<b>Application of the unit</b>	<p>This unit is intended to apply to the analysis of data generated by a continuous plant and equipment condition monitoring program. The analysis of condition monitoring and production of recommendations is undertaken autonomously. Recommendations may be in writing or verbal. If production of formal reports is required, then appropriate communication units should be accessed.</p> <p><b>Band: B</b></p> <p><b>Unit Weight: 4</b></p>
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

Prerequisite units		
<b>Path 1</b>	MEM09002B	Interpret technical drawing
	MEM12003B	Perform precision mechanical measurement
	MEM12023A	Perform engineering measurements
	MEM12024A	Perform computations
	MEM12025A	Use graphical techniques and perform simple statistical computations
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18003C	Use tools for precision work
	MEM18006C	Repair and fit engineering components
	MEM18010C	Perform equipment condition monitoring and recording
	MEM18055B	Dismantle, replace and assemble engineering components

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse condition monitoring results	1.1. Records/graphs/results of condition monitoring are examined and analysed and problem areas are identified. 1.2. Necessary calculations/computations are undertaken. 1.3. Appropriate reports/determinations of analyses are undertaken to prescribed site procedure.
2. Develop recommendations	2.1. Recommendations are developed based on previous history, results, specifications and legislative requirements. 2.2. Recommendations are reported to appropriate authority.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- obtaining results of condition monitoring of plant/equipment
- performing calculations to analyse condition monitoring data
- preparing reports based on the analysis of the condition monitoring data
- reporting recommendations to the appropriate authority
- orally reporting routine information

#### Required knowledge

Look for evidence that confirms knowledge of:

- the operational specifications of the plant/equipment being monitored
- any trends and/or deviations from operational specifications
- numerical operations and calculations/formulae for data analysis within the scope of this unit
- the reasons for undertaking the identified calculations
- the procedures for reporting the analysis of condition monitoring data
- the previous history of the plant/equipment being monitored
- any relevant legislative requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- the operational specifications of the plant/equipment
- the recommendations with respect to action to be taken
- the reasons for the recommendations made
- the expected effect of the recommendations on the operational performance of the plant/equipment
- the procedures for reporting recommendations
- the authority/person to whom the recommendations are to be made

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to analyse plant and equipment condition monitoring results. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with analysing plant and equipment condition monitoring results or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess wheel condition	1.1.Rim/tyre designs, constructions, codes, balancing, fastening principles and terminology are understood. 1.2.Fastening components are correctly assessed for damage and security. 1.3.Abnormal tyre wear is recognised and cause of fault is correctly determined. 1.4.Unsafe tyre and/or wheel condition is recognised and remedial action is determined.
2. Rectify and maintain wheel	2.1.Safety procedures associated with tyre/wheel removal, handling, inflation, assembly and disassembly and fastening are understood and adhered to. 2.2.Wheels/tyres are safely removed and replaced using standard procedures and appropriate tools/equipment. 2.3.Tools and equipment are correctly applied and used. 2.4.Ballasting and/or inflation of tyres is performed safely and to specification. 2.5.Static/dynamic balancing of wheels is performed to specification. 2.6.Rim/tyre/tube faults are rectified to specifications, regulations or codes. 2.7.Rectification activities are accurately recorded. 2.8.Wheel bearings are correctly lubricated to specification.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations

**REQUIRED SKILLS AND KNOWLEDGE**

- checking task-related information
- checking for conformance to specification
- identifying damaged fastening components
- identifying abnormal tyre wear
- checking wheel fastening components for damage and security
- identifying corrective action to be taken for unsafe tyre and wheel condition
- removing and replacing wheels/tyres using appropriate tools and equipment
- using tools and equipment correctly and appropriately
- undertaking ballasting and/or inflation of tyres
- balancing wheels to specification
- identifying repairable rim, tyre and tube faults
- repairing faults in rims/tyres/tubes to specification
- recording work activities
- lubricating wheel bearings in accordance with specification

**Required knowledge**

Look for evidence that confirms knowledge of:

- the design and construction of a variety of rims and tyres
- the principles of fastening and balancing of wheels
- the relevant codes and standards
- the procedures for checking wheels for secure fastening
- the reasons for checking fastening components for damage and security
- the causes of abnormal tyre wear
- examples and causes of unsafe tyre and wheel condition
- the procedures for removing, handling, inflating, assembling/disassembling and fastening of tyres and wheels
- the safety precautions to be taken when working with wheels and tyres
- the tools, techniques and equipment required to carry out the above procedures
- the procedures, tools, techniques and equipment for static and dynamic balancing of wheels
- the reasons for selecting the chosen tools, techniques and equipment
- the procedures, tools, techniques and equipment for repairing rim, tyre and tube faults
- examples of unrepairable rim, tyre and tube faults
- the procedures for recording repairs undertaken on rims, tyres and tubes
- the procedures for lubricating wheel bearings
- types of wheel bearing lubricant and their application
- hazards and control measures associate with maintaining and rectifying wheels and tyres, including housekeeping
- safe work practices and procedures

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate fault	<p>1.1. Equipment/<i>component</i> function is determined by reference to circuit diagrams, schematics, manual and/or consultation with technical adviser.</p> <p>1.2. Where required, equipment is correctly isolated from power supply.</p> <p>1.3. Where appropriate, built-in fault indicators and error codes are examined and correctly interpreted, and results are recorded to standard operating procedures.</p> <p>1.4. Equipment/<i>component</i> is checked and tested using correct and <i>appropriate techniques</i>, procedures, tools and <i>test equipment</i>.</p> <p>1.5. Check and test results are correctly interpreted and, where required, verified.</p> <p>1.6. Equipment/<i>component</i> fault is identified and localised.</p> <p>1.7. Equipment/<i>component</i> fault/s are correctly recorded to standard operating procedures.</p>
2. Rectify faults	<p>2.1. Using correct and appropriate techniques, procedures, tools and equipment, equipment/<i>component</i>/s are repaired, replaced or adjusted to specification or manufacturers' requirements.</p> <p>2.2. Equipment/<i>component</i> is checked and tested using correct and appropriate techniques, procedures, tools and equipment for compliance with site or manufacturers' specifications.</p> <p>2.3. Where appropriate, rectifications report is recorded to standard operating procedures.</p>

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
<p>This section describes the skills and knowledge required for this unit.</p>
<p><b>Required skills</b></p>
<p>Look for evidence that confirms skills in:</p> <ul style="list-style-type: none"> <li>• obtaining circuit diagrams, specifications, schematics</li> <li>• isolating electrical equipment/<i>component</i> from the power supply</li> </ul>

## REQUIRED SKILLS AND KNOWLEDGE

- tagging and checking isolated electrical equipment/component
- locating and reading/recording built-in fault indicators
- checking and testing electrical equipment/component for correct operation
- verifying variations from specifications indicated by initial test results
- identifying and localising faults in electrical equipment/ components
- recording/reporting faults in the electrical equipment/components
- repairing, replacing or adjusting electrical equipment/components to specification
- referencing supplier catalogues
- confirming that the electrical equipment/components have been returned to specification
- recording rectification of the electrical equipment/ components

### Required knowledge

Look for evidence that confirms knowledge of:

- operation and characteristics of active and passive components
- basic motor operation of various types
- function of the electrical equipment/component within the circuit
- hazards associated with the electrical equipment/component
- relevant regulatory requirements
- electrical equipment/component isolation procedures
- test equipment to be used to verify isolation of the electrical equipment/circuit
- errors indicated by built-in devices
- the procedures, tools, equipment and techniques to be used to test the operation of the electrical equipment/component
- reasons for selecting the chosen tools, equipment and techniques
- specifications of the electrical equipment/component
- variations between test results and specifications
- procedures for localising faults in electrical equipment/components
- procedures for recording/reporting faults in electrical equipment/components
- techniques/procedures for returning the electrical equipment/components to specification
- adjustments that can be made to electrical equipment/components
- procedures for confirming the electrical equipment/components have been returned to specification
- procedures for recording electrical equipment/component rectifications

---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Dismantle engineering components	1.1. Engineering components are inspected and task requirements are analysed. 1.2. Appropriate tools and equipment are selected and component/s are prepared for dismantling. 1.3. Component is dismantled using standard operating procedures, tools and equipment. 1.4. Engineering components are clearly marked to aid reassembly.
2. Identify faulty components	2.1. Specifications for components are obtained from appropriate source and are interpreted and understood. 2.2. Damaged or faulty components are assessed against specifications according to standard operating procedures. 2.3. Faulty components are identified for repair, replacement or adjustment according to standard operating procedures.
3. Select replacement components	3.1. Where applicable, replacement and/or repaired parts are selected for reassembly according to standard operating procedures.
4. Assemble engineering components into assemblies or sub-assemblies	4.1. Appropriate techniques are applied in the preparation, assembly and adjustment of components using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety of the completed assembly according to standard operating procedures. 4.2. Correct lubrication, packing, sealing materials are selected and applied correctly in conformance to job specifications. 4.3. Final component assembly is inspected, tested and adjusted as necessary for compliance with operational specifications and returned to use according to standard operating procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Look for evidence that confirms skills in:

- obtaining and interpreting all relevant instructions, standard operating procedures, drawings and specifications
- preparing component for dismantling
- dismantling components using appropriate techniques, tools and equipment
- marking component parts appropriately for identification purposes
- checking components visually and dimensionally for conformance to specification
- where appropriate, marking faulty parts for repair, replacement or adjustment
- selecting and confirming replacement parts to specifications
- obtaining and using all relevant supplier catalogues
- preparing and assembling components using appropriate techniques in accordance with standard operating procedures
- where appropriate, applying lubricants correctly to the assembly in accordance with specifications and standard operating procedures
- where appropriate, applying packing and/or sealing materials in accordance with specifications and standard operating procedures
- inspecting and checking the final assembly for conformance to specification
- where appropriate, returning the final assembly to use

**Required knowledge**

Look for evidence that confirms knowledge of:

- tasks to be performed in accordance with standard operating procedures
- procedures for dismantling the assembly
- tools and equipment to be used to dismantle the components
- procedures and required equipment for checking components for conformance to specification
- specifications of the components to be replaced
- features and/or dimensions upon which replacement parts are to be selected
- process of identifying replacement parts from "third party" suppliers' catalogues
- procedures for assembling components
- requirements of the assembly in terms of specifications, operational performance, quality and safety
- procedures for lubricating the assembly
- materials
- checks to be undertaken during inspection of the final assembly
- procedures for returning components/assemblies into use
- hazards and control measures associated with dismantling, replacing and

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and implement engineering practices	1.1.Engineering practices applicable to engineering activities are identified. 1.2.Factors, conditions and contexts integral to effective engineering practice are researched and evaluated. 1.3.The application of management practices and regulatory/legal systems to engineering practice is researched and evaluated. 1.4.Elements of engineering practices are incorporated into engineering activities.
2. Negotiate, document and monitor outcomes and performance measures	2.1.Technical experts and specialists are consulted as required. 2.2.Engineering options are evaluated and ranked. 2.3.Performance measures for processes and outcomes are negotiated with stakeholders and documented.
3. Negotiate, develop and document work instructions	3.1.Work instructions are negotiated and documented with taskforce.
4. Perform hazard and risk analysis	4.1.Hazards and risks associated with project are analysed.
5. Monitor progress, respond appropriately	5.1.Progress is monitored and responded to in cooperation and consultation with stakeholders and taskforce.
6. Conclude engineering activities appropriately	6.1.Engineering activities are concluded in accordance with workplace and legislative requirements.
7. Evaluate career options and develop career development strategy	7.1.Career options are developed based on current engineering activities. 7.2.A portfolio or CV of current engineering activities that is also a framework for future engineering activities is developed.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

Look for evidence that confirms skills in:

- research and evaluation
- review and maintenance of academic development, work experience, ethical practice, indemnity, negotiation, consultation and human relations with respect to the practice of engineering
- consultation with technical experts and specialists
- evaluation and ranking of engineering options for particular applications
- designing and planning documentation for particular applications
- documenting work instructions
- implementing occupational health and safety and environmental regulations, codes of practice and statutory requirements
- identifying and analysing hazards and risks
- monitoring and consultation with stakeholders and taskforce
- research and evaluation of engineering career options based on current engineering activities

### Required knowledge

Look for evidence that confirms knowledge of:

- political, social and environmental context and possible range of particular engineering activities
- the effect of government policy on industrial education and training, immigration for industrial labour/ skills, globalisation, the quality movement, JIT and competitive or lean manufacturing on a range of applications using jobbing, batch, mass or continuous production
- the significance, need for continual review and maintenance of academic development, work experience, ethical practice, indemnity, negotiation, consultation and human relations with respect to the practice of engineering
- the significance and applicability of strategic industrial management, financial management, workteams, supervision and control, industrial relations, OHS&E, enterprise based agreements, chemical registers, noise abatement, industrial law to particular industrial applications and work environments
- the application and affect of elements of engineering practice on particular engineering activities
- methods for evaluation and ranking of engineering options including the use of decision making and problem solving tools (eg. Kepler Trebor method)
- the significance of documented processes and outcomes performance measures in the context of client requirements, industrial, social, political and economic environments
- documented work instructions in the context of the objectives of the engineering activity

**REQUIRED SKILLS AND KNOWLEDGE**

- negotiating principles
- risk assessment tools such as 'risk matrix' and 'Monte Carlo' risk assessment
- the significance of statutory requirements disaster management strategies
- long term environmental and sustainability issues associated with the engineering activity
- documentation and conclusion procedures
- relevance of current engineering activities to future career options
- the value of a portfolio in contributing to future career options in engineering

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to perform engineering activities within one or more specified engineering disciplines. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing engineering activities or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

**EVIDENCE GUIDE**

<b>Guidance information for assessment</b>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Factors, conditions and contexts**

- Academic development, work experience, ethical practices, indemnity, negotiation, consultation and human relations
- Applicable local, regional, national and international economic, political and social contexts

**Management practices**

Strategic industrial management, financial management, workteams, supervision and control.

**Regulatory/legal systems**

Industrial relations, OHS&E, enterprise based agreements, chemical registers, noise abatement, industrial law to particular industrial applications and work environments

**Unit Sector(s)**

<b>Unit sector</b>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage self	1.1. Manage own time and own processes in an engineering environment for planning and design purposes. 1.2. Manage learning opportunities in and outside the workplace. 1.3. Complete tasks / roles in a competent and timely manner.
2. Work effectively with team	2.1. Communicate effectively with others. 2.2. Recognise cultural diversity. 2.3. Use judgement and discretion as appropriate to the situation. 2.4. Work autonomously to procedures and guidelines. Develop and maintain trust and confidence of colleagues and clients/suppliers where appropriate. 2.5. Mentor others in specific areas of engineering focus. Accept appropriate responsibility.
3. Manage information	3.1. Locate and review relevant information on materials, products, processes or services including relevant legislation, codes and national standards. 3.2. Document processes and outcomes. Include OHS&E procedures.
4. Manage work priorities and resources	4.1. Prioritise competing demands to achieve personal, team and an organisation's goals and objectives. 4.2. Prepare, monitor and review work plans, programs and budgets. 4.3. Plan resource use to achieve targets.
5. Facilitate and capitalise on change and innovation	5.1. Work with others to introduce change. 5.2. Manage emerging challenges and opportunities.
6. Establish and maintain business relationships	6.1. Work in collaborative relationships with customers/suppliers. 6.2. Manage the procurement process.

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Look for evidence that confirms skills in:

- setting personal goals and plans
- completing allocated within time limits
- seeking feedback from internal and external sources
- providing clear and precise information to team members
- communicating in meetings
- using feedback to develop ways of improving performance
- accessing and using appropriate development opportunities
- team members are mentored in specific areas of engineering relevant to their work, where appropriate.
- obtaining all relevant legislation, statutory requirements and standards
- obtaining all relevant commercial documents
- documenting the processes and outcomes
- processing and filing the masters and file copies of documents
- setting priorities
- using technology appropriately to manage work priorities and commitments
- work plans, programs and/or budgets are prepared in accordance with organisational procedures.
- monitoring, reviewing and modifying work plans, programs and/or budgets
- achieving targets by the effective and efficient use of resources
- introducing changes smoothly and with minimal disruption
- communicating changes to be implemented
- preparing plans for the implementation of authorised changes
- providing regular and complete progress reports to clients/stakeholders/suppliers/regulators
- procuring materials/supplies/services in accordance with organisational procedures

**Required knowledge**

Look for evidence that confirms knowledge of:

- techniques for ensuring that personal goals and plans reflect an organisation's plans and personal roles, responsibilities and accountabilities
- the way in which a person's performance acts as a role model for others
- ways in which personal goals are achieved and extended
- the importance and benefits of maintaining consistent personal performance
- the value of cultural diversity within the engineering team is recognised and the benefits
- internal and external sources of feedback on products, services and/or performance

**REQUIRED SKILLS AND KNOWLEDGE**

- team members roles and responsibilities
- ways of gaining and using feedback to improve personal performance
- options for suitable professional development opportunities
- the role of mentor in the engineering team
- the mentoring process
- sources of relevant codes, standards, legislation and regulations
- the need and relevance for commercial information, including insurances and indemnities
- the procedures for documenting processes and outcomes
- the procedures for processing and filing master and file
- techniques for prioritising competing demands
- options for using various types of relevant technology and the ways they can be used efficiently and effectively to manage work priorities and commitments
- the procedures for preparing work plans, programs and budgets
- the authority responsible for authorising work plans, programs and budgets
- the procedures for modifying work plans, programs and/or budgets
- human and physical resources available
- targets to be achieved
- techniques for optimising resource utilisation
- opportunities to introduce change
- the benefits of the proposed change
- the costs and risks associated with the proposed change
- those affected by change
- emerging challenges and opportunities in the area of engineering expertise
- opportunities to implement change and innovation
- reasons for implementing change and innovation
- strategies for implementing change and innovation
- customer needs
- clients/stakeholders/suppliers/regulators and their business relationships
- information required by clients/stakeholders/suppliers/ regulators
- the suppliers of materials/services/components/ equipment, etc.
- procurement procedures
- the authority responsible for authorising the procurement of materials/supplies/services
- commercial issues associated with the procurement process

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Engineering environment</b>	Refers to a real or simulated environment dealing in engineering practices/functions/services.
<b>Tasks/roles</b>	Will be involved in self-directed application of knowledge - have substantial depth of knowledge in some areas and a range of skills for work tasks, roles and functions.
<b>Cultural diversity</b>	Refers to all aspects of diversity within the working environment such as gender, age, physical ability, sexual preference, ethnicity and culture.
<b>Work autonomously</b>	May work autonomously under broad guidance; may supervise others and may guide teams.
<b>Appropriate responsibility</b>	May have responsibility for planning and managing the work of others.
<b>Relevant legislation codes and national standards</b>	Refers to all the legislation that occurs in the work place such as equal employment opportunity legislation, occupational health and safety legislation and industrial relations legislation.
<b>Document</b>	Applies to the time frame of the design development. Agreed processes of documentation will be required and applied.
<b>OHS&amp;E</b>	Occupational Health Safety and Environment recognizes that stakeholders in workplace activity

**RANGE STATEMENT**

	include the workforce exposed to worksite conditions, materials and processes of the activity and the broader community exposed to environmental effects of the activity. Apply in accordance with organisational policies and statutory and regulatory requirements.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the existing environmental condition	1.1. Research, debate and report on case studies involving examination of environmental values. 1.2. Prepare an inventory of the existing environmental condition. 1.3. Record/report on the findings of the initial assessment.
2. Establish stakeholders' expectations	2.1. Determine expectations regarding each component of the environment. 2.2. Record and report on expectations for project/operation integration.
3. Review existing environmental conditions against stakeholders' expectations	3.1. Determine variations between expectations and the existing environmental conditions. 3.2. Establish the possibilities and options for improvement in the environment.
4. Develop and rank strategies to achieve sustainable development	4.1. Evaluates available options against assessment criteria to identify risks and priorities. 4.2. Develop an environmental report on strategies to implement the preferred options.
5. Implement strategies to achieve sustainable development	5.1. Implement strategies in consultation with appropriate stakeholders. 5.2. Collect and review data on implementation of strategies. 5.3. Evaluate progress and review strategies.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- undertaking debate on environmental values
- reporting on case studies involving examination of environmental values
- producing inventory of existing environmental conditions

## REQUIRED SKILLS AND KNOWLEDGE

- documenting the findings of the initial environmental assessment
- identifying stakeholders' environmental expectations
- integrating environmental expectations with the overall outcomes of the operation/project
- communicating expected outcomes to stakeholders
- documenting variations between expected and current environmental status
- implementing strategies for improving the environmental outcomes of the project/operation
- evaluating available options
- implementing selected sustainable development options
- developing environmental management plans
- monitoring the implementation of the environmental management plan
- collecting environmental data
- reviewing and evaluating implementation strategies

### Required knowledge

Look for evidence that confirms knowledge of:

- environmental conditions of the workplace/process/ operation/procedure
- the procedures for documenting environmental conditions
- applicable environmental legislation and regulations
- the legislative/regulatory reporting and recording requirements
- the tests and testing procedures required to establish environmental conditions
- stakeholders' views on specific options for environmental improvement
- opportunities for integrating project/operation outcomes with environmental improvement options
- variations between expected and current environmental status
- options for improving the environmental status of the project/operation
- the costs/benefits of the identified options
- the concept of sustainable development
- options for sustainable development
- criteria for assessing the feasibility of available options
- the risks and priorities associated with sustainable development
- strategies to implement sustainable development options
- the procedures for communicating sustainable development options to stakeholders
- strategies to implement environmental development plans
- the data necessary to evaluate the implementation of the environmental management plan
- procedures for collecting and documenting environmental data
- benchmarks against which implementation strategies can be evaluated

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to manage the environmental effects of engineering activities. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. **Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Environmental values**

Biophysical values eg. clean air, soil, water, biodiversity, ecosystem sustainability, sustaining the quality of natural and artificial environments, both indoor and outdoor  
Socio cultural values

**Existing environmental conditions**

Identification of environmental relations - mapping all the relations that will be used and affected by a particular activity in both space and time, analysing the resulting relational map for areas of intense impact, especially as a result of cumulative impacts; identification of physical, socio-cultural and economic conditions for life and for the existing or desired quality of life, identification of the socio-cultural values placed on the current environmental conditions; identification of both the negative and positive environmental impacts, the potential de-sustaining and sustaining aspects of the activity; identification of where engineering interventions and follow-up are possible

**Environmental report**

A description of the state of the environment, an assessment of the nature and consequence of impacts, identifiable trends, available and recommended actions, identification of responsibilities and potential change agents, cost of action; a critical review of the parameters of the environmental relations considered, the criteria by which they were evaluated, the process of

## **MEM22012A Coordinate resources for an engineering project or operation**

### **Modification History**

Release 1 - New unit. Replaces MEM22003A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the coordination of resources in accordance with operations or project plans and budgets formulated to meet business goals and strategic objectives.

### **Application of the Unit**

This unit applies to engineering projects or operations that have a significant engineering component. It is suitable for people with responsibility for resources and those pursuing technical qualifications and careers at engineering technician level.

Prior or concurrently developed experience in mathematics, computer packages and file handling, engineering plant, facilities and services, materials, methods and processes is required.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### Elements and Performance Criteria

1	Contribute to operations or project planning and budgeting	1.1	Participate in policy and procedures development
		1.2	Review sustainability implications of resources, sourcing, processing, process waste, transport, distribution, life cycle and disposal
		1.3	Participate in planning for operations or project resourcing in the context of operations, project, strategic and business plans
		1.4	Participate in development of budgets
		1.5	Participate in development of performance indicators or parameters, monitoring and continuous improvement processes
		1.6	Participate in the development of resources information distribution and control systems, including the use of software systems
2	Evaluate supply chain relations	2.1	Identify supply value chain members and contribution to project or operation
		2.2	Assess supply agreements, quality and delivery parameters against performance indicators
		2.3	Employ value analysis of product or customer service costs
		2.4	Assess tender and contract documents for risk
		2.5	Assess supply chain communications for feedback on quality, supply chain efficiency and continuous

- improvement processes
- 3 Coordinate physical resources
    - 3.1 Assess physical resource requirements and develop a resources distribution schedule consistent with the budget
    - 3.2 Coordinate efficient utilisation of physical resources
    - 3.3 Ensure compliance with work health and safety (WHS), regulatory and risk management requirements with particular emphasis on handling and use of resources
  - 4 Contribute to project or operation human resources management
    - 4.1 Identify labour and skills requirements based on assessment of timetable and project or operational requirements
    - 4.2 Program and communicate labour and skills to satisfy project or operational technical and budget requirements
    - 4.3 Organise labour and skill schedules to facilitate training
    - 4.4 Contribute to skills development and training arrangements
  - 5 Contribute to budget development and control
    - 5.1 Participate in developing budgets in the context of business and strategic operations or project plans
    - 5.2 Control delegated expenditure and cash flow
    - 5.3 Record resources utilisation and costs, including those for maintenance of assets
  - 6 Supervise and review resources delivery
    - 6.1 Apply systems thinking, constraints and contingency management, and continuous improvement techniques
    - 6.2 Monitor and review supply chain and coordinate continuous improvements
    - 6.3 Monitor physical and human resources and performance indicators and coordinate continuous improvement processes
    - 6.4 Monitor budget and coordinate response to threats

- 6.5 Monitor sustainability and coordinate responses in accordance with sustainability policy and procedures
  - 6.6 Monitor information and resources control system and implement continuous improvement
  - 6.7 Employ software packages to achieve information handling, data processing, planning and control objectives
- 
- 7 Report and document resources coordination
    - 7.1 Report in accordance with procedures
    - 7.2 Maintain documentation on planning, supply chain analysis, resources requirements analysis, budgets, delivery, continuous improvement and training, WHS and regulatory requirements, and risk assessment

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- participating and communicating with others
- negotiating and seeking consensus in support of strategic objectives
- evaluating:
  - supply chain, quality, delivery and capability
  - tender and contracting processes and documents
- coordinating physical and human resources
- coordinating and controlling resource budgets
- monitoring, reviewing and improving resources delivery
- planning for operations or project resourcing in the context of operations, project, strategic and business plans
- participating, cooperating and negotiating required for dealing with customers, contractors, designers and production management
- determining take off quantities for 'bill of materials' from drawings, specifications and contracts
- reporting and documenting objectives, key performance indicators, timetables and progress

### Required knowledge

Required knowledge includes:

- typical sustainability implications for engineering projects or operations
- systems thinking, constraints and contingency management, and continuous improvement techniques
- procedures for preparing and monitoring project plans, business plans and budgets
- cost planning, cost-benefit analysis, life cycle costing, valuation and cost estimation procedures
- procedures for assessing implications of design on project implementation costs or manufacturability of product and maintainability of plant and process
- resources information distribution and control systems, including the use of enterprise resource planning (ERP) and materials resource planning (MRP) software
- planning and cost control software
- supply and value chain evaluation techniques, including contract, quality and delivery parameters
- engineering-related operating procedures associated with the use of resources

- financial impact of a variety of maintenance strategies on overall costs on typical tenders, contracts and law of contract provisions, relevant to engineering projects or operations
- ability to calculate quantities from drawings, specifications and contracts
- WHS requirements, including WHS Acts and regulations
- resources expenditure and cash flow control procedures
- procedures and requirements of financial records, including records of resources and costs for maintenance of assets

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to coordinate resources for an engineering project or operation within project plans and budgets. This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• participate, communicate, cooperate and negotiate strategic objectives, policy and procedures development</li> <li>• evaluate supply chain, quality, delivery, capability, tender and contracting processes and documents</li> <li>• coordinate and control physical and human resources and resource budgets</li> <li>• monitor, review and improve resources delivery</li> <li>• report and document resource planning and use.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.</li> <li>• The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks</li> </ul>

	<p>and include questioning on underpinning knowledge to ensure correct interpretation and application.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Participate</b>	Participation includes the requirement to communicate, cooperate, negotiate and work with others in accordance with the operations or project plans
<b>Software packages</b>	<p>Software packages may include:</p> <ul style="list-style-type: none"> <li>• spreadsheets</li> <li>• databases</li> <li>• word processor</li> <li>• presentation</li> <li>• project management and cost control</li> <li>• system control and data acquisition (SCADA), MRPII, MRPIII and ERP</li> </ul>
<b>Value analysis</b>	Value analysis is the determination of value-added, as defined by the ultimate customer at each step in the supply chain or production process or service provision. The value is often specified in contract documentation in terms of quality, cost, quantity and delivery schedule
<b>Systems thinking</b>	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and

	<p>techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Continuous improvement implementation</b>	<p>Continuous improvement implementation may relate to:</p> <ul style="list-style-type: none"> <li>• plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance</li> </ul> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>
<b>Manage constraints and contingencies</b>	<p>Contingencies arising during operations or improvement projects are responded to in the context of constraints. Contingencies may threaten operations or improvement projects and planning for contingencies may be essential to maintain resources, skilled labour and schedules. Each contingency will have constraints on possible solutions. These may be:</p> <ul style="list-style-type: none"> <li>• financial, organisational, procedural or cultural constraints</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> </ul>

	<ul style="list-style-type: none"><li>• conforming to all industry covenants, protocols and best practice guides</li><li>• minimising ecological and environmental footprint of process, plant and product</li><li>• maximising economic benefit of process plant and product to the organisation and the community</li><li>• minimising the negative WHS impact on employees, community and customer</li></ul>
--	---

## Unit Sector(s)

### Competency field

**Unit sector**            Management and organisation

## Custom Content Section

Not applicable.

## **MEM22013A Coordinate engineering projects**

### **Modification History**

Release 1 - New unit. Replaces MEM22004A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the coordination of engineering projects within project plans and budgets. It includes monitoring and maintaining the project implementation plan, performance analysis and use of project management software.

### **Application of the Unit**

This unit applies to people with significant coordination and facilitation responsibilities for engineering or related projects. The projects will usually have fixed term or purpose and involve specific engineering-related tasks, such as installation and commissioning of plant, design of equipment or major overhauls.

The coordination role covered by the unit includes monitoring of engineering and other technical performance parameters against the project plan as well as monitoring of other project parameters that impact on engineering and technical compliance of the project. These include finance, accounting, budgeting and control, resourcing, tenders, contracts, work health and safety (WHS), risk management, human resources, and legal and regulatory requirements.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Review and confirm parameters of delegated project	1.1	Review designs, drawings, standards and established implementation plan and schedule to establish scope of the engineering project
		1.2	Review budget and control measures for delegated project
		1.3	Review project management structure, functional team relationships, communications and reporting lines
		1.4	Review materials, logistics and services procurement requirements
		1.5	Review the need for appropriate technical and professional assistance
		1.6	Review physical resources requirements
		1.7	Review human resources and skills development requirements
		1.8	Review compliance requirements for project, including WHS requirements, codes of practice, regulations, standards, legal and other regulatory requirements, and enterprise procedures

- 2 Coordinate implementation of delegated project
  - 2.1 Assign and obtain team agreement to plans, communication arrangements, responsibilities, schedules and requirements
  - 2.2 Establish liaison arrangements with other functional groups
  - 2.3 Ensure efficient and documented arrangements for requests for further information (RFIs) from designers and other experts
  - 2.4 Confirm internal and external reporting requirements, including content, schedule and sign-off arrangements
  - 2.5 Confirm suppliers, contractors and delivery schedules, and any installation requirements
  - 2.6 Coordinate actions to overcome constraints and contingencies, including coordination with stakeholders and adjustments, if necessary, to plans and schedules
  - 2.7 Coordinate and monitor specialist and technical support services to meet schedules, budgets and performance requirements
  - 2.8 Maintain and monitor records of project tasks for accountability against objectives, schedule and budget
  - 2.9 Apply principles of continuous improvement to implementation
  - 2.10 Implement project management, resources control and budgeting software, when required
- 3 Report on outcomes
  - 3.1 Record progress in accordance with procedures
  - 3.2 Supervise the completion of project, including sign-off and completion of required documentation of the project

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- coordinating technically complex engineering-related projects
- project management skills, including using resources control and budgeting software, as required
- reviewing, confirming and establishing parameters for project objectives, project plan, budget and scheduling related to tasks
- communicating, negotiating and reviewing with stakeholders throughout project duration
- coordinating and monitoring task schedules and resources; addressing contingencies and constraints, continuous improvement, problem solving and decision making; and adjusting short-term planning and rescheduling, as necessary
- implementing systems thinking and concurrent engineering, as appropriate
- project planning and scheduling, including:
  - working within or establishing a project management structure
  - establishing functional team relationships, communications and reporting lines
  - ensuring compliance with business plans, financial objectives, budgets and customer brief
  - incorporating WHS and other regulatory requirements
- establishing accountabilities and responsibilities (including recording and reporting) for:
  - scheduling and implementation of project tasks
  - physical and financial resources and budget
  - the use of professional services and contractors
  - maintaining records of trades and industry contacts and sources of expert advice
  - records of procedures and regulatory compliance
  - personal and team skills development
  - maintaining task schedules, Gantt charts and other planning tools and resources
  - procedures for addressing contingencies and constraints, continuous improvement, problem solving and decision making, and adjusting short-term planning and rescheduling as necessary
  - organisational procedures for compliance with WHS, codes of practice, and other legislative requirements, environmental and social obligations, and ethical practice
  - risk management procedures

### Required knowledge

Required knowledge includes:

- engineering and technology knowledge appropriate to the project
- context of project, including:
  - customer-supplier relationships
  - regulatory requirements and environment
  - materials resourcing and labour and skills supply arrangements
  - market and competitive environment
- human resources and skills development procedures and options for skill needs typical of engineering projects
- typical budget and control measures for engineering-related projects, including:
  - audit
  - tenders
  - contracts
  - schedules
  - budget categories and items:
- personnel
- materials
- equipment procurement and maintenance
- contractors
- logistics
- security
- requirements for and functions of technical documentation, graphics and specifications, meeting procedures, records and minute taking
- WHS Acts and regulations relevant to engineering projects
- risk management procedures, isolation and notification procedures in the event of irregularities or accident
- systems thinking, contingency and constraints management
- conflict resolution, problem solving and decision making

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to coordinate an engineering project This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• review, confirm and establish project objectives, plans and schedules</li> <li>• identify technical and engineering requirements of project from drawings, customer briefs, contracts and other appropriate sources</li> <li>• identify and manage stakeholders, including customers, suppliers, contractors and regulatory agencies</li> <li>• manage for contingencies and non-conformances</li> <li>• cooperate, communicate and negotiate effectively with stakeholders.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> </ul>

	<ul style="list-style-type: none"> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Personal responsibilities</b>	<p>Personal responsibilities within the project may be defined by:</p> <ul style="list-style-type: none"> <li>• role specification and delegations</li> <li>• workplace agreement or Award</li> <li>• negotiation with clients and/or supervisors</li> <li>• contracts</li> <li>• legal or regulatory obligations</li> <li>• professional and ethical considerations</li> <li>• agreed operational or project requirements</li> </ul>
<b>Systems thinking</b>	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<b>WHS, regulatory</b>	WHS, regulatory requirements and enterprise procedures may

<b>requirements and enterprise procedures</b>	<p>include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• environmental protection and planning law</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Stakeholders</b>	<p>Relevant stakeholders may include:</p> <ul style="list-style-type: none"> <li>• teams</li> <li>• contractors</li> <li>• support professionals and teams</li> <li>• technicians</li> <li>• functional groups</li> <li>• customers</li> <li>• suppliers</li> </ul>
<b>Records of project</b>	<p>Records of project may include:</p> <ul style="list-style-type: none"> <li>• tenders and contracts</li> <li>• schedules</li> <li>• personnel</li> <li>• resource allocations and financial management procedures</li> <li>• standard operating procedures, including maintenance procedures</li> <li>• WHS committee minutes and action</li> <li>• risk management and mitigation</li> <li>• documentation and records of current safe work methods statements (SWMS), material safety data sheets (MSDS), work permits, standards and codes of practice</li> <li>• audits</li> <li>• meetings and communications</li> <li>• graphics and specifications</li> </ul>
<b>Continuous improvement implementation</b>	<p>Continuous improvement implementation may relate to:</p> <ul style="list-style-type: none"> <li>• plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. It may include techniques, such as: <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>
<b>Appropriate technical and professional assistance</b>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers</li> <li>• professional and technical support for specific technologies and equipment</li> <li>• professional services for: <ul style="list-style-type: none"> <li>• finance, accounts and tax</li> <li>• insurance and legal,</li> <li>• training and human resources</li> </ul> </li> </ul>
<b>Constraints and contingencies</b>	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> <li>• financial, organisational, procedural or culture constraints</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>

## Unit Sector(s)

### Competency field

**Unit sector**            Management and organisation

## Custom Content Section

Not applicable.

# MEM22014A Coordinate engineering-related manufacturing operations

## Modification History

Release 1 - New unit. Replaces MEM22005A, but not equivalent.

## Unit Descriptor

This unit of competency covers the skills and knowledge required to coordinate, monitor and maintain engineering-related manufacturing operations, including the coordination of purchasing, scheduling of materials and resources, achievement of budget with control of processes, physical resources, maintenance of operations and assets, performance analysis and process improvement, work health and safety (WHS) and risk management.

## Application of the Unit

This unit applies to people with coordination and facilitation responsibilities for significant manufacturing operations.

Where the planning, scheduling and purchasing is done in an engineering or manufacturing organisation following lean principles, it is recommended that appropriate competitive systems and practices units of competency also be selected.

The unit applies where the coordination role involves application of engineering skills and knowledge to ensure safe, effective and efficient manufacturing and can include specific engineering-related tasks, such as installation and commissioning of plant, design of equipment and major overhauls.

The coordination role of the unit includes monitoring engineering and other technical performance parameters against the project plan as well as monitoring other project parameters that impact on engineering and technical compliance of the project. These include finance, accounting, budgeting and control, resourcing, tenders, contracts, WHS, risk management, human resources, and legal and regulatory requirements.

For coordination skills for time-defined engineering projects see unit MEM22013A Coordinate engineering projects.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A	Apply technical mathematics
MEM14091A	Integrate manufacturing fundamentals into an engineering task

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Develop the production plan	1.1	Coordinate development of, or obtain, demand forecast
		1.2	Participate in preparation of production plan in consultation with relevant stakeholders to meet quality, demand and delivery timelines within capacity and budget constraints
		1.3	Coordinate preparation of purchasing schedules
		1.4	Coordinate preparation of production schedules, including allowances for scheduled maintenance and any required shutdown periods
		1.5	Coordinate development of risk management and contingency procedures
		1.6	Review production plan with relevant stakeholders and adjust, as necessary
		1.7	Coordinate development of key performance indicators (KPIs) and monitoring procedures with relevant stakeholders
		1.8	Incorporate professional and technical assistance, as required

- 2 Coordinate the implementation of the production plan
  - 2.1 Allocate responsibilities for purchasing and detailed scheduling, including communication of priorities and KPIs
  - 2.2 Coordinate materials and product flow and transfer operations to meet plan requirements, including buffer and emergency stocks, warehousing, stores and logistics
  - 2.3 Monitor quality and process control procedures
  - 2.4 Coordinate and monitor physical, human and financial resources, and budget to achieve production plan
  - 2.5 Review and monitor information and reporting procedures to stakeholders
  - 2.6 Address systems constraints and contingencies and adjust short-term planning and reschedule, as necessary
  
- 3 Monitor operational performance
  - 3.1 Review actual indicators against KPIs
  - 3.2 Review manufacturing operations against production plan and other KPIs
  - 3.3 Participate in continuous improvement procedures, including lean operation principles and procedures, where implemented
  - 3.4 Monitor preventative and breakdown maintenance and review impact on operational performance
  - 3.5 Monitor implementation of risk management procedures during non-conformances and adjust, as required, in accordance with organisational procedures
  - 3.6 Report progress against production plan in accordance with procedures
  - 3.7 Provide documentation, data entry and analysis, as required

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying equipment and process capacity from information supplied by designers and suppliers
- developing production schedule demand forecast from information supplied by customers, distributors, and sales and marketing departments
- preparing master production, schedule or project plan
- detailed operations planning, scheduling, production control and contingency measures that take into account:
  - facilities
  - services
  - plant and tooling
  - enterprise resource planning (ERP) software
  - process layout
  - use of automation
  - product manufacturability
  - asset maintainability
- preparing purchasing schedules and coordinating material supplies
- complying with WHS and regulations, codes of practice, standards and risk assessment
- coordinating manufacturing operation to be consistent with business plans and legal and regulatory requirements, and coordinating systems maintenance of manufacturing operation following improvement procedures
- use of software, such as ERP, system control data acquisition (SCADA) and spreadsheets, where installed
- coordinating manufacturing operations to schedule and priority
- maintaining quality and process control procedures
- coordinating problem solving and decision making, short-term planning and rescheduling to meet constraints and contingencies, as necessary
- maintaining records, reporting and documenting in accordance with procedures

### Required knowledge

Required knowledge includes:

- manufacturing management systems
- forecasting, scheduling and production control procedures

- production systems, including assembly and process layouts, material and product flows, automation and control systems
- WHS requirements, codes of practice, regulations, standards, regulatory requirements, risk management, current safe work methods statements (SWMS), material safety data sheets (MSDS) and work permits
- budgeting, costing and control measures
- quality and process control measures
- asset maintenance techniques and management options
- continuous improvement procedures
- problem solving and decision making, systems thinking, contingency and constraints management as applied to manufacturing
- requirements for and functions of technical documentation, graphics and specifications
- sustainability implications of manufacturing operations, products and processes, including social, environmental, resources and economic implications
- reporting and documenting procedures used in manufacturing, including role of standard operating procedures, engineering drawings and process control charts

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to coordinate, monitor and maintain an engineering-related manufacturing operation, including purchasing, scheduling of materials and resources and priorities. This includes working individually and as part of a team and recognising and complying with normal organisation control procedures.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• prepare production or project plan in consultation with relevant stakeholders to meet WHS, quality, demand and delivery requirements within capacity and budget constraints</li> <li>• apply procedures to ensure compliance of manufacturing operations with WHS, environmental and other regulatory requirements</li> <li>• review and monitor facilities and services, including:             <ul style="list-style-type: none"> <li>• plant, tooling and software</li> <li>• process layout</li> <li>• use of automation and automation safety</li> <li>• product manufacturability and asset maintainability</li> <li>• compliance requirements of WHS and regulations, codes of practice, standards, risk assessment and registration requirements for manufacturing plant.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> </ul>

	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Relevant stakeholders</b>	<p>Relevant stakeholders may include:</p> <ul style="list-style-type: none"> <li>• team</li> <li>• organisation functional groups</li> <li>• support professionals and licensed technicians</li> <li>• customers and suppliers</li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>

<b>Records</b>	<p>Records may include:</p> <ul style="list-style-type: none"> <li>• forecasts, schedules and budgets</li> <li>• records of operations, production quantities, quality and supply performance</li> <li>• process, resources and budget control measures</li> <li>• communications, graphics and specifications</li> <li>• tenders, contracts and schedules</li> <li>• personnel, resource allocations and financial management procedures</li> <li>• standard operating procedures, including maintenance procedures</li> <li>• records of procedures and legislative compliance</li> </ul>
<b>Appropriate licensed technical and professional assistance</b>	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring or devices with high current or voltages above extra low voltage</li> </ul> </li> <li>• professional support for engineering research, calculations and technologies <ul style="list-style-type: none"> <li>• professional services in non-engineering related areas, such as: <ul style="list-style-type: none"> <li>• finance, accounts and tax</li> <li>• insurance and legal</li> <li>• training and human resources</li> </ul> </li> </ul> </li> </ul>
<b>Continuous improvement procedures</b>	<p>Continuous improvement procedures may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>
<b>Constraints and</b>	Contingencies arising during operations or improvement projects will

<b>contingencies</b>	<p>have constraints on possible solutions. These may be:</p> <ul style="list-style-type: none"> <li>• financial</li> <li>• organisation procedural or culture</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<b>Systems thinking</b>	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<b>Lean manufacturing</b>	<p>Lean manufacturing uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness</p>
<b>Software options</b>	<p>Software may be employed for forecasting, scheduling performance analysis/modelling and may include:</p> <ul style="list-style-type: none"> <li>• ERP</li> <li>• SCADA</li> <li>• spreadsheets</li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>

## **Unit Sector(s)**

### **Competency field**

**Unit sector**            Management and organisation

## **Custom Content Section**

Not applicable.

