
- calculating surface area, required resin volume and resin content
- making plugs as required in accordance with procedures
- identifying faults both routine and potential and applying remedial action
- undertaking minor maintenance to tools and equipment in accordance with procedures
- minimising wastage
- labelling and storing plug
- cleaning and replacing tools for next use
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- finishing resins
- tooling materials and resins
- methods used to calculate surface area, required resin volume and resin content
- batch scale formulae for resin system
- parting lines
- design criteria/brief
- reverse engineering
- shrinkage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cure values
- correct release agent
- thermal expansion
- open/closed mould (e.g. flange width and draft)
- resin transfer moulding (RTM) – metal versus composite mould
- closed mould (e.g. A/B side, bag it and silicon blanket)
- corners and undercuts.

Assessment Conditions

- Assessors must:
  - have vocational competency in making basic plugs for composites fabrication at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM26005 Make basic moulds for composites fabrication

Modification History

Release 1. Supersedes and is equivalent to MEM26005A Make basic moulds for composites fabrication

Application

This unit of competency defines the skills and knowledge required to make low pressure moulds for composites for routine or one-off production.

This unit does not cover the making of the moulds which require specialist patternmaking or metal fabrication trade skills. See the relevant metals and engineering units of competency for these situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	product requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify product requirements from specifications, job sheets or work instructions and customer requests
2	**Interpret product requirements**	2.1	Determine features of mould including relief, parting lines and efficient lay-up
		2.2	Identify or develop procedure to make mould
		2.3	Select tooling and materials required to make mould
		2.4	Liaise with plug maker in relation to suitable plug
		2.5	Set up equipment/workplace
3	**Prepare materials**	3.1	Calculate surface area and required resin volume
		3.2	Develop cutting list for solid materials
		3.3	Mark out and cut out sheet materials, as required
		3.4	Calculate resin content
		3.5	Develop batch scale formulae for resin system
		3.6	Prepare any non-composite materials to be used
		3.7	Measure resin components and minimise wastes, as appropriate
4	**Make mould**	4.1	Identify and control hazards
		4.2	Check suitability of plug, including release angles and parting lines
		4.3	Prepare plug, including cleaning, repairing surface blemishes and applying release systems
		4.4	Mix resin system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.5 Fabricate mould and release mould from plug
	4.6 Detail mould, including buffing, filling and getting ready for production
	4.7 Identify routine and non-routine faults and take appropriate remedial action
	4.8 Recognise typical process and product problem/potential problem and take appropriate action
	4.9 Perform final verification to meet product requirements
5 **Clean up and maintain equipment and anticipate common problems**	5.1 Label and store mould for future use
	5.2 Clean and replace tools ready for next use
	5.3 Undertake any required minor maintenance of tools/equipment
	5.4 Complete required logs and reports according to SOPs

MEM26006 Mark and cut out sheets for composite use

Modification History

Release 1. Supersedes and is equivalent to MEM26006A Mark and cut sheets for composite use

Application

This unit of competency defines the skills and knowledge required to mark and cut out sheets for composite use.

The marking out/cutting out of sheets used for composites can be significantly different to the marking out/cutting out of other materials, including metals. Sheets used in composite fabrication often have significant directionality which must be considered and as a result of this composite design often includes different physical properties in one direction to another and so sheets must be marked and cut to align the required directional properties of the product with those of the sheets used in the fabrication.

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

Where the selection and use of power tools is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine product requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Determine requirements of sheet material to be used from specifications, job sheets or work instructions and customer requests
		1.5	Identify process to be used to fabricate product
2	**Develop geometric shape**	2.1	Develop lay flats for regular solid rectilinear shapes
		2.2	Develop lay flats for regular curved/circular shapes
		2.3	Develop lay flats for transition pieces
		2.4	Develop lay flats for complex 3-D shapes
3	**Orient required shape to suit directional differences of sheet**	3.1	Identify directional properties in sheet
		3.2	Identify sheet-related directional requirements of product
		3.3	Identify orientations and alignments of lay flats with sheet
4	**Mark out and cut sheet**	4.1	Identify and control hazards
		4.2	Place lay flat on sheet and arrange lay flats to minimise waste
		4.3	Prevent lay flat moving and mark sheet, as required, using lay flat
		4.4	Cut sheet to meet requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		4.5 Identify typical problems and take appropriate remedial action
		4.6 Perform final verification to meet product requirements
5	**Store templates/lay flats**	5.1 Clean lay flats after use
		5.2 Label lay flat using identification protocol
		5.3 Record required directionality information with lay flat
		5.4 Store lay flats according to procedures
		5.5 Complete logs and reports according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sheets include one (1) or more of the following:

- reinforcing:
  - woven
  - non-woven
- pre-impregnated (pre-preg)
- cores
- timber, including medium density fibreboard (MDF) and plywood
- filler material

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Requirements of sheet material includes the following:	• strength • flexibility/rigidity • thickness • density • directionality • drape • operating temperature
Regular rectilinear shapes include one (1) or more of the following:	• rectangular prisms • cubes • portions of prisms and cubes • similar shapes
Regular curved shapes include one (1) or more of the following:	• cylinders • spheres • segments of cylinders and spheres • similar shapes
Transition pieces include one (1) or more of the following:	• cones • pyramids • portions of cones and pyramids • square to round • tee piece • lobster back • similar shapes
Complex 3-D shapes include the following:	• other 3-D shapes which may need to be fabricated and which may be composed of a number of components of the above shapes
Alignment includes the following:	• warp • weft • selvedge • other features of the sheet • the nesting of lay flats to optimise the use of materials and minimise waste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Typical problems include one (1) or more of the following:	• identifying directionality in sheet • identify a feature to provide alignment • products requiring multidirectional properties

Assessment Requirements for MEM26006 Mark and cut out sheets for composite use

Modification History

Release 1. Supersedes and is equivalent to MEM26006A Mark and cut sheets for composite use

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, product drawings, customer requests for marking and cutting sheets for composite use
- developing lay flats for geometric shapes
- marking out and cutting sheets taking into account the directional properties and alignments of lay flats and minimising waste
- identifying typical problems and taking appropriate remedial action
- cleaning, labelling, recording directionality information and storing lay flats in accordance with procedures
- completing all documentation and reports, including items requiring further action in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to marking and cutting sheets for composite use
- orientation of plies/reinforcing
- direction of fibres (e.g. unidirectional, quad directional and on bias)
- weaves (e.g. plain, twill and satin)
- use for curves and compound curves
- creating patterns for a lay flat
- 3-D development of shapes.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in marking and cutting sheets for composite use at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM26007 Select and use reinforcing appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26007A Select and use reinforcing appropriate for product

Application

This unit of competency defines the skills and knowledge required to select specified reinforcement. It includes the science of reinforcing.

This unit does not cover the selection of reinforcing for a structurally designed composite, although it can include working with a person undertaking a structural design and it can cover the redesign of an existing product (e.g. using a different process) or the design of a new product similar to an existing product.

Where the selection of a suitable resin system is required unit MEM26008 Select and use resin systems appropriate for product should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM26007 Select and use reinforcing appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26007A Select and use reinforcing appropriate for product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications formulas/recipes, batch sheets, product drawings, customer requests for selecting and using reinforcing appropriate for product
- considering all reasonably available reinforcing when selecting and choosing the appropriate product
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- fabricating the final product using selected process and minimising waste in accordance with specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using reinforcing appropriate for product
- coloured fibres
- fibre types, costs and source (e.g. country/company)
- life cycle assessment
- types of weave and material
- non-woven reinforcing (e.g. unidirectional, milled and chopped)
- how you buy reinforcing (e.g. toe, strands, gsm, width and weight in product)
- how the reinforcing is arranged
- exotic and hybrid reinforcing.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and using reinforcing appropriate for product at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. 	4.6 Fabricate product using selected process and minimise waste
	4.7 Review product compared to requirements
	4.8 Review reinforcing selection and fabrication process
	4.9 Identify areas for improvement and take appropriate actions
	4.10 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Requirements of resin system include the following:	• strength • flexibility/rigidity • surface finish and colour • shrinkage • chemical/ultraviolet (UV)/environmental resistance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- operating temperature and heat distortion temperature
- recyclability

Most appropriate resin includes the following:

- compliance with product requirements
- greatest ease of use in manufacture
- best financial return
- greatest sustainability contribution

Resin system adjustments include one (1) or more of the following:

- temperature
- humidity
- required cure time

Adjustments may only be made within the allowable limits of the system being used

Areas for improvement include one (1) or more of the following:

- cost/benefit of different resin systems
- selecting a resin system suited to the fabrication process

Sustainability includes the following:

- survival of the ecology/physical environment
- economic viability
- social sustainability

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM26008A Select and use resin systems appropriate for product

Assessment Requirements for MEM26008 Select and use resin systems appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26008A Select and use resin systems appropriate for product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, safety data sheets (SDS), formulas/recipes, batch sheets, product drawings, customer requests for selecting and using resin systems appropriate for product
- considering all reasonably available resin systems when selecting and choosing the appropriate product
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- fabricating the final product using selected process and minimising waste as per specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports including items requiring further action in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using selecting and using resin systems appropriate for product
- physical and chemical properties of resins
- resin types, cost and source
- catalyst types and systems (e.g. polyester and vinyl ester)
- hardener types (e.g. epoxy and phenolic)
- fillers and thickeners (e.g. mineral extenders, milled and cut fibre)
- safety data sheets (SDS) appropriate to the resin system selected

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- catalyst hazards (e.g. self-accelerating decomposition temperature (SADTs)) and control measures associated with selecting and using resin systems appropriate for product, including housekeeping.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and using resin systems appropriate for product at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM26009 Select and use cores and fillers appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26009A Select and use cores and fillers appropriate for product

Application

This unit of competency defines the skills and knowledge required to select and use appropriate cores and/or fillers.

Where the selection of suitable reinforcing required unit MEM26007 Select and use reinforcing appropriate for product should also be selected.

Where the selection of a suitable resin system is required unit MEM26008 Select and use resin systems appropriate for product should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Composites

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine product requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Determine requirements of core and/or filler from specifications, job sheets or work instructions and customer requests
		1.5	Select appropriate process to be used to fabricate product
2	**Select most appropriate core and/or fillers for job**	2.1	Compile specification of required composite properties relevant to the core and/or filler
		2.2	Compare required properties with specifications of available cores and/or fillers
		2.3	Select most appropriate core and/or filler
3	**Evaluate selected core and/or filler**	3.1	Fabricate a sample using the selected core and/or filler and nominated resin and reinforcing system
		3.2	Conduct/organise for relevant tests
		3.3	Evaluate test results against product requirements
		3.4	Review fabrication process and make any required changes to core, filler or process
4	**Fabricate product**	4.1	Identify and control hazards
		4.2	Prepare selected core and/or filler, as required
		4.3	Lay core in correct direction, including directional properties, as appropriate
		4.4	Prepare nominated reinforcing, including cutting to size/shape, packaging into kits and ant pre-treatment, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.5 Lay reinforcing in correct direction including fibre orientation and fibre pre-forming, as appropriate
	4.6 Mix nominated resin system, as required
	4.7 Prepare and incorporate core and/or filler, as required
	4.8 Fabricate product using selected process and minimise waste
	4.9 Review product compared to requirements
	4.10 Review core and/or filler selection and fabrication process
	4.11 Identify areas for improvement and take appropriate actions
	4.12 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fillers include the following:	• particulate materials which can be added to the composite matrix to vary the bulk, stiffness, density or other properties of the final composite

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Requirements of core include the following:	• stiffness/flexibility • directionality • density • shear strength • operating temperature • provision of thickness • provision of some rigidity • thermal and acoustic insulation, where appropriate • but not the significant structural strength provided by reinforcing
Most appropriate core/filler includes the following:	• compliance with product requirements • greatest ease of use in manufacture • best financial return • greatest sustainability contribution
Areas for improvement include one (1) or more of the following:	• cost/benefit of different core/filler systems • selecting a core/filler suited to the fabrication process • air/vapour entrapment • bonding/delaminating • contamination
Sustainability includes the following:	• survival of the ecology/physical environment • economic viability • social sustainability

Assessment Requirements for MEM26009 Select and use cores and fillers appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26009A Select and use cores and fillers appropriate for product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, safety data sheets (SDS), formulas/recipes, batch sheets, product drawings and customer requests for selecting and using cores and fillers appropriate for product
- considering all reasonably available core and/or fillers when selecting and choosing the appropriate product
- preparing cores, as required
- preparing fillers, as required
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- fabricating the final product using selected process and minimising waste as per specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to selecting and using cores and fillers appropriate for product
- types of cores
- chemical makeup of cores, including urethane, polyvinyl chloride (PVC), styrene acrylonitrile (SAN) (e.g. Corefell), polymethacrylimide (PMI) (e.g. Rohacell), wood (e.g. end grain balsa), cellulose (e.g. phenolic coated paper), polypropylene (PP), polyethylene (PE), aluminium honeycomb and aramid honeycomb (e.g. Nomex)
- types of fillers including syntactic foam

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- machining techniques
- function of cores and fillers
- bonding of cores and fillers
- wettability of cores and fillers by the resin
- properties of cores and fillers and their contributions to the properties of the composite
- interrelationship between cores, fillers and matrix
- modes of core failure
- sustainability considerations
- SDS appropriate to the chemical makeup of cores selected.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and using cores and fillers appropriate for product at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM26010 Store and handle composite materials

Modification History

Release 1. Supersedes and is equivalent to MEM26010A Store and handle composite materials

Application

This unit of competency defines the skills and knowledge required to recognise hazards, shelf life, commercial and other issues controlling appropriate storage and handling of materials used to make composites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 2

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Composites

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify properties and characteristics of materials used**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			(PPE) in accordance with SOPs
		1.4	List all materials used on site
		1.5	Interpret safety data sheet (SDS) for each material
		1.6	Identify relevant manual handling issues
		1.7	Identify and define environmental hazards for each material
		1.8	Categorise materials into groups based on their hazards and determine appropriate hazard controls
2	**Identify key factors effecting storage and handling**	2.1	Identify requirements for dangerous goods licence
		2.2	Identify environmental regulation requirements
		2.3	Identify usage patterns and frequencies
		2.4	Identify cost sensitivity to volume purchased
		2.5	Identify shelf life
3	**Determine appropriate storage and handling protocols**	3.1	Check manufacturer’s storage and handling recommendations/requirements
		3.2	Check SDS and dangerous goods/Environment Protection Agency (EPA)/WHS requirements
		3.3	Check company usage requirements
		3.4	Resolve conflicts between different requirements
		3.5	Prepare storage and handling procedure for materials
4	**Store and handle materials in accordance with protocols**	4.1	Identify and control hazards
		4.2	Use required handling aids
		4.3	Move and store materials in accordance with procedures
		4.4	Monitor storage and handling of materials and identify areas for improvement and take appropriate action, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.5 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:	• resins • catalysts • promoters • solvents • reinforcing • cores • fillers • pigments • mould release • other materials used directly or indirectly in making products

Dangerous goods licence includes the following:	• the dangerous goods licence conditions can vary between states/territories and councils but will typically cover conditions related to:
	  • fire
	  • storage
	  • the fee payable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Environmental regulations include the following:	• trade waste • atmosphere • other wastes • other emissions
Hazard controls include the following:	• elimination • substitution • isolation • engineering controls • administration controls
Storage hazards include the following:	• chemical hazards (e.g. fire) • physical hazards (e.g. manual handling) • cost hazards (e.g. economic purchasing quantity *versus* shelf life) • efficiency hazards (e.g. having the material where you need it when you need it)
Areas for improvement include one (1) or more of the following:	• conflicting requirements • inadequate storage facilities

Assessment Requirements for MEM26010 Store and handle composite materials

Modification History

Release 1. Supersedes and is equivalent to MEM26010A Store and handle composite materials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting safety data sheets (SDS), formulas/recipes, batch sheets for storing and handling composite materials
- listing all materials on site
- identifying all hazards and implementing appropriate hazard control measures based on the hierarchy of control
- moving materials using appropriate manual handling techniques and mechanical handling devices to appropriate storage site in accordance with procedures
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- SDS and product data sheets
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to the handling and storage of composite materials
- the hierarchy of hazard control measures
- material registers (e.g. set up hazardous goods register, maintain it and use it)
- bunding and ventilation
- handling and storage and impact on product
- contamination (e.g. from water)
- storage temperature (e.g. low temperature for catalyst).

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in storing and handling composite materials at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM26011 Determine materials and techniques for a composite component or product

Modification History

Release 1. Supersedes and is equivalent to MEM26011A Determine materials and techniques for a composite component or product

Application

This unit of competency defines the skills and knowledge required to select and use resin system/reinforcing combinations for a composite product. It includes the science of reinforcing, and core and resin interactions. It also includes basic design of a composite component/product but does not include structural design.

This unit builds on the units covering the selection and use of reinforcing and resins and in particular covers the interactions between resins and reinforcement.

Flow of fluid in porous media is described by Darcy's Law and this will need to the applied in this unit.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 6

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Most appropriate combination includes the following:

- compliance with product requirements
- greatest ease of manufacture
- best financial return
- greatest sustainability contribution

Requirements of core include the following:

- stiffness/flexibility
- directionality
- density
- operating temperature
- provision of thickness
- provision of some rigidity
- thermal and acoustic insulation where appropriate
- but not the significant structural strength provided by reinforcing

Requirements of resin system include the following:

- strength
- flexibility/rigidity
- surface finish and colour
- chemical/ultraviolet (UV)/environmental resistance
- operating temperature
- recyclability

Resin system adjustments include one (1) or more of the following:

- temperature
- humidity
- required cure time

Adjustments may only be made within the allowable limits of the system being used

Areas for improvement include one (1) or more of the following:

- cost/benefit of different combinations
- selecting a combination suited to the fabrication process
- maximising sustainability

Sustainability includes the following:

- survival of the ecology/physical environment
- economic viability
- social sustainability

Assessment Requirements for MEM26011 Determine materials and techniques for a composite component or product

Modification History

Release 1. Supersedes and is equivalent to MEM26011A Determine materials and techniques for a composite component or product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, product drawings and customer requests for determining materials and techniques for a composite component or product
- considering all reasonably available combinations of resin systems, reinforcing and cores
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- fabricating the final product using selected process and minimising waste as per specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using materials and techniques for a composite component or product
- cost against known processes, including labour and machine output
- principles of adhesion and substrate/resin interactions
- bonding within and between composites, including:
  - inter-laminar delamination
  - secondary bonding delamination
- resin/reinforcement compatibility
- resin penetration
- permeability of reinforcement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sustainability considerations
- Darcy's Law and its application to the flow of resins through porous media (e.g. reinforcing and cores).

Assessment Conditions

- Assessors must:
  - have vocational competency in determining materials and techniques for a composite component or product at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM26012 Record and trial work processes for one-off composite products

Modification History

Release 1. Supersedes and is equivalent to MEM26012A Record and trial work processes for one-off composite products

Application

This unit of competency defines the skills and knowledge required to take a one-off/prototype product or a new product/process from an internal or external developer and turn this into a standard manufacturing process which works and can be used in the plant.

Where the organisation of composite trials is required unit MEM26018 Organise composite trials should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 4

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	benefits/ outcomes of new product/ process	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Confirm deliverables expected by customer
		1.4	Confirm benefits expected by organisation
		1.5	Identify any existing products with similar expectations
		1.6	Note any relevant issues with existing similar products
2	**Sketch a process map/flow chart of proposed process**	2.1	Determine processes and identify order of process steps to be used
		2.2	Draw process map/flow chart of proposed process
		2.3	Annotate key resources, including materials, labour, time and money to map/flow chart
		2.4	Examine map/flow chart for possible improvements and redraw, as appropriate
3	**Compare proposed process with current standard processes**	3.1	Identify processes and materials which will be new to/changed from/deleted from existing similar process used by the organisation
		3.2	Identify areas of improvement in the existing similar process
		3.3	Identify hazards and appropriate hazard controls
		3.4	Develop procedures for new/modified steps
4	**Draft procedures for new product/ process**	4.1	Locate appropriate template for procedures
		4.2	Observe and record prototype
		4.3	Draft procedures from successful prototype steps in appropriate format
5	**Evaluate draft procedures**	5.1	Keep tally of resources used
		5.2	Compare production to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	5.3 Compare outcomes with expectations
	5.4 Identify any required changes and take appropriate action
6 **Draft new procedures and obtain authorisation**	6.1 Draft workable procedures
	6.2 Obtain authorisation of new procedures, as required
	6.3 Standardise procedures
	6.4 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Deliverables expected by customer include one (1) or more of the following:	• technical specification • aesthetic requirements • other quality expectations • cost/price expectations • quantity and delivery schedules
Process improvements address one (1) or more of the following:	• over-production • delay • transportation • over-processing • excess inventory/work in progress (WIP)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- excess motion
- defects
- untapped human potential

Required changes include one (1) or more of the following:

- multiple ways of doing the same job
- waste built into procedures
- aligning procedures with good practice

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM26012A Record and trial work processes for one-off composite products

Assessment Requirements for MEM26012 Record and trial work processes for one-off composite products

Modification History

Release 1. Supersedes and is equivalent to MEM26012A Record and trial work processes for one-off composite products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes and batch sheets for determining materials and techniques and customer requests for recording and trialling work processes for one-off composite products
- sketching a process map/flow chart of proposed process and annotating key resources and examining possible improvements
- comparing proposed process with standard processes and identifying any required changes and taking appropriate remedial action
- developing draft procedures taking into account the process mapping and consulting and obtaining authorisation of new set of workable procedures and standardise new procedures
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- formulas/recipes and batch sheets for determining materials and techniques and customer requests for recording and trialling work processes for one-off composite products
- use of production tools (e.g. one-off or multiple products)
- limits of size which suggest easiest/most cost effective way to produce product
- fibre/resin ratio
- process mapping
- resource identification
- evaluation of procedures and outcomes
- resources wastage/savings calculations
- hazards and the hierarchy of hazard control measures
- available resources

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recording procedures for resource usage
- report requirements and procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in recording and trialling work processes for one-off composite products at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM26013 Select and use composite processes or systems appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26013A Select and use composite process or systems appropriate for product

Application

This unit of competency defines the skills and knowledge required for the selection of processes or systems for the redesign of an existing product (e.g. using a different process) or the design of a new product similar to an existing product.

Where the selection of suitable materials is required unit MEM26011 Determine materials and techniques for a composite component or product should also be chosen.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 4

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	process requirements of the product	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Determine physical, chemical and aesthetic characteristics of the product
		1.5	Determine production volume and delivery schedule
		1.6	Determine regulatory requirements
2	**Select most appropriate process/ system**	2.1	Identify processes which can deliver requirements of product
		2.2	Determine the capability of the organisation to use the processes and meet the requirements
		2.3	Evaluate each process against the requirements
		2.4	Select most appropriate process
		2.5	Fabricate a sample using most appropriate process
		2.6	Conduct/organise for relevant tests
		2.7	Evaluate test results
		2.8	Review test results against product and sustainability requirements
		2.9	Review selected fabrication process and make any required changes to process
3	**Use process to make product**	3.1	Identify and control hazards
		3.2	Fabricate product using selected process and minimise waste
		3.3	Review product compared to requirements
		3.4	Review fabrication process
		3.5	Identify areas for improvement and take corrective

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	actions
	3.6 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Physical characteristics of product include the following:	• size • shape • weight • requiring one/two part mould • light weight • high strength • erosion resistant
Chemical characteristics of product include the following:	• corrosion resistant • fire retardant • ultraviolet (UV) resistant
Aesthetic characteristics of product include the following:	• finish (e.g. gloss, buffed and matt) • colour
Regulatory requirements include one (1) or more of the following:	• dangerous goods • WHS • Environmental Protection Agency (EPA)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Areas for improvement include one (1) or more of the following:	• cost/benefit of different processes • selecting a process suited to the customer needs • selecting a process within the organisation capability • maximising sustainability
Sustainability includes the following:	• survival of the ecology/physical environment • economic viability • social sustainability

Assessment Requirements for MEM26013 Select and use composite processes or systems appropriate for product

Modification History

Release 1. Supersedes and is equivalent to MEM26013A Select and use composite process or systems appropriate for product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets for selecting and using composite processes or systems appropriate for product
- considering all reasonably available processes in selecting and choosing the appropriate processes or systems, including technical, practical, cost and sustainability criteria
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- fabricating the final product using selected process and minimising waste in accordance with specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using composite processes or systems appropriate for product
- cost analysis for each process to select best process
- technical standards/suitability
- mechanical stresses
- life cycle assessment for each process
- ease of manufacture
- testing criteria
- failure modes effects analysis (FMEA)
- typical applications of each major type of process, strengths and weaknesses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- grid analysis
- hazards and the hierarchy of hazard control measures
- product characteristics design requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and using composite process or systems appropriate for product at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. MEM26014 Adjust resin chemicals for current conditions

Modification History

Release 1. Supersedes and is equivalent to MEM26014A Adjust resin chemicals for current conditions

Application

This unit of competency defines the skills and knowledge required to apply knowledge of resin chemistry, particularly catalysis and resin curing, to make adjustments to the chemistry to suit current requirements caused by weather, job specifications or other factors and requires knowing the limits of these adjustments and having discussions with suppliers/manufacturers regarding resin chemistry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 4

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify variables for the chemistry of resin types
		1.5	Identify impacts of environmental changes on resin chemistry
		1.6	Observe current environmental conditions
		1.7	Predict impact of current conditions on resin chemistry
		1.8	Discuss resin chemistry and adjustment limitations with suppliers
2	**Identify adjustments which may be made to meet current conditions**	2.1	Identify limits of resin chemistry adjustment
		2.2	Determine impact on resin chemistry of changing resin composition
		2.3	Select resin composition changes to counteract impact of current conditions
		2.4	Compare selected composition changes with adjustments allowed by manufacturer of resin system
		2.5	Select most appropriate resin composition changes
		2.6	Identify alternative process changes to adjust for conditions
		2.7	Fabricate a sample using the selected adjustment
		2.8	Conduct/organise for relevant tests
		2.9	Evaluate test results against product requirements
		2.10	Review resin composition changes and take appropriate action
3	**Fabricate product using adjusted composition/**	3.1	Identify and control hazards
		3.2	Make any appropriate adjustments to the resin system recipe

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
conditions	3.3 Prepare materials, tools and equipment and minimise waste
	3.4 Review product compared to requirements
	3.5 Review chemistry modification process
	3.6 Identify areas for improvement and take appropriate actions
	3.7 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Resin chemistry includes the following:	• process of curing/cross linking of resins • rate of cure and change of properties over cure time • changes in viscosity and other flow properties during progress of cure • final properties of resin post-cure
Environmental changes include one (1) or more of the following:	• temperature • humidity • air flow/wind • solar/ultraviolet (UV) insolation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Resin composition includes the following:	• resin/catalyst ratio • resin/promoter ratio • resin/catalyst/promoter ratios • changing temperature of resin components (e.g. using chilled catalyst or resin) • ratios of other resin system components
Most appropriate resin composition changes include one (1) or more of the following:	• comply with product requirements • adjust for the current conditions • have greatest ease of use in manufacture • have best financial return • have greatest sustainability contribution
Alternative process changes include one (1) or more of the following:	• controlling the environmental conditions • moving the timing of the job to when conditions are more favourable (e.g. at night) • moving the location of the job to where conditions are more favourable (e.g. in plant, different site and in shade)
Conditions that can be adjusted to improve outcomes include the following:	• unusually hot/cold workplace/weather • extreme humidity • very tight/unusual specification of properties required of product • high/low air flow/wind
Sustainability includes the following:	• survival of the ecology/physical environment • economic viability • social sustainability

Assessment Requirements for MEM26014 Adjust resin chemicals for current conditions

Modification History

Release 1. Supersedes and is equivalent to MEM26014A Adjust resin chemicals for current conditions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes and batch sheets for adjusting resin chemicals for current conditions
- identifying variables of resin chemistry
- interpreting environmental changes that have an impact on resin chemistry
- discussing resin chemistry and adjustment limitations with suppliers
- identifying limits of resin chemistry adjustment
- selecting resin composition changes to suit conditions
- selecting the most appropriate resin composition changes that are sound and complying with product requirements
- fabricating a sample and conducting/organising relevant test and evaluating the test results and making any required changes
- fabricating the final product using adjusted composition/conditions and minimising waste in accordance with specifications
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- summer/winter catalyst
- resin chemistry
- resin chemistry adjustment limits
- resin composition
- hazards and the hierarchy of hazard control measures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to using resin chemicals
- curing/cross linking chemistry
- basic chemistry of resin manufacture
- effects of temperature (workplace and materials), humidity, air flow (wind) and concentration
- effect of adjustments in the workplace (and why)
- adjustments available from supplier
- report requirements and procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in adjusting resin chemicals for current conditions at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16006	Organise and communicate information

Competency Field

Composites

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Diagnose the item needing repair**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Clean out damaged area
		1.5	Determine accessibility of area to be repaired
		1.6	Inspect damaged area
		1.7	Identify original materials of construction
		1.8	Determine cause of failure to the extent possible
2	**Determine requirements of the repair**	2.1	Check insurance status
		2.2	Confirm intended usage of composite
		2.3	Determine extent of repair required (e.g. structural or cosmetic)
		2.4	Undertake appropriate incidental design
		2.5	Agree on scope of repair
3	**Select most appropriate repair technique for job**	3.1	Check the availability of standard repair kits/components and techniques
		3.2	Short list suitable repair techniques and materials
		3.3	Evaluate suitability of possible repair techniques and materials
		3.4	Select appropriate repair process
		3.5	Select appropriate materials for repair
		3.6	Conduct and evaluate tests, as appropriate
4	**Undertake repair**	4.1	Identify and control hazards
		4.2	Create necessary access to damaged area
		4.3	Prepare area, materials and tools and equipment required for repair

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.4 Undertake required repair and minimise waste
	4.5 Review repaired product compared to requirements
	4.6 Review material selection and fabrication process
	4.7 Identify areas for improvement and take appropriate actions
	4.8 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate repair process includes the following:	• compliance with product requirements • greatest ease of execution • best financial return • greatest sustainability contribution
Repair techniques include one (1) or more of the following:	• hand moulding • hand lay-up skills • applying resin infusion techniques • applying syringe technique • using ultraviolet (UV) curable resin systems • using other open and closed mould techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Incidental design includes the following:	• improves on an original design weakness (e.g. might be shown up by the failure being repaired) • changes the original design to incorporate current techniques, materials or practices • better meets customer needs
Preparing materials includes the following:	• cutting to size and shape, as required • any pre-treatment required • calculating amount of resin and resin components required • mixing resin systems
Process considerations include one (1) or more of the following:	• cost/benefit of different repair techniques and materials • customer wants more improvement than is technically feasible • customer wants more improvements than insurance will pay for
Sustainability includes the following:	• survival of the ecology/physical environment • economic viability • social sustainability

Assessment Requirements for MEM26015 Select and apply repair techniques

Modification History

Release 1. Supersedes and is equivalent to MEM26015A Select and apply repair techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes and batch sheets for selecting and applying composites repair techniques
- considering all reasonably available composites repair techniques and materials when selecting and choosing the appropriate technique
- undertaking appropriate incidental design which includes minor design incidental to conducting a composites repair, as required
- short listing and evaluating appropriate composites repair techniques
- undertaking composites repair to meet product requirements
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- different composites repair techniques (e.g. patch repair, honeycomb repair and resin surface repair), uses and limitations
- dedicated composites repair materials
- blocking techniques
- hot bonders
- temporary moulds
- repairing internal or external surfaces
- repairing against a mould
- mixing and using gel coat and gel coat additives (e.g. filler, wax, catalyst and pigment)
- laminate defects, including air entrapment, moisture entrapment, osmosis and delamination.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and applying repair techniques at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Finished application properties include the following:	• permanent/removable • waterproof/chemical resistant • structural rigidity • strength (tensile, compressive, shear and torsional) • aesthetic
Properties of surfaces to be joined include the following:	• materials of construction • physical properties (e.g. strength and rigidity) • surface properties (e.g. surface finish and surface treatment/coatings) • size and shape
Joining system includes one (1) or more of the following:	• bonding (e.g. adhesive, gluing, ethacrylates, sikaflex and epoxy) • using composite materials (e.g. Probond, Divelett, K-Lite and Eurmere) • secondary bonding – cured composite to cured composite • using mechanical fasteners (e.g. bolts and rivets)
Preparation of surfaces includes one (1) or more of the following:	• solvent or other chemical cleaning • chemical etching • mechanical preparation such as blasting, buffing • surface smoothing (e.g. machining) • making of holes or other physical locking features

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Most appropriate joining system includes the following:	• compliance with product requirements • greatest ease of joining • best financial return • greatest sustainability contribution
Requirements of the job include one (1) or more of the following:	• rigid or flexible • water, ultraviolet (UV), chemical or fire resistant • or have other properties, as well as the required strength
Areas for improvement include one (1) or more of the following:	• incompatible requirements • hazardous materials/preparation methods • non-uniform join
Sustainability includes the following:	• survival of the ecology/physical environment • economic viability • social sustainability

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM26016A Select and use joining techniques

Assessment Requirements for MEM26016 Select and use joining techniques

Modification History

Release 1. Supersedes and is equivalent to MEM26016A Select and use joining techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, safety data sheets (SDS) for selecting and using joining techniques
- considering all reasonably available joining techniques and materials when selecting and choosing the appropriate technique
- preparing surfaces to be joined
- making a sample join and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- completing the required join using hand and power tools, applying assembly techniques and applying bonding joiner and techniques and minimising waste in accordance with procedures
- identifying areas for improvement and taking appropriate action
- completing all documentation and reporting items requiring further action in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- adhesives (e.g. plexus – methylmethacrylate)
- sealants (e.g. sikaflex – silicon or butyl mastic)
- mechanical joining
- substrates and interactions with joiner
- surface preparation of substrate
- application methods
- clamping forces (minimum and maximum)
- adhesive/sealant thickness
- primers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- design rules around fastening (e.g. minimum area for pop rivets, rivet spacing and rivet patterns)
- edge finish of pilot holes
- quality requirements with the hole preparation and with the installation of fasteners
- radius of edge of laminate
- effect of flatness and smoothness of joining surfaces
- substrate composition in joining area.

Assessment Conditions

- Assessors must:
  - have vocational competency in selecting and using joining techniques at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM26017 Prepare composite or other substrate surfaces

Modification History

Release 1. Supersedes and is equivalent to MEM26017A Prepare composite or other substrate surfaces

Application

This unit of competency defines the skills and knowledge required to prepare by abrasive or chemical means, a composite surface prior to bonding/joining or coating and includes the preparation of composite surfaces and other surfaces which are used in conjunction with composites (e.g. metal surfaces).

This unit complements unit MEM26016 Select and use joining techniques.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 4

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify the chemistry of materials to be applied to the surface
		1.5	Identify the surface chemistry of the substrate
		1.6	Determine any chemical treatments needed to make the substrate compatible with the materials to be applied
		1.7	Interpret safety data sheets (SDS) for materials that may be used
		1.8	Identify the current and possible required physical states of the substrate
2	**Select most appropriate preparation technique for job**	2.1	Compile specification for required substrate preparation
		2.2	Compare possible substrate preparation methods with specification
		2.3	Select most appropriate substrate preparation
		2.4	Conduct and evaluate tests, as appropriate
		2.5	Review selection and substrate preparation and make any required changes to substrate preparation
3	**Prepare substrate**	3.1	Identify and control hazards
		3.2	Prepare substrate, as required and minimise waste
		3.3	Review result compared to requirements
		3.4	Review substrate preparation process
		3.5	Identify areas for improvement and take appropriate actions
		3.6	Clean up and perform any routine maintenance required on equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.7 Complete any required documentation/reporting according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Most appropriate substrate preparation includes the following:	• compliance with product requirements • greatest ease of preparation • best financial return • greatest sustainability contribution
Areas for improvement include one (1) or more of the following:	• incompatible surface applications with substrates • non-uniform substrate preparation • the use of hazardous materials
Sustainability includes the following:	• survival of the ecology/physical environment • economic viability • social sustainability

Assessment Requirements for MEM26017 Prepare composite or other substrate surfaces

Modification History

Release 1. Supersedes and is equivalent to MEM26017A Prepare composite or other substrate surfaces

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, safety data sheets (SDS) for preparing composite or other substrate surfaces
- considering all reasonably suitable substrate preparation methods when selecting and choosing the appropriate method
- selecting the most appropriate substrate preparation and conducting/organising relevant test and evaluating the test results and making any required changes, as appropriate
- preparing substrate, as required, controlling blasting equipment, operating blasting equipment by hand and using chemical treatment equipment in accordance with procedures
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- current state/territory work health and safety (WHS) legislation, standards and codes of practice relevant to preparing composite or other substrate surfaces
- methods and purposes of abrasive cleaning
- types of abrasives and their applications (e.g. sand, bead, shot, soda and grit)
- protection of non-blasted surfaces
- waste control, reuse and disposal
- hazards and the hierarchy of hazard control measures
- work health and safety (WHS) issues and environmental considerations
- surface preparation standards (e.g. surface measurement and surface finish)
- types of chemical cleaning (e.g. etching and solvents)

MEM26018 Organise composite trials

Modification History

Release 1. Supersedes and is equivalent to MEM26018A Organise composite trials

Application

This unit of competency defines the skills and knowledge required to trial new materials and processes and make prototypes.

The source of these trials can arise from internal improvements or new products/processes from external sources. Regardless, trials need to be conducted to 'prove' it in an industrial environment, to translate research and development into practical processes and to provide appropriate records and metrics.