## **MEM22015A Source and estimate engineering materials requirements**

### **Modification History**

Release 1 - New unit. Replaces MEM22006A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to locate and approve a materials source and estimate materials requirements against a specification or bill of materials for engineering-related operations. This includes consideration of quantities, quality and capacity of suppliers to supply in accordance with a supply plan.

### **Application of the Unit**

The unit applies to sourcing and estimating within an engineering operation or along a value chain and can be applied to individual or team-based work. It is suitable for people working in engineering or related industries in planning, purchasing or quantity surveying functions.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Participate in planning and budgeting for materials resourcing in engineering operation or project	1.1	Participate in planning for materials resourcing in the context of operations, project, strategic and business plans and budgets
		1.2	Contribute to management processes, such as costing and value engineering, feasibility studies, cost-benefit and break even analysis, consideration of contract law pertaining to supply arrangements and life cycle costing
		1.3	Evaluate sustainability implications of materials and components being sourced
		1.4	Participate in the selection or development of materials information systems
		1.5	Review suitability of software packages for materials estimation and sourcing and related purposes
2	Estimate quantities	2.1	Consult with operations and project teams regarding their materials needs
		2.2	Estimate quantities against operations or project specifications, drawings and bill of materials documents
3	Contribute to the development of supply chain relations	3.1	Contribute to supply chain requirements, evaluation and management
		3.2	Assist in developing tender and contract documents

- |   |   |     |  |
|---|---|-----|--|
| 4 | Locate source and confirm material suppliers  | 4.1 | Locate source and evaluate materials suppliers against specifications  |
|   |   | 4.2 | Evaluate supply agreements, quality and delivery parameters against operation or project requirements  |
|   |   | 4.3 | Coordinate approval of samples, testing and certification in accordance with specification requirements  |
|   |   | 4.4 | Confirm or recommend suppliers according to enterprise procedures  |
| 5 | Monitor and review materials and supply chain | 5.1 | Participate in development of performance indicators or parameters for materials supply chain  |
|   |   | 5.2 | Consult, negotiate and cooperate with suppliers in relation to supply chain efficiency improvements  |
|   |   | 5.3 | Provide feedback on quality, efficiency and continuous improvement processes to supply chain members and internal stakeholders   |
|   |   | 5.4 | Identify and monitor work health and safety (WHS) and regulatory requirements related to materials supply, transport, handling, storage and processing                                 |
|   |   | 5.5 | Monitor sustainability of sourced materials and coordinate responses in accordance with sustainability policy and procedures   |
|   |   | 5.6 | Apply systems thinking, constraints and contingency management, as necessary, and continuous improvement techniques  |
| 6 | Report and document outcomes                  | 6.1 | Provide reports on material sourcing in accordance with procedures   |
|   |   | 6.2 | Maintain documentation on estimations, sources of supply, supply chain analysis performance, continuous improvement and training, WHS and regulatory requirements, and risk assessment |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- planning for materials resourcing
- estimating quantities, sourcing and evaluating materials suppliers against operations or project, specifications, drawings and bill of materials
- cooperating, communicating and negotiating effectively within team and functional groups, customers and suppliers
- monitoring and evaluating purchasing budget, expenditure and cash flow, sourcing of materials, sustainability implications, supply agreements and suppliers for quality, capacity and flexibility, conformance to regulatory requirements and test procedures
- using materials sourcing and planning software packages
- contributing to organisational management processes and materials supply chain management
- developing or using materials supply tender and contract documents
- interpreting materials requirement and purchasing schedule, purchasing budgets, and performance indices for materials supply chain
- coordinating responses to budget and delivery supply threats related to materials purchases
- participating in setting and implementing supplier payment policies
- implementing systems thinking, concurrent engineering, continuous improvement, contingency and constraint management, problem solving and decision making
- determining implications for materials sourcing of WHS, risk management, codes of practice, and sustainability policy and requirements
- reporting and documenting results of evaluations, tender analysis, and so on

### Required knowledge

Required knowledge includes:

- planning procedures for materials resourcing in the context of operations, project, strategic and business plans and budgets
- use of systems and software packages to assess materials requirements information, data processing, bill of materials, estimating, supplier database and purchasing budget control
- systems for cost estimation and planning, value engineering, feasibility studies, cost-benefit analysis, life cycle costing and valuation
- supply chain management and value analysis, performance indices or parameters, and monitoring processes

- tender and contract documents, supply agreements, quality and delivery parameters, and terms of payment
- supply chain communications, feedback on quality, supply chain efficiency and continuous improvement processes
- sustainability policy and procedures
- WHS, regulatory and risk management requirements with particular emphasis on handling and use of resources
- WHS and regulatory compliance requirements, material safety data sheets (MSDS), test results, and risk management related to handling and storage
- use of systems thinking, constraints and contingency management, problem solving and decision making, and continuous improvement techniques

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to source and estimate materials for an engineering operation, including interacting with the supply chain. It includes planning and estimating supplies and integrating purchasing into operations. This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• plan for materials resourcing</li> <li>• estimate quantities, source and evaluate materials suppliers</li> <li>• develop tender and contract documents, materials requirement and purchasing schedule, purchasing budgets, and performance indices for materials supply chain</li> <li>• participate, communicate, cooperate, and negotiate with stakeholders on policy and procedures development and implementation</li> <li>• monitor supply of materials against contract requirements and key performance indicators (KPIs)</li> <li>• contribute to organisational management processes, and materials supply chain management.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, or a combination of both on and off the job. The candidate should have access to a workplace where the engineering-related production or project</li> </ul>

	<p>processes and volume of materials used enable the materials sourcing skills covered by this unit to be realistically assessed. Where part of assessment occurs off the job a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <ul style="list-style-type: none"> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Sustainability implications</b>	<p>Sustainability implications for sourcing and estimating materials in engineering or engineering-related operations may include taking account of:</p> <ul style="list-style-type: none"> <li>• resource consumption</li> <li>• energy consumption and conservation</li> <li>• processing needs</li> <li>• minimisation and processing of waste</li> <li>• transport</li> <li>• distribution</li> <li>• life cycle</li> <li>• reuse, recycle and disposal</li> </ul>
<b>Materials</b>	<p>Materials covered by this unit are those required for the ongoing production or performance of an engineering-related project or operation and must meet an engineering specification and for which the delivery must be coordinated with a production or project schedule. The materials will typically be subject to formal supplier agreements or contracts and delivery is to specified cost, times, quality and quantities</p>
<b>Supplier performance</b>	<p>Supplier performance may include:</p> <ul style="list-style-type: none"> <li>• cost</li> <li>• delivery reliability</li> <li>• conformance to quality and quantity specifications</li> <li>• conformance to contract and regulatory requirements</li> <li>• participation in efficiency improvement processes</li> <li>• flexibility</li> </ul>
<b>Software packages</b>	<p>Software packages may include:</p> <ul style="list-style-type: none"> <li>• spreadsheets</li> <li>• databases</li> <li>• word processor</li> <li>• presentation</li> <li>• project management and cost control</li> <li>• system control and data acquisition (SCADA), MRPII and enterprise resource planning (ERP)</li> </ul>
<b>Systems thinking</b>	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems</p>

	should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
<b>Constraints and contingencies</b>	Contingencies and constraints may include: <ul style="list-style-type: none"> <li>• financial</li> <li>• sudden changes to schedules or delivery by a supplier</li> <li>• organisational, procedural or cultural</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<b>Continuous improvement implementation</b>	Improvement processes may include techniques, such as: <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	WHS, regulatory requirements and enterprise procedures may include: <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Standards and Codes</b>	Standards and codes refer to all relevant Australian and international standards and applicable codes
<b>MSDS</b>	Organisations using or storing hazardous substances or dangerous goods are required to maintain a MSDS and dangerous goods register. Manufacturers or importers of hazardous substances are obliged to provide an MSDS whenever the substances are first supplied to a customer

## **Unit Sector(s)**

### **Competency field**

**Unit sector**            Management and organisation

## **Custom Content Section**

Not applicable.

# **MEM22017A Coordinate continuous improvement and technical development**

## **Modification History**

Release 1 - New unit. Replaces MEM22008A, but not equivalent.

## **Unit Descriptor**

This unit of competency covers the skills and knowledge required to coordinate continuous improvement and ongoing technical development activities for engineering-related operations or projects. It includes feasibility studies, proposals for the introduction of technology or process change and development of implementation strategy, costing and budgets relating to proposals.

## **Application of the Unit**

This unit applies to people with delegated coordination and facilitation responsibilities for implementing engineering-related continuous improvement change and technical development within organisations.

It does not cover design or implementation of major change, such as re-engineering or design and commissioning of new major plant. It is suitable for people working in engineering or related environments in design, maintenance or in operational functions.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Evaluate project or operations for improvement and technical development opportunities	1.1	Select project or operation for review in conjunction with stakeholders
		1.2	Determine current performance of operations or projects against objectives and key performance indicators (KPIs)
		1.3	Establish and monitor processes to identify shortfalls in performance and root causes
		1.4	Establish and monitor processes to identify possible opportunities for performance and technical improvements
		1.5	Evaluate hardware and software technology requirements for performance improvement opportunities
		1.6	Evaluate personnel skill requirements and training needs for performance improvement opportunities
		1.7	Confirm current or future work health and safety (WHS) requirements, codes of practice, regulations, standards and regulatory requirements related to possible opportunities for performance improvement
2	Develop recommendations for performance improvement and technical	2.1	Coordinate the specification of options for performance improvement, including required technology changes, skills development needs, timelines, budget and extent of disruption to current operations
		2.2	Coordinate feasibility analyses on options and develop

- |             |   |
|-------------|---|
| development | firm proposals  |
|             | 2.3 Prepare report and recommendations, including objectives, implementation schedule, budget and any required regulatory compliance measures |
|             | 2.4 Communicate and negotiate with stakeholders to confirm recommendations for change and technological developments                          |
| 3           | Coordinate implementation of approved changes   |
|             | 3.1 Develop implementation objectives, plan, schedule and budgets for approved changes  |
|             | 3.2 Monitor implementation of objectives by priority, strategy and schedule   |
|             | 3.3 Coordinate change management, process redesign and introduction of technology   |
|             | 3.4 Manage physical and financial resources and budget within delegation  |
|             | 3.5 Monitor change and technological development for compliance with organisational policies and procedures                                   |
|             | 3.6 Assist with risk management procedures  |
| 4           | Report outcomes   |
|             | 4.1 Record progress and results in accordance with procedures   |
|             | 4.2 Provide documentation, data entry and analysis, as required   |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying current objectives and performance measures
- identifying change and development opportunities
- evaluating technologies, plant and other assets, hardware and software used by current operations and projects
- identifying skills, knowledge and techniques for operations or projects
- completing feasibility analyses on options and developing of proposals
- maintaining relevant records of plans, priorities, schedules and progress, legislative compliance, personal and team skills development, and sources of technical information and resources
- setting and coordinating priorities, strategy and schedule for changes, including introduction of new technology and continuous improvement operational changes
- problem solving and decision making, systems thinking, constraints and contingency management, short-term planning adjustments, and rescheduling physical and financial resources and budget within delegation
- communicating and negotiating with stakeholders, team members, support function groups, expert technical and professional assistance, customers and suppliers
- monitoring change and technological development for compliance with regulatory requirements
- reporting and documenting progress and results, data and analysis in accordance with procedures

### Required knowledge

Required knowledge includes:

- project management techniques
- modern production management techniques
- context of operations, such as competitive pressures or markets, customer-supplier relationships, regulatory and industrial environment, environmental and sustainability, and resourcing and labour issues
- operations or project management structure, functional team relationships, responsibilities and delegations across the organisation, available technical and professional support services, communications and reporting lines
- procedures for audit of technologies, skills, knowledge and techniques, plant and other assets, including hardware and software used by current operations and projects

- feasibility analysis or ‘trade-off’ methods to assist selection from among options
- accountability and record keeping requirements in accordance with organisational procedures
- tendering and contract requirements and processes and their effect on continuous improvement, including agreement on design and specification, negotiations and optimisations, provisions for variations, delays and penalties
- change and technological development implications for WHS requirements, codes of practice, regulations, standards and regulatory requirements related to proposed changes and technologies
- sustainability issues related to continuous improvement of engineering-related projects and operations
- typical software for program management and budget control, use and validation options
- implementation plan, strategic and prioritised objectives and budgets
- procedures for reporting and recording of progress and records of legislative compliance in accordance with procedures for accountability against objectives, schedule and budget
- requirements for and functions of technical documentation, graphics and specifications and records of meetings, communications and agreements with stakeholders

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to review an existing engineering-related operation or project, including current context and performance objectives, and to identify and implement continuous improvements and technical developments. This includes working individually and in a team environment and recognising and complying with normal control procedures on engineering projects.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• evaluate technologies, assets, workforce and contractor skills and knowledge, personnel development strategies, hardware and software technology requirements, for technology and capability gaps and opportunities for improvement</li> <li>• review organisation structure, current operations and context, development opportunities, budgets and constraints, software options for opportunities for improvement</li> <li>• complete feasibility analyses on options and develop proposals</li> <li>• maintain appropriate documentation and records</li> <li>• demonstrate systems thinking, constraints and contingency management, short-term planning adjustments and rescheduling</li> <li>• manage physical and financial resources and budget within delegation</li> <li>• communicate and negotiate with stakeholders</li> <li>• report and document progress and results, data and analysis in accordance with procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with</li> </ul>

	disabilities.
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Stakeholders</b>	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> <li>• enterprise or project owners and managers</li> <li>• team members</li> <li>• support function groups</li> <li>• expert technical and professional assistance</li> <li>• customers and suppliers</li> <li>• colleagues identified in reporting arrangements for the engineering project or operation</li> </ul>
<b>Systems thinking</b>	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or

	<p>projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<b>Constraints and contingencies</b>	<p>Constraints and contingencies may include:</p> <ul style="list-style-type: none"> <li>• financial</li> <li>• organisational, procedural or cultural</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include formal policy documents, operational procedures, mission statements, training manuals, orders, production schedules, safety instructions and notices, and may reference:</p> <ul style="list-style-type: none"> <li>• enterprise agreements and awards</li> <li>• WHS requirements</li> <li>• codes of practice and other legislative requirements</li> <li>• environmental and social obligations</li> <li>• ethical practice</li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Standards and codes</b>	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to the engineering project or operation</p>
<b>Continuous improvement implementation</b>	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>• balanced scorecard</li> </ul>

	<ul style="list-style-type: none"> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Lean principles</b>	<p>Lean manufacturing uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness</p>

## Unit Sector(s)

### Competency field

**Unit sector**            Management and organisation

## Custom Content Section

Not applicable.

## **MEM22018A Coordinate sales and promotion of engineering-related products or services**

### **Modification History**

Release 1 - New unit. Replaces MEM22009A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to coordinate sales and promotion of engineering-related products or services requiring engineering knowledge. The unit covers ensuring appropriate technical advice is provided to clients, contribution and participation in strategic planning and sales budget setting, control of sales costs against budgets, and responsibility for meeting sales performance indices. It includes a requirement to provide feedback on customer satisfaction and seek out opportunities for improvements.

### **Application of the Unit**

This unit applies to people with coordination responsibilities for sales and promotion of products or services that require engineering knowledge. It is suitable for people working in marketing and sales where detailed engineering-related advice must be provided or where technically advanced products or services are sold.

Prior or concurrently developed competence in personal and electronic communication, self-directed and group activities, planning and scheduling, process improvement, performance analysis, and an understanding of technology, skills and techniques required by operations and projects is required.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Review organisational operations, markets and customer base	1.1	Define sales, service and marketing strategic objectives for engineering-related products or services
		1.2	Establish nature and context of products or services, including market potential, technical advantage, customer-supplier relationships and relevant regulatory requirements
		1.3	Review functional team relationships and organisational fit, available technical and professional support services, communications and reporting lines
		1.4	Review sustainability and life cycle implications of products and services
		1.5	Review legal obligations of organisation and team related to consumer protection, trade practices, environmental and commercial legislation related to product or service delivery
		1.6	Identify relevant organisation accounts and budgets and establish procedures for compliance
		1.7	Identify available software for marketing and sales operations

- |   |   |     |  |
|---|---|-----|--|
| 2 | Coordinate sales, service and promotions activities | 2.1 | Establish implementation plan, schedule and budgets to achieve promotional and sales objectives  |
|   |   | 2.2 | Establish procedures to record progress against objectives, schedule and budget  |
|   |   | 2.3 | Participate in and supervise engineering-related sales, service and promotions with stakeholders, including customers  |
|   |   | 2.4 | Establish processes to ensure self and team maintain currency of technical knowledge of organisation's products and services   |
|   |   | 2.5 | Establish continuous improvement of sales and promotion activities   |
|   |   |     |  |
| 3 | Monitor sales and promotion activities              | 3.1 | Communicate and negotiate with stakeholders to establish organisational capability, feedback on improvement opportunities and customer needs, marketing opportunities, and development needs of sales and marketing team |
|   |   | 3.2 | Address constraints and contingencies, and adjust short-term planning and reschedule, as necessary   |
|   |   | 3.3 | Monitor implementation of objectives by priority, strategy and schedule  |
|   |   |     |  |
| 4 | Report outcomes                                     | 4.1 | Record progress and results in accordance with procedures  |
|   |   | 4.2 | Provide documentation, data entry and analysis, as required  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- planning, scheduling and budgeting to achieve promotional, sales and service objectives
- investigating and evaluating options for sales, promotions and marketing team development and training
- identifying technical and market advantage for products or services, regulatory and industrial relations environment
- establishing customer-supplier relationships, current markets and context, marketing and sales opportunities, and constraints
- coordinating implementation of objectives, sales and promotions, personal and team training, continuous improvement, problem solving and decision making
- monitoring marketing team performance
- identifying awards, enterprise agreements personnel entitlements and remuneration arrangements that may impact on technical sales and promotion team activities
- maintaining records
- systems thinking, constraints and contingency management, short-term planning adjustments and rescheduling, marketing team resources and budgeting
- communicating and negotiating with stakeholders
- monitoring products and services for change or change opportunities
- monitoring of team compliance with relevant regulations, including enterprise agreements or awards, WHS, codes of practice, trade practices and consumer law, other legislative requirements, social and economic obligations, and ethical practice
- reporting and documenting progress and results, data and analysis in accordance with procedures

### Required knowledge

Required knowledge includes:

- engineering knowledge relevant to operations and supplied products and services context of marketing and sales, such as competitive pressures or markets, customer-supplier relationships and consumer protection legislation
- organisational management structure, functional team relationships, available technical and professional support services, communications and reporting lines
- audit procedures for personnel current competence, competence gaps and training requirements within marketing team
- opportunities for technological and personnel competence improvement

- sustainability implications of products and services
- organisation mission and business strategy, operations and project plans and objectives
- opportunities and constraints related to sales and promotions
- techniques for analysis of organisational capability, current and future technological needs of customer base, and marketing opportunities
- software options for program management and budget control
- WHS, codes of practice, and other legislative requirements, sustainability and ethical practice related to products and services, marketing team changes and developments
- risk management procedures
- procedures for reporting and recording of progress and records
- legal obligations of organisation and team related to employment conditions, consumer protection, trade practices, environmental and commercial legislation related to procedures

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to coordinate sales of products or services where such sales require engineering-related knowledge and skills, including establishing performance objectives and identifying and implementing continuous improvement.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• define sales and marketing organisational mission and strategic objectives, features and functions within the organisation</li> <li>• plan, schedule and budget to achieve promotional and sales objectives</li> <li>• identify technical and market advantage for products or services, customer-supplier relationships, current markets and context, marketing and sales opportunities, and constraints</li> <li>• investigate and evaluate options for sales, promotions and marketing team development, and complete feasibility analysis on marketing options</li> <li>• maintain records of plans, priorities, schedules and progress, legislative compliance, and personal and team skills development</li> <li>• coordinate implementation of objectives, sales, marketing and</li> </ul>

	<p>promotions, personal and team training, continuous improvement, problem solving and decision making, systems thinking, constraints and contingency management, short-term planning adjustments and rescheduling, and marketing team resources and budget</p> <ul style="list-style-type: none"> <li>• communicate and negotiate with stakeholders monitor products and services</li> <li>• report and document progress and results, data and analysis in accordance with procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Personal responsibilities</b></p>	<p>Personal responsibilities may be defined by:</p> <ul style="list-style-type: none"> <li>• role specification</li> <li>• workplace agreement or award</li> <li>• negotiation</li> <li>• contract, legal or regulatory obligations</li> <li>• professional and ethical considerations</li> <li>• agreed operational or project requirements</li> </ul>
<p><b>Systems thinking</b></p>	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<p><b>Constraints and contingencies</b></p>	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> <li>• financial</li> <li>• organisational, procedural or cultural</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<p><b>WHS, regulatory requirements and enterprise procedures</b></p>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>

<b>Legal obligations</b>	<p>Legal obligations may include:</p> <ul style="list-style-type: none"> <li>• contract law</li> <li>• commercial law</li> <li>• company law</li> <li>• consumer protection Acts and Commonwealth Trade Practices Acts and Regulations</li> <li>• environmental Acts</li> <li>• tax Acts and regulations, including GST and other sales-related provisions</li> <li>• industrial law, including relevant awards and agreements</li> </ul> <p>WHS Act and regulations</p>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Continuous improvement implementation</b>	<p>Continuous improvement implementation may relate to products or services being sold, including:</p> <ul style="list-style-type: none"> <li>• sales operation</li> <li>• product delivery and maintenance</li> <li>• measuring performance against benchmarks</li> <li>• process improvement</li> <li>• problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>

Not Applicable

## Pre-Requisites

Prerequisite units		
Path 1	MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment
	MEM16008A	Interact with computing technology

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Graph exponential and logarithmic functions and solve exponential and logarithmic equations.	1.1. Simplify arithmetic and algebraic expressions using the laws of indices and logarithms. 1.2. Sketch the graphs of exponential and logarithmic functions. 1.3. Convert logarithms between bases. 1.4. Draw curves of best fit, interpolate data and estimate constants. 1.5. Solve problems involving growth and decay.
2. Graph trigonometric functions and solve trigonometric equations.	2.1. Sketch graphs of simple trigonometric functions. 2.2. Simplify trigonometric expressions. 2.3. Solve trigonometric equations.
3. Apply basic computer numerical methods to engineering situations.	3.1. Apply appropriate number systems to a range of engineering applications requiring manipulations of decimal, binary and hexadecimal information. 3.2. Apply computer techniques to the solution of engineering problems involving products, sums, divisions and subtraction of variables. 3.3. Apply computer techniques to the solution of engineering problems involving linear, quadratic, logarithmic, trigonometric equations. 3.4. Apply computer techniques to the solution of engineering problems and vector analysis.
4. Sketch and describe complex figures mathematically.	4.1. Sketch complex figures including intersections to implement pattern developments. 4.2. Describe complex figures mathematically. Relate mathematical models to computer graphics models.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- simplifying arithmetic and algebraic expressions using the laws of indices and

## REQUIRED SKILLS AND KNOWLEDGE

logarithms

- correctly sketching exponential and logarithmic functions
- accurately converting logarithms from one base to another
- drawing curves of best fit for given sets of data
- accurately interpolating data from plotted data and/or drawn curves
- solving problems involving growth and decay
- accurately sketching trigonometric functions
- simplifying trigonometric expressions using trigonometric identities
- correctly solving trigonometric equations
- selecting an appropriate number system
- developing an appropriate program for the engineering situation
- running a program to achieve an appropriate solution

### Required knowledge

Look for evidence that confirms knowledge of:

- the laws of indices and logarithms
- the procedures for simplifying arithmetic and algebraic expressions
- the procedures for sketching exponential and logarithmic functions
- the effects on the curve due to variation in size of constants
- the procedures for converting logarithms between bases
- the procedures for drawing curves of best fit and interpolating results
- the procedures for estimating constants in suggested relationships
- the concept of growth and decay
- the procedures for solving problems involving growth and decay
- the significance of amplitude, period and phase angle
- the procedures for sketching trigonometric functions
- the trigonometric identities
- the procedures for using trigonometric identities to simplify trigonometric expressions
- matching of engineering situations to appropriate number systems
- use of number systems for particular applications
- identification and description of engineering situations appropriate for analysis using simple programming techniques
- procedure for using programs to analyse engineering situation and the identification of program limitations

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to apply advanced mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying mathematical concepts to engineering applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures,</p>

<b>EVIDENCE GUIDE</b>	
	product and manufacturing specifications, codes, standards, manuals and reference materials.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Operate a computer and/or controller system	1.1. Operate a range of hardware to complete engineering tasks. 1.2. Use appropriate software to produce required outcomes. 1.3. Identify and use available sources of help to overcome basic difficulties with applications. Ensure technical instructions are followed and inconsistencies and technical difficulties investigated and resolved. This should include adherence to occupational health and safety regulations / guidelines.
2. Develop/customise computer and/or controller systems/programs	2.1. Work plan for the programming/customising task is prepared in accordance with organizational guidelines. 2.2. Programs are written/altered/customised in the required format and computer language. Develop and maintain client engagement with project or task. 2.3. Program/system records are maintained and made available to all interested parties following company procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- completing tasks using selected hardware in accordance with manufacturer's instructions and to workplace procedures
- using CPU, I/O, peripherals, interfaces, actuators and other computer/controller equipment
- accessing and using appropriate software in accordance with manufacturer's instructions to complete task requirements
- saving and storing documents and other computer/controller files in an appropriate directory in accordance with manufacturer's instructions and workplace

## **REQUIRED SKILLS AND KNOWLEDGE**

procedures

- identifying and analysing difficulties using appropriate help sources
- preparing work plans for programming/customising task
- writing/altering/customising programs
- testing and amending programs
- maintaining records

### **Required knowledge**

Look for evidence that confirms knowledge of:

- functions and operating procedures of CPU, I/O, peripherals, interfaces, actuators and other computer/controller equipment
- applications of available hardware and criteria for selecting the hardware for particular tasks
- procedures for operating hardware
- procedures for checking and replacing hardware consumables
- available software and their applications
- procedures and commands for the use of identified software
- procedures and related requirements for saving and storing documents and computer/controller files
- techniques for accessing, transferring, printing documents or other computer files or using computer files to control plant and equipment
- techniques for accessing and using manuals and training booklets to solve minor problems
- procedures for accessing sources of help
- techniques for accessing help with typical difficulties with selected applications
- typical programming/customising sequencing and related issues
- techniques and procedures for preparing a work plan for a programming/customising task
- techniques and procedures for writing/customising programs in specified formats and computer language
- techniques and procedures for testing and amending programs
- procedures for checking program alteration with users
- procedures for maintaining records and reports on program/system development or enhancement
- procedures for disseminating information on program/system development

## **MEM23004A Apply technical mathematics**

### **Modification History**

Release 1 - New unit. Replaces MEM23001A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the application of mathematical analysis, graphical and software techniques to engineering problems. It includes exponential and logarithmic functions, trigonometric equations involving single and double angles, sequences and series, two dimensional vector analysis, complex numbers, determinants and matrices.

### **Application of the Unit**

The unit applies to engineering or related activities requiring specific mathematical techniques. It is suitable for people giving technical support to design, operations or maintenance activities and those pursuing technical qualifications and careers at paraprofessional or technician level.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of technical mathematical techniques required for an engineering application	1.1	Analyse an engineering application for required technical mathematical tasks
		1.2	Develop systematic methods for layout and solution checking
		1.3	Determine mathematical software required for analytical and graphical solutions and validate software using traditional solutions to simple examples
2	Apply technical mathematical techniques to engineering application	2.1	Use appropriate software for analytical and graphical solutions
		2.2	Convert between different number systems
		2.3	Use appropriate mathematical techniques required for analysis and solution
		2.4	Use appropriate data representations to communicate the solution to others.
		2.5	Report results and document calculations, graphs and analysis

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- solving mathematical problems using standard engineering software packages, and validating software results of simple examples analytically and/or graphically
- manipulating values using decimal, binary and hexadecimal number systems
- graphing and analysing functions for solutions:
  - exponential and logarithmic functions
  - trigonometric functions
- using the techniques of sequences and series to solve simple mathematical problems
- using the techniques of two dimensional vectors to solve mathematic and applied problems
- solving problems involving complex quantities using the properties, operations and theorems of complex numbers
- using determinant and matrix analysis to solve algebraic and vectorial problems
- using probability to assess likely occurrences

### Required knowledge

Required knowledge includes:

- software for mathematical analysis and graphical representations
- binomials and polynomials
- exponential and logarithmic functions
- trigonometric equations
- sequences and series
- two dimensional vectors
- complex numbers
- determinant and matrices
- probability
- stability analysis using plots

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

---

## Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to apply mathematical analysis, graphical and software techniques to engineering-related problems within the context of delegations and other checking and technical oversight procedures. The candidate may demonstrate competence through either working individually or as part of a team.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• solve mathematical problems using software</li> <li>• validate software results of simple examples analytically and/or graphically</li> <li>• manipulate values using decimal, binary and hexadecimal number systems</li> <li>• graph and analyse exponential, logarithmic and trigonometric functions for solutions</li> <li>• use the techniques of sequences and series to solve simple mathematical problems</li> <li>• use the techniques of two dimensional vectors to solve mathematic and applied problems</li> <li>• solve problems involving complex quantities using the properties, operations and theorems of complex numbers</li> <li>• use determinant and matrix analysis to solve algebraic and vectorial problems</li> <li>• use probability to assess likely occurrences.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> </ul>

	<ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Engineering applications related to mathematical techniques in this unit</b>	<p>Most engineering disciplines will have applications supported by the technical mathematics skills described in this unit, including mechanical, manufacturing, maintenance and mechatronics engineering. Examples of engineering applications requiring mathematical skills described in this unit may include:</p> <ul style="list-style-type: none"> <li>• vector analysis of force systems on beams and bodies</li> <li>• trigonometric plots related to waveforms for amplitude, frequency and phase shift analysis</li> <li>• matrix and determinant solutions of vector systems or simultaneous equations</li> <li>• complex plane analysis of control systems for stability analysis</li> </ul>
<b>Scope of technical mathematical techniques</b>	<p>The scope of technical mathematical techniques required for an engineering application will vary and may include:</p> <ul style="list-style-type: none"> <li>• standard mathematical software</li> <li>• decimal, binary and hexadecimal number systems</li> <li>• graph exponential and logarithmic functions required for the engineering application</li> <li>• solve trigonometric equations involving single and double angles</li> <li>• solve problems using simple binomials and polynomials</li> </ul>

	<ul style="list-style-type: none"> <li>• solve problems involving simple sequences and series in the engineering application</li> <li>• analyse two dimensional vectors</li> <li>• analyse complex numbers and represent graphically</li> <li>• analyse simple algebraic and vectorial problems using determinants and matrices</li> <li>• evaluate probability as a predictive tool in simple situations</li> </ul>
<b>Number system</b>	<p>Number systems may include:</p> <ul style="list-style-type: none"> <li>• decimal</li> <li>• binary</li> <li>• hexadecimal</li> </ul>

# MEM23006A Apply fluid and thermodynamics principles in engineering

## Modification History

Release 1 (MEM05v9).

## Unit Descriptor

This unit of competency covers the application of fluid and thermodynamic principles to engineering applications. It includes sustainability issues; fundamental scientific principles; fundamentals of vacuum technology; properties of gases and liquids; heat transfer due to conduction, convection and radiation heat and compression processes; closed and open systems; continuity, enthalpy and energy transfers related to compressors, boilers, turbine heat exchangers, heat engines, refrigerators and heat pump performance. It also includes fluid systems and components, forces on floating and submerged bodies, turbine and pumping systems, and jet forces on blades and plates.

## Application of the Unit

This unit applies to fluid and thermodynamic devices and systems used in industry. It is suitable for people working as technicians in engineering or related fields using hydrostatic, hydrodynamic, fluid power or heating, ventilation and air conditioning (HVAC) equipment and those pursuing careers and qualifications in engineering or related disciplines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A                      Apply technical mathematics

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of fluid or thermodynamic application	1.1	Determine compliance requirements of work health and safety (WHS) and regulatory requirements, codes of practice standards, risk assessment and registration requirements
		1.2	Review sustainability implications of fluid and thermodynamic tasks
		1.3	Assess fluid, thermodynamic and vacuum principles, skills and techniques required by tasks
		1.4	Review functions and features of fluid, thermodynamic and vacuum devices, machines and systems
		1.5	Assess software techniques required for analysis and graphics required by the task
2	Interpret fluid or thermodynamic system design for effective performance	2.1	Determine the energy cost for running boilers, heat engines, compressors or turbines over a billing period, the efficiency of conversion of energy source to electrical, fluid, thermal or mechanical power and the sustainability of the processes
		2.2	Select components for thermal and fluid systems ensuring compatible materials, pressure, temperature and flow capacity and appropriate performance
		2.3	Determine pumping system power requirements to provide for raising fluid, adequate flow rate and specified system losses
		2.4	Specify vacuum system components and performance requirements for moulding, dust removal, film

- deposition, chemical reaction control, and prove or test performance of specified system or individual components
- 2.5 Seek technical and professional assistance or clarification of design information, as required
  - 2.6 Ensure clear and logical process of specification development and compatibility of units in calculations
- 3 Report results
- 3.1 Record results of investigation, evaluation and application
  - 3.2 Provide documentation, such as calculations, diagrams, programs and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining and confirming parameters and context of tasks, personal responsibilities, team and support personnel relations, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures
- reviewing sustainability implications, functions and features of fluid, thermodynamic and vacuum devices, machines and systems
- assessing and applying fluid, thermodynamic and vacuum principles and software skills and techniques
- ensuring clear and logical process of specification development and compatibility of units in calculations
- reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files

### Required knowledge

Required knowledge includes:

- definition of fluid mechanics and thermodynamics and recognition of applications
- analytical, graphical, semi-graphical and software assisted techniques for applications for fluid and thermodynamic principles in engineering
- energy and sustainability concepts relevant to fluid and thermodynamic applications
- principles of turbines and heat engines
- basic properties and concepts common to fluids and thermodynamics:
  - atoms, molecules, inter-molecular forces, molecular motion, states of matter, solids, liquids, gases, basic properties and units
  - ideal or perfect gases and liquids
  - definitions
- energy types and concepts:
  - potential energy, kinetic energy and internal energy
  - chemical energy = energy content of a fuel
  - work, constant and variable force, relationship to pressure and volume changes
  - sensible heat and specific heat capacity ( $C_p$  and  $C_v$ )
  - phase change, latent heat, enthalpy and enthalpy diagram
- heat transfer processes

- concepts and properties of gases
- energy transfer in closed and open systems:
  - definition of a closed system
  - non-flow energy equation definition of an open system
  - mass and volume flow rate and the continuity equation
- fluid mechanics
- fluid system components
- fluid statics
- fluid dynamics
- fluid power
- vacuum technology:
  - definition of vacuum
  - states of matter
  - purposes of vacuums
  - degrees of vacuum
- methods of lowering pressure:
  - displacement or transfer of gas
  - sorption or condensation
- barometric pressure:
  - inverted mercury tube
  - variation of atmospheric pressure with altitude
- quantity of gas:
  - mole, Avogadro's Number and molar mass
- types of vacuum pumps for evacuating volumes
- description of typical vacuum vessels, features and functions
- applications of vacuum technology in industry

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to apply fluid, thermodynamic and vacuum principles to the selection and evaluation of components and systems.</p> <p>This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.</p>
-------------------------------	--

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• review sustainability implications, functions and features of fluid, thermodynamic and vacuum devices, machines and systems</li> <li>• interpret fluid, thermodynamic and vacuum system designs for industry applications</li> <li>• select components for specified technical performance</li> <li>• calculate energy use in fluid, thermodynamic and vacuum system</li> <li>• assess and apply fluid, thermodynamic and vacuum principles and software skills and techniques to engineering tasks.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<p><b>Method of assessment</b></p>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that</li> </ul>

	<p>competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <ul style="list-style-type: none"> <li>Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Fluid and thermodynamic tasks</b>	<p>Fluid and thermodynamic tasks covered by this unit may include:</p> <ul style="list-style-type: none"> <li>energy costs, efficiency and sustainability assessment of running boilers, heat engines, compressors or turbines</li> <li>fluid and thermal system component selection</li> <li>pumping and turbine system power evaluation</li> <li>evaluating vacuum system components and performance requirements</li> </ul>
<b>Basic properties and units common to fluids and thermodynamics</b>	<p>Basic properties and units include:</p> <ul style="list-style-type: none"> <li>mass, weight and force</li> <li>volume, density, specific volume and relative density</li> <li>pressure (absolute and gauge), and atmospheric pressure variation</li> <li>temperature (Celsius, Kelvin and others)</li> <li>viscosity and surface tension</li> <li>vapour pressure of a liquid (saturation vapour pressure)</li> <li>temperature and pressure effects on properties</li> <li>international system of units (SI)</li> <li>fundamental dimensions and units</li> <li>derived dimensions and units</li> </ul>
<b>Static and hydrodynamic devices or systems</b>	<p>Static and hydrodynamic devices or systems may include:</p> <ul style="list-style-type: none"> <li>floating and submerged bodies</li> <li>turbine and pumping systems</li> </ul>

	<ul style="list-style-type: none"> <li>• stationary or moving plates or blades</li> <li>• vacuum systems</li> </ul>
<b>Thermodynamic devices or systems</b>	<p>Thermodynamic devices or systems may include:</p> <ul style="list-style-type: none"> <li>• heat transfer devices</li> <li>• compressors</li> <li>• boilers</li> <li>• turbines</li> <li>• heat exchangers</li> <li>• heat engines</li> <li>• refrigerators</li> <li>• heat pumps</li> </ul>
<b>Appropriate licensed technical and professional assistance</b>	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Enthalpy</b>	<p>Enthalpy is a thermodynamic property equal to the sum of the internal energy of a system and the product of its pressure and volume</p>

## **Unit Sector(s)**

### **Competency field**

**Unit sector**          Engineering science

## **Custom Content Section**

Not applicable.

## **MEM23007A Apply calculus to engineering tasks**

### **Modification History**

Release 1 - New unit. Replaces MEM23002A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the application of calculus, including differentiation and integration techniques to engineering applications. It includes the use and application of standard differentiation and integration rules, finding maximum and minimum values of curves, application to rates of change and slope, finding definite integrals, using method of substitution, using trigonometric identities and finding areas under curves.

### **Application of the Unit**

The unit applies to engineering or related activities requiring the application of mathematical techniques using calculus. It is suitable for people giving technical support to design, operations or maintenance activities and those pursuing technical qualifications and careers at paraprofessional or technician level.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

MEM23004A                      Apply technical mathematics

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of calculus techniques required for an engineering application	1.1	Analyse an engineering application for required calculus tasks
		1.2	Develop systematic methods for layout and solution validation, including any required external sign-off of solution
		1.3	Identify calculus technique and any software required for analysis and resolution of identified engineering application tasks
		1.4	Identify sources for professional and technical assistance, if required
2	Apply differential techniques to engineering applications	2.1	Apply standard differentiation rules to solve engineering problems
		2.2	Check solution is laid out correctly and is error free
		2.3	Review solution to ensure it provides information relevant to resolution of engineering application task
		2.4	Report results and document calculations, graphs and analysis
3	Apply integration techniques to engineering applications	3.1	Apply standard integration rules to solve engineering problems
		3.2	Check solution is laid out correctly and is error free
		3.3	Review solution to ensure it provides information

relevant to resolution of engineering application task

3.4 Report results and document calculations, graphs and analysis

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- analysing engineering applications to determine relevant calculus techniques
- applying relevant differentiation and integration concepts and tools to engineering applications
- using appropriate software and/or scientific calculators to generate solutions to statistical and probability-related engineering problems
- using differentiation to find rates of change
- applying special calculus techniques to solve more complex integrals, such as:
  - method of substitution
  - using trigonometric identities
- identifying and solving simple first and second order differential equations
- identifying key points to find constants of integration
- finding integrals of algebraic, trigonometric and exponential functions
- establishing appropriate procedures for checking and validating solutions
- logical layout and presentation of data developed using calculus
- reporting and effectively communicating the results of calculus-based analysis

### Required knowledge

Required knowledge includes:

- identifying appropriate limits and applying to engineering problems being solved with calculus techniques
- differentiation rules and techniques
- partial differentiation
- relationship between differentiation and attributes of mathematical curves and graphs
- optimisation of variables based on maximum and minimum values of mathematical curves and graphs
- integration as the reverse of differentiation
- integration rules and techniques
- the definite integral

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to apply calculus techniques to engineering and related problems within the context of specified engineering applications and solution validation and technical oversight procedures. The candidate may demonstrate competence through either working individually or as part of a team.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• solve mathematical problems related to engineering and manufacturing using calculus techniques</li> <li>• validate results of mathematical problems using calculus either analytically and/or graphically</li> <li>• manipulate engineering and manufacturing-related mathematical functions and equations using calculus techniques</li> <li>• analyse mathematical problems by using appropriate calculus techniques to achieve engineering and manufacturing solutions.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> </ul>

	<ul style="list-style-type: none"> <li>Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Engineering applications related to calculus techniques in this unit</b>	<p>Most engineering disciplines will have applications supported by the calculus skills described in this unit, including mechanical, manufacturing, maintenance and mechatronics engineering. Examples of engineering or manufacturing applications requiring calculus skills described in this unit may include:</p> <ul style="list-style-type: none"> <li>determining the point of maximum bending moment, slope and deflection for a beam</li> <li>determining the depth of parabolic mirrors</li> <li>determining moments of inertia of a range of engineering components</li> <li>solving rectilinear motion problems</li> </ul>
<b>Scope of calculus techniques</b>	<p>The scope of calculus techniques required for an engineering or manufacturing application will vary and may include:</p> <ul style="list-style-type: none"> <li>identification of appropriate limits</li> <li>use of standard derivatives and rules</li> <li>application of second and third derivatives</li> <li>finding rates of change and slopes of curves</li> <li>calculating maximum and minimum values of curves</li> <li>solving first and second order differential equations</li> <li>use of standard integrals and rules</li> <li>finding constants of integration</li> <li>finding areas under and between curves</li> <li>integrating algebraic, trigonometric and exponential functions</li> <li>the definite integral</li> </ul>

	<ul style="list-style-type: none"><li>• identification of appropriate methods to solve more complex integration applications</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Research and identify the range of basic mechanical scientific principles and techniques relevant to mechanical and manufacturing engineering</p>	<p>1.1.The basic mechanical scientific principles relating to mechanical and manufacturing engineering researched and reported on from appropriate sources of information and examination of applications.</p> <p>1.2.The basic mechanical techniques and associated technologies, software and hardware required to implement scientific principles relating to mechanical and manufacturing engineering situations.</p>
<p>2. Select basic mechanical scientific principles and techniques relevant to particular mechanical and manufacturing engineering applications</p>	<p>2.1.For particular mechanical and manufacturing engineering situations, the relevant basic mechanical scientific techniques and principles can be selected.</p> <p>2.2.For particular mechanical engineering situations, the relevant basic mechanical techniques and associated technologies, software and hardware can be selected.</p>
<p>3. Apply the relevant basic mechanical scientific principles and techniques appropriately</p>	<p>3.1.The basic mechanical scientific principles are applied in a consistent and appropriate manner to obtain any required solution.</p> <p>3.2.Appropriate calculations and coherent units are used in the solution of engineering calculations.</p> <p>3.3.Significant figures are used in engineering calculations.</p> <p>3.4.The basic mechanical techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain required solutions.</p>
<p>4. Quote the results of the application of the basic mechanical scientific principles and basic techniques correctly</p>	<p>4.1.For applications involving engineering calculations the solution is quoted in an appropriate style.</p> <p>4.2.For applications not involving engineering calculations the solution is quoted in an appropriate style.</p>

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

## **REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### **Required skills**

Look for evidence that confirms skills in:

- selecting appropriate basic mechanical scientific principles have been chosen to suit specific applications
- selecting appropriate basic mechanical techniques and associated technologies, software and hardware to suit specific applications
- applying basic mechanical scientific principles to particular engineering situations
- applying and manipulating appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations
- checking the validity of equations is using dimensional analysis
- applying basic mechanical techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles.
- referring solutions to the original aim of the application.
- quoting solutions in appropriate units, using appropriate significant figures.
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application.

### **Required knowledge**

Look for evidence that confirms knowledge of:

- basic mechanical scientific principles
- limitations of selected basic scientific principles
- basic mechanical techniques and related technologies, software and hardware associated with implementing scientific principles in mechanical engineering solutions
- the limitations of basic techniques and associated technologies, software and hardware
- the applicability and limitations of basic mechanical scientific principles
- the applicability and limitations of basic mechanical techniques and associated technologies, software and hardware
- appropriateness of calculations
- fundamental and derived quantities
- common systems of units
- the procedure for converting between systems of units
- common prefixes used with units and their values
- the procedure for carrying out dimensional analysis

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

- |   |
|---|
| <ul style="list-style-type: none"><li>• the concept of significant figures</li><li>• the uncertainty of computations based on experimental data</li><li>• the procedures for determining the significance of figures in calculations</li><li>• the procedures for estimating errors in derived quantities</li></ul> |
|---|

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to apply basic scientific principles and techniques in mechanical engineering situations.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic scientific principles and techniques in mechanical engineering situations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

<b>EVIDENCE GUIDE</b>	
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Sources of information</b>	Reference texts, manufacturer's catalogues and industrial magazines, websites, use of phone, email and fax information gathering.
<b>Basic mechanical scientific techniques and principles</b>	<ul style="list-style-type: none"> <li>• Candidates should apply appropriate basic techniques supported by their mathematical skills and introductory knowledge of scientific principles to design, manufacturing and commissioning related tasks and projects. The applications may require the use of one or two basic mechanical scientific principles together with a fundamental mathematical calculation leading to process, resources and system choices from a limited range of options.</li> <li>• Basic techniques include basic hand and power tool operations, machining, fitting, welding, moulding, fabricating, wiring and programming techniques.</li> </ul>
<b>Mechanical engineering</b>	The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of mechanical products, processes, systems or services for converting energy into power and motion, materials into product and components into machines and systems for domestic, industrial, public or private services, entertainment and

<b>RANGE STATEMENT</b>	
	military applications.

# MEM23063A Select and test mechanical engineering materials

## Modification History

Release 1 - New unit. Replaces MEM23061A, but not equivalent.

## Unit Descriptor

This unit of competency covers the skills needed to interpret design information for material and material test requirements, select appropriate tests and use results in the selection of appropriate materials for mechanical and manufacturing engineering-related applications.

## Application of the Unit

This unit applies to the selection of materials and material tests, sourcing materials data, ensuring appropriate performance and physical standards for mechanical and manufacturing applications, documenting materials tests, and ensuring calibration standards. The unit applies to mechanical and manufacturing engineering applications in mass production, batch production, jobbing shop and prototyping.

Activities may be performed as a member of a design and development team.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Distinguish classes of materials, based on properties and materials tests, relevant to mechanical and manufacturing engineering	1.1	Relate material properties to common mechanical and manufacturing engineering methods and processes
		1.2	Identify common characteristics, faults or flaws in materials, components and product
		1.3	Identify engineering-related test methods for materials and components or product properties
		1.4	Identify common industrial test standards/codes, calibration requirements, regulations and authorities relevant to selection of materials and products for mechanical and manufacturing engineering applications
2	Utilise sources of information on engineering materials, materials tests and test equipment	2.1	Review design information for material specifications and required material tests
		2.2	Identify and use appropriate sources of information on materials, material tests and test calibration
		2.3	Identify and use appropriate sources of information on methods of testing of properties of materials
		2.4	Investigate and report on relevant standards and codes
		2.5	Identify and use appropriate sources of information on materials safety data sheets (MSDS)
		2.6	Establish availability of technical and professional assistance

- |   |  |     |   |
|---|--|-----|---|
| 3 | Test for or obtain the properties of engineering materials                           | 3.1 | Specify required materials tests and manage implementation of tests to ensure quality, safety and suitability for applications  |
|   |  | 3.2 | Ensure traceability of measurement standard   |
|   |  | 3.3 | Obtain test sheets/certificates for appropriate materials for applications in accordance with organisational procedures and/or codes and regulations                                      |
|   |  | 3.4 | Obtain appropriate MSDS for applications in accordance with organisational procedures and/or codes and regulations  |
|   |  |     |   |
| 4 | Select and implement materials for mechanical/manufacturing engineering applications | 4.1 | Select materials for use in given mechanical or manufacturing engineering applications based on relevant test information   |
|   |  | 4.2 | Incorporate materials and components into mechanical and manufacturing processes in accordance with design functional requirements  |
|   |  |     |   |
| 5 | Document materials design data and methods and results of materials tests            | 5.1 | Report and record materials selections against design functional requirements in accordance with organisational procedures, codes and regulations   |
|   |  | 5.2 | Undertake any required environmental impact and sustainability assessment   |
|   |  | 5.3 | Report and record materials tests and test sheets or certificates in accordance with organisational procedures, codes and regulations, including appropriate calibration and traceability |
|   |  | 5.4 | Report and record appropriate MSDS for applications in accordance with organisational procedures, codes and regulations   |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to mechanical and manufacturing engineering-related methods and processes
- identifying common characteristics, faults or flaws in materials
- identifying test methods for properties of, and faults and flaws in, materials and components
- identifying industrial test standards and regulations for materials and particular engineering applications
- selecting the most appropriate tests and test methods from a range of possible tests
- identifying and applying standards and regulations for materials and components
- sourcing and using materials test sheets and certificates
- sourcing and implementing MSDS
- implementing tests correctly for materials and component properties and faults
- interpreting design documentation for materials and materials testing requirements
- applying environmental and sustainability requirements to material selection
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability

### Required knowledge

Required knowledge includes:

- properties of materials classes
- the effect of material properties, faults or flaws on mechanical and manufacturing engineering methods and processes
- test methods and procedures for materials and components, including specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- sources and uses of information on materials and materials tests, including test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS
- significance of test sheets/certificates to applications
- significance of MSDS and relevance of procedures
- materials selections in relation to design functional requirements

- environmental impact and sustainability assessment
- significance of test procedures, reports and documentation to applications, including the need for obtaining and filing test sheets and certificates
- significance of test calibration and traceability

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to select and test mechanical engineering materials.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• review design information for materials and materials test requirements</li> <li>• select classes of materials relevant to design for further research, testing and evaluation</li> <li>• identify standards, codes and regulatory requirements relevant to materials testing and application</li> <li>• specify appropriate tests and interpret test results for material selection</li> <li>• select materials consistent with test results and design and regulatory requirements</li> <li>• ensure traceability in material selection process</li> <li>• correctly document all results and tests.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</li> <li>• This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting and testing mechanical engineering materials or other units requiring the exercise of the skills and knowledge covered by this unit.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with</li> </ul>

	<p>application of underpinning knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Classes of materials</b>	<p>Classes of materials include:</p> <ul style="list-style-type: none"> <li>• non-ferrous metals and alloys</li> <li>• ferrous metals</li> <li>• non-metals (e.g. timber, concrete, ceramics, polymers and fabrics, adhesives and lubricants)</li> <li>• thermal and electrical conductors and insulators</li> </ul>
<b>Properties and characteristics of materials</b>	<p>Properties and characteristics of materials may include:</p> <ul style="list-style-type: none"> <li>• physical properties (e.g. strength; elasticity; plasticity; malleability; hardness; toughness; brittleness; fatigue endurance; mouldability; weldability; machinability; formability; resistance to creep and stress relaxation; resistance to degradation, such as use of plastic fillers to enhance UV resistance; adhesion; electrical, magnetic, thermal, chemical and optical; material structure and effect on properties)</li> </ul>

	<ul style="list-style-type: none"> <li>• susceptibility to corrosion</li> <li>• conductivity and resistance – both thermal and electrical</li> <li>• the effect of manufacturing and construction processes on material properties</li> </ul>
<b>Mechanical engineering</b>	Mechanical engineering is the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of mechanical products, processes, systems or services for converting energy into power and motion, materials into product and components into machines and systems
<b>Manufacturing engineering</b>	Manufacturing engineering includes conceptual development, design, manufacture, construction, implementation, installation, optimisation, commissioning and maintenance of resources and processes employed for the manufacture of product and components, machines and systems
<b>Sources of information</b>	<p>Sources of information may include:</p> <ul style="list-style-type: none"> <li>• standards and codes</li> <li>• MSDS</li> <li>• reference texts</li> <li>• manufacturer catalogues and other published information</li> <li>• regulatory bodies</li> <li>• technical, professional and industrial associations and societies</li> </ul>
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to the mechanical engineering analysis task
<b>Tests of materials</b>	<p>Tests of materials include:</p> <ul style="list-style-type: none"> <li>• destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, fatigue and peel resistance (adhesives)</li> <li>• non-destructive, including hardness, ultrasonics, X-ray, die penetrant, eddy current, surface friction, conductivity, heat expansion, photoelastic, heat capacity refractive index and magnetic hysteresis loop</li> </ul>
<b>Traceability</b>	Test calibrations can be traced back to the relevant base unit in the relevant measurement system

## **Unit Sector(s)**

### **Competency field**

**Unit sector**            Engineering science

## **Custom Content Section**

Not applicable.

## **MEM23064A Select and test mechatronic engineering materials**

### **Modification History**

Release 1 - New unit. Replaces MEM23062A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the skills and knowledge needed to interpret design information for material and material test requirements, select appropriate tests and use results in the selection of appropriate materials for mechatronic engineering-related applications.

### **Application of the Unit**

This unit applies to the selection and implementation of materials and material tests relevant to mechatronic, maintenance, electronic, electrical, instrumentation and control engineering, including identifying sources of information on engineering materials, tests and test equipment. It also applies to reporting and documenting materials test and design data according to procedures.

Activities may be performed as a member of a design and development team.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Identify classes and types of materials and test equipment relevant to mechatronic engineering applications	1.1	Relate material properties to common mechatronic-related methods and processes
		1.2	Identify common characteristics, faults or flaws in materials, components and product in particular engineering applications
		1.3	Identify engineering-related test methods for materials and components or product properties
		1.4	Identify specific industrial test standards/codes, calibration requirements, regulations and authorities related to selection of materials and products for mechatronic engineering applications
2	Identify and use sources of information on engineering materials, materials tests and test equipment	2.1	Review design information for material specifications and required material tests
		2.2	Identify and use appropriate sources of information on materials, materials tests and test calibration
		2.3	Identify and use appropriate sources of information on methods of testing of properties of materials
		2.4	Investigate and report on the use of relevant standards and codes
		2.5	Identify and use appropriate sources of information on material safety data sheets (MSDS)

- |   |  |     |  |
|---|--|-----|--|
| 3 | Specify and implement methods used to test or obtain the properties of engineering materials | 3.1 | Specify required materials tests and manage implementation of tests to ensure quality, safety and suitability for applications   |
|   |  | 3.2 | Ensure traceability of measurement standard  |
|   |  | 3.3 | Obtain test sheets or certificates for appropriate materials for applications in accordance with organisational procedures and/or codes and regulations                                |
|   |  | 3.4 | Obtain appropriate MSDS for applications in accordance with organisational procedures and/or codes and regulations   |
| 4 | Select and implement materials and components for mechatronic engineering applications       | 4.1 | Select materials for use in given mechatronic engineering applications based on relevant test information  |
|   |  | 4.2 | Incorporate materials and components into mechatronic processes in accordance with design functional requirements  |
| 5 | Report on and record materials design data and methods and results of materials tests        | 5.1 | Report and record materials selections against design functional requirements in accordance with organisational procedures, codes and regulations                                      |
|   |  | 5.2 | Include environmental impact and sustainability assessment   |
|   |  | 5.3 | Report and record materials tests and test sheets/certificates in accordance with organisational procedures, codes and regulations, including appropriate calibration and traceability |
|   |  | 5.4 | Report and record appropriate MSDS for applications in accordance with organisational procedures, codes and regulations  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- selecting class of materials suitable for mechatronic applications based on comparison of material properties
- identifying for common characteristics, faults or flaws in materials
- identifying test methods for properties of, and faults and flaws in, materials and components
- identifying specific industrial test standards and regulations for materials and particular engineering applications
- selecting the most appropriate tests from a range of possible tests
- identifying and applying standards and regulations for materials and components
- sourcing and using materials test sheets and certificates
- sourcing and implementing MSDS
- implementing tests correctly for materials and component properties and faults
- interpreting design documentation for materials and materials testing requirements
- addressing environmental and sustainability requirements related to material selection
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability

### Required knowledge

Required knowledge includes:

- properties of materials classes
- the effect of material properties, faults and flaws on mechatronic engineering methods and processes
- test methods and procedures for materials and components, including specific industrial test standards, regulations and authorities related to particular engineering applications
- sources and uses of information on materials and materials tests, including test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS
- significance of test sheets/certificates to applications
- significance of MSDS and relevance of procedures
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test procedures, reports and documentation to applications, including the need for obtaining and filing test sheets and certificates

- significance of test calibration and traceability

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to select and test mechatronic engineering materials.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• review mechatronic design information for materials and materials test requirements</li> <li>• select classes of materials relevant to design for further research, testing and evaluation</li> <li>• identify mechatronic engineering-related standards, codes and regulatory requirements relevant to materials testing and application</li> <li>• specify appropriate tests and interpret test results for material selection</li> <li>• select materials consistent with test results and design and regulatory requirements</li> <li>• ensure traceability in material selection process</li> <li>• correctly document all results and tests.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</li> <li>• This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting and testing mechatronic engineering materials or other units requiring the exercise of the skills and knowledge covered by this unit.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of</li> </ul>

	<p>workplace relevant contexts) together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Classes and types of materials</b>	<p>Classes and types of materials include:</p> <ul style="list-style-type: none"> <li>• non-ferrous metals and alloys</li> <li>• ferrous metals</li> <li>• non-metals (e.g. timber, concrete, ceramics, polymers and fabrics, adhesives, fibres and lubricants)</li> <li>• thermal and electrical conductors and insulators</li> <li>• semiconductors</li> <li>• substrates</li> <li>• cables and cable supports</li> <li>• fluids and lubricants</li> </ul>
<b>Properties and characteristics of materials</b>	<ul style="list-style-type: none"> <li>• Properties and characteristics of materials may include:</li> <li>• physical properties (e.g. strength, elasticity, plasticity, malleability, hardness, toughness, brittleness, fatigue endurance, mouldability,</li> </ul>

	<p>weldability, machinability, formability, resistance to creep and stress relaxation, resistance to degradation – use of plastic fillers to enhance UV resistance – and adhesion)</p> <ul style="list-style-type: none"> <li>• electrical related properties (e.g. resistivity, conductivity, electro-magnetic, i.e. permeability, permittivity and electro-static susceptibility)</li> <li>• thermal, chemical and optical</li> <li>• material structure and effect on properties</li> <li>• susceptibility to corrosion</li> <li>• effects of manufacturing and construction processes on material properties</li> </ul>
<b>Mechatronic engineering</b>	<p>Mechatronics is usually defined as the integration of mechanical, electronics, programming, electrical and fluid power in an engineering product. The skills and underpinning knowledge of mechatronics are common with general automation of processes, systems and services. The definition of mechatronics is here broadened to include general automation.</p>
<b>Sources of information</b>	<p>Sources of information may include:</p> <ul style="list-style-type: none"> <li>• standards and codes</li> <li>• MSDS</li> <li>• reference texts</li> <li>• manufacturer catalogues and other published information</li> <li>• regulatory bodies</li> <li>• technical, professional and industrial associations and societies</li> </ul>
<b>Standards and codes</b>	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to the mechatronic engineering analysis task</p>
<b>Tests of materials</b>	<p>Tests of materials include:</p> <ul style="list-style-type: none"> <li>• destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, fatigue and peel resistance (adhesives)</li> <li>• non-destructive, including hardness, ultrasonics, X-ray, die penetrant, eddy current, surface friction, conductivity, heat expansion, photo-elastic, heat capacity refractive index and magnetic hysteresis loop</li> <li>• electrical-related testing (e.g. conductivity, insulation, earthing resistance and safety)</li> </ul>

<b>Traceability</b>	Test calibrations can be traced back to the relevant base unit in the relevant measurement system

## Unit Sector(s)

### Competency field

**Unit sector**      Engineering science

## Custom Content Section

Not applicable.

# MEM23109A Apply engineering mechanics principles

## Modification History

Release 1 (MEM05v9).

## Unit Descriptor

This unit of competency covers the application of mechanics and strength of materials principles to devices, machines and systems and their components in order to identify key mechanical properties. It includes a range of basic analyses of static and dynamic loads and moments, stresses and deflections, velocities and accelerations.

## Application of the Unit

This unit applies to analysis of mechanical devices, machines and systems and their components to determine a range of mechanical related properties. It covers the analysis of 2-D forces and moments, stresses and deflections on bodies, frames and beams. It is suitable for people working as technicians in engineering or related fields using basic mechanics principles and those pursuing careers and qualifications in engineering or related disciplines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A                      Apply technical mathematics

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Identify scope of required analysis	1.1	Identify device, machine or system and component parts for analysis
		1.2	Assess engineering mechanics principles, skills and techniques required by tasks
		1.3	Review functions and features of devices, machines and systems
		1.4	Assess software techniques required for basic analysis and graphics required by the task
		1.5	Identify stakeholders to be consulted on analysis tasks
		1.6	Confirm work health and safety (WHS) and regulatory requirements, risk management and organisational procedures
		1.7	Review sustainability implications of tasks
		1.8	Determine available sources for any required technical and professional assistance
2	Apply engineering mechanics principles and techniques to tasks	2.1	Identify appropriate engineering mechanics principles and analytical, graphical and software-assisted techniques applicable to task
		2.2	Validate software results using analytical and graphical methods
		2.3	Ensure clear and logical process of analysis and compatibility of units in calculations

- 2.4 Apply resultant loads and reactions on machines, support frames and beams due to parallel and oblique, concentrated and distributed loads and moments
  - 2.5 Apply the torque and power required to drive translation screws and winding drums against inclined and vertically suspended loads subject to gravitation, acceleration and friction resistance loads
  - 2.6 Select a range of standard hardware to meet specifications
  - 2.7 Analyse bending and shear stresses in beams subject to static point and distributed loads
- 3 Report results
    - 3.1 Record results of investigation, evaluation and application
    - 3.2 Provide documentation, such as calculations, diagrams, programs and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying parameters and context of tasks, chain of responsibility, WHS and regulatory requirements, risk management and organisational procedures
- confirming personal functions and responsibilities, team and support functional group interdependencies and communications, appropriate qualifications and delegations, and appropriate support
- reviewing sustainability implications, functions and features of devices, machines and systems
- assessing and applying mechanics principles, software basic analysis and graphics skills and techniques to mechanical devices and systems
- employing techniques to ensure clear and logical process of analysis and compatibility of units in calculations
- reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files

### Required knowledge

Required knowledge includes:

- mathematical techniques, including arithmetic, algebra, trigonometry, geometry and differential calculus
- definition of typical applications of mechanics, statics, dynamics, kinematics, kinetics and strength of materials
- analytical, graphical, semi-graphical and software-assisted techniques for all tasks
- physical quantities and dimensions, including international system of units (SI) and fundamental dimensions and units
- basic principles of statics applicable to mechanical devices and systems
- application of force systems applied to bodies, frames and beams
- friction laws and applications in mechanical devices and systems
- stress and strain:
  - axial stress
  - shear stress
  - bolted and welded joints
  - torsional stress
- bending of beams
- dynamics applicable to mechanical devices and systems, including:

- kinematics of rectilinear motion:
  - displacement, velocity and acceleration
  - equations of rectilinear motion
  - equations of simple harmonic motion
  - uniform acceleration and sinusoidal acceleration
- kinetics of rectilinear motion:
  - force, mass and acceleration
  - freely falling bodies
  - acceleration against resistance (accelerating force = unbalanced force)
  - acceleration against gravity and terminal velocity
  - acceleration against dry sliding friction and air resistance
  - forces diagrams
- curvilinear motion:
  - normal acceleration in curvilinear motion
  - centrifugal force
  - circular motion as a particular case of curvilinear motion
- kinematics of rotation:
  - rotational motion
  - angular displacement
  - angular velocity
  - angular acceleration
  - conversions of units of angular motion
  - equations of rotation with uniform acceleration
  - relation between linear and angular motion
- kinetics of rotation:
  - moment of inertia, second moment of mass, concept and units
  - torque due to inertia compared with torque due to winding drum rope force
  - the law of a machine
  - work, energy and power
  - specifications for engineering hardware applicable to mechanical devices and systems

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to apply principles of mechanics to machines, support frames, beams and related components to determine static and dynamic loads, stresses and deformations to contribute to the design and component selection process.</p> <p>This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine parameters and context of tasks</li> <li>• apply WHS, regulatory requirements, risk management and organisational procedures</li> <li>• confirm personal functions and responsibilities</li> <li>• review sustainability implications, functions and features of devices, machines and systems</li> <li>• assess and apply engineering mechanics principles, including use of software basic analysis and graphics skills and techniques</li> <li>• ensure compatibility of units in calculations</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>

<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Engineering mechanics tasks</b>	<p>Engineering mechanics tasks covered by this unit include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• application of resultant loads and reactions on machines, support frames and beams</li> <li>• application of the torque and power required to drive translation screws and winding drums against inclined and vertically suspended loads subject to gravitation, acceleration and friction resistance loads</li> <li>• selecting a range of standard hardware, such as shafts, bolts and hooks, subject to plane axial or shear stresses and deformation limits</li> </ul>
------------------------------------	--

	<ul style="list-style-type: none"> <li>analysing bending and shear stresses in beams subject to static point and distributed loads</li> </ul>
<b>Motion</b>	Motions described in this unit may be of constant velocity, constant acceleration or sinusoidal accelerations (e.g. sprung bodies). Other non-uniformly accelerated motions may be described for contrast only. This unit confines itself to 2-D plane motion
<b>Appropriate licensed technical and professional assistance</b>	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>high pressure</li> <li>energised fluid vessels</li> <li>high temperatures and heat energy capacity</li> <li>wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>professional support for technologies may include: <ul style="list-style-type: none"> <li>specialist electric motor drives and controllers</li> <li>specialist materials, plastics, metal alloys and nano materials</li> <li>special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>WHS Acts and regulations</li> <li>relevant standards</li> <li>codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>risk assessments</li> <li>registration requirements</li> <li>safe work practices</li> <li>state and territory regulatory requirements</li> </ul>
<b>Analysis</b>	<p>Analysis may include:</p> <ul style="list-style-type: none"> <li>static and dynamic analysis of loads</li> <li>the stresses and deformations resulting</li> <li>the transmitted power, torque and speed</li> <li>graphical and mathematical methods and software options</li> </ul>

## Unit Sector(s)

**Competency field**

**Unit sector**          Engineering science

**Custom Content Section**

Not applicable.

## **MEM23111A Select electrical equipment and components for engineering applications**

### **Modification History**

Release 1 - New unit. Replaces MEM23051A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the identification and matching of electrical supply and electrical system equipment and components to mechanical, manufacturing and mechatronic engineering applications. It includes electrical principles and laws, inductive and capacitive effects on AC supplies, control system power supply fundamentals, electrical safety and earthing systems, electrical motors and motor controls.

### **Application of the Unit**

This unit applies to people working as technicians in engineering or related fields where electrical power supply, equipment and systems must be considered. The unit applies to mechanical, manufacturing and mechatronic engineering applications which include electrical equipment, including domestic, commercial or industrial situations. Electrical equipment and component identification covered by this unit is from manufacturer catalogues or other standard specifications. The unit does not cover one-off design or modification to electrical equipment.

The unit does not cover the undertaking of licensed electrical work but will often apply to individuals working as part of a team that includes licensed electricians.

This unit includes knowledge of electrical dangers and safety procedures and the need to comply with work health and safety (WHS) and electrical regulatory requirements.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

MEM23004A                      Apply technical mathematics

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

- |   |  |     |   |
|---|--|-----|---|
| 1 | Investigate context of electrical equipment and supply                                       | 1.1 | Review functions and features of devices  |
|   |  | 1.2 | Identify safe machine   |
|   |  | 1.3 | Identify WHS and regulatory requirements  |
|   |  | 1.4 | Determine available sources for any required licensed electrical  |
|   |  | 1.5 | Review sustainability implications of energy source options   |
| 2 | Determine electrical supply, equipment and components required for engineering-related tasks | 2.1 | Assess electrical supply specifications for engineering application   |
|   |  | 2.2 | Analyse electrical motors and their control options for suitability   |
|   |  | 2.3 | Estimate power factor requirements for engineering applications   |

- techniques, where required, to achieve or test options
- 2.8 Identify preferred electrical supply system, equipment and components
- 3 Report results
  - 3.1 Record results of investigation, evaluation and application
  - 3.2 Provide documentation, such as calculations, diagrams, programs and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- evaluating relevance of WHS, regulatory requirements, standards and codes of practice
- evaluating multiple solutions against design criteria, risk, sustainability and cost factors
- applying life cycle design and sustainability parameters to identification of task
- solving problems and making decisions with systems thinking approach for contingencies and constraints and continuous improvement
- reviewing sustainability implications, functions and features of devices, machines and systems employing electricity and electrical principles
- integrating electrical evaluation techniques with overall engineering application requirements, including mechanical; fluid power; electronic; heating, ventilation, air conditioning and refrigeration (HVAC/R); and controller and networking
- assessing and applying basic electrical principles and techniques, software basic analysis and graphics skills and techniques to engineering tasks
- ensuring safe electrical working practice
- ensuring compatibility of units in calculations
- reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files

### Required knowledge

Required knowledge includes:

- energy source options, sustainability implications of electricity generation, distribution and use
- sustainable sources of energy
- features and function of electrical systems in a range of engineering applications, such as:
  - sources and reliability of supply (e.g. mains, generators and batteries)
  - fault and other protection requirements
  - electrical system control and interfacing with other systems
  - maintainability
  - efficiency
  - fitness for purpose
- WHS and regulatory requirements with particular emphasis on automation safety, codes of practice, standards, risk management and registration requirements
- the effects of electricity on humans, including dangerous high currents and voltages

related to extra low, low and high voltage applications and relating these to engineering applications

- licensed technical and professional assistance
- electrical laws and theorems
- electrical circuit components
- AC and DC electrical supply systems:
  - single and 3-phase power
  - power factor
  - distribution systems, including transformers, cables and switchboards
  - local area distribution considerations and supply authority requirements
  - typical and possible faults and dangerous situations
  - earthing systems, such as multiple earth neutral (MEN) system
- circuit protection devices, such as fuses, thermal relays, circuit breakers and residual current devices
- basic electrical circuits and applications for lighting, motors, controllers, heaters and coolers
- graphical symbols and diagrammatic representation of basic circuits and power supply fundamentals
- electrical power consumption
- electrical measurements and techniques

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to apply electrical principles to ensure safe practice, assist with systems development, component selection and maintenance and broadly evaluate electrical features, functions and performance of machines or systems.</p> <p>This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• identify effects and dangers of electricity</li> <li>• review sustainability implications, functions and features of electrical devices, machines and systems</li> <li>• assess and apply basic electrical principles and techniques</li> <li>• evaluate of suitability of electric power supply for applications</li> <li>• apply appropriate calculations and methods for electric motor control</li> <li>• ensure safe electrical working practice and compatibility of units in calculations</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>

<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electrically powered equipment and systems</b>	<p>Electrically powered equipment and systems in mechanical, manufacturing and mechatronic engineering applications may include:</p> <ul style="list-style-type: none"> <li>• motors</li> <li>• electrical supply equipment, including transformers, switchboards, and power circuit components</li> <li>• sensors, programmable logic controllers (PLCs) and control circuits</li> <li>• isolation, shutdown and emergency cut-offs</li> <li>• lighting</li> </ul>
---	---

	<ul style="list-style-type: none"> <li>heating, cooling and ventilation</li> <li>average and maximum load, power factor, switch board layout, earthing and protection systems and power consumption and cost</li> </ul>
<ul style="list-style-type: none"> <li><b>Electrical-related engineering tasks</b></li> </ul>	<p>Electrical-related engineering tasks covered by this unit include, but are not limited to:</p> <ul style="list-style-type: none"> <li>determining WHS, regulatory and risk management requirements</li> <li>evaluating electrical supply options</li> <li>technical evaluation of options for electrical equipment and components against performance, cost and reliability requirements</li> <li>determining methods for start, stop, speed control and reversing of a range of electric motors</li> <li>matching of electrical equipment to other systems</li> </ul>
<b>Automation safety</b>	Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, interlocks and data integrity. Standards apply to general plant design and use as well as the 'functional safety of safety-related electrical, electronic and programmable electronic control systems'
<b>Appropriate licensed technical and professional assistance</b>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>high pressure</li> <li>energised fluid vessels</li> <li>high temperatures and heat energy capacity</li> <li>wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>professional support for technologies, such as: <ul style="list-style-type: none"> <li>specialist electric motor drives and controllers</li> <li>specialist materials, plastics, metal alloys and nano materials</li> <li>special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>WHS Acts and regulations</li> <li>relevant standards</li> <li>codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>risk assessments</li> <li>registration requirements</li> </ul>

	<ul style="list-style-type: none"> <li>• safe work practices</li> <li>• state and territory regulatory requirements applying to electrical work</li> </ul>
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular mechatronic analysis task
<b>Systems thinking</b>	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
<b>Life cycle assessment</b>	Life cycle analysis can be used to improve sustainability of products and services. It may be applied to: <ul style="list-style-type: none"> <li>• all aspects of manufacture of a single product</li> <li>• the entire operations of an organisation</li> <li>• a particular aspect of operations, such as environmental implications</li> </ul>
<b>Sustainability implications</b>	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>

## Unit Sector(s)

### Competency field

**Unit sector**      Engineering science

## **Custom Content Section**

Not applicable.

# MEM23112A Investigate electrical and electronic controllers in engineering applications

## Modification History

Release 1 - New unit. Replaces MEM23051A, but not equivalent.

## Unit Descriptor

This unit of competency covers investigation of new or existing controllers for suitability in automated systems used in engineering applications. The unit includes the application of fundamental controller programming techniques and control system power supply requirements, basic programmable logic controller (PLC), microcontroller and system control and data acquisition (SCADA) applications.

## Application of the Unit

The unit applies to controllers used in automated systems in industry. Typical applications of the unit include assessing the ongoing suitability of existing controllers, programming of PLCs, adjustments to controllers for new equipment or products, and condition monitoring. It is suitable for people working as automation or mechatronics technicians and for people using the services of electrical and control systems technicians. It is suitable for those pursuing careers and qualifications in mechatronic or automated system design and maintenance.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23111A	Select electrical equipment and components for engineering applications

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Determine scope of electro and controller operation            | 1.1 | Assess current or proposed controller context for electrical and automation safety and risks   |
|   |  | 1.2 | Identify potential or actual dangerous high currents and voltages and check for regulatory compliance requirements related to extra low, low and high voltage applications                   |
|   |  | 1.3 | Identify work health and safety (WHS) and regulatory requirements with particular emphasis on automation safety, codes of practice, standards, risk management and organisational procedures |
|   |  | 1.4 | Identify stakeholders to be consulted on investigation task  |
|   |  | 1.5 | Investigate software and software techniques required for basic analysis and graphics required for controller investigation task   |
|   |  | 1.6 | Ensure appropriate support, including licensed electrical, technical and professional assistance is available  |
| 2 | Review functions and features needed in controller application | 2.1 | Use analytical and graphical software, as required, to review controller application and function  |
|   |  | 2.2 | Validate software results  |
|   |  | 2.3 | Undertake instrument readings, as required   |

- 3 Program controllers and SCADA applications for required functions
  - 3.1 Program controller as required for required sequencing and actuations for applications
  - 3.2 Develop simple SCADA applications for required interactions with inputs and outputs of controllers
  
- 4 Report results
  - 4.1 Record outcomes of investigation, evaluation and application
  - 4.2 Provide documentation, such as calculations, diagrams, programs and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying parameters and context of tasks, WHS, regulatory requirements, risk management and organisational procedures
- reviewing effects of electricity on humans, dangerous high currents and voltages and automated systems, regulatory requirements related to extra low, low and high voltage applications, and relating these to electrical and electronic applications in engineering
- reviewing sustainability implications of functions and features of devices, machines, controllers, interfaces, signal conditioning and networks programming and interfacing of PLCs, including sequencing two or more actuations with start, stop and actuation motion confirmation signals
- ensuring safe electrical working practice, including use of licensed personnel
- describing information flow and control as a flowchart
- reporting and documenting results of investigation, evaluation and application, calculations, diagrams, programs and files

### Required knowledge

Required knowledge includes:

- the effects of electricity on humans
- electrical laws:
  - Ohm's law
  - Kirchhoff's voltage and current laws
  - analogies with hydraulics, pressure drop and continuity
- automated systems and mechatronic devices (Note: This unit does not include design or modification of interfacing with these devices)
- common software requirements of control systems, including SCADA, distributed control systems (DCS) and programming
- PLC and microcontroller basic programming functions
- SCADA, including basic editing and programming techniques
- documentation techniques, circuit diagrams, programs and applications
- specifications for hardware applicable to controller techniques in engineering

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to apply controller principles to ensure safe practice, assist with systems development, component selection and maintenance and broadly evaluate electrical, electronic and controller features and functions.</p> <p>This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• identify and apply WHS, regulatory and risk management procedures</li> <li>• review dangers and effects of electricity on humans</li> <li>• identify effects and dangers of electricity, automated systems and specialist requirements, such as licensing related to technical work</li> <li>• confirm personal functions and responsibilities and that of team and support functional group</li> <li>• review sustainability implications, functions and features of controllers and related devices, machines and systems</li> <li>• assess and apply basic electrical and electronic control principles, controller programming principles and techniques to simple machine control functions</li> <li>• ensure safe electrical working practice</li> <li>• ensure clear and logical process of analysis</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> </ul>

	<ul style="list-style-type: none"> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Controllers</b>	<p>Controllers may be:</p> <ul style="list-style-type: none"> <li>• PLCs</li> <li>• microcontrollers</li> <li>• DCS</li> <li>• SCADA</li> <li>• other systems and equipment, including proprietary equipment</li> </ul>
--------------------	---

<b>Controller tasks</b>	<p>Controller tasks covered by this unit include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• determining WHS, regulatory, risk management and automation safety requirements</li> <li>• programming and interfacing a PLC capable of sequencing two or more actuations with start, stop and actuation motion confirmation signals</li> <li>• developing a simple SCADA application capable of interacting with inputs and outputs of PLCs and/or microcontrollers</li> </ul>
<b>Automation safety</b>	<p>Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, interlocks and data integrity</p>
<b>Appropriate licensed trade, technical and professional assistance</b>	<p>Appropriate licensed trade, technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• availability of licensed electrical tradespersons for work covered by electrical licensing regulations</li> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies may include: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements applying to electrical work</li> </ul>

<b>Sustainability</b>	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular task

## Custom Content Section

Not applicable.

# MEM23113A Evaluate hydrodynamic systems and system components

## Modification History

Release 1 - New unit. Replaces MEM23081A, but not equivalent.

## Unit Descriptor

This unit of competency covers the evaluation of fluid systems and system components. It includes hydrodynamic fundamentals, including properties of fluids and system component materials, evaluation of system component performance related to flow rates, pressures, forces and power of containment, transport and use of fluids, work health and safety (WHS) compliance requirements and risk management procedures.