This unit does not cover the selection of materials or processes but does cover the organising and analysing of trials to prove proposed new materials or processes in the production environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify risks to be controlled
		1.5	Identify novel parts of process/materials/properties
		1.6	Compare data from past work/trials
		1.7	Obtain data for novel part of process/material
		1.8	Develop procedures which should produce the required result
		1.9	Determine required process properties
		1.10	Determine required business and sustainability measures
2	**Compare proposed process with existing and predict problem areas**	2.1	Compare proposed process with existing similar processes
		2.2	Identify points of difference
		2.3	Identify weaknesses with existing process
		2.4	Predict possible problems with trial process/materials
3	**Organise appropriate trials**	3.1	Determine scale of trial
		3.2	Ensure availability of adequate resources, including equipment, tools, materials, personnel and time
		3.3	Organise for the preparation of equipment/materials
		3.4	Conduct and monitor trial and record key observations and metrics
4	**Select**	4.1	Compare outcome with requirements

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
appropriate manufacturing procedure	4.2 Modify procedure and repeat trial, as appropriate
	4.3 Identify areas for improvement and take appropriate actions
	4.4 Determine procedure which will yield desired results
	4.5 Record procedure in appropriate form
	4.6 Complete all required reporting and recording according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Novel part includes one (1) or more of the following:	• new resin system on standard reinforcing • new reinforcing with standard resin system • new process using standard materials • standard process and materials producing product with different properties
Process properties include the following:	• gel time • viscosity • temperature (e.g. mould, resin and ambient) • infusion time • peak exotherm (e.g. using a laser thermometer)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Business measures include the following:	• costs • time analysis • quality reliability
Scale of trial includes one (1) or more of the following:	• full scale prototype • scaled down prototype • laminate samples only • portion of laminate
Modifying procedure includes one (1) or more of the following:	• changing resin inlets • changing resin chemistry • changing other materials • modifications to process • modifications to tooling
Areas for improvement include one (1) or more of the following:	• trial procedures not workable • trial product does not meet specification • trial procedures do not meet sustainability requirements

Release 1. Supersedes and is equivalent to MEM26018A Organise composite trials

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, design brief and data for organising composite trials
- identifying business and sustainability measures
- identifying novel parts of the process
- determining appropriate metrics before commencement of trial
- determining scale of trial and conducting trial ensuring trial procedure has a sound basis
- modifying procedure and repeating trial, as appropriate
- analysing trial results and identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- intended outcome of product
- resource requirement calculations
- design of documents for the floor
- design of trials
- design test requirements for trial
- novel parts
- appropriate metrics before commencement of trial
- trial procedure modifications
- trial procedures
- trial analysis techniques
- product improvement opportunities
- report procedures.

MEM26019 Finish a composite product

Modification History

Release 1. Supersedes and is equivalent to MEM26019A Finish a composite product

Application

This unit of competency defines the skills and knowledge required to select and use appropriate mechanical finishing and repair techniques for a composite product.

Where gel coating is required unit MEM26001 Lay up composites using open moulding techniques, MEM26002 Lay up composites using vacuum closed moulding techniques and MEM26003 Lay up composites using pressure closed moulding techniques should also be selected as appropriate.

Where the selection and use of hand tools is required unit MEM18001 Use hand tools should also be selected.

Where the selection and use of power tools is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM26019 Finish a composite product

Modification History

Release 1. Supersedes and is equivalent to MEM26019A Finish a composite product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes, batch sheets, drawings, customer requests and descriptions of required use of product for finishing a composite product
- considering all reasonably appropriate finishing methods when selecting and choosing the appropriate method/technique
- finishing product using hand and power tools and machine tools, and observing finished surfaces ensuring it meets specifications and customer requests
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- deburring and sanding
- surface preparation
- preparing cut edges
- drill bits and sizes
- measurement of tools and relationship to finished size
- choice of tool
- gel coat repair, metal flake, dual colour and touch up chips
- hazards and the hierarchy of hazard control measures
- report requirements and procedures.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in finishing a composite product at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for MEM26020 Identify and interpret required standards for composites

Modification History

Release 1. Supersedes and is equivalent to MEM26020A Identify and interpret required standards for composites

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, formulas/recipes and batch sheets for identifying and interpreting required standards for composites
- considering all reasonably standards when selecting and choosing the appropriate standard
- undertaking required work and monitoring production to ensure it complies with the procedures
- identifying areas for improvement and taking appropriate action
- completing all documentation and reports, including items requiring further action, in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- the hierarchy of standards vs guidance vs voluntary codes
- relevant standards
- interpretation of standards
- evidence to support meeting of standard
- accessing standards
- copyright of Australian Standards
- using standards.

Assessment Conditions

- Assessors must:
  - have vocational competency in identifying and interpreting required standards for composites at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM27001 Maintain and repair stationary and mobile plant engine cooling systems

Modification History

Release 1. Supersedes and is equivalent to MEM18024B Maintain engine cooling systems

Application

This unit of competency defines the skills and knowledge required to maintain and repair the cooling systems of combustion engines used in mobile and stationary plant and equipment.

It covers servicing, preventative maintenance, diagnosis and repair of combustion engine cooling systems and components in vehicles and plant used to support manufacturing, maintenance and engineering related operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5	Identify required test equipment
2	**Assess cooling system operation**	2.1	Identify normal cooling system operational performance from manufacturer specifications and work procedures
		2.2	Undertake system checks using specified test procedures and equipment
		2.3	Determine and record water/air flows, pressures and temperatures
		2.4	Isolate faults to component level and determine appropriate corrective action
		2.5	Obtain and evaluate coolant samples
		2.6	Assess component parts for reuse, repair or replacement
3	**Rectify faulty components**	3.1	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.2	Remove components selected for repair or replacement
		3.3	Repair components to manufacturer specifications where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Select replacement components using manufacturers' data where required
	3.5 Refit repaired or replacement components to engine
	3.6 Record test, repair and replacement activities as required
	3.7 Ensure engine is free of coolant leaks and the cooling system contains the correct level of additive/inhibitor after repair work is carried out

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Cooling systems include one (1) or more of the following:	• engine or vehicle cooling • large stationary plant combustion engine cooling • cooling towers • shutter type systems or fan drive • water type inter/after coolers • oil coolers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Cooling system testing includes one (1) or more of the following:	• air and/or water flows
	• temperatures
	• pressures
	• assess serviceability and repair on a range of:
	  • flow/pressure actuators
	  • sensors
	  • actuators and solenoids

Typical system faults include one (1) or more of the following:	• coolant pressures
	• the presence of:
	  • steam
	  • gases
	  • oil
	  • fuel
	  • air
	• corrosion
	• contamination

Testing coolant condition includes testing for one (1) or more of the following:	• correct additives including anti-corrosion and anti-freeze
	• contamination, including:
	  • oil
	  • metal
	  • other particles

Components include one (1) or more of the following:	• sensors • caps • gauges • pumps • fan drives and motors

Assessment Requirements for MEM27001 Maintain and repair stationary and mobile plant engine cooling systems

Modification History

Release 1. Supersedes and is equivalent to MEM18024B Maintain engine cooling systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents to maintain engine cooling systems
- checking cooling system safely in accordance with specifications and procedures and measuring and recording water/air flows, pressures and temperature of the cooling system using test equipment
- fault finding cooling system down to component level and determining applicable corrective action
- obtaining coolant samples and carrying out testing on coolant condition
- checking cooling system components for wear and clearances using appropriate test equipment to manufacturers' specifications
- undertaking numerical operations, calculations and formulae for maintaining engine coolant systems
- interpreting relevant specifications, parts lists and catalogues for replacement components
- removing, repairing and re-fitting cooling system components to engine in accordance with prescribed procedures
- testing engine for coolant performance and leaks after repairs
- reporting and documenting service, repair/replacement activities.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of heat transfer as applied to cooling systems
- effect of water treatment, contamination and corrosion on the effectiveness of cooling system operation
- components of the cooling system and their function, including:
  - engine coolant composition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - water pumps
  - thermostats
  - fan systems and drives
  - radiators and radiator caps
  - expansion tanks
  - hoses
  - temperature sensors and gauges
- checks and procedures to be carried out on cooling systems, including tests for:
  - corrosion
  - pressure and temperature
  - leaks
  - performance of pumps, thermostats, fans, cooling system sensors and instruments
- procedures for:
  - measuring water/air flows, pressures and temperatures in cooling systems and tools, techniques and equipment
  - testing coolant test samples and tools and equipment
  - testing components for wear and clearances and the appropriate measuring/test equipment
  - obtaining replacement parts
  - removing/replacing cooling system components from the engine
  - checking coolant levels and engine coolant leaks
  - handling hot pressurised cooling systems
  - containing and disposing of cooling system fluids released from the system
  - recording test and rectification
- variations of test results from specifications and the likely causes of those variations and appropriate corrective action to be taken
- precautions to be taken when using test equipment
- reasons for identifying faulty components for repair or replacement
- correct amount of additive/inhibitor to be added to the coolant.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining engine cooling systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27002 Test and repair compression ignition systems

Modification History

Release 1. Supersedes and is equivalent to MEM18026C Test compression ignition fuel systems

Application

This unit of competency defines the skills and knowledge required to assess the operation of compression ignition systems.

It covers the testing and repair of ignition systems used in large compression engines, including direct injection and common rail systems and repair and replacement of components.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

If the operation of plant and equipment is required, it must only be performed within the person's licensing limits or as determined by relevant regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess fuel system operation**	2.1	Apply knowledge of fuel injection principles and component part functions/operation to assess fuel system operation
		2.2	Start, operate and shut down diesel plant/equipment
		2.3	Undertake checks safely to prescribed procedures
		2.4	Determine and record flows, pressures and speeds
		2.5	Interpret engine and plant operating characteristics and parameters
		2.6	Interpret test results and operational data for faults and serviceability
3	**Repair compression ignition system**	3.1	Identify components to be repaired or replaced
		3.2	Select appropriate tools, equipment and materials
		3.3	Repair and replace components according to manufacturer specifications, WHS and environmental

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	requirements
	3.4 Time the high-pressure fuel pump or injectors to engine
	3.5 Use test equipment to test ignition system and set to specifications
	3.6 Record repair according to workplace procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fuel system components include the following:

- tank
- filters
- sensors, including:
  - engine position
  - coolant temperature
  - engine mass airflow (MAF)
  - inlet air temperature
  - engine fuel pressure
  - boost pressure
  - fuel delivery
  - fuel rail pressure
- common rail
- electronic and hydraulic electronic injectors
- solenoid and piezoelectric valves
- pumps

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- engine control unit (ECU) and associated components

Final adjustment includes the setting of one (1) or more of the following:

- low/high speed
- no load/full load speed
- droop
- sensitivity
- stability
- promptness

Assessment Requirements for MEM27002 Test and repair compression ignition systems

Modification History

Release 1. Supersedes and is equivalent to MEM18026C Test compression ignition fuel systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- describing the function and operation of ignition system component parts through identification and interpretation of appropriate specifications, charts, lists, drawings, service documents and reference to fuel injection principles
- starting/operating and shutting down diesel plant/equipment
- conducting operational checks of the diesel fuel system in determining and recording fuel flows, pressures and engine speeds using appropriate test equipment in accordance with specifications and procedures
- interpreting faults from the test results and ignition system operating characteristics and parameters
- determining serviceability of the fuel system components, including:
  - engine control unit (ECU)
  - injectors
  - sensors
- removing, replacing and carrying out adjustment of ignition system components, including:
  - injectors
  - sensors, connectors and cables
  - tank
  - filters
  - fuel pumps
- undertaking calculations and numerical operations for testing compression ignition fuel systems
- timing the high-pressure fuel pump or injectors and carrying out final adjustments to engine in accordance with specifications
- recording/reporting service activities according to SOPs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of fuel injection and function/operation of each component in a fuel injection system
- types of fuels used in compression engines, air/fuel ratios, combustion process and combustion products
- compression ignition management systems, including:
  - electronic injectors
  - electronic control systems
  - common rail systems
  - exhaust management and treatment
- procedures for starting up, operating and shutting down diesel plant and equipment
- visual and aural checks to be made on the diesel fuel system and procedures for carrying out these checks
- use of appropriate test equipment, including use of oscilloscopes, multimeters and other electrical and electronic test equipment and methods for testing:
  - high and low pressure fuel pump performance
  - oil pressures
  - injectors
  - sensors and circuits
  - exhaust composition
  - engine performance against specifications
- plant operating characteristics and parameters
- indicators of ignition system faults, including:
  - engine knock
  - difficulty in starting
  - incomplete combustion and excessive smoke
  - warning lights and diagnostic trouble codes
- causes of ignition system faults, including:
  - dirty/worn injectors
  - incorrect timing
  - poor fuel
  - poor oil
  - low compression
  - worn engine components e.g. piston rings
  - incorrect timing
  - damaged dirty air, fuel and oil filters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reasons for the decisions made with respect to serviceability and likely faults and causes for unserviceable systems.

Assessment Conditions

- Assessors must:
  - have vocational competency in testing and repairing compression ignition fuel systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27003 Overhaul engine fuel system components

Modification History

Release 1. Supersedes and is equivalent to MEM18027C Overhaul engine fuel system components

Application

This unit of competency defines the skills and knowledge required to recondition and reinstall fuel system components on large stationary or mobile diesel engines.

It includes removal and cleaning of fuel system components, assessing components for wear and defects, deciding whether a component should be reconditioned or replaced, reinstallation of reconditioned components in engines and testing of reconditioned components for effective operation.

Where breakdown testing and repair of compression ignition systems is required, unit MEM27002 Test and repair compression ignition systems should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: 8

MEM18055 Dismantle, replace and assemble engineering components

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Clean and assess parts**	2.1	Disassemble components, including the use of specialised tools, according to manufacturer recommendations
		2.2	Assess fuel system components visually for abnormal wear or defects
		2.3	Interpret characteristics of surface finishes and wear patterns associated with fuel system components
		2.4	Decide whether components should be reconditioned or discarded and replaced using knowledge of fuel system and control functions, characteristics and applications
		2.5	Select appropriate cleaning method/solution and procedures
		2.6	Make parts identifiable according to their original location in the pump/injector and protect and store as required for reassembly
		2.7	Obtain and interpret measurements and part condition when determining reuse/replacement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3 **Recondition and set up equipment**	3.1 Recondition and replace components identified as faulty
	3.2 Assemble components according to manufacturer specifications
	3.3 Use test equipment to test components and set fuel system to specifications
	3.4 Record reconditioning of components according to workplace procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fuel system types include one (1) or more of the following:	• port and helix • sleeve metering • unit injection • distributor • pressure/time

Assessment Requirements for MEM27003 Overhaul engine fuel system components

Modification History

Release 1. Supersedes and is equivalent to MEM18027C Overhaul engine fuel system components

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents for overhauling engine fuel system components
- dismantling the engine fuel system components using specialised tools and test equipment and checking parts visually for abnormal wear or defects
- identifying parts according to their original location in the pump/injector and protecting and storing them as required for reassembly
- undertaking calculations and numerical operations for overhauling engine fuel system components
- measuring and recording fuel system components using appropriate measuring equipment
- assessing components and parts for serviceability or replacement
- reconditioning, assembling and replacing components according to manufacturer specifications
- testing operation of reconditioned components to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- sequence for disassembling engine fuel components
- specialised tools required and their application
- common defects, examples and causes of abnormal wear
- characteristics of surface finishes and wear patterns for fuel system components
- method of cleaning fuel system components
- appropriate solvents for cleaning fuel systems
- procedures for:
  - cleaning, protecting and storing fuel system components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - marking fuel system components in readiness for reassembly
  - recording fuel system component measurements
  - reconditioning and/or replacing faulty fuel system components
  - assembling and testing fuel system components
  - setting fuel system components
- measuring instruments to be used to measure fuel system components and reasons for selecting the chosen measuring instruments
- principles of operation of diesel fuel systems
- specifications of the fuel system components
- tools, techniques and equipment required to carry out fuel system component tests.

Assessment Conditions

- Assessors must:
  - have vocational competency in overhauling engine fuel system components at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess lubrication system operation**	2.1	Identify lubrication system and lubricant specifications prior to any testing
		2.2	Undertake system checks safely and to prescribed procedures
		2.3	Assess lubrication system operation, including condition and appropriateness of lubricant fluid, integrity of lubrication system and condition of components
		2.4	Determine flows, pressures and temperatures and record
		2.5	Identify leaks and any sources of contamination
		2.6	Isolate faults to component level using test equipment and determine appropriate corrective action
		2.7	Evaluate results of spectrographic or laboratory analysis and make recommendations regarding adjustments to future maintenance activities
		2.8	Assess auxiliary lubrication systems for correct operation
3	**Rectify faulty components**	3.1	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.2	Select replacement components using manufacturers' data
		3.3	Remove components and refit to engine

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Make final adjustments that bring system in line with specifications
	3.5 Record test and rectification activities
	3.6 Ensure engine is free of lubricant leaks after rectification work is carried out

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Faults include one (1) or more of the following:	• low or high pressure • low or high temperature • contamination • excessive or too little consumption/flow • leaks • use of incorrect lubricant
Test equipment includes one (1) or more of the following:	• pressure/temperature gauges • flow meters
Adjustments include setting one (1) or more of the following valves to specified pressures or flows:	• bypass • regulating • relief

Assessment Requirements for MEM27004 Maintain and repair engine lubrication systems

Modification History

Release 1. Supersedes and is equivalent to MEM18028B Maintain engine lubrication systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents prior to any testing on engine lubrication systems
- conducting operational checks of engine lubrication system and determining and recording oil flows, pressures and temperature using appropriate test equipment
- identifying faults of engine lubrication system and determining corrective action
- obtaining and interpreting the results of lubricating oil tests and making recommendations to future maintenance activities
- checking auxiliary lubrication systems for correct operation in accordance with specifications
- undertaking calculations and numerical operations for maintaining engine lubrication systems
- checking lubrication system components for wear and clearances using appropriate test equipment to manufacturer specifications
- removing/refitting and adjusting lubrication system components and make final adjustments to bring system in line with specifications
- recording/reporting test and work activities.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation of the lubrication system and procedures for testing/checking lubrication
- tests to be undertaken and equipment and techniques to be used to determine oil flows, pressures and temperatures
- procedures for:
  - recording lubrication system test results
  - analysing lubricating oil samples and reasons that apply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - removing/replacing lubrication system components
    - adjusting lubrication systems
    - recording test and repair activities
    - checking lubrication systems for leaks
- specifications of the lubrication system components and appropriate corrective action for faulty components
- characteristics of lubricants and application of a variety of lubricants
- likely causes of a range of out of specification test results and appropriate corrective action to be taken
- implications of out of specification test results on maintenance schedules and requirements
- reasons for installing auxiliary lubrication systems on diesel plant and equipment
- operation of the auxiliary lubrication system
- measuring equipment/techniques used to determine lubrication system component wear and clearances.

Assessment Conditions

- Assessors must:
    - have vocational competency in maintaining engine lubrication systems at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27005 Tune diesel engines

Modification History

Release 1. Supersedes and is equivalent to MEM18029B Tune diesel engines

Application

This unit of competency defines the skills and knowledge required to compression test and tune up the engine.

It applies to tune up procedures and evaluation of engine performance on compression ignition engines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Compression test engine**	2.1	Remove injectors and isolate fuel system for each cylinder
		2.2	Select and fit appropriate adaptors
		2.3	Obtain, interpret, record and correct readings for adaptor used
		2.4	Use correct compression readings for adaptor
3	**Perform tune up**	3.1	Determine firing pressures and adjust to specification, as applicable
		3.2	Perform air restriction, boost, back pressure and flow tests according to manufacturer recommendations using applicable test equipment
		3.3	Record readings and determine variances from specifications
		3.4	Determine density of exhaust smoke
		3.5	Adjust valve clearance and/or timing to specifications
		3.6	Adjust injection pump or injector timing to specification
		3.7	Adjust engine parameters using methods appropriate to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	technology of engine
	3.8 Determine if injector opening pressure is within specification and adjust, arrange replacement or repair if faulty

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Engine firing pressure control adjustment methods include the following:	• reflashing of electronic control module (ECM) unit where electronic control is used
	• manual adjustment of:
	  • governor rack travel
	  • torque spring load limit
	  • over speed trips
	  • aneroid or fuel ratio control to specification

Unit Mapping Information

Assessment Requirements for MEM27005 Tune diesel engines

Modification History

Release 1. Supersedes and is equivalent to MEM18029B Tune diesel engines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents for tuning diesel engines
- removing injectors from each cylinder, isolating fuel system and fitting appropriate adaptors to each of the cylinders
- obtaining, recording and correcting compression readings for adaptor used
- determining firing pressures and adjusting to specifications
- performing tune up of diesel engine using appropriate tools, equipment and techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- procedures for:
  - removing injectors from cylinders and reasons for isolating the fuel system
  - fitting adaptors to the cylinders
  - compression testing diesel engines and recording compression readings
  - comparing the compression readings with specifications and identifying any deviations
  - adjusting firing pressures
  - starting, operating, loading and shutting down diesel engines
  - recording test results
  - determining exhaust smoke density and equipment and techniques
  - adjusting valve clearances and/or timing
  - adjusting injector pump and injector timing
  - adjusting the governor rack travel, torque spring load limit, over speed trips, aneroid or fuel ratio control
  - adjusting injector opening pressure
- appropriate adaptors and reasons for using adaptors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- likely causes of any detected deviations from specification
- corrections required for compression readings to take account of the adaptor used
- test equipment and procedures to be used in the tuning of diesel engines
- manufacturer's recommended tests and reasons for conducting the tests
- timing and pressures to be achieved
- governor specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in tuning diesel engines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27006 Diagnose and rectify batteries, low voltage sensors and circuits

Modification History

Release 1. Supersedes and is equivalent to MEM18030B Diagnose and rectify low voltage electrical systems

Application

This unit of competency defines the skills and knowledge required to use test instruments, test the battery, assess and rectify wiring faults.

It applies to testing and rectification activities associated with 12, 24 36 and 48 volt wiring systems on vehicles, mobile plant and stationary equipment.

Where soldering of wires/connections is required unit MEM05001 Perform manual soldering/desoldering - electrical/electronic components should also be selected.

Where an electrical wiring system is above 48 volts unit MEM18045 Fault find and repair electrical equipment/components up to 250 volts single phase supply or unit MEM18046 Fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c. should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Use test instruments**	2.1	Apply principles of electron theory, current, voltage and resistance to diagnose and rectify low voltage electrical systems
		2.2	Select, use and maintain appropriate test instruments to determine current, voltage and resistance
		2.3	Interpret electrical drawings and manufacturer diagrams
		2.4	Determine series, parallel and series parallel circuits
		2.5	Interpret and apply basic electrical laws
		2.6	Connect amps voltage and resistance (AVR) test instruments into circuits to measure current, voltage and resistance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.7	Read meters to standard accuracy
		2.8	Use and apply multipliers and shunts
3	**Test battery**	3.1	Interpret and apply chemical battery operating principles when testing batteries
		3.2	Determine electrolyte level and record specific gravity readings temperature
		3.3	Carry out dry charge preparation and recharging of batteries
		3.4	Perform discharge testing according to prescribed procedures
		3.5	Select replacement batteries for application
4	**Assess and rectify wiring faults**	4.1	Isolate wiring and sensor fault
		4.2	Determine replacement sensors and cables/wires, including size and insulation quality
		4.3	Make up wiring looms for application and securely fix
		4.4	Strip, fit, prepare and terminate wiring and cables
		4.5	Test terminated cables for continuity and to comply with requirements
		4.6	Remove corrosion, neutralise and apply appropriate protective coating
		4.7	Test sensors, relays, solenoids, contacts and circuits and repair/replace

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Circuits include one (1) or more or the following for:	• door and other access locks • interior and exterior lighting • seat adjustment • power windows • turning and other indicators • low voltage electric motors • hazard and brake lights • sensors
Test instruments include the following:	• multimeters • amp meters • circuit testers
Wiring systems include the following:	• wiring • switching mechanisms • circuit protection devices

Assessment Requirements for MEM27006 Diagnose and rectify batteries, low voltage sensors and circuits

Modification History

Release 1. Supersedes and is equivalent to MEM18030B Diagnose and rectify low voltage electrical systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, SOPs, electrical drawings and diagrams to diagnose and rectify batteries, low voltage sensors and circuits
- selecting and using the correct test instrument, including multimeters, amp meters and circuit testers, for a variety of electrical circuits to measure current, voltage and resistance of specified circuit components or sections of circuitry
- applying Ohm's Law to determine the required values of current, voltage and resistance of a range of electrical circuits, including series, parallel and series parallel
- connecting electrical test instruments into given circuits to determine the required values of current, voltage and resistance in a safe and effective manner
- determining the specific gravity of the electrolyte for temperature variations using a hydrometer
- preparing dry batteries for charging and recharging and performing discharge testing of batteries
- fault finding using fault-finding techniques to identify wiring faults in electrical circuits
- selecting appropriate replacement cables according to size, rating and insulation resistance from supplier catalogues
- making up replacement wiring looms, stripping and preparing cable ends for termination and terminating to specifications
- testing terminations for continuity and compliance with requirements
- removing and/or neutralising corrosion from terminals and connections and applying appropriate protective coating
- testing and fault finding a range of circuits components, including sensors, relays, solenoids, contacts for repair/replacement.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of electron theory
- definitions of current, voltage and resistance in terms of electrical circuits
- Ohm's Law and the relationships between current, voltage and resistance for a variety of given electrical circuits
- instruments and procedures to be used to measure current, voltage and resistance and safety precautions to be taken
- procedures for maintaining electrical test equipment
- function of a variety of electrical circuits identified from given electrical drawings/diagrams
- symbols used in electrical drawings/diagrams
- components of a variety of electrical circuits identified by given electrical drawings/diagrams
- differences between series and parallel electrical circuits
- function of a general purpose oscilloscope and procedures for connecting a general purpose oscilloscope into given electrical circuits
- use of wave forms in the testing of electrical circuits
- accuracy to which a range of electrical test equipment can be read
- procedures for:
  - using multipliers and shunts in the measurement of electrical circuits
  - measuring the specific gravity of the electrolyte and the effect of temperature on the specific gravity of the electrolyte
  - preparing and recharging dry batteries
  - discharge testing of batteries and purpose
  - making up and fixing wiring looms can be given
  - stripping, fitting and preparing wiring terminations
  - soft and hard soldering/crimping of wiring terminations
  - corrosion removal and/or neutralisation
- operation of a chemical battery and the function of the electrolyte in batteries and specifications applied to batteries
- examples and causes of common faults in electrical wiring and test procedures for isolating wiring faults
- specifications of cables and wires, including insulation resistance used in given electrical circuits
- test procedures for terminated wiring and cables
- effect of corrosion on the performance of electrical circuits and connections
- coatings available to stop/inhibit corrosion
- correct operational principles of sensors, relays, solenoids and contacts
- common faults and causes in sensors, relays, solenoids, contacts and circuits and procedures for testing circuit components.

MEM27007 Diagnose and rectify low voltage starting systems

Modification History

Release 1. Supersedes and is equivalent to MEM18031B Diagnose and rectify low voltage starting systems

Application

This unit of competency defines the skills and knowledge required to assess the operation, test and repair starting systems requiring the use of amps, voltage and resistance (AVR) test equipment.

Where soldering of wires/connections is required unit MEM05001 Perform manual soldering/desoldering - electrical/electronic components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess starting motor operation**	2.1	Apply principles of magnetism, induced voltage and electromagnetism and electric motor principles to assess starter motor operation
		2.2	Interpret starting motor component functions and multi-pole/winding/shunt wiring arrangements
		2.3	Test the performance of the cranking motor drive mechanism
		2.4	Determine starter locked armature current, voltage and torque
3	**Test and rectify starting motors**	3.1	Dismantle and assemble starting motors according to manufacturer recommendations
		3.2	Perform testing to determine shorts to ground, turn shorts and winding continuity
		3.3	Test solenoid, relays and over-temperature devices
		3.4	Test starter engagement mechanism and adjust where possible, i.e. pinion clearance
		3.5	Ensure starting system is free of excessive voltage drops
		3.6	Connect starting and charging cables to circuit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	connections tighten and insulate
	3.7 Determine starter locked armature current, voltage and torque

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Axial and coaxial type starters with drive arrangements include one (1) or more of the following:	• Dyer • Positork • Sprag clutch • overrunning clutch • inertia drive

Assessment Requirements for MEM27007 Diagnose and rectify low voltage starting systems

Modification History

Release 1. Supersedes and is equivalent to MEM18031B Diagnose and rectify low voltage starting systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings, diagrams and service documents to diagnose and rectify low voltage starting systems
- identifying the construction of electric starter motors
- testing the cranking motor drive mechanism
- dismantling and assembling given starter motors in accordance with manufacturer recommendations/procedures and specifications using appropriate tools, equipment and techniques
- checking operation of given starter motors for electrical faults, including testing solenoids, relays and over-temperature devices, operation and conformance of the engagement mechanism, excessive voltage drops and all circuit connections for compliance with specifications
- testing the repaired/overhauled starter motor to ensure that the locked armature current, voltage and torque for compliance to specifications.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- concepts of magnetism, electromagnetism and induced voltage
- principles of operation of electric motors
- components and functions of common starting motors
- effect of multi-pole/winding/shunt wiring arrangements on starting motor performance
- tests and test procedures that can be used to check the performance of the cranking motor drive mechanism
- concept of 'locked armature' in terms of current, voltage and torque and specifications
- tools and equipment used to test components and systems
- procedures for:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - determining locked armature current, voltage and torque
  - testing solenoids, relays and over-temperature devices for correct operation and operational specifications
  - testing and adjusting starter engagement mechanisms and specifications
  - checking starting systems for excessive voltage drops
- manufacturers' recommended dismantling/assembling procedures, tools and equipment for given starting motors
- range of electrical tests that can be applied to starting motors and the purpose of these tests
- equipment and procedures required to carry out the tests
- function of solenoids, relays and over-temperature devices
- effect and causes of voltage drops on starting system operation/performance
- effect of loose, poorly joined and/or inappropriate insulation on starting motor performance/operation and specifications of all circuit connections.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying low voltage starting systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess induction and exhaust system operation**	2.1	Apply principles, terminology and applications of supercharging, filtering, inter and after cooling to assess induction and exhaust system operation
		2.2	Obtain relevant information and interpret prior to any testing
		2.3	Undertake checks safely and to prescribed testing procedures
		2.4	Determine and record flows, pressures and temperatures
		2.5	Isolate faults to component level and determine appropriate corrective action using appropriate test instruments and equipment
3	**Assess emission control system operation**	3.1	Inspect emission control system components against manufacturer specification
		3.2	Check fuel evaporative control system and engine crankcase ventilation
		3.3	Service, adjust or replace components to manufacturer specifications, workplace procedures and WHS and environmental requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
4 **Rectify faulty components**	4.1 Determine component wear and clearances using manufacturer recommendations
	4.2 Determine if faulty components should be repaired or replaced
	4.3 Repair faulty components where appropriate
	4.4 Select replacement components using manufacturers' data
	4.5 Remove and refit repaired or replacement components to engine
	4.6 Record all test and rectification activities
	4.7 Ensure engine is free of air and exhaust leaks after repair work is carried out

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Faults include one (1) or more of the following:

- excessive air inlet restrictions
- excessive exhaust back pressures
- too much or too little boost pressure
- ineffective inter or after cooling

Assessment Requirements for MEM27008 Maintain induction, exhaust and emission control systems

Modification History

Release 1. Supersedes but not equivalent to MEM18032B Maintain induction/exhaust systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents to maintain induction and exhaust systems
- checking induction and exhaust system for correct operation
- checking emission control system performance for correct operation against specifications
- using test instruments and equipment to isolate faults down to component level and visually and dimensionally checking components for wear against specifications
- undertaking calculations and numerical operations to maintain induction and exhaust systems
- removing and refitting components to engines, including using replacement parts from manufacturers' catalogues
- checking induction/exhaust system for leaks
- using appropriate tools, equipment and techniques for each task
- recording all test and repair activities in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles and terminology of supercharging, filtering, inter and after cooling
- performance and operational specifications of the induction and exhaust system
- procedures and safety precautions for testing induction/exhaust systems for correct operation
- equipment and procedures necessary to test flows, pressures and temperatures associated with induction/exhaust systems
- components and applications of supercharging apparatus
- maintain induction, exhaust and emission control systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types of emissions, their relationship to standards and specifications and their effects on the environment
- sources of emissions from mobile and stationary plant and equipment
- exhaust gas recirculation (EGR) systems
- supplementary catalytic reduction (SCR) systems
- role of particulate filters, charcoal canisters, fuel evaporative control systems and crankcase ventilation in controlling emissions
- supercharging apparatus such as turbo charging equipment
- common faults associated with induction/exhaust systems and causes of those faults
- appropriate action and procedures for correcting common faults in induction/exhaust systems
- component specifications/tolerances and actions to be taken if the components are outside of specification
- action to be taken if the components are 'just' within specification
- measuring instruments to be used to carry out dimensional checks on components
- the operation of the apparatus installed to balance fuel injection to boost pressure and control devices installed to prevent excessive turbocharger RPM and/or boost pressure
- procedures and safety precautions for removing/fitting components to engines
- procedures for recording test and repair activities undertaken on induction/exhaust systems
- consequences of air/exhaust leaks on the safe operation of the induction/exhaust system and procedures for testing for leaks in induction/exhaust systems.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining induction/ exhaust systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27009 Diagnose and rectify braking systems

Modification History

Release 1. Supersedes and is equivalent to MEM18035B Diagnose and rectify braking systems

Application

This unit of competency defines the skills and knowledge required to check and assess braking systems, and replace/repair/overhaul braking system components associated with mobile equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Check and assess braking system**	2.1	Identify braking system types, components and arrangements, including anti-lock systems
		2.2	Apply knowledge of friction and heat principles and component functions to check and assess braking system operation
		2.3	Assess braking system, including control devices, for compliance with relevant specifications, regulations and standards
		2.4	Assess serviceability of friction materials, discs and drums
		2.5	Assess braking system communication and control modules and bus connections for correct operation and compliance with specifications
		2.6	Measure and record minimum operating dimensions and determine corrective action
		2.7	Diagnose faults to component level and determine appropriate corrective action
3	**Rectify and overhaul braking system components**	3.1	Interpret characteristics of surface finishes and wear patterns associated with braking components
		3.2	Interpret measurements and part condition when determining reuse/replacement
		3.3	Remove braking system components and disassemble

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Clean components using appropriate fluid and procedure
	3.5 Adjust friction material to reaction member clearance to specification
	3.6 Ensure system is free of leaks/restrictions after repair work
	3.7 Adjust all levers, linkages and pedal clearances to specifications
	3.8 Recommission and test braking system according to manufacturer recommendations or appropriate standard/regulation

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Braking system arrangements include one (1) or more of the following:	• air • hydraulic • air over hydraulics • mechanical • electric • disc • multi-wet disc • drum • wheel brakes • track brakes • anti-locking braking systems • transmission brakes and service • park and emergency brakes
Braking system control devices include one (1) or more of the following:	• communication and control circuit cabling and connectors • bus systems • data logger connections for braking system • power circuits and connectors for modules
Relevant regulations/standards include one (1) or more of the following:	• Australian Design Rules • mines regulations • transport regulations

Unit Mapping Information

Assessment Requirements for MEM27009 Diagnose and rectify braking systems

Modification History

Release 1. Supersedes and is equivalent to MEM18035B Diagnose and rectify braking systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices, including brake dust, fibre and fluid control and protection procedures
- identifying and interpreting specifications, charts, lists, drawings and service documents to diagnose and rectify braking systems
- checking braking system for conformance to specifications and for compliance with relevant regulations
- checking friction materials and identifying as being serviceable or to be replaced
- undertaking calculations and numerical operations for diagnosing and rectifying braking systems
- measuring and recording brake operating dimensions and identifying variations of brake operating measurement from specifications
- checking operation of braking system for compliance to specifications and identifying faulty components for replacement
- checking braking system interaction with equipment control and recording systems and components
- removing, dismantling, handling and replacing braking system components safely
- cleaning components using appropriate solutions and safety precautions
- adjusting brake clearance, levers, linkages and pedal clearances using appropriate tools, equipment and procedures
- testing and recommissioning the braking system for compliance with specifications/regulations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of friction and heat as applied to braking systems
- function of the components of a variety of braking system types and arrangements
- typical applications of different types of braking systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- requirements of relevant regulations as applying to mobile plant braking systems
- tools, techniques and equipment used to remove and dismantle braking system components
- procedures for:
  - checking braking systems for compliance with regulations
  - measuring brake operating dimensions recording brake operating dimensions
  - checking braking system operation
  - removing and dismantling braking system components
  - cleaning braking system components and solutions to be applied
  - adjusting brake clearances, levers, linkages and pedal clearances
  - checking for hydraulic, air and vacuum system leaks and restrictions
  - testing and recommissioning the braking system
- worn and defective friction materials
- specifications of the braking system
- corrective action to be taken when brake operating measurement varies from specification
- corrective action to be taken when faulty braking system components are identified
- characteristics of surface finishes and wear patterns as applied to braking system components
- reasons for identifying the components for reuse or replacement
- precautions to be taken when handling braking systems components
- reasons for selecting the chosen tools, techniques and equipment
- tests, tools, techniques and equipment required to test the braking system and reasons for selection.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying braking systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27010 Diagnose and rectify low voltage charging systems

Modification History

Release 1. Supersedes and is equivalent to MEM18037B Diagnose and rectify low voltage charging systems

Application

This unit of competency defines the skills and knowledge required to assess generator/alternator operation, and test and repair and/or replace generators and alternators.

It applies to the testing and rectification work associated with 12, 14, 36 and 48 volt charging systems on vehicles, mobile plant and stationary equipment.

Where specialist electronic skills are required appropriate units should also be selected.

Where soldering of wires/connections is required unit MEM05001 Perform manual soldering/desoldering - electrical/electronic components should also be selected.