## Application of the Unit

This unit applies to evaluation of fluid systems and components used in hydrodynamic systems. It is suitable for people working as technicians in these industries or system designers, draftspersons and maintainers, and those pursuing careers and qualifications in engineering or related disciplines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A Apply technical mathematics

MEM23006A Apply fluid and thermodynamics principles in engineering

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Establish scope of hydrodynamic system	1.1	Determine fluid systems and system components to be evaluated
		1.2	Identify stakeholders to be consulted on evaluation tasks
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Determine WHS and regulatory requirements, risk management and organisational procedures
		1.5	Investigate sustainability implications of hydrodynamic applications
2	Apply principles and techniques required for evaluation of hydrodynamic system and components	2.1	Review features and functions of hydrodynamic system and components
		2.2	Determine hydrodynamic principles and techniques required to evaluate system and select and optimise components
		2.3	Determine appropriate analysis techniques, software and software validation techniques
3	Evaluate hydrodynamic system and components	3.1	Assess components and system compatibility with fluid properties
		3.2	Assess suitability of pumps and pump performance in hydrodynamic system
		3.3	Assess forces on bends and section changes in piping

- systems and confirm they are within specification
- 3.4 Assess hydrodynamic performance of components, such as fittings, valves and hoses
  - 3.5 Assess open channel systems and optimise for required flow rates
  - 3.6 Evaluate collar and cylindrical bearings subject to boundary, transitional and hydrodynamic lubrication
- 4 Report results
- 4.1 Record outcomes of evaluation
  - 4.2 Provide documentation, such as calculations, component and system layouts, and functional diagrams

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining parameters and context of tasks
- identifying WHS and regulatory requirements
- identifying risk management and organisational procedures
- reviewing sustainability implications, features and functions of hydrodynamic systems and components
- identifying hydrodynamic principles and techniques, analysis techniques, software and software validation techniques
- ensuring compatibility of units in calculations
- evaluating components and system compatibility with fluid properties, pumps, turbines, piping forces, hydrodynamic performance of components, open channel systems, collar and cylindrical bearing lubrication
- selecting equipment and instruments for use in evaluation considering properties and compatibility
- reporting and documenting results of scoping, principles and techniques identification, evaluation of applications, calculations, component and system layouts, and functional diagrams

### Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- availability of professional and technical assistance for engineering specialisations
- current options and trends in performance analysis software, including underpinning program techniques and software validation techniques
- properties of fluids:
  - fluid types
  - relevant units of measurement
  - chemical properties
- sustainability issues:
  - hydrodynamic energy, generation and consumption
  - environmental effects of manufacturing and use
- fluid statics

- fluid dynamics, including:
  - flow
  - velocity
  - viscosity
  - pressure
  - fluid power
  - hydrodynamic forces
- hydrodynamic system components
- head loss in pipes and fittings
- pumping systems, including components and methods for determining efficiency
- forces developed by flowing fluids
- open channel flow
- oiled bearings

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate hydrodynamic systems, including evaluation of system performance, selection of components and calculation of fluid force.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine parameters and context of evaluation task</li> <li>• determine WHS, regulatory requirements, risk management and organisational procedures</li> <li>• identify features, functions and components of a range of hydrodynamic systems</li> <li>• investigate and review sustainability implications, features and functions of hydrodynamic systems and components</li> <li>• apply correct hydrodynamic principles and techniques for particular hydrodynamic systems</li> <li>• evaluate components and systems to determine safety, efficiency and fitness for purpose</li> <li>• report and document results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. # MEM23114A Evaluate thermodynamic systems and components

## Modification History

Release 1 - New unit. Replaces MEM23081A, but not equivalent.

## Unit Descriptor

This unit of competency covers the evaluation of thermodynamic systems and components, such as heat exchangers, heat engines, refrigeration and air conditioners, and air compressors.

## Application of the Unit

This unit applies to the evaluation of thermodynamic systems and components. The evaluation may be undertaken as part of a design or system selection process or to assess system condition, sustainability or efficiency. It is suitable for people working as technicians or system designers and draftspersons, and those pursuing careers and qualifications in engineering or related disciplines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of thermodynamic system	1.1	Determine thermodynamic system and system components to be evaluated
		1.2	Determine stakeholders to be consulted on the evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Determine work health and safety (WHS) and regulatory requirements, risk management and organisational procedures
		1.5	Investigate sustainability implications of thermodynamic applications
2	Identify principles and techniques required for evaluation of thermodynamic system and components	2.1	Review features and functions of thermodynamic system and components
		2.2	Determine thermodynamic principles and techniques required to evaluate system and select and optimise components
		2.3	Determine appropriate analysis techniques, software and software validation techniques
3	Evaluate thermodynamic applications and components	3.1	Assess the performance of heat transfer devices
		3.2	Assess heat engine performance
		3.3	Assess combustion processes

- 3.4 Assess steam processes, where present
  - 3.5 Assess refrigeration and air conditioning processes, where present
  - 3.6 Assess air compression processes, where present
- 4 Report results
- 4.1 Record outcomes of evaluation
  - 4.2 Provide documentation, such as calculations, component and system layouts, and functional and thermodynamic cycle diagrams

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining parameters and context of tasks
- identifying WHS and regulatory requirements
- identifying risk management and organisational procedures
- investigating and reviewing sustainability implications, features and functions of thermodynamic systems and components
- identifying thermodynamic principles and techniques, analysis techniques, software and software validation techniques
- evaluating components, combustion, steam, air compression, refrigeration and air conditioning processes
- system compatibility with fluid properties, pumps, turbines, piping forces and thermodynamic performance of components
- selecting equipment and instruments for use in evaluation considering properties and compatibility
- reporting and documenting results of scoping, principles and techniques identification, evaluation of applications, calculations, component and system layouts, and functional diagrams and thermodynamic cycle diagrams

### Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, standards and risk management requirements
- availability of professional and technical assistance
- current options and trends in performance analysis software, including underpinning program techniques and software validation techniques
- descriptions of thermodynamic devices and systems, such as boilers, turbines, refrigerators, gas-turbines and rockets
- concepts related to thermodynamics, such as:
  - properties, process and state
  - mass, conservation of mass, specific volume and density, force, weight, pressure and temperature
  - systems, cycles and steady state
- energy forms

- effects of heating of solids and liquids
- heat transfer, conduction, convection and radiation, including related laws and calculations
- typical thermodynamic devices and engines, and thermal cycles
- closed and open systems:
  - non-flow, internal energy
  - flow systems, mass and volumetric flow and continuity of flow
- steady flow and enthalpy, turbines, compressors, boilers and heat exchanger applications
- zeroth and first laws in detail and second law (conceptual)
- gas laws and characteristics
- gas compression effects, measurements and calculations
- compressor types and characteristics heat engines, including types, cycles, performance and efficiency fuels and combustion steam plant and processes for steam generation, heat transfer and power production, including:
  - steam saturation steam tables
- air conditioning, refrigeration and heat pumping plant and processes

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate thermodynamic systems, including evaluation of system performance and selection of components.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine parameters and context of evaluation task</li> <li>• determine WHS, regulatory requirements, risk management and organisational procedures</li> <li>• identify features, functions and components of a range of thermodynamic dynamic systems and components</li> <li>• investigate and review sustainability implications, features and functions of thermodynamic systems and components</li> <li>• evaluate components and systems to determine safety, efficiency and fitness for purpose</li> <li>• evaluate combustion, steam, air compression and refrigeration and air conditioning processes</li> <li>• determine system performance and heat transfer</li> <li>• report and document results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering</li> </ul>

	<p>Training Package.</p> <ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Appropriate licensed</b>	Appropriate technical and professional assistance may include:

<b>technical and professional assistance</b>	<ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• ministerial directives</li> <li>• risk assessments</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements applying to electrical work</li> </ul>
<b>Standards and codes</b>	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular thermodynamic system task</p>

## Unit Sector(s)

### Competency field

Unit sector      Engineering science

## Custom Content Section

Not applicable.

## MEM23115A Evaluate fluid power systems

### Modification History

Release 1 - New unit. Replaces MEM23081A, but not equivalent.

### Unit Descriptor

This unit of competency covers the evaluation of hydraulic and pneumatic systems and components, including automated fluid power applications characterised by two or three actuators requiring digital control of valves and preset flow and pressure control.

### Application of the Unit

This unit applies to the evaluation of manual and automated fluid power systems and components. The evaluation may be undertaken as part of a design or system selection process or to assess system condition, sustainability or efficiency. It is suitable for people working as fluid power technicians or system designers, draftspersons and maintainers, and those pursuing careers and qualifications in engineering or related disciplines.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23006A	Apply fluid and thermodynamics principles in engineering

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of fluid power system evaluation	1.1	Determine fluid power systems and components to be evaluated
		1.2	Identify stakeholders to be consulted on the evaluation
		1.3	Confirm that appropriate support, including technical and professional assistance, is available
		1.4	Determine relevant work health and safety (WHS) and regulatory requirements, risk management and organisational procedures
		1.5	Investigate sustainability implications of fluid power applications
2	Identify principles and techniques required for evaluation of fluid power systems and components	2.1	Review features and functions of pneumatic systems and components for relevance to evaluation
		2.2	Review features and functions of hydraulic systems and components for relevance to evaluation
		2.3	Determine fluid power principles and techniques required to evaluate systems and select and optimise components
		2.4	Determine appropriate analysis techniques, software and software validation techniques

- |   |   |     |   |
|---|---|-----|---|
| 3 | Evaluate fluid power systems and components | 3.1 | Assess fluid suitability, compatibility, and treatment relative to systems  |
|   |   | 3.2 | Assess features, functions and suitability of hydraulic systems and components for applications   |
|   |   | 3.3 | Assess features, functions and suitability of pneumatic components for applications   |
|   |   | 3.4 | Assess suitability of fluid power system and components in automated power applications using two or three actuator hydraulic or pneumatic circuits with digital fluid and electrical/electronic control elements |
| 4 | Report results                              | 4.1 | Record outcomes of evaluation   |
|   |   | 4.2 | Provide documentation, such as calculations, component and system layouts, and functional diagrams and fluid power process, and control signal diagrams   |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining parameters and context of fluid power systems
- identifying WHS and regulatory requirements
- identifying risk management and organisational procedures
- investigating and reviewing sustainability implications, features and functions of fluid power systems and components
- identifying fluid power principles and techniques, analysis techniques, including use of software and software validation techniques
- evaluating fluid suitability, compatibility and treatment, features and functions of hydraulic and pneumatic components and systems both automated and non-automated, digital fluid and electrical/electronic control elements
- reporting and documenting results of scoping, principles and techniques identification, evaluation of applications, calculations, component and system layouts, functional diagrams and fluid power process and control signal diagrams

### Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, standards, risk management requirements
- availability of professional and technical assistance
- current options and trends in performance analysis software, including underpinning program techniques and software validation techniques
- common applications for pneumatics and hydraulics
- comparative advantages of fluid power over mechanical and electrical power for particular applications
- characteristics and properties of pneumatic and hydraulic fluids and relative compressibility of air and hydraulic fluid
- applications and selection criteria for mineral, synthetic and fire-resistant fluids and compatibility of fluids with system materials
- fluid power fundamental principles and calculations for system components, including:
  - conservation of energy
  - energy measurement and units
  - energy forms
  - hydraulics fundamentals, such as pressure, temperature and flow rate relative to actuator

force

- pneumatic fundamentals, such as gas laws, pressure difference and flow rate, and flow to atmosphere
- features and functions and selection criteria of fluid power components in applications, including:
  - pumps
  - valves electrical circuits and control elements actuators
  - accumulators
  - compressors (pneumatics)
  - reservoirs
  - gauges and instrumentation
  - hoses, pipes, filters and fittings
- types and requirements for fluid and electrical circuits maintenance requirements for fluid power systems
- methods of circuit presentation, standard symbols, circuit sequence and signal condition diagrams for multi-actuator circuits

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate fluid power systems both automatic and non-automated for safety, economy and fitness for purpose, including selection of components.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• determine parameters and context of evaluation task</li> <li>• determine WHS and regulatory requirements, risk management and organisational procedures</li> <li>• investigate and review sustainability implications, features and functions of fluid power systems and components</li> <li>• identify fluid power principles and techniques analysis techniques, software and software validation techniques</li> <li>• evaluate fluid suitability, compatibility and treatment, features and functions of hydraulic and pneumatic components and systems, digital fluid and</li> </ul>

	<p>electrical/electronic control elements</p> <ul style="list-style-type: none"> <li>• report and document results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Hydraulic applications</b>	Hydraulic applications may include: <ul style="list-style-type: none"> <li>• mobile vehicles and plant</li> <li>• equipment for moving and positioning heavy loads</li> <li>• industrial machinery (e.g. presses for punching, drawing and forging)</li> <li>• industrial and mobile braking systems</li> </ul>
<b>Pneumatic applications</b>	Pneumatic applications may include: <ul style="list-style-type: none"> <li>• transfer mechanisms for moving and positioning light loads</li> <li>• medium load clamping and stamping operations</li> <li>• compressed air distributed systems</li> </ul>
<b>Sustainability</b>	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Appropriate licensed technical and professional assistance</b>	Appropriate licensed technical and professional assistance may include: <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment,</li> </ul> </li> </ul>

	sealing and fastening
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular fluid power system task

## Unit Sector(s)

### Competency field

**Unit sector**      Engineering science

## Custom Content Section

Not applicable.

---

# **MEM23116A Evaluate programmable logic controller and related control system component applications**

## **Modification History**

Release 1 - New unit. Replaces MEM23082A, but not equivalent.

## **Unit Descriptor**

This unit of competency covers the evaluation of automated devices, machines and processes controlled by programmable logic controllers (PLCs). It includes basic PLC architecture, associated control system components and programming techniques, work health and safety (WHS) compliance requirements, risk management, automation safety, networking for data sharing and remote control, and broad implications of wiring rules.

## **Application of the Unit**

This unit applies to evaluations of PLCs and their use in engineering applications. The evaluation may be undertaken as part of a PLC selection process or to assess PLC and control system condition or efficiency. It is suitable for people working as automation, mechatronics or maintenance technicians or for those pursuing qualifications or careers in those disciplines.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

MEM23004A Apply technical mathematics

MEM23111A Select electrical equipment and components for engineering applications

MEM23112A Investigate electrical and electronic controllers in engineering applications

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

- |   |   |     |  |
|---|---|-----|--|
| 1 | Determine scope of evaluation                   | 1.1 | Confirm and apply safe electrical working practice   |
|   |   | 1.2 | Review the currents and voltages present in the PLC applications and check for regulatory requirements and dangerous high currents and voltages, including effects on humans and on application equipment and components |
|   |   | 1.3 | Identify WHS and regulatory requirements with particular emphasis on automation safety, codes of practice, standards, risk management and organisational procedures  |
|   |   | 1.4 | Determine requirement for PLC and related control system components  |
|   |   | 1.5 | Ensure appropriate support, including licensed electrical, technical and professional assistance, is available.  |
|   |   | 1.6 | Determine software and software techniques for analysis and graphics required by the evaluation task   |
|   |   | 1.7 | Identify stakeholders to be consulted on evaluation  |
|   |   | 1.8 | Investigate sustainability implications of PLC applications  |
| 2 | Establish existing features of PLC applications | 2.1 | Review the functions and features of devices, machines and processes controlled by PLCs  |
|   |   | 2.2 | Identify features and functions of PLC systems and components  |

- 
- 2.3 Review PLC programming and functions
  - 2.4 Identify system integrating principles and techniques, signal conditioning and power interfacing
  - 2.5 Identify networking and system supervision, data acquisition and systems control options
- 3 Evaluate PLC applications
- 3.1 Determine suitability of components of application including sensor/transducers, PLC and output devices, signal conditioning and interfacing
  - 3.2 Establish suitability of controller functions, PLC software and programming
  - 3.3 Determine suitability of network, system control and data acquisition (SCADA) communications protocols, standards and network topologies, human-machine interfaces (HMIs) and graphical user interfaces (GUIs) used by applications
  - 3.4 Evaluate compliance of application with WHS and regulatory requirements, codes of practice, standards and risk management procedures
- 4 Report results
- 4.1 Record results of evaluation
  - 4.2 Provide documentation, such as layouts, programs, flow charts, state diagrams and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying features and functions of PLCs and control systems, including:
  - components
  - signal conditioning and power interfacing
  - networking and system supervision, data acquisition and systems control options
- ensuring safe electrical working practice, including use of licensed personnel, where required
- investigating sustainability implications of PLC applications
- evaluating safety, condition, efficiency and functionality of PLCs and associated applications, including:
  - controller functions and programming
  - network and interfacing, including SCADA, communications protocols, standards and network topologies
  - suitability of HMIs and GUIs
  - compliance with WHS and regulatory requirements
- applying WHS, regulatory and automation safety requirements, risk management and organisational procedures
- reporting and documenting results of evaluation, including layouts, programs, flow charts or state diagrams and files

### Required knowledge

Required knowledge includes:

- features of a range of PLC and related control system component applications used in engineering environments
- effects of electricity on humans, dangerous high currents and voltages and automated systems, regulatory requirements related to extra low, low and high voltage applications
- relevant compliance requirements of WHS, regulations, codes of practice, standards, and risk assessment requirements for integrated manufacturing systems with particular emphasis on automation safety
- hardware functions, options and integration into PLC and related control systems
- input devices/sensors
- output devices/actuators
- PLCs
- interfacing and signal conditioning

- communications and networking options for devices
- HMIs and GUIs
- PLC architecture
- Input/Output (I/O) functions and arrangements
- typical input signals and sensor/transducers
- shielding and twisted pairing for noise mitigation
- calibration techniques
- reading of discrete levels from analog input data (other analog I/O functions not required by this unit)
- input signal conditioning
- digitally driven output devices and interface requirements power supply
- programming techniques and options

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to evaluate PLCs and related control system component applications for safety, efficiency and function.</p>

MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of evaluation	1.1	Confirm and apply safe electrical working practice
		1.2	Review the currents and voltages present in the microcontroller applications and check for regulatory requirements and dangerous high currents and voltages, including effects on humans and on application equipment and components
		1.3	Identify work health and safety (WHS) and regulatory requirements with particular emphasis on automation safety, codes of practice, standards, risk management and organisational procedures
		1.4	Identify software techniques and graphics required for evaluation
		1.5	Identify stakeholders to be consulted on evaluation tasks
		1.6	Identify sources of technical and professional assistance
		1.7	Investigate sustainability implications of microcontroller applications
2	Establish existing features of microprocessor applications	2.1	Review the functions and features of devices, machines and processes controlled by microprocessors
		2.2	Identify features and functions of microprocessor devices and components
		2.3	Review microprocessor programming and functions
		2.4	Identify system integrating principles and techniques,

- signal conditioning and power interfacing
- 2.5 Identify networking and system supervision, data acquisition and systems control options
- 3 Evaluate microcontroller applications
  - 3.1 Determine suitability of components of application, including sensor/transducers, microcontroller and output devices, signal conditioning and interfacing used by applications
  - 3.2 Assess scope and suitability of microcontroller functions, software and programming to applications
  - 3.3 Assess suitability of network, system control and data acquisition (SCADA) options, communications protocols, standards and network topologies, HMIs and graphical user interfaces (GUIs) used by applications
  - 3.4 Review application for compliance with WHS and regulatory requirements, codes of practice, standards and risk management procedures
- 4 Report results
  - 4.1 Record results of scoping, principles and techniques identification, and evaluation of applications
  - 4.2 Provide documentation, such as layouts, programs, flow charts, state diagrams and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying features and functions of microcontroller systems, including:
  - components
  - system integrating principles and techniques
  - signal conditioning and power interfacing
  - networking and system supervision, data acquisition and systems control options
- ensuring safe electrical working practice, including use of licensed personnel
- investigating sustainability implications of microcontroller applications
- evaluating safety, condition, efficiency and functionality of microcontrollers and their applications, including
  - components of applications
  - controller functions and programming, network, SCADA, communications protocols, standards and network topologies
  - HMIs and GUIs
- compliance with WHS and regulatory requirements
- applying WHS, regulatory and automation safety requirements, risk management and organisational procedures
- reporting and documenting results of scoping, principles and techniques identification, and evaluation of applications, layouts, programs and flow charts or state diagrams

### Required knowledge

Required knowledge includes:

- features of a range of microcontrollers and related control system component applications used in engineering environments
- compliance requirements of WHS, regulations, codes of practice, standards and risk assessment
- effects of electricity on humans, dangerous high currents and voltages and automated systems, and regulatory requirements related to extra low, low and high voltage applications
- hardware functions, options and integration with microprocessor applications
- input devices/sensors, output devices/actuators, controller, interfacing and signal conditioning, communications, HMIs, GUIs, and networking options for devices
- appropriate use of microprocessor related terminology
- microcontroller features and function, including:

- volatile and non-volatile memory and data storage
- one-time programmable and reprogrammable microcontrollers
- typical microcontroller architecture characteristics
- central processing unit (CPU) functions
- interrupt structures
- Input/Output (I/O) functions
- timers and clocks
- logic
- programming methods and techniques

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate microprocessor devices, machines and processes for safety, economy and fitness for purpose.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• identify and assess compliance with WHS and regulatory requirements, and risk management procedures</li> <li>• review dangers and effects of electricity on humans</li> <li>• identify microprocessor related systems and components, integrating principles and techniques</li> <li>• assess suitability of programming</li> <li>• investigate sustainability implications of microprocessor related applications</li> <li>• assess and apply basic electrical and electronic, control principles, controller programming principles and techniques, software basic analysis, and graphics skills and techniques</li> <li>• evaluate components of applications against application specifications for safety, economy and fitness for purpose</li> <li>• report and document results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> </ul>

	<ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Microcontroller</b>	Microcontrollers are typically an integrated circuit consisting of a CPU combined with support functions, such as a crystal oscillator, timers, watchdog timer, serial and optional analog I/O. A limited amount of read/write memory on the chip along with program memory in the form of reprogrammable flash or 'one-time programmable' ROM
<b>Microcontroller applications</b>	Microcontroller applications are found in most industries. Typical applications include: <ul style="list-style-type: none"> <li>• motor controllers</li> <li>• fault detectors</li> <li>• power controllers</li> <li>• communications</li> <li>• security systems</li> <li>• machine and process automation</li> <li>• automotive and transport applications</li> <li>• domestic appliances</li> <li>• medical equipment</li> </ul>

<b>Standards and codes</b>	Standards, codes and protocols refer to all relevant Australian and international standards, codes and protocols applicable to microprocessor related tasks
<b>Appropriate technical and professional assistance</b>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies may include: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Automation safety</b>	Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, system interlocks and data integrity. Standards apply to general plant design and use as well as the functional safety of safety-related electrical, electronic and programmable electronic control systems.
<b>Network topologies</b>	<p>Network topologies include:</p> <ul style="list-style-type: none"> <li>• daisy-chain, star, ring, branch, linear and tree</li> <li>• wired and wireless options</li> </ul>
<b>Software for microcontroller applications</b>	<p>Software for microcontroller applications may include:</p> <ul style="list-style-type: none"> <li>• integrated development environment software which may include programmer, editor, assembler, compiler, linker, simulator and emulator</li> <li>• HMI software</li> </ul>

	<ul style="list-style-type: none"> <li>• network software</li> <li>• modem software</li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>

## Unit Sector(s)

### Competency field

**Unit sector**          Engineering science

## Custom Content Section

Not applicable.

# MEM23118A Apply production and service control techniques

## Modification History

Release 1 - New unit. Replaces MEM23083A, but not equivalent.

## Unit Descriptor

This unit of competency covers the application of techniques for production and service control to maintain efficient and effective supply of product or service delivery to customers and to provide data for improvements to enhance competitiveness. This unit includes monitoring and measurement of quality, costs, quantities and reliability of processes in the value chain, including maintenance activities to ensure customer requirements. It requires the use of statistical process control (SPC), and control charts and the graphical representation of results.

## Application of the Unit

This unit applies to individuals who are required to control production and/or service delivery processes to ensure quality and for product manufacture or the provision of services to defined quality and operational requirements. It is suitable for people working as service providers, supervisors or technicians and those pursuing manufacturing, engineering or related technical qualifications and careers.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM30012A                      Apply mathematical techniques in a manufacturing, engineering or related environment

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Establish scope of required production or service control	1.1	Identify products or services required by customers, including quality and delivery requirements
		1.2	Identify current production or service control tasks, key performance indicators (KPIs), and context within organisation strategic objectives and markets
		1.3	Identify software techniques required for production or service control, communications and reporting
		1.4	Identify stakeholders to be consulted on the production or service control tasks
		1.5	Confirm work health and safety (WHS) and regulatory requirements, codes of practice, standards and risk assessment requirements
2	Review current data collection and production or service provision	2.1	Determine measurable parameters of production process or service delivery
		2.2	Determine parameters of product or service that are open to control and establish tolerances or acceptable variation
		2.3	Review process control functions
		2.4	Review production control performance indicators/indices
		2.5	Review the role of probability in sampling and SPC
		2.6	Review process capability and SPC evaluation, control

- charts and sampling
- 2.7 Review features and functions of graphical methods for display of data
- 3 Analyse data and apply production control principles to improve product manufacture or service provision
- 3.1 Obtain or record production or service data or appropriate data samples using a range of manual and automated devices
- 3.2 Use software and control chart techniques to generate histograms, Pareto diagrams, flowcharts, tallycharts, scatter plots and/or run charts in accordance with procedures
- 3.3 Analyse data for trends and correlations and apply to process improvement, quality control and other support functions according to procedures
- 3.4 Determine process capability indices for an appropriate sample of a product or service delivery
- 3.5 Establish required performance indicators for production or service operations
- 3.6 Take corrective action in accordance with procedures
- 3.7 Monitor production or service delivery using control charts to determine compliance of the product or service with specified performance limits
- 3.8 Take further corrective action, as required
- 4 Report results
- 4.1 Provide required reports
- 4.2 Provide documentation, such as data, graphics, capability assessments, control and continuous improvement processes

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying production control task parameters and context within organisation strategic objectives and markets
- confirming stakeholder and support functional group interdependencies and communications, reporting and information flow
- determining controllable parameters of product or service and acceptable variation
- using manual and automatic methods for measurement, data gathering and analysis
- production of different charts used in production and service control, including:
  - histograms
  - Pareto diagrams
  - flowcharts
  - tallycharts
  - scatter plots
  - run charts
- applying a range of sampling plans to products or measurable aspects of services and justifying the choice of sampling plan
- analysing data for trends and correlations
- setting of KPIs capable of measurement and ongoing monitoring
- determining appropriate corrective actions based on analysis of measurable production or service performance parameters

### Required knowledge

Required knowledge includes:

- process capability, including:
  - capable processes definition
  - upper, lower and target specification limits
  - in-control
  - out-of-control, assignable causes and trends
  - corrective action plans, such as Western Electric, Wheeler or Nelson rules
  - capability indices
  - sample estimators
  - confidence intervals for indices and Chi square distribution

- role of production or process control in supporting lean processes, for example:
  - value stream management
  - standardised work
  - demand pull
  - just-in-time (JIT)
  - process levelling
  - cycle time
  - quick changeover
  - preventative maintenance
  - waste minimisation
  - efficient process layout
- role of production control in quality maintenance:
  - mistake proofing process
  - defect detection, production halt and correction procedures
  - total quality management (TQM), quality assurance (QA) procedures and quality control (QC), and SPC processes
  - role of SPC and process capability
- production control performance indicators/indices
- applications where role of probability in sampling and SPC is important
- SPC, including:
  - data types and frequency distributions
  - population mean and standard deviation
  - sample mean and standard deviation
  - upper and lower specification limits and target
  - upper and lower process control limits and centre line
  - data mean and process control centre line offset
  - 3 sigma  $\sigma$  and 6 sigma  $\sigma$
  - sigma shift to account for long-term drift of data
- types and functions of control charts
- attributes and variables of sampling plans
- features and functions of graphical methods for display of data:
  - Ishikawa 'Fishbone' diagrams
  - histograms
  - Pareto analysis diagrams
  - flowcharts
  - tallycharts
  - scatter plots
  - run charts, including control charts
- types of manual and automated data collection and information flow

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to measure and analyse production or service performance data and apply techniques for process control to maintain efficient and effective production or supply or service to customers and to provide data for improvements to enhance competitiveness. This includes working individually and as part of a team in accordance with organisational procedures</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine measurable and controllable parameters of product or service,</li> <li>• determine acceptable variation of production or service parameters</li> <li>• use manual and automatic methods for measurement, data gathering and analysis</li> <li>• apply software and control chart techniques for SPC, performance analysis and graphical representations, including generating histograms, Pareto diagrams, flowcharts, tally charts, scatter plots and/or run charts from production or measurable service data</li> <li>• review production and service functions in order to recommend or make process improvements that are based on statistical analyses</li> <li>• identify WHS and regulatory requirements, risk management and related organisational procedures</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.</li> <li>• The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> </ul>

	<ul style="list-style-type: none"> <li>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Production control related tasks</b>	<p><b>Production control related tasks</b> covered by this unit may include:</p> <ul style="list-style-type: none"> <li>measuring and recording data either manually or using automated data collection</li> <li>determining process capability indices for a large sample of a product with a particular dimension normally distributed within upper and lower specification limits</li> <li>applying a range of sampling plans to products or measurable aspects of services and justify the choice of sampling plan based</li> </ul>
---	---

	<p>on the properties required of the plan</p> <ul style="list-style-type: none"> <li>• applying control charts to a sample from a product or service to determine acceptability of the product or service within set limits (e.g. <math>3\sigma</math> and <math>6\sigma</math> limits)</li> <li>• analysing data for trends and taking corrective action in accordance with procedures</li> <li>• selecting and employing appropriate control charts from c-chart, p-chart and X-bar and R or np control charts</li> <li>• employing a Pareto analysis to determine priority issues for solutions related to a specific problem</li> </ul>
<b>Process control</b>	Process control includes the qualitative and quantitative analysis of the process and production data necessary to ensure customer requirement
<b>Required performance indicators for production or service operations</b>	<p>Required performance indicators for production or service operations will vary according to the nature of the product or service and may include:</p> <ul style="list-style-type: none"> <li>• design features, such as dimensional and weight specifications and tolerances</li> <li>• production schedules</li> <li>• organisation or customer specified target error rates and waste, including those set under lean systems, such as <math>6\sigma</math></li> <li>• equipment availability indices</li> <li>• mass balancing targets</li> <li>• WHS related indicators (e.g. lost time injury)</li> <li>• takt time compliance</li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>Lean principles</b>	Lean principles and techniques use cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement.

**Unit sector**          Engineering science

## **Custom Content Section**

Not applicable.

## MEM23119A Evaluate continuous improvement processes

### Modification History

Release 1 - New unit. Replaces MEM23083A, but not equivalent.

### Unit Descriptor

This unit of competency covers the evaluation of continuous improvement processes for production, engineering and associated services. It requires the evaluation of improvement processes, and the efficiency and effectiveness of their response to continuous feedback from customers and other sources. It requires consideration of the effect of improvements or change on entire systems.

### Application of the Unit

This unit applies to production and engineering activities where continuous improvements, such as those to product, process or service, efficiency or competitiveness, is required. It is suitable for people working as service providers, supervisors or technicians and those pursuing manufacturing, engineering or related technical qualifications and careers.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

MEM23118A	Apply production and service control techniques
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### Elements and Performance Criteria

- |   |  |     |   |
|---|--|-----|---|
| 1 | Establish scope of continuous improvement evaluation | 1.1 | Identify industrial and market context for continuous improvement   |
|   |  | 1.2 | Identify features, functions and measurable parameters of products, processes, systems or services, assets and operations subject to continuous improvement         |
|   |  | 1.3 | Assess software techniques required for continuous improvement  |
|   |  | 1.4 | Review sustainability implications of evaluation task   |
|   |  | 1.5 | Identify stakeholders in continuous improvement processes and appropriate licensed technical and professional assistance to be consulted on the tasks               |
|   |  | 1.6 | Determine compliance requirements of relevant work health and safety (WHS) and regulatory requirements, codes of practice, standards and risk assessment procedures |
| 2 | Prepare for evaluation                               | 2.1 | Identify appropriate measurement, data gathering, software and other analysis methods to be used for evaluation   |
|   |  | 2.2 | Identify performance criteria or indices  |
|   |  | 2.3 | Identify existing process capability, evaluation, control and run charts and sampling procedures  |
|   |  | 2.4 | Identify existing qualitative continuous improvement processes  |

- 3 Evaluate organisation continuous improvement processes
  - 3.1 Evaluate manual and automatic methods for measurement of parameters of products or services
  - 3.2 Evaluate data gathering, analysis and performance indices
  - 3.3 Evaluate software techniques for performance analysis and visual display generation
  - 3.4 Evaluate quantitative and qualitative continuous improvement processes
  - 3.5 Apply systems thinking, constraint and contingency management, problem solving and decision making to evaluation tasks
  - 3.6 Evaluate sustainability implications of improvements
  
- 4 Report results
  - 4.1 Record results of scoping, identification of principles and techniques and evaluation of continuous improvement techniques
  - 4.2 Provide documentation, such as reports, data, graphics, flow charts and performance indices

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining suitability of measurable parameters of products, processes, systems and services for continuous improvement activities
- undertaking measurement, data gathering and analysis, including identifying trends and improvements
- reviewing performance indices, software for data analysis and visual representations and continuous improvement techniques
- evaluating continuous improvement, systems thinking, constraint and contingency management, and lean systems requirements
- producing and interpreting charts used in production and service control, including:
  - histograms
  - Pareto diagrams
  - flowcharts
  - tallycharts
  - scatter plots
  - run chart
- evaluating sustainability implications of improvements
- reporting and documenting results of scoping, identification of principles and techniques and evaluation of continuous improvement techniques, data, graphics, flow charts and performance indices

### Required knowledge

Required knowledge includes:

- features of products, processes, systems and services subject to improvement processes
- economic, social and sustainability implications of products, processes, systems, services and implications of improvement processes
- continuous improvement drivers and mechanisms, such as:
  - market competitiveness
  - maintenance of a technological edge
  - customer expectations
- WHS requirements, codes of practice, regulatory requirements, and standards problem solving and decision making techniques:
  - brainstorming

- current and future state mapping
- seven tools of quality:
- Ishikawa 'Fishbone' diagrams
- histograms
- Pareto analysis
- flowcharts
- scatter plots
- run charts
- control charts
- data, performance metrics, graphics and visual indicators
- software options, such as:
  - budgeting, financial and business planning performance metrics analysers and graphics generators
  - maintenance downtime and cost data generators
  - system control and data acquisition (SCADA), distributed control systems (DCS), enterprise resource planning (ERP) and materials resource planning (MRP) system data generators
  - performance data analysis and graphics generators
- statistical process control (SPC) techniques
- qualitative improvement techniques

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Features, functions and measurable parameters of products, processes, systems or services, assets and operations subject to continuous improvement</b>	<p>Features, functions and measurable parameters of products, processes, systems, services and assets subject to continuous improvement may include:</p> <ul style="list-style-type: none"> <li>• sustainability</li> <li>• software</li> <li>• product manufacturability</li> <li>• process design</li> <li>• process control</li> <li>• equipment and tooling</li> <li>• material and product flow</li> <li>• plant layout and transfer operations</li> <li>• standard operating procedures</li> <li>• maintenance</li> <li>• lean systems</li> <li>• labour and skills distribution</li> <li>• information flow</li> <li>• value chain</li> <li>• sales, marketing and planning</li> <li>• management</li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>

<p><b>WHS, regulatory requirements and enterprise procedures</b></p>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<p><b>Standards and codes</b></p>	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular thermodynamic system task</p>
<p><b>Systems thinking</b></p>	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<p><b>Continuous improvement processes</b></p>	<p>Continuous improvement processes may relate to plant, products, production processes, systems and services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>

	<ul style="list-style-type: none"> <li>• qualitative improvement processes, such as:             <ul style="list-style-type: none"> <li>• toolbox meetings</li> <li>• suggestion schemes</li> <li>• mentoring</li> <li>• changes in work organisation, responsibilities and recruitment</li> </ul> </li> </ul>
<b>Constraints and contingencies</b>	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> <li>• financial</li> <li>• organisational, procedural or cultural</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<b>Lean principles</b>	<p>Lean manufacturing uses cost, capacity and responsiveness, quality, reliability and waste minimisation as drivers of the process and measures for process improvement. Lean manufacturing is the response of many organisations to local, regional, national and global market competitiveness</p>

## Unit Sector(s)

### Competency field

**Unit sector**          Engineering science

## Custom Content Section

Not applicable.

## **MEM23120A Select mechanical machine and equipment components**

### **Modification History**

Release 1 - New unit. Replaces MEM23091A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the technical selection of mechanical machine and equipment components. It includes analysis of the application to determine suitability of components and use of performance analysis software.

### **Application of the Unit**

This unit applies to selecting components of machines or equipment based on mechanical engineering-related technical criteria in order to ensure appropriate performance and compliance with standards. The unit applies to selection tasks based on analyses completed by an individual or the use of technical criteria supplied by professional engineers or equipment suppliers. The use of calculus for technical analysis is not covered by this unit.

The unit is suitable for people working as mechanical detailers or designers and draftspersons and those pursuing careers and qualifications in mechanical engineering or related disciplines. This unit does not cover selection of electric motors; electrical components; fluid power components, including pumps, control components and support structures; and structural fastening and welding with eccentric loadings. These are covered in other units.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

MEM23004A	Apply technical mathematics
MEM23109A	Apply engineering mechanic principles

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Establish scope of machine components selection task	1.1	Identify stakeholders to be consulted on selection tasks
		1.2	Determine relevant compliance requirements of work health and safety (WHS) and regulatory requirements, codes of practice, standards, and risk assessment requirements for machines and equipment
		1.3	Review features and functions of mechanical machines and components
		1.4	Investigate sustainability implications of component selection task
		1.5	Establish availability of technical and professional assistance
2	Examine technical specifications for component selection	2.1	Confirm performance requirements of particular machines or equipment components
		2.2	Select appropriate analysis techniques using graphs, tables, nomograms or computer-aided solutions, as appropriate
		2.3	Analyse operating conditions of components and determine component selection criteria
		2.4	Review design loads, working stresses, allowable deformations and factor of safety for machine components
		2.5	Determine component arrangement, limits, fits and clearances, assembly, fastening and alignment methods

- 3      Select machine components
  - 3.1    Specify arrangement and assembly requirements
  - 3.2    Advise stakeholders of selection and make any required adjustments
  - 3.3    Ensure traceability of analysis and component selection
  
- 4      Report results
  - 4.1    Record results of scoping, principles and techniques identification and component selection procedures
  - 4.2    Provide documentation, such as calculations, estimations, specifications, diagrams and drawings

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- applying safe working practices and procedures when working with machines and equipment
- component arrangement, limits, fits and clearances, assembly, fastening and alignment methods
- investigating sustainability implications of machine development, manufacture and use
- reviewing features and functions of machines and components
- identifying design features of machines, equipment and components, including:
  - loads
  - working stresses
  - allowable deformations and factor of safety
  - component arrangements
  - limits and fits
  - assembly, adjustment and fastening methods
- identifying relevant analysis support, such as graphs, tables, nomograms or computer-aided solutions and validation techniques
- selecting and specifying machine and equipment components, arrangement and assembly requirements
- communicating with stakeholders, professionals and technicians
- identifying and complying with relevant WHS and regulatory requirements and risk assessment procedures
- reporting and documenting results of component selection, including calculations, specifications, diagrams and drawings

### Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, standards and risk management requirements relevant to mechanical component selection processes
- current options and trends in performance analysis software, including underpinning program techniques and software validation techniques
- conditions for equilibrium
- reactions at beam supports (e.g. simply supported, overhung and cantilever beam with vertical and oblique concentrated, uniform and variable distributed loads and couples)

- shear force and bending moments, including diagrams
- vertical and oblique concentrated and uniform and variable distributed loads
- bending and shear stresses
- torsion distribution diagrams
- combined stresses
- properties of common machine and component materials
- stress concentration and fatigue due to alternating stresses
- deflection of beams
- bolted and welded connections with central loads (bolted joints may include friction forces)
- static versus dynamic forces, balanced and unbalanced
- dynamics and laws of rotational motion
- work and forms of mechanical energy and power
- dynamic systems
- mechanical power and drive efficiency
- mechanical drives
- block, band and disk brakes and clutches with single contact surface
- mechanical couplings and devices
- dynamic balancing of rotating masses
- stresses in flywheels
- stresses in thin walled pressure vessels

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to select a wide variety of mechanical machine and equipment components for safety, economy and fitness for purpose. Selections must be able to be justified through appropriate engineering analysis.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine component arrangement, limits, fits and clearances, assembly, fastening and alignment of components</li> <li>• investigate sustainability implications of components selection task</li> <li>• review features and functions of machine and equipment components, design loads, working stresses, allowable deformations and factor of safety</li> <li>• select and specify machine components, including arrangement and assembly requirements</li> <li>• evaluate machine components and arrangements for compliance with WHS and regulatory requirements and risk assessment</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<p><b>Method of assessment</b></p>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering</li> </ul>

	<p>Training Package.</p> <ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Machine and equipment components</b></p>	<p>Machine and equipment components for this unit are limited to components performing mechanical functions. Examples include:</p> <ul style="list-style-type: none"> <li>• shafts</li> <li>• bearings</li> <li>• couplings</li> <li>• power screws</li> <li>• gear drives</li> <li>• spur gears</li> <li>• chain and belt drives</li> <li>• brakes</li> <li>• clutches</li> </ul>
--	--

<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular selection of mechanical machine and equipment components task
<b>Appropriate licensed technical and professional assistance</b>	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>Sustainability implications</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Analysis of machine and components</b>	<p>Analysis of machine and equipment components may include:</p> <ul style="list-style-type: none"> <li>• static and dynamic analysis of loads</li> <li>• the stresses and deformations resulting</li> <li>• the transmitted power, torque and speed</li> <li>• machine/operator interface in terms of ergonomics and safety</li> <li>• environmental effects, including noise, energy efficiency, heat generation and dust generation</li> <li>• graphical and mathematical methods and software options</li> </ul>

<b>Appropriate computer-aided solutions and validation techniques</b>	Appropriate computer-aided solutions include: <ul style="list-style-type: none"><li>• performance analysis and computer-aided design (CAD) modelling</li></ul> Validation techniques include: <ul style="list-style-type: none"><li>• comparison of traditional solutions for simple design problems with software solutions to the same design problems</li><li>• review of previously implemented design challenges which were completed using the software</li></ul>
---	---

## Unit Sector(s)

### Competency field

**Unit sector**      Engineering science

## Custom Content Section

Not applicable.