Where an electrical wiring system is above 48 volts unit MEM18045 Fault find and repair electrical equipment/components up to 250 volts single phase supply or unit MEM18046 Fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c. should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess generator/ alternator operation**	2.1	Apply principles of magnetism, induced voltage and electromagnetism when assessing generator/alternator operation
		2.2	Apply alternating and direct current generating principles, voltage/current regulation methods and types and action of diodes/condensers in generator/alternator operation to assess generator/alternator operation
		2.3	Check charging system performance and record variances from system specifications
3	**Test and rectify generators/**	3.1	Dismantle and assemble generators/alternators to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
alternators	3.2 Determine charging faults to component level
	3.3 Perform testing to determine shorts to ground, turn shorts and winding continuity
	3.4 Test alternator/generator for normal and maximum output
	3.5 Test voltage and/or current regulators and cut-outs and relays and adjust to specification
	3.6 Determine condition of power/exciter diodes
	3.7 Replace all faulty components according to manufacturers' recommendations
	3.8 Ensure charging system is free of excessive voltage drops and connections are soldered, tightened and insulated

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Faulty components include one (1) or more of the following:	• brush gear • bearings • diodes • contacts • relays

Assessment Requirements for MEM27010 Diagnose and rectify low voltage charging systems

Modification History

Release 1. Supersedes and is equivalent to MEM18037B Diagnose and rectify low voltage charging systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents to diagnose and rectify low voltage charging systems
- checking and testing the charging system for correct operation and conformance and recording any variations from system specifications
- dismantling/reassembling given generators and alternators using appropriate tooling, techniques and procedures and replacing faulty components
- identifying charging faults and conducting tests for short circuit and winding continuity tests
- undertaking calculations and numerical operations in diagnosing and rectifying low voltage charging systems
- testing current and voltage regulators, cut-outs and relays for correct operation and determining the condition of given power/exciter diodes to specifications
- testing the output of the generator/alternator for compliance to specifications, including the charging system for excessive voltage drops
- recording/reporting all service activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- concepts of magnetism, electromagnetism and induced voltage
- construction and principles of operation of generators and alternators
- methods of generating alternating and direct current for low voltage systems
- methods of regulating voltage and current generated
- function of diode and condenser types of regulator
- tests and test procedures that can be used to check the performance of the charging system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- charging system specifications and procedures for recording charging system performance/variations from specifications
- procedures for:
  - dismantling and reassembling generators/alternators and tools and equipment to be used
  - identifying charging faults, testing short circuits and winding continuity and test equipment to be used
  - testing and methods of adjusting voltage and current regulators, cut-outs and relays
  - testing diodes with the appropriate test equipment and precautions to be taken
- specifications of generator/alternator output and test equipment and procedures to be used to determine alternator/generator output
- operational specifications and test equipment to be used to check the operation of voltage and current regulators, cut-outs and relays
- components of generators/alternators that can be replaced
- specifications of the faulty generator/alternator components
- effect and causes of voltage drops on charging system operation/ performance and procedures to be taken when checking for excessive voltage drops
- effect of loose, poorly soldered and/or inappropriate insulation on charging system operation
- parameters which determine repair or replacement
- specifications of all circuit connections.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying low voltage charging systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27011 Maintain track type undercarriage on mobile plant

Modification History

Release 1. Supersedes and is equivalent to MEM18039B Diagnose and rectify track type undercarriage

Application

This unit of competency defines the skills and knowledge required to maintain track assemblies, including checking components, clearances, tension and replacing any faulty components.

It covers mobile plant equipment that uses crawler belts and/or chain links.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess track assembly**	2.1	Apply operating principles and terminology of track type undercarriage in assessing track assembly
		2.2	Inspect for wear or damage and determine if component requires repair or replacement
		2.3	Check track frame alignment and determine variances from specifications
3	**Rectify and maintain track assemblies**	3.1	Remove, repair or replace faulty track undercarriage components
		3.2	Set track tension to specification
		3.3	Adjust clearances to specification
		3.4	Record all service/rectification activities

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:

- links
- pins
- sprockets
- idlers
- rollers and pads
- track chains
- tensioners
- sensors and monitoring module

Assessment Requirements for MEM27011 Maintain track type undercarriage on mobile plant

Modification History

Release 1. Supersedes and is equivalent to MEM18039B Diagnose and rectify track type undercarriage

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to diagnose and rectify track type undercarriage
- checking track type undercarriage for compliance with specifications
- identifying components present in the track type undercarriage system
- inspecting track type undercarriage components for wear and damage and identifying worn or damaged parts for repair or replacement using appropriate tools, equipment and techniques
- undertaking calculations and numerical operations associated with diagnosing and rectifying track type undercarriage
- checking the track frame for alignment and identifying variations from alignment specifications
- removing and replacing track undercarriage components using appropriate tools, equipment and techniques
- setting track tension and adjusting clearances to specifications
- recording/reporting all service/work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operating principles of track type undercarriage
- procedures for:
  - checking track type undercarriage components for wear and tools, techniques and equipment
  - aligning track frames and tools, techniques and equipment
  - removing and replacing track type undercarriage components and precautions to be taken

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - setting track tension and adjusting clearances setting track tension and adjusting clearances
- reasons for selecting the chosen tools, techniques and equipment
- specifications of the track type undercarriage components
- action to be taken to overcome the wear and/or damage detected.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining track type undercarriage on mobile plant at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27012 Maintain mobile plant suspension systems

Modification History

Release 1. Supersedes and is equivalent to MEM18040B Maintain suspension systems

Application

This unit of competency defines the skills and knowledge required to assess, maintain and repair/replace suspension systems of all types of wheeled and/or tracked plant/vehicles.

Where suspension systems are required to be maintained on track type undercarriage see unit MEM27014 Diagnose and rectify automatic transmissions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

Assessment Requirements for MEM27012 Maintain mobile plant suspension systems

Modification History

Release 1. Supersedes and is equivalent to MEM18040B Maintain suspension systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to maintain suspension systems
- inspecting the suspension components for wear, faults and security
- testing suspension arrangements, control arms/links and dampening devices for correct operation
- checking axle alignment/tracking for compliance with specifications and identifying variations of axle alignment from specification
- undertaking calculations and numerical operations associated with maintaining suspension systems
- testing automatic/manual levelling devices for correct operation
- aligning axles, adjusting the ride height and re-gassing the suspension system to specifications
- removing/replacing suspension components using appropriate tools, equipment and techniques
- recording/reporting all service and rectification work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation of suspension systems and the effects of steering geometry and alignment
- procedures for:
  - checking suspension system components for wear, faults, security and conformance to specification and tools, techniques and equipment
  - aligning axles and specifications that apply
  - adjusting ride height and specifications that apply
  - re-gassing suspension systems and precautions to be taken

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - removing and replacing suspension systems and precautions to be taken
- parameter determining suitability of repair or replacement of components and component parts
- action to be taken to correct non-conformance to specification
- tools, techniques and equipment required to maintain and repair suspension systems and reasons for selection.

Assessment Conditions

- Assessors must:
    - have vocational competency in maintaining suspension systems at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess steering system operation**	2.1	Obtain relevant information and interpret prior to any testing
		2.2	Undertake performance tests on primary and/or emergency steering systems in accordance with prescribed procedures
		2.3	Determine and record flows and pressures angles using appropriate test equipment
		2.4	Identify available wheel and axle adjustments and specifications
		2.5	Isolate faults to component level and determine appropriate corrective action
		2.6	Repair or replace faulty components and component parts
		2.7	Apply power steering component functions, adjustment principles, terminology and applications when assessing steering system operation
3	**Repair/replace faulty components**	3.1	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.2	Select replacement components using manufacturers' data
		3.3	Remove components and refit using appropriate tools, equipment and techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Undertake wheel and axle adjustments to comply with alignment specifications
	3.5 Make adjustments to primary and/or emergency steering systems that makes the system compliant with specifications
	3.6 Record all test and rectification activities

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Steering system includes one (1) or more of the following:	• manual
	• hydraulically assisted
	• full hydraulic
	• articulated and track type systems, including:
	  • hydrostatic
	  • clutch and differential steering

Assessment Requirements for MEM27013 Maintain steering systems

Modification History

Release 1. Supersedes and is equivalent to MEM18041B Maintain steering systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to maintain steering systems
- checking and testing steering system for compliance to specifications using appropriate tools, test equipment and techniques
- recording all test results and measurements in accordance with SOPs
- measuring steering system components using appropriate tools, equipment and techniques
- undertaking calculations and numerical operations associated with maintaining steering systems
- removing/refitting steering system components and selecting replacement parts using manufacturer catalogues and data
- aligning wheels and axles and adjusting steering system to specifications
- recording/reporting all service/work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation of the steering system and its components
- procedures for:
  - testing steering system performance and tests to be undertaken
  - checking components for wear and clearance
  - removing and refitting steering system components and precautions to be taken
  - adjusting the alignment of wheels and axles if available on the equipment
  - recording test and rectification activities
  - adjusting primary and emergency steering systems and the effect this causes on the steering system specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tools, techniques and equipment necessary to maintain and rectify steering systems and reasons for selection
- precautions to be taken when testing steering systems and procedures for recording test results
- identification of faulty components and reasons for the corrective action to be taken
- parameter determining suitability of repair or replacement of components and component parts
- operation of power and power assisted steering systems
- effects of toe in and other available wheel/axle alignments on steering system operation
- measuring equipment to be used.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining steering systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27014 Diagnose and rectify automatic transmissions

Modification History

Release 1. Supersedes and is equivalent to MEM18043C Diagnose and rectify automatic transmissions

Application

This unit of competency defines the skills and knowledge required to assess converter/transmission operation, and repair or replace faulty components.

Testing and assessment of performance would typically require operation of the plant or equipment. A licence may be required and users should check with the relevant authorities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess converter/ transmission operation**	2.1	Apply principles of torque converter, simple and compound planetary gearing, and hydraulic control operating principles to assess converter/transmission operation
		2.2	Obtain and interpret relevant information prior to any testing
		2.3	Undertake preliminary checks safely to prescribed procedures
		2.4	Isolate faults to component level and determine appropriate corrective action
		2.5	Assess component parts and determine the need for repair or replacement
		2.6	Use test equipment in accordance with SOPs
		2.7	Assess component parts for reuse or replacement
3	**Repair/replace faulty components**	3.1	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.2	Select replacement components using manufacturers' data

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.3 Remove and refit components to converter/transmission assembly using appropriate tools, equipment and techniques
	3.4 Make adjustments using appropriate tooling/equipment and manufacturers' data
	3.5 Verify converter/transmission assembly is free of excessive noise and operates to specification after repair work is carried out
	3.6 Record all test and rectification activities

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Automatic transmissions and assemblies include one (1) or more of the following:	• automatic • semi-automatic • powershift transmissions • hydrostatic transmissions • fluid coupling/torque converter assemblies • continuously variable transmission (CVT)
Control of lockup/shifting includes one (1) or more of the following:	• fully hydraulic • electronic

Assessment Requirements for MEM27014 Diagnose and rectify automatic transmissions

Modification History

Release 1. Supersedes and is equivalent to MEM18043C Diagnose and rectify automatic transmissions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions using different types of automatic transmissions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings, design rules and other applicable reference documents to diagnose and rectify automatic transmissions
- checking automatic transmission for compliance with specifications using appropriate tools, techniques and test equipment
- undertaking calculation and numerical operations associated with diagnosing and rectifying automatic transmissions
- selecting and using appropriate test equipment to test converter/transmission components for compliance to specifications
- interpreting fault codes and data from test equipment and control modules
- identifying faulty components by using appropriate testing equipment and identifying components for reuse or replacement
- removing and refitting components to converter/transmission assembly and selecting replacement parts using manufacturers' catalogues and data
- adjusting converter/transmission components using appropriate tools, techniques and equipment
- operating the converter/transmission assembly free of excessive noise and in compliance with specifications
- recording/reporting all service/work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of operation of automatic transmissions
- parameter determining suitability of repair or replacement of components and component parts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- function of torque converters, countershaft transmissions, planetary gearing, control valves and solenoids and hydraulic controls in automatic transmissions
- procedures for:
  - checking automatic transmissions for correct operation
  - testing automatic transmissions
  - checking automatic transmission components for wear and clearance
  - removing, refitting and adjusting automatic transmission components
  - recording test and rectification activities
- appropriate action to correct the faulty components
- test equipment to be used in checking/testing automatic transmissions for correct operation and reasons for selection
- tools, techniques and equipment to be used to determine component wear and clearance and reasons for selection
- tools, techniques and equipment to be used to maintain and repair automatic transmission assemblies
- effects of the adjustments on automatic transmission operation
- automatic transmission assembly specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying automatic transmissions at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27016 Diagnose and maintain electronic controlling systems on mobile and stationary plant

Modification History

Release 1. Supersedes and is equivalent to MEM18047B Diagnose and maintain electronic controlling systems on mobile plant

Application

This unit of competency defines the skills and knowledge required to test, diagnose and fault find electronic control systems associated with mobile and stationary plant and equipment.

It applies to whole of equipment diagnosis and rectification and complements diagnostic and rectification skills contained in individual system units of competency.

Where electronic systems associated with communication between the mobile or stationary plant and external communication sources such as those used for remote guidance or monitoring unit MEM27018 Test, diagnose and rectify mobile and stationary plant external monitoring and control systems should also be selected.

Where the repair of electronic circuitry associated with these systems. is required unit MEM18056 Diagnose and repair analog equipment and components and unit MEM18057 Maintain/service analog/digital electronic equipment, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits
MEM27023	Diagnose and rectify fieldbus circuits in mobile and stationary plant and equipment

Competency Field

Fixed and mobile plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for service or maintenance task**	2.1	Check service and operational records and discuss operational history with operator where relevant
		2.2	Identify control and bus systems used in mobile or stationary plant and locate control units and modules
		2.3	Inspect plant for obvious damage or wear to control units, modules or circuits
		2.4	Identify and select diagnostic benchmarks, methods, sequence, tests and testing processes according to manufacturer specification and workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
3	**Perform diagnostic tests on electronic controlling systems**	3.1	Operate plant or equipment and undertake visual, aural and functional checks for obvious faults, including checking for warning gauges, lights and alerts
		3.2	Access and interpret fault codes, live data and freeze frame data using appropriate test procedures and equipment and precautions to safeguard electronic components and systems
		3.3	Interpret fault codes and other diagnostic test results to determine controlling systems requiring rectification
		3.4	Trace faults from fault codes using specified troubleshooting procedures
		3.5	Determine if fault is related to wiring, interference, components, modules or individual system controller
		3.6	Determine root cause of faults
4	**Rectify faulty electronic controlling systems**	4.1	Rectify faults through repair, replacement or reprogramming to required specification
		4.2	Clear fault codes from memory according to SOPs
		4.3	Test controlling system and components for correct operation
		4.4	Make adjustments, as required, to mechanical clearances and measured electrical and resistance values
5	**Change operating parameters**	5.1	Source appropriate specifications from plant/equipment identification and applicable manuals and specifications
		5.2	Select and use appropriate tooling (software/hardware)
		5.3	Obtain relevant security codes using plant/equipment identification
		5.4	Download, enter and verify data for new specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Plant and equipment systems include one (1) or more of the following:	• discrete logic • analogue monitoring • microprocessor monitoring • control systems

Maintenance includes one (1) or more of the following:	• wiring harness faults
	• testing and identifying faulty:
	  • sensors
	  • actuators
	  • control components
	• replacing and making adjustments to:
	  • input components
	  • output components
	• accessing data from electronic control unit and applicable manufacturer software/hardware to change operating parameters

Input components include one (1) or more of the following:	• sensors • actuators • resistors • capacitors • diodes • transistors • integrated circuits (ICs) • erasable programmable read-only memory (EPROM) • microprocessors • joysticks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Output components include one (1) or more of the following:	• hardware • software • hard copy devices • soft storage devices

Assessment Requirements for MEM27016 Diagnose and maintain electronic controlling systems on mobile and stationary plant

Modification History

Release 1. Supersedes and is equivalent to MEM18047B Diagnose and maintain electronic controlling systems on mobile plant

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, manufacture/technical manuals and other applicable reference documents to diagnose and maintain electronic controlling systems on mobile plant
- identifying applicable control unit and using fault codes correctly to access fault codes with indicators, meters or diagnostic tooling then clearing codes from memory and verifying using applicable procedures and manuals
- tracing the root cause of faults
- identifying and applying procedures to safeguard electronic components and systems when diagnosing and maintaining typical mobile electronic circuits
- locating, identifying and testing applicable input and output components
- repairing/replacing components and selecting replacement parts using manufacturer specifications and data
- adjusting mechanical clearances and measured electrical and resistance values using appropriate tools and techniques
- obtaining security codes using correct protocol from manufacturer, plant/equipment identification and using computer and relevant computer applications to download, enter and verify new specifications in accordance with manufacturer procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- applicable fault codes and their meanings and procedures to clear fault codes and verify clearance
- sources of potential damage to typical mobile plant electronic systems when performing maintenance and diagnostic work and techniques and procedures to safeguard against damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- correct troubleshooting procedures, including identifying root causes of faults, including faults related to:
  - design
  - manufacturing
  - operator error (e.g. overload and over speed)
  - environment (e.g. contamination, interference and hazards)
  - previous service or maintenance error
- procedures for:
  - removal and replacement of faulty components and techniques and procedures
  - obtaining security code
  - downloading, entering and verifying data
- various types of input components
- operation and principles of transducers used in control systems
- relevant testing procedures
- component types, functions and locations
- techniques for repairing components
- operation and principles of actuators used in control system
- concepts of erasable programmable read-only memory (EPROM) and microprocessors.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and maintaining electronic controlling systems on mobile plant at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27017 Maintain, fault find and rectify hydraulic systems for mobile plant

Modification History

Release 1. Supersedes and is equivalent to MEM18052B Maintain fluid power systems for mobile plant

Application

This unit of competency defines the skills and knowledge required to test, fault find and rectify hydraulic systems used in the earthmoving, agricultural and transport industries.

It covers identifying the hydraulic system and components used on mobile plant, general servicing and identifying faults that are related to electronic and fieldbus controls and communication.

Where the rectification of electronic controls is required unit MEM27016 Diagnose and maintain electronic controlling systems on mobile and stationary plant should also be selected.

Where the rectification of communication systems is required unit MEM27018 test, diagnose and rectify mobile and stationary plant external monitoring and control systems should also be selected.

Where the rectification of fieldbus controls is required unit MEM27023 Diagnose and rectify fieldbus circuits in mobile and stationary plant and equipment should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	operational data		for hydraulic systems
		3.3	Consult equipment operator where appropriate and collect additional data on equipment performance and faults
		3.4	Check previous maintenance reports and preventative maintenance schedules and review for additional fault-finding data
4	**Check hydraulic system components and fluid**	4.1	Identify system components using appropriate circuit diagrams or manufacturer instructions
		4.2	Inspect equipment for obvious faults, leaks and contamination
		4.3	Access, inspect and test the operational function of components in accordance with SOPs
		4.4	Trace and localise faults with reference to manufacturer troubleshooting procedures, including using accessing and interpreting fault codes in controllers
		4.5	Determine parts that require repair or replacement
		4.6	Check hydraulic fluid and components for signs of contamination
5	**Rectify component faults**	5.1	Remove faulty components from system using appropriate tools, procedures and techniques
		5.2	Source replacement components from manufacturer/supplier
		5.3	Prepare and assemble hoses, tubes and pipework
		5.4	Assemble and refit replacement components and conductors to system
		5.5	Replace filter or fluid where required
		5.6	Test and adjust system for correct operation according to SOPs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
6	**Dismantle, inspect and rectify linear actuators**	6.1	Dismantle hydraulic cylinders and rams using appropriate tools, procedures and techniques
		6.2	Evaluate component parts for condition
		6.3	Fit seals and bearings in accordance with manufacturer specifications
		6.4	Reassemble and fit cylinders/rams in accordance with manufacturer instructions
		6.5	Test assembly in accordance with manufacturer instructions
7	**Complete maintenance and fault rectification work**	7.1	Perform scheduled preventive maintenance and other hydraulic systems servicing according to manufacturer schedules and instructions
		7.2	Verify correct operation of the system using fluid power principles and manufacturer instructions
		7.3	Instigate appropriate follow-up procedures
		7.4	Update maintenance and service records

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

General servicing includes the following:

- fluid replacement
- filtration requirements
- oil sampling
- checking for and rectifying faults
- preventative maintenance
- checks and adjustments to suit changes in operating conditions

Hydraulic systems include the following:

- open circuit
- closed circuit
- systems used for one (1) or more of the following:
  - direct motive power
  - powering actuators
  - braking
  - transmissions and gearboxes
  - pumping

Contaminants include one (1) or more of the following:

- dirt
- metal particles
- other particulates
- water
- fuel
- non-hydraulic oil

Rectifying includes the following:

- replacement of components and fittings
- filtering or replacement of hydraulic fluid
- assembly and fitting of hydraulic hoses
- flushing/cleaning of tubing and pipework
- resealing and repairs to cylinders and rams
- resetting of controls

Checks include one (1) or more of the following:

- pressure and flow testing
- cycle times
- basic interrogation of diagnostic system controllers
- basic electronic servicing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components include one (1) or more of the following:	• actuators • fixed and variable displacement pumps • pressure, directional and flow control valves • electro-hydraulic servo and servo-proportional valve (EHSV) • hydraulic motors • reservoirs • contamination control components (filtration) • fluid conductors/fittings • other associated equipment

Service of hydraulic systems include the following:	• change out of hydraulic components, including:
	  • pumps
	  • valves
	  • actuators
	• the associated remedial actions required, including:
	  • system flushing and purging
	  • setting of component parameters

Unit Mapping Information

Assessment Requirements for MEM27017 Maintain, fault find and rectify hydraulic systems for mobile plant

Modification History

Release 1. Supersedes and is equivalent to MEM18052B Maintain fluid power systems for mobile plant

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to maintain hydraulic systems on mobile plant
- identifying sources of stored energy and hazardous situations/conditions, including bleeding down accumulators and position actuators, and applying appropriate safety measures
- fault finding hydraulic system down to component level using appropriate fluid power principles and procedures
- inspecting and testing components using appropriate equipment in accordance with procedures
- identifying and tracing fieldbus circuits and control modules related to hydraulic systems on equipment
- removing/refitting faulty components to system, including pipes, hoses, conductors and fittings and where appropriate cutting and assembling conductors to length using appropriate tooling/machine, techniques and procedures
- undertaking calculation and numerical operations associated with maintaining fluid power systems on mobile plant
- testing and adjusting replacement components for correct operation and compliance to specifications
- dismantling linear actuators without damage using appropriate tools, techniques/procedures and safety measures and using specifications to identify performance/condition of cylinders and rams for wear and damage
- fitting seals and bearings and reassembling cylinder/ram in accordance with manufacturer instructions
- refitting and testing assembly to machine and verifying repairs on machine circuit and/or test rig to specifications
- carrying out general servicing of hydraulic system in accordance with manufacturer instructions
- recording/reporting service activities in accordance with SOPs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- different sources of stored energy and their applications and reasons for bleeding accumulators and actuators and the hazards associated with working on pressurised systems
- open circuit hydraulic systems, including:
  - applications
  - fixed displacement pump systems, including simple Open centre DCV systems and closed centre with bypass (3 port) compensator inlet
  - variable displacement pump systems, including pre and post-compensated systems
  - open centre systems
  - pump control systems, including proportional displacement control for open circuit pumps
  - common faults and preventative maintenance
- closed circuit systems, including:
  - applications
  - simple fixed/variable pumps with manual control
  - common faults and preventative maintenance
- full range of hydraulic system components in a mobile plant application
- information on circuit diagram or manufacturer instructions
- characteristics and operational function of each system component
- impact of other equipment systems on the hydraulic system
- methods and techniques for tracing and localising faults and problems and reasons relating to faulty hydraulic system components/ operation in accordance with specifications
- procedures for:
  - inspecting and testing hydraulic system components and equipment to be used
  - checking and adjusting the system
  - dismantling linear actuators and tools, techniques, procedures and safety measures to be used
  - fitting bearings and seals
  - reassembly/fitting of cylinder/ram and sequence to be used
  - testing and verifying repairs using machine circuits and/or test rigs and necessary remedial action
- common faults in hydraulic components
- specifications and correct operation of each hydraulic system component and conductors
- removal methods for various components
- information in catalogues or electronic media and procedures to obtain replacement parts
- typical conductor types and fittings their applications
- methods for cutting/assembling hoses/tubes/pipework

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- tools and techniques for fitting replacement components and conductors
- methods of inspection and measurement and guides and specifications for reusable parts
- manufacturer scheduled service timeframes, service items and service procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, fault finding and rectifying hydraulic systems for mobile plant at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27018 Test, diagnose and rectify mobile and stationary plant external monitoring and control systems

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to test, diagnose and rectify the systems used on stationary and mobile plant for functions that require communication to and from an external source. It covers installation, service and maintenance, diagnostics and troubleshooting of the on-board components of the communication, reporting and control systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM16008	Interact with computing technology
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits
MEM27016	Diagnose and maintain electronic controlling systems on mobile and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	stationary plant
MEM27023	Diagnose and rectify fieldbus circuits in mobile and stationary plant and equipment

Competency Field

Fixed and Mobile Plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Locate and identify features and purpose of external communication systems**	2.1	Determine on-board methods of communication and data exchange with external source
		2.2	Locate on-board electronic control module (ECMs) associated with external monitoring and control systems
		2.3	Identify other external monitoring and control system hardware and components
3	**Test external monitoring and control system**	3.1	Ensure equipment is parked with engine off or in specified safe mode for testing
		3.2	Check for damage to externally located antennae, sensors and other system components
		3.3	Review previous records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
		3.4 Identify location of service ports and other test locations and connect laptop or test equipment
		3.5 Run specified test procedure or program to access data on system and plant performance
		3.6 Identify faults and determine if related to on-board component or ECM fault
		3.7 Analyse information from tests and test equipment and identify faults
		3.8 Trace on-board faults to root cause
		3.9 Report off-board faults in system according to SOP’s
4	**Rectify on-board faults**	4.1 Repair or rectify faulty system components
		4.2 Adjust program settings to workplace and manufacturer specifications for program related faults
		4.3 Report continued program faults according to workplace procedures
		4.4 Adjust, recalibrate or replace faulty sensors, aerials and antennae
5	**Re-test system and document work**	5.1 Re-test equipment external monitoring and control system to ensure compliance with specifications and workplace needs
		5.2 Undertake any required final adjustments
		5.3 Document work undertaken in accordance with procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

The systems and equipment covered by this unit are found in stationary and mobile plant used in one or more of the following:	• mining • agriculture • forestry • construction • transport industries
External monitoring and control systems include one (1) or more of the following:	• integrated original equipment manufacturer (OEM) management and monitoring systems • bolt on systems • remote control and guidance systems, including on and off site remote control systems • single equipment system telemetry and monitoring systems • multi-mode systems allowing choice of operator control, semi-autonomous and fully autonomous control • load and yield management and monitoring • equipment condition monitoring and reporting systems • safety related systems, including proximity awareness and collision avoidance systems
Communication and data exchange method includes one or more of the following:	• satellite • Wi-Fi • cellular • radio • global positioning system (GPS) • laser

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hardware and components include one (1) or more of the following

- on-board electronic control modules (ECMs)
- connectors
- memory and communication interfaces
- ethernet connectors
- broadband transmitter/receiver (could be built into other hardware e.g. a PC)
- radio frequency (RF) transmitter/receiver
- laser transmitter/receiver
- GPS receiver
- satellite dish/aerial
- displays, buzzers and signal lamps
- operator switches and controls
- antennae
- fieldbus cables and connectors to other on-board systems and ECMs
- sensors
- radar
- cameras
- service ports
- power input
- service ports to allow for laptops and other test instrumentation to be connected (e.g. USB, serial and connecting cables)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

External communication systems can be related to single equipment system which include one (1) or more of the following:	• engine • tyres • load monitoring and reporting

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MEM27018 Test, diagnose and rectify mobile and stationary plant external monitoring and control systems

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting information on external monitoring and control systems from multiple sources, including manufacturers' specifications, drawings, information provided by equipment operators, log books and job records and obtaining and accessing other relevant data manually or by electronic means on mobile plant and equipment performance
- identifying hazards associated with mobile plant and equipment and implementing appropriate risk control measures and procedures before undertaking testing procedures
- establishing correct connection of test equipment to on-board access points
- running of diagnostic programs and other tests to system manufacturer specifications
- interpreting test results for equipment condition and faults
- undertaking root cause analysis to identify cause of faults
- rectifying faults using appropriate rectification strategy, including repair, replacement, changing program settings or referral to engineering, technical or other personnel
- undertaking calculations and numerical operations associated with advanced equipment testing and diagnostics on mobile plant and equipment
- documenting all findings and outcomes in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- equipment system components and locations for:
  - acquisition of engine and other equipment systems real time operational data
  - data logging features, where fitted, for:
    - event list
    - system snapshot

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - trend and cumulative data
  - data transmission and reception to on-board and external sensors and electronic control modules
  - system power
  - fieldbus data Links to other on board systems and electronic control modules (ECMs)
- system login procedures for operation and maintenance access levels
- on-board access points for test equipment
- correct fixing/mounting procedures for sensors, transmitters and receivers, antennae, aerials and satellite dishes
- procedures for running diagnostic programs and tests at equipment and component level
- sources of information available to assist in fault finding
- uses and parameters of information management systems
- required rectification for equipment faults
- practices and procedures in root cause analysis
- equipment performance specifications
- documentation requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in testing, diagnosing and rectifying mobile and stationary plant external monitoring and control systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27019 Diagnose, repair and replace diesel engines in stationary and mobile plant

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to diagnose, repair and replace diesel engines used in mobile and stationary plant and equipment.

It covers the diagnosis of diesel engine operation to determine location and cause of faults and whether in situ repair, more specialist investigation or engine removal for off-site repair is required. It includes bottom and top end repair of engines and re-installing repaired or replacement engines into stationary and mobile plant.

Where repairs to fuel, coolant, electrical and starting, exhaust systems, as well as transmissions and accessories and their components are required, see the appropriate units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **5**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM18055 Dismantle, replace and assemble engineering components

Competency Field

Fixed and Mobile Plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Check engine performance**	2.1	Determine normal engine performance parameters from manufacturer specifications and workplace records
		2.2	Perform appropriate diagnostic tests for engine and equipment type
		2.3	Identify faults from diagnostic test results
		2.4	Determine appropriate action to rectify faults
3	**Remove engine and engine assemblies**	3.1	Remove engine and ancillary components according to manufacturer specifications, workplace procedures and WHS and environmental requirements
		3.2	Tag and record engine and ancillary components according to workplace procedures
		3.3	Prepare engine and engine assemblies for repair

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Repair engines**	4.1	Interpret characteristics of surface finishes and wear patterns on top and bottom end components
		4.2	Assess components for abnormal wear or defects
		4.3	Remove top-end components and dismantle block assembly according to manufacturer recommendations
		4.4	Select appropriate cleaning solution and procedure, clean and store components not requiring repair ready for reassembly
		4.5	Replace or repair faulty parts to manufacturer specification
		4.6	Test engine and make any required post-repair adjustments
5	**Install repaired or replacement engine**	5.1	Locate and fix engine according to manufacturer specifications
		5.2	Refit ancillary components and equipment systems
		5.3	Check and adjust lubricants, coolant, fuel and other required fluids
		5.4	Test engine and make any required post-installation adjustments
6	**Undertake completion tasks**	6.1	Clean work area and dispose of non-recyclable material according to workplace and environmental requirements
		6.2	Collect and store recyclable material in appropriate containers
		6.3	Check and store tools and equipment
		6.4	Document and report engine repair or replacement according to workplace procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

The large diesel engines covered by this unit are used in one or more of the following:	• mobile plant • agriculture • forestry • rail • marine • other transport operations • power generation • air and gas compression • stand by power • other industry sectors using large combustion engines
Actions to rectify faults include one (1) or more of the following:	• on-site repair, including in an on-site workshop • installation of a new or reconditioned engine

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MEM27019 Diagnose, repair and replace diesel engines in stationary and mobile plant

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to perform engine repair or replacement
- checking engine for conformance and removing the engine and top-end components and dismantling block assembly
- undertaking calculation and numerical operations to calculate bearing clearances
- checking parts for abnormal wear or defects and identifying components for reuse or replacement
- testing of cylinder head, spring tensions, valves and guides for conformance to specifications
- replacement of worn or faulty parts
- cleaning parts using appropriate solutions and safety precautions and rack and setting out engine parts according to their original position in readiness for reassembly
- obtaining and recording measurements and interpreting readings for replacement or reuse as being under or over size
- reassembling engine bottom-end components using appropriate tools, equipment and techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of surface finishes and wear patterns as applied to crankshaft and piston assemblies
- specifications of crankshaft and piston assemblies
- reasons for identifying the components for reuse or replacement
- procedures for:
  - dismantling the block assembly and removing the engine from the plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - removing the top-end from the engine
  - cleaning engine parts and solution to be applied
  - racking and/or setting out of parts in readiness for reassembly
  - recording engine measurements
  - removing ridges, gaps, tapers, ovality and protrusions
  - assembling engine bottom-ends and precautions to be taken
  - determining bearing clearances and methods to be applied
- tools, techniques and equipment to be used and reasons for selection
- action to be taken when abnormal wear or defects are observed in the engine components
- measuring instruments to be used to measure engine components
- concept of under/over size of replacement parts and the reasons for identifying replacement parts as under or over size
- tools, techniques and equipment required to correct faults.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing, repairing, removing and replacing diesel engines in stationary and mobile plant at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27020 Apply knowledge of large combustion engine operations to service and maintenance tasks

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to identify engine features and operations essential for large engine servicing and maintenance tasks.

It includes identifying and assessing large combustion engines, the equipment powered by the engines, and the operations the equipment is required to perform and applying this information to engine service and maintenance tasks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

Assessment Requirements for MEM27020 Apply knowledge of large combustion engine operations to service and maintenance tasks

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following manufacturer and work instructions, standard operating procedures (SOPs) and safe work practices
- identifying appropriate sources of information on engine and equipment
- carrying out classification of large combustion engines from observation, manufacturer instructions and manuals and workplace records, including classification of:
  - engine type
  - engine features
  - engine systems
  - engine components
  - fuel type and fuel system
- assessing implications of engine and equipment service history and equipment operational records for service and maintenance tasks
- recording and reporting service activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- classification of combustion engines, including:
  - internal and external combustion
  - reciprocating and rotary engines
  - two and four stroke cycles
  - spark ignition and compression ignition
  - turbines
- engine features, including:
  - number and arrangement of cylinders
  - materials used for major components (e.g. steel, aluminium and ceramic)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- fuel types and implications for engine operation and maintenance (e.g. petrol, diesel, diesel/gas, gas (natural gas, biogases and special gases))
  - engine location:
    - front, mid or rear engine
    - longitudinal or transverse engine
  - ignition system, components and firing order
  - operational parameters, including:
    - bore and stroke
    - displacement
    - compression ratio
    - efficiency
  - torque, horsepower and brake horsepower
  - cycles of engine operation:
    - intake stroke
    - compression stroke
    - power stroke
    - exhaust stroke
- principles of operation of engine oil, fuel, lubrication and cooling systems, including:
  - function of filters
  - purpose of additives and correct proportions to be used
  - symptoms and effects of contamination, abnormal engine operation and extremes of weather
- role and operation of major engine components, including:
  - timing belt or chain
  - camshaft timing pulley
  - camshaft single and dual
  - rocker arms and shafts
  - intake valves and springs
  - exhaust valves and springs
  - cylinder head
  - crankshaft and crankshaft pulleys, balancer and balance weights and bearing journals
  - flywheels
  - starter ring gear
  - engine block
  - pistons
  - connecting rods
- exhaust system and components.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in applying knowledge of large combustion engine operations to service and maintenance tasks at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27021 Maintain, fault find and repair stationary plant gas turbine engines

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to maintain gas turbine engines used in stationary plant applications.

It covers scheduled servicing, preventative maintenance, fault finding and repair or rectification of faulty operation and components undertaken on gas turbine engines up to 5 GJ/hr (1300 kw) capacity, including ancillary equipment that may be associated with the engine operation.

The application of the skills and knowledge described in this unit in some states/territories may require an authority to practice in the workplace. Other conditions may apply under state and territory legislative and regulatory requirements.