## MEM23121A Analyse loads on frames and mechanisms

### Modification History

Release 1. Replaces MEM23091A, but not equivalent.

### Unit Descriptor

This unit of competency covers the analysis of loads on mechanisms, frames and structural support elements, such as linkages, rods, shafts and beam elements within machines and mechanisms. It includes safe working practices, work health and safety (WHS) compliance requirements, function and features of frames and mechanisms, load and deflection analysis for static and dynamic elements, and traditional and software-based techniques.

### Application of the Unit

This unit applies to the analysis of loads on mechanisms, beams, frames and support elements either individually or with the assistance of a professional engineer for more complex calculations of loads and stresses. It is suitable for people working as mechanical detailers or designers and draftspersons, and those pursuing careers and qualifications in mechanical engineering or related disciplines.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks
MEM23109A	Apply engineering mechanics principles

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

- |   |   |     |  |
|---|---|-----|--|
| 1 | Establish scope of frame and mechanism analysis | 1.1 | Determine compliance requirements of relevant WHS and regulatory requirements, codes of practice, standards and risk assessment and for design and use of machines and equipment |
|   |   | 1.2 | Identify features, functions, operating conditions and performance requirements of frames, beams and mechanisms  |
|   |   | 1.3 | Investigate sustainability implications of frames and mechanisms   |
|   |   | 1.4 | Review design loads, working stresses, allowable deformations and factor of safety for elements  |
|   |   | 1.5 | Review element arrangements, assembly and fastening methods  |
|   |   | 1.6 | Identify any complex load calculations to be done with or obtained from a professional engineer  |
|   |   | 1.7 | Establish availability of other technical and professional assistance  |
|   |   | 1.8 | Identify and evaluate appropriate analysis techniques, software and software validation techniques   |
|   |   | 1.9 | Identify stakeholders to be consulted on selection tasks   |

-

|   |  | 3.2 | Provide documentation, such as calculations, specifications diagrams and drawings                                 |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- applying safe working practices and procedures when working with frames, mechanisms and equipment
- evaluating frames, beams and mechanisms for WHS, regulations and risk management requirements
- investigating sustainability implications of frames and mechanisms
- reviewing design features, functions and performance requirements of frames, beams and mechanisms, including:
  - dynamics
  - design loads
  - working stresses
  - allowable deformations and factor of safety element arrangements
  - assembly and fastening methods
- selecting appropriate analysis techniques, software and software validation techniques
- identifying relevant analysis support, such as graphs, tables, nomograms or computer-aided solutions and validation techniques
- analysing static and dynamic operating conditions and determining design or selection parameters
- optimising frame, beam and mechanism elements for strength, deflection, arrangement and fastening
- communicating with stakeholders
- reporting and documenting results of analysis, including calculations, specifications, diagrams and drawings

### Required knowledge

Required knowledge includes:

- WHS and regulatory requirements, codes of practice, and directives and standards, including those related to risk management
- current options and trends in performance analysis software, including underpinning program and software validation techniques
- types and functions of frames and mechanisms
- mechanisms for converting linear to rotary motion and rotary to linear motion
- lifting machines

- design loads, working stresses, allowable deflections and factor of safety for machine elements
- conditions for equilibrium
- non-coplanar and force systems
- equilibrium of non-coplanar and non-concurrent force systems
- reactions at beam supports (e.g. simply supported, overhung and cantilever beam with vertical and oblique concentrated, uniform and variable distributed loads and couples)
- shear force and bending moments
- shear force and bending moment diagrams
- vertical and oblique concentrated and uniform and variable distributed loads
- types and locations of stresses, including:
  - combined stresses
  - thermal stress due to restrained expansion
  - stress concentration and fatigue due to alternating stresses
- centre of gravity
- centre of percussion
- methods of analysis of frames and trusses
- deflection of beams
- statically indeterminate beams
- buckling of compressed members
- loads and stresses on bolted and welded connections
- static versus dynamic forces, balanced and unbalanced
- dynamics and laws of rotational motion
- dynamic analysis of mechanisms
- linked bodies in motion, including types, impulse, momentum and work energy methods
- work, energy and power for balanced and unbalanced force systems

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to analyse loads on a variety of frames and mechanisms to confirm performance and safety compliance.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• identify and review features, functions and performance requirement of frames, beams and mechanisms</li> <li>• identify complex calculations requiring professional engineering assistance</li> <li>• establish dynamics, design loads, working stresses, allowable deformations and factor of safety element arrangements for calculations to be done</li> <li>• evaluate assembly and fastening methods, analysis techniques, software and software validation techniques</li> <li>• analyse static and dynamic operating conditions and determine design or selection parameters</li> <li>• optimise frame, beam and mechanism elements for strength, deflection, arrangement and fastening</li> <li>• communicate and negotiate with stakeholders, professionals and technicians and make adjustments accordingly</li> <li>• evaluate frames, beams and mechanisms for WHS and regulatory requirements, and risk management compliance</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics</li> </ul>

	<p>and disability.</p> <ul style="list-style-type: none"> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Structural support and machine elements</b>	<p>Typically these are beam, strut and tie elements of machines and machine supports subject to bending, tension, compression and shear stresses, and may include:</p> <ul style="list-style-type: none"> <li>• shafts, levers, cams and linkages</li> <li>• frames, stanchions and beams</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>mechanisms for converting linear to rotary motion and rotary to linear motion</li> <li>mechanisms with up to five linkages</li> <li>lifting machines</li> </ul>
<b>Machine mechanisms</b>	<p>Machine mechanisms refers to a device to produce a constrained motion while producing a required output. A mechanism is an assembly of elements or links which may be called 'kinematic pairs', which remain in contact throughout their motions. One link, typically the base element, is fixed.</p> <p>Kinematic pairs may be described as turning, sliding, rolling or skidding pairs</p>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>WHS Acts and regulations</li> <li>relevant standards</li> <li>codes of practice</li> <li>risk assessments</li> <li>registration requirements</li> <li>safe work practices</li> <li>state and territory regulatory requirements</li> </ul>
<b>Standards and codes</b>	<p>Standards and codes refer to all relevant Australian and International standards and codes applicable to a particular frame and mechanism</p>
<b>Load calculations to be done with, or obtained from, a professional engineer</b>	<p>The unit requires the ability to identify calculations that should be obtained from or calculated with the assistance of a professional engineer. These may include:</p> <ul style="list-style-type: none"> <li>regulatory or organisational requirement for professional engineer involvement</li> <li>static and dynamic complex analysis of loads, including resulting stresses and deformations</li> <li>choice of graphical and mathematical methods and software options</li> </ul>
<b>Appropriate licensed technical and professional assistance</b>	<p>Appropriate licensed technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>high pressure</li> <li>energised fluid vessels</li> <li>high temperatures and heat energy capacity</li> <li>wiring with high current control voltages above extra low</li> </ul> </li> </ul>

	<p>voltage</p> <ul style="list-style-type: none"> <li>professional support for technologies, such as: <ul style="list-style-type: none"> <li>specialist electric motor drives and controllers</li> <li>specialist materials, plastics, metal alloys and nano materials</li> <li>special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant including:</p> <ul style="list-style-type: none"> <li>meeting all regulatory requirements</li> <li>conforming to all industry covenants, protocols and best practice guides</li> <li>minimising ecological and environmental footprint of process, plant and product</li> <li>maximising economic benefit of process plant and product to the organisation and the community</li> <li>minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Appropriate computer-aided solutions and validation techniques</b>	<p>Appropriate computer-aided solutions may include:</p> <ul style="list-style-type: none"> <li>software employed for performance analysis/modelling. Underpinning program techniques and algorithms should be understood, such as the use of finite element analysis (FEA) and numerical methods within object oriented modelling techniques</li> </ul> <p>Validation techniques include:</p> <ul style="list-style-type: none"> <li>comparison of traditional solutions for simple design problems with software solutions to the same design problems</li> <li>review of previously implemented design challenges which were completed using the software</li> </ul>

## Unit Sector(s)

### Competency field

**Unit sector**      Engineering science

## Custom Content Section

Not applicable.

# MEM23122A Evaluate computer integrated manufacturing systems

## Modification History

Release 1 - New unit. Replaces MEM23092A, but not equivalent.

## Unit Descriptor

This unit of competency covers the evaluation of computer integrated manufacturing (CIM) systems. It includes hardware, controllers, networks and data handling for business, planning and control, manufacturing operations, automation safety, work health and safety (WHS) and risk management compliance, software and system integration.

## Application of the Unit

This unit applies to evaluation of computer integrated systems used in manufacturing. It is suitable for people working as manufacturing technicians or paraprofessionals and draftspersons and those pursuing manufacturing, engineering or related technical qualifications and careers.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

1	Determine scope of CIM application	1.1	Identify stakeholders to be consulted on the evaluation
		1.2	Confirm that appropriate support, including technical and professional assistance, is available
		1.3	Identify WHS and regulatory requirements, codes of practice, standards and risk assessment requirements for CIM systems with particular emphasis on automation safety
		1.4	Identify appropriate analysis techniques, software techniques and graphics required for evaluation
		1.5	Identify stakeholders to be consulted on evaluation tasks
		1.6	Investigate sustainability implications of CIM systems
2	Evaluate CIM components and systems	2.1	Evaluate parameters and requirements of manufacturing operations
		2.2	Evaluate machines, processes and data flow for machine and process control in CIM systems
		2.3	Evaluate system control, signal generation and conditioning, controller functions and actuator power interfacing
		2.4	Evaluate data collection, sharing and control software and programming for hardware integration
		2.5	Evaluate the data and communications protocols, standards and network topologies for the applications

- 2.6 Evaluate system integration of hardware, controllers, human-machine interfaces (HMIs) and graphical user interfaces (GUIs) and network
  - 2.7 Evaluate system analysis and simulation software and validation techniques
  - 2.8 Evaluate automation safety and compliance with WHS, regulatory requirements, standards and risk management implementation
- 3 Report results
- 3.1 Record results of scoping, principles and techniques identification and evaluation of systems
  - 3.2 Provide documentation, such as layouts, programs, flow charts and files

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required knowledge includes:

- relating manufacturing context and requirements to existing or planned CIM applications and continuous improvement requirements
- identifying WHS, regulatory requirements and risk management compliance
- evaluating CIM systems against automation safety requirements
- investigating sustainability implications of CIM systems
- evaluating features and functions of existing or planned CIM systems against:
  - components
  - processes and data flow
  - controller functions
  - signal and power interfacing
  - communications protocols
  - standards and network topologies
  - HMIs and software
  - automation safety
  - compliance with WHS and regulatory requirements
- applying CIM related software analysis, and software validation techniques
- reporting and documenting results of scoping, principles and techniques identification and evaluation of systems, layouts, programs and flow charts

### Required knowledge

Required knowledge includes:

- types of manufacturing operations, their features and parameters and potential for CIM applications, for example:
  - continuous, mass, batch and jobbing
  - prototype manufacture
  - cellular manufacturing
  - jobbing
  - just-in-time (JIT) and other lean manufacturing systems and techniques
  - maintenance systems and techniques (e.g. condition monitoring)
- compliance requirements of WHS and regulatory requirements, codes of practice, standards, and risk assessment for CIM systems with particular emphasis on automation safety

- sustainability implications of CIM systems
- CIM hardware
- CIM principles and techniques required to evaluate systems and select and optimise components
- current options and trends in performance analysis and programming software, including underpinning program techniques and algorithms
- LAN and WAN network communications in CIM applications
- documentation, drawings, specifications, instructions required, process information and programming
- interdependencies and communications linkages between team members, support functional groups, and licensed technical and professional support

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate CIM systems for safety, economy and fitness for purpose. This includes working individually and as part of a team in accordance with organisational procedures.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> <li>• evaluate compliance with WHS, regulatory requirements and risk management with particular emphasis on automation safety</li> <li>• investigate sustainability implications of CIM systems</li> <li>• review features and functions of CIM systems</li> <li>• identify CIM principles and techniques, analysis, software and software validation techniques</li> <li>• evaluate parameters of manufacturing operations and the features and suitability of CIM components and systems</li> <li>• report and document results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.</li> <li>• The competencies covered by this unit would be</li> </ul>

	<p>demonstrated by an individual working alone or as part of a team.</p> <ul style="list-style-type: none"> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>CIM</b>	CIM uses mechatronic and manufacturing technologies integrated
------------	--

	across an enterprise by the communication of data to control plant and operations, plan production, marketing, maintenance and feedback to the business planning process
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to CIM applications and systems
<b>Automation safety</b>	Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, system interlocks and data integrity. Standards apply to general plant design and use as well as the 'functional safety of safety-related electrical, electronic and programmable electronic control systems'
<b>Appropriate technical and professional assistance</b>	Appropriate technical and professional assistance may include: <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	WHS, regulatory requirements and enterprise procedures may include: <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements</li> </ul>
<b>CIM hardware</b>	Hardware options for CIM systems may include: <ul style="list-style-type: none"> <li>• robots</li> <li>• pick and place, materials handling, automated guided vehicles (AGVs) and transfer devices</li> <li>• fluid power components</li> <li>• pumping and wash equipment</li> </ul>

	<ul style="list-style-type: none"> <li>• boilers, heating and drying equipment</li> <li>• pasteurising, chilling and refrigeration equipment</li> <li>• welding equipment</li> <li>• moulding, casting and forging equipment</li> <li>• pressing, forming, drawing and cropping equipment</li> <li>• surface finishing, plating and painting</li> <li>• packaging equipment</li> <li>• mechanical linkages and support structures</li> <li>• pressure, temperature, proximity sensor/transducers, relative and absolute encoders, vision systems and smart cameras</li> <li>• controllers, programmable logic controllers (PLCs) and remote telemetry units (RTUs)</li> <li>• HMIs (e.g. touch screens)</li> <li>• power interfaces and signal processors for digital and analog control</li> <li>• stepper motors</li> <li>• servo motors, torque, speed and position control</li> <li>• special purpose equipment (e.g. package labelling equipment, logistics and warehousing requirements)</li> <li>• wired and wireless networking systems</li> </ul>
<b>Data and communications protocols and standards</b>	<p>Data and communications protocols and standards include the set of standardised rules for data and signal syntax, checking and error detection. Hardware and software generate data in accordance with a protocol that allows generators and receivers to understand or translate the data as information, control signals integrity and error checks. These may include the following or their current updates:</p> <ul style="list-style-type: none"> <li>• layered communications and networking protocols</li> <li>• Open Systems Interconnection Model (OSI Model) – 7 layers</li> <li>• TCP/IP Internet Protocol Suite {Transmission Control Protocol (TCP) and the Internet Protocol (IP)} – 4 or 5 layers</li> <li>• IEEE 802 LAN/MAN group of standards, including IEEE 802.3 Ethernet standard, IEEE 802.11 Wireless networking standard</li> <li>• Interface standards, such as: RS232 and RS485, Fieldbus, Modbus and DNP3.0</li> </ul>
<b>Network topology</b>	<p>Network topology refers to the arrangement of connected hardware. These include:</p> <ul style="list-style-type: none"> <li>• bus, ring, star, tree, mesh and in-line (2 way comms.) arrangements</li> <li>• wired and wireless options</li> </ul>
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant, including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> </ul>

	<ul style="list-style-type: none"> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<p><b>Continuous improvement implementation</b></p>	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> </ul>

## Unit Sector(s)

### Competency field

**Unit sector**          Engineering science

## Custom Content Section

Not applicable.

## **MEM23123A Evaluate manufacturing processes**

### **Modification History**

Release 1 - New unit. Replaces MEM23093A, but not equivalent.

### **Unit Descriptor**

This unit of competency covers the evaluation of plant, facilities, services, labour and skills distribution used for manufacturing processes against defined process performance parameters. It includes the evaluation and assessment of plant layout and material flows for efficient manufacturability of product and maintainability of the plant and process.

### **Application of the Unit**

This unit applies to manufacturing processes for products, machinery, tools or components for structures. Evaluations may be required for a variety of reasons, including assessing impact of proposals for new products or investigating potential change in processes to meet regulatory, sustainability or efficiency requirements. Efficiency evaluations are based on lean systems and techniques. Where more in-depth training in lean systems and techniques is required relevant competitive systems and practices units should be selected.

The unit is suitable for people working as, supervisors, technicians, and design draftspersons and those pursuing manufacturing, engineering or related technical qualifications and careers.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### Elements and Performance Criteria

1	Determine scope of manufacturing processes	1.1	Identify manufacturing context and processes
		1.2	Identify features and functions of plant, facilities, services, labour and skill distribution used for manufacturing processes
		1.3	Identify stakeholders to be consulted as part of the evaluation
		1.4	Confirm work health and safety (WHS) and regulatory requirements, codes of practice, standards, risk assessment and registration requirements for manufacturing plant
		1.5	Investigate sustainability implications of manufacturing processes
		1.6	Identify sources of professional and technical assistance
2	Evaluate manufacturing processes	2.1	Identify manufacturing principles and techniques required to evaluate and optimise the processes
		2.2	Identify appropriate analysis techniques, software and software validation techniques
		2.3	Evaluate and assess facilities, services, plant and tooling in relation to product manufacturability and maintainability
		2.4	Evaluate and assess process layout, use of automation and process control using lean systems and techniques

- 2.5 Evaluate and assess materials, product flow and transfer operations, buffer and emergency stocks, warehousing, stores and logistics using lean systems and techniques
  - 2.6 Evaluate WHS and regulatory compliance and risk management practices of manufacturing processes and maintenance procedures
  - 2.7 Evaluate processes for sustainability
  - 2.8 Evaluate process compatibility with maintenance management system
  - 2.9 Evaluate labour requirements and skills distribution
  - 2.10 Evaluate process information flows for control and process improvement
- 3 Report results
    - 3.1 Review results of evaluation and assessment with stakeholders
    - 3.2 Provide recommendations for improvements, where appropriate
    - 3.3 Provide reports and documentation, such as layouts, programs and flow charts

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying parameters and context of manufacturing processes
- investigating sustainability implications of manufacturing processes
- identifying appropriate manufacturing processes and analysis techniques and software
- evaluating WHS and regulatory requirements, automation safety and risk management compliance, sustainability and standards
- investigating existing or planned software against manufacturing technical and efficiency requirements
- applying lean systems and techniques to evaluate:
  - facilities and services
  - plant and tooling
  - process layout
  - automation and process control
  - materials and product flow
  - buffer and emergency stocks
  - stores and warehousing
  - transport and logistics
  - maintenance management system
  - labour and skill requirements
- reporting and documenting results of scoping, principles and techniques identification and evaluation of systems, layouts, programs and flow charts

### Required knowledge

Required knowledge includes:

- important features of products and processing options with regard to:
  - marketing options and advantages
  - economic, social and sustainability implications of products and processes
  - WHS and other regulatory requirements
- plant, facilities, services and process layout
- range of common modern manufacturing technical and work organisation processes, including:
  - volume production using transfer lines

- cellular manufacturing
- jobbing
- metal shaping processes, such as casting, forging and machining
- metal assembly, fabricating and joining
- plastic and rubber product manufacturing, including various types of moulding and assembly
- surface finishing based processes (e.g. electroplating)
- process transfers and materials handling
- packaging
- warehousing, stores, and provision for logistics and transport
- labour and skills distribution requirements of plant and processes
- asset maintainability and reliability concepts and processes
- process automation and control options
- techniques for process improvement, including:
  - material and product flow measurement and improvement
  - feedback on product manufacturability for possible product modification
  - feedback from maintenance and life cycle costs for plant
  - quality assurance (QA), quality control (QC) and statistical process control (SPC) feedback
  - customer feedback on cost, quality, delivery and reliability
- maintenance management systems and compatibility with manufacturing processes
- information flows and software options for process measurement and control
- budgeting and costing processes
- WHS, risk management, safe work methods statements (SWMS), work permits, material safety data sheets (MSDS), codes of practice, regulations, standards and regulatory requirements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to evaluate plant, facilities, services and processes against defined process performance parameters. This includes working individually and as part of a team in accordance with organisational procedures.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine features and functions of manufacturing processes, including manufacturing principles and techniques used and relevant internal and external context of manufacturing processes</li> <li>• identify relevant lean systems and techniques and apply in evaluation of manufacturing processes</li> <li>• evaluate WHS, regulatory, automation safety and risk management compliance</li> <li>• investigate sustainability implications of manufacturing processes</li> <li>• evaluate software, facilities, services, plant and equipment tooling, process layout, automation and process control</li> <li>• identify appropriateness of materials and product flow and transfer operations, buffer and emergency stocks, warehousing, stores and compatibility of maintenance management system</li> <li>• report and document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.</li> <li>• The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning</li> </ul>

	and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Defined parameters</b>	<p>Defined parameters may include</p> <ul style="list-style-type: none"> <li>• target cost</li> <li>• target outgoing quality levels and warranty costs</li> <li>• production rates</li> <li>• stock levels and availability to customer order</li> <li>• productivity</li> <li>• working capital</li> </ul>
---------------------------	--

	<ul style="list-style-type: none"> <li>• plant utilisation</li> </ul>
<b>Context of manufacturing processes</b>	<p>The context of manufacturing operations includes:</p> <ul style="list-style-type: none"> <li>• customer requirements</li> <li>• market considerations</li> <li>• product and process sustainability</li> <li>• lean systems</li> <li>• product manufacturability</li> <li>• system maintainability</li> <li>• facilities, services, plant and tooling requirements</li> <li>• supply chains</li> <li>• material and product flow</li> <li>• transfer operations</li> <li>• process control</li> <li>• labour requirements and skills distribution</li> <li>• information flow</li> <li>• systems thinking</li> <li>• continuous improvement and constraint and contingency management</li> <li>• WHS and regulatory requirements and risk management</li> </ul>
<b>Automation safety</b>	<p>Automation safety refers to the reliance on emergency stop, failsafe design, redundancy, interlocks and data integrity. Standards apply to general plant design and use as well as the functional safety of safety-related electrical, electronic and programmable electronic control systems</p>
<b>Appropriate technical and professional assistance</b>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements, codes of</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p>

<b>practice and enterprise procedures</b>	<ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> <li>• state and territory regulatory requirements applying to electrical work</li> </ul>
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular manufacturing process
<b>Sustainability</b>	<p>Sustainability is used to mean the entire sustainable performance of the organisation/plant including:</p> <ul style="list-style-type: none"> <li>• meeting all regulatory requirements</li> <li>• conforming to all industry covenants, protocols and best practice guides</li> <li>• minimising ecological and environmental footprint of process, plant and product</li> <li>• maximising economic benefit of process plant and product to the organisation and the community</li> <li>• minimising the negative WHS impact on employees, community and customer</li> </ul>
<b>Continuous improvement implementation</b>	<p>Continuous improvement of manufacturing processes may result in changes to plant, facilities, services, layout, materials flows, handling and logistics. It may include techniques, such as:</p> <ul style="list-style-type: none"> <li>• balanced scorecard</li> <li>• current and future state mapping</li> <li>• measuring performance against benchmarks</li> <li>• process improvement, problem solving and decision making</li> <li>• data management, generation, recording, analysing, storing and use of software</li> <li>• training for improvement systems participation</li> <li>• technical training</li> <li>• systems thinking</li> <li>• constraints and contingency management</li> </ul>
<b>Lean systems and techniques</b>	<p>Lean systems and techniques used in evaluations can vary according the type of production and product and may include:</p> <ul style="list-style-type: none"> <li>• performance indicators based on customer value</li> <li>• continuous improvement, including kaizen</li> <li>• just-in-time (JIT) and kanban</li> </ul>

	<ul style="list-style-type: none"> <li>• pull system for production and services</li> <li>• elimination and/or limitation of waste, where waste is defined as effort and resources not contributing to customer value</li> <li>• mistake proofing</li> <li>• standardisation of work</li> <li>• quick changeover</li> <li>• planning benchmarks and techniques: <ul style="list-style-type: none"> <li>• cycle time</li> <li>• takt time</li> <li>• pack out</li> <li>• pitch</li> <li>• line balancing</li> <li>• overall equipment effectiveness (availability x performance efficiency x quality rate)</li> </ul> </li> <li>• problem solving and decision making tools: <ul style="list-style-type: none"> <li>• total quality management (TQM) tools</li> <li>• root cause analysis (RCA)</li> <li>• failure mode and effects analysis (FMEA)</li> <li>• design review based on failure mode (DRBFM)</li> <li>• constraints and contingencies management</li> </ul> </li> <li>• total productive maintenance</li> <li>• value stream analysis</li> <li>• visual factory techniques</li> </ul>
<b>Automation</b>	Automation options range from manual operations with manual information generation, handling, analysis and storage to islands of automation supported by manual interfaces with some electronic information processing to systems with major automation and networked data handling
<b>Information flow requirements</b>	<p>Information flow may include:</p> <ul style="list-style-type: none"> <li>• SPC and QA data</li> <li>• production planning and maintenance systems information</li> <li>• visual information feedback to stakeholders</li> </ul> <p>Information processing may include:</p> <ul style="list-style-type: none"> <li>• software and networks for automated data handling, analysis, display and storage</li> </ul>

# MEM23124A Measure and analyse noise and vibration

## Modification History

Release 1 - New unit. Replaces MEM23094A, but not equivalent.

## Unit Descriptor

This unit of competency covers the monitoring, measurement and analysis of noise and vibration. It includes equipment calibration and use, analysis of data, standards for exposure limits, work health and safety (WHS) and mitigation measures.

## Application of the Unit

This unit applies to machinery and equipment generated noise and vibration, including mechanical shock generated in commercial and industrial environments. It is suitable for people working as asset maintenance technicians or noise and vibration specialists. It is suitable for people working as technicians in engineering or related industries and those pursuing careers and qualifications in engineering or related disciplines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A                      Apply technical mathematics

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Determine scope of investigation into noise or vibration | 1.1 | Identify machinery and equipment to be investigated for noise and vibration measurement and analysis                   |
|   |  | 1.2 | Determine stakeholders to be consulted on analysis tasks   |
|   |  | 1.3 | Determine software required for the analysis of the task   |
|   |  | 1.4 | Determine regulatory, standards and risk management noise and vibration compliance requirements                        |
|   |  | 1.5 | Investigate sustainability implications of noise and vibration   |
|   |  | 1.6 | Apply systems thinking, continuous improvement problem solving and constraint and contingency management               |
|   |  | 1.7 | Determine available sources for any required technical and professional assistance                                     |
| 2 | Prepare for noise measurement and analysis               | 2.1 | Identify noise exposure limits appropriate to the equipment, process and employee, community and environmental context |
|   |  | 2.2 | Review and identify available sound measuring equipment and components and suitability for required measurements       |
|   |  | 2.3 | Select sound measuring equipment   |

- |   |  |     |  |
|---|--|-----|--|
| 3 | Measure and analyse sound data                                       | 3.1 | Set up and site sound measurement equipment for desired measurements   |
|   |  | 3.2 | Calibrate sound measurement equipment  |
|   |  | 3.3 | Take sound measurements using appropriate techniques for particular application and environment                            |
|   |  | 3.4 | Process, analyse and interpret noise data  |
|   |  | 3.5 | Relate data to plant and equipment performance   |
| 4 | Review options for noise elimination or mitigation and protection    | 4.1 | Review options for noise elimination, mitigation and protection measures   |
|   |  | 4.2 | Prepare report and make recommendations  |
| 5 | Prepare for vibration measurement and analysis                       | 5.1 | Identify vibration exposure limits appropriate to the equipment, process and employee, community and environmental context |
|   |  | 5.2 | Review and identify available vibration measuring equipment and components and suitability for required measurements       |
|   |  | 5.3 | Select vibration measuring equipment   |
| 6 | Measure and analyse vibration and shock data                         | 6.1 | Set up and site or mount vibration and shock measurement equipment   |
|   |  | 6.2 | Calibrate equipment  |
|   |  | 6.3 | Take measurements  |
|   |  | 6.4 | Process, analyse and interpret vibration and shock data  |
|   |  | 6.5 | Relate data to plant and equipment performance   |
| 7 | Review options for vibration and shock elimination or mitigation and | 7.1 | Review options for vibration and shock elimination or damping and isolating  |
|   |  | 7.2 | Prepare report and make recommendations  |

protection

- |   |  |     |  |
|---|--|-----|--|
| 8 | Investigate developments in the field of noise and vibration measurement in predictive equipment maintenance | 8.1 | Investigate developments in acoustic, vibration and shock measurement                  |
|   |  | 8.2 | Investigate the use of condition monitoring in predictive maintenance programs         |
| 9 | Record and report  | 9.1 | Record and report results of review, measurement, analysis and recommendations         |
|   |  | 9.2 | Provide documentation, such as calculations, data records and analysis and assessments |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining parameters and context of noise and vibration measurement and analysis tasks
- determining WHS, other regulatory and risk management compliance requirements, including noise and vibration, noise dose and vibration exposure limits
- reviewing physics of sound and vibration, effects of noise, vibration and shock on humans, measuring equipment and mitigation measures
- selecting equipment
- siting, setting up and calibrating equipment prior to use
- measuring, analysing, interpreting and recording
- relating data to plant and equipment performance
- applying systems thinking, continuous improvement problem solving and constraint and contingency management
- investigating sustainability implications, developments in acoustic, vibration and shock measurement, condition monitoring in predictive maintenance programs
- recording, reporting and documenting results of review, measurement, data, analysis and calculations, interpretations and recommendations

### Required knowledge

Required knowledge includes:

- characteristics and measurement of noise and vibration, and sources of noise and vibration
- noise and vibration concepts and terminology
- ISO and other vibration severity standards
- limitations of broadband vibration and trend analysis
- principles of using vibration analysis as an indicator of machine and equipment condition
- causes and effects of vibration and noise in industrial and commercial equipment, such as damaged product, limited processing speeds and catastrophic machine failure
- typical engineering components subject to vibration
- relevant WHS and regulatory requirements, codes of practice, standards, risk minimisation and registration requirements
- calculations, formulae and laws relating to vibration and sound measurement, including allowable exposure using AS 2670 Physiological effects of noise and vibration
- range and capacity of equipment for measuring vibration and sound
- noise measurement and testing techniques and equipment for various environments and

- sound characteristics in vibration measurement and testing
- acoustic emission in vibration measurement and testing
- shock testing, including applications requiring laboratory testing (e.g. anechoic chambers)
- vibration trend analysis
- noise and vibration concepts (e.g. vibration, noise, transmission of noise and vibration and harmonic excitation)
- common sources of noise generation (e.g. fans, motors, engines and ducts)
- noise mitigation and protection measures, such as:
  - isolation
  - insulation
  - personal hearing protection
  - exposure limitation policies
- vibration and shock control equipment and techniques
- community noise
  - noise and vibration measurement and analysis applications, such as:
    - condition monitoring for plant
    - acoustic emissions for fault detection
    - modal analysis of dynamic properties of structures or room acoustics
    - correlation of modal analysis with finite element analysis (FEA)
    - statistical energy analysis

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to measure and analyse noise and vibration and make recommendations for mitigation and protection.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• determine compliance with WHS and regulatory requirements, and risk management with particular emphasis on automation safety</li> <li>• review physics of sound and vibration, effects of noise, vibration and shock on humans, measuring equipment and mitigation measures</li> <li>• identify noise and vibration, noise dose and vibration exposure limits</li> <li>• select appropriate measuring equipment for measuring task</li> <li>• calibrate, site and set up equipment</li> <li>• correctly measure and record noise and vibration</li> <li>• analyse and interpret measurement results</li> <li>• relate data to plant and equipment performance</li> <li>• recommend noise and vibration elimination, mitigation and protection measures</li> <li>• investigate sustainability implications</li> <li>• report and document results and recommendations</li> <li>• apply systems thinking, continuous improvement problem solving and constraint and contingency management.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>

<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Sound measuring equipment</b>	<p>Sound measuring equipment may include:</p> <ul style="list-style-type: none"> <li>• microphones</li> <li>• cables/connectors</li> <li>• meters</li> <li>• recorders</li> <li>• analysers/comper and software</li> </ul>
<b>Set-up and measurement techniques</b>	<p>Set-up and measurement techniques may include:</p> <ul style="list-style-type: none"> <li>• microphone positioning</li> <li>• meter time constants</li> <li>• frequency filter settings</li> </ul>
<b>Purpose for sound</b>	Purposes for sound measurements may include:

<b>measurements</b>	<ul style="list-style-type: none"> <li>• simple sound level or spectrum</li> <li>• limited or full frequency band</li> <li>• standards to be met</li> <li>• impulsive or consistent noise</li> </ul>
<b>Vibration</b>	Vibration refers to continuous or sporadic vibration whether or not associated with noise and also includes mechanical shock
<b>Vibration and shock measuring equipment</b>	<p>Vibration and shock measuring equipment may include:</p> <ul style="list-style-type: none"> <li>• accelerometer</li> <li>• impedance heads</li> <li>• cables</li> <li>• mounting media</li> <li>• calibrators</li> <li>• preamplifier</li> <li>• meters</li> <li>• filters</li> <li>• recorders</li> <li>• analysers/computer and software</li> </ul>
<b>Appropriate technical and professional assistance</b>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano materials</li> <li>• special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul> </li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS Acts and regulations</li> <li>• relevant standards</li> <li>• codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>• risk assessments</li> <li>• registration requirements</li> <li>• safe work practices</li> </ul>

	<ul style="list-style-type: none"> <li>state and territory regulatory requirements</li> </ul>
<b>Standards and codes</b>	Standards and codes refer to all relevant Australian and International standards and codes applicable to a particular noise and vibration measurement and analysis task
<b>Systems thinking</b>	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
<b>Continuous improvement</b>	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>balanced scorecard</li> <li>current and future state mapping</li> <li>measuring performance against benchmarks</li> <li>process improvement, problem solving and decision making</li> <li>data management, generation, recording, analysing, storing and use of software</li> <li>training for improvement systems participation</li> <li>technical training</li> </ul>
<b>Constraints and contingencies</b>	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> <li>financial</li> <li>organisational, procedural or cultural</li> <li>physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>

## Unit Sector(s)

### Competency field

**Unit sector**      Engineering science

## **Custom Content Section**

Not applicable.

# MEM23125A Evaluate maintenance systems

## Modification History

Release 1 - New unit. Replaces MEM23094A, but not equivalent.

## Unit Descriptor

This unit of competency covers the evaluation of maintenance management systems, including analysing the effect of any action or breakdown on achieving strategic objectives. The unit requires evaluation of maintainability and reliability of assets, maintenance management systems, personnel participation, monitoring, responding to indicators, prioritising action, sustainability, lean systems maintenance requirements, work health and safety (WHS) compliance, risk minimisation, facilities and services maintenance, costing and data analysis, and performance indices.

## Application of the Unit

This unit applies to evaluation of both corrective and preventative maintenance systems for plant, facilities and services used in industry. Evaluations may be required for variety of purposes and may apply to evaluations of a maintenance system for a whole process, plant or enterprise. The unit is suitable for operations managers, maintenance personnel and those pursuing maintenance or manufacturing, engineering or related technical qualifications and careers.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MEM23004A	Apply technical mathematics
MEM14088A	Apply maintenance engineering techniques to equipment and component repairs and modifications
MEM14092A	Integrate maintenance fundamentals into an engineering task

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### Elements and Performance Criteria

1	Determine scope of maintenance processes	1.1	Determine parameters of maintenance management system to be evaluated
		1.2	Assess engineering principles, skills and techniques required by tasks
		1.3	Assess software and software techniques required for evaluation task
		1.4	Identify stakeholders to be consulted
		1.5	Determine compliance requirements of WHS and regulatory requirements, codes of practice, standards and risk assessment requirements for maintenance processes
		1.6	Investigate sustainability implications of maintenance processes
2	Identify principles and techniques required by evaluation	2.1	Review trends in maintenance practice and equipment with particular emphasis on integrated management systems
		2.2	Review maintenance system and implementation strategies for relevance to evaluation
		2.3	Identify features and functions of maintenance information systems

- 3 Evaluate maintenance management systems
  - 3.1 Evaluate organisational maintenance safety and risk management procedures
  - 3.2 Evaluate maintenance processes for sustainability
  - 3.3 Evaluate asset reliability, maintainability and performance against against lean indices, production targets and system design parameters
  - 3.4 Audit plant, facilities, services and systems for provision of parts and consumables, adequacy of labour, skills and technical support
  - 3.5 Evaluate maintenance system data generation and collection and reporting for performance analysis required for process improvement
  - 3.6 Evaluate the use of maintenance management software
  - 3.7 Evaluate manual and automated condition monitoring, testing and analysis
  - 3.8 Evaluate implementation of maintenance management systems techniques, including up-time preparations, spares availability, tooling and equipment readiness
  - 3.9 Evaluate asset categorisation, maintenance scheduling and prioritising
  - 3.10 Evaluate implementation of maintenance continuous improvement processes
- 4 Report results
  - 4.1 Record results of scoping, principles and techniques identification and evaluation of maintenance systems
  - 4.2 Provide documentation, such as layouts, schedules, performance analysis and flow charts

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying WHS, regulatory and risk management compliance requirements for maintenance systems
- investigating sustainability implications of maintenance processes
- identifying and reviewing features and functions of maintenance and information systems, trends and implementation strategies and software
- evaluating organisational maintenance safety and risk management procedures, sustainability, asset reliability and maintainability, lean indices, system design parameters, data generation and collection, reporting, storage and analysis, condition monitoring, implementation, facilities and services maintenance response systems, asset categorisation, maintenance scheduling and prioritising, and continuous improvement
- auditing plant, facilities and services, systems for provision of parts and consumables, and adequacy of labour, skills and technical support for maintenance activities
- reporting and documenting results of scoping, principles and techniques identification and evaluation of maintenance systems, layouts, schedules, performance analysis, flow charts, calculations, programs and files

### Required knowledge

Required knowledge includes:

- maintenance requirements of various organisations and industry trends
- features of integrated management systems within organisations and industry trends:
  - monitoring, adjustment, lubrication, consumables, breakdown maintenance required by typical plant equipment and facilities
  - labour and training requirements for typical maintenance systems
  - maintenance performance indices, such as mean time between failure (MTBF) and overall equipment efficiency (OEE), and relationship to maintenance strategies, business financial objectives and maintenance system design criteria, such as life cycle cost and break-even point
  - maintenance management systems, such as terotechnology
  - maintenance management within ILS
- sources of information, software and hardware required by maintenance systems
- systems thinking in relation to maintenance, failure analysis, problem solving and decision making processes, constraint and contingency management
- compliance requirements of WHS, regulations and standards relevant to maintenance

- risk management requirements and analyses for maintenance of plant, including failure mode effects analyses (FMEA)
- maintainability and reliability related to life cycle costing, system design, cost predictions and break-even analysis
- audit processes for plant, facilities and services, provision of parts and consumables, labour, skills and technical support
- maintenance system data generation and collection, reporting and response processes, data storage and performance analysis for process improvement against performance parameters, such as MTBF and OEE
- manual and automated condition monitoring, testing and analysis
- maintenance system and implementation strategies, including corrective, preventative, predictive, precision, proactive, total productive and reliability centred maintenance
- facilities and service maintenance response systems
- asset categorisation and maintenance scheduling and prioritising
- organisational maintenance safety procedures, such as:
  - risk management procedures
  - WHS committees
  - standard operating procedures
  - safe work methods statements (SWMS)
  - material safety data sheets (MSDS)
  - permits
  - standards related to significant maintenance or plant modifications
- terotechnology
- engineering, plant, facilities and services maintenance requirements
- continuous process improvement
- data generation, analysis, storage and feedback
- reporting techniques and documentation required

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate maintenance systems and processes for safe, cost-effective and sustainable operation.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• investigate sustainability implications of maintenance processes</li> <li>• identify and review features and functions of maintenance and information systems, trends and implementation strategies and software</li> <li>• evaluate safety and risk management, sustainability, asset reliability and maintainability, lean indices, system design parameters, data generation, collection, reporting, storage and analysis, condition monitoring, facilities and services maintenance response systems, asset categorisation, maintenance scheduling and prioritising, and continuous improvement, implementation</li> <li>• audit plant, facilities and services, provision of parts and consumables provision, labour, skills and technical support</li> <li>• report and document results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment</li> </ul>

	<p>Guidelines of the MEM05 Metal and Engineering Training Package.</p> <ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other units of competency where required.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Appropriate technical and professional assistance</b>	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> <li>• technical support and advice relating to elements which have intrinsic dangers, such as: <ul style="list-style-type: none"> <li>• high pressure</li> <li>• energised fluid vessels</li> <li>• high temperatures and heat energy capacity</li> <li>• wiring with high current control voltages above extra low voltage</li> </ul> </li> <li>• professional support for technologies, such as: <ul style="list-style-type: none"> <li>• specialist electric motor drives and controllers</li> <li>• specialist materials, plastics, metal alloys and nano</li> </ul> </li> </ul>
--	---