Band: **A**

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Fixed and Mobile Plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets and work instructions
2	**Inspect gas turbine engine system and components**	2.1	Determine normal gas turbine engine performance parameters from manufacturer specifications and workplace records
		2.2	Prepare engine for engine safe system inspection and operation in accordance with manufacturer specification
		2.3	Check gas turbine engine components visually for external and internal signs of defects
		2.4	Check pipes, cables and connections for wear and damage
		2.5	Perform appropriate diagnostic tests for engine and equipment type
		2.6	Identify faults from diagnostic test results
		2.7	Determine appropriate action to rectify faults
3	**Test gas turbine engine system**	3.1	Identify test ports and connectors and connect test equipment
		3.2	Follow specified test procedure or run diagnostic program to access data on engine performance
		3.3	Test safety systems and emergency shut offs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		3.4	Identify faults and determine if related to engine, associated systems or control fault
		3.5	Trace fault to root cause
		3.6	Obtain specialist advice, where required, to assist with the troubleshooting process
4	**Service gas turbine engine**	4.1	Check and replace air and oil filters if required or to manufacturer schedule
		4.2	Test and adjust regulator, operation and safety controls
		4.3	Pressure test gas, oil, and air pipes and hoses and purge, as required
		4.4	Lubricate engine and components according to maintenance schedule
		4.5	Document engine service to workplace requirements
5	**Rectify faults according to manufacturer specifications**	5.1	Assess components for abnormal wear or defects
		5.2	Replace faulty or worn components
		5.3	Remove corrosion where required
		5.4	Finish or re-finish metal surfaces through polishing, lapping and blending of damage area or other specified process
		5.5	Apply required surface treatments
		5.6	Test engine and make any required post-repair adjustments
6	**Install new, repaired or replacement engine**	6.1	Locate and fix engine according to manufacturer specifications
		6.2	Refit ancillary components and equipment systems
		6.3	Check and adjust lubricants, coolant, fuel and other required fluids

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	6.4 Test run engine and make any required post-installation adjustments
7 **Complete repair or installation**	7.1 Clean work area and dispose of non-recyclable material according to workplace and environmental requirements
	7.2 Collect and store recyclable material in appropriate containers
	7.3 Check and store tools and equipment
	7.4 Document and report engine repair or replacement according to workplace procedure

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Ancillary equipment includes one (1) or more of the following:	• pumps • compressors • fluid power equipment • metering equipment • electrical controls • electronic controls

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Gas turbine engine and components include one (1) or more of the following:

- engine change unit, main components and accessories/drives
- control components, including valves, meters and regulators
- ignition and starter system components
- fuel system components, including:
  - manifold and nozzles
  - combustion chambers
  - filters
- oil system components
- air system components, including:
  - air inlet structures
  - fans
  - guide vanes
  - centrifugal or axial flow compressor assemblies (low and high pressure)
  - compressor bleed valves if fitted
- exhaust system components, including:
  - high and low pressure turbine assemblies
  - free turbine (where fitted)
  - exhaust outlet flues and shafts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Actions to rectify faults include one (1) or more of the following:	• on-site repair, including in an on-site workshop • removal of engine to a specialist engine repair facility • installation of a new or reconditioned engine

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MEM27021 Maintain, fault find and repair stationary plant gas turbine engines

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to perform engine repair or replacement
- testing of turbine engine operation with and without fuel
- checking gas turbine engine performance against specifications for conformance
- purging of gas turbine and associated equipment
- checking components and parts for abnormal wear or defects and identifying whether to reuse, repair or replace components and parts
- replacing worn or faulty parts
- cleaning parts using appropriate solutions and safety precautions and rack and setting out engine parts according to their original position in readiness for reassembly
- obtaining and recording measurements and interpreting readings for replacement or reuse as being under or over size
- assembly and disassembly of gas turbine engine using appropriate tools, equipment and techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- tools, techniques and equipment to be used and reasons for selection
- characteristics of surface finishes and wear patterns as applied to gas turbine engine components
- criteria for identifying the components for reuse or replacement
- gas turbine engine layout and operation, including:
  - types of gas turbine
  - operating principles and power output
  - gas path

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - intakes
  - compressors
  - combustion chambers
  - turbine blades
  - air intake path
  - exhaust path
  - bearings and seals
  - lubrication system
  - starting system
  - ignition system
  - safety systems, including safety shut off systems, leak detection systems and vents
- controls and instrumentation, including systems and controls for remote operation and monitoring
- action to be taken when abnormal wear or defects are observed in the engine components
- test instruments and tools used for gas turbine service and maintenance
- purging procedure for the stationary gas turbine and associated equipment
- gas turbine engine fuel types, properties and applications
- relevant standards and regulations including AS 3814:2015 Industrial and commercial gas-fired appliances and AS/NZS 5601 Gas installation
- concept of under/over size of replacement parts and the reasons for identifying replacement parts as under or over size
- tools, techniques and equipment required to correct faults.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, fault finding and repairing stationary plant gas turbine engines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27022 Maintain, fault find and repair traction drive mechanics

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to maintain and repair traction drive systems on transport and mobile equipment.

It covers the skills and knowledge for mechanical related maintenance and fault finding of traction drive systems, including fault finding and rectifying mechanical systems and components supporting the operation of the traction drive system.

Where the connection and disconnection of electrical equipment operating above 36 volts is required, see unit MEM18045 Fault find and repair electrical equipment/components up to 250 volts single phase supply or unit MEM18046 Fault find and repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.

The application of the skills and knowledge described in this unit in some states/territories may require an authority to practice in the workplace. Other conditions may apply under state and territory legislative and regulatory requirements.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools

MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits
MEM27016	Diagnose and maintain electronic controlling systems on mobile and stationary plant

Competency Field

Fixed and Mobile Plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets and work instructions
		1.5 Check equipment operational records and fault reports and codes for indications of traction system problems
2	**Diagnose and rectify traction drive mechanical components**	2.1 Observe engine and alternator or generator during operation for signs of abnormal shaft vibration and noise
		2.2 Inspect shafts and bearings from prime mover to alternator or generator for poor lubrication, wear, overheating, corrosion or other faults
		2.3 Rectify shafts and bearings through repair or replacement
		2.4 Align shaft to manufacturer specifications using specified procedures and test instruments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		2.5	Assess coupler and bearing clearances and adjust, as required
		2.6	Check dynamic retarding components, including resistance grids, cooling air ducts and fan/blowers for operation and blockages and repair/rectify damaged components
		2.7	Check wheel motor assemblies for alignment, wear, vibration and rectify faults to manufacturer specifications
		2.8	Test operation of solenoids, valves, sensors, links to electronic control modules (ECMs) and rectify where required
		2.9	Arrange for repair/rectification of any identified electrical related faults
3	**Remove or install new, repaired or replacement major traction drive components**	3.1	Ensure equipment is parked safely, engine off and battery, other electrical and hydraulic systems de-energised
		3.2	Check all cables, hoses and pipes are disconnected
		3.3	Remove or install major component according to manufacturer specifications
		3.4	Remove or refit ancillary components, hoses, pipes, sensors, fieldbus links and connections
		3.5	Arrange for connection of low and/or high voltage power supply connections
4	**Complete repair or installation**	4.1	Test run equipment and make any required post-installation adjustments
		4.2	Document work undertaken on traction drive according to workplace procedure

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Major traction drive components include the following:	• alternator • generator • drive shaft from engine • cooling grid/s • inverters • rectifiers • wheel motors • blowers/fans
Actions to rectify faults include one (1) or more of the following:	• on-site repair, including in an on-site workshop • removal of component to a specialist off-site repair facility • referral of the fault to other trade, technical or professional personnel for rectification

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MEM27022 Maintain, fault find and repair traction drive mechanics

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to perform engine repair or replacement
- testing procedures for traction drive components
- checking traction drive and equipment performance against specifications
- checking components and parts for abnormal wear or defects and identifying whether to reuse, repair or replace components and parts
- aligning shafts from engine to alternator or generator
- replacement of worn or faulty parts
- obtaining and recording measurements and interpreting readings for replacement or reuse as being under or over size
- assembly and disassembly of traction drive components using appropriate tools, equipment and techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- tools, techniques and equipment to be used and reasons for selection
- criteria for identifying components for reuse or replacement
- traction system layout and principles, including:
  - types of engines (prime movers) and operating principles and power output
  - relationship of alternator/generator speed/load to engine performance
  - power path to motors, including role of engine, alternators/generators, inverters and rectifiers, and dynamic retarding, including function of cooling grid and blower, and wheel motors
- controls and instrumentation, including systems and controls for remote operation and monitoring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- action to be taken when abnormal wear or defects are observed in the traction drive components
- test instruments and tools used for traction drive service and maintenance.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, fault finding and repairing traction drive mechanics at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM27023 Diagnose and rectify fieldbus circuits in mobile and stationary plant and equipment

Modification History

Release 1: New Unit

Application

This unit of competency defines the skills and knowledge required to carry out diagnosis and rectification of circuits used in controller area network (CAN) and other fieldbus systems and control technology components in mobile and stationary plant.

It applies to systems and components that do not require a host computer. The unit can apply to circuits used for communication with and between systems and components, including systems for engine management, suspension, hydraulics and pneumatics, chassis and body management, braking systems, mechanical, electrical and hydraulic drives, lighting control, air conditioning, vehicle guidance and telemetry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Assessment Requirements for MEM27023 Diagnose and rectify fieldbus circuits in mobile and stationary plant and equipment

Modification History

Release 1: New Unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, standards, charts, lists, SOPs, electrical drawings and diagrams to diagnose and rectify fieldbus circuits in mobile and stationary plant and equipment
- selecting and using the correct test instrument, including multimeters, amp meters and circuit testers for bus and control system circuits and components
- assessing condition and serviceability of components, including connectors, resistors, harnesses, boards, sensors, switches, fuses and seals
- applying Ohm's Law to determine the required values of current, voltage and resistance of a range of electrical circuits, including series, parallel and series parallel
- connecting electrical test instruments into given circuits to determine the required values of current, voltage and resistance in a safe and effective manner
- connecting and adjusting multi-channel and general purpose oscilloscopes to a given electrical circuit to measure wave forms at nominated points in the circuit
- fault finding using fault-finding techniques to identify wiring faults in electrical circuits
- selecting appropriate replacement cables according to size, rating and insulation resistance from supplier catalogues
- making up replacement wiring looms, strip and prepare cable ends for termination and terminate to specifications
- testing terminations for continuity and to comply with requirements
- removing and/or neutralising corrosion from terminals and connections and applying appropriate protective coating.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of electron theory
- definitions of current, voltage and resistance in terms of electrical circuits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Ohm's Law and the relationships between current, voltage and resistance for a variety of given electrical circuits
- instruments and procedures to be used to measure current, voltage and resistance and safety precautions to be taken
- procedures for maintaining electrical test equipment
- principles and functions of two wire differential serial bus systems, including:
  - communication and power cables for bus systems
  - voltage states relative to shield or ground and role in information transfer
  - logic states
  - channels
  - communication protocols, including message priority and identification
  - electronic control modules (ECMs)
  - engine control modules
  - power distribution boards
  - ground modules
  - typical diagnostic codes and faults
  - cabin displays
- symbols used in electrical drawings/diagrams
- components of a variety of electrical circuits identified by given electrical drawings/diagrams
- differences between series and parallel electrical circuits
- function of a general purpose and multi-channel oscilloscopes and procedures for connecting oscilloscopes to bus and control system circuits and components
- use of wave forms in the testing of circuits
- accuracy to which electrical test equipment can be read
- examples and causes of common faults in electrical wiring and test procedures for isolating wiring faults
- specifications of cables and wires including insulation resistance used in given electrical circuits
- test procedures for terminated wiring and cables
- effect of corrosion on the performance of electrical circuits and connections
- common faults and causes in sensors, relays, solenoids, contacts and circuits and procedures for testing circuit components.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying fieldbus circuits in mobile and stationary plant and equipment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate

MEM27024 Diagnose and rectify mobile plant hydrostatic systems

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to assess converter/transmission operation, and repair or replace faulty components.

It applies to hydrostatic systems used in mobile plant applications, including steering, transmissions and other closed circuit systems. It provides additional specialist skills and knowledge in hydrostatics and is designed to complement the MEM units relevant to the particular equipment systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27017	Maintain, fault find and rectify hydraulic systems for mobile plant

Competency Field

Fixed and Mobile Plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify and assess the function and operation of hydrostatic system components**	2.1	Identify motor and pump configurations used on equipment
		2.2	Identify pump types and control methods
		2.3	Check pump prime mover and alignment
		2.4	Identify charge pumps and assess operation against specifications
		2.5	Identify control valves and functions, including special control features
		2.6	Identify load sensors, other sensors, control modules, fieldbus circuits and other electrical or electronic components
		2.7	Locate and check filters, hydraulic lines, heat exchangers and reservoirs
		2.8	Test system operation and integrity according to manufacturer specifications
3	**Repair/replace faulty components**	3.1	Interpret test results and determine components requiring repairs or replacement
		3.2	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.3	Select replacement components using manufacturer’s data
		3.4	Remove and refit components to hydrostatic system using appropriate tools, equipment and techniques
		3.5	Test performance of hydrostatic system against specification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.6 Record all test and rectification activities

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hydrostatic motor and pump configuration includes one (1) or more of the following:	• close coupled (motor and pump back to back units) • split units (separate motor and pump) single and double • multiple pump/motor layouts • series and parallel operation • fixed and variable displacement pumps
Control valves include one (1) or more of the following:	• hot oil shuttle valves • cross-line relief valves • counterbalance valves • bypass valves • differential lock valves • parking brake valves
Hydrostatic special control features include one (1) or more of the following:	• inch control • creep speed • brake defeat function • hydrostatic braking

Unit Mapping Information

Assessment Requirements for MEM27024 Diagnose and rectify mobile plant hydrostatic systems

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions using different types of mobile plant hydrostatic systems and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings, design rules and other applicable reference documents to mobile plant hydrostatic systems
- performing diagnostic testing procedures for hydrostatic transmissions, including:
  - flow and pressure testing
  - measuring case drains
  - internal and external fluid leaks
  - abnormal noises and operation
  - scan tools and/or multimeter testing
- undertaking calculation and numerical operations associated with diagnosing and rectifying closed circuit fluid power systems
- checking hydrostatic system components for wear and clearance
- removing, refitting, adjusting and aligning hydrostatic system components
- selecting and using appropriate test equipment to test components for compliance to specifications
- interpreting fault codes and data from test equipment and control modules
- identifying faulty components visually and by using and adapting appropriate testing equipment and identifying components for reuse or replacement
- removing and refitting components to hydrostatic assembly and selecting replacement parts using manufacturer catalogues and data
- adjusting components using appropriate tools, techniques and equipment
- recording/reporting all service/work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- different pump and motor configurations and their advantages and disadvantages in mobile applications, including:
  - close coupled (motor and pump back to back units)
  - split units (separate motor and pump) single and double
  - multiple pump/motor layouts
- method of operation and assembly/disassembly procedures for axial, bent axis and radial pumps
- pump control methods, including:
  - mechanical
  - mechanical servo
  - pilot pressure
  - electronic servo
  - pressure/limitation and displacement control
- operating principles of charge pumps, including construction, circuitry, case flushing and cooling and heating functions
- functions and types of control valves used in hydrostatic/closed circuit systems
- flow amplifiers and functions
- effect of engine speed and performance on hydrostatic system
- methods for checking hydrostatic system components for wear and clearance
- procedures used to remove, refit, adjust and align hydrostatic system components
- recording requirements for test and rectification activities
- appropriate action to correct the faulty components
- test equipment to be used in checking/testing mobile plant hydrostatic systems for correct operation and reasons for selection
- tools, techniques and equipment used in maintaining and repair hydrostatic system assemblies.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying mobile plant hydrostatic systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27025 Maintain, diagnose and rectify fluid power controls in mobile equipment

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to install and repair and/or rectify fluid power controls used in mobile equipment applications.

It applies to hydraulic fluid power systems control circuits and may also apply to mobile equipment using pneumatic systems. Where pneumatic controls are also to be maintained, relevant pneumatic units should also be selected.

It covers fault finding of fluid power systems control circuits, maintaining and repairing or replacing system control components, and checking and adjusting the operation of fluid power system controls. System circuit/components are identified, traced, inspected and operational function is assessed and verified using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: B

Unit Weight: **6**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits

Competency Field

Fixed and Mobile Plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Identify/inspect or install fluid power systems and controls**	2.1	Interpret and apply fluid power control principles and system/circuit diagrams
		2.2	Identify control modules, fieldbus wiring, sensors and control module locations for fluid power systems
		2.3	Conduct initial inspection of fluid power system/circuit components for compliance with specifications
		2.4	Undertake sequential installation according to manufacturer specifications and SOPs
3	**Check and adjust fluid power system control sequence and operation**	3.1	Check controls and system operation against operational specifications using appropriate test equipment and application principles/techniques
		3.2	Perform adjustments to sequence system to meet/align to operational requirements and specifications
		3.3	Report modifications/alterations and according to SOPs
		3.4	Check controls and system operation and commission to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Fault find fluid power systems control circuit**	4.1	Interpret and apply system/circuit diagrams and data sheets
		4.2	Identify and inspect system/circuit components
		4.3	Trace system/circuit and diagnose action of components to identify and localise faults
		4.4	Test system/circuit parts using appropriate test equipment and application principles
		4.5	Assess system/circuit parts against operational specifications
		4.6	Localise fault condition at the component level
		4.7	Evaluate faulty condition, analyse root cause and plan corrective action
5	**Maintain and repair or rectify system control components**	5.1	Apply correct maintenance procedures
		5.2	Select and apply repair procedures using appropriate tools, equipment and techniques
		5.3	Test faulty items, repair or replace using sequential installation procedures according to manufacturer recommendations
		5.4	Select replacement items from appropriate sources
		5.5	Reassemble system control components according to specifications
6	**Check and adjust sequence of fluid power system controls**	6.1	Identify circuit sensors and controllers using circuit diagrams and fluid power system control principles
		6.2	Make necessary adjustments to sequence system control circuit to meet operational specification
		6.3	Check and verify correct operation of system control circuit against operational specification
		6.4	Commission fluid power system controls to specifications
		6.5	Adopt appropriate follow-up procedures
		6.6	Complete service/maintenance report

Assessment Requirements for MEM27025 Maintain, diagnose and rectify fluid power controls in mobile equipment

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining and interpreting specifications system/circuit diagrams, system operation and control data records and identifying and inspecting system components for compliance with specifications
- planning and undertaking sequential installation of fluid power systems and controls in accordance with manufacturer specifications and procedures
- checking and adjusting control and system operation using appropriate test equipment ensuring that the sequence of operations conforms to specifications and operational requirements
- recording/reporting any modifications/alterations to the system in accordance with SOPs
- fault finding fluid power systems control circuits and controllers using fault-finding techniques and appropriate test equipment and identifying and localising components not conforming to operational specifications for repair/replacement
- repairing/replacing faulty items after testing for compliance to specifications using appropriate tools, equipment and techniques
- reassembling control components to meet specifications
- verifying correct operation of system power control circuit and commission the fluid power system controls to specifications
- initiating maintenance and/or service follow-up procedures and completing maintenance and/or service reports according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- system operational and control requirements and specifications
- application of common fluid power system components and controllers
- basic electronic concepts, including current/voltage/power and solenoid coils
- pulse width modulation (PWM) and its function/application

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- function of analogue controllers in simple fluid power systems
- digital controllers in mobile fieldbus systems (e.g. controller area network (CAN) bus) and their function and capabilities
- controller fault code interrogation and interpretation, where available
- circuit sensors and controllers
- temperature transducers
- data loggers – types and basic function
- special installation requirements
- fluid power and common test equipment and their application
- correct operational sequence of the system
- typical adjustments to correct sequencing variations from specification
- procedures for recording/reporting modifications/alterations and consequences of not recording/reporting
- fluid power system commissioning procedures
- components not complying with operational specification and typical causes of component failure
- cause of the faulty condition in the components and appropriate procedures for rectifying the faulty condition
- appropriate maintenance schedule and procedures
- appropriate control component repair procedures
- typical test equipment and its application
- common adjustments that can be made to control systems and their effect
- any maintenance/service follow-up procedures
- maintenance/service recording/reporting requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in maintaining, diagnosing and rectifying fluid power controls in mobile equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27026 Service and repair mobile plant air conditioning systems

Modification History

Release 1: New unit

Application

This unit of competency defines the skills and knowledge required to service and repair in cabin air conditioning systems installed in mobile plant and rail vehicles.

It covers systems supplying heating, ventilation, air conditioning (HVAC) and cooling systems to operator compartments and includes servicing, fault finding, repairing and replacing of control and operating components, refrigerant check, replacement and recovery, and recommissioning of the air conditioning system.

This unit forms part of the requirements to obtain an Australian Refrigeration Council (ARC) Refrigerant handling licence – qualified persons (Automotive air conditioning licence.)

In some jurisdictions, an occupational licence for refrigeration/air conditioning or electrical restricted licence may be required.

Band: A

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

Assessment Requirements for MEM27026 Service and repair mobile plant air conditioning systems

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices including refrigerant safe handling procedures
- obtaining and interpreting specifications air conditioning system/circuit diagrams, system operation and control data records, and identifying and inspecting system components for compliance with specifications
- planning and undertaking sequential servicing of air conditioning system in accordance with manufacturer specifications and regulatory requirements
- checking and adjusting control and system operation using appropriate test equipment, including checking for:
  - ambient and vent temperature
  - condenser and suction temperature
  - manifold gauge pressure
  - refrigerant leaks
  - heater core and system water coolant leaks
- ensuring that the sequence of operations conforms to specifications and operational requirements
- recording/reporting any modifications/alterations to the system in accordance with SOPs
- fault finding air conditioning systems controls and circuits using fault-finding techniques and appropriate test equipment
- repairing/replacing faulty items after testing for compliance to specifications using appropriate tools, equipment and techniques
- reassembling of air conditioning system to meet specifications
- verifying correct operation of air conditioning system after service and repair
- initiating maintenance and/or service follow-up procedures and completing maintenance and/or service reports according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of air conditioning systems used in mobile applications, including:
  - piston, scroll and rotary vane compressors
  - electric compressors
  - variable displacement compressors
  - clutchless compressors
  - single and multi-zone
- system operational and control requirements and specifications, including:
  - high and low pressure switches
  - pressure relief valves
  - temperature sensors
  - sunlight sensors
  - zone temperature sensors
  - carbon dioxide sensors
- heating system components, including core, control valve, blower motor and fan, ducts, controls and sensors
- typical mobile systems refrigerants, their features and applications and relationship to Australian Refrigerant Council (ARC) regulatory requirements
- lubricating oils
- application of air conditioning system components and controls
- digital controllers in mobile fieldbus systems (e.g. controller area network (CAN) bus) and their function and capabilities in regards to air conditioning systems
- controller fault code interrogation and interpretation where installed
- circuit sensors and controllers
- special system installation requirements
- air conditioning system test equipment and test procedures, including use of:
  - manifold gauges
  - surface probe thermocouples
  - temperature gauges
  - scan tools
  - electrical test equipment
  - electronic leak detectors
  - recovery units
  - vacuum pumps
  - electronic scales
  - other test equipment relevant to the vehicle system
- correct operational sequence of the system
- typical adjustments to correct sequencing variations from specification
- procedures for recording/reporting modifications/alterations and consequences of not recording/reporting
- air conditioning system commissioning procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- components not complying with operational specification and typical causes of component failure
- cause of the faulty condition in the component and appropriate procedures for rectifying the faulty condition
- appropriate maintenance schedule and procedures
- appropriate control component repair procedures
- typical test equipment and its application
- common adjustments that can be made to control systems and their effect
- any maintenance/service follow-up procedures
- maintenance/service recording/reporting requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in the service and repair of mobile plant air conditioning systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Competency Field

Fixed and Mobile Plant

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4 Identify job requirements from specifications, drawings, job sheets or work instructions
		1.5 Plan job to conform to Australian Refrigeration Council (ARC) code of practice requirements
2	**Install air conditioning system in new mobile plant**	2.1 Check that mobile plant is parked and engine/power source are safe for air conditioning system access and work
		2.2 Check cabin installation site against drawings or specifications for access, dimension and levels
		2.3 Check supplied air conditioning system matches specification and is complete
		2.4 Identify locations for structural support brackets and other support and holding components
		2.5 Identify air conditioning connection location and requirements for power, control modules, fieldbus wiring and sensors
		2.6 Prepare all surfaces, materials and components for use
		2.7 Install air conditioning system and connections in conformance with manufacturer and customer specifications
		2.8 Check air conditioning system is levelled, aligned, coupled and connected in accordance with specifications
		2.9 Charge system with specified refrigerant according to manufacturer specifications and regulatory requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
3	**Modify or retrofit mobile plant air conditioning system**	3.1 Determine modification requirements from customer specifications, job instructions and drawings, and equipment manuals
		3.2 Check that mobile plant is isolated/made safe according to SOPs
		3.3 De-gas system using approved recovery unit and appropriate refrigerant recovery cylinder for the refrigerant type
		3.4 Recover oil and evacuate system
		3.5 Remove air conditioning system or components requiring modification according to SOPs
		3.6 Retrofit or modify air conditioning system according to manufacturer specifications and customer requirements
		3.7 Pressure test system and identify leaks and non-conformances to specifications
		3.8 Re-charge system with specified refrigerant according to manufacturer specifications and regulatory requirements
4	**Test and complete installation of new /retrofitted or modified mobile plant air conditioning system**	4.1 Test air conditioning system for correct operation against specifications
		4.2 Trace non-conformances to specifications to root cause and rectify
		4.3 Document installation or modification actions according to workplace procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Mobile plant air conditioning systems include one (1) or more of the following:	• in cabin units • above, behind or below cabin units • single units that feed two driver cabins e.g. some locomotive systems
Mobile plant air conditioning system components include one (1) or more of the following:	• fieldbus system control unit, modules and sensors relevant to the air conditioning system • integrated or separate measurement/testing/data logging equipment • pumps • motors • compressors • condensers • filters • pipes and hoses • switches • valves • coils and radiators • receivers • ancillary equipment

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MEM27027 Install or modify mobile plant air conditioning systems

Modification History

Release 1: New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices, including refrigerant safe handling procedures
- obtaining and interpreting specifications, air conditioning system/circuit diagrams, system operation and control data records and identifying and inspecting system components for compliance with specifications
- checking of new air conditioning systems and components for quality and completeness
- planning installation, retrofitting or modification to ensure efficient assembly/disassembly of air conditioning systems and compliance with manufacturer specifications and regulatory requirements
- checking and adjusting control and system operation using appropriate test equipment, including checking for:
  - ambient and vent temperature
  - condenser and suction temperature
  - manifold gauge pressure
  - refrigerant leaks
  - heater core and system water coolant leaks
- ensuring that the sequence of operations conforms to specifications and operational requirements
- recording/reporting any required modifications/alterations to new/retrofitted units in accordance with SOPs
- testing air conditioning systems controls and circuits using appropriate test equipment
- repairing/replacing faulty items after testing for compliance to specifications using appropriate tools, equipment and techniques
- reassembling of air conditioning system to meet specifications
- verifying correct operation of air conditioning system after service and repair.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safe work practices and procedures and use of personal protective equipment (PPE)
- types of air conditioning systems used in mobile applications, including:
  - piston, scroll and rotary vane compressors
  - electric compressors
  - variable displacement compressors
  - clutchless compressors
  - single and multi-zone
- system operational and control requirements and specifications, including:
  - high and low pressure switches
  - pressure relief valves
  - temperature sensors
  - sunlight sensors
  - zone temperature sensors
  - carbon dioxide sensors
- heating system components, including core, control valve, blower motor and fan, ducts, controls and sensors
- typical mobile systems refrigerants, their features and applications and relationship to Australian Refrigerant Council (ARC) regulatory requirements
- lubricating oils
- application of air conditioning system components and controls
- digital controllers in mobile fieldbus systems (e.g. controller area network (CAN) bus) and their function and capabilities in regards to air conditioning systems
- controller fault code interrogation and interpretation where installed
- circuit sensors and controllers
- special system installation requirements
- air conditioning system test equipment and test procedures, including use of:
  - manifold gauges
  - surface probe thermocouples
  - temperature gauges
  - scan tools
  - electrical test equipment
  - electronic leak detectors
  - recovery units
  - vacuum pumps
  - electronic scales
  - other test equipment relevant to the vehicle system
- correct operational sequence of the system
- typical adjustments to correct sequencing variations from specification
- procedures for recording/reporting modifications/alterations and consequences of not recording/reporting
- air conditioning system commissioning procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cause of the faulty condition in new components and appropriate procedures for rectifying the faulty condition
- appropriate control component connection procedures
- typical test equipment and its application
- common adjustments that can be made to control systems and their effects.

Assessment Conditions

- Assessors must:
  - have vocational competency in installing or modifying mobile plant air conditioning systems at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27028 Diagnose and rectify manual transmissions

Modification History

Release 1. Supersedes and is equivalent to MEM18042C Diagnose and rectify manual transmissions

Application

This unit of competency defines the skills and knowledge required to assess clutch and transmission operation, and repair or replace faulty components.

Testing and assessment of performance would typically require operation of the plant or equipment. A licence may be required and users should check with the relevant authorities.

Where hydraulic clutch assembly is used then unit MEM18020 Maintain hydraulic system components should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess clutch/ transmission operation**	2.1	Apply principles of clutch and release mechanism types, power flows, gear types and ratios, torque multiplication, synchronising and shifting to assess operation of clutch/transmission assembly
		2.2	Obtain and interpret relevant information prior to any testing
		2.3	Undertake preliminary checks safely to prescribed procedures
		2.4	Isolate faults to component level and determine appropriate corrective action
		2.5	Use test equipment in accordance with SOPs
		2.6	Assess component parts for reuse or replacement
3	**Repair/replace faulty components**	3.1	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.2	Select replacement components using manufacturers' data
		3.3	Remove and refit components to clutch/transmission assembly using appropriate tools, equipment and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	techniques
	3.4 Make adjustments using appropriate tooling/equipment and manufacturers' data
	3.5 Verify clutch/transmission assembly is free of excessive noise and operates to specification after work is carried out
	3.6 Record all test and rectification activities according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Manual transmissions include one (1) or more of the following:	• single/multi-plate type • clutch assemblies • counter shaft transmissions • power take-offs • transfer cases

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM18042C Diagnose and rectify manual transmissions

Assessment Requirements for MEM27028 Diagnose and rectify manual transmissions

Modification History

Release 1. Supersedes and is equivalent to MEM18042C Diagnose and rectify manual transmissions

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to diagnose and rectify manual transmissions
- checking manual transmission for compliance with specifications using appropriate tools, techniques and test equipment
- undertaking calculation and numerical operations associated with diagnosing and rectifying manual transmissions
- testing the clutch/transmission components for compliance to specifications and identifying faulty components by using appropriate testing equipment and identifying components for reuse or replacement
- removing and refitting components to clutch/transmission assemblies and selecting replacement parts using manufacturer catalogues and data
- adjusting clutch and transmission components using appropriate tools, techniques and equipment
- operating the clutch/transmission assembly free of excessive noise and in compliance with specifications
- recording/reporting all service/work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- principles of operation of a variety of clutches
- functions of the components of a variety of clutches
- principles of operation of manual transmissions
- concepts of gear ratios, torque multiplication and synchronisation
- procedures for:
  - checking clutches and transmissions for correct operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - testing clutches and transmissions
  - checking clutch and transmission components for wear and clearance
  - removing, refitting and adjusting clutch and transmission components
  - recording test and repair activities
- appropriate action to correct the faulty component(s)
- test equipment to be used in checking/testing clutches and transmissions for correct operation and reasons for selection
- tools, techniques and equipment to be used to determine component wear and clearance
- tools, techniques and equipment to be used to maintain and repair clutch and transmission assemblies
- effects of the adjustments on clutch and transmission operation
- clutch/transmission assembly specifications.

Assessment Conditions

- Assessors must:
  - have vocational competency in diagnosing and rectifying manual transmissions at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27029 Maintain wheels and tyres

Modification History

Release 1. Supersedes and is equivalent to MEM18038B Maintain wheels and tyres

Application

This unit of competency defines the skills and knowledge required to assess wheel condition, and repair/replace and maintain the wheel.

It covers the basic maintenance and repair or replacement of wheel rims and to the full range of wheel/tyre assemblies, plant and equipment using appropriate regulations, codes of practice, manufacturer specifications or in-house standards as a guide for assessment repair and assembly.

Where complex rim repairs are required appropriate fitting or welding units should also be selected.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Assess wheel condition**	2.1	Apply rim/tyre designs, constructions, codes, balancing, fastening principles and terminology when assessing wheel condition
		2.2	Assess fastening components for damage and security
		2.3	Recognise abnormal tyre wear and determine cause of fault
		2.4	Recognise unsafe tyre and/or wheel condition and determine remedial action
3	**Rectify and maintain wheel**	3.1	Adhere to safety procedures associated with tyre/wheel removal, handling, inflation, assembly and disassembly and fastening
		3.2	Remove wheels/tyres and replace using appropriate tools, equipment and techniques
		3.3	Apply tools and equipment in accordance with SOPs
		3.4	Perform ballasting and/or inflation of tyres to

Assessment Requirements for MEM27029 Maintain wheels and tyres

Modification History

Release 1. Supersedes and is equivalent to MEM18038B Maintain wheels and tyres

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists and other applicable reference documents to maintain wheels and tyres
- checking wheels and tyres for compliance to specifications
- inspecting wheel fastening components for damage and security and tyres for abnormal wear
- identifying corrective action to be taken for unsafe tyre and wheel condition
- removing and replacing wheels/tyres using appropriate tools, equipment and techniques
- undertaking ballasting and/or inflation of tyres and balancing wheels to specifications
- identifying and repairing rim, tyres and tube faults to specifications
- lubricating wheel bearings in accordance with specifications
- recording/reporting all service/work activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- design and construction of a variety of rims and tyres
- principles of fastening and balancing of wheels
- relevant codes and standards
- procedures for:
  - checking wheels for damage and secure fastening and reasons that apply
  - removing, handling, inflating, assembling/disassembling and fastening of tyres and wheels and tools, techniques and equipment to be used
  - static and dynamic balancing of wheels and reasons for selecting the chosen tools, techniques and equipment
  - repairing rim, tyre and tube faults and tools, techniques and equipment to be used
  - recording repairs undertaken on rims, tyres and tubes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - lubricating wheel bearings and the type of lubricant and their application that applies
- causes of abnormal tyre wear and examples and causes of unsafe tyre and wheel condition
- examples of unrepairable rim, tyre and tube faults.

Assessment Conditions

- Assessors must:
    - have vocational competency in maintaining wheels and tyres at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM27030 Perform engine bottom-end overhaul

Modification History

Release 1. Supersedes and is equivalent to MEM18033B Perform engine bottom-end overhaul

Application

This unit of competency defines the skills and knowledge required to dismantle, clean and assess parts, record and interpret measurements, and recondition components.

It includes cylinder honing using hand held power tools, and replacement of bearings, piston rings and similar activities but not major machining, including crankshaft grinding, cylinder boring and tunnel boring.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12003	Perform precision mechanical measurement
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations

MEM18055 Dismantle, replace and assemble engineering components

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Dismantle, clean and assess parts**	2.1	Determine the reuse or replacement of crankshaft and piston assemblies based on the characteristics of surface finish and wear patterns
		2.2	Remove engine from plant, remove top-end components and dismantle block assembly according to manufacturer recommendations
		2.3	Check parts for abnormal wear or defects and identify components for reuse or replacement
		2.4	Select appropriate cleaning solution and procedure, clean and store ready for reassembly
		2.5	Rack or set out parts according to their original location in the engine
		2.6	Obtain and record measurements using appropriate measuring equipment
		2.7	Interpret readings regarding replacement or reuse and determine appropriate under/oversize of replacement parts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
3 **Recondition components**	3.1 Identify ridges, gaps, tapers, ovality and protrusions and take necessary corrective action
	3.2 Assemble components according to manufacturer specifications using appropriate tools and equipment
	3.3 Determine bearing clearances by calculation or direct measurement

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

No range of conditions provided for this unit.

Assessment Requirements for MEM27030 Perform engine bottom-end overhaul

Modification History

Release 1. Supersedes and is equivalent to MEM18033B Perform engine bottom-end overhaul

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and other applicable reference documents to perform engine bottom-end overhaul
- checking engine for conformance and removing the engine and top-end components and dismantling block assembly
- undertaking calculation and numerical operations to calculate bearing clearances
- checking parts for abnormal wear or defects and identifying components for reuse or replacement
- cleaning parts using appropriate solutions and safety precautions, racking and setting out engine parts according to their original position in readiness for reassembly
- obtaining and recording measurements and interpreting readings for replacement or reuse as being under or over size
- reassembling engine bottom-end components using appropriate tools, equipment and techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of surface finishes and wear patterns as applied to crankshaft and piston assemblies
- specifications of crankshaft and piston assemblies
- reasons for identifying the components for reuse or replacement
- procedures for:
  - dismantling the block assembly and removing the engine from the plant
  - removing the top-end from the engine
  - cleaning engine parts and solution to be applied
  - racking and/or setting out of parts in readiness for reassembly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - recording engine measurements
    - removing ridges, gaps, tapers, ovality and protrusions
    - assembling engine bottom ends and precautions to be taken
    - determining bearing clearances and methods to be applied
- tools, techniques and equipment to be used and reasons for selection
- action to be taken when abnormal wear or defects are observed in the engine components
- measuring instruments to be used to measure engine components
- concept of under/over size of replacement parts and the reasons for identifying replacement parts as under or over size
- tools, techniques and equipment required to correct the above faults.

Assessment Conditions

- Assessors must:
    - have vocational competency in performing engine bottom-end overhaul at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27031 Perform engine top-end overhaul

Modification History

Release 2. Quantum of hours of workplace practice removed. Supersedes and is equivalent to MEM27031 Perform engine top-end overhaul (Release 1).

Release 1. Supersedes and is equivalent to MEM18034B Perform engine top-end overhaul.

Application

This unit of competency defines the skills and knowledge required to dismantle, clean and assess parts, record and interpret measurements and recondition the cylinder head.

It includes all types of engines and work associated with the reconditioning of cylinder heads, including determining the causes of failures, replacement of inserts, guides and injector sleeves, grinding of valves and seats, and crack/twist/bend testing. The reconditioning of original parts, crack repairs using non-welding techniques and sizing and fitting of replacement parts are also included.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **8**

Pre-requisite Unit

- cleaning cylinder head, ancillary equipment and parts using appropriate solutions and safety precautions, racking and setting out parts according to their original position in readiness for reassembly
- obtaining and recording measurements and interpreting readings for replacement or reuse as being under or over size
- identifying the cylinder head as serviceable or requiring repair/replacement and pressure testing the cylinder head to specifications
- measuring and recording spring tension, valve and guide dimensions and surface flatness
- grinding valves and valve seats using appropriate tools, equipment and techniques
- determining whether components are to be reconditioned or replaced
- replacing all applicable components using appropriate tools, equipment and techniques.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- characteristics of surface finishes and wear patterns as applied to valve operating mechanisms and cylinder heads

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specifications of valve operating mechanisms and cylinder heads
- procedures for:
  - dismantling cylinder heads and ancillary equipment and tools, techniques and equipment
  - storing parts in readiness for reassembly
  - pressure testing cylinder heads using appropriate tools, techniques and equipment
  - for measuring spring tension, valve and guide dimensions and surface flatness using appropriate tools, techniques and equipment
  - recording cylinder head and valve mechanism measurements
  - removing the cylinder head from the engine using appropriate tools, techniques and equipment
  - grinding valves and valve seats using appropriate tools, techniques and equipment
  - cleaning cylinder heads and ancillary equipment and solutions to be applied
  - reassembling cylinder heads and their components using appropriate tools, techniques and equipment
- cylinder head specifications
- operational parameters of cylinder head components
- precautions to be taken when reassembling cylinder heads.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing engine top-end overhaul at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must occur in a functioning workplace. Where assessment in the workplace would be unsafe, impractical or threatens the environment, assessment must occur in a sufficiently rigorous simulated environment that reflects the circumstances that would be experienced in a functioning workplace. Assessment must cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27032 Service combustion engines

Modification History

Release 1. Supersedes and is equivalent to MEM18025B Service combustion engines

Application

This unit of competency defines the skills and knowledge required to check and assess engine consumable fluids and components for serviceability, perform the service procedures and report what has been carried out.

Servicing activities include obtaining and dispatching samples for spectrographic or laboratory analysis.

Where interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

This unit should not be selected if unit MEM18055 Dismantle, replace and assemble engineering components has already been selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Check and assess items for serviceability**	2.1	Assess engine consumable fluids and components for correct condition
		2.2	Identify replacement fluids/items using manufacturers' data
		2.3	Identify abnormal appearance/condition of engine consumables fluids and components and report to appropriate authority
		2.4	Apply lubricant, cooling system additives and filtering principles in checking and assessing items for serviceability
3	**Perform servicing procedures**	3.1	Drain, flush and replace engine fluids with correct fluid and/or additives to the correct level/concentration according to manufacturer recommendations
		3.2	Remove engine consumable components and replace according to manufacturer recommended procedures
		3.3	Ensure engine is free of lubricant, water and air leaks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	after servicing work
	3.4 Secure hoses, wiring and ducts and keep clear of moving parts after servicing work, where required
	3.5 Make minor running adjustments to specification
	3.6 Obtain test samples of fluids from system as determined by SOPs
	3.7 Record servicing activities on report sheet/proforma, or provide accurate oral report

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Engine consumable fluids and components include one (1) or more of the following:	• filters • coolants • lubricants • hydraulic and other fluids • additives • simple drive belts • coolant hoses
Running adjustments include one (1) or more of the following:	• belt tensions • shroud clearances

Assessment Requirements for MEM27032 Service combustion engines

Modification History

Release 1. Supersedes and is equivalent to MEM18025B Service combustion engines

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing engine consumable fluids and components for levels and serviceability and identifying replacement consumables and components using manufacturers' data
- identifying and reporting on fluids and items which have abnormal appearance and flushing and cleaning engine of any residual fluids according to procedures
- undertaking numerical operations and calculations for servicing combustion engines
- removing/replacing engine fluids with correct fluids and/or additives to correct levels
- checking engine for leaks after servicing and, where required, securing all wiring, hoses and ducts free of moving parts
- carrying out minor running adjustments
- obtaining test samples of fluids for further testing
- recording and reporting service activities in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- common defects that can be identified from the appearance of fluids and items
- procedures for:
  - reporting items/fluids with abnormal appearance
  - draining and flushing fluids from the engine, including the reasons for ensuring any residual/spilt fluids are removed from the engine
  - removing/replacing engine consumable fluids and components
  - checking serviced engines for leaks
  - taking test samples
  - reporting service activities
- principles of operation of the lubrication and cooling systems
- function of filters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose of a range of additives and correct proportions to be used
- spilt containment and spilt kits
- appropriate grade and type of replacement fluid
- methods of fastening/securing wires, hoses and ducts
- specifications and procedures for undertaking minor running adjustments.

Assessment Conditions

- Assessors must:
  - have vocational competency in servicing combustion engines at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM27033 Perform advanced equipment testing and diagnostics on mobile plant and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18073A Perform advanced equipment testing and diagnostics on mobile plant and equipment

Application

This unit of competency defines the skills and knowledge required to obtain and interpret information to diagnose mobile plant and equipment faults, determine the cause, and make recommendations, and includes the use of electronic and analog diagnostic tools.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **B**

Unit Weight: **8**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM16008	Interact with computing technology
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components
MEM27006	Diagnose and rectify batteries, low voltage sensors and circuits
MEM27016	Diagnose and maintain electronic controlling systems on mobile and stationary plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Obtain information on mobile plant and equipment performance**	2.1	Access and interpret job-related information and use information management systems to access data on plant and equipment performance
		2.2	Review previous service records to access data on plant and equipment performance
		2.3	Review equipment systems operation, testing and adjusting procedure and identify troubleshooting procedure
		2.4	Identify hazards associated with plant and equipment tests
3	**Identify equipment fault/s**	3.1	Interpret data from information management system and determine fault symptoms, including carrying out a visual inspection on equipment operation
		3.2	Install all test equipment at the correct test point locations and conduct performance tests, as required
		3.3	Analyse information from tests and test equipment and identify fault
		3.4	Plot data and record on performance analysis report forms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
4	**Determine cause of fault/s and make recommendations**	4.1	Identify possible causes and conduct diagnostic tests to confirm cause
		4.2	Analyse test result and compare with specifications
		4.3	Locate cause of fault and document
		4.4	Make recommendations for repair and implement rectification strategy
5	**Check and document repairs**	5.1	Check repairs for completion
		5.2	Re-test equipment to ensure compliance
		5.3	Prepare and complete service report and complete required documentation in accordance with procedures

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Mobile plant faults occur within one (1) or more of the following:	• hydraulics • engine • power train • electronic systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hazards include one (1) or more of the following:	• ventilation hazards, including battery gas leaks and (freon) paint emission • excessive noise • fluid spillage • electrical hazards from generator sets and water • lifting hazards caused by the removal and replacement of heavy components (e.g. engines and transmissions) • hydraulic hazards (e.g. high oil pressure and temperature) • drive trains hazards (e.g. tail shaft wind up) • fire hazards from the activation of fuel and temperature
Information management systems include one (1) or more of the following:	• retrieving test data from the service information system (SIS) • equipment management systems • factory passwords • finding test data through, microfiche and SIS • obtaining relevant flash file information • finding full load settings (FLS) and full torque settings (FTS), SIS or similar • using the dynamometer and windows performance analysis reporting programs • producing performance analysis report
Test equipment includes one (1) or more of the following:	• dynamometer • electronic technician • multimeter • flow meter • pressure gauges • communication adaptors • scroll box • stop watch

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Performance tests include one (1) or more of the following:

- rocker checks for oil
- fluid level checks
- fuel and cooling system checks
- emergency shutdown operation checks
- final walk around inspection
- manual and/or electronic tests of equipment and/or components
- cylinder cut out tests
- solenoid tests
- cycle times
- sensor tests
- lubrication pressure checks
- leak checks
- power checks using the dynamometer program, engine performance tools, transmission and hydraulic test equipment
- checks on alignments between components

Assessment Requirements for MEM27033 Perform advanced equipment testing and diagnostics on mobile plant and equipment

Modification History

Release 1. Supersedes and is equivalent to MEM18073A Perform advanced equipment testing and diagnostics on mobile plant and equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting charts, lists, manufacturer specifications, drawings, personnel accounts/descriptions, history, log books and job records and obtaining and accessing relevant data manually or by electronic means on mobile plant and equipment performance
- identifying hazards associated with mobile plant and equipment and implementing appropriate risk control measures and procedures
- identifying faults by checking equipment for compliance with specifications using appropriate test equipment and appropriate fault-finding techniques
- identifying possible causes for fault and making recommendations for rectifying faults using a rectification strategy, including referral, replacement or dispatch to other personnel
- undertaking calculations and numerical operations associated with advanced equipment testing and diagnostics on mobile plant and equipment
- checking equipment for compliance with specifications after rectification of faults
- documenting all findings and outcomes in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- tests to be conducted to diagnose faults at equipment and component level
- sources of information available to assist in fault finding
- uses and parameters of information management systems
- required rectification for equipment faults
- practices and procedures in root cause analysis
- equipment performance specifications
- documentation requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing advanced equipment testing and diagnostics on mobile plant and equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers applies the *concepts of mathematics* to appropriate and simple engineering situations within the individual's area of engineering expertise.

Application of the Unit

Application of the unit	This unit applies to technician level work that requires basic algebraic, trigonometric and statistical knowledge and skill. **Band**: **0** **Unit Weight**: **4**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use concepts of arithmetic in the solution of engineering problems	1.1. Units of physical quantities are converted to facilitate engineering calculations. 1.2. Calculations are performed to solve problems involving rational and irrational numbers. 1.3. Scientific notation is used to represent numbers. 1.4. Calculations are checked for reasonableness using estimating and approximating techniques.
2. Solve engineering problems involving algebraic expressions with one independent variable	2.1. Algebraic expressions are manipulated using mathematical operations in their correct order.
3. Use two-dimensional geometry to solve practical problems	3.1. Angles expressed in degrees are correctly converted to radians and vice versa. 3.2. The perimeter, area, length and angles of a range of two-dimensional figures are correctly calculated. 3.3. The volume and surface area of complex figures are correctly calculated. 3.4. Points identified in terms of cartesian coordinates can be converted to polar coordinates and vice versa.
4. Use trigonometry to solve practical	4.1. Basic trigonometry functions are used to calculate the lengths of the sides of right-angled triangles.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
problems	4.2. Inverse trigonometry functions are used to determine angles in a right-angled triangle given the lengths of two sides. 4.3. The sine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given one side and two angles. 4.4. The cosine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given two sides and one angle.
5. Graph linear functions	5.1. Linear functions are solved graphically and equations of straight lines are determined from the slope and one point, or two points. 5.2. Two linear functions are solved simultaneously both algebraically and geometrically. 5.3. The length and mid point of a line segment are determined.
6. Solve quadratic equations	6.1. Quadratic equations are solved. 6.2. Simultaneous linear and quadratic equations are solved.
7. Perform basic statistical calculations	7.1. Mean, median and mode are calculated from given data. 7.2. Standard deviation is calculated and interpreted employing graphical representation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

Look for evidence that confirms skills in:
• using and applying mathematical formulas:
  • logical thinking
  • problem solving
  • calculating
  • applying statistics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• using computer numerical methods • drawing graphs
Required knowledge
Look for evidence that confirms knowledge of: • transposing and evaluating formulae • polynomials • straight line coordinate geometry • introduction to indices • introduction to trigonometry • circular functions • trigonometry of oblique triangles • trigonometric identities • introduction to functions and their graphs

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying mathematical concepts to engineering applications, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Concepts of mathematics	Include arithmetic, algebraic expressions with one independent variable, two-dimensional geometry, trigonometry, linear functions, basic quadratic functions, basic statistical methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Correct order	Refers to the correct procedure when expanding brackets, factorising algebraic expressions, factorising quadratic expressions, simplifying algebraic fractions, transposing formulae, solving simple one variable equations, finding the quotient and remainder given a linear division
Complex figures	May include cones, pyramids, spheres, frustums and intersections of figures singularly or in combination

MEM30025A Analyse a simple electrical system circuit

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers analysing a simple circuit by identifying the function and operation of the circuit and circuit components contained within approved manufactured products.

Application of the Unit

Application of the unit	This unit applies to all manufacturing environments. It covers analysis of existing circuits against specifications only and does not extend to determining modifications to circuits. This unit does not cover the skills involved in direct measuring of values requiring connecting or disconnecting of circuits and components covered by licensing requirements. Where such values are required they are to be obtained through the assistance of appropriately licensed personnel or through undertaking the specified training for the appropriate licence. Work is conducted in accordance with regulatory and legislative requirements in each State and Territory Work is carried out under supervision. **Band**: **0** **Unit Weight**: **0**

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		
Path 1	MEM12024A	Perform computations

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Establish function and purpose of selected circuit	1.1. All relevant drawings, specifications, manuals and documentation are obtained and interpreted in accordance with workplace procedures. 1.2. Circuit and component installation is observed where required to establish function and purpose. 1.3. Safety procedures to be followed are determined in conjunction with supervisors and in accordance with legislative and regulatory requirements. 1.4. Appropriate personnel are consulted with to establish job requirements.
2. Extract a circuit diagram from	2.1. Appropriate components and assemblies are identified.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
existing drawings and documentation	2.2. Where required, components and/or materials are identified from supplier/manufacturer catalogues. 2.3. Circuit diagram is extracted. 2.4. Drawing conventions and symbols are used in the diagram in accordance with codes and workplace procedures.
3. Analyse the circuit for electrical characteristics	3.1. Functions of the circuit and components are compared against design characteristics and operational specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- calculating
- reading and interpreting specifications and drawings
- drawing to scale
- analysing
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- safe work practices and procedures
- hazard and control measures associated with analysing the function of a simple electrical system circuit
- dangers and safety precautions:
  - electrical hazards
  - earthing and insulation
- The function of the following components:
- resistors:
  - fixed (composition and wire wound)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- variable (rheostats, potentiometers and trimmers)
- non-linear (thermistors)

- capacitors:
  - fixed (ceramic, plastic and electrolytic)
  - variable
  - magnetic
  - transformers (AF, RF and power)
  - chokes
  - relays
  - contactors
  - rectifiers
  - smoothing filters
  - voltage regulators and feedback
- basic physics:
  - conductors
  - insulators
  - semiconductors
  - current flow
  - voltage
  - resistance
  - colour code
  - power rating
  - Ohm's Law
  - electrical units
  - power in electrical circuits
- protection methods:
  - fuses
  - circuit breaking
  - safety interlocks
  - earthing - personnel safety
- a.c. circuits:
  - series and parallel a.c. circuits
  - power in a.c. circuits
- power supplies:
  - transformers
  - rectifiers
  - smoothing filters
  - voltage regulators and feedback

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• function and operation of a simple low voltage d.c. power supply • function and operation of the transformer in a simple low voltage d.c. power supply, including the significance of the turns ratio • function in a simple low voltage d.c. power supply of rectifiers including the significance of the diode characteristics, for both half and full wave types • operation of smoothing filters in a simple low voltage d.c. power supply • operation of simple zener diode type voltage regulators in a simple low voltage d.c. power supply • feedback

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to analyse the functions and components of a simple electrical system circuit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication,

	materials handling, recording and reporting associated with analysing a simple electrical system circuit or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Components and assemblies	Can include: • resistors - fixed (composition and wire wound), variable (rheostats, potentiometers and trimmers), non-linear (thermistors) • capacitors - fixed (ceramic, plastic and electrolytic), variable, magnetic, transformers (AF, RF and power), chokes, relays, contactors, rectifiers, smoothing filters, voltage regulators and feedback

MEM50001 Classify recreational boating technologies and features

Modification History

Release 1. Supersedes and is equivalent to MEM50001B Classify recreational boating techniques and features

Application

This unit of competency defines the skills and knowledge required to recognise vessel features, fittings and fixtures; correctly identify power and transmission systems; describe system operating purpose; and use appropriate terminology.

This unit applies to the identification of vessel types and to the classification of vessels according to their main features and relates to recreational vessels and covers engine and sail powered as well as rowed vessels and the depth of knowledge required is sufficient to be able to identify one vessel from another and be able to describe its method of propulsion where applicable.

Detailed features of hulls, power plants and trailers are covered by other competencies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **E**

Unit Weight: **0**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering

Competency Field

Boating services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify vessel configurations used in boating applications**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify hull forms and superstructure features
		1.4	Match hull designs to normal vessel application
		1.5	Identify construction materials
2	**Identify and describe the functions of the major systems of a recreational vessel and trailer**	2.1	Identify systems used for vessel propulsion, steering, navigation, communication, services and appliances and explain functions
		2.2	Identify trailer components and explain functions
3	**Confirm vessel origins**	3.1	Locate vessel identification plates and registration tags
		3.2	Locate and record engine number, model designation and other details
		3.3	Use identification data to confirm vessel year of manufacture, refurbishment (and/or registration)
4	**Identify configuration of motorised propulsion systems**	4.1	Locate and categorise vessel power plant(s) for fuel system, number and configuration of cylinders
		4.2	Identify engine cooling and control systems and categorise
		4.3	Identify and categorise engine lubricating systems
		4.4	Categorise vessel propulsion (transmission) system for type and operation
		4.5	Describe operating cycles and cylinder configuration for 2 stroke, 4 stroke, diesel and petrol powered engines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Trailer components include one (1) or more of the following:

- winching
- coupling
- load securing
- braking
- suspension
- electrical systems

Construction materials include one (1) or more of the following:

- glass reinforced plastics
- composite materials
- aluminium
- steel
- timber:
  - clinker
  - carvel
  - cold moulded
  - plywood sheeted

Assessment Requirements for MEM50001 Classify recreational boating technologies and features

Modification History

Release 1. Supersedes and is equivalent to MEM50001B Classify recreational boating techniques and features

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- discerning differences in hull shapes and types as well as construction materials, propulsion and steering systems, power plants, ancillary systems, fittings and fastenings
- locating, reading and interpreting information on identification and compliance plates, registration tags, engine and other component identification numbers
- identifying different types of power plants, engine cooling and lubrication systems and transmission types.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- typical hull shapes and design features of recreational sail, powered and non-powered craft, including hard chine, round bilge, planing hulls, multi-hulls, inflatables, rigid and swing keel and centre board
- typical superstructure configurations and general deck layouts of recreational sail, powered and non-powered craft, including fully open, flush decks, bow riders, half cabins and fly bridges
- typical sail and mast arrangements for recreational sailing craft, including mast configurations, basic rigging arrangements and sail types, including mainsail, genoa and spinnaker
- construction materials, including glass reinforced plastics and composite materials, aluminium and steel and types of internal combustion engines used for inboard and outboard propulsion systems, including two and four cycle; different cylinder layouts and different fuel types, including petrol and diesel, liquid or air cooling, starting systems and lubrication methods
- propulsion systems, including single and multi-screw, jet drives, clutches and gearboxes, including stern drives and outboard drives as well as vee drives and bow thrusters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- steering systems, including tillers, rods/chains/cable drives, hydraulic and rudder types
- features and functions of attached navigation and communication devices, including navigational lighting, compass, global positioning system (GPS), radar, depth sounder, logs, radios and audible alarms
- features and functions of trailer components, including winches, couplings, load securing, braking, suspension and electrical systems
- use of information on identification and compliance plates, registration tags, engine and other component identification numbers.

Assessment Conditions

- Assessors must:
  - have vocational competency in classifying recreational boating techniques and features at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM50002 Work safely on marine craft

Modification History

Release 1. Supersedes and is equivalent to MEM50002B Work safely on marine craft

Application

This unit of competency defines the skills and knowledge required to identify risks and safely work on and move around vessels – for sales, service or repair – on and out of the water and applies to recreational vessels in both land and water environments and in workplaces in which vessels are built, repaired, stored, sold and transported.

This unit could be assessed in conjunction with unit MEM13002 Undertake work health and safety activities in the workplace and unit MEM13003 Work safely with industrial chemicals and materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **1**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering

Competency Field

Boating services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify safe access methods and working**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	platforms		requirements at all times
		1.3	Use appropriate access methods to gain access to the work location
		1.4	Inspect work platforms to confirm that they are appropriate for the purpose, are located in a correct manner and comply with any regulatory controls
2	**Move around and work safely on recreational vessels**	2.1	Identify risks and hazards from observation, including confined spaces, and identify workplace approved risk controls
		2.2	Select work methods and tools appropriate for the task
		2.3	Identify and use appropriate engineering controls
		2.4	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		2.5	Use appropriate warning signs and signals
		2.6	Minimise, control and dispose of work residues in accordance with SOPs
		2.7	Maintain worksite in a clean and tidy state using appropriate housekeeping methods
3	**Follow emergency procedures for incidents in the marine environment**	3.1	Use appropriate responses in reaction to incidents and accidents
		3.2	Use communication systems and methods to convey emergency messages
		3.3	Follow drills for fire, explosion, toxic/dangerous spills and leakage, personal illness or injury, man overboard, collision or vessel damage

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Access to the work location includes one (1) or more of the following:	• gang planks • hatches • access ladders • bosun's chairs • rigging
Work platforms include one (1) or more of the following:	• purpose built work platforms • mobile and prefabricated scaffold • elevated work platforms
Engineering controls include one (1) or more of the following:	• ventilation and extraction systems • dust control devices • screens
PPE includes one (1) or more of the following:	• goggles/face shields • masks or respirators • air supplied or self-contained helmets • appropriate footwear, gloves and appropriate garments • hearing protection • fall arrest devices • UV protection
Workplace housekeeping includes the following:	• covering/protecting surfaces prior to starting work • returning materials/equipment to storage area • sweeping and cleaning • containment and mopping of spills • appropriate disposal of waste products
Communication systems and methods include one (1) or more of the following:	• direct voice • megaphone • flares • radio • hand signals • telephone

Assessment Requirements for MEM50002 Work safely on marine craft

Modification History

Release 1. Supersedes and is equivalent to MEM50002B Work safely on marine craft

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, appropriate emergency procedures, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting safety signage, labelling and placards; carrying out risk assessment and identifying work health and safety (WHS) hazards and risks; and implementing appropriate risk control measures and procedures
- selecting and using the most appropriate engineering controls, including proper manual handling techniques and personal protection equipment (PPE) suitable to the task being performed
- implementing appropriate workplace housekeeping methods
- performing emergency procedures for incidents in the marine environment
- using communication systems and methods to convey emergency messages.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- testing and maintenance of PPE
- dangerous goods classification and labelling/placarding
- inherent hazardous properties of the chemicals used
- interpretation of the relevant safety data sheets (SDS)
- basic fire-fighting procedures
- site-specific emergency plan procedures
- spill confinement procedures
- dangerous occurrence (near miss) reporting procedures
- regulatory and legislative requirements.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in working safely on marine craft at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM50003 Follow work procedures to maintain the marine environment

Modification History

Release 1. Supersedes and is equivalent to MEM50003B Follow work procedures to maintain the marine environment

Application

This unit of competency defines the skills and knowledge required to conduct work on vessels or equipment without adversely affecting the quality of the marine environment and applies to the protection of marine environments when working on or around recreational vessels and in workplaces in which vessels are built, repaired, stored, sold and transported.

Where specific coverage of the limitation, capture and disposal of pollutants in the marine environment is required unit MEM50004 Maintain quality of environment by following marina codes should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	procedures	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Observe workplace and surroundings and use equipment and practices to minimise environmental damage
		1.5	Complete assigned housekeeping duties following approved workplace procedures
		1.6	Identify any damaged equipment, tag for maintenance and notify appropriate personnel
		1.7	Maintain schedules and records for housekeeping duties
2	**Demonstrate spill clean-up procedures**	2.1	Identify source of spill and stop, if possible, and make notification to appropriate personnel
		2.2	Identify appropriate materials to contain spills, including booms, portable bunding, absorbent materials and drain blocks
		2.3	Clean up spills following workplace procedures
		2.4	Dispose of waste in appropriate locations and containers
3	**Assist the business to maintain the quality of the environment**	3.1	Follow business environment policy
		3.2	Avoid excessive idling and revving of engines
		3.3	Ensure noisy activities are located away from neighbours, where possible
		3.4	Use noise suppression procedures, where available
		3.5	Use dust control and waste containment measures
		3.6	Collect and dispose of waste in accordance with legislative requirements

Assessment Requirements for MEM50003 Follow work procedures to maintain the marine environment

Modification History

Release 1. Supersedes and is equivalent to MEM50003B Follow work procedures to maintain the marine environment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- locating and interpreting relevant workplace procedures and assessing work activities that can have an impact on the environment
- handling materials, including fuels, oils, protective coatings, and cleaning products
- identifying sources of potential pollution, minimising risks and containing pollution
- implementing appropriate workplace housekeeping methods
- demonstrating procedures for cleaning up spills and disposing of waste
- following business environmental policy and collecting and disposing of waste products in accordance with regulatory and legislative requirements.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- pollutants and their sources
- procedures to minimise risk of pollution
- procedures for containment of pollution
- procedures for cleaning up spills and disposing of waste
- applicable environmental legislation and regulatory requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in following work procedures to maintain the marine environment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job**	1.1	Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	requirements	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	List tasks to be conducted or consult work instructions to establish work requirements
		1.5	Inspect vessel to be maintained visually to establish any particular potential pollutants
		1.6	Identify potential pollutants that may be produced as a result of the work
2	**Select work area and method**	2.1	Identify possible work areas for the work and select to conform to marina/slipway codes and local environmental regulations and to minimise risk of pollution
		2.2	Select work method, equipment and materials to minimise impact on the environment
		2.3	Identify pollution control measures and implement
3	**Dispose of potential pollutants**	3.1	Classify potential pollutants, separate and collect appropriate to the recycling, treatment or storage system adopted by the business
		3.2	Dispose of collected pollutants in accordance with regulatory requirements and workplace procedures
4	**Support implementation of marina and slipway environment management plans**	4.1	Follow workplace designated procedures for marina and slipway management
		4.2	Communicate observations of the effects of the management plan and recommend implementation improvements to appropriate personnel
		4.3	Participate in the implementation of the environment management plan

Assessment Requirements for MEM50004 Maintain quality of environment by following marina codes

Modification History

Release 1. Supersedes and is equivalent to MEM50004B Maintain quality of environment by following marina codes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and conforming with marina/slipway codes and local environmental regulations to minimise risk of pollution
- communicating observations of the effects of the management plan and recommending implementation improvements
- identifying potential sources of pollution
- identifying work tasks and appropriate area to perform work
- minimising risks of pollution and containing using appropriate measures
- collecting and disposing of pollutants according to SOPs
- following workplace procedures for marina and slipway management.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- communication procedures
- marina and slipway environmental management
- identification of pollutants
- procedures to minimise risk of pollution
- procedures for containment of pollution
- applicable environmental legislation
- applicable marina codes and regulations.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in maintaining quality of environment by following marina codes at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM50005 Refuel vessels

Modification History

Release 1. Supersedes and is equivalent to MEM50005B Refuel vessels

Application

This unit of competency defines the skills and knowledge required to refuel recreational vessels and appliances in both land and water environments and relates to workplaces in which vessels are built, repaired, stored, sold and transported.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **E**

Unit Weight: **0**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM50002	Work safely on marine craft
MEM50003	Follow work procedures to maintain the marine environment

Competency Field

Boating services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Match fuels and additives to marine**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	applications		requirements at all times
		1.3	Select and use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Select fuels to match the engine or appliance
		1.5	Consider alternative fuel applications
		1.6	Select fuel additives and lubricants based on vessel/appliance use and manufacturer requirements
2	**Identify fuel handling risk, precautions and regulatory requirements**	2.1	Identify dangers of volatile fuel liquids and vapours
		2.2	Identify precautions for minimising risks associated with volatile liquids in workplace procedures
		2.3	Identify procedures to prevent build up of volatile vapours and gases
		2.4	Identify regulatory requirements for refilling portable fuel containers
3	**Identify safety and environmental requirements for fuel refill areas**	3.1	Use correct locations for refuelling activities
		3.2	Apply workplace strategies/procedures to limit danger from static electricity and other sources of ignition
		3.3	Identify protection systems that provide physical barriers to minimise accidental collision with fuelling facilities and use to prevent spills entering drains or the water environment
		3.4	Use appropriate ventilation
		3.5	Identify signage for public safety needs and Hazchem requirements
		3.6	Identify emergency stops and shut-off devices and describe activation methods
4	**Refill fuel containers**	4.1	Refill portable liquid fuel tanks and appliances
		4.2	Refill gas cylinders
		4.3	Refill on-board fuel tanks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		4.4	Check fuel levels for each method of storage
		4.5	Identify emergency procedures for leaks, spills and fire
		4.6	Replace gas cylinders if required
5	**Contain and clean up spills**	5.1	Identify potential for spills
		5.2	Follow procedures for notification of spills
		5.3	Follow workplace procedures to contain spill and minimise any environment or safety dangers
		5.4	Identify clean up equipment and use

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fuels include one (1) or more of the following:	• petrol (gasoline), including premixed two stroke fuel • diesel (distillate) • kerosene • methylated spirits • lighter fluid/white spirits • liquefied petroleum gas (LPG)
Appliances include one ((1) or more of the following:	• stoves • refrigerators • heaters • lights

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Replacement of gas cylinders includes the following:	• turn off appliances and pilot light • vent gas lines in a safe manner after closing gas valves • leak test fittings after fitting cylinders • refit and adjust bottle restraining devices • following emergency procedures for leaks and fire
PPE includes one (1) or more of the following:	• goggles/face shields • masks or respirators • gloves and appropriate clothes/garments
Contain spill includes one (1) or more of the following:	• bunding and drain covers • chemical dispersal agents • absorptive materials • containment booms and portable bunding

Assessment Requirements for MEM50005 Refuel vessels

Modification History

Release 1. Supersedes and is equivalent to MEM50005B Refuel vessels

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying correct fuel for the application
- identifying correct additives and lubricant for the application
- using appropriate personal protective equipment (PPE)
- sourcing and interpreting Hazchem (or similar) requirements and working safely with fuels and lubricants
- refilling fuel containers and tanks and checking fuel levels using gauges, dipsticks and sight tubes
- refilling and, if required, replacing gas cylinders and carrying out leak test in accordance with procedures
- containing spills using containment and clean up procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- different fuels and their applications
- personal and environmental dangers associated with fuels and refuelling/filling
- risk minimisation
- selection of appropriate fire-fighting equipment
- reduction of vapours
- correct handling of gas cylinders, including condition and lifespan
- dealing with spills
- emergency procedures
- regulatory and legislative requirements.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in refuelling vessels at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM50006 Check operational capability of marine craft

Modification History

Release 1. Supersedes and is equivalent to MEM50006B Check operational capability of marine craft

Application

This unit of competency defines the skills and knowledge required to conduct basic checks on the operational condition of engine and sail powered recreational vessels in or out of the water and relates to workplaces in which vessels are built, repaired, stored, sold and transported.

The scope of the unit is limited to identifying and reporting that a vessel is not of its 'normal' appearance at rest on its mooring or berth, or after being brought out of the water and includes basic operational checks similar to those routinely performed by machinery or vehicle operators.

This unit does not include an assessment of seaworthiness or durability but it does cover watertight integrity and the information would be reported to a supervisor or manager who would determine any further action.

Where operational checking of sails and sails systems is required unit MEM50007 Check operational capability of sails and sail operating equipment should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **E**

Unit Weight: **0**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM50002	Work safely on marine craft

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency Field

Boating services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Inspect hull, fittings and safety equipment**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Inspect hull bungs and sea cocks for security and integrity
		1.4	Check hull condition for holes, cracks and deterioration, and extent of marine growth
		1.5	Check fittings and mountings for security and excessive corrosion
		1.6	Complete reports of hull and fitting condition on approved workplace documentation and/or report verbally
		1.7	Check vessel safety equipment availability against identified requirements and determine condition and report, as required
2	**Check operating systems**	2.1	Check propulsion, electrical power (including battery), steering, cable and line handling and domestic systems for correct fluid levels, fuel state, lubrication, and visually check for mechanical condition and leaks
		2.2	Check communication equipment for operational status
3	**Inspect cabin and domestic systems**	3.1	Inspect cabin fittings for security and integrity
		3.2	Check cabin and fittings for holes, cracks and deterioration
		3.3	Check fittings and mountings for security and condition
		3.4	Operate domestic systems to ensure serviceability
		3.5	Complete reports of cabin and fittings condition on approved workplace documentation and/or report

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	verbally

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hull and fittings include the following:	• surface finish and general condition of the hull inside and out as well as any fittings both above and below the water line where visible
Safety equipment includes one (1) or more of the following:	• flotation devices • communication systems including lights • flares • pumps and bailers • anchor • halyards and chains • emergency position-indicating radio beacons (EPIRBs) • fire extinguishers • torches • lifelines
Operating systems include the following:	• mechanical propulsion systems • communication systems • steering systems • pumping systems • winches and cable handling equipment • ultra low voltage electrical systems operating at 12 or 24 volts d.c.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Domestic systems include one (1) or more of the following:	• water supply and heating • air conditioning and heating • lighting • cooking • refrigeration • sewage and sullage • entertainment systems

Assessment Requirements for MEM50006 Check operational capability of marine craft

Modification History

Release 1. Supersedes and is equivalent to MEM50006B Check operational capability of marine craft

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking the general condition of hulls, decks, cabins fixtures and fittings and safety equipment
- checking operational condition of operating and domestic systems
- checking engines and other equipment for leaks and performing visual inspection of batteries
- checking and correcting fluid levels and lubrication
- completing all reports in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- general methods of determining condition of hulls, decks, cabins, fittings and fixtures and safety equipment
- methods of determining condition of operating and domestic systems in terms of whether they operate as required
- battery inspection requirements
- information collation methods to provide a written and/or verbal report.

Assessment Conditions

- Assessors must:
  - have vocational competency in checking operational capability of marine craft at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM50007 Check operational capability of sails and sail operating equipment

Modification History

Release 1. Supersedes and is equivalent to MEM50007B Check operational capability of sails and sail operating equipment

Application

This unit of competency defines the skills and knowledge required to conduct basic checks on vessel sail systems of recreational vessels in both land and water environments and relates to workplaces in which vessels are built, repaired, stored, sold and transported.

The scope of the unit is limited to identifying and reporting on the general condition of the sails and their equipment and identifying potential problems that can be easily discerned and includes basic operational checks similar to those routinely performed by machinery or vehicle operators.

This unit does not include an assessment of seaworthiness or durability and the information would be reported to a supervisor or manager who would determine any further action.

Where operational checking of other vessel components is required unit MEM50006 Check operational capability of marine craft should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MEM50007 Check operational capability of sails and sail operating equipment

Modification History

Release 1. Supersedes and is equivalent to MEM50007B Check operational capability of sails and sail operating equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking the general condition of masts, booms and spars for security and integrity
- checking the general condition of sails for tears, rot and deterioration in accordance with procedures
- checking the general condition of sail hoisting and trimming equipment for security and integrity
- stowing sails and ropes in a correct manner
- completing all reports in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- general methods of determining condition of masts, booms and spars
- methods of determining condition of sails and hoisting/trimming equipment in terms of whether they operate or not, are frayed or showing signs of distress
- information collation methods to provide a verbal and/or written report.

Assessment Conditions

- Assessors must:
  - have vocational competency in checking operational capability of sails and sail operating equipment at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM50008 Carry out trip preparation and planning

Modification History

Release 1. Supersedes and is equivalent to MEM50008B Carry out trip preparation and planning

Application

This unit of competency was developed by the National Marine Safety Committee (NMSC) and defines the skills and knowledge required to plan and prepare for a safe boating trip and includes maintenance of the boat and safety equipment as well as mooring and berthing apparatus.

This unit is one of three core competencies that have been adopted by all government marine safety authorities to contribute to and promote the safe use of waterways and awareness of boating safety and applies specifically to mechanical powered recreational boats, including personal watercraft. However, it is recognised that some aspects of this competency apply to any recreational vessel.

Where general operational checks and basic assessment of the condition of a vessel are required units MEM50006 Check operational capability of marine craft and MEM50007 Check operational capability of sails and sail operating equipment should be selected as appropriate.

Unit MEM50009 Safely operate a mechanically powered recreational boat and unit MEM50010 Respond to boating emergencies and incidents are the other two NMSC core units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **E**

Unit Weight: **0**

Pre-requisite Unit

Competency Field

Boating services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Maintain the boat and safety equipment**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Ensure boat is maintained/serviced on a regular basis
		1.4	Ensure safety equipment complies with relevant legislation
		1.5	Identify location of safety equipment ensuring it is serviceable and accessible, and stowed securely and appropriately
2	**Maintain mooring and berthing apparatus**	2.1	Maintain/service mooring and berthing apparatus on a regular basis
		2.2	Ensure mooring apparatus is appropriate to the vessel and location
3	**Plan trip**	3.1	Check weather conditions, vessel and personnel for suitability for planned trip
		3.2	Ensure trip activity plan takes into account area and type of operation and emergency contact
		3.3	Carry out adequate provisions, including fuel, for trip
		3.4	Communicate trip details to appropriate person
		3.5	Check to ensure the number of passengers does not exceed boat design limitations and/or legislative requirements
		3.6	Check to ensure equipment, stores and personal items are securely stowed and do not adversely affects the boat's stability

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.7 Conduct pre-start checks on equipment operation
	3.8 Inform appropriate person of safe return from the activity

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Safety equipment includes the following:

- life jackets
- bailers
- dinghy/life raft
- paddles/oars
- bilge pumps
- bucket and line
- first aid kit
- fire extinguisher
- distress signalling equipment
- marine radio
- waterproof torch
- charts
- anchor/sea anchor
- lifebuoy
- compass
- sound signal
- drinking water
- towing harness
- isolating switches
- tow rope
- local emergency procedures book
- sounding equipment
- emergency position-indicating radio beacon (EPIRB)
- global positioning system (GPS)
- divers flag
- suitable clothing
- alternative means of propulsion

Maintaining/servicing mooring and berthing apparatus includes the following:

- appropriateness of mooring/berthing
- regularity of checks
- services by recognised contractor
- serviceable mooring and berthing lines, fenders, anchors and ground tackle

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Weather conditions include the following:

- current forecast
- wind
- latest weather and conditions information
- source of weather information
- tides (flood and ebb tides)
- rips and bars
- wave height
- visibility
- day/night

Area and type of operation includes the following:

- hazards
- local knowledge
- rules and protocols
- events
- emergency response
- access and exit points
- safe havens
- launching ramps
- destination port

Adequate provisions include the following:

- suitability of the vessel for the activity
- adequate fuel for the distance
- water, food and ice
- sun protection
- wet weather gear
- first aid kit
- personal medications
- batteries
- gas
- emergency (reserve) fuel and method of fuel transfer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Trip details include the following:

- trip departure and return time
- number of people in the boat
- area and nature of operation
- way points
- radio used and frequency
- call signs
- details of vessel, including description and registration number
- shore contact details
- fuel capacity and usage
- trailer registration number

Appropriate person includes one (1) or more of the following:

- family member or relative
- neighbour(s)
- police - water or local
- marine rescue services
- club or organisation
- harbour master
- costal radio station
- leave a note in your vehicle parked at the departure location (if appropriate)

Pre-start checks include the following:

- fuel is connected
- battery is charged and connected
- kill switch
- fumes and petrol
- fuel and water leaks
- hatches/windows/doors are open
- ventilation
- sea-cock opening
- loose gear is secured
- marine radio is turned on and radio aerials raised
- bilge water levels checked
- navigation lights

Assessment Requirements for MEM50008 Carry out trip preparation and planning

Modification History

Release 1. Supersedes and is equivalent to MEM50008B Carry out trip preparation and planning

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking to ensure boat is maintained and all safety equipment complies with relevant legislation
- maintaining mooring and berthing apparatus on a regular basis and is appropriate to the vessel and location
- planning the trip, including interpreting weather forecasts for suitability
- ensuring safe passenger numbers, safe stowing of all equipment/items and serviceability of safety equipment
- carrying adequate provisions, including fuel and communicating trip details with appropriate personnel and informing person on safe return from activity.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- weather information
- vessel maintenance and service schedule requirements
- capabilities of boat
- safety equipment required on-board boat
- safety procedures
- marine legislation, regulations and rules
- area of activity
- legislative requirements regarding the use of safety equipment.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - have vocational competency in carrying out trip preparation and planning at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. MEM50009 Safely operate a mechanically powered recreational boat

Modification History

Release 1. Supersedes and is equivalent to MEM50009B Safely operate a mechanical powered recreational boat

Application

This unit of competency was developed by the National Marine Safety Committee (NMSC) and defines the skills and knowledge required to safely handle/operate a powered recreational boat on coastal and inland waters and includes manoeuvring and handling the boat as well as safe navigation and anchoring.