	<p>materials</p> <ul style="list-style-type: none"> <li>special processes, foundry, alloy welding, heat treatment, sealing and fastening</li> </ul>
<b>WHS, regulatory requirements and enterprise procedures</b>	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> <li>WHS Acts and regulations</li> <li>relevant standards</li> <li>codes of practice from Australian and overseas engineering and technical associations and societies</li> <li>ministerial directives</li> <li>risk assessments</li> <li>registration requirements</li> <li>safe work practices</li> <li>state and territory regulatory requirements</li> </ul>
<b>Standards and codes</b>	<p>Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular maintenance system</p>
<b>Systems thinking</b>	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
<b>Continuous improvement</b>	<p>Continuous improvement implementation may relate to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance.</p> <p>Improvement processes may include techniques, such as:</p> <ul style="list-style-type: none"> <li>balanced scorecard</li> <li>current and future state mapping</li> <li>measuring performance against benchmarks</li> <li>process improvement, problem solving and decision making</li> <li>data management, generation, recording, analysing, storing and use of software</li> <li>training for improvement systems participation</li> </ul>

	<ul style="list-style-type: none"> <li>• technical training</li> </ul>
<b>Constraints and contingencies</b>	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> <li>• financial</li> <li>• organisational, procedural or cultural</li> <li>• physical constraints, such as limits to resources, limits to site access or logistical limitations</li> </ul>
<b>Maintenance systems</b>	<p>Maintenance systems include:</p> <ul style="list-style-type: none"> <li>• breakdown maintenance</li> <li>• preventive maintenance</li> <li>• predictive maintenance (on-condition)</li> <li>• precision maintenance</li> <li>• proactive maintenance</li> <li>• reliability centred maintenance</li> <li>• total productive maintenance</li> </ul>
<b>Lean systems maintenance</b>	<p>Lean maintenance systems aim at maximising machine and process up-time, minimising waste and costs, maintaining quality and delivery and customer service. Maintenance processes and procedures are subject to continuous improvement and are set to complement engineering business objectives</p>
<b>Integrated maintenance management systems (terotechnology)</b>	<p>Terotechnology is an integrated maintenance management system combining management, financial, engineering and other practices for cost-effective maintenance of assets, such as plant, equipment and facilities. It involves the design for reliability and maintainability, manufacture, installation, commissioning and eventual write-off and replacement of the assets. Data is collected and analysed to assess the reliability, life cycle costs and productivity of the assets against the design criteria.</p> <p>Reliability relates to the productivity of assets, that is, the maintenance of service or product output (quantities) and its quality within cost parameters. In the context of terotechnology, the cost parameters include life cycle costs</p>
<b>Integrated logistic support (ILS)</b>	<p>ILS is the management and technical process through which supportability and logistic support considerations are integrated into the design and taken into account throughout the life cycle of systems/equipment and by which all elements of logistic support are planned, acquired, tested, and provided in a timely and cost-effective manner. Maintenance systems and schedules are part of this process</p>
<b>Maintenance priority</b>	<p>Assets may be prioritised for maintenance according to different criteria and categories, such as:</p>

	<ul style="list-style-type: none"> <li>• critical assets: <ul style="list-style-type: none"> <li>• high cost of replacement</li> <li>• unavailability of replacement or spares</li> <li>• failure will or may immediately endanger life and property</li> <li>• essential to quality</li> <li>• high cost of disruption to production or service delivery</li> <li>• failure would require an immediate response</li> </ul> </li> <li>• semi-critical assets: <ul style="list-style-type: none"> <li>• shutdown produces partial loss of capacity</li> <li>• asset is regulated</li> <li>• difficult to repair</li> <li>• alternative asset may be available</li> <li>• some spare parts are stored</li> <li>• medium priority for response</li> </ul> </li> <li>• non-critical: <ul style="list-style-type: none"> <li>• breakdown affects minimal production loss</li> <li>• asset used infrequently</li> <li>• parts readily available</li> <li>• lowest priority attended to as time and resources allow</li> </ul> </li> </ul>
<b>Maintenance activity audit</b>	<p>An audit of plant, facilities and services may be used to identify maintenance requirements with details listed in the maintenance database according to different criteria, such as:</p> <ul style="list-style-type: none"> <li>• criticality, locality, machine type and maintenance activities required</li> <li>• skills and techniques required for corrective actions</li> <li>• sources and availability of spares</li> <li>• specialised corrective skills and techniques for specific equipment</li> </ul>
<b>Maintainability</b>	<p>Maintainability refers to the design of product, machines and processes with an objective of reducing maintenance downtime, resources, specialist tools and skills required to maintain reliability. Design techniques may include modular design for ease of replacement, provision of bypass opportunities to isolate the failure for repair while processes continue or provision of substitute equipment</p>
<b>Monitoring and testing</b>	<p>Monitoring and testing may be undertaken for both corrective and proactive and predictive maintenance. Tests may include:</p> <ul style="list-style-type: none"> <li>• manual inspections</li> <li>• instrumented monitoring</li> <li>• lubricant testing (tribology)</li> </ul>

	<ul style="list-style-type: none"> <li>• lidar (light for atmospheric particle detection)</li> <li>• gas chromatography</li> <li>• mandatory inspections</li> <li>• performance and condition monitoring</li> <li>• radiographic examination for material imperfections</li> <li>• microwave for non-metallic solid or liquid test</li> <li>• camera and scope techniques</li> </ul>
<b>Maintenance system data</b>	<p>Maintenance system data may include:</p> <ul style="list-style-type: none"> <li>• asset ID and plant warranties</li> <li>• procedural documents: <ul style="list-style-type: none"> <li>• monitoring and preventative maintenance schedules</li> <li>• SWMS</li> <li>• MSDS</li> <li>• work permits</li> </ul> </li> <li>• monitoring reports and system measurements</li> <li>• maintenance actions and costs</li> <li>• spares inventory control</li> </ul>

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers performing basic penetrant testing procedures in a range of industrial applications.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to basic penetrant testing techniques on fabrications, structures and components across a wide range of industries and restricted to basic visible dye and/or process penetrant line methods.</p> <p>The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures.</p> <p>Penetrant testing is performed on critical component or structural zones.</p> <p>All testing must be completed with particular attention to personal safety and OH&amp;S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>This unit should not be selected when Unit MEM24002B (Perform penetrant testing) has already been selected.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p><b>Band: A</b></p> <p><b>Unit Weight: 2</b></p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic penetrant testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic penetrant testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Test media is selected and applied in accordance with workplace practices and specifications. 2.4. Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements. 2.5. Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of penetrant test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- preparing inspection areas
- identifying discontinuities
- applying procedures

## REQUIRED SKILLS AND KNOWLEDGE

- applying test media
- applying principles of penetrant testing techniques
- identifying defects
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

### Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- precleaning methods and their areas of use - solvents, vapour degrease, etching, detergents, paint removers, mechanical methods
- consequences of incorrect preparation
- procedures and OH&S requirements in relation to the preparation process
- basic concepts and principles of NDT; general terms, purpose of NDT and areas of application of NDT
- scope and basic description of test
- general properties of penetrants - penetrability, removability, visibility
- emulsifier types
- developer types
- use of standard test panels
- established inspection procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out penetrant testing
- penetrant application
- dwell times
- penetrant removal
- developer application
- dry powder
- development time
- factors affecting indications
- non-relevant indications
- post-cleaning methods and their areas of use
- basic maintenance and storage procedures for testing equipment
- OH&S requirements including storage requirements
- definition of a defect and common basic defects
- methods/procedures for reporting test results

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to perform basic penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic penetrant testing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers performing penetrant testing in a range of industrial applications.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to penetrant testing techniques on fabrications, structures and components across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent by portable penetrant testing, processing on a dedicated penetrant line, visible dye and fluorescent methods.</p> <p>The work can relate to scheduled and unscheduled maintenance activities using general tools and specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Penetrant tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&amp;S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for penetrant testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform penetrant testing	2.1. The most appropriate penetrant test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Appropriate test media is selected and applied in accordance with workplace/industry practices. 2.4. Penetrant test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.5. Penetrant test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of penetrant test(s)	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

**REQUIRED SKILLS AND KNOWLEDGE**

- interpreting and following procedures
- identifying inspection areas
- conducting visual inspections
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- using decision making skills
- assessing risk
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- planning, sequencing operations

**Required knowledge**

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- procedure, statutory and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- penetrant testing techniques and procedures for a range of situations
- tools, equipment, techniques
- principles and applications of penetrant testing techniques
- hazards and safety requirements associated with penetrant testing
- maintenance and storage procedures for test equipment
- common faults and damage
- range of defects
- meaning and application of national and international codes and standards
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to perform penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing penetrant testing in a range of industrial applications or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- assessing risk
- undertaking calculations using formulae
- entering routine and familiar information onto proformas and standard workplace forms

**Required knowledge**

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- magnetic particle testing techniques and procedures for a range of situations
- system verification checks necessary to carry out the magnetic particle test
- principles and applications of magnetic particle testing
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- types of magnetism;
- magnetic properties
- magnetic materials
- magnetic circuits
- relative permeability of common engineering materials
- magnetic discontinuity, leakage fields
- types of equipment - portable, stationary, automated etc.
- equipment features
- nature and properties of the various types of magnetising current
- current requirements for testing
- media types - advantages and limitations of dry powders and fluid suspensions
- quality control of media, viewing conditions
- disposal procedures
- environment care
- preparation of parts
- effect of surface coatings on sensitivity
- effect of surface roughness
- dressing of welds

**REQUIRED SKILLS AND KNOWLEDGE**

- interpretation of indications
- lighting conditions
- use of magnification
- factors influencing appearance
- spurious indications, false indications
- surface and sub-surface indications
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for eddy current testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform eddy current testing	2.1. The most appropriate eddy current test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Eddy current test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.4. Eddy current test equipment is checked for defects, and maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of eddy current tests	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- using calculations relating to eddy current testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

**Required knowledge**

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out eddy current testing
- tools, equipment, techniques and system verification checks necessary to carry out eddy current testing
- basic principles of electricity, magnetism, electromagnetism and eddy current testing:
  - Reactance - field made by eddy current
  - Biot and Savant law - Definition, Practical (right hand) rules
  - Amperes law - Definition, Applications (toroid, infinite coil, flat coil)
  - Lenz law - Definition, Auto-induction factor, Mutual induction factor, Coupling factor
- induced currents - short circuit coil, metallic mass, skin effect, reactance
- cylindrical bars
- theory of eddy currents
- tubes
- geometric defect characterisation
- multiple defects
- characteristics of eddy current probes
- eddy current equipment:
  - transmission
  - reception
  - data presentation
- equipment controls
- types of equipment:
- physical properties of materials

**REQUIRED SKILLS AND KNOWLEDGE**

- electrical conductivity
- magnetic permeability
- applications of eddy current testing
- influence of various parameters on eddy current measurement
- defect position and orientation
- compensation
- structure and geometry of test part
- coupling influence
- relative speed
- limitations of eddy current testing
- hazards and safety precautions associated with eddy current testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to perform eddy current testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing eddy current testing in a range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for ultrasonic thickness testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed for obvious discontinuities.
2. Perform ultrasonic thickness testing	2.1. Nominated ultrasonic thickness test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Ultrasonic tests are carried out in accordance with relevant standards and OH&S requirements. 2.4. Ultrasonic test equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of ultrasonic thickness tests	3.1. Basic thicknesses are identified and explained in accordance with enterprise standards and/or procedures. 3.2. Basic thicknesses are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- performing calculations

**REQUIRED SKILLS AND KNOWLEDGE**

- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

**Required knowledge**

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- basic principles of ultrasonic thickness testing
- properties and behaviour of ultrasound
- basic concepts associated with frequency, velocity, wavelength, amplitude
- generation of ultrasound
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic thickness tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic thickness test
- advantages and limitations of ultrasonic thickness testing
- hazards and safety requirements associated with ultrasonic thickness testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- indications and thicknesses
- methods/procedures for reporting test results
- ultrasonic thickness testing equipment
- types of displays:
  - a-scan display
  - b-scan display
- types of couplants, desirable characteristics
- straight beam testing method:
- calibration of thickness testing equipment
- frequency
- probe size and shape
- thickness testing
- plate testing
  - acceptance standards within the scope of this unit
- recording and reporting:
  - job records
  - routine reports
  - codes and standards
- variables affecting test results

**REQUIRED SKILLS AND KNOWLEDGE**

- methods of controlling variables
- component variables:
  - size and geometry
  - distance location from entry surface
  - orientation to entry surface
  - reflecting characteristics of back wall
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

## REQUIRED SKILLS AND KNOWLEDGE

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- analysing test results
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- performing calculations relating to ultrasonic testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

### Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- principles of ultrasonic testing
- variables affecting test selection
- variables affecting test results
- ultrasound - frequency, velocity, wavelength, amplitude
- behaviour of ultrasound at interfaces
- characteristics of ultrasound in materials
- generation of ultrasound
- detection of ultrasound
- the flaw detector
- basic test methods:
  - pulse-echo and transmission methods
  - resonance methods
  - a, b, c, and p scan
  - types of coupling
  - single, dual and two-probe methods
- characteristics and applications associated with probes
- calibration methods
- variables
- contact and immersion test methods
- testing methods and their application
- flaw size evaluation
- interpretation and evaluation:
  - defect types as related to product

**REQUIRED SKILLS AND KNOWLEDGE**

- codes and standards
- recording and reporting:
  - job records
  - routine reports
  - codes and standards
- written procedures:
  - presentation
  - use of standards
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic tests

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas ready for basic radiographic testing	1.1. Radiographic specimens are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Set up radiographic test equipment	2.1. Nominated test is identified from standard operating procedures. 2.2. Radiation testing and processing equipment is set up in accordance with standard operating procedures.
3. Carry out basic radiographic tests	3.1. Basic properties of X-rays and gamma rays are identified. 3.2. Safety practices and controls for minimising radiation exposure are applied. 3.3. Radiographic testing and safety equipment is operated in accordance with relevant work instructions and OH&S requirements. 3.4. Films are processed to achieve optimum results.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards

**REQUIRED SKILLS AND KNOWLEDGE**

- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

**Required knowledge**

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment
- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts
- exposure techniques
- equipment types
- recording and reporting
- safety aspects
- types of materials
- industrial applications
- set-up procedures
- methods/procedures for reporting test results

**REQUIRED SKILLS AND KNOWLEDGE**

- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to perform basic radiographic testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic radiographic testing procedures in a range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

**EVIDENCE GUIDE**

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers operating radiographic testing equipment and applying the testing procedures in a range of industrial applications.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to inspecting, interpreting, classifying and reporting on radiographic testing techniques of fabrications, structures and components.</p> <p>Testing is across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent and includes identifying abnormalities such as corrosion, metal fatigue, deformation in non-ferrous/ferrous alloys steels, composite materials, fatigue cracks, stress corrosion cracking, manufacturing defects, thickness measurement and fit, mechanical and bonded repairs, welding defects and casting defects and/or aircraft components.</p> <p>The work can relate to scheduled and un-scheduled maintenance activities using general tools and specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Radiographic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal and OH&amp;S regulations.</p> <p>Ionizing radiation equipment materials and chemicals, which are subject to codes and regulations, must be stored, used, and transported in accordance with safe work practices. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p>
--------------------------------	--

	<p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p><b>Band: A</b></p> <p><b>Unit Weight: 6</b></p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for radiographic testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Select and prepare radiographic test	2.1. The most appropriate radiographic test for the material/application is selected. 2.2. Appropriate testing and processing equipment is selected and set up for various geometries in accordance with standards and/or procedures. 2.3. Quality of radiographic test is optimised.
3. Perform radiographic testing	3.1. Radiographic tests are carried out in accordance with relevant standards, codes, specifications and OH&S requirements. 3.2. Radiographs are set up and carried out for specialised applications. 3.3. Films are processed to maximise quality of image. 3.4. Films are processed to achieve optimum results.
4. Maintain radiographic testing equipment	4.1. Radiographic testing equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
5. Monitor and ensure radiation safety	5.1. Safety controls are set up and maintained. 5.2. Exposure to radiation employees and general public is minimised. 5.3. Radiation monitoring equipment is selected and used.
6. Interpret and report the results of radiographic tests	6.1. Conditions necessary to view and interpret radiographs are established. 6.2. Radiographs are interpreted/evaluated in accordance with applicable codes, standards and specifications. 6.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

#### Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment

**REQUIRED SKILLS AND KNOWLEDGE**

- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts.
- exposure techniques
- equipment types
- recording and reporting
- safety aspects
- types of materials
- industrial applications
- set-up procedures
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for non-destructive test	1.1. Inspection area is assessed for testing and all possible failure sites are identified utilising metallurgical analysis. 1.2. Relevant information for test development is collected from available sources using accepted techniques. 1.3. Information is analysed and interpreted. 1.4. Test requirements are determined.
2. Establish non-destructive test techniques and procedures	2.1. Test methods, techniques and procedures to be used for specific NDT work are designated. 2.2. Codes, standards, specifications and procedures are interpreted. 2.3. Test procedures are developed in accordance with established techniques and metallurgical principles.
3. Validate/confirm non-destructive tests	3.1. General and specific test procedures are validated in accordance with established techniques. 3.2. Inspection results are interpreted and evaluated in terms of existing codes, standards and specifications.
4. Approve non-destructive test procedures	4.1. Procedures are approved in accordance with workplace procedures and relevant codes and standards. 4.2. Procedures are documented and distributed in accordance with workplace requirements and relevant codes and standards.
5. Evaluate non-destructive test procedures	5.1. Procedures are evaluated for effectiveness. 5.2. Evaluation results are documented and reported according to workplace requirements. 5.3. Changes/amendments to non-destructive test procedures are made and distributed as necessary.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**REQUIRED SKILLS AND KNOWLEDGE****Required skills**

Look for evidence that confirms skills in:

- conducting metallurgical assessment of inspection areas
- designating most appropriate method, technique or procedure
- referencing information
- developing and validating test procedures
- applying safety procedures, standard operating procedures and legislative requirements to all work
- reading/interpreting/applying relative testing standards
- reading/interpreting/applying relative conformance standards
- documenting procedure and results

**Required knowledge**

Look for evidence that confirms knowledge of:

- application of metallurgical analysis to assess inspection areas
- NDT methods, techniques and procedures
- meaning and validity of relevant codes, standards, specifications and procedures
- test procedure for testing techniques and specimen
- validation processes
- process for approval of procedures
- process for documentation/distribution of procedures
- evaluation procedures
- process for documentation of evaluation results
- process for amending tests and distributing amendments
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply the principles of solidification and crystal structures in metals and alloys	1.1.Principles of solidification and crystal structures in metals and alloys are interpreted and applied in relation to NDT techniques.
2. Interpret equilibrium diagrams for metals and alloys	2.1.Equilibrium diagram for metal or alloy is correctly sourced 2.2.Equilibrium diagrams are correctly interpreted.
3. Interpret and apply the principles of fusion welding of metals and alloys	3.1.Principles and methods for fusion welding of metals and alloys are applied to NDT test selection. 3.2.Defects in weldments are identified and classified from NDT test results.
4. Interpret and apply the principles of the formation of castings	4.1.Principles and methods used to produce metal castings are applied to NDT test selection. 4.2.Defects in metal and alloy castings are identified and classified from NDT test results.
5. Interpret and apply the principles of steel forging	5.1.Principles and methods used to produce steel forgings are applied to NDT test selection. 5.2.Defects in steel forgings are identified and classified from NDT test results.
6. Interpret and apply the principles of mechanical testing	6.1.Principles of mechanical testing are applied to NDT test selection. 6.2.Defects in metal product are identified and classified from NDT test results

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
Look for evidence that confirms skills in: <ul style="list-style-type: none"> <li>• research</li> <li>• understanding and applying metallurgy principles</li> <li>• selecting NDT test appropriate to metal or alloy and manufacturing process</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

Look for evidence that confirms knowledge of:

- principles of solidification and crystal structures in metal:
  - classification of materials
  - structure of atoms
  - process of solidification
  - crystal structures
  - defects formed during solidification
  - modification of crystal structure
  - heat treatment processes
  - defects formed during heat treatment
- meaning of equilibrium diagrams representative of a range of metals including aluminium, iron, steel and common non-ferrous alloys:
  - alloy systems
  - solid and liquid solubility
  - basic equilibrium diagrams
  - equilibrium diagrams for common alloys
- principles of fusion welding in relation to NDT testing
- defects in fusion welding:
  - processing defects
  - grinding cracks
  - pickling cracks
  - heat treatment cracks
  - service defects
  - fatigue cracks
  - corrosion and stress corrosion cracks
- principles of the formation of castings
- defects in castings
- principles of steel forging
- defects in steel forging
- principles of mechanical testing:
  - mechanical testing
  - tensile testing
  - impact testing
  - hardness testing
  - fatigue testing
- other tests

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the resultant and equilibrant of systems of coplanar forces	1.1. Calculate the magnitude and direction of the resultant and equilibrant of coplanar force systems. 1.2. Calculate the line of action of a resultant using the principle of Moment.
2. Determine nominal sizes for a simple horizontal beam subject to a combination of uniform and point loading	2.1. Support reactions for a simply supported horizontal beam using the equations of equilibrium and including the moment effect of a couple are calculated. 2.2. The possible types of failure that need to be considered are determined. 2.3. Shear force and bending moment diagrams are drawn. 2.4. Bending stress is determined. 2.5. Calculations are completed to determine the nominal size for the beam. 2.6. Factors of safety are applied to finalise nominal size of beam.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- calculating and using trigonometry, transposition, algebraic formula
- drawing shear force and bending moment diagrams

#### Required knowledge

Look for evidence that confirms knowledge of:

- force and gravity
- the concept of force
- characteristics of force
- rectangular components of force
- graphical addition of forces

**REQUIRED SKILLS AND KNOWLEDGE**

- mathematical addition of forces
- weight as force
- moment and torque
- moment of force
- addition of moments
- equilibrium of moments
- torque
- equivalent force moment systems
- statics
- equilibrium of coplanar forces
- conditions of equilibrium
- calculation of beam reactions (simply supported, point load, uniformly distributed load (UDL), self-weight)
- simple beams
- shear force and bending moment diagrams
- bending stress
- deflection by formulae
- stress and strain
- shear stress and strain
- allowable stress
- factors of safety

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to calculate force systems within simple beam structures. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with calculating force systems within simple structures, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine stresses in simple structures and mechanical components	<p>1.1. The shear stresses in simple bolted connections are determined.</p> <p>1.2. The nominal weld size or length of weld required on simple welded connections is determined to meet load requirements.</p> <p>1.3. Torque distribution diagrams are drawn and used to calculate torsional shear stress and angle of twist on threaded bolts subjected to torques.</p>
2. Verify stress levels using appropriate reference material	<p>2.1. Appropriate reference materials are used to verify that stress loading is acceptable and in accordance with standard operational procedures.</p> <p>2.2. Verification results are reported according to standard operational procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting drawings and graphical representations
- calculating stresses using given formulas
- construction of torque distribution diagrams
- accessing relevant codes and reference material
- interpreting results against reference materials

#### Required knowledge

Look for evidence that confirms knowledge of:

- stress and strain:
  - normal stress and strain
  - modules of elasticity
  - deformation
  - Poisson's Ratio
  - shear stress and strain

**REQUIRED SKILLS AND KNOWLEDGE**

- modulus of rigidity
- yield stress, ultimate stress, proportional limit, factor of safety, allowable stress
- centrally loaded connections
- bolted connections
- shear, tensile, torque and bearing stresses
- centrally loaded welded connections
- fillet and butt welds, method of failure
- size and length of weld
- effect of hole punching
- longitudinal stress
- how to access and use relevant codes and reference material

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common engineering materials by their principal properties	1.1. The principal properties of ferrous and non-ferrous metals are identified. 1.2. The principal properties of thermosetting and thermoplastic polymers are identified. 1.3. The principal properties of ceramics and composite materials are identified. 1.4. The effects of different types of bonding in materials are identified. 1.5. The effects of mechanical and thermal processes on the principal properties of materials are identified.
2. Select materials for specific applications	2.1. The engineering requirement for the specific application is determined in consultation with others. 2.2. Material is selected based on the requirement and consideration of principal properties and further processing. 2.3. Selection is confirmed according to standard operating procedures.
3. Verify selected material as fit for purpose	3.1. Appropriate tests for the required properties are identified. 3.2. Testing of materials is arranged with appropriate persons, if necessary. 3.3. Test results are analysed and material choices are confirmed or modified as appropriate.

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
Look for evidence that confirms skills in: <ul style="list-style-type: none"> <li>• undertaking research</li> <li>• selecting/carrying out tests appropriate to the material</li> <li>• communicating</li> <li>• documenting</li> <li>• planning and sequencing operations</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE**

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

**Required knowledge**

Look for evidence that confirms knowledge of:

- classification of materials:
  - metals and non-metals
  - ferrous and non-ferrous metals
  - polymers (thermoplastics, thermosetting and elastomers)
  - ceramics
  - composite materials
- structure of materials
- physical properties of materials:
  - electrical conductivity/resistivity
  - specific gravity/density
  - thermal conductivity/expansion
  - specific heat
  - melting/boiling points
- magnetic properties
- optical properties
- mechanical properties:
  - strength - yield, tensile, compressive
  - stress/strain data
  - hardness
  - toughness (impact and slow strain)
  - elasticity
  - plasticity
  - ductility
  - malleability
  - fatigue
  - creep
- chemical properties:
  - corrosion of metals, corrosion processes, mechanisms
  - degradation of polymers
- materials testing methods - destructive testing and applications:
  - tensile
  - compressive

**REQUIRED SKILLS AND KNOWLEDGE**

- shear
- torsion
- hardness
- impact
- fatigue
- creep
- visual
- corrosion testing
- engineering materials
- engineering applications of ferrous metals:
  - cast irons
  - carbon and alloy steels
  - stainless steels
- engineering applications of non-ferrous metals:
  - aluminium and its alloys
  - copper, brass and bronze
  - nickel alloys, zinc, titanium
  - magnesium
  - refractory metals
- engineering applications of polymers:
  - thermosetting polymers
  - thermoplastic polymers
  - ceramics and glasses
- effects of mechanical and thermal processes on the properties of materials:
  - casting
  - forging, rolling and extrusion
  - cold forming
  - powder processes
  - heat treatment
  - joining - fasteners
  - soldering
  - brazing
  - welding
  - adhesives
  - finishing - coatings, metallic and non-metallic
- hazards and control measure associated with selecting common engineering materials, including housekeeping
- safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to select common engineering materials.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting common engineering materials, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Common engineering materials</b>	Includes ferrous metals, cast irons, carbon and alloy steels, stainless steels, coated steels, non-ferrous metals, aluminium and its alloys, copper and its alloys, nickel alloys, zinc, titanium, magnesium, refractory metals, polymers, thermosetting polymers, thermoplastic polymers, ceramics and glasses
<b>Appropriate tests</b>	Tests which can be undertaken by a technician within the organisation as well as those required to be undertaken by external organisations, including simple tests
<b>Required properties</b>	Properties to be tested include tensile strength, compression, shear characteristics, torsion, hardness, impact resistance, fatigue resistance, creep resistance, visual appearance and colour, magnetic properties, corrosion resistance
<b>Appropriate persons</b>	Internal technicians and/or external organisations

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare required customer requirements from information provided	Criteria for the engineering application are obtained in accordance with standard operating procedures.
2. Verify that customer requirements have been met in the engineering application criteria	Criteria for the engineering application criteria are reviewed against customer requirement and deficiencies are noted. Knowledge of engineering parameters is applied to evaluate the engineering application criteria. Use of appropriate and relevant standards and codes is verified using standard operating procedures or reference to supervisor.
3. Verify specifications in accordance with economic principles	The relationships between quality, cost of production and function are considered and specifications are verified in accordance with policy and procedures.
4. Verify specifications in accordance with ergonomic principles	The specifications are checked and verified for health effects of human/machine interaction in accordance with given policy and procedures.
5. Seek approval of recommendations	All recommendations are referred to a supervisor for approval in accordance with policy and procedures.

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
Look for evidence that confirms skills in: <ul style="list-style-type: none"> <li>determining customer requirements</li> <li>determining, accessing and using relevant Australian and ISO standards</li> </ul>
<b>Required knowledge</b>
Look for evidence that confirms knowledge of:

## **REQUIRED SKILLS AND KNOWLEDGE**

- engineering parameters:
  - safety of personnel, consequences of failure (such as human injury)
  - quality of product consideration
  - material reliability and choice
  - safety factors
  - maintenance, source of spares/service
  - energy consumption
- economic considerations:
  - costs of manufacture, effect of production quantity
  - cost of quality
  - design for manufacture
  - use of standardised components
- ergonomic considerations:
  - safety considerations
  - human capacity - reach, dexterity, strength, human comfort
  - health effects of human/machine interaction, repetitive use injuries
  - aesthetics

## Evidence Guide

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Engineering application**

For this unit, engineering application includes assisting in engineering processes and applications requiring ergonomic and economic knowledge and skills including design, engineering assessments, supervision of installation and commissioning etc.

**Engineering parameters**

Includes consideration of safety of personnel, consequences of failure (human injury etc.), economic considerations, production cost, quality of product consideration, material reliability and choice, design safety factors, maintenance, energy consumption, source of spares/service

**Standards and codes**

Includes access and use of Australian standards (AS): AS 3000, AS 1250, AS 4800, AS 1100, International Standards Organisation (ISO) standards

**Economic principles**

Includes production quantities (mass/batch), cost of manufacture, ease of manufacture, use of standardised components, human capacity (reach, dexterity, strength, repetitiveness, human comfort), aesthetics, health effects of human/machine interaction, safety

**Ergonomic principles**

Includes designing, installing or checking things for effective human use, and creating environments that are suitable for human living and work. It includes work methods, equipment,

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research equipment function and operational requirements	1.1.All relevant drawings, specifications, manuals and documentation are obtained in accordance with workplace procedures. 1.2.Appropriate personnel are consulted to determine requirements. 1.3.Information collected is interpreted and draft functional and operational requirements are prepared and verified with supervisor or design team.
2. Prepare a preliminary sketch/drawing/specification	2.1.Appropriate components, assemblies and fasteners are selected to perform the required function. 2.2.Where required, components and/or materials are selected from supplier/manufacturer catalogues. 2.3.Appropriate and relevant codes are applied to the sketch/drawing/specification in accordance with workplace procedures. 2.4.The preliminary sketch/drawing/specification is referred to a higher authority for approval in accordance with policy and procedures.
3. Issue or file completed sketch/drawing/specification list as required	3.1.Approved sketch/drawing/specification is stored and catalogued in accordance with standard operating procedures. 3.2.Approved sketch/drawing/specification is issued in accordance with standard operating procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- reading and interpreting specifications and drawings

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

Look for evidence that confirms knowledge of:

- relevant codes and standards
- basic mechanical components:
  - shafts
  - bearings
  - seals
  - fasteners, thread systems
  - splines
  - cams
- drive components:
  - electric motors
  - IC engines
  - brakes
  - clutches
  - belts and pulleys
  - chains and sprockets
  - gears
  - couplings
  - universal joints
- lifting systems:
  - lifting jacks
  - hoists
  - winch equipment
- pneumatic systems:
  - advantages and disadvantages
  - compressors
  - pneumatic components

  - electrical control
- pumps and piping system:

**REQUIRED SKILLS AND KNOWLEDGE**

- purpose of pumps and piping systems
- pumps, valves, pipes and other components
- typical piping systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

A person who demonstrates competency in this unit must be able to contribute to the design of basic mechanical systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

#### Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with contributing to the design of basic mechanical systems, or other units requiring the exercise of the skills and knowledge covered by this unit.

#### Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine system requirements	1.1. Instructions regarding system requirements are obtained, understood and clarified as necessary. 1.2. Circuit drawings using standard symbols are interpreted correctly.
2. Select components for simple hydraulic circuits	2.1. Suitable fluids are selected for given hydraulic systems from specification charts and in accordance with safety procedures involving fluids. 2.2. Linear actuators and motors are selected to suit system requirements. 2.3. Control valves are selected to suit system requirements.
3. Verify component selection	3.1. Circuits are set up and operated on laboratory benches. 3.2. Operation is analysed and outcomes are verified against system requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- interpreting simple hydraulic circuit drawings
- testing operation of simple hydraulic circuits
- assessing performance
- documenting circuit specifications and test results
- applying fluid power principles

#### Required knowledge

Look for evidence that confirms knowledge of:

- fluid power:
  - definition of the term fluid power
  - differences between pneumatic and hydraulic systems
  - advantages and disadvantages of fluid power compared with mechanical and

**REQUIRED SKILLS AND KNOWLEDGE**

- electric power systems
- safety procedures when working with fluid power equipment
- basic properties of fluids
- selection and suitability for different applications
- basic properties and units - mass, volume, density, specific volume, relative density, force and weight, pressure (absolute, atmospheric and gauge), temperature (celsius and kelvin), viscosity, surface tension
- introduction to temperature and pressure effects on the basic properties and applications
- precautions to be taken when changing type of fluid in a system
- awareness of different components including:
  - pipes (rigid and flexible)
  - valves, types and functions
  - filters and strainers for liquids
  - gauges and instruments - pressure/temperature gauges, liquid level gauges, thermometers, thermocouples, manometers, piezometers
  - pipe fittings - elbows/bends, enlargement/contractions, coupler/unions, tees
  - tanks and vessels - storage tanks, pressure vessels, header and surge tanks, weirs/dams/reservoirs
  - flow measurement instruments - venturi and orifice meters
  - pumps, motors/turbines
- linear actuators:
  - types, selection and functions
  - methods of supporting linear actuators
  - introduction to calculations related to linear actuators
  - recognition and drawing of standard symbols
  - observation and analysis of performance of linear actuators in laboratory circuits
- control valves (hydraulic and pneumatic):
  - directional controls and functions
  - check valves and functions
  - pressure controls and functions
  - flow controls and functions
  - recognition and drawing of standard symbols for control valves
  - drawing and analysis of typical circuits containing control valves
  - observation and analysis of performance of valves in basic circuits
- circuit design and analysis (single linear actuator):
  - drawing and analysis of circuit diagrams containing basic components
  - setting up and operating circuits on pneumatic and hydraulic benches in a fluid

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to set up basic hydraulic circuits and verify outcomes.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting up basic hydraulic circuits, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<b>Guidance information for</b>	

**EVIDENCE GUIDE****assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Simple hydraulic circuits</b>	Limited to linear actuators, motors, control valves
----------------------------------	---

<b>Safety procedures</b>	Selecting a suitable fire resistant fluid for a system, given its operating conditions; following required precautions when changing a system from one fluid to another
--------------------------	---

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers setting up and selecting components associated with single linear pneumatic systems.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to all engineering or manufacturing environments.</p> <p>The unit refers to simple pneumatic circuits containing single linear actuators.</p> <p>Work is carried out under supervision.</p> <p><b>Band: 0</b></p> <p><b>Unit Weight: 0</b></p>
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine system requirements	1.1. Instructions regarding system requirements are obtained, understood and clarified as necessary. 1.2. Circuit drawings using standard symbols are interpreted correctly.
2. Select components for simple pneumatic circuits	2.1. Suitable air system components are selected for given fluid power systems from specification charts and in accordance with safety procedures involving compressed air. 2.2. Linear actuators are selected to suit system requirements. 2.3. Control valves are selected to suit system requirements.
3. Verify component selection	3.1. Circuits are set up and operated on laboratory benches. 3.2. Operation is analysed and outcomes are verified against system requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- drawing pneumatic circuits
- testing operation of pneumatic circuits
- assessing performance
- calculating circuit requirements
- documenting circuit specifications and test results
- applying fluid power principles

#### Required knowledge

Look for evidence that confirms knowledge of:

- fluid power:
  - definition of the term fluid power

**REQUIRED SKILLS AND KNOWLEDGE**

- differences between pneumatic and hydraulic systems
- advantages and disadvantages of fluid power when compared to mechanical and electric power systems
- safety procedures when working with compressed air and associated equipment
- awareness of different components including:
  - air compressors
  - receivers, interlocks
  - pipes - rigid and flexible
  - valves - types and functions
  - filters - types and functions
  - gauges and instruments - pressure and temperature gauges, liquid level gauges, thermometers, thermocouples, manometers, piezometers
  - pipe fittings - elbows/bends
  - flow measurement instruments - venturi and orifice meters
  - air motors
  - linear actuators:
    - types, selection and functions
    - methods of supporting linear actuators
    - introduction to calculations related to linear actuators
    - recognition and drawing of standard symbols
    - observation and analysis of performance of linear actuators in laboratory circuits
  - control valves (hydraulic and pneumatic):
    - directional controls and functions
    - check valves and functions
    - pressure controls and functions
    - flow controls and functions
    - recognition and drawing of standard symbols for control valves
    - drawing and analysis of typical circuits containing control valves
    - observation and analysis of performance of valves in basic circuits
- circuit design and analysis (single linear actuator):
  - drawing and analysis of circuit diagrams containing basic components
  - setting up and operating circuits on pneumatic and hydraulic benches in a fluid power laboratory

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to set up basic pneumatic circuits.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting up basic pneumatic circuits or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Safety procedures

Following required precautions when using compressed air and when shutting down air compressors and receivers

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use concepts of arithmetic in the solution of engineering problems	1.1.Units of physical quantities are converted to facilitate engineering calculations. 1.2.Calculations are performed to solve problems involving rational and irrational numbers. 1.3.Scientific notation is used to represent numbers. 1.4.Calculations are checked for reasonableness using estimating and approximating techniques.
2. Solve engineering problems involving algebraic expressions with one independent variable	2.1.Algebraic expressions are manipulated using mathematical operations in their correct order.
3. Use two-dimensional geometry to solve practical problems	3.1.Angles expressed in degrees are correctly converted to radians and vice versa. 3.2.The perimeter, area, length and angles of a range of two-dimensional figures are correctly calculated. 3.3.The volume and surface area of complex figures are correctly calculated. 3.4.Points identified in terms of cartesian coordinates can be converted to polar coordinates and vice versa.
4. Use trigonometry to solve practical problems	4.1.Basic trigonometry functions are used to calculate the lengths of the sides of right-angled triangles. 4.2.Inverse trigonometry functions are used to determine angles in a right-angled triangle given the lengths of two sides. 4.3.The sine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given one side and two angles. 4.4.The cosine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given two sides and one angle.
5. Graph linear functions	5.1.Linear functions are solved graphically and equations of straight lines are determined from the slope and one point, or two points. 5.2.Two linear functions are solved simultaneously both algebraically and geometrically. 5.3.The length and mid point of a line segment are determined.
6. Solve quadratic	6.1.Quadratic equations are solved.