This unit is one of three core competencies that have been adopted by all government marine safety authorities to contribute to and promote the safe use of waterways and awareness of boating safety and applies specifically to mechanical powered recreational boats, including personal watercraft. However, it is recognised that some aspects of this competency apply to any recreational vessel.

Unit MEM50008 Carry out trip preparation and planning and unit MEM50010 Respond to boating emergencies and incidents are the other two NMSC core units.

Some jurisdictions may require the holder of this unit to be licensed or certified and users should check with the relevant authorities.

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Boating services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Manoeuvre and handle the boat**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Undertake a pre-start checks and start motor
		1.4	Manoeuvre boat safely according to conditions and in accordance with water traffic regulations
		1.5	Monitor performance of the boat and personnel at all times
		1.6	Consider impact of boat use on others and the environment
		1.7	Use safety equipment, stow and, as required, wear in accordance with legislation and recognised regulations and rules
2	**Navigate safely**	2.1	Identify aids to small craft navigation
		2.2	Apply collision avoidance techniques when required in accordance with relevant legislation, recognised regulations and rules
		2.3	Carry out operation of the boat at all times in accordance with relevant legislation, recognised regulations and rules
		2.4	Use navigational aids and landmarks to determine and monitor boat position
		2.5	Take into account hazards and conditions in navigating the boat
3	**Anchor the boat**	3.1	Select anchorage site in accordance with prevailing and forecast conditions and in accordance with legislation
		3.2	Use type of anchor and anchoring system suitable for location
		3.3	Lower, set and monitor anchor according to prevailing conditions

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Retrieve and securely stow anchor

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pre-start checks include the following:	• fuel is connected • battery is charged and connected • kill switch • fumes and petrol • fuel and water leaks • hatches/windows/doors are open • ventilation • sea-cock opening • loose gear is secured • marine radio is turned on and radio aerials raised • bilge water levels checked • navigation lights
Manoeuvring conditions include the following:	• from or to a ramp, pontoon, wharf, mooring, anchor, confined areas, such as narrow channels, marinas, moorings and obstructions • sea-states, including bars, waves, rips, high seas, tidal surges, choppy conditions and wakes • low speed/high speed • poor visibility • effect of wind

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- large vessels

Safe manoeuvring includes the following:

- steer straight line
- astern
- figure-eight
- right of way
- port-starboard
- throttle control
- emergency stop
- trim and stability of vessel
- towing or being towed
- berthing
- standing-on/stemming the tide
- retrieval of person overboard

Monitoring includes the following:

- cooling system
- bilge
- portholes and hatches
- location and welfare of persons on board
- oil, fuel and water
- radio
- position of boat
- other water users
- battery and electrical systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Others and environment include the following:	• noise • wake • safety of others • disturbance or injury to wildlife • disposal of waste and bilge water • effects of detergent and anti-foul • fuelling arrangements
Aids to small craft navigation include one (1) or more of the following:	• IALA Buoyage System ‘A’ • charts • compasses • global positioning system (GPS) • sounder • tide tables • passage plan • marine references • notices to mariners • radio navigational warnings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Relevant legislation, recognised regulations and rules include the following:

- collision regulations:
  - navigating in narrow channels
  - giving way to other vessels
  - overtaking, proper lookout
  - sound signals
  - lights and shapes
  - responsibilities and duty of care
  - use of buoyage system
  - speed
  - recognition of lights and markers
  - rules of road
  - recognition of operation areas
  - specific activity rules, e.g. personal watercraft (PWCs), water skis and equipment requirements
  - accident/incident reporting
- marine regulations:
  - safety regulations
  - licensing and registration
  - speed limit restrictions
  - distance off requirements
  - port limits/rules
  - marine incident reporting
  - carrying capacity
  - drug and alcohol limits/effects
  - age of operators
- environmental and wildlife regulations as relevant and applicable to the operation of boats

Hazards and conditions include the following:

- weather
- set and drift
- effect of wind, tide and currents
- submerged objects
- other boats and wash
- restricted waters
- crossing bars

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Types of anchor include one (1) or more of the following:	• Danforth • Grapnel/Reef • Bruce • Plough • Admiralty • Sarca • sea anchor
Anchoring systems include one (1) or more of the following:	• multiple anchors • bow and stern anchors • mooring buoy

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM50009B Safely operate a mechanical powered recreational boat

Assessment Requirements for MEM50009 Safely operate a mechanically powered recreational boat

Modification History

Release 1. Supersedes and is equivalent to MEM50009B Safely operate a mechanical powered recreational boat

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- conducting pre-start checks
- manoeuvring and handling boat safely and accurately according to conditions and in accordance with water traffic regulations
- monitoring performance of boat and be aware of impact of boat use on others and the environment
- navigating safely, taking hazards into account using navigational aids and landmarks to determine and monitor boat position
- anchoring the boat using the type of anchor and anchoring system suitable for location.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- pre-start checks
- boating and other relevant legislation, rules and regulations
- legislative requirements regarding the use of safety equipment
- area of activity hazards and prevailing conditions
- boating information resources
- environmental awareness.

Assessment Conditions

- Assessors must:
  - have vocational competency in safely operating a mechanical powered recreational boat at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM50010 Respond to boating emergencies and incidents

Modification History

Release 1. Supersedes and is equivalent to MEM50010B Respond to boating emergencies and incidents

Application

This unit of competency was developed by the National Marine Safety Committee (NMSC) and defines the skills and knowledge required to deal with boating emergencies and incidents, including the use of safety equipment and the provision of assistance to others in distress and includes raising alarms and dealing with on-board emergencies.

This unit is one of three core competencies that have been adopted by all government marine safety authorities to contribute to and promote the safe use of waterways and awareness of boating safety and applies to all recreational boats including personal watercraft.

Unit MEM50008 Carry out trip preparation and planning and unit MEM50009 Safely operate a mechanically powered recreational boat are the other two NMSC core units.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **E**

Unit Weight: **0**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Boating services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Use safety equipment**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Ensure nature, type, location, accessibility and serviceability of safety equipment is known and understood by all personnel on board
		1.4	Conduct briefing of personnel before departure
		1.5	Use safety equipment in a manner and purpose for which it was designed and appropriate to the emergency or incident
2	**Raise alarms**	2.1	Identify nature of emergency
		2.2	Communicate alarm to on-board personnel
		2.3	Use recognised distress signals to indicate need of assistance
3	**Deal with on-board emergency**	3.1	Inform on-board personnel of actions required to deal with the emergency
		3.2	Implement procedures to combat emergency and protect persons on board
		3.3	Identify position, record and communicate
		3.4	Provide injured persons with assistance
		3.5	Maintain communication with rescuers
		3.6	Undertake preparation for abandoning the boat, as required
		3.7	Communicate cessation of emergency to appropriate personnel
4	**Assist others in distress**	4.1	Recognise distress signals from others
		4.2	Identify nature of assistance required
		4.3	Determine capability to safely assist or relay emergency taking into account own safety and physical proximity to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	the emergency incident
	4.4 Prepare for appropriate response to the emergency and implement
	4.5 Communicate cessation of emergency incident to appropriate personnel

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Briefing information includes the following:

- vessel operation
- personnel assessment, including swimming skills, boating knowledge, medication and dietary requirements
- location and use of safety equipment
- emergency procedures
- abandoning procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Emergencies include one (1) or more of the following:

- fire (smoke or heat)
- grounding
- person overboard
- person retrieval from water
- capsize
- swamping
- sinking
- engine/motor breakdown or malfunction
- fouled propeller
- anchoring
- flooding
- lost
- injuries/illness
- hypothermia
- lack of fuel
- contaminated fuel

Distress signals include one (1) or more of the following:

- pyrotechnic distress flares
- flags
- radio
- hand signals
- dye markers
- International Code Signal of Distress
- sound signal including voice
- emergency position-indicating radio beacon (EPIRB)
- V-sheet
- reflective mirror
- light signals
- mobile phone

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Preparation for abandoning includes the following:	• brief on-board personnel • take drinking water • don of life jackets • identify location of vessel • communicate to rescuers actions taken or to be taken • assess and ensure readiness of life rafts/life rings • activate emergency position indicating radio beacon (EPIRB) • identify and collect emergency equipment, provisions and clothing • deploy anchor or sea anchor

Assessment Requirements for MEM50010 Respond to boating emergencies and incidents

Modification History

Release 1. Supersedes and is equivalent to MEM50010B Respond to boating emergencies and incidents

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- using safety equipment in a correct manner appropriate to the emergency or the incident
- communicating while under pressure
- briefing others on safety and emergency procedures
- demonstrating boat abandoning procedures
- delegating personnel appropriate to the emergency situation, including raising the alarm and assisting others in distress
- determining capability to assist others and making decision under pressure
- assisting injured people safely and without undue risk
- applying emergency first aid, where appropriate
- communicating cessation of emergency incident to appropriate personnel in accordance with procedures.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- range of safety equipment
- common emergency actions
- emergency procedures
- boat abandoning procedures
- relevant contacts
- communication protocols
- types of boating emergency incidents and situations
- protocols for assisting injured people
- boating legislation, regulations and rules

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in responding to boating emergencies and incidents at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MSATCM304A Interpret basic binary phase diagrams

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to interpret phase diagrams and so predict the microstructures of binary alloys.

Application of the Unit

Application of the unit	This unit applies to the interpretation of cooling phase diagrams as used in metallurgy. The application will primarily be to phase diagrams of metals and alloys showing temperature and composition variables. In a typical scenario, a metallurgical technician will be required to recommend a phase transition process in order to obtain a required microstructure, or to predict a microstructure from a known phase transition process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the microstructures from an equilibrium cooling phase diagram	1.1. Phase diagram for metal or alloy is obtained from internal or external sources 1.2. Identify number, composition, proportion and structural arrangement of phases in binary alloys. 1.3. Describe structural changes due to varying proportion of alloying elements and temperature. 1.4. Describe the phase changes and final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment operations.
2. Identify the microstructures from a non equilibrium cooling phase diagram	2.1. Identify number, composition, proportion and structural arrangement of phases in binary alloys. 2.2. Describe structural changes due to varying proportion of alloying elements and temperature. 2.3. Describe the phase changes and final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment operations.
3. Recognise characteristic microstructures of binary alloys	3.1. .Recognise characteristic structures of dendrites (homogeneous and cored) columnar and equiaxed grains. 3.2. Recognise characteristic structures resulting from eutectic, eutectoid and peritectic reactions. 3.3. Recognise characteristic structures resulting from solid state precipitation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• produce a basic cooling phase diagram from supplied data • estimate composition from the structure of a phase diagram • predict structure from the composition from a phase diagram
Required knowledge:
Competency includes sufficient knowledge of: • methods of construction of phase diagrams for binary alloys. • the phase changes that occur in binary alloy systems as recorded by the appropriate phase diagrams. • the equilibrium and non equilibrium cooling of binary alloys and the resulting microstructures in cast and heat treated material.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The person will be able to interpret binary phase diagrams. Assessment may be by workplace project, case study or suitable alternative.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • recognise and use correct scientific terminology in regards to phase diagrams • source phase diagrams and other reference material from internal or external sources • use phase diagrams to interpret intermediate and final phase structures of binary alloys
Relationship to other units	This unit may be assessed concurrently with other relevant units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Scientific techniques and principles of cooling phase diagrams relate to	• Equilibrium phase diagrams • Non-equilibrium phase diagrams • Effect of temperature and alloying elements on structural changes • Structures of homogenous and cored dendrites • Structures of columnar and equiaxed grains • Eutectic, eutectoid and peritectic reactions

MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed. Duplication between Performance Evidence and Performance Criteria removed. Assessment conditions updated.

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Application

This unit describes the skills and knowledge required to comply with environmental regulations, identify environment issues and minimise the risks of negative impact on work and carry out improvements in own work area.

This unit applies to operators and team members who are required to follow procedures to work in an environmentally sustainable manner.

This unit applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be contextualised for the industry sector, organisation and section.

This unit applies to an individual working alone or as part of a team and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify current resource use and environmental issues	1.1 Identify workplace environmental and resource efficiency issues 1.2 Identify resources used in own work role 1.3 Confirm current usage of resources
2. Comply with environmental regulations	2.1 Read and follow environmental policies and procedures to ensure compliance with federal, state/territory and local government laws, by-laws, regulations and mandated codes of practice, and codes and standards that the organisation applies voluntarily 2.2 Ask questions and seek clarification relating to environmental work requirements 2.3 Identify incidents, including breaches or potential breaches of environmental regulations and occurrences outside of standard procedures and report to appropriate personnel 2.4 Report environmental incidents using workplace forms and procedures
3. Seek opportunities to improve environmental practices and resource efficiency	3.1 Follow workplace procedures to improve environmental practices and resource efficiency 3.2 Make suggestions for improvements to environmental workplace practices and work plans

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed. Duplication between Performance Evidence and Performance Criteria removed. Assessment conditions updated.

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- followed environmental policies and identified potential breaches of environmental regulations and suggested improvements within the limit of own authority.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- environmental sustainability issues relevant to organisation
- resource use and impact of inefficiencies associated with own work role
- environmental and resource efficiency policies and procedures for own work role
- environmental regulations and guidelines and their impact on own work role
- the environmental issues, hazards and risks associated with own work role
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - environmental regulations, guidelines and procedures
  - workplace incident reporting procedures and forms.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Application

This unit of competency covers the skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices, and to implement improvements and monitor their effectiveness.

This unit of competency applies to those who have responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

It includes identifying areas for improvement, developing plans to make improvements, and implementing and monitoring improvements in environmental performance.

This unit of competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Investigate current practices in relation to resource usage**	1.1	Identify environmental regulations applying to the enterprise
		1.2	Assess procedures for assessing compliance with environmental regulations
		1.3	Collect information on environmental and resource efficiency systems and procedures and provide to the work group, as required
		1.4	Measure and record current resource usage by members of the work group
		1.5	Analyse and record current purchasing strategies
		1.6	Analyse current work processes to access information and data, and assist in identifying areas for improvement
2	**Set targets for improvements**	2.1	Seek input from stakeholders, key personnel and specialists
		2.2	Access external sources of information and data as required
		2.3	Evaluate alternative solutions to workplace environmental issues
		2.4	Set efficiency targets
3	**Implement performance**	3.1	Source and use techniques/tools to assist in achieving targets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	improvement strategies	3.2	Apply continuous improvement strategies to own work area of responsibility, and communicate ideas and possible solutions to the work group and management
		3.3	Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them
		3.4	Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate
		3.5	Implement costing strategies to fully value environmental assets
4	**Monitor performance**	4.1	Document outcomes and communicate reports on targets to key personnel and stakeholders
		4.2	Evaluate strategies and environmental performance, including breaches or potential breaches of regulations and occurrences outside of standard procedure which may lead to lower environmental performance
		4.3	Set new targets and investigate and apply new tools and strategies
		4.4	Promote successful strategies and reward participants where possible

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- *ISO 14001:2015 Environmental management systems*

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Unit Mapping Information

Assessment Requirements for MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- investigate/analyse resource usage
- evaluate improvement alternatives and set targets
- implement improvements within the limit of own authority
- monitor the performance of improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant environmental and resource efficiency issues, specific to industry practices, including:
  - contribution to climate change and other macro threats that can arise from materials and work processes used
  - regulated environmental issues
  - issues relevant to licencing conditions
- best practice environmental approaches relevant to own area of responsibility
- methods for measuring and calculating resource usage.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of appropriate tools, equipment and documents

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
    - walk-throughs
    - pilot plant operation
    - demonstration of skills
    - industry based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

PMBPROD291 Operate resin infusion moulding equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD291B Operate resin infusion moulding equipment

Application

This unit of competency covers the skills and knowledge required to operate resin infusion moulding equipment to make composite parts.

This unit of competency applies to operators who are required to take product off mould table; prepare materials and moulds; check vacuum bags, infusion lines, closures and fittings; operate the equipment; and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Check work requirements**	1.1	Identify work requirements from procedures
		1.2	Check product, materials and equipment meet requirements for job
		1.3	Recognise requirements which may not be in accordance with usual practice
		1.4	Ask questions of appropriate person to confirm non-standard job specifications
		1.5	Ensure housekeeping is to requirements
		1.6	Identify hazards associated with the job and take appropriate action
		1.7	Perform other pre-operational checks in accordance with procedures
2	**Conduct pre-operational checks as required**	2.1	Check safety equipment is in position and working
		2.2	Check moulds, closures and fittings to procedures
		2.3	Check moulds for cracks, chips, marks and cleanliness
		2.4	Check materials, including fibre preforms, resins, additives and release agents are correct
		2.5	Undertake other pre-operational checks in accordance with procedures
3	**Operate resin infusion equipment, to procedure**	3.1	Check process is operating within required limits
		3.2	Check product is in specification and to required quality standard
		3.3	Ensure product is consistently ready for next operation
		3.4	Maintain supply of materials as required
		3.5	Complete logs and records as required
		3.6	Collect and segregate scrap, waste and other materials as required
		3.7	Keep equipment and work area clean
		3.8	Pause infusion cycle and perform emergency stop as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			required
4	**Resolve routine problems, to procedure**	4.1	Recognise known faults that occur during the operation
		4.2	Identify and take action on causes of routine faults
		4.3	Log problems as required
		4.4	Identify non-routine process and quality problems and take appropriate action

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- moulds
- vacuum bags
- infusion lines
- vacuum pumps and fittings eg hoses and couplings
- programmable logic controllers (PLC) if fitted
- hand tools used in the this process, e.g. dispensing equipment.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- hazardous products and materials
- sharp edges, swarf and scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- equipment malfunction
- vacuum leaks
- vacuum bag bridging
- vacuum switch-off timing
- stoppage of resin flow
- variations in process conditions especially temperature
- variations affecting cure rate
- variations in materials
- contamination of materials
- equipment, tool or mould damage
- dry spots
- resin pooling
- under-saturation of resin
- poor surface finish
- routine product faults.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD291 Operate resin infusion moulding equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD291B Operate resin infusion moulding equipment

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- select and use materials, tools and equipment to meet job specifications
- prepare moulds, fibre preforms, resins, additives and release agents to specifications
- monitor resin infusion moulding equipment and ancillary equipment using measured/indicated data and smell, sight, sound and feel as appropriate
    - monitor and interpret key variables, including:
    - vacuum bag conditions
    - resin flow
    - curing time and conditions
    - production rate
    - product integrity and general conformance to specification
- operate and adjust the equipment to meet product quality and production output specifications
- pause the equipment or shut down equipment in normal and abnormal circumstances
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults. including:
    - raw material variations/contamination
    - process abnormalities
    - procedural errors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - mechanical abnormalities
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- function of infusion moulding equipment
- principles of operation of the equipment
- role of fibres, resins, additives and release agents
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- production workflow sequences and materials demand
- process behaviours of resins and the role of additives
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
    - their possible causes
    - potential consequences
    - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
    - teamwork
    - communication.
- The collection of performance evidence:
    - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
    - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
    - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including, relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD294 Operate resin transfer moulding equipment

Modification History

Release 1. Supersedes and is equivalent to PMBPROD294B Operate resin transfer moulding equipment

Application

This unit of competency covers the skills and knowledge required to operate resin transfer moulding equipment to make composite parts.

This unit of competency applies to operators who are required to prepare materials and moulds, operate the equipment, maintain supply of materials, and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Conduct**	1.1	Check safety equipment is in position and working

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	pre-operational checks as required	1.2	Check moulds, closures and fittings to procedures
		1.3	Check moulds for cracks, chips, marks and cleanliness
		1.4	Check materials including fibre preforms, resins, additives and release agents are correct
		1.5	Undertake other pre-start checks in accordance with procedures.
2	**Operate equipment to procedures**	2.1	Check process is operating within required limits
		2.2	Check product is in specification and to required quality standard
		2.3	Maintain supply of materials as required
		2.4	Complete logs and records as required
		2.5	Collect and segregate scrap, waste and other materials as required
		2.6	Complete logs and records as required
		2.7	Keep equipment and work area clean
		2.8	Pause cycle or stop equipment in an emergency, as required
3	**Resolve routine problems**	3.1	Recognise known faults that occur during the operation
		3.2	Identify and take action on causes of routine faults
		3.3	Log problems as required
		3.4	Identify non-routine problems and report to designated person

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

PMBPROD298 Operate equipment using pre-preg material

Modification History

Release 1. Supersedes and is equivalent to PMBPROD298B Operate equipment using pre-preg material

Application

This unit of competency covers the skills and knowledge required to operate equipment using pre-preg materials to produce composite parts.

This unit of competency applies to operators who are required to prepare pre-preg and other materials, prepare moulds, monitor and operate the equipment, and recognise routine and non-routine problems and take appropriate action.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Routine problems

Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- equipment malfunction
- poor handling or storage of pre-preg materials
- pre-preg incorrectly applied to mould
- variations in process conditions, especially temperature
- variations affecting cure rate
- variations in materials and/or contamination of materials
- equipment, tool or mould damage
- incorrect quantity of materials
- contaminated materials/additives
- equipment damage/faults
- mould damage
- wrong raw materials/additives
- incorrect quantity of materials/additives
- routine product faults
- machine failure
- mould/tooling problems.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Assessment Requirements for PMBPROD298 Operate equipment using pre-preg material

Modification History

Release 1. Supersedes and is equivalent to PMBPROD298B Operate equipment using pre-preg material

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, basic machine control panels, material labels and safety data sheets (SDS)
- select and use materials, tools and equipment to meet job specifications
- prepare pre-pregs, moulds, fibre preforms, resins, additives and release agents to specifications
- monitor the equipment using measured/indicated data and smell, sight, sound and feel as appropriate
- monitor and interpret key variables, including:
  - operating temperatures
  - process conditions/variables
  - cycle time
  - output rate
  - product integrity and general conformance to specification
- operate and adjust the equipment to meet product quality and production output specifications
- pause the equipment or shut down equipment in normal and abnormal circumstances
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- recognise routine and non-routine problems
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- take action to resolve faults or report faults to appropriate personnel
- distinguish between possible causes of routine faults, including:
  - raw material variations/contamination
  - process abnormalities
  - procedural errors

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - mechanical abnormalities
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- function of the equipment
- principles of operation of the equipment
- types and application of common pre-pregs
- role of fibres, resins, additives and release agents
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- production workflow sequences and materials demand
- process behaviours of polymers and the role of additives
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
    - their possible causes
    - potential consequences
    - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
    - teamwork
    - communication.
- The collection of performance evidence:
    - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
    - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD391 Produce composites using resin infusion

Modification History

Release 1. Supersedes and is equivalent to PMBPROD391B Produce composites using resin infusion

Application

This unit of competency covers the skills and knowledge required to operate and adjust resin infusion processes to produce product.

This competency applies to experienced operators who are required to start up and shut down resin infusion equipment, monitor equipment operation, establish a stable process, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPROD291 Operate resin infusion moulding equipment

Competency Field

Production

Unit Sector

Not applicable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan own work requirements**	1.1	Identify the most appropriate equipment to be used for production and upstream and downstream operations from production plan or request
		1.2	Identify and check materials required, including additives
		1.3	Implement measures to control hazards in line with procedures and duty of care
		1.4	Identify requirements for materials, quality, production and equipment checks
2	**Start resin infusion moulding process to procedures**	2.1	Identify process settings for required product
		2.2	Set process to required settings
		2.3	Check materials are correct
		2.4	Take appropriate action for non-conforming materials
		2.5	Set up date, batch and materials markings to specifications, as required
		2.6	Complete pre-start checks
		2.7	Start up resin infusion moulding process
3	**Operate and make adjustments to the resin infusion process to procedures**	3.1	Operate resin infusion equipment, noting key variables
		3.2	Monitor controls/displays/terminals for production and process data
		3.3	Take samples as required and identify product out of specification
		3.4	Monitor product/process quality
		3.5	Make adjustments to remedy faults and non-conformity to standard as required
		3.6	Establish a stable resin infusion process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.7	Adjust process to minimise scrap and trim
		3.8	Clean, adjust and check equipment damage as required
4	**Shut down machine to procedures**	4.1	Determine type of shutdown
		4.2	Select appropriate cleaning method
		4.3	Clean efficiently and adequately as required
		4.4	Leave machine in appropriate condition and with appropriate locks, tags or notices
		4.5	Complete relevant documentation
		4.6	Ensure area is clean and clear after the shutdown, in readiness for the next start-up
5	**Anticipate and solve problems**	5.1	Recognise a problem or a potential problem
		5.2	Determine problems needing priority action
		5.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		5.4	Seek information and assistance as required to solve problems
		5.5	Solve problems within area of responsibility
		5.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- moulds
- vacuum bags
- infusion lines
- vacuum pumps and fittings eg hoses and couplings
- programmable logic controllers (PLC) if fitted

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hand tools used in the this process, e.g. dispensing equipment.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- fibres, airborne and handled
- hazardous products and materials
- sharp edges, swarf and scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment, product mass
- other hazards that might arise.

Problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- variations in quality
- emergency situations
- mould release problems
- stoppage of resin flow

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- excess resin
- warping or cracking after moulding
- variations in vacuum
- variations affecting cure rate
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMBPROD391B Produce composites using resin infusion

Assessment Requirements for PMBPROD391 Produce composites using resin infusion

Modification History

Release 1. Supersedes and is equivalent to PMBPROD391B Produce composites using resin infusion

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- set up resin infusion equipment and materials to meet specifications
- start up and operate the equipment
- monitor key variables, including:
  - operating temperatures
  - cycle time (such as the resin filling time)
  - output rate
  - vacuum pressure
  - surface finish and condition
  - equipment - adjustments/set-up
  - product weight product integrity and general conformance to specification
- make adjustments to remedy faults and non-conformity
- maintain output and product quality using appropriate instruments, controls, test information and readings
- safely shut down equipment in normal and abnormal circumstances
- leave machine in appropriate condition with any required locks, tags or notices
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - equipment design deficiencies
  - materials properties
  - process variables
- recognise and prioritise problems requiring action
- resolve non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems including knowledge of:

- resin infusion manufacturing process and phases of the cycle
- characteristics of materials and their behaviour in relation to process conditions and stages of production
- quality requirements at each production stage
- mechanical, hydraulic, pneumatic, electrical and electronic principles which effect machine operation
- common adjustments in process variables and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- Where the assessee does not currently possess evidence of competency in *PMBPROD291 Operate resin infusion moulding equipment*, it may be co-assessed with this unit.
- The collection of performance evidence:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD394 Produce composites using resin transfer moulding

Modification History

Release 1. Supersedes and is equivalent to PMBPROD394B Produce composites using resin transfer moulding

Application

This unit of competency covers the skills and knowledge required to operate and adjust resin transfer moulding processes to produce product.

This unit of competency applies to experienced operators who are required to start up and shut down resin transfer equipment, monitor equipment operation, establish a stable process, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPROD294 Operate resin transfer moulding equipment

Competency Field

Production

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan own work requirements**	1.1	Identify the most appropriate equipment to be used for production and upstream and downstream operations from production plan or request
		1.2	Identify and check materials required, including additives
		1.3	Implement measures to control identified hazards in line with procedures and duty of care
		1.4	Identify requirements for materials, quality, production and equipment checks
2	**Start up resin transfer moulding process to procedures**	2.1	Identify process settings required for the product
		2.2	Adjust control panel to required settings
		2.3	Check materials, resins, fibres and cores are correct
		2.4	Take appropriate action for non-conforming materials
		2.5	Set up date, batch and materials markings to specifications, as required
		2.6	Complete pre-start checks
		2.7	Start up process
3	**Operate and make adjustments as required to the resin transfer moulding process to procedures**	3.1	Operate resin transfer moulding process, noting key variables
		3.2	Monitor controls/displays/terminals for production/process data
		3.3	Monitor product/process quality, thickness and integrity to procedures
		3.4	Take samples as required and identify product out-of-specification
		3.5	Make adjustments to remedy faults and nonconformity to standard, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.6	Establish a stable resin transfer moulding process
		3.7	Adjust process to minimise scrap and waste
		3.8	Clean, adjust and lubricate equipment as required
4	**Shut down machine to procedures**	4.1	Determine type of shutdown
		4.2	Select appropriate purging method
		4.3	Purge efficiently and adequately as required
		4.4	Leave machine in appropriate condition and with appropriate locks, tags or notices
		4.5	Complete relevant documentation
		4.6	Ensure area is clean and clear after the shutdown, in readiness for the next start-up
5	**Anticipate and solve problems**	5.1	Recognise a problem or anticipate potential problems
		5.2	Determine problems needing priority action
		5.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		5.4	Seek information and assistance as required to solve problems
		5.5	Solve problems within area of responsibility
		5.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- resin transfer moulding equipment
- moulds

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resin pumps and fittings
- programmable logic controllers (PLC) if fitted
- ancillary equipment that is integral to the process.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- fibres (airborne and handled)
- hazardous products and materials
- sharp edges, swarf and scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- unstable process variables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sub-optimal operation
- variations in feed rates
- variations in quality
- emergency situations
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Assessment Requirements for PMBPROD394 Produce composites using resin transfer moulding

Modification History

Release 1. Supersedes and is equivalent to PMBPROD394B Produce composites using resin transfer moulding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- set up resin transfer moulding equipment and materials to meet specifications
- start up and operate the equipment
- monitor key variables, including:
  - operating temperatures
  - cycle time
  - output rate
  - surface finish and condition
  - product weight
  - product integrity and general conformance to specification
- make adjustments to remedy faults and non-conformity
- maintain output and product quality using appropriate instruments, controls, test information and readings
- safely shut down equipment in normal and abnormal circumstances
- leave machine in appropriate condition with any required locks, tags or notices
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings
  - equipment design deficiencies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - materials properties
  - process variables
- recognise and prioritise problems requiring action
- resolve non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- resin transfer moulding manufacturing process and phases of the cycle
- characteristics of materials and their behaviour in relation to process conditions and stages of production
- quality requirements at each production stage
- mechanical, hydraulic, pneumatic, electrical and electronic principles which effect machine operation
- common adjustments in process variables and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- Where the assessee does not currently possess evidence of competency in *PMBPROD294 Operate resin transfer moulding equipment*, it may be co-assessed with this unit.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBPROD398 Produce composites using pre-pregs

Modification History

Release 1. Supersedes and is equivalent to PMBPROD398B Produce composites using pre-pregs

Application

This unit of competency covers the skills and knowledge required to operate and adjust equipment and processes which use pre-pregs to produce composite product.

This unit of competency applies to experienced operators who are required to start up and shut down the equipment, monitor equipment operation, establish a stable process, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPROD298 Operate equipment using pre-pregs material

Competency Field

Production

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan own work requirements**	1.1	Identify equipment and processes used for production process and upstream and downstream operations from production plan or request
		1.2	Identify materials required, including additives
		1.3	Recognise hazards and follow appropriate hazard control/minimisation methods
		1.4	Identify and check emergency stops, guards and controls
		1.5	Identify requirements for materials, quality, production and equipment checks
		1.6	Identify materials, waste management and housekeeping needs
2	**Start up pre-preg process**	2.1	Determine equipment requirements
		2.2	Adjust control panel to required settings
		2.3	Check equipment, raw material and die/tool all match job requirements
		2.4	Check materials, pre-pregs, release agents, and so on, are correct
		2.5	Discard, or make adjustments to the process for, non-conforming materials
		2.6	Set up date, batch and materials markings to specifications, as required
		2.7	Complete other pre-start checks in accordance with procedures
		2.8	Start up pre-preg process
3	**Operate and make adjustments as required to the**	3.1	Operate composites forming equipment, noting key variables
		3.2	Monitor controls/displays/terminals for production/process data

	process	3.3	Monitor product/process quality, thickness and integrity to procedures
		3.4	Make adjustments to remedy faults and non-conformity to standard as required
		3.5	Maintain continuity of process
		3.6	Collect and reprocess/discard scrap/waste and other materials in accordance with procedures
		3.7	Clean, adjust and lubricate equipment as required
		3.8	Pause or stop equipment in an emergency, following procedures
4	**Shut down machine to procedures**	4.1	Determine type of shutdown
		4.2	Select appropriate cleaning method
		4.3	Clean efficiently and adequately as required
		4.4	Leave machine in appropriate condition and with appropriate locks, tags or notices
		4.5	Complete relevant documentation
		4.6	Ensure area is clean and clear after the shutdown, in readiness for the next start-up
5	**Anticipate and solve problems**	5.1	Recognise a problem or a potential problem
		5.2	Determine problems needing priority action
		5.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		5.4	Seek information and assistance as required to solve problems
		5.5	Solve problems within area of responsibility
		5.6	Follow through items initiated until final resolution has occurred

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- moulds
- moulding equipment and closures
- programmable logic controllers (PLC) if fitted
- ancillary equipment that is integral to the process
- hand tools used in the this process.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- hazardous products and materials
- sharp edges, swarf and scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- unstable process variables
- sub-optimal operation
- variations in quality
- emergency situations
- warped moulds or dies
- worn or damaged mould parts or fittings
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMBPROD398B Produce composites using pre-pregs

Assessment Requirements for PMBPROD398 Produce composites using pre-pregs

Modification History

Release 1. Supersedes and is equivalent to PMBPROD398B Produce composites using pre-pregs

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, instruments/control panels, material labels and safety data sheets (SDS)
- set up pre-preg equipment and materials to meet specifications
- start up and operate the equipment
- monitor key variables, including:
  - operating temperatures
  - cycle time
  - output rate
  - surface finish and condition
  - product weight
  - product integrity and general conformance to specification
- make adjustments to remedy faults and non-conformity
- maintain output and product quality using appropriate instruments, controls, test information and readings
- safely shut down equipment in normal and abnormal circumstances
- leave machine in appropriate condition with any required locks, tags or notices
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction
  - wrong readings
  - equipment design deficiencies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - materials properties
  - process variables
- recognise and prioritise problems requiring action
- resolve non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- pre-preg manufacturing processes and phases of the cycle
- characteristics of common pre-pregs and their behaviour in relation to process conditions and stages of production
- quality requirements at each production stage
- mechanical, hydraulic, pneumatic, electrical and electronic principles which effect machine operation
- common adjustments in process variables and their impact on product quality and production output
- impact of variations in raw materials and equipment operation in relation to final product
- possible changes to materials properties to better suit specific process requirements
- non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- Where the assessee does not currently possess evidence of competency in *PMBPROD298 Operate equipment using pre-preg* material, it may be co-assessed with this unit.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

TLILIC0002 Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to safely operate a vehicle loading crane with a Maximum Rated Capacity (MRC) of 10 metre tonnes or more. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Vehicle loading crane means a crane mounted on a vehicle for loading and unloading the vehicle.

A person undertaking this unit must hold:

- a current National High-Risk Work Licence (HRWL) to perform dogging or a certification for a specific VET course for HRWL to perform dogging.

A person performing this work is required to hold a vehicle loading crane HRWL.