ELEMENT	PERFORMANCE CRITERIA
equations	6.2. Simultaneous linear and quadratic equations are solved.
7. Perform basic statistical calculations	7.1. Mean, median and mode are calculated from given data. 7.2. Standard deviation is calculated and interpreted employing graphical representation.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- using and applying mathematical formulas:
  - logical thinking
  - problem solving
  - calculating
  - applying statistics
  - using computer numerical methods
  - drawing graphs

#### Required knowledge

Look for evidence that confirms knowledge of:

- transposing and evaluating formulae
- polynomials
- straight line coordinate geometry
- introduction to indices
- introduction to trigonometry
- circular functions
- trigonometry of oblique triangles
- trigonometric identities
- introduction to functions and their graphs

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to apply mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying mathematical concepts to engineering applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

**EVIDENCE GUIDE**

**Guidance information for assessment**

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Concepts of mathematics**

Include arithmetic, algebraic expressions with one independent variable, two-dimensional geometry, trigonometry, linear functions, basic quadratic functions, basic statistical methods

**Correct order**

Refers to the correct procedure when expanding brackets, factorising algebraic expressions, factorising quadratic expressions, simplifying algebraic fractions, transposing formulae, solving simple one variable equations, finding the quotient and remainder given a linear division

**Complex figures**

May include cones, pyramids, spheres, frustums and intersections of figures singularly or in combination

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunities for workplace layout improvement	1.1. Basic analysis of workplace data is undertaken to determine sources of waste. 1.2. Future capacity requirement is obtained in accordance with policy and procedures. 1.3. Productivity improvement areas are established in accordance with organisational policy and procedures. 1.4. Appropriate productivity measures are established in conjunction with supervisors and other appropriate personnel.
2. Develop basic layout options for workplace improvement	2.1. Operation process charts, flow charts, flow process charts, and string diagrams etc. are used to develop basic layout options. 2.2. Information on ergonomics, health and safety hazards is considered in accordance with policy and procedures. 2.3. Improvements are developed in consultation with users and supervisors and in accordance with policy and procedures. 2.4. Simple economic appraisals for proposed improvements are developed in accordance with policy and procedures. 2.5. Layout options are referred to a higher authority for approval in accordance with policy and procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- communicating
- analysing
- documenting
- reviewing

**REQUIRED SKILLS AND KNOWLEDGE**

- applying principles of ergonomics
- applying productivity principles

**Required knowledge**

Look for evidence that confirms knowledge of:

- basic knowledge of workplace layout principles including at a basic level the degree to which workplace layout is affected by:
  - engineering processes and systems
  - materials flow patterns
  - types of production plant and machinery
  - materials handling methods
  - unit loads
  - types of production methods
- productivity:
  - definition and measures of productivity
  - factors affecting productivity
  - productivity and quality
  - value adding
- recording techniques:
  - flow charts
  - activity relationship charts
  - outline process charts
  - flow process charts
  - multipurpose charts
  - string diagrams
  - basic principle of ergonomics
  - the concept of waste and its application to productivity improvements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to assist in the design of basic workplace layout.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assisting in the design of basic workplace layout, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Waste</b>	<ul style="list-style-type: none"> <li>• Excess production and early production, waiting, materials queuing, not moving, people not working, transporting, double handling, poor process design, inventory, stores, buffers, lot sizes, inefficient performance of a process, reaching, bending, exertion</li> <li>• Making defective items, rework, rejects, unnecessary inspection</li> </ul>
<b>Information on ergonomics, health and safety hazards</b>	<ul style="list-style-type: none"> <li>• Standard references including NOHSC guidelines, any relevant Acts and Regulations, information contained in manufacturers' manuals, standard operating procedures</li> <li>• Workplace reports including: incident reports, commissioned studies, advice from relevant leaders/supervisors/workplace committees</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify potential to eliminate waste in the current system	1.1.Value chain members are identified. 1.2.Principles of waste elimination are applied to each step in the value chain. 1.3.Current storage/inventory in value chain is analysed for excesses. 1.4.Production lead time is analysed for all components, sub-assemblies and assemblies subject to JIT including potential for set up time reductions. 1.5.Kanban cards and flow authorisation indicators are analysed for appropriate quantity. 1.6.Workplace layout is analysed for flow and application of housekeeping principles. 1.7.Production process is analysed for excess rework and scrap.
2. Draft workable procedures to implement improvements to JIT system	2.1.Key internal stakeholders are liaised with to develop solutions to JIT issues. 2.2.Key external members of the value chain are liaised with to develop solutions to JIT issues. 2.3.Key measures for improvements are determined. 2.4.The plan is referred to a higher authority for approval in accordance with policy and procedures.
3. Implement the JIT system/improvements	3.1.The JIT system/improvements are implemented according to workplace procedures. 3.2.Key measures of JIT are monitored. 3.3.Regular liaison is conducted with key stakeholders seeking areas for improvement.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- analysing
- communicating

**REQUIRED SKILLS AND KNOWLEDGE**

- negotiating
- reading/interpreting/following information on written job instructions, specifications, standard operating procedures and other applicable reference documents
- planning and sequencing operations

**Required knowledge**

Look for evidence that confirms knowledge of:

- JIT manufacturing philosophy
- push and pull systems
- Kanbans
- work cells
- set up time reduction techniques
- group technology
- ABC analysis of inventory
- principles of TQM
- principles of TPM
- hazards and control measures associated with applying basic JIT systems to the reduction of waste
- safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to apply basic JIT systems to the reduction of waste.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic JIT systems to the reduction of waste or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Value chain</b>	Includes the entire production system, beginning with the customer, and includes the sales outlet, product design, processing and supply
<b>Waste</b>	<ul style="list-style-type: none"> <li>• Includes activities and results to be eliminated within manufacturing</li> <li>• Categories of waste include excess production and early production, waiting, materials queuing, not moving, people not working, transporting, double handling, poor process design, inventory, stores, buffers, lot sizes, inefficient performance of a process, reaching, bending, exertion, making defective items, rework, rejects, unnecessary inspection</li> </ul>
<b>JIT</b>	<ul style="list-style-type: none"> <li>• Includes a production scheduling concept that calls for any item needed at a production operation - whether raw material, finished item, or anything in between, to be produced and available precisely when needed</li> <li>• JIT systems may also be known as part of other manufacturing systems such as lean manufacturing, agile manufacturing or similar</li> </ul>
<b>Kanban</b>	<ul style="list-style-type: none"> <li>• Includes a card or sheet used to authorise production or movement of an item</li> <li>• Kanban is typically applied to batch type operations and the production is measured in units produced. In continuous manufacturing organisations, production is measured in terms of production rate</li> </ul>
<b>Flow authorisation indicator</b>	May include Kanban bin, ticket or similar, or may be some other indicator of demand pull

<b>RANGE STATEMENT</b>	
<b>Housekeeping principles</b>	<p>Principles of 5S which refer to the five Japanese words seiri, seiton, seison, seiketsu, shitsuke. These words are shorthand expressions for principles of maintaining an effective, efficient workplace:</p> <ul style="list-style-type: none"> <li>• seiri - eliminating everything not required for the work being performed</li> <li>• seiton - efficient placement and arrangement of equipment and material</li> <li>• seison - tidiness and cleanliness</li> <li>• seiketsu - ongoing, standardised, continually improving seiri, seiton, seison</li> <li>• shitsuke - discipline with leadership</li> </ul>
<b>Key measures</b>	<ul style="list-style-type: none"> <li>• May include inventory levels, lead time, delivery, productivity/ production rate, set up time, other measures of pull through the value chain, quality, rework, scrap rates</li> <li>• Pull system refers to a manufacturing planning system based on actual real-time needs from sales or equivalent - i.e. 'make what we sell'</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify existing set up procedures	1.1. Internal and external set up activities are identified and recorded. 1.2. All waiting time is identified and recorded. 1.3. All adjustment times are identified and recorded. 1.4. Any hazards and risks from all steps in the set up are identified and recorded.
2. Analyse set up procedures to determine opportunities for improvement	2.1. Opportunities for conversion of internal set up activities to external set up are considered. 2.2. Opportunities to reduce/eliminate adjustment times, waiting times and any hazards and risks are considered.
3. Prepare recommendations for operational improvement	3.1. Liaise with relevant people to validate recommendations. 3.2. Recommended improvements are recorded.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- communicating, including preparing reports
- analysing hazards
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures and other applicable reference documents

#### Required knowledge

Look for evidence that confirms knowledge of:

- principles of set up time reduction including:
  - internal and external set up activities
  - waiting time
  - adjustment times

**REQUIRED SKILLS AND KNOWLEDGE**

- set up hazards and risks
- planning and sequencing operations:
  - application of ergonomic principles and hierarchy of control in regard to hazards
  - hazards and control measures associated with developing recommendations for basic set up time improvements, including housekeeping
  - safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to develop recommendations for basic set up time improvements.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with developing recommendations for basic set up time improvements, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
<b>Guidance information for</b>	

**EVIDENCE GUIDE**

<b>assessment</b>	
-------------------	--

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Set up procedures**

May refer to:

- an exchange of dies/tools or a change between batches
- any quantum equipment/process change to produce a different product

**Internal and external set up activities**

- Internal set up activities are those that can be done only when the machine or process is not actively engaged in production
- External set up activities are those that can be done concurrently when the machine or process is actively engaged in production

**Waiting time**

Includes clean up activities, waiting for tools, waiting for materials, waiting for instructions, waiting for approvals, operator training etc.

**Unit Sector(s)**

<b>Unit sector</b>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist in mapping the supply stream for a nominated product/process	1.1.All organisations in the supply stream are identified. 1.2.All relevant steps in own organisation are identified.
2. Assist in assessing the value added at each step	2.1.Value added and contributed by each supplier organisation is identified. 2.2.Value added by each internal step is identified. 2.3.Activities which do not add value to customer benefit/features are identified. 2.4.External/internal supply chain members are liaised with to identify methods to reduce non value adding activities. 2.5.Information is collated and assessed. 2.6.Suggestions for improvements are recorded and submitted for approval.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- communicating
- planning
- assessing
- problem solving
- analysing
- prioritising
- reading and interpreting
- recording

#### Required knowledge

Look for evidence that confirms knowledge of:

- purpose of supply chain analysis

**REQUIRED SKILLS AND KNOWLEDGE**

- methods of supply chain analysis
- types of waste, non value adding activities and methods of reducing them
- process used to make own product
- processes employed by other members of the supply chain sufficient to have meaningful dialogue with them
- safe work practices

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret enterprise maintenance strategy	<p>1.1. Objectives and details of enterprise maintenance strategy are obtained in accordance with enterprise procedures.</p> <p>1.2. Major techniques and tools for monitoring are confirmed in consultation with key stakeholders and supervisor.</p>
2. Use preventative maintenance techniques and tools	<p>2.1. Techniques and tools are selected and confirmed in consultation with key stakeholders and supervisor in accordance with enterprise requirements.</p> <p>2.2. Key information and performance indicators required are identified in consultation with key stakeholders and supervisor.</p> <p>2.3. Data collection is undertaken as required.</p>
3. Interpret results	<p>3.1. Actual information/performance indicators are compared with target levels set by supervisors and/or equipment manufacturers.</p> <p>3.2. Required adjustments are developed in consultation with key stakeholders and supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- conducting root cause analysis
- identifying mean time between failures
- basic analysis of the effects of failures
- conducting condition monitoring
- analysing
- assessing
- communicating
- problem solving
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other

**REQUIRED SKILLS AND KNOWLEDGE**

applicable reference documents

- planning and sequencing operations
- checking for conformance to specifications
- checking and clarifying task-related information

**Required knowledge**

Look for evidence that confirms knowledge of:

- characteristics and strengths of different types of strategies
- characteristics and strengths of different types of techniques and tools
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them
- hazard and control measures associated with using basic preventative maintenance techniques and tools, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist in determination of a process sequence	1.1. A basic analysis of process specifications using relevant job instructions, drawings, cost objectives, and operational procedures is undertaken. 1.2. An operation or process sheet is prepared based on analysis. 1.3. The process steps are clearly documented and approved in accordance with standard operating procedures. 1.4. Flow charts, based on analysis, are produced where required. 1.5. Material and parts lists are prepared, based on analysis, for the production process in accordance with standard operating procedures. 1.6. Tooling and/or equipment requirements are determined in conjunction with supervisor and other expert personnel. 1.7. All requirements are documented in accordance with standard operating procedures.
2. Prepare and submit new/revised operation sheet/flow chart/parts list as required	2.1. New/revised operation sheet/flow chart/parts list is prepared in accordance with standard operating procedures. 2.2. New/revised operation requirements are submitted in accordance with enterprise approval procedures.
3. Issue or file approved operation sheet/flow chart/parts list as required	3.1. Approved drawings and or parts lists are stored and catalogued or issued in accordance with standard operating procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- communicating

**REQUIRED SKILLS AND KNOWLEDGE**

- prioritising
- planning
- drawing
- evaluating
- analysing
- documenting
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures charts, lists, drawings and other applicable reference documents.
- planning and sequencing operations
- checking and clarifying task-related information

**Required knowledge**

Look for evidence that confirms knowledge of:

- overview knowledge of product and process manufacturing principles including:
  - flow
  - elaborate transformation
  - value adding
  - waste
  - hazard identification and reduction
  - safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to undertake basic process planning.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with undertaking basic process planning, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use software interface	1.1. Keyboards, track ball/mouse and monitor and/or other peripherals are used to access system. 1.2. The system and the screens are navigated. 1.3. Messages are acknowledged. 1.4. Information is processed in the required format.
2. Access information	2.1. Relevant data and information is obtained from the system. 2.2. The status of items in the system is identified. 2.3. Historical data and information are accessed. 2.4. Information is interpreted and actions are prioritised.
3. Take appropriate actions	3.1. Actions are taken in response to resource planning information. 3.2. Follow-up is conducted as appropriate to ensure anticipated results have occurred. 3.3. Adjustments and variations are recorded according to procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- using basic computer functions
- analysing
- communicating
- undertaking production planning and control
- prioritising
- reading and interpreting
- recording

#### Required knowledge

Look for evidence that confirms knowledge of:

**REQUIRED SKILLS AND KNOWLEDGE**

- technical knowledge and skills needed to operate process
- hierarchy of ERP, MRP or similar systems and operation
- information available from and business activities exercised by/through the ERP, MRP system
- closed loop manufacturing system basics
- business planning, demand, resources
- Master Production Scheduling (MPS)
- Materials Requirement Planning (MRP)
- Capacity Requirement Planning (CRP)
- system inputs:
  - bills of material
  - need for accuracy
  - inventory statistics
  - planning data
  - introduction to capacity management
  - production activity control
- system outputs:
  - planned orders
  - order action
  - firm/tentative
- Just in Time (JIT)
  - techniques
  - production smoothing
  - single unit flow
  - Kanban
  - set up time reduction (SMED)
  - lead time reduction
- production control methods:
  - types
  - master schedules
  - control by exception
  - computer control
  - visual control
  - combination MRP2/Kanban system
  - shop floor - day-to-day - Kanban
- scheduling:
  - techniques
  - order release

**REQUIRED SKILLS AND KNOWLEDGE**

- policies
- centralised
- decentralised
- inventory control:
  - raw
  - work-in-process
  - finished goods
  - lean manufacture and inventory
  - inventory costs
  - procurement
  - material control techniques
  - ABC (Pareto) Analysis
  - Economic Order Quantity (EOQ)
  - Min-Max systems
  - Kanban - Just in Time
  - cycle counting

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to use ERP, MRP planning software systems in manufacturing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate project management tools and develop project plan	1.1.A working knowledge of project management tools is used to develop a plan for a simple manufacturing related project and schedule of activities to meet project outcomes. 1.2.The plan is referred to a supervisor for approval in accordance with policy and procedures.
2. Implement planned activities	2.1.Plan is implemented according to schedule. 2.2.All affected personnel are communicated with regarding project implementation. 2.3.Supply and/or allocation of required resources including materials and equipment is organised. 2.4.Project progress is regularly reported in relation to agreed milestones to provide a measure of performance throughout the life of the plan. 2.5.Progress is discussed in consultation with other staff and contractors to ensure effective outcomes.
3. Review project plan and schedule	3.1.Project outcomes, performance standards and project objectives are monitored and analysed against specifications and the results are reported in accordance with procedures. 3.2.Variations in keeping to plan are discussed with supervisors and are resolved in accordance with enterprise policy and procedures.

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
Look for evidence that confirms skills in: <ul style="list-style-type: none"> <li>• using computing skills</li> <li>• using interpersonal communication skills</li> <li>• negotiating</li> <li>• report writing</li> <li>• reading, interpreting and following information on written job instructions,</li> </ul>

## REQUIRED SKILLS AND KNOWLEDGE

specifications, standard operating procedures and other applicable reference documents

- planning and sequencing operations
- checking and clarifying task-related information

### Required knowledge

Look for evidence that confirms knowledge of:

- understanding of applicable regulations and standards
- appropriate software
- Gantt charts
- critical path method (CPM)
- bar charts
- work breakdown structures
- program evaluation and review technique (PERT)
- basic quality assurance techniques
- knowledge of availability of resources
- safe work practices and procedures
- a basic knowledge of:
  - the project life cycle and the relationship between project phases
  - planning and control procedures, resource management and risk management

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to develop and manage a plan for a simple manufacturing related project.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with developing and manage a plan for a simple manufacturing related project or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<b>Guidance information for</b>	

**EVIDENCE GUIDE**

<b>assessment</b>	
-------------------	--

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Project management tools**

May include critical path method (CPM), bar and Gantt charts, work breakdown structures, Program Evaluation and Review Technique (PERT), project management software packages, recording systems - electronic and manual

**Plan**

May include project implementation plans, quality assurance targets, milestones, any planning that relates to time, cost or quality and requires that progress is communicated to others

**Simple manufacturing related project**

Projects that are small scale, low risk, managed by one person, carried out under guidance, related to manufacturing processes and products

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements	1.1.The production processes to be used are identified from instructions and specifications provided. 1.2.Customer requirements in terms of volume, delivery time and arrangements and quality are obtained from supervisor or other appropriate sources. 1.3.Customer and process requirements are analysed to determine production requirements.
2. Develop an activity plan production requirements	2.1.Production requirements are divided into activity elements. 2.2.A network diagram is constructed. 2.3.The critical path is determined. 2.4.The latest start/earliest finish and slack time are determined for activity elements to meet requirements. 2.5.Assistance and approval from supervisor is obtained.
3. Prepare the production schedule	3.1.A production schedule is prepared which lists: <ul style="list-style-type: none"> <li>3.1.1. customer requirements</li> <li>3.1.2. time constraints</li> <li>3.1.3. production requirements</li> <li>3.1.4. machine availability and capability</li> <li>3.1.5. inventory requirements</li> <li>3.1.6. procurements</li> <li>3.1.7. supply capacities</li> <li>3.1.8. contingency analysis.</li> </ul> 3.2.A simple bill of materials required is prepared to assist in control of materials. 3.3.Schedule is depicted using a Gantt chart or similar graphical display. 3.4.Schedule allows for future changes to improve performance. 3.5.Assistance and approval from supervisor is obtained.
4. File and issue the schedule	4.1.The schedule is reviewed and tested with appropriate personnel. 4.2.The schedule is referred to appropriate personnel for implementation. 4.3.All supporting documents are provided for implementation. 4.4.The schedule is filed/issued according to workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- prioritising
- communicating
- managing time
- organising
- documenting
- using project management tools
- analysing
- calculating
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information

#### Required knowledge

Look for evidence that confirms knowledge of:

- basic knowledge of:
  - types of production
  - jobbing production
  - batch production
  - process production
  - Just in Time procedures
  - cellular manufacture
  - scheduling
  - interpreting customer requirements
  - machine capability and selection
  - Gant charts

**REQUIRED SKILLS AND KNOWLEDGE**

- contingency plans
- introduction to project planning techniques
- introduction to PERT/CPM diagrams
- introduction to critical path networks
- hazards and control measures associated with preparing a simple production schedule, including housekeeping
- safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to prepare a simple production schedule.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and to be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing a simple production schedule, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan procurement activities	1.1.The procurement requirements and outcomes are interpreted, understood and, where necessary, clarified. 1.2.Instructions for procedures to manage standard contract in accordance with legislation, policy and procedures are obtained. 1.3.Supplier is selected in accordance with workplace procedures.
2. Establish contractual arrangements	2.1.Method of requesting and receiving offers is in accordance with organisational policy and procedures. 2.2.Evaluation and selection of offer is made in consultation and in accordance with policy and procedures. 2.3.Contractual arrangements are submitted for approval and formalised in accordance with policy and procedures. 2.4.Notification of successful and unsuccessful suppliers occurs in accordance with organisational policy and procedures.
3. Follow up on contracts	3.1.Start-up or transition arrangements are confirmed and monitored in accordance with policy and procedures. 3.2.Communication strategies are implemented to ensure effective relationship with contractor/s is managed in accordance with policy and procedures. 3.3.Contractual obligations to contractors are met in accordance with policy and procedures. 3.4.Contractor performance is monitored to ensure contractual obligations are being met. 3.5.Approvals are obtained for any contract variations in accordance with organisational and contractual requirements. 3.6.Disputes/complaints procedures are followed and implemented in accordance with contractual requirements. 3.7.Records are maintained in accordance with organisational and legal requirements to provide an audit trail and for other organisational purposes.
4. Complete contractual	4.1.Goods or services received are verified as meeting

ELEMENT	PERFORMANCE CRITERIA
arrangements	<p>outcomes required.</p> <p>4.2. Contracts are finalised, cancelled or terminated in accordance with organisational and contractual requirements.</p> <p>4.3. Records are maintained in accordance with organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- planning and evaluating
- using numeracy skills for developing and using a budget and contractual timeframes
- effectively consulting and negotiating with suppliers involving oral and written exchanges
- using writing skills for procurement specification in unambiguous terms
- reading contractual agreements which may include complexity of language and style
- undertaking ongoing communication with contractor which may involve explanation or clarification of written and oral information; note-taking at meetings; active listening; checking for understanding and recording
- using numeracy skills for scheduling activities, and planning activities and timeframes

#### Required knowledge

Look for evidence that confirms knowledge of:

- applicable Commonwealth/State/Territory government legislation
- procurement policies and practices
- method of requesting and receiving offers
- procurement approval procedures
- evaluation and selection of offer
- procedures to manage the contract in accordance with legislation, policy and procedures
- procedures for receipt and payment of goods or services

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to undertake supervised procurement activities.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with undertaking supervised procurement activities, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Standard contract</b>	Covers contracts where deliverables and conditions desired from the supplier have already been determined by the company and where there are pre-existing procedures for requesting and receiving offers
<b>Method of requesting and receiving offers</b>	May include request for quotation, request for offer, direct purchases using existing supply agreements such as standing offers, common use arrangements, oral quotations, written quotations, direct purchase from retail or wholesale outlets, electronic commerce
<b>Evaluation</b>	May include price comparison, timing, suitability
<b>Contractual arrangements</b>	May include verbal and written orders, purchase order, credit card, petty cash, memoranda of understanding/ memoranda of agreement, in-house service level agreements, contracts, common use arrangements/ standing offers
<b>Records</b>	May include purchase requests and orders, invoices and payment requests, statements and petty cash vouchers, offer and contract documents, evaluation process documentation, records of authorised officers' decisions, records of supplier performance

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain tender/cost estimate requirements	1.1.Tender/cost estimate brief is obtained within established organisational framework, procedures and routines. 1.2.Key requirements are identified. 1.3.Assistance/approval from supervisor is obtained.
2. Prepare a simple cost estimate	2.1.Relevant costing data is identified and interpreted from the tender/cost estimate documents. 2.2.Organisational production costs are obtained. 2.3.Cost estimates are prepared according to established organisational framework, procedures and routines. 2.4.Assistance/approval from supervisor is obtained.
3. Verify cost estimate	3.1.Actual cost information is sourced from a completed tender/cost estimate project. 3.2.Actual costs are compared with estimated cost to identify deviations. 3.3.A report is prepared for supervisors to explain deviations according to established organisational framework, procedures and routines. 3.4.Assistance/approval from supervisor is obtained.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures and other applicable reference documents
- undertaking simple report writing
- planning and sequencing operations
- checking and clarifying task-related information

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

Look for evidence that confirms knowledge of:

- overview of the impact on cost estimates of:
  - product manufacture
  - demand vs. capability
  - make-or-buy
  - market-demand-price-competition
  - cost control
  - product costs
  - materials
  - resource consumption (water, power, etc.)
  - labour
  - standard time/usage
  - margins, profit/loss
  - using proforma estimate sheets
  - using estimates as targets
  - impact of value adding non value adding activities
- lead times associated with:
  - raw material availability
  - equipment, tool design and commissioning
  - prototypes and trial builds
  - estimating processes
  - use of contract documents - drawings, specifications
  - consideration of general conditions and any special conditions
  - application of resources costs - hourly rates (labour, plant, material, subcontractors)
  - contingency costs
  - allowance for contract variations
- hazards and control measures associated with preparing a simple cost estimate for a manufactured product, including allowing for housekeeping, safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	<p>A person who demonstrates competency in this unit must be able to prepare a simple cost estimate for a manufactured product.</p>
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply quality standards and procedures	1.1. Quality standards and procedures are interpreted and applied to individual and teamwork in accordance with standard operating procedures.
2. Monitor and report on quality	2.1. Quality of all received, in-work and finished materials and products is monitored as required in accordance with standard operating procedures. 2.2. Designated process improvement tools are used either individually or in a team to identify and solve design, development and production quality problems. 2.3. Designated analytical tools are used to evaluate principal causes of process variation in consultation with the team or other subject experts. 2.4. Further action to improve quality is recommended, where required, using standard operating procedures.
3. Assist in implementing approved improvement strategy or strategies	3.1. Key indicators and performance measures are established and agreed in consultation with the team or other subject experts. 3.2. Process, product output is measured against key indicators in consultation with the team or other subject experts. 3.3. Steps are taken to lock in improvements in accordance with standard operating procedures.

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
Look for evidence that confirms skills in: <ul style="list-style-type: none"> <li>• undertaking problem solving</li> <li>• undertaking basic arithmetic calculations</li> <li>• interpreting known data</li> <li>• using standard texts and references</li> <li>• undertaking simple report writing</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE**

- reading and interpreting engineering specifications

**Required knowledge**

Look for evidence that confirms knowledge of:

- the importance of quality
- the key principles of quality improvement programs
- the influence of variation
- use and application of Australian standards/ ISO 9000 etc.
- quality policy
- quality manuals
- quality procedures
- quality definitions
- purpose of quality audits
- simple sampling techniques and possible sources of sampling error and bias
- simple statistical tools
- problem solving techniques including:
  - process flow charts, interpretation and construction of simple case
  - cause and effect diagrams, fault trees etc.
  - root cause analysis
  - Pareto diagrams

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to participate in quality assurance techniques - basic. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with participating in quality assurance techniques - basic, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish function and purpose of selected circuit	1.1.All relevant drawings, specifications, manuals and documentation are obtained and interpreted in accordance with workplace procedures. 1.2.Circuit and component installation is observed where required to establish function and purpose. 1.3.Safety procedures to be followed are determined in conjunction with supervisors and in accordance with legislative and regulatory requirements. 1.4.Appropriate personnel are consulted with to establish job requirements.
2. Extract a circuit diagram from existing drawings and documentation	2.1.Appropriate components and assemblies are identified. 2.2.Where required, components and/or materials are identified from supplier/manufacturer catalogues. 2.3.Circuit diagram is extracted. 2.4.Drawing conventions and symbols are used in the diagram in accordance with codes and workplace procedures.
3. Analyse the circuit for electrical characteristics	3.1.Functions of the circuit and components are compared against design characteristics and operational specifications.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- calculating
- reading and interpreting specifications and drawings
- drawing to scale
- analysing
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

Look for evidence that confirms knowledge of:

- safe work practices and procedures
- hazard and control measures associated with analysing the function of a simple electrical system circuit
- dangers and safety precautions:
  - electrical hazards
  - earthing and insulation
- The function of the following components:
- resistors:
  - fixed (composition and wire wound)
  - variable (rheostats, potentiometers and trimmers)
  - non-linear (thermistors)
- capacitors:
  - fixed (ceramic, plastic and electrolytic)
  - variable
  - magnetic
  - transformers (AF, RF and power)
  - chokes
  - relays
  - contactors
  - rectifiers
  - smoothing filters
  - voltage regulators and feedback
- basic physics:
  - conductors
  - insulators
  - semiconductors
  - current flow
  - voltage
  - resistance
  - colour code
  - power rating
  - Ohm's Law
  - electrical units
  - power in electrical circuits
- protection methods:

**REQUIRED SKILLS AND KNOWLEDGE**

- fuses
- circuit breaking
- safety interlocks
- earthing - personnel safety
- a.c. circuits:
  - series and parallel a.c. circuits
  - power in a.c. circuits
- power supplies:
  - transformers
  - rectifiers
  - smoothing filters
  - voltage regulators and feedback
  - function and operation of a simple low voltage d.c. power supply
  - function and operation of the transformer in a simple low voltage d.c. power supply, including the significance of the turns ratio
  - function in a simple low voltage d.c. power supply of rectifiers including the significance of the diode characteristics, for both half and full wave types
  - operation of smoothing filters in a simple low voltage d.c. power supply
  - operation of simple zener diode type voltage regulators in a simple low voltage d.c. power supply
  - feedback

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to analyse the functions and components of a simple electrical system circuit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with analysing a simple electrical system circuit or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p><b>Method of assessment</b></p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

**EVIDENCE GUIDE**

<b>Guidance information for assessment</b>	
--	--

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Components and assemblies**

Can include:

- resistors - fixed (composition and wire wound), variable (rheostats, potentiometers and trimmers), non-linear (thermistors)
- capacitors - fixed (ceramic, plastic and electrolytic), variable, magnetic, transformers (AF, RF and power), chokes, relays, contactors, rectifiers, smoothing filters, voltage regulators and feedback

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Write and test basic programs using a hand program loader	1.1. Programs are written in accordance with programming rules. 1.2. Programs are loaded into a PLC. 1.3. Programs are verified with a supervisor. 1.4. The operation of programs is tested with assistance from a supervisor.
2. Edit and monitor basic programs using a hand program loader	2.1. The monitoring function is used to verify circuit conditions and check the current values of timers and counters. 2.2. Editing features are used to make minor program changes.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Look for evidence that confirms skills in:

- communicating
- planning
- assessing
- problem solving
- analysing
- reading and interpreting engineering specifications, standard operating procedures and other applicable reference documents
- organising information
- using numeral operations, geometry and calculations/formulae within the scope of this unit
- checking for conformance to specifications
- planning and sequencing operations
- checking and clarifying task-related information

#### Required knowledge

Look for evidence that confirms knowledge of:

**REQUIRED SKILLS AND KNOWLEDGE**

- hazards and control measures associated with preparing basic programs for PLC, including housekeeping
- safe work practices and procedures
- General knowledge of programmable controllers including:
  - basic PLC operation: definitions, terminology and block diagrams; scan cycle
  - basic programming rules; addressing for I/O; halt; run
  - programming (using a hand programmer): flowcharts/steps to use when programming; clearing of memory; ladder format
  - Boolean/mnemonic/statement list format; series circuits; parallel circuits; latching circuits; stack register operation; combination series/parallel circuits; inversion elements; timers
  - counters; monitoring of discrete I/O and timer/counter values; edit (insert and delete elements)
  - connection of discrete input and output devices to a PLC

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop product knowledge in a nominated area	1.1.Product purpose/s and use/s are identified 1.2.Key features of the product are identified. 1.3.Product features are identified. 1.4.The strengths and weaknesses of competitors' products are established from available sources.
2. Assist in identification of sales prospects	2.1.Assist in identification of potential clients from available sources in accordance with company procedures 2.2.Assist in targeting present, previous and new clients through nominated prospecting methods as required.
3. Apply product knowledge to client requirements	3.1.Assist in the development and presentation of product/system promotional information. 3.2.Provide information on the technical product/process to meet the client's requirements.
4. Assist in closing the sale	4.1.Conditions of the agreement are negotiated. 4.2.Process and completion of the sales transaction comply with organisational requirements.
5. Assist in providing after sales service	5.1.Assist in matching client's need and identifying opportunities for improvement/s. 5.2.Assist in training clients in applying technical products. 5.3.Review and report on client's feedback.

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
Look for evidence that confirms skills in: <ul style="list-style-type: none"> <li>• communicating</li> <li>• literacy skills to interpret legal requirements, product labelling and description and organisational requirements</li> <li>• sales data interpretation skills</li> <li>• information management skills, including the ability to summarise information</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE**

verbally and non-verbally

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- use of internet and other technology to locate prospect information
- interpretation of numerical data associated with prospects
- use of technology to store and manage prospect information
- ability to apply analytical skills in relating products to prospects' requirements
- negotiation skills

**Required knowledge**

Look for evidence that confirms knowledge of:

- basic product knowledge in a specific nominated area
- buying and selling processes
- organisational requirements, including policy and procedures
- key competitors and their products
- industry trends and developments
- legislative and regulatory requirements relevant to the product/s in regard to occupational health and safety and environmental issues
- range of prospecting methods, and prospect information management strategies
- prospecting as a key component of the overall sales process
- familiarity with range of buyer motives
- sales closure techniques, and situations in which it is appropriate to attempt closure
- safe work practices and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to assist in sales of technical products/systems.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

## **MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements**

### **Modification History**

Release 1 - New unit of competency

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

### **Application of the Unit**

This unit is suitable for those working within a CAD or drafting work environment and may be applied across engineering and manufacturing environments. It covers competent use of a CAD program to perform basic drawing tasks used in the development of detail drawings.

Drawings may include plans, diagrams, charts, circuits, systems or schematics.

This unit includes using computer equipment and selecting software functions in order to generate basic drawing elements.

Work is conducted under supervision.

### **Licensing/Regulatory Information**

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |                                       |     |   |
|---|---------------------------------------|-----|---|
| 1 | Confirm drawing requirements          | 1.1 | Confirm purpose, scope, and information and presentation requirements for drawing   |
|   |                                       | 1.2 | Review available information relevant to project and work requirements, and identify and address further information needs          |
|   |                                       | 1.3 | Identify computing equipment and software used in the organisation  |
|   |                                       | 1.4 | Identify work flow and procedures for work supervision  |
|   |                                       | 1.5 | Examine requirements for presentation of drawings   |
| 2 | Identify key features of CAD software | 2.1 | Describe types of CAD software used for detail drafting, their key features and suitability for producing specific drawing outcomes |
|   |                                       | 2.2 | Describe types of CAD software used for design drafting, their key features and suitability for producing specific drawing outcomes |
|   |                                       | 2.3 | Identify differences in CAD process to generate 2-D drawings and 3-D models, and reasons for each presentation                      |
|   |                                       | 2.4 | Identify differences in CAD process to generate single and multiple view drawings, and reasons for each presentation                |
|   |                                       | 2.5 | Identify CAD software used in the organisation and confirm compatibility with other software programs and peripheral equipment      |
|   |                                       | 2.6 | Identify software features for linked specifications,   |

catalogues or materials ordering

- |   |   |  |
|---|---|--|
| 3 | Access software and set up for drawing work | 3.1 Open software and navigate organisational filing and library system  |
|   |   | 3.2 Identify organisational and software templates and determine uses  |
|   |   | 3.3 Identify organisational symbols, codes and standards to be applied in drafting work and how these are accessed and applied |
|   |   | 3.4 Apply workplace procedures to retrieve and manipulate required information and navigate computing technology               |
|   |   | 3.5 Set up working environment   |
| 4 | Produce basic drawing elements              | 4.1 Use CAD functions to produce basic drawing elements  |
|   |   | 4.2 Use editing and transfer tools and methods to modify drawing elements  |
|   |   | 4.3 Apply dimensions, text and symbols to drawing elements   |
|   |   | 4.4 Import and export files into/out of working space  |
|   |   | 4.5 Generate different views and perspectives  |
|   |   | 4.6 Organise presentation of work  |
| 5 | Complete CAD operations                     | 5.1 Save and file drawing elements according to organisational procedures  |
|   |   | 5.2 Print drawing elements and evaluate presentation   |
|   |   | 5.3 Evaluate work and identify areas for improvement   |
|   |   | 5.4 Close applications, perform CAD housekeeping and maintain organisational filing system                                     |

## Required Skills and Knowledge

### Required skills

Required skills include:

- literacy skills sufficient to read instructions for drawings work
- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and determine scaling and layout issues
- navigating software to:
  - manipulate drawing entities
  - modify dimension styles
  - create and use layers
  - manipulate the drawing origin
  - define and utilise symbol libraries
  - utilise grids/grid snaps and object snaps
  - display views at multiple scales
  - add title blocks/frame to layout a drawing for printing
  - prepare advanced drawings in plane orthogonal or equivalent
  - set up prototype drawings
  - define and extract attribute data
  - create bills of materials (BOM) utilising attribute data and third-party application software

### Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- CAD program capabilities and processes

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to use CAD software to produce graphics commonly used in drafting work.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> <li>• work within typical site/teamwork structures and methods</li> <li>• apply worksite communication procedures</li> <li>• comply with organisational policies and procedures, including quality requirements</li> <li>• participate in work meetings</li> <li>• comply with quality requirements</li> <li>• use industry terminology</li> <li>• apply appropriate safety procedures</li> <li>• identify drawing work requirements and determine appropriate software functions and features</li> <li>• identify features and uses of CAD software used in detail and design drafting</li> <li>• access and use computing equipment and CAD software functions to produce drawing elements.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics</p>

	<p>and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<b>Method of assessment</b>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

## Range Statement

<b>CAD software</b>	<p>CAD software may include:</p> <ul style="list-style-type: none"> <li>• AutoCAD</li> <li>• Inventor</li> <li>• Revit</li> <li>• Solidworks</li> <li>• ProSteel</li> <li>• XSteel</li> <li>• other programs</li> </ul>
<b>Key features</b>	<p>Key features may include:</p> <ul style="list-style-type: none"> <li>• 2-D</li> <li>• 3-D modelling</li> <li>• built-in specifications</li> <li>• file import/export</li> <li>• save</li> <li>• undo</li> <li>• scale</li> </ul>
<b>Specific drawing outcomes</b>	<p>Specific drawing outcomes may include</p> <ul style="list-style-type: none"> <li>• 2-D</li> <li>• 3-D modelling</li> <li>• drawings for specific engineering applications</li> <li>• orthographic/isometric/perspectives/schematics</li> </ul>
<b>Basic drawing elements</b>	<p>Basic drawing elements may include:</p> <ul style="list-style-type: none"> <li>• points, line angles, circles, arcs, planes, figures and solids</li> <li>• squares, rectangles and triangles</li> <li>• bisected lines and dividing lines</li> <li>• polygon, ellipse, spline, dimension and hatch</li> </ul>
<b>Editing and transfer tools and methods</b>	<p>Editing and transfer tools and methods may include:</p> <ul style="list-style-type: none"> <li>• delete, fillet, chamfer, erase, trim/extend, break, undo and redo commands</li> <li>• zooming and panning</li> <li>• moving, copying, rotating and mirroring</li> <li>• polar and rectangular duplication</li> <li>• object snaps</li> <li>• dimensions</li> <li>• selecting entities</li> <li>• dividing</li> <li>• scaling</li> </ul>

	<ul style="list-style-type: none"><li>• measuring</li><li>• grouping</li></ul>

## Unit Sector(s)

Drawing, drafting and design

## Custom Content Section

Not applicable.

## **MEM30032A Produce basic engineering drawings**

### **Modification History**

Release 1 - New unit of competency

### **Unit Descriptor**

This unit of competency covers producing drawings or similar graphical representations where the critical dimensions and associated tolerances and design specifications are predetermined.

### **Application of the Unit**

This unit applies to any of the full range of engineering disciplines. All work is carried out under supervision and all specifications, dimensions and tolerances are predetermined. The unit covers application of introductory drafting skills to select and apply drawing protocols. Manual drafting or computer-aided design (CAD) drawing equipment may be used.

If CAD skills are required, MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should be selected.

Drawings are completed to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

### **Licensing/Regulatory Information**

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |                               |  |
|---|-------------------------------|--|
| 1 | Identify drawing requirements | <p>1.1 Identify information requirements for work and obtain all relevant job requirements and design specifications in accordance with workplace procedures</p> <p>1.2 Identify, interpret and analyse drawing requirements, specifications and relevant workplace information</p> <p>1.3 Interpret and apply industry terminology for drawing work</p> <p>1.4 Confirm communication practices required during drawing work</p> <p>1.5 Estimate time requirements for completing work</p> |
| 2 | Select drawing features       | <p>2.1 Set up drawing list or register</p> <p>2.2 Determine level of detail and numbers of drawings required for work</p> <p>2.3 Plan presentation and layout, and determine drawing sheets, text style and size, and scales, appropriate for drawing work</p> <p>2.4 Identify features and applications of line types and thicknesses and select for drawing work</p> <p>2.5 Establish datums and dimensions</p>  |
| 3 | Prepare and detail drawings   | <p>3.1 Prepare drawings in plane orthogonal, isometric projection or equivalent</p> <p>3.2 Detail drawings in third angle projection, including auxiliary views, sections and assemblies</p>   |

- 3.3 Draw sections through engineering components incorporating correct use of cutting plane symbols and conventions
  - 3.4 Include appropriate symbols for limits and fits, surface texture and geometric tolerances
  - 3.5 Resolve problems in consultation with a supervisor
  - 3.6 Check drawing compliance with work instructions and specifications
- 
- 4 Select physical dimensions and produce engineering parts list
    - 4.1 Where required, select components and/or materials from supplier/manufacturer catalogues using predetermined design specifications
    - 4.2 Produce an engineering parts list in accordance with workplace procedures
- 
- 5 Complete drawing documentation
    - 5.1 Obtain approval for drawings and/or parts list
    - 5.2 Store approved drawings and/or parts lists
    - 5.3 Catalogue and issue drawing and documentation in accordance with workplace procedures

## Required Skills and Knowledge

### Required skills

Required skills include:

- correctly using and maintaining equipment, including CAD
- manual drafting, filing and printing
- reading and interpreting specifications
- communicating with supervisor to confirm work requirements and outcomes
- visualising components
- preparing a drawing in plane orthogonal, isometric projection or equivalent
- determining drawing protocols required to complete drawing to industry standard
- selecting and locating text to support presentation
- establishing datums and dimensions for drawings
- drawing sections through an engineering component incorporating correct use of cutting plane symbols and conventions

### Required knowledge

Required knowledge includes:

- drafting media, including cartridge paper, tracing paper, drafting film and plain printing paper
- layout conventions
- effective use of blank space, location of notes and symbols
- sectioning
- overview of graphical techniques
- assembly drawings and explosion drawings
- schematics/line drawings, graphs and pictorials
- standard engineering drawing symbols, references and terminology
- application of surface finish symbols to drawings
- uses of different scales in industry applications
- uses and types of line weights
- uses and types of drawing sheets
- type of information provided with drawings

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<p><b>Overview of assessment</b></p>	<p>A person who demonstrates competency in this unit must be able to produce basic engineering drawings to AS 1100.101–1992 Technical drawing – General principles.</p>
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> <li>• work within typical site/teamwork structures and methods</li> <li>• apply worksite communication procedures</li> <li>• comply with organisational policies and procedures, including quality requirements</li> <li>• participate in work meetings</li> <li>• comply with quality requirements</li> <li>• use industry terminology</li> <li>• apply appropriate safety procedures</li> <li>• produce drawings in orthogonal and isometric projection to AS 1100.101–1992 Technical drawing – General principles</li> <li>• produce drawings in third angle projection, including auxiliary views, sections and assemblies</li> <li>• include all details, symbols and notation.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality,</p>

	communication, materials handling, recording and reporting associated with producing basic engineering graphics, or other units requiring the exercise of the skills and knowledge covered by this unit.
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

## Range Statement

<b>Specifications</b>	Specifications may be obtained from: <ul style="list-style-type: none"> <li>• design information</li> <li>• customer</li> <li>• ideas</li> <li>• concepts/expectations/requirements</li> <li>• sketches</li> <li>• preliminary layouts</li> </ul>
<b>Drawings</b>	Drawings may include: <ul style="list-style-type: none"> <li>• plans</li> <li>• diagrams</li> <li>• charts</li> </ul>
<b>Consultation</b>	Consultation may include <ul style="list-style-type: none"> <li>• reference to appropriate personnel, including technical supervisors, manufacturers, suppliers, contractors and customers</li> </ul>
<b>Engineering parts list</b>	Engineering parts list may include: <ul style="list-style-type: none"> <li>• part name</li> <li>• description of part</li> <li>• material specification or part number</li> <li>• quantities</li> <li>• other details, as required</li> </ul>
<b>Issued drawings</b>	Issued drawings may include: <ul style="list-style-type: none"> <li>• hard copy</li> <li>• photographic, slide or transparency form, including presentation as a single drawing and/or with other drawings</li> <li>• support documentation as a package</li> </ul>

## Unit Sector(s)

Drawing, drafting and design

## Custom Content Section

Not applicable.