This unit requires a person operating a slewing vehicle loading crane with an MRC of 10 metre tonnes or more to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is confirmed to determine the quality of ground suitability for operational use of vehicle loading crane in accordance with workplace procedures
	1.3 Vehicle loading crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Appropriate paths for operating the vehicle loading crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
	1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed and followed in accordance with workplace procedures
	1.7 Appropriate communication procedures are identified and tested with associated personnel in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.8	All tasks are confirmed to ensure requirements for the relevant work area in accordance with workplace procedures
Prepare for work/task 2	**2.1**	Consultation with workplace personnel is established and maintained to ensure all crane and lifting operations are clear and consistent with site requirements in accordance with a lift plan and workplace procedures
	2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
	2.3	Vehicle loading crane controls are accessed safely in accordance with manufacturer requirements and safe work procedures
	2.4	Pre-start vehicle loading crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
	2.5	Vehicle loading crane is set up correctly with any lifting gear as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
	2.6	Boom/jib and lifting gear are set up as required in accordance with specific manufacturer requirements and safe work procedures
	2.7	Vehicle loading crane is stabilised appropriately in accordance with the lift plan, relevant manufacturer requirements and safe work procedures
	2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.9	Vehicle loading crane logbook is inspected and is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.10	Weather and work environment conditions are assessed to determine any impact on vehicle loading crane operations in accordance with manufacturer requirements and safe work procedures
3	**Perform work/task**	**3.1**	Lifts are determined within the RC of the vehicle loading crane in accordance with the load chart/s and lift plan
		3.2	Boom/jib and hook block are safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
		3.3	Lifting gear is connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
		3.4	Test lift is carried out in accordance with dogging and safe work procedures
		3.5	Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
		3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
		3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
		3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
		3.9	Lifting gear is disconnected from load and crane is positioned safely and efficiently for next task in accordance with lift plan and safe work procedures
4	**Pack up**	**4.1**	Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.2 Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures

4.3 Stabilisers are stowed and secured in accordance with manufacturer requirements and safe work procedures

4.4 Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures

4.5 Plates or packing are stowed and secured in accordance with safe work procedures

4.6 Shut down crane checks are carried out in accordance with safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC0012 Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

Assessment Requirements for TLILIC0002 Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart to determine radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
  - boom
  - Stabiliser positioning
  - type of hook
- conducting and applying risk and hazard assessment strategies including:
  - confirming work area operating surface suitability based on crane and task requirements
  - dynamic loads
  - ground conditions including condition of surface and slopes
  - load swing
  - overloading
  - lifting and placing load
  - tyre pressures/track condition
  - asymmetric loads
  - overhead hazards including electric lines and service pipes
  - restricted and poorly ventilated areas
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - traffic including pedestrians, vehicles and other plant
  - weather conditions
- confirming and following traffic management plan procedures relevant to their role in the work area
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation
- communicating with other associated personnel through using appropriate worksite procedures which including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - 2-way radio
  - active listening
  - demonstrating and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - whistles
  - written instructions
- maintaining three points of contact whilst accessing load surface area of vehicle loading crane and ensure rungs / steps are free of hazards
- completing the pre-start check including:
  - engine / mechanical fluid level checks as required by manufacturer requirements
  - presence of correct logbook
  - evidence of damage
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - fire extinguisher
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres and wheels for damage/wear and correct inflation
  - updating records as required
  - visual damage or equipment faults
- identifying, isolating, and tagging out defective equipment and reporting to authorised person/s
- inputting crane configuration into crane computer as required and checking operation to accurately reflect crane configuration
- carrying out operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operated
  - lifting gear movements and control functions are smooth and comply with lift plan
  - hazard warning systems, safety, audible and visual warning devices are checked for to ensure they are functional including:
    - reversing beepers
    - lights
    - horns
  - start-up is in accordance with manufacturer requirements and safe work procedures
  - there are no unusual noises
  - crane control functions comply with operating requirements
- determining any defects or faults with operation of crane and reporting to relevant person/s

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ensuring risk control measures within the work area are effective as per workplace procedures
- interpreting and confirming relevant documentation for the work task and relevant area
- monitoring load disconnection from hook is safe and ensuring no movement of controls
- applying relevant communication signals from associated personnel
- operating a vehicle loading crane of 10metre tonnes or greater configured to its rated capacity (RC) to lift and move four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
  - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
  - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling, and
  - an asymmetrical load that requires a dogger to sling, and
  - stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling
- applying relevant crane movements including:
  - boom/jib up and down (luffing)
  - catching load swing appropriately
  - positioning and using main and auxiliary hook and lifting gear to connect to load safely
  - raise and lower hoist
  - slew boom/jib
  - telescope in and out
- positioning vehicle loading crane in relevant area for next task
- setting up and validating an exclusion zone
- positioning the vehicle loading crane for safe operation for:
  - application of the task
  - manoeuvring in the workplace
  - stability of the vehicle loading crane and the load
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- shutting down a vehicle loading crane in accordance with manufacturer requirements and safe work procedures
- stabilising a vehicle loading crane for operation by:
  - correctly positioning plates or packing
  - deploying stabilisers
  - establishing correct size plates or packing in accordance with lift plan
  - levels are checked
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
  - slinging is correct
  - all crane equipment is functioning properly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - load centre of gravity is correct
    - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
    - load measuring equipment can be used to verify calculated weight of load
    - near capacity loads do not overload crane
- using communications signals including:
    - hoist down - hand and whistle and radio
    - hoist up - hand and whistle and radio
    - luff boom down - hand and whistle and radio
    - luff boom up - hand and whistle and radio
    - slew left - hand and whistle and radio
    - slew right - hand and whistle and radio
    - stop - hand and whistle and radio
    - telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
    - telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematical calculations to:
    - estimate loads
    - radius requirements
    - relevant lifting gear to perform work/task
- appropriate worksite communication procedures including:
    - listening
    - hand signals
    - questioning techniques
    - signage
    - two-way radios
    - written instructions
    - whistles
- characteristics and impact of factors affecting vehicle loading crane stability whilst moving loads including:
    - overloading
    - poor load placement
    - asymmetric loads
    - tyre deflation/condition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- crane, lifting gear load chart/s and manufacturer requirements
- lift impacting factors including:
  - centre of gravity
  - dynamic nature of load
  - flex/deflexion of load
  - length
  - radius of lift
  - weight
- set up of:
  - jib
  - fly jib (where fitted)
- hazards including:
  - pack up and crane stability, crane tipping and demolition sites
  - ground stability including ground condition, recently filled trenches and slopes
  - insufficient lighting
  - obstacles or obstruction
  - other specific hazards and dangerous materials
  - overhead hazards including:
    - electric lines
    - service pipes
    - fixed structures
    - vegetation (trees)
  - traffic including pedestrians, vehicles and other plant
  - operations on unusual, uneven or difficult terrains
- manufacturer requirements on stabiliser procedures
- manufacturer requirements and instructions on shutting down and packing up crane
- vehicle loading crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements and safe work / workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- prestart and operational checks required for a vehicle loading crane
- starting procedure of crane as per manufacturer requirements
- weather bureau forecasts and environmental conditions that could impact operation including:
  - lightning
  - wind
  - water impacted ground
  - Ultra Violet (UV) exposure
- problems and appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- stability of load and avoidance of hazards using best crane practice including:
  - allowing for boom deflection
  - boom/jib as low as possible
  - carrying load near to ground surface
  - crane stability
  - gently accelerating and braking on slew/boom to minimise load swing
  - lowering load safely onto appropriate dunnage taking into consideration swing and restrictions of area
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines as required
  - identification of incorrect sling of load
- workplace standards, requirements, policies and procedures for conducting operations for the vehicle loading crane
- work area suitability based on relevant ground reports including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - pre-contaminated soils
  - rock
  - rough uneven ground
  - soft soils

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Accredited assessors assessing for this HRWL on behalf of the regulator are responsible for ensuring candidates must have access to resources for assessment that must include access to:

- vehicle loading crane with a MRC of greater than 10 metre tonnes in safe/serviceable working order in accordance with manufacturers specifications
- appropriate loads as outlined in the performance evidence requirements
- appropriate personnel to sling and direct loads including:
  - dogger or rigger
- communications equipment including:
  - two-way radios
  - whistles
- relevant personal protective equipment (PPE)
- relevant documentation for operating a vehicle loading crane with an MRC of greater than 10 metre tonnes including:
  - approved codes of practice and guidance
  - Australian Standards
  - checklists
  - safe work operating procedures
  - relevant industry standards (where applicable)
  - logbook
  - manufacturer guidelines (instructions, specifications or checklists)
  - relevant workplace documentation

TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
	1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
	1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures
	1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures
	1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2 Prepare for work/task	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
	2.2	Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
	2.3	Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
	2.4	Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
	2.5	Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
	2.6	Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
	2.7	Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
	2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.9	Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
3 Perform work/task	**3.1**	Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.2	Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
	3.3	Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
	3.4	Unplanned and unsafe situations are responded to in accordance with safe work procedures
	3.5	Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
	3.6	Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4 Pack Up	**4.1**	Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
	4.2	Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
  - maintaining safe operating speed
  - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer requirements
  - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - document evidence of damage
  - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
  - ensuring availability of correct forklift truck logbook and updating records as required
  - ensuring forklift truck tynes or other attachment/s are securely fitted
  - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
  - fluid leaks
  - lights are working effectively
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - insufficient lighting
  - other specific hazards including dangerous goods
  - overhead hazards and fixed structures, roof beams and doorways
  - restricted and poorly ventilated areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - surface suitability based on forklift truck and task requirements
  - the risk of collision with people, moving plant and fixed structures
  - weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
  - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
  - recording and maintaining accurate information relating to forklift truck operations
  - safety devices as fitted
  - start-up is in accordance with manufacturer requirements
  - steering, transmission and brake functions comply with operating requirements
  - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
  - positioning of unusually balanced/shaped loads
  - centre of gravity
  - dynamic nature of load
  - tyne/attachment positioning
  - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
  - audible and visual warning devices
  - signage
  - two-way radio
  - verbal instructions
  - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
  - aligning tynes/attachment to load
  - carrying out a lift to 75% of the maximum height
  - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
  - correctly using horns and mirrors in workplace
  - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
  - driving applicable to conditions and moving loads safely
  - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
    - an 'S' bend with a minimum 90 degrees left and right turn
    - ensuring load/s remains stable through pick up, transport and placement
    - forklift truck speed is appropriate to load and surroundings
    - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
  - tilting mast (or forks if applicable) to ensure balance of load
  - using gluts/dunnage appropriately and lowering load safely
  - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
- reporting to relevant person/s on site risk control measures that are not in place or are deficient
- setting up an exclusion zone
- securely parking forklift truck and isolating in appropriate position including:
  - minimising possible access by unauthorised person/s
  - tynes/attachment lowered to required position in accordance with manufacturer requirements
  - park brake applied
  - switching off, isolating fuel/power source and removing key according to workplace procedures
- shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
  - audible and visual warning devices
  - hand signals
  - questioning techniques
  - signage
  - traffic warning systems
  - two-way radio
  - written instructions
- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
  - failure/loss of control including brakes and steering
  - failure of equipment during forklift truck operations
  - forklift truck instability causes including:
    - deterioration of ground condition
    - overloading
    - pick up and placement of load
    - irregular loads
  - operating on ramps and uneven surfaces and in restricted spaces
  - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
    - labels on the actual load
    - markings on the actual load
    - paperwork such as consignment notes, running sheets and weighbridge dockets
    - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
  - wind
  - lightning
  - water/ice impacted surface/ground
  - rain
  - extreme heat
  - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
  - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

including:

- gas bottle
- connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
- refuelling

- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
  - bale clamps
  - carpet spike for carpet rolls
  - drum carrier
  - jib attachment
  - paper roll clamps
  - personnel work platforms
  - rotators
  - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
  - backfilled ground
  - bitumen (damaged, cracked)
  - concrete (damaged, cracked)
  - hard compacted soil
  - potholes
  - railway tracks
  - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
  - soft soils
  - trench covers
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety

and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLILIC0004 Licence to operate an order picking forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate an order picking forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Order picking forklift truck means an order picking forklift truck where the operator controls are incorporated with the lifting media and elevate with the lifting media.

A person performing this work is required to hold an order picking forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating an order picking forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Elements and Performance Criteria

ELEMENTS		PERFORMANCE CRITERIA
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1**	Task requirements are identified from work orders or equivalent and confirmed with relevant people and a site inspection is conducted in accordance with workplace procedures
	1.2	All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures
	1.3	Order picking forklift truck is selected using relevant methodology in accordance with type and weight characteristics of load, workplace conditions, manufacturer specifications and workplace procedures
	1.4	Working area is inspected and appropriate paths for operating the order picking forklift truck and moving in work area are assessed and determined in accordance with workplace procedures
	1.5	Traffic management plan implementation is confirmed and understood in accordance with workplace procedures
	1.6	Appropriate communication procedures are identified and tested with relevant people in accordance with workplace procedures
	1.7	Work area operating surface is assessed to determine quality and suitability for operational use in accordance with workplace procedures
2 Prepare for work/task	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	2.2	Environmental work area conditions are assessed to determine any impact on order picking forklift truck positioning in accordance safe work procedures
	2.3	Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
	2.4	Order picking forklift truck is accessed in a safe manner in accordance with manufacturer specifications and safe work procedures
	2.5	Order picking forklift truck logbook is inspected and is correct for the order picking forklift truck, is completed, signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
	2.6	Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer specifications
	2.7	Prior to operation, order picking forklift truck and safety equipment for working at height is visually checked for any damage, defects are reported, recorded and appropriate action is taken in accordance with safe work procedures
	2.8	Order picking forklift truck is started and checked for any abnormal noise in accordance with manufacturer specifications and safe work procedures
	2.9	Operational checks including all safety device/s are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer specifications and safe work procedures
3 Perform work/task	**3.1**	Hazard prevention/control measures are implemented and communicated to people in the work area in accordance with safe work procedures
	3.2	Weight and positioning of load on platform is assessed to ensure compliance with order picking forklift truck data plate specifications in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		manufacturer specifications and safe work procedures
	3.3	Order picking forklift truck is operated safely in accordance with manufacturer specifications and safe work procedures
	3.4	Order picking forklift truck path and load/s are monitored constantly when moving, lowering and placing to ensure stability of material and avoidance of hazards in accordance with safe work procedures
	3.5	Loads are transported using all relevant order picking forklift truck movements in accordance with safe work procedures
	3.6	Unplanned and unsafe situations are responded to in accordance with safe work procedures
	3.7	Work is conducted safely at heights and fall arrest/restraint equipment is used safely and efficiently in accordance with safe work procedures
	3.8	Order picking forklift truck is parked and isolated appropriately in accordance with manufacturer specifications and safe work procedures
4 Pack up	**4.1**	Order picking forklift truck is shut down in accordance with manufacturer specifications and safe work procedures
	4.2	Order picking forklift truck is secured to prevent unauthorised access/use in accordance with legislative obligations and safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

Assessment Requirements for TLILIC0004 Licence to operate an order picking forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for an order picking forklift truck including:
  - maintaining safe operating speed
  - travelling with platform lowered to an appropriate height
- applying emergency procedures
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer specifications
  - checking data plate is relevant to the attachment being used on the order picking forklift truck
  - fluid level checks as required by manufacturer specifications
  - evidence of damage
  - ensuring availability of correct logbook and updating records as required
  - fluid leaks
  - lights are working effectively
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - structural weaknesses including paint separation or stressed welds
  - ensuring order picking forklift truck tynes or other attachment/s are securely fitted
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - order picking forklift truck instability due to overloading, poor load placement or irregular loads
  - operating surface conditions and obstructions
  - insufficient lighting
  - overhead hazards
  - restricted and poorly ventilated areas
  - the risk of collision with people, moving plant and fixed structures
- confirming and following traffic management plan procedures relevant to their role in the work area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- conducting operational checks including:
  - all controls are located, identified and tested for functionality
  - checks for adaptations or modifications outside manufacturer specifications that are not listed on the order picking forklift truck data plate
  - hazard warning systems including travel beepers, lights and horns are functional
- clarifying workplan and checking understanding
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and regulations
- conducting and monitoring safe order picking forklift truck operations that include:
  - correctly using horns
  - driving applicable to conditions and moving loads safely
  - driving an order picking forklift truck with load in forward and reverse, while maintaining visibility
  - order picking forklift truck speed is appropriate to load and surroundings
  - lowering load to appropriate height for transport
  - carrying out a lift with load to 75% of the maximum height
  - picking up, driving, manoeuvring and placing loads safely at various heights within a compliant racking system
- confirming traffic management plan is implemented
- connecting battery to charger and disconnecting battery from charger and reconnecting to order picking forklift truck
- demonstrating understanding of traffic management plan
- ensuring risk control measures within the work area are effective as per workplace procedures
- inspecting and using relevant safety equipment, including:
  - safety harness/es
  - energy absorber/s
  - lanyard/s
  - anchor point/s
- identifying, segregating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- maintaining communication with other workplace personnel through using appropriate worksite procedures which must include:
  - audible and visual warning devices
  - listening
  - two-way radio
  - questioning to confirm understanding
  - signage
  - written instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- positioning the order picking forklift truck for safe operation for:
  - application of the task
  - manoeuvring in the workplace
  - stability of the order picking forklift truck and the load
- recording and maintaining accurate information relating to order picking forklift truck operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- safety devices are checked, including:
  - safety gates and interlocks
  - emergency hydraulic descent device
  - deadman's switch
- securely parking order picking forklift truck and isolating in appropriate position to minimise possible access by unauthorised person/s including:
  - tynes/attachment/work platform lowered to ground
  - hand/park brake applied
  - switched off and key removed according to manufacturer specifications and workplace procedures
- setting up and validating an exclusion zone
- shutting down an order picking forklift truck in accordance with manufacturer specifications and workplace procedures ensuring access ways are clear
- start-up is in accordance with manufacturer requirements
- steering, transmission and brake functions comply with operating requirements and there are no unusual noises
- verifying problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations
- working safely at heights using relevant Personal Protective Equipment (PPE) safely and efficiently

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate an order picking forklift truck
- appropriate worksite communication protocols including:
  - audible and visual warning devices
  - hand signals
  - questioning techniques
  - 2-way radio
  - signage
  - traffic warning systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - written instructions
- hazards including:
    - all operating surface hazards
    - traffic including pedestrians, vehicles, other mobile plant and fixed structures
    - overhead hazards including:
        - electric lines
        - service pipes
        - doorways
        - roof beams
        - lights
        - fixed structures
    - obstacles or obstructions
    - insufficient lighting
    - other specific hazards including falling from platform and dangerous goods
- impact of the following on the operation of the order picking forklift truck including:
    - loss of control of brakes and/or steering
    - failure of equipment including hydraulic system
    - order picking forklift truck instability including:
        - deterioration of operating surface condition
        - overloading
        - picking and placing of irregular loads
- lock out and tag out procedures
- methodology and appropriate mathematical procedures to estimate loads or determination from labels, markings or load paperwork
- manufacturer specifications, instructions and operator's manual
- order picking forklift truck characteristics and capabilities, manufacturer specifications and instructions for any attachments
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
    - wind
    - water/ice impacted ground
    - slippery surfaces
    - sun glare
- procedures for connecting battery to charger and disconnecting battery from charger and reconnecting to order picking forklift truck
- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - administrative controls
  - personal protective equipment (PPE)
- relevant documentation requirements
- risk control measures including barricades and traffic control
- traffic management plan procedures and requirements
- typical routine problems encountered operating an order picking forklift truck and equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including:
  - unusual and cracked surfaces
  - uneven surfaces
  - steel decks and grates
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislative obligations and responsibilities
- working at height procedures and relevant PPE

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable order picking forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- suitable stock and compliant racking system to pick loads from
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and guidance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant Australian technical standards
- manufacturer guidance material (instructions, specifications or checklists)
- relevant industry standards and operating procedures (where applicable)

TLILIC0006 Licence to operate a bridge and gantry crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate bridge cranes and gantry cranes safely. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

A person undertaking this unit must hold:

- a current National High-Risk Work Licence (HRWL) to perform dogging or a certification for a specific VET course for HRWL to perform dogging

Bridge crane means a crane that:

- consists of a bridge beam or beams, that are mounted to end carriages at each end, and
- can travel along elevated runways, and
- has 1 or more hoisting mechanisms arranged to traverse across the bridge.

Gantry crane means a crane that:

- consists of a bridge beam or beams supported at one or both ends by legs mounted to end carriages, and
- can travel on supporting surfaces or deck levels, whether fixed or not, and
- has a crab with 1 or more hoisting units arranged to travel across the bridge

This unit applies to the activities of a person operating bridge crane or gantry crane that is:

- controlled from a permanent cabin or control station on the crane, or
- remotely controlled and having more than 3 powered operations

A person performing this work is required to hold a bridge and gantry crane HRWL.

This unit requires a person operating a bridge crane or gantry crane to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- Pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and site inspection in accordance with workplace procedures
	1.2 Working area is inspected and appropriate paths for operating the bridge and gantry crane and moving/placing load/s in work area are assessed and determined in accordance with workplace procedures
	1.3 Work area operating surface is assessed to determine the quality of ground suitability for operational gantry crane in accordance workplace procedures
	1.4 Bridge and gantry crane Rated Capacity (RC) and lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer specifications and workplace procedures
	1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to relevant person/s in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed and followed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.7	Appropriate communication procedures are identified, tested with associated personnel in accordance workplace procedures
	1.8	All tasks are confirmed to ensure requirements for the relevant work area in accordance with workplace procedures
2 Prepare for work/task	**2.1**	Consultation with workplace personnel is established and maintained to ensure all crane and lifting operations are clear and consistent with site requirements in accordance with a lift plan and workplace procedures
	2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
	2.3	Bridge and gantry crane is accessed safely in accordance with manufacturer specifications and safe work procedures
	2.4	Pre-start bridge and gantry crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer specifications
	2.5	Bridge and gantry crane is set up and rigged correctly with any lifting gear as per lift plan in accordance with relevant manufacturer specifications including load chart/s and safe work procedures
	2.6	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer specifications and safe work procedures
	2.7	All controls are located, identified and tested in accordance with relevant manufacturer specifications and safe work procedures
	2.8	Crane logbook is inspected and is correct for the crane and type and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
	2.9	Weather and work environment conditions are assessed to determine any impact on bridge and gantry crane operations in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3 Perform work/task	**3.1**	Lifts are determined within the RC of the bridge and gantry crane in accordance with load chart/s and lift plan
	3.2	Hook block is safely positioned over the load in accordance with safe work procedures and if crane is controlled from cabin following directions from associated personnel
	3.3	Lifting gear is connected to load and used safely in accordance with the lift plan and safe work procedures
	3.4	Test lift is carried out in accordance with dogging and safe work procedures
	3.5	Loads are transferred using relevant bridge and gantry crane movements and tag lines as required, in accordance with lift plan and safe work procedures
	3.6	Load and bridge and gantry crane movement is monitored constantly and operated safely in accordance with lift plan and safe work procedures
	3.7	All required communications signals are correctly interpreted and followed whilst crane is operated in accordance with safe work procedures
	3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
	3.9	Lifting gear is disconnected from load and positioned safely and efficiently for next task in accordance with lift plan and safe work procedures
4 Pack up	**4.1**	Bridge and gantry crane is parked in accordance with manufacturer specifications and safe work procedures
	4.2	Bridge and gantry crane lifting gear and associated equipment is stowed and secured in accordance with safe work procedures
	4.3	Relevant motion locks and brakes are applied as required in accordance with manufacturer specifications and safe work procedures
	4.4	Bridge and gantry crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.5 Post operational bridge and gantry crane checks are carried out in accordance with safe work procedures and manufacturer specifications

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC3003 Licence to operate a bridge and gantry crane

Links

Assessment Requirements for TLILIC0006 Licence to operate a bridge and gantry crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with the rated capacity to determine relevant lifting gear to perform work/task
- applying and interpreting crane manufacturer requirements and data, including load charts, to enable crane to be configured for load
- applying relevant crane movements including:
  - catching load swing appropriately
  - positioning and using lifting attachment and lifting gear to connect to load safely
  - raise and lower hoist
- applying relevant communication signals from associated personnel
- conducting and applying risk and hazard assessment strategies including:
  - confirming work area operating surface suitability based on crane and task requirements
  - travelling surfaces are clear of debris and in serviceable condition
  - overloading
  - lifting and placing of load
  - asymmetric loads
  - overhead hazards
  - restricted and poorly ventilated areas
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - weather conditions
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures
- communicating with other workplace personnel through using appropriate worksite protocols including:
  - 2-way radio
  - listening
  - making and interpreting hand signals

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - questioning to confirm understanding
  - signage
  - verbal language
  - visual aids
  - whistles
  - written instructions
- completing the pre-start check including:
  - presence of correct logbook
  - evidence of damage
  - pendant wiring not frayed or damaged (if applicable)
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - emergency evacuation rescue plan in place
  - mirrors and seat are adjusted appropriately
  - safety equipment checks
  - fire extinguisher
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres/wheels for damage/wear and rail conditions are serviceable
  - visual damage or equipment faults
- completing operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operated
  - Lifting gear movements and control functions are smooth and comply with operating requirements
  - hazard warning systems, safety, audible and visual warning devices including travel alarms, lights and horns are functional
  - start-up is in accordance with manufacturer requirements and workplace procedures
  - there are no unusual noises
  - long and cross travel, transmission and brake functions comply with operating requirements
- confirming and following traffic management plan procedures relevant to their role in the work area
- controlling the load and attachments including:
  - rotation of load, or magnetic or vacuum lifting attachment or grab attachment or multiple non-synchronised hoists operated simultaneously but independently
  - long and cross travel
  - positioning crane in relevant area for next task
- determining any defects or faults with operation of crane and reporting to relevant personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ensuring risk control measures within the work area are effective as per workplace procedures
- ensuring stability of load and avoidance of hazards by applying best crane practice including:
  - lifting attachment and lifting gear as low as possible
  - carrying load near to ground surface
  - accelerating and braking to minimize load swing
  - lowering load onto appropriate dunnage safely taking into consideration swing and restrictions of area
  - minimum speed
  - using handheld taglines
- following directions of dogger or rigger when load is outside vision of operator or lift plan determines it
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and confirming relevant documentation for the work task and relevant area
- interpreting and acting on communications signals including:
  - hoist down - hand, whistle and radio
  - hoist up - hand, whistle and radio
  - traverse (trolley) travel - hand, whistle and radio
  - long (bridge) travel - hand, whistle and radio
  - creep - hand, whistle and radio
  - stop - hand, whistle and radio
- maintaining three points of contact whilst accessing crane and ensure rungs / steps are free of hazards if applicable
- monitoring load disconnection from hook/lifting gear is safe and ensuring no movement of controls
- operating a bridge or gantry crane configured to lift and move four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
  - a load at least 10% of the Maximum Rated Capacity (MRC) of the crane, and
  - A round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling, and
  - an asymmetrical load that requires a dogger to sling, and
  - stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling
- positioning the crane for safe operation for:
  - application of the task
  - manoeuvring in the workplace
  - stability of the crane and the load
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- setting up and validating an exclusion zone

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- shutting down a bridge and gantry crane in accordance with manufacturer requirements and workplace procedures
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
  - slinging is correct
  - all crane equipment is functioning properly
  - load centre of gravity is correct
  - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
  - load measuring equipment can be used to verify calculated weight of load
  - near capacity loads do not overload crane
- using two-way radio communication during movement of load

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate workplace communication procedures including:
  - bells
  - buzzers
  - listening
  - hand signals
  - questioning techniques
  - signage
  - two-way radios
  - written instructions
  - whistles
- bridge and gantry crane characteristics and capabilities
- crane configuration mathematical calculations to:
  - estimate loads
  - relevant lifting accessories to perform work/task
- crane and lifting gear load chart/s and manufacturer requirements
- hazards including:
  - erection and pack up
  - crane stability
  - ground stability and condition including recently filled trenches and slopes
  - insufficient lighting
  - obstacles or obstruction
  - other specific hazards and dangerous materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - overhead hazards including:
        - electric lines
        - service pipes
        - structures
    - traffic including pedestrians, vehicles and other plant
    - operations on unusual, uneven or difficult terrains
- lift impacting factors including:
    - centre of gravity
    - dynamic nature of load
    - flex/deflexion of load
    - length
    - weight
- manufacturer requirements and instructions on shutting down crane
- problems and application of appropriate response procedures to unplanned and/or unsafe situations and environmental conditions including:
    - wind, lightning and storms
    - failure of equipment
    - failure/loss of control including brakes
    - obstacles and obstructions
- prestart and operational checks required for a bridge and gantry crane
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational health and Safety (OHS)/Occupational Safety and Health (OSH) requirements and safe work / workplace procedures
- starting procedure of crane as per manufacturer requirements
- weather bureau forecasts and associated information and environmental conditions that could impact operation including:
    - lightning
    - rain
    - wind
    - water impacted ground
    - Ultra Violet (UV) exposure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace standards, requirements, policies and procedures for conducting operations for the bridge and gantry crane

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions

- Simulators must **not** be used in the assessment of this unit of competency.

Resources for equipment must include:

- access to a bridge and gantry crane in safe/serviceable working order and have the following characteristics:
  - appropriate bridge crane, a bridge beam mounted at each end to an end carriage, capable of travelling along elevated runways and having one or more hoisting mechanisms arranged to traverse across the bridge
  - appropriate gantry crane, a bridge beam, supported at each end by legs mounted on end carriages, capable of travelling on supported surfaces or deck levels, whether fixed or not, which has a crab with one or more hoisting units arranged to travel across the bridge
  - if remote controlled crane must have more than three powered operations that includes:
    - rotation of load, or
    - magnetic or vacuum lifting attachment, or
    - grab attachment, or
    - multiple hoists operated simultaneously but independently
- appropriate loads as outlined in the performance evidence requirements
- associated personnel to sling and direct loads including:
  - dogger or rigger
- communications equipment including:
  - bells
  - buzzers
  - two-way radios
  - whistles
- relevant personal protective equipment (PPE)
- safety devices including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - audible and visual travel devices
  - horns/sirens
  - lights
- where appropriate, relevant workplace procedures and standards for operating a bridge and gantry crane including:
  - approved codes of practice and guidance
  - Australian Standards
  - checklists
  - safe work operating procedures
  - relevant industry standards (where applicable)
  - logbook
  - manufacturer guidelines (instructions, specifications or checklists)
  - relevant workplace documentation

TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a non-slewing mobile crane with a Maximum Rated Capacity (MRC) exceeding 3 tonnes safely, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

A person undertaking this unit must hold:

- a current National High-Risk Work Licence (HRWL) or a certification for a specific VET course for HRWL to perform dogging

Non-slewing mobile crane means a mobile crane incorporating a boom or jib that cannot be slewed, and includes:

- an articulated mobile crane
- a locomotive crane
- but does not include vehicle tow trucks.

A person performing this work is required to hold a non-slewing mobile crane HRWL.

This unit requires a person operating non-slewing mobile crane with an MRC exceeding 3 tonnes to:

- plan the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is confirmed to determine the quality of ground suitability for operational use of non-slewing mobile crane in accordance with workplace procedures
	1.3 Non-slewing mobile crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
	1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed and followed in accordance with workplace procedures
	1.7 Appropriate communication procedures are identified and tested with associated personnel in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.8	All tasks are confirmed to ensure requirements for the relevant work area in accordance with a lift plan and workplace procedures
2 Prepare for work/task	**2.1**	Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
	2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
	2.3	Non-slewing mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
	2.4	Pre-start crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.5	Mobile crane is set up correctly with any lifting gear as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
	2.6	Fly jib (if fitted) is set up as required in accordance with specific manufacturer requirements and safe work procedures
	2.7	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.8	Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
	2.9	Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
3 Perform work/task	**3.1**	Lifts are determined within the RC of the non slewing mobile crane in accordance with the load chart/s and lift

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		plan
	3.2	Boom/jib and hook block is safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
	3.3	Lifting gear where required is connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
	3.4	Test lift is carried out in accordance with dogging and safe work procedures
	3.5	Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
	3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
	3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
	3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
	3.9	Lifting gear is disconnected from load and crane is positioned safely and efficiently for next task in accordance with lift plan and safe work procedures
4 Pack Up	**4.1**	Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures
	4.2	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
	4.3	Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
	4.4	Post-operational crane checks are carried out in accordance with legislative responsibilities, safe work procedures and manufacturer requirements

Assessment Requirements for TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart, radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
  - boom
  - fly-jib (where fitted)
  - line pull
  - mobiling
  - type of hook
  - side slope derations
  - articulation derations
- applying relevant crane movements including:
  - boom/jib up and down (luffing)
  - positioning and using main and auxiliary hook and lifting gear to connect to load safely
  - raise and lower hoist
  - telescope in and out
  - travel and articulating (as required)
- communicating with other workplace personnel through using appropriate worksite procedures including:
  - 2-way radio
  - listening
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - verbal language
  - visual aids
  - whistles
  - written instructions
- complying with Commonwealth, state and territory Work Health and Safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

(WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures

- completing the pre-start check including:
  - battery power level as required by manufacturer requirements
  - engine / mechanical fluid level checks as required by manufacturer requirements
  - presence of correct logbook
  - evidence of damage
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - mirrors and seat are adjusted appropriately
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres and wheels for damage/wear and correct inflation (Water/Air)
  - updating records as required
  - visual damage or equipment faults
- conducting and applying risk and hazard strategies including:
  - confirming work area operating surface suitability based on crane and task requirements
  - articulation of crane
  - dynamic loads
  - ground conditions including surface and slopes
  - impact of tyre inflation/condition
  - load swing
  - overloading
  - pick and placement of load
  - asymmetric loads
  - overhead hazards
  - restricted site/s and poorly ventilated area/s
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - weather conditions
- completing operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operated
  - lifting gear movements and control functions are smooth and comply with lift plan
  - hazard warning systems, safety, audible and visual warning devices are checked to ensure they are functional including:
    - reversing beepers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - lights
    - horns
    - crane computer alarm (where fitted)
    - anti-two block alarms (where fitted)
  - start-up is in accordance with manufacturer requirements and workplace procedures
  - there are no unusual noises
  - steering, transmission and brake functions comply with operating requirements
- confirming and following traffic management plan procedures relevant to crane operator role in the work area
- determining any defects or faults with operation of crane and reporting to relevant person/s
- ensuring risk control measures within the work area are effective as per workplace procedures
- ensuring stability of load and avoidance of hazards by applying best mobile practice including:
  - allowing for boom deflection
  - boom/jib as low as possible
  - boom/jib in line with crane
  - carrying load near to ground surface
  - crane stability whilst manoeuvring load into position with drive/steering wheels and articulating as required
  - gently accelerating and braking to minimise load swing
  - lowering load safely and stably onto appropriate dunnage taking into consideration swing and restrictions of area
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines/bridling
- following directions of dogger or rigger
- interpreting and confirming relevant documentation for the work task and relevant area
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals including:
  - hoist down - hand and whistle and radio
  - hoist up - hand and whistle and radio
  - luff boom down - hand and whistle and radio
  - luff boom up - hand and whistle and radio
  - articulate left - hand and whistle and radio
  - articulate right - hand and whistle and radio
  - stop - hand and whistle and radio
  - telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
  - telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - travel - hand and radio
- maintaining three points of contact whilst accessing crane and ensure rungs / steps are free of hazards
- monitoring load disconnection from hook is safe and ensuring no movement of controls
- observing relevant communication signals from relevant person
- operating an articulated non-slewing mobile crane with a rated capacity (RC) of 12 tonnes or greater to lift four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
  - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
  - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling, and
  - an asymmetrical load that requires a dogger to sling, and
  - travelling with a load of stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling and a boom length of <75%
- positioning the non-slewing mobile crane for safe operation for:
  - application of the task
  - manoeuvring in the workplace
  - aligning of crane boom to the load
  - stability of the non-slewing mobile crane and the load whilst driving to load set down position
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- setting up of:
  - fly jib (where fitted)
  - manual boom section (where fitted)
- setting up and validating an exclusion zone
- shutting down a non-slewing mobile crane in accordance with manufacturer requirements and workplace procedures
- stabilising a non-slewing mobile crane for operation by ensuring level and articulation (if required) is checked and within deration load chart requirements
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
  - slinging is correct
  - all crane equipment is functioning properly
  - load centre of gravity is correct
  - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
  - load measuring equipment can be used to verify calculated weight of load
  - near capacity loads do not overload crane

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate worksite communication procedures including:
  - listening
  - hand signals
  - questioning techniques
  - signage
  - two-way radios
  - written instructions
  - whistles
- crane configuration mathematical calculations to:
  - estimate loads
  - establish counterweight/s requirements (where fitted)
  - radius requirements
  - relevant lifting gear to perform work/task
- characteristics and impact of factors affecting non-slewing mobile crane stability whilst mobiling loads including:
  - side slope derations
  - articulation derations of crane
  - correct tyre pressure (inflation/condition)
  - driving safely on roadways
  - pick up and carry the load
- crane and lifting gear load chart/s and manufacturer requirements
- lift impacting factors including:
  - centre of gravity
  - dynamic nature of load
  - deflection of boom
  - length
  - radius of lift
  - weight
  - side slope derations
  - articulation derations of crane
  - tyre inflation pressures
- hazards including:
  - pack up and crane stability, crane tipping and demolition sites
  - ground stability including ground condition, recently filled trenches and slopes
  - insufficient lighting
  - obstacles or obstruction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - catching load swing appropriately
  - other specific hazards and dangerous materials
  - overhead hazards including:
    - electric lines
    - service pipes
    - fixed structures
    - Vegetation (Trees)
  - traffic including pedestrians, vehicles and other plant
  - operations on unusual, uneven or difficult terrains
- impact of factors affecting non-slewing mobile crane stability including:
  - overloading
  - pick up and placement of load
  - unbalanced loads
  - articulation of crane
  - correct tyre pressures (inflation/condition)
  - side slope derations
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile non-slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational health and Safety (OHS)/Occupational Safety and Health (OSH) requirements and safe work/workplace procedures
- prestart and operational checks required for a non-slewing mobile crane
- starting procedure of crane as per manufacturer requirements
- set up of:
  - jib
  - fly jib (where fitted)
  - manual boom section (where fitted)
- weather bureau forecasts and environmental conditions that could impact operation
- workplace standards, requirements, policies and procedures for conducting operations for the mobile non-slewing crane

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- problems and applying appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- work area suitability based on relevant ground reports including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - pre-contaminated soils
  - rock
  - rough uneven ground
  - soft soils

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- non-slewing articulated mobile crane with an MRC greater than 12 tonnes in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the performance evidence requirements
- associated personnel to sling and direct loads including:
  - dogger or rigger
- communications equipment including:
  - two-way radios
  - whistles
- personal protective equipment (PPE)
- relevant documentation for operating a non-slewing mobile crane over 3 tonnes including:
  - approved codes of practice and guidance
  - Australian Standards
  - checklists

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industry operating procedures
- relevant industry standards (where applicable)
- logbook
- manufacturer guidelines (instructions, specifications or checklists)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor **1**)

1.1) Descriptor

This unit specifies the mandatory requirements of occupational health and safety and how they apply to the various electrotechnology work functions. It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Prerequisite Unit(s) **2**)

2.1) **Competencies**

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills **3**)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit **4**)

This unit addresses information, processes and techniques for the application of general occupational health and safety requirements in workplaces and is essential for employees without managerial or supervisory responsibilities

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to enter a	1.1 Work area access permits are obtained from appropriate personnel according to established

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
work area		procedures
	1.2	Safe work methods for controlling risk obtained, read and understood prior to undertaking a work activity.
	1.3.	Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process control according to established procedures.
	1.4	Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
2 Apply safe working practices.	2.1	Safe work methods for controlling risk are followed accurately.
	2.2	Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
3. Follow workplace procedures for hazard identification and risk control	3.1	Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
	3.2	Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
	3.3	OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
	3.4	Workplace instructions and training are followed accurately within established procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in the workplace.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE101A Occupational Health and Safety principles

Evidence shall show an understanding of Occupational Health and Safety to an extent indicated by the following aspects

T1 The basic legal requirements covering occupational health and safety in the workplace encompassing:

- underlying principles of OH&S
- general aims and objectives of the relevant state or territory legislation relating to OH&S.
- employer and employee responsibilities, rights and obligations.
- major functions of safety committees and representatives.
- powers given to Occupational Health and Safety Inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations

T2 The work environment encompassing:

- typical hazards associated with a range of work environments
- procedures used to control the risks associated with these hazards
- principles of risk assessment / management and state the purpose of each.
- hierarchy of OH&S hazard control measures.
- required documentation for risk assessment.
- commonly used workplace safety signs.
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation.
- appropriate fire extinguisher for a given type of fire.
- requirements for the location, mounting and maintenance of portable fire extinguishers.
- basic process of fighting a fire.
- Importance of safe premises, buildings and security in an industrial setting and the consequences of non- compliance.
- standard work procedure.

T3 Manual Handling encompassing:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- typical manual handling injuries and the effect they can have on lifestyle
- situations that may cause manual handling injuries
- correct procedures for lifting and carrying to prevent manual handling injuries

T4 Chemicals in the workplace encompassing:

- hazardous substances and dangerous goods.
- classification of chemicals as hazardous substances and/or dangerous goods
- requirements for labelling of chemicals in the workplace
- safe storage procedures for chemicals
- purpose and interpretation of material safety data sheet (MSDS)

T5 Working at heights encompassing:

- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms.

T6 Confined spaces encompassing:

- hazards associated with working in a confined space
- identifying workplace situations that could be classified as a confined space
- control measures for working in a designated confined space

T7 Physical and psychological hazards encompassing:

- short and long term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
- effects of vibration on the human body and work practices to protect against vibration
- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation.
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger.
- occupational overuse syndrome, how it occurs and means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace

T8 Working safely with electricity encompassing:

- effects of electric shock on the human body

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- common causes of electrical accidents
- precautions that can minimise the chance of electric shock (earthing, extra low voltage, fuses, circuit breakers and residual current devices – RCDs)
- protection offered by a residual current device (RCD)
- need for ensuring the (safe) isolation of an electrical supply
- appropriate method of removing an electric shock victim from a live electrical situation

T9 Life support - CPR in the workplace encompassing:

- First Aid.
- responsibilities of the First Aider.
- priorities of first aid management for any accident or injury.
- procedures required at an accident scene.
- legal and ethical issues, which may impact on the management of care.
- 'Duty of Care'.
- examination of a casualty for injuries.
- effect of cardio pulmonary arrest on the body.
- Managing simulated conditions of: airway obstruction; respiratory arrest and cardio pulmonary arrest,
- single and two-person cardio pulmonary resuscitation (CPR).
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness.
- signs and symptoms of shock.
- management of simulation of a casualty in shock

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1**) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement encompassing:
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Applying OHS practices in the workplace as described in 8) and including:

A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.

B Understanding and following risk control safe work methods.

C Applying work procedures and instructions as they apply to risk control measures.

D Dealing with accidents and emergencies within the scope of responsibility.

E Participation in consultation processes, identifying hazards and implementing and monitoring control measures.

F Dealing with unplanned events

Note:
Ability to implement these Occupation Health and Safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

measures shall be demonstrated on all occasions safety issues arise.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying OHS practices in the workplace.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to each of the following

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Accepted industry work procedures and the specific safety procedures and work instructions for particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Custom Content Section

Competency Field 5)

UEENEEE104A Solve problems in d.c. circuits

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor **1**)

1.1) Descriptor

This unit covers determining correct operation of single source d.c. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pre-Requisites

Prerequisite Unit(s) **2)**

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace

Employability Skills Information

Employability Skills **3)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit **4)**

4.1) General Application

This unit applies to competency development entry-level employment based programs incorporated in approved contracts of training.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe
the essential outcomes

of a unit of competency

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to work on d.c. electrical circuits.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	OHS risk control work preparation measures and procedures are followed.
		1.3	The nature of the circuit problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
		1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
		1.5	Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
		1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2	Solve d.c. circuit problems.	2.1	OHS risk control work measures and procedures are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.4	Established methodological techniques are used to solve d.c. circuit problems from measure and calculated values as they apply to electrical circuit.
		2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
		2.6	Problems are solved without damage to apparatus,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
		circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in d.c. circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE104A Direct current circuits

Evidence shall show an understanding of electrical fundamentals and direct current multiple path circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- electrotechnology industry
- static and current electricity
- production of electricity by renewable and non renewable energy sources
- transportation of electricity from the source to the load via the transmission and distribution systems
- utilisation of electricity by the various loads
- basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

T2 Basic electrical circuit encompassing:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- purpose of each component in the circuit
- effects of an open-circuit, a closed-circuit and a short-circuit
- multiple and sub-multiple units

T3 Ohm's Law encompassing:

- basic d.c. single path circuit.
- voltage and currents levels in a basic d.c. single path circuit.
- effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path relationship between voltage and current from measured values in a simple circuit
- determining voltage, current and resistance in a circuit given any two of these quantities
- graphical relationships of voltage, current and resistance
- relationship between voltage, current and resistance

T4 Electrical power encompassing:

- relationship between force, power, work and energy
- power dissipated in circuit from voltage, current and resistance values
- power ratings of devices
- measurement electrical power in a d.c. circuit
- effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- typical uses of the effects of current
- mechanisms by which metals corrode
- fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- basic principles of producing an emf from the heating of one junction of a thermocouple.
- basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- basic principles of generating a emf when a mechanical force is applied to a crystal (piezo electric effect)
- principles of producing a electrical current from primary, secondary and fuel cells

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- input, output, efficiency or losses of electrical systems and machines
- effect of losses in electrical wiring and machines
- principle of conservation of energy

T7 Resistors encompassing:

- features of fixed and variable resistor types and typical applications
- identification of fixed and variable resistors
- various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- characteristics of temperature, voltage and light dependent resistors and typical applications of each
- power ratings of a resistor.
- power loss (heat) occurring in a conductor.
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- measurement of resistance of a range of variable' resistors under varying conditions of light, voltage, temperature conditions.
- specifying a resistor for a particular application.

T8 Series circuits encompassing:

- circuit diagram of a single-source d.c. 'series' circuit.
- Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- applications where 'series' circuits are used in the Electro technology industry.
- characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between voltage drops and resistance in a simple voltage divider network.
- setting up and connecting a single-source series dc circuit
- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open-circuit on a series connected circuit

T9 Parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'parallel' circuit.
- major components of a 'parallel' circuit (power supply, loads, connecting leads and switch)
- applications where 'parallel' circuits are used in the Electrotechnology industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics of a 'parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'parallel' circuit).
- relationship between currents entering a junction and currents leaving a junction
- relationship between branch currents and resistances in a two branch current divider network.
- calculation of the total resistance of a 'parallel' circuit.
- calculation of the total current of a 'parallel' circuit.
- Calculation of the total voltage and the individual voltage drops of a 'parallel' circuit.
- setting up and connecting a single-source d.c. parallel circuit
- resistance, voltage and current measurements in a single-source parallel circuit
- voltage, current, resistance or power dissipated from measured values of any of these quantities
- output current and voltage levels of connecting cells in parallel.

T10 Series/parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'series/parallel' circuit.
- major components of a 'series/parallel' circuit (power supply, loads, connecting leads and switch)
- applications where 'series/parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'series/parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'series/parallel' circuit).
- relationship between voltages, currents and resistances in a bridge network.
- calculation of the total resistance of a 'series/parallel' circuit.
- calculation of the total current of a 'series/parallel' circuit.
- calculation of the total voltage and the individual voltage drops of a 'series/parallel' circuit.
- setting up and connecting a single-source d.c. series/ parallel circuit
- resistance, voltage and current measurements in a single-source d.c. series / parallel circuit
- the voltage, current, resistances or power dissipated from measured values of any two of these quantities

T11 Factors affecting resistance encompassing:

- four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
- affect the change in the type of material (resistivity) has on the resistance of a conductor.
- affect the change in 'length' has on the resistance of a conductor.
- affect the change in 'cross-sectional area' has on the resistance of a conductor.
- effects of temperature change on the resistance of various conducting materials
- effects of resistance on the current-carrying capacity and voltage drop in cables.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
- using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome, tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature.

T12 Effects of meters in a circuit encompassing:

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
- measuring resistance using direct, volt-ammeter and bridge methods.
- instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used.
- hazards involved in using electrical instruments and the safety control measures that should be taken.
- operating characteristics of analogue and digital meters.
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error.
- types of voltmeters used in the Electrotechnology industry – bench type, clamp meter, Multimeter, etc.
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter.
- types of voltage indicator testers. e.g. LED, neon, solenoid, volt-stick, series tester, etc. and explain the purpose of each voltage indicator tester.
- operation of various voltage indicator testers.
- advantages and disadvantages of each voltage indicator tester.
- various types of ammeters used in the Electrotechnology industry – bench, clamp meter, multimeter, etc.
- purpose of an ammeter and the correct connection (series) of an ammeter into a circuit.
- reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity.
- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings.
- loading effect of various voltmeters when measuring voltage across various loads.
- using voltage indicator testers to detect the presence of various voltage levels.
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings.

T13 Resistance measurement encompassing:

- Identification of instruments used in the field to measure resistance (including

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

insulation resistance) and the typical circumstances in which they are used.

- the purpose of an Insulation Resistance (IR) Tester.
- the parts and functions of various analogue and digital IR Tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads).
- reasons why the supply must be isolated prior to using the IR tester.
- where and why the continuity test would be used in an electrical installation.
- where and why the insulation resistance test would be used in an electrical installation.
- the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c and 1000 V d.c
- AS/NZS3000 Wiring Rules requirements – continuity test and insulation resistance (IR) test.
- purpose of regular IR tester calibration.
- the correct methods of storing the IR tester after use
- carry out a calibration check on a IR Tester
- measurement of low values of resistance using an IR tester continuity functions.
- measurement of high values of resistance using an IR tester insulation resistance function.
- volt-ammeter (short shunt and long shunt) methods of measuring resistance.
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- measurement of resistance using volt-ammeter methods

T14 Capacitors and Capacitance encompassing:

- basic construction of standard capacitor, highlighting the: plates, dielectric and connecting leads
- different types of dielectric material and each dielectric's relative permittivity.
- identification of various types of capacitors commonly used in the Electrotechnology industry (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and Variable value capacitors – tuning and trimmer)
- circuit symbol of various types of capacitors: standard; variable, trimmer and polarised
- terms: Capacitance (C), Electric charge (Q) and Energy (W)
- unit of: Capacitance (Farad), Electric charge (Coulomb) and Energy (Joule)
- factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent.
- how a capacitor is charged in a d.c. circuit.
- behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves
- the term 'Time Constant' and its relationship to the charging and discharging of a capacitor.
- calculation of quantities from given information: Capacitance (Q = VC); Energy (W

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

=½CV2); Voltage (V = Q/C)

- calculation one time constant as well as the time taken to fully charge and discharge a given capacitor. ($\tau = RC$)
- connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit

T15 Capacitors in Series and Parallel encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- safe handling and the correct methods of discharging various size capacitors
- dangers of a charged capacitor and the consequences of discharging a capacitor through a person
- factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- effects of capacitors connected in parallel by calculating their equivalent capacitance.
- effects on the total capacitance of capacitors connected in series by calculating their equivalent capacitance.
- Connecting capacitors in series and/or parallel configurations to achieve various capacitance values.
- common faults in capacitors.
- testing of capacitors to determine serviceability.
- application of capacitors in the Electrotechnology industry.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for

EVIDENCE GUIDE

apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Solving problems in d.c. circuits as described in 8) and including:

    A Using methodological techniques to solve d.c. circuit problems from measure and calculated values

    B Determining the operating parameters of an existing circuit.

    C Altering an existing circuit to comply with specified operating parameters.

    D Developing circuits to comply with a specified function and operating parameters.

    E Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the

EVIDENCE GUIDE

	approved industry simulation policy. The resources used for assessment should reflect current industry practices in relation to solving problems in d.c. circuits.
Method of assessment	**9.4**) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'. Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.
Concurrent assessment and relationship with other units	**9.5**) There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to single source series, parallel and series-parallel d.c. circuits as they apply to problems related to installation, fault finding, maintenance or development work functions and at least two of the following types of circuit problems and on more than one occasions:

- Determining the operating parameters of an existing circuit
- Altering an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1**)

1.1) Descriptor

This unit covers the use of drawings, diagrams, cable schedules, standards, codes and specifications as they apply to the various electrotechnology work functions. It encompasses the rudiments for communicating with schematic, wiring and mechanical diagrams and equipment and cable/connection schedules, manuals, site and architectural drawings and plans showing the location of services, apparatus, plant and machinery and understanding the use and format of compliance standards and job specifications.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to use drawings, diagrams, schedules and manuals.	1.1	Established OHS risk control measures and procedures are followed.
		1.2	The need for drawings, diagrams, schedules or manuals is determined from the nature of the work to be undertaken.
		1.3	Established routines and procedures are followed to obtain drawings, diagrams, schedules or manuals required for the work to be undertaken.
2	Use drawings, diagrams, schedules and manuals to obtain job information.	2.1	Drawings, diagrams, schedules and/or manuals are selected, appropriate to the work being undertaken.
		2.2	Drawings, diagrams and schedules are interpreted using knowledge of drawing layouts, conventions and symbols.
		2.3	Dimensions are extracted from drawings and diagrams for application to work undertaken.
		2.4	Location of equipment is determined from equipment schedules and location diagrams.
		2.5	Manuals are reviewed to ascertain their format and where information relevant to the work to be undertaken is located.
		2.6	Information given in manuals is interpreted in relation to the work to be undertaken.
3	Use drawings, diagrams, schedules and manuals to	3.1	Drawing conventions are used in neat freehand drawings to convey information and ideas to others involved in the work to be undertaken.

ELEMENT	PERFORMANCE CRITERIA	
convey information and ideas.	3.2	Drawing conventions are used to neatly correct freehand original job drawing to show final 'as-installed' arrangement.
	3.3	Corrected drawings are forwarded to appropriate person(s) in accordance with established procedures.
4 Prepare to use compliance standards, codes and specifications.	4.1	Compliance Standards and Codes that apply to particular disciplines are sought and obtained.
	4.2	The format of compliance Standards and Codes that apply to particular disciplines are reviewed and understood.
	4.3	The purpose and format and typical content of job specifications are reviewed and understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using drawings, diagrams, cable schedules, standards, codes and specifications.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE107A Drawings, diagrams and schedules

Evidence shall show an understanding of drawings, diagrams and schedules used in electrotechnology work to an extent indicated by the following aspects:

T1 Architectural drawings encompassing:

- site plans, floor plans detailed drawings and standard drawings
- architectural floor plan to determine the power and lighting or communications / audio/ video layouts required in a domestic installation
- site plan to locate the service point, consumers mains, communication services, main switchboard, distribution boards and/or builders supplies.
- standard drawing scales to determine the actual lengths represented by dimensions on an architectural drawing.
- reading and interpretation of floor plans to determine the location of the electrical/

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

communication/audio accessories and appliances.

- Australian standard symbols used on floor plans to show the location of the accessories and appliances as detailed in an electrical schedule.

T2 Electrical drawings encompassing:

- types of electrical drawings: block, circuit, wiring and ladder diagrams
- purpose and application of block, circuit, wiring diagrams and ladder diagrams
- Australian standard symbols used to represent components on electrical diagrams.
- conventions used in and the features of circuit diagrams
- converting a circuit diagram to a wiring diagram
- identification of cable type, origin and route from a cable schedule.
- developing a cable schedule for a given installation.

T3 Circuit diagrams encompassing:

- purpose of circuit diagrams in the electrotechnology industry
- conventions used in and the features of circuit diagrams
- sketching basic circuit diagrams
- common symbols used in circuit diagram (Australian Drawing Standard AS/NZS 1102)
- developing switching charts to identify the terminals of various types of switches
- connecting equipment using circuit diagrams.

T4 Wiring diagrams encompassing:

- purpose of wiring diagrams in the electrotechnology industry
- conventions used in and the features of wiring diagrams
- sketching basic wiring diagrams
- common symbols used in wiring diagram (Australian Drawing Standard AS/NZS 1102)
- connecting equipment using wiring diagrams.

T5 Building construction drawings and diagrams encompassing:

- building types: timber frame, brick veneer, double brick and metal frame.
- identification of different types of: footings, floors, external walls, roofs, interior walls
- typical cable routes through buildings, structures and premises
- sequence of each constructional stage for brick, brick veneer and timber cottages
- identification of the stages at which the electrical/communications - first and second fixing occurs in the constructional sequence
- areas of cooperation between electrical/communications and other building trades

KS02-EE107A Introduction to regulations, compliance standards and codes

Evidence shall show an understanding of regulations, compliance standards and codes that apply to electrical work to an extent indicated by the following aspects:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

T1 Regulation for undertaking electrical work encompassing:

- scope of work covered by licensing in the electrotechnology industry (Electrical licensing)
- legislative requirements for ensuring electrical or electronic equipment is safe i.e. compliance requirements of electrical installations

T2 Standards philosophy and format encompassing:

- performance verses prescriptive requirements
- purpose of technical standards and their development
- role of standards Australia/New Zealand, International Organisation for Standardisation (ISO) and the International Electrotechnical Commission (IEC)
- how standards are used in compulsory and accreditation compliance schemes.
- arrangement and use of technical standards in relation to electrical and electronic work
- how to read and apply a standard.
- Standards and codes that apply to all types of electrical installations
- Standards include Standards mandated under regulation (e.g. Wiring Rules) or by an authority, deemed-to-comply standard and local service requirements (e.g. Service rules).
- Codes include those applicable to electrical safe working practices and some aspects of the Building Code of Australia.

T3 Purpose, format and content of typical job specifications encompassing:

- NATSPEC specification system - provide the most common templates on which job specification are written.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1**) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Use drawings, diagrams, schedules, standards, codes and specifications as described in 8) Range and including:

    A Identifying drawings, diagrams, schedules and manuals relevant to the work to be undertaken.

    B Interpreting drawings, diagrams, schedules and manuals correctly.

    C Using correct conventions in freehand drawings.

    D Giving correct information in freehand drawings.

    E Obtaining compliance Standards and Codes applicable to particular disciplines

    F Reviewing and understanding the format of compliance Standards and Codes that apply to particular disciplines

    G Reviewing the format and content of typical job specifications.

    H Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment

Elements and Performance Criteria Pre-Content

6) Elements describe
the essential outcomes
of a unit of competency

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to work on electromagnetic devices and circuits.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	OHS risk control work preparation measures and procedures are followed.
		1.3	The nature of the device(s)/circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
		1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
		1.5	Sources of materials that may be required for the work are established in accordance with established procedures.
		1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2	Solve electromagnetic devices/circuit problems.	2.1	OHS risk control work measures and procedures are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.4	Established methods are used to solving circuit problems from measure and calculated values as they apply to electromagnetic devices/circuits.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in electromagnetic devices and related circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG101A Electromagnetic devices and circuits

Evidence shall show an understanding of electromagnetic devices and circuits to an extent indicated by the following aspects:

T1 Magnetism encompassing:

- magnetic field pattern of bar and horse-shoe magnets.
- magnets attraction and repulsion when brought in contact with each other.
- common magnetic and non-magnetic materials and groupings (diamagnetic, paramagnetic and ferromagnetic materials).
- principle of magnetic screening (shielding) and its applications.
- practical applications of magnets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- construction, operation and applications of reed switches.

T2 Electromagnetism encompassing:

- conventions representing direction of current flow in a conductor.
- magnetic field pattern around a single conductor and two adjacent conductors carrying current.
- Using the “right hand rule” to determine the direction of magnetic field around a current carrying conductor.
- direction of force between adjacent current carrying conductors.
- effect of current, length and distance apart on the force between conductors (including forces on bus bars during fault conditions).
- magnetic field around an electromagnet.
- Using the “right hand rule” to determine the direction of magnetic field around a current carrying coil.
- magnetomotive force (m.m.f.) and its relationship to the number of turns in a coil and the current flowing in the coil.
- practical applications of electromagnets.

T3 Magnetic circuits encompassing:

- magnetic characteristic curve for various materials and identify the various regions.
- Identify the various conditions of a magnetic material from its Hysteresis loop.
- factors which determine losses in magnetic material.
- methods used to reduce electrical losses in a magnetic circuit.
- magnetic flux (definition, unit and symbol).
- reluctance as the opposition to the establishment of magnetic flux.
- permeability (definition, symbol and unit).
- difference for magnetic and non-magnetic materials in regards to reluctance and permeability.
- calculation of m.m.f., flux or reluctance given any two values.
- flux density (definition, symbol, unit and calculation).
- magnetising force (definition, symbol, unit and calculation).
- common magnetic circuit types.
- effect of an air gap in a magnetic circuit.
- terms “magnetic leakage” and “magnetic fringing”.

T4 Electromagnetic induction encompassing:

- principle of electromagnetic induction (Faraday’s law of electromagnetic induction).
- applying “Fleming’s right hand rule” to a current a carrying conductor under the influence of a magnetic field.
- calculation of induced e.m.f. in a conductor given the conductor length, flux density and velocity of the conductor.
- calculation of induced e.m.f. in a coil given the number of turns in a coil and the rate of change of flux.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- calculation of force on a conductor given the flux density of the magnetic field, length of the conductor and the current being carried by the conductor.
- Lenz's law
- applications of electromagnetic induction

T5 Inductance encompassing:

- construction of an inductor, including a bifilar winding inductor.
- Australian Standard circuit diagram symbol for the four types of inductor.
- effect of physical parameters on the inductance of an inductor.
- common types of inductor cores.
- applications of the different types of inductors.
- definition of terms self induction, inductance and mutual inductance.
- calculation of value of self induced e.m.f. in a coil.
- mutual induction occurs between two coils.
- graphical relationship between load voltage, current and self induced e.m.f. in a single d.c. circuit having inductance.
- practical applications for the effects of self and mutual induction.
- undesirable effects of self and mutual induction.
- definition of term "time constant" and draw the characteristic curve as applied to a series circuit containing an inductor and a resistor. (LR circuit)Calculation of value of the time constant for an LR circuit given the values of the components.
- time constants required for the current in an LR circuit to reach its final value.
- determining of instantaneous values of voltage and current in an LR circuit using a universal time constant chart.

T6 Measurement Instruments encompassing:

- moving coil, moving iron, dynamometer meter movements and clamp testers.
- practical applications for moving coil, moving iron and dynamometer meter movements.
- Calculation of resistance of shunts and multipliers to extend the range of ammeters and voltmeters.
- factors to be considered in selecting meters for a particular application.
- safety category of meters and their associated applications.
- steps and procedures for the safe use, care and storage of electrical instruments.

T7 Magnetic devices encompassing:

- construction, operation and applications of relays.
- construction, operation and applications of contactors.
- magnetic methods used to extinguish the arc between opening contacts.
- construction, operation and applications of Hall Effect devices.
- operation and applications of magnetostriction equipment.
- construction, operation and application of magnetic sensing devices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

T8 Machine principles encompassing:

- basic operating principle of a generator.
- applying Fleming's right hand rule for generators.
- basic operating principle of a motor.
- applying Fleming's left hand rule for motors.
- calculation of force and torque developed by a motor.

T9 Rotating machine construction, testing and maintenance encompassing:

- components of a d.c. machine.
- difference between a generator and a motor in terms of energy conversion.
- nameplate of a machine.
- using electrical equipment to make electrical measurements and comparison of readings with nameplate ratings.
- Identification of faults in a machine from electrical measurements.
- care and maintenance processes for rotating machines
- safety risks associated with using rotating machinery.

T10 Generators encompassing:

- basic operation of a d.c generator.
- calculation of generated and terminal voltage of a d.c. shunt generator
- prime movers, energy sources and energy flow used to generate electricity.
- types of d.c. generators and their applications.
- methods of excitation used for d.c generators.
- equivalent circuit for a d.c. generator.
- importance of residual magnetism for a self excited generator.
- open circuit characteristics of d.c. generators.
- load characteristics of a d.c generator.
- reversing the polarity of a d.c. generator
- Connect and test a d.c generator on no-load and load
- Identify safety risks associated with using generators.

T11 Motors encompassing:

- operation of a motor and its energy flow.
- effect of back e.m.f. in d.c. motors
- torque as the product of the force on the conductors and the radius of the armature/rotor.
- types of d.c. motors and their applications.
- circuit diagrams for the types of d.c. motors.
- equivalent circuit for the types of d.c. motors.
- calculation of power output of a motor.
- characteristics of the different types of d.c. motors.
- connection and testing a d.c. shunt motor on no-load and load

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- reversing the direction of rotation of a d.c. motor.
- safety risks associated with using motors (include risks of series d.c. motors).

T12 Machine efficiency encompassing:

- losses that occur in a d.c machine.
- methods used to determine the losses in a d.c. machine.
- calculation of losses and efficiency of a d.c machine.
- efficiency characteristic of a d.c. machine and the conditions for maximum efficiency.
- application of Minimum Energy Performance standards (MEPS).
- methods used to maintain high efficiency.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

EVIDENCE GUIDE

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- Solve problems in electromagnetic circuits as described as described in 8) and including:

A Using methodological techniques to solve problems in circuits with an electromagnetic device from measure and calculated values

B Determining the operating parameters of an existing circuit with an electromagnetic device.

C Alternating an existing circuit with an electromagnetic device to comply with specified operating parameters.

D Developing circuits with electromagnetic devices to comply with a specified function and operating parameters.

E Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in electromagnetic devices and related circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.
Concurrent assessment and relationship with other units	**9**.**5**) For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving problems in electromagnetic devices and related circuits by:

- Determining the operating parameters of an existing circuits with electromagnetic devices
- Altering an existing circuit with an electromagnetic device to comply with specified operating parameters
- Developing circuit with an electromagnetic device to comply with a specified function and operating parameters

AND

In relation to the following on more than one occasions:

Solving problems

- Connecting circuits,
- Using methodological problem solving techniques,
- Solving electromagnetic device problems,
- Demonstrate an understanding of the behaviour of current and voltage in circuits with electromagnetic devices
- Calculating circuit parameters accurately,

Circuit and device testing

- Choose correct instruments and ranges for testing,
- Connect meters to measure parameters in circuits with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

electromagnetic devices,

and

At least four of the following electromagnetic devices

- Reed switches
- Solenoids
- Relays
- Contactors
- Inductive limit switches
- Bells
- Lifting magnets
- Core balance devices
- Magnetic overloads
- Motors
- Generators
- Magnetic brakes
- Magnetic circuit breakers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2.2) Literacy and numeracy skills

Unit Descriptor

Unit Descriptor **1**)

1.1) Descriptor

This unit covers ascertaining correct operation of single and three phase a.c. circuits and solving circuit problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, multiphase circuit arrangements, issues related to protection, power factor and MEN systems and solutions to circuit problems derived from calculated and measured parameters.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **2)**

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE104A	Solve problems in d.c circuits
UEENEEG101A	Solve problems in electromagnetic devices and related circuits

Employability Skills Information

Employability Skills **3)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit **4)**

4.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical licence.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria Pre-Content

6) Elements describe
the essential outcomes
of a unit of competency

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to solve low voltage a.c. circuit problems.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
		1.3	Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
		1.4	The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
		1.5	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
		1.6	Sources of materials that may be required for the work are established in accordance with established procedures.
		1.7	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2	Solve low voltage a.c. circuit problems.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
\		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA	
	2.4	Established methods are used to solve circuit problems from measure and calculated values as they apply to single and three-phase low voltage circuit.
	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and Solving single and three phase low voltage circuit problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG102A Alternating current power circuits

Evidence shall show an understanding of alternating currents power circuits to an extent indicated by the following aspects:

T1 Alternating Current Quantities encompassing:

- sine, cosine and tangent ratios of a right angle triangle
- Pythagoras Theorem to a right angle triangle.
- use of the CRO to measure d.c. and a.c. voltage levels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- sinusoidal voltage generated by a single turn coil rotated in a uniform magnetic fields
- terms 'period', 'maximum value', 'peak-to-peak value', 'instantaneous value', 'average value', 'root-mean-square (r.m.s.) value', in relation to a sinusoidal waveform.
- calculation of the instantaneous value of induced voltage of a generated sinusoidal waveform.
- measurement of instantaneous, peak, peak-to-peak values and the period of a sinusoidal waveform.
- calculation of root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform from values of peak voltage and period.

T2 Phasors Diagrams encompassing:

- purpose of phasor diagrams
- 'in-phase', 'out-of-phase', 'phase angle'' lead' and 'lag'.
- phase angle between two or more alternating quantities from a given sinusoidal waveform diagram.
- convention for representing voltage, current and the reference quantity in a phasor diagram.
- drawing phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current.
- determination of phase relationship between two or more sinusoidal waveforms from a given diagram and measurements.

T3 Single Element a.c. circuits encompassing:

- setting up and connect a single-source resistive a.c. circuit and take voltage and current measurements to determine the resistance
- determining the voltage, current resistances from measure of given values of any tow of these qualities.
- relationship between voltage drops and current in resistive a.c. circuit
- applications of resistive a.c. circuits
- defining ‘inductive reactance’.
- calculation of inductive reactance for a given inductor and the relationship between inductive reactance and frequency.
- applying Ohm’s Law to determine voltage, current of inductive reactance in a purely inductive a.c. circuit given any two to these quantities.
- applications of inductive a.c circuits.
- calculation of capacitive reactance
- applying Ohm’s Law to determine voltage, current or capacitive reactance in a purely capacitive a.c circuit given any two of the quantities.
- applications of capacitive a.c circuits

T4 RC and RL Series a.c. circuits encompassing:

- impedance and impedance triangle.
- determining the impedance, current and voltages for a series RC circuit given the resistance, capacitance and supply voltage.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- drawing and labelling the impedance triangle for a series RC circuit
- drawing phasor diagrams for a series RC circuit
- AS/NZS 3000 requirements for the installation of capacitors.
- examples of capacitive components in power circuits and systems and the effect on the phase relationship between voltage and current.
- determining the impedance, current and voltages for a series RL circuit given the resistance, inductance and supply voltage.
- drawing and labelling the impedance triangle for a series RL circuit
- drawing the equivalent circuit of a practical inductor
- Draw phasor diagrams for a series RL circuit.
- examples of inductive components in power circuits and systems and describe their effect on the phase relationship between voltage and current

T5 RLC Series a.c. circuits encompassing:

- measuring component voltages in a series RLC circuit and using a phasor diagram to determine the supply voltage and phase angle between circuit voltage and circuit current.
- determining the impedance, current and voltages for a series RLC circuit given resistance, inductance, capacitance and supply voltage.
- drawing and labelling the impedance triangle for a series RLC circuit.
- calculation of total impedance for a series RLC circuit.
- calculation of voltage drop for cables using the values for reactance and a.c. resistance from AS/NZS 3008.
- comparison of current limiting characteristics of inductors and resistors.
- practical examples of RLC series circuits

T6 Parallel a.c. Circuits encompassing:

- determining the branch currents of a parallel circuit that contain RL, RC or LC in two branches.
- using a phasor diagram to determine the total circuit current and phase angle in parallel RL, RC or LC circuits.
- determining the total circuit impedance of parallel RL, RC or LC circuits.
- measuring the branch currents in a parallel RLC circuit and use a phasor diagram to determine the total current and phase angle between circuit voltage and circuit current.
- determining the branch impedances, branch currents and phase angles voltages for a parallel RLC circuit given resistance, inductance, capacitance and supply voltage.
- calculation of impedance for a parallel RLC circuit.
- practical examples of parallel circuits.

T7 Power in an a.c. circuit encompassing:

- difference between true power, apparent power and reactive power and the units in which these quantities are measured.
- drawing the power triangle to show the relationships between true power, apparent

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

power and reactive power
- defining the term "power factor" and phase angle.
- methods used to measure single phase power, energy and demand.

T8 Power Factor Improvement encompassing:

- effects of low power factor.
- requirements for power factor improvement.
- methods used to improve low power factor of an installation.
- local supply authority and AS/NZS 3000 wiring rules requirements regarding the power factor of an installation and power factor improvement equipment.
- methods used to measure single phase power factor.
- using manufacturers catalogues to select power factor equipment for a particular installation

T9 Harmonics and Resonance Effect in a.c. Systems encompassing:

- term "harmonic" in relation to the sinusoidal waveform of an a.c. power system.
- sources in a.c. systems that produce harmonics.
- problems that may arise in a.c. circuits as a result of harmonics and how these are overcome.
- methods and test equipment used to test for harmonics
- methods used to reduce harmonics in a.c. power system
- conditions in a series a.c. circuit that produce resonance.
- dangers of series resonance circuits
- conditions in a parallel a.c. circuit that produce resonance.
- dangers of parallel resonance circuits
- AS/NZS3000 and the local supply authority requirements concerning harmonics and resonance effect in a.c. power systems.

T10 Three Phase Systems encompassing:

- features of a multiphase system.
- comparison of voltages generated by single and multiphase alternators.
- reasons for the adoption of three phases for power systems.
- how three phases is generated in a single alternator.
- Calculation of r.m.s. value of voltage generated in each phase given the maximum value.
- relationship between the phase voltages generated in a three phase alternator and the conventions for identifying each.
- term "phase sequence" (also, referred to as "phase rotation").
- determining the phase sequence of a three phase supply

T11 Three phase star-connections encompassing:

- connecting a three phase star-connection load.
- phase relationship between line and phase voltages and line and phase currents of a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

star-connected system.
- determining the r.m.s. value of line and phase voltage given any one of these quantities.
- determining the r.m.s. value of line and phase current given any one of these quantities.
- terms "balanced load" and "unbalanced load".
- effect of a reversed phase winding of a star connected alternator.
- example of balanced and unbalanced loads in typical power systems.

T12 Three phase four wire systems encompassing:

- purpose of the neutral conductor in a three phase four wire systems.
- determining the effects of an high impedance in the neutral conductor of a three phase four wire system supplying an unbalanced load where MEN earthing is employed.
- determining the value and phase relationship of neutral current in an unbalanced three phase four wire systems given line currents and power factors.
- AS/NZS 3000 requirements regarding neutral conductors.
- AS/NZS 3008.1.1 method for determining voltage drop in unbalanced three phase circuits

T13 Three phase delta-connections and Interconnected systems encompassing:

- connecting three phase delta loads.
- phase relationship between line and phase voltages and line and phase currents of a delta-connected system.
- determining the r.m.s. value of line and phase voltage given any one of these quantities.
- determining the r.m.s. value of line and phase current given any one of these quantities.
- limitations and uses of open delta connections
- effect of a reversed phase winding of a delta connected transformer
- example of loads in typical power systems.
- drawing the typical combinations of three phase interconnected systems using star-connections and a delta-connection.
- relationship between line and phase voltages and line and phase currents in the typical interconnected systems using star-connections and delta-connections.

T14 Energy and power requirements of a.c. systems encompassing:

- purposes for measuring power, energy, power factor and maximum demand of a.c. power systems and loads.
- difference between true power, apparent power and reactive power and the units in which these quantities are measured in a three phase system.
- drawing the power triangle to show the relationships between true power, apparent power and reactive power in a three phase system.
- methods used to measure three phase power , energy, power factor and demand.
- determining how the power factor of a three phase installation can be improved.
- using manufacturers catalogues to select measurement equipment for a particular installation

T15 Fault Loop Impedance encompassing:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- term fault loop impedance of a a.c. power system
- determining fault loop impedance using resistance and reactance values from AS/NZS 3008.1.1
- measuring fault loop impedance of typical circuits
- procedures for testing fault loop impedance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will

EVIDENCE GUIDE

contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Solve problems in single and three phase circuits as described as described in 8) and including:

    A Using methodological techniques to solve problems in circuits in a.c. circuits from measure and calculated values

    B Determining the operating parameters of existing circuits

EVIDENCE GUIDE

C Altering an existing circuit to comply with specified operating parameters.

D Developing circuits to comply with a specified function and operating parameters.

E Determining the cause of low power factor in an existing circuit.

F Determining conditions causing an existing circuit to be unsafe.

G Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving single and three phase low voltage circuit problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent

9.5)

assessment and relationship with other units	For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving problems in a.c. circuit by:

- Determining the operating parameters of existing circuits
- Altering an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters of voltage, current, impedance, power and power factor
- Determining the cause of low power factor in an existing circuit.
- Determining conditions causing an existing circuit to be unsafe includes electric shock hazard from indirect contract with conductive parts, insufficiently low impedance of a fault current path and inadequate fault protection.

In relation to the following on more than one occasions:

Single phase circuits

- Connecting single-phase circuits
- Choosing correct instruments
- Taking measurements correctly and accurately.

Three-phase circuits

- Connecting three-phase circuits
- Choosing correct instruments
- Taking measurements correctly and accurately.

AND

At least four of the following applications

- Series a.c. circuits
- Parallel a.c. circuits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- Series / parallel a.c. circuits
- Single phase motors / controls
- Three phase motors / controls
- Synchronous machines
- Transformers / Auxiliary components
- Star connected circuits
- Delta connected circuits
- Star-Delta interconnected circuits
- Open Delta circuits

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.