# **MEM30033A Use computer-aided design (CAD) to create and display 3-D models**

## **Modification History**

Release 1 - New unit of competency

## **Unit Descriptor**

This unit of competency covers using a computer-aided design (CAD) program to produce and plot basic 3-D view drawings.

## **Application of the Unit**

This unit applies to the production of 3-D models using CAD software and associated equipment. This will include the use of region and solid modelling techniques, section views and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

All work is conducted under supervision.

## **Licensing/Regulatory Information**

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## **Pre-Requisites**

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

## **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Confirm drawing requirements	1.1	Confirm purpose, scope and information and presentation requirements for drawing
		1.2	Identify, interpret and analyse available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify computing equipment and software used in the organisation
		1.4	Identify work flow and procedures for work supervision and confirm communication requirements through project
		1.5	Examine requirements for presentation of drawings
2	Create and display 3-D views	2.1	Set up a 3-D environment on the screen to allow multiple viewing
		2.2	Create 3-D views on the screen by manipulation of drawing planes and insertion of 3-D geometric shapes
		2.3	Draw on any plane of the 3-D view
		2.4	Use editing functions to modify 3-D geometric shapes in creating 3-D views
		2.5	Produce wire line, surface and solid face displays in isometric, perspective and orthographic projections
3	Detail 3-D model	3.1	Extract the mass and surface area of a given solid model made from a nominated material
		3.2	Apply basic rendering techniques to render solid model

to a specified set of criteria

- |   |  |     |  |
|---|--|-----|--|
| 4 | Save completed drawing file in various formats | 4.1 | Save file in an appropriate format to enable retrieval and use in a CAD system |
|   |  | 4.2 | Save file in other formats to enable retrieval in other software applications  |

## Required Skills and Knowledge

### Required skills

Required skills include:

- reading and interpreting engineering specifications
- organising information
- using computer and peripherals
- using CAD program
- saving 3-D models in various file formats
- preparing drawings in plane orthogonal, isometric projection or equivalent

### Required knowledge

Required knowledge includes:

- region modelling techniques
- solid modelling techniques
- development of sectioned models
- use of cutting plane
- use of cross hatching
- use of pre-drawn library files and primitives to produce a 3-D model
- use of third level software to produce 3-D models
- how to extract mass and area properties
- how to extract area properties from region models
- application of basic rendering techniques to a 3-D model

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to use CAD to create and display 3-D models.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Specifically the candidate must be able to:</p> <ul style="list-style-type: none"> <li>• work within typical site/teamwork structures and methods</li> <li>• apply worksite communication procedures</li> <li>• comply with organisational policies and procedures, including quality requirements</li> <li>• participate in work meetings</li> <li>• comply with quality requirements</li> <li>• use industry terminology</li> <li>• apply appropriate safety procedures</li> <li>• identify modelling work requirements and determine appropriate software functions and features</li> <li>• apply CAD functions to produce a rendered 3-D model to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality,</p>

	communication, materials handling, recording and reporting associated with using CAD to create and display 3-D models or other units requiring the exercise of the skills and knowledge covered by this unit.
<b>Method of assessment</b>	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

## Range Statement

<b>Multiple viewing</b>	Multiple viewing includes: <ul style="list-style-type: none"> <li>• top views</li> <li>• front and side views</li> <li>• general 3-D view</li> </ul>
<b>3-D geometric shapes</b>	3-D geometric shapes may include: <ul style="list-style-type: none"> <li>• arcs and lines</li> <li>• spheres</li> <li>• cones</li> <li>• cylinders</li> <li>• boxes</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive and act upon instructions	1.1.Listen attentively to instructions and respond appropriately 1.2.Clarify instructions to ensure a complete understanding of the task
2. Receive and convey messages	2.1.Receive verbal and written messages and respond appropriately 2.2.Record and convey information so that messages are understood
3. Demonstrate appropriate interpersonal skills	3.1.Follow enterprise procedures which reflect equal opportunity, anti-discrimination and non-harassment legislative requirements 3.2.Demonstrate effective interpersonal skills during everyday interactions
4. Provide appropriate information	4.1.Deal with inquiries in accordance with enterprise customer service requirements 4.2.Establish details of inquiry by questioning and summarising 4.3.Access and provide relevant information that meets own authorisation and confidentiality requirements 4.4.Redirect inquiries to relevant personnel for resolution if beyond own area of responsibility 4.5.Complete all workplace documents legibly and accurately in accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- communicating effectively with people from different organisational levels and diverse cultural backgrounds
- using available communication equipment (e.g. telephone, online and hard copy directories, email, fax, intranet and internet)
- listening attentively and clarifying messages and instructions to confirm their meaning
- responding to calls and messages within accepted enterprise timelines
- locating relevant sources of information
- providing accurate information in an effective and timely manner
- understanding colloquial, scientific and technical terminology appropriate to the expected level of knowledge in the workplace
- legibly and accurately completing relevant workplace documents
- promoting cooperation through personal interactions

#### Required knowledge

Required knowledge includes:

- enterprise customer service standards and procedures
- standard operating procedures (SOPs) for routine technical tasks undertaken by candidate
- principles of effective interpersonal interactions
- equal opportunity, anti-discrimination and anti-harassment requirements
- communication protocols
- relevant health, safety and environment requirements
- products and services provided by the enterprise
- layout of the enterprise and laboratory
- role of laboratory services to the enterprise and customers
- organisational structure

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example:

Manufacturing, food processing and construction materials testing industry sectors:

- instructions to production staff when altering production mixes as a result of laboratory analysis

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

Biomedical industry sector:
-----------------------------

- |   |
|---|
| <ul style="list-style-type: none"><li>• verification and signature requirements for the receipt and release of human specimens (such as blood transfusion products, blood alcohol samples and urine for drug testing)</li></ul> |

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• communicate with people effectively by listening attentively and clarifying messages and instructions to confirm their meaning</li> <li>• provide accurate and timely information using appropriate terminology</li> <li>• complete workplace documents legibly and accurately</li> <li>• use personal interactions to promote cooperation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL933002A Contribute to the achievement of quality objectives.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• enterprise procedures and documents</li> <li>• communication equipment (for example, telephone, online and hard copy directories, email, fax, intranet and internet).</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of messages and workplace documentation prepared by the candidate</li> <li>• feedback from peers, customers and supervisors</li> <li>• observation of the candidate's performance of a wide range of technical and administrative tasks</li> <li>• questions to assess understanding of relevant workplace procedures.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

<b>EVIDENCE GUIDE</b>	
	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A technician in a petroleum refinery asked a laboratory assistant to 'go down to the cat and take a sample of the bottoms,' not realising that the assistant had only just started work with the company. The assistant looked at the technician in amazement, not knowing whether to pretend to understand, maintain self esteem, or clarify the instructions for the task. The assistant decided on the latter - to ask for clarification - and the technician repeated the instructions without using jargon. The laboratory assistant then proceeded to the catalytic cracker to take the sample as per the appropriate standard operating procedures.</p> <p><b>Biomedical</b></p> <p>The regular collection staff were not present when a flustered client came into the outpatient clinic with a domestic container full of straw coloured fluid. The receptionist knew what urine collection containers usually looked like and this was clearly not one. The receptionist called for help from the laboratory in the absence of collection staff. A technical officer was sent. The officer quickly realised that a recollection would be requested and because this would be inconvenient to the patient, tried to seek an explanation from them as to why the correct container was not used. The technical officer then explained as clearly and gently as possible the reasons for the recollection and why the substitute container could not be used. The officer confirmed that the patient was clear on the collection procedure and checked that the labels on the new container were</p>

**EVIDENCE GUIDE**

correct.

**Food**

The front office staff of a small food processing company were responsible for many tasks and could not always ensure that they were in the office to receive customers and answer phone calls. This meant that urgent inquiries were not always immediately attended to and some customers became irate if they were unfortunate enough to have made several inquiries while the office staff were absent.

The company laboratory was adjacent to the reception area and laboratory technicians would attend to customers if they happened to see them waiting. The laboratory technicians realised that they could improve company-customer relations. They organised for a buzzer to be installed that connected the reception desk to the laboratory and the reception phone to redirect to the laboratory if it was not answered within a reasonable period of time. Since they could not always attend to the specific needs of the callers, they developed a standard format for recording messages that were passed back to the reception staff. The laboratory assistants were also trained to receive personal and phone inquiries in an appropriate manner. The company found that, even though the laboratory technicians could not always satisfy the immediate demands of customers, the customer satisfaction level was greater when customers were attended to personally than when they were connected to an answering machine or not received at all.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Anti-discrimination Acts
- Australia New Zealand Food Standards (ANZFS) Code
- Australian code of good manufacturing practice for medicinal products (GMP)
- Human Rights and Equal Opportunity Commission Act 1986
- Therapeutic Goods Regulations 1009
- customer service and telephone protocols
- information directories for staff access (personnel and telephone), online databases and CD-ROMs
- workplace documents, such as:
  - SOPs and laboratory methods
  - job (batch) cards and job descriptions
  - equipment manuals and service logs
  - induction manuals
  - supplier catalogues
  - (daily) production schedules
  - laboratory schedules
  - calibration and maintenance schedules
  - guide to relevant acts and regulations (e.g. Food Standards Code)
  - material safety data sheets (MSDS)
  - non-compliance reports
  - quality manuals
  - time sheets and logbooks

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• product specifications</li> <li>• text procedures</li> <li>• shift handover reports</li> <li>• pick lists</li> <li>• hazard analysis and critical control points (HACCP) procedures</li> <li>• libraries</li> <li>• information which uses: <ul style="list-style-type: none"> <li>• common scientific and technical terminology</li> <li>• symbols, charts, signs, written text, tables, graphs and calculations</li> </ul> </li> </ul>
<b>Communication</b>	<p>Communication may include interactions with:</p> <ul style="list-style-type: none"> <li>• supervisors and managers</li> <li>• other laboratory and production personnel</li> <li>• members of the public, customers and clients</li> </ul>
<b>Items of equipment</b>	<p>Items of equipment may include:</p> <ul style="list-style-type: none"> <li>• telephone, two-way radio, PA system, fax and computer (email)</li> <li>• direct display readouts</li> <li>• online information systems</li> </ul>
<b>Interpersonal communication</b>	<p>Interpersonal communication includes:</p> <ul style="list-style-type: none"> <li>• active listening</li> <li>• including others</li> <li>• effective questioning</li> <li>• tolerating the view of others, attempting to reduce conflict and to negotiate suitable outcomes</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## MSL913002A Plan and conduct laboratory/field work

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to plan and complete tasks individually or in a team context. The tasks involve established routines and procedures using allocated resources with access to readily available guidelines and advice. Work plans may need to be modified with supervisor agreement to suit changing conditions and priorities.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to instrument operators, laboratory assistants and technical assistants working in all industry sectors.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and organise daily work activities	1.1. Clarify allocated work activities and required resources if necessary 1.2. Prioritise work activities as directed 1.3. Break down work activities into small achievable components and efficient sequences 1.4. Review work plan in response to new information, urgent requests, changed situations or instructions from appropriate personnel 1.5. Update work plan and communicate changes to appropriate personnel
2. Complete allocated work	2.1. Locate relevant workplace procedures for required tasks 2.2. Undertake tasks following prescribed and routine work related sequences 2.3. Seek assistance from relevant personnel when difficulties cannot be handled 2.4. Record completion of activities to confirm outputs in accordance with plan
3. Identify and resolve work problems	3.1. Recognise problems or opportunities for improved work performance 3.2. Apply agreed problem solving strategies to consider possible causes and solutions 3.3. Identify and access appropriate sources of help 3.4. Consider available alternatives and keep them open before agreeing on the most appropriate action
4. Work in a team environment	4.1. Cooperate with team members to negotiate and achieve agreed outcomes, timelines and priorities 4.2. Recognise personal abilities and limitations when undertaking team tasks 4.3. Confirm personal role and responsibility within the team for particular outputs 4.4. Demonstrate sensitivity to the diversity of other team members' backgrounds and beliefs
5. Update knowledge and skills as required	5.1. Recognise own strengths and weaknesses and take advantage of skill development opportunities

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- conducting work based on ethical values and principles
- clarifying tasks and recognising resource needs
- following relevant procedures consistently
- recognising potential disruptions or changed circumstances and modifying work plan in conjunction with relevant personnel
- ability to adjust to a variety of working environments (indoor, outdoor and night)
- seeking assistance from relevant personnel when difficulties arise
- achieving quality outcomes within timelines
- working effectively with team members who may have diverse work styles, cultures and perspectives
- promoting cooperation and good relations in the team
- assisting team members to organise and manage its workload

#### Required knowledge

Required knowledge includes:

- enterprise procedures:
  - customer service
  - quality
  - occupational health and safety (OHS) and environmental legislative requirements
  - technical work that the candidate routinely performs
- workplace agreements and employment conditions:
  - workers compensation
  - industrial awards enterprise agreements
  - equal employment opportunity
  - anti-discrimination and anti-harassment
- ethical background relevant to the nature of the work:
  - use of animals for research
  - genetic modification, gene therapy, cloning and stem cells
  - invitro fertilisation
  - forensic testing of populations
  - importance of commercial confidentiality
- problem solving strategies

<b>REQUIRED SKILLS AND KNOWLEDGE</b>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• follow workplace procedures to achieve quality outcomes within timelines</li> <li>• identify and resolve work problems</li> <li>• work effectively with team members and promote cooperation and good relations</li> <li>• prioritise activities and recognise potential disruptions or changed circumstances and modify the work plan in conjunction with relevant personnel.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL913001A Communicate with other people</i></li> <li>• <i>MSL943002A Participate in laboratory/field workplace safety</i></li> <li>• technical units related to the tasks undertaken.</li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• enterprise procedures, equipment and materials for relevant technical tasks.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of a flowchart prepared by the candidate to show efficient sequencing of tasks</li> <li>• observation of the candidate performing a range of technical tasks over sufficient time to demonstrate their handling of a variety of contingencies</li> <li>• review of documents detailing completed tasks, such as completed job cards, a report or suggestions for quality improvement</li> <li>• feedback from peers and team members</li> <li>• feedback from supervisors</li> <li>• written or oral questions to partly assess the candidate's ability to handle a range of contingencies and work in a team environment.</li> </ul>

**EVIDENCE GUIDE**

	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A plastic processing plant had to halt production because of a suspect raw material. The plant manager immediately requested the polymer testing laboratory to test and identify all batches of polypropylene additives and colouring agents. The laboratory team of three assistants and one technical officer allocated the workload amongst themselves to conduct the twelve different tests within a period of four hours to identify the 'out of specification' materials and report them to the production supervisor. All laboratory assistants had to reschedule their workplan, perform the required tests and assist each other to solve the production problem.</p> <p><b>Biomedical</b></p> <p>As part of a routine sequence, a technical officer is required to perform a series of tasks, including the calibration of instruments required for testing of blood samples. These tasks are to be completed within a specified timeframe to meet the output requirements of the enterprise. During the calibration of one of the instruments, the technician experiences difficulties that require expert technical assistance. The problem is referred to the appropriate person and is quickly resolved. Consequently, the officer is able to complete all</p>

**EVIDENCE GUIDE**

necessary tasks within the prescribed timeframe and the required output is maintained.

**Food processing**

Each of the technical assistants working in the laboratory of a food processing company was dedicated to performing specific analyses. As a result, they often alternated between periods of inactivity and excessive workload (the latter case had the potential to compromise their health and safety and the accuracy of their food analyses). One of the contributing factors to the periods of intense activity was the need to quickly prepare standard solutions and reagents. The team discussed this problem and agreed that while it was not appropriate for each assistant to become competent to perform every analytical procedure, it was feasible for each person to be able to prepare solutions and reagents used by others. The team developed a central register in which impending shortages of these materials was noted. Each assistant referred to this register when no other work was due and prepared the materials on a 'first in, first out' basis unless a task was given a priority rating. The team found that this strategy more evenly distributed the workload over their shift, improved safety in the laboratory and reduced the risk of error.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards such as: <ul style="list-style-type: none"> <li>• AS/NZS 2243 Set:2006 Safety in laboratories set</li> <li>• AS/NZS ISO 14000 Set:2005 Environmental management standards set</li> <li>• AS/NZS ISO 9000 Set:2008 Quality management systems set</li> </ul> </li> <li>• OHS national standards and codes of practice</li> </ul>
<b>Ethical and professional work performance</b>	<p>Ethical and professional work performance includes:</p> <ul style="list-style-type: none"> <li>• following enterprise policy and procedures, regulations and legislation</li> <li>• behaving honestly and openly</li> <li>• respecting others and treating them with courtesy and impartiality</li> <li>• working diligently and responsibly</li> <li>• ensuring confidentiality of information, including client identification and test results</li> <li>• ensuring proprietary rights, intellectual property and copyright are protected</li> <li>• clarifying personal values and ethics and analysing how they impinge on actions in the workplace</li> </ul>
<b>Workplace activities</b>	<p>Workplace activities may include:</p> <ul style="list-style-type: none"> <li>• setup and pre-use checks of laboratory equipment</li> <li>• calibration status checks</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• sampling and testing following standard procedures</li> <li>• maintenance and cleaning tasks</li> </ul>
<b>Workplace procedures</b>	<p>Workplace procedures may include:</p> <ul style="list-style-type: none"> <li>• standard operating procedures (SOPs)</li> <li>• job cards, batch cards and production schedules</li> <li>• job descriptions</li> <li>• methods, recipes, procedures and protocols</li> </ul>
<b>Problem solving</b>	<p>Problem solving may include:</p> <ul style="list-style-type: none"> <li>• accessing relevant documentation</li> <li>• identifying inputs and outputs</li> <li>• sequencing a process</li> <li>• identifying and rectifying a problem step</li> <li>• obtaining timely help</li> <li>• implementing preventative strategies wherever possible</li> </ul>
<b>Teams</b>	<p>Teams may:</p> <ul style="list-style-type: none"> <li>• be ongoing with responsibility for particular services or functions</li> <li>• be project based</li> <li>• have a mixture of full and part-time employees and contractors, laboratory, construction and production personnel</li> <li>• be separated by distance and work at sites outside laboratory facilities</li> </ul>
<b>Team operation</b>	<p>Team operation may occur within:</p> <ul style="list-style-type: none"> <li>• small, medium and large contexts</li> <li>• internal and external environments</li> <li>• enterprise guidelines covering access and equity principles and practices, licensing requirements, industrial awards, enterprise bargaining agreements and codes of practice</li> <li>• agreed responsibility and accountability requirements</li> <li>• appropriate goals, objectives</li> <li>• given resource parameters</li> </ul>
<b>Team tasks</b>	<p>Team tasks may vary according to:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• the size of enterprise</li> <li>• the scope of the laboratory</li> <li>• their level of responsibility</li> </ul>
<b>Strategies to maintain work flow</b>	<p>Strategies to maintain work flow may include:</p> <ul style="list-style-type: none"> <li>• communicating critical events on shift</li> <li>• recognising shortages in reagents and problems with equipment</li> <li>• communicating quality breakdowns</li> <li>• recognising urgent and abnormal results to be processed</li> <li>• communicating and behaving in a courteous manner</li> <li>• being punctual</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## MSL922001A Record and present data

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to record and store data, perform simple calculations of scientific quantities and present information in tables and graphs. The unit of competency requires personnel to solve predictable problems using clear information or known solutions. Where alternatives exist, they are limited or apparent.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit of competency is applicable to production operators, field assistants and laboratory assistants working in all industry sectors.  Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Record and check data	1.1. Enter data into laboratory information system or record sheets as directed 1.2. Check data to identify transcription errors or atypical entries 1.3. Rectify errors in data using enterprise procedures
2. Calculate simple scientific quantities	2.1. Calculate simple scientific quantities using given formulae and data 2.2. Ensure calculated quantities are consistent with estimations and expectations 2.3. Report all calculated quantities with appropriate precision and units
3. Present data in tables, charts and graphs	3.1. Present data accurately in tables and charts using given formats and scales 3.2. Recognise and report obvious features and trends in data
4. Store and retrieve data	4.1. File and store data in accordance with enterprise procedures 4.2. Maintain enterprise confidentiality standards

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- performing simple calculations
- preparing and interpreting straightforward tables, graphs and charts
- applying calculations in the workplace
- coding, recording and checking data accurately
- presenting accurate results in the required format
- recognising obvious trends in data
- maintaining the confidentiality of data in accordance with workplace and regulatory requirements

#### Required knowledge

Required knowledge includes:

- concepts of metrology
- the international system of units (SI)
- relevant scientific and technical terminology
- procedures for coding, entering, storing, retrieving and communicating data
- procedures for verifying data and rectifying mistakes
- conversion of units involving multiples and submultiples
- significant figures, estimation, approximation, rounding off
- substitution of data in formulae
- calculations involving fractions, decimals, proportions and percentages
- procedures for maintaining and filing records, security of data

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• accurately code, check and record data in the required format</li> <li>• calculate simple scientific quantities</li> <li>• recognise obvious trends in data</li> <li>• maintain the confidentiality of data.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit may be assessed with technical units, such as:</p> <ul style="list-style-type: none"> <li>• <i>MSL973001A Perform basic tests</i></li> <li>• <i>MSL973002A Prepare working solutions</i></li> <li>• <i>MSL973007A Perform microscopic examination.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• data sets and records</li> <li>• computer and relevant software or laboratory information system</li> <li>• relevant enterprise procedures.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of data worksheets, calculations, graphs and tables prepared by the candidate</li> <li>• review of records transcribed, maintained or stored by the candidate</li> <li>• feedback from supervisors and peers</li> <li>• observation of the candidate as they record data and perform calculations</li> <li>• questions to assess understanding of relevant procedures and trends in data.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made</p>

**EVIDENCE GUIDE**

	<p>to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Construction materials</b></p> <p>A laboratory assistant is given 20 soil samples and asked to test their moisture content by weighing each sample, placing them in an oven for 24 hours and then reweighing them. The assistant performs the tests in accordance with the standard method and then calculates the % water content by dividing the weight loss by the wet weight and multiplying by 100. He/she checks the results. After entering them into the laboratory information management system (LIMS), they notice that they are consistently less than the previous results recorded for soils at the same site. The assistant reports the discrepancy to the supervisor who checks whether the oven was operated at the required temperature. The supervisor then discovers that the assistant has calculated the moisture content by dividing the weight loss by the wet weight instead of the dry weight. The assistant recalculates the moisture content for the 20 samples and notes that the results are now consistent with previous results.</p> <p><b>Manufacturing</b></p> <p>On Friday, a laboratory assistant performs the routine set of temperature, pressure and humidity measurements at 10 sites in a refinery. They enter the data on a pre-prepared data sheet that also contains the data recorded for the previous days of that week. The assistant checks the data for any significant variations to that recorded previously. They notice that for site #5, the temperature reading is 250(C which is 100(C below the expected value. The assistant repeats the measurement</p>

**EVIDENCE GUIDE**

and gets the same result. After returning to the laboratory, the assistant enters the data into the LIMS and reports the odd result to their supervisor. The supervisor contacts the site manager and finds out that the pipeline at site #5 has been isolated as part of unscheduled maintenance in that part of the site.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards such as:
  - AS ISO 1000-1998 The international system of units (SI) and its application
- national measurement regulations and guidelines

#### Concepts of metrology

Concepts of metrology may include:

- that all measurements are estimates
- measurements belong to a population of measurements of the measured parameters
- repeatability
- precision
- accuracy
- significant figures
- sources of error
- uncertainty
- traceability

#### Data

Data may be recorded on:

- worksheets
- spreadsheets or databases linked to information management systems

Data may include results of:

- observations
- tests and measurements
- surveys

Data may be presented in the form of:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• graphs</li> <li>• tables</li> <li>• control charts</li> <li>• semi-quantitative observations expressed on a scale (for example, 1 to 4 or + to +++)</li> </ul>
<b>Simple calculations</b>	<p>Simple calculations may be performed with or without a calculator or computer software and may include scientific quantities such as:</p> <ul style="list-style-type: none"> <li>• decimals, fractions, ratios, proportions and percentages</li> <li>• perimeters, areas, volumes and angles</li> <li>• concentration</li> <li>• unit conversion, multiples and submultiples</li> <li>• use of significant figures, rounding off, estimation and approximation</li> <li>• substitution of data in formulae</li> <li>• conversions between SI units</li> <li>• areas (m<sup>2</sup>) and volumes (mL, L, m<sup>3</sup>) of regular shapes (e.g. packaging and moulds)</li> <li>• average mass, mass %, density, specific gravity, moisture, relative and absolute humidity</li> <li>• ratios, such as mass to mass, mass to volume and volume to volume percentages</li> <li>• industry specific ratios, such as g/cm<sup>2</sup>, kg/m<sup>2</sup></li> <li>• concentration (for example, g/100mL, mg/L, mg/(L, dilution mL/L)</li> <li>• statistical values such as mean, median, mode and standard deviation</li> <li>• average count, colonies per swab surface and cell counts (live and dead/total)</li> <li>• process variables, such as pressure, velocity and flow rates</li> <li>• % content of moisture, ash, fat, protein, alcohol, sulphur dioxide and trace metals, such as calcium or zinc</li> <li>• food properties, such as % concentration (dry), friability, bitterness, brix, free amino nitrogen, diastatic power, calorific content and yeast viability</li> </ul>
<b>Obvious features and trends in</b>	Obvious features and trends in data could include:

<b>RANGE STATEMENT</b>	
<b>data</b>	<ul style="list-style-type: none"> <li>• maximum and minimum values</li> <li>• spread of data</li> <li>• increasing/decreasing data, rate of change</li> <li>• outliers, data beyond control limits or normal range</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clean work preparation areas	1.1. Clean preparation areas using appropriate cleaning agents and equipment according to enterprise procedures 1.2. Remove spillages, if they occur, using appropriate agents, personal protective equipment and enterprise procedures 1.3. Collect and segregate wastes in accordance with enterprise procedures, relevant codes and regulations
2. Clean and store equipment	2.1. Collect used equipment, inspect for faults and, where necessary, remove from service 2.2. Use appropriate agents, apparatus and techniques to clean equipment 2.3. Store clean equipment in the designated locations and manner
3. Monitor stocks of materials and equipment	3.1. Perform stock checks and maintain records of usage as directed 3.2. Store labelled stocks for safe and efficient retrieval 3.3. Inform appropriate personnel of impending stock shortages to maintain continuity of supply
4. Maintain a safe work environment	4.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other personnel 4.2. Report potential hazards and/or maintenance issues in own work area to designated personnel 4.3. Minimise the generation of wastes and environmental impacts 4.4. Dispose of wastes in accordance with enterprise procedures, relevant codes and regulations

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- safely cleaning work preparation areas and equipment using appropriate cleaning agents, equipment and techniques
- safely removing spillages and disposing of wastes
- minimising the exposure to hazards of self, others and the laboratory
- safely storing equipment and materials using enterprise procedures, relevant codes and guidelines
- monitoring and reporting stock levels and the condition of laboratory materials and equipment
- keeping accurate, up-to-date records
- reporting potential hazards and maintenance issues using enterprise procedures

#### Required knowledge

Required knowledge includes:

- enterprise procedures for the cleaning of work preparation areas, materials and equipment
- storage requirements for specific materials and equipment
- enterprise procedures for minimisation and disposal of waste
- enterprise procedures for monitoring of laboratory stocks
- information contained in material safety data sheets (MSDS) for materials handled regularly during the performance of maintenance tasks
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• follow enterprise procedures, relevant codes and guidelines when maintaining the laboratory/field workplace</li> <li>• work safely and minimise exposure of hazards to self, others and the laboratory</li> <li>• keep accurate up-to-date records and report potential hazards and maintenance issues.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL943002A Participate in laboratory/field workplace safety.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• access to work preparation areas, stocks, materials and equipment</li> <li>• cleaning, decontamination and/or disinfection agents and equipment</li> <li>• personal protective equipment</li> <li>• stock order forms, labels and records/forms.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• observation of the candidate's techniques for cleaning and/or removal of spillages and waste disposal</li> <li>• review of stock records completed by the candidate</li> <li>• feedback from supervisors and peers</li> <li>• questioning to assess underpinning knowledge of regulations and procedures where direct observation is difficult (such as dealing with hazards) and choice of materials and equipment.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

**EVIDENCE GUIDE**

	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>On receipt of a bulk container of cleaning or sanitising agent, a laboratory assistant always attached to the container a description of its method of use. The assistant also attached a list of the surfaces, apparatus, utensils and machines that could be safely treated with that chemical agent as outlined in the company's quality manual. This practice reduced the likelihood of misuse of the chemical, wastage, damage to equipment and inadequate cleaning and sanitation.</p> <p><b>Biomedical and environmental</b></p> <p>Laboratory assistants and technical officers routinely examine fluids for micro-organisms using a microscope. They examine fluids, such as urine, seawater, chlorinated pool water, water from catchment areas and bottled water. To maintain microscopes in working order, they thoroughly clean the stage, oculars and each objective after use and sometimes between samples. The 100X objective requires particular care since this is the oil immersion objective. The oil is slightly acidic and will slowly corrode the objective if it is not cleaned thoroughly and regularly. After using the 100X objective they also take care not to drag the other objectives through the oil.</p> <p><b>Food processing</b></p> <p>A laboratory assistant regularly uses standard pH</p>

**EVIDENCE GUIDE**

solutions to calibrate the laboratory's pH meters. The assistant is aware from the label that the shelf life of these solutions after opening is two months and records the opening and disposal dates on the container. The assistant is also aware that the shelf life of unopened buffer solutions is twelve months from the date of manufacture and monitors this by noting the production date on the bottle. Requests for stock replacement take into account the normal rate of use of these buffer solutions so that unopened bottles have not reached their expiry date before use.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards such as:
  - AS 1678 Emergency procedure guide - Transport
  - AS 1940-2004 Storage and handling of flammable and combustible liquids
  - AS 2252 Biological safety cabinets
  - AS 3780-2008 The storage and handling of corrosive substances
  - AS 4332-2004 The storage and handling of gases in cylinders
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 1269 Set:2005 Occupational noise management set
- AS/NZS 1337 Eye protection
- AS/NZS 2161 Set:2008 Occupational protective gloves set
- AS/NZS 2210:1994 Occupational protective footwear
- AS/NZS 2243 Set:2006 Safety in laboratories set
  - AS/NZS 2243.8:2006 Safety in laboratories - Fume cupboards
  - AS/NZS 2865 Set:2005 Safe working in a confined space set
  - AS/NZS 2982.1:1997 Laboratory design and construction - General requirements

**RANGE STATEMENT**

- AS/NZS 4187:2003 Cleaning, disinfecting and sterilising reusable medical and surgical instruments and equipment, and maintenance of associated environments in health care facilities
- AS/NZS 4452:1997 The storage and handling of toxic substances
- AS/NZS 4501 Set:2008 Occupational clothing set
- AS/NZS ISO 14000 Set:2005 Environmental management standards set
- animal welfare legislation and codes of practice
- Australian code of good manufacturing practice for medicinal products (GMP)
- Australian Dangerous Goods Code
- Australian Quarantine and Inspection Service (AQIS) Export Control (Orders) Regulations 1982
- Australian Quarantine and Inspection Service (AQIS) Import Guidelines
- Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice
- enterprise or standard operating procedures (SOPs)
- equipment manuals and warranties, supplier catalogues and handbooks
- gene technology regulations
- guide to physical containment levels and facility types
- HB 9-1994 Occupational personal protection

**RANGE STATEMENT****Equipment, material procedures and facilities**

Equipment, material procedures and facilities may include:

- animal cages
- autoclaves
- balances
- blenders, centrifuges and separating equipment
- brushes
- cell counters and staining machines
- colorimeters/spectrometers and polarimeters
- compaction rammers and soil classification equipment
- conductivity meters and pH meters
- dishwashers, refrigerators, freezers, ovens, microwave ovens, incubators and water baths
- disintegration apparatus, thermometers and incubators
- fume hoods, biohazard containers and biological safety cabinets
- gas cylinders
- glassware, plastic ware; glass, plastic and quartz cuvettes
- hotplates, mantles, burners and muffle furnaces
- instrument chart recorders, penetrometers, force measuring equipment and tensiometers
- light and fluorescence microscopes
- melting point apparatus, viscometers and hardness testing equipment
- microtomes and tissue processors
- mixing and separating equipment such as centrifuges, riffers and splitters and mixers
- noise meters and blasting meters
- optical microscopes
- pipettes, burettes and volumetric glassware
- shovels, scoops, plates, rods, cylinder moulds and buckets
- steel ruler/tapes and spirit levels
- thermometers, thermohygrographs, instrument chart recorders, hydrometers, pH meters and ion-selective electrodes
- ultrasonic cleaners
- vehicles

<b>RANGE STATEMENT</b>	
<b>Typical materials</b>	<p>Typical materials may include:</p> <ul style="list-style-type: none"> <li>• consumable items, such as syringes, pipette tips, weigh boats</li> <li>• disposable clothing and personal protective equipment</li> <li>• distilled water, reagents, chemicals, disinfectants, detergents, agar media and plates</li> <li>• equipment spares, such as fuses, bulbs and batteries</li> <li>• oils/lubricants, fuels, industrial gases and cryogenics, such as dry ice and liquid nitrogen</li> <li>• paper and stationery</li> <li>• reference samples and standards</li> </ul>
<b>Maintenance</b>	<p>Maintenance may include:</p> <ul style="list-style-type: none"> <li>• checking serviceability before storage</li> <li>• cleaning</li> <li>• prevention of contamination</li> <li>• storing</li> </ul>
<b>Cleaning requirements</b>	<p>Cleaning requirements may include:</p> <ul style="list-style-type: none"> <li>• decontamination and/or disinfection</li> <li>• hygiene monitoring</li> <li>• minimising environmental impacts</li> <li>• operation of automatic cleaning apparatus, such as pipette washer, ultrasonic cleaners and dishwashers</li> <li>• sterilisation and disposal of wastes using boiling, high pressure air or steam, microwaves, chemicals, gas, filtration, ultraviolet radiation and autoclaving</li> <li>• use of specialised techniques, such as chromic acid baths and soaking in hypochlorite</li> </ul>
<b>Preparation areas</b>	<p>Preparation areas may include:</p> <ul style="list-style-type: none"> <li>• benches</li> <li>• fume cupboards</li> <li>• sheds</li> <li>• sinks</li> </ul>
<b>Agents for cleaning</b>	<p>Agents for cleaning may include:</p> <ul style="list-style-type: none"> <li>• cleaning solutions</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• decontaminants</li> <li>• organic solvents</li> </ul>
<b>Spillages</b>	<p>Spillages may include:</p> <ul style="list-style-type: none"> <li>• chemicals</li> <li>• radioactive materials</li> <li>• biologically active materials</li> </ul>
<b>Wastes</b>	<p>Wastes may include:</p> <ul style="list-style-type: none"> <li>• broken glass</li> <li>• batteries</li> <li>• disposable personal protective equipment</li> <li>• excess test samples</li> <li>• micro-organisms</li> <li>• plastic and metals</li> <li>• sharps</li> <li>• solvents</li> <li>• spent reagents</li> <li>• spent samples and test pieces</li> <li>• used containers, boxes, bags and palettes</li> </ul>
<b>Stock records</b>	<p>Stock records may include:</p> <ul style="list-style-type: none"> <li>• calibration and maintenance history</li> <li>• data sheets</li> <li>• handbooks, warranty documents, catalogues, manuals and MSDS</li> <li>• records of usage, loans and breakages</li> </ul>
<b>Communication</b>	<p>Communication could involve other people, such as:</p> <ul style="list-style-type: none"> <li>• laboratory, production, administration and cleaning staff</li> <li>• internal/external contractors</li> <li>• emergency personnel</li> </ul>
<b>Maintenance issues</b>	<p>Maintenance issues could involve:</p> <ul style="list-style-type: none"> <li>• checking materials and equipment are fit for purpose</li> <li>• equipment malfunction</li> <li>• hygiene issues</li> <li>• potential hazards, incidents and emergencies</li> <li>• recycling and waste disposal</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• spillages, leakages, breakages and contamination</li> <li>• stock requirements and shortages</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• aerosols from broken centrifuge tubes and pipetting</li> <li>• chemicals, such as acids, heavy metals, pesticides and hydrocarbons</li> <li>• crushing, entanglement and cuts associated with moving machinery or falling objects</li> <li>• cryogenics, such as dry ice and liquid nitrogen</li> <li>• electric shock</li> <li>• fluids under pressure, such as steam and industrial gas cylinders</li> <li>• manual handling, working at heights and working in confined spaces</li> <li>• microbiological organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids</li> <li>• occupational overuse syndrome, slips, trips and falls</li> <li>• pedestrian and vehicular traffic</li> <li>• sharps, broken glassware and hand tools</li> <li>• solar radiation, dust and noise</li> <li>• sources of ignition, flammable liquids and gases</li> </ul>
<b>Established safe work practices</b>	<p>Established safe work practices may include:</p> <ul style="list-style-type: none"> <li>• applying containment procedures through the use of appropriate equipment, such as biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets and Class PCII, PCIII, and PCIV physical containment facilities</li> <li>• ensuring access to service shut-off points</li> <li>• following established manual handling procedures for tasks involving manual handling</li> <li>• handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions</li> <li>• identifying and reporting operating problems or equipment malfunctions</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• labelling of samples, reagents, aliquoted samples and hazardous materials</li> <li>• recognising and observing hazard warnings and safety signs</li> <li>• reporting to appropriate personnel of abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates</li> <li>• use of MSDS</li> <li>• use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gown, body suits, respirators and safety boots</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply quality control procedures	1.1. Record data for quality control purposes 1.2. Recognise and report non-conformances in keeping with job role and quality procedures
2. Contribute to quality improvements	2.1. Review own work practices for opportunities to continuously improve performance 2.2. Identify and report opportunities for improvements in procedures, processes and equipment in work area
3. Maintain commitment to enterprise quality standards in own work	3.1. Maintain an objective of 'right first time' 3.2. Conduct work in accordance with sustainable energy work practices 3.3. Minimise waste and rework in accordance with enterprise guidelines 3.4. Demonstrate 'job ownership' for whole tasks through a commitment to finish and follow-up 3.5. Ensure that personal actions conform with the code of ethics relevant to the workplace
4. Assist in maintaining customer relationships	4.1. Demonstrate an understanding of the business goals, products and services of the enterprise when dealing with customers in relation to own function 4.2. Communicate appropriately with customers in keeping with knowledge and authority limitations and quality requirements
5. Update knowledge and skills as required	5.1. Recognise own strengths and limitations and take advantage of opportunities for skill development

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- applying the required quality control procedures
- providing quality products and services to customers consistent with the job role
- resolving simple customer requirements
- minimising waste and rework
- contributing to improvements in productivity and quality through teamwork and commitment to personal work standards

#### Required knowledge

Required knowledge includes:

- concepts of metrology
- continuous improvement and waste minimisation principles
- enterprise procedures associated with the candidate's regular technical duties
- layout of the enterprise, divisions and laboratory
- lines of communication
- organisational structure of the enterprise
- products and services provided by the enterprise
- quality requirements of the candidate's job role and functions
- recording, reporting and document control requirements
- relevant health, safety and environment requirements
- role of internal and external audits
- role of laboratory services to the enterprise and customers
- scheduling of tests and procedures to meet customer requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• apply the required quality control principles and procedures to their work</li> <li>• contribute to improvements in productivity and quality</li> <li>• maintain their personal commitment to quality objectives.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL913001A Communicate with other people</i></li> <li>• technical units of competency dealing with sampling and testing.</li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• enterprise quality manual and procedures</li> <li>• standard operating procedures (SOPs).</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of quality control data collected by the candidate</li> <li>• review of quality improvements suggested by the candidate</li> <li>• feedback from supervisors and peers</li> <li>• oral or written questions about quality concepts and enterprise procedures</li> <li>• flow charts or diagrams prepared by the candidate to describe work flows and workplace layout (alternatively, the candidate could explain existing charts or diagrams).</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p>

**EVIDENCE GUIDE**

	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>Laboratory assistants must have a good working knowledge of quality control procedures and how they contribute to the achievement of enterprise quality objectives. An assistant was measuring the moisture content of coke by a standard method. The SOP for this test stated that the limits for moisture should be between 2% and 5% by weight. The assistant obtained a result of 5.8%. The assistant had followed the SOP correctly and performed the determination in triplicate and had confidence in the precision of the result. The assistant recognised and reported the non-conformance to the laboratory supervisor. The production manager took corrective action and modified the drying process to reduce the moisture content and provide a product which met the customer's requirements.</p> <p><b>Biomedical</b></p> <p>A laboratory assistant working in the pathology department of a rural hospital was responsible for serum lithium estimations by flame photometry. When asked by the office staff when the lithium results would be ready, the assistant replied that the testing schedule of the laboratory meant that the test would not be done until the following week and asked why the office staff needed to know. The answer was that an outpatient clinic was being held, and the results were needed for a consultation. Although samples were often taken a week before the clinic was to be held, the assistant realised that results were not always ready for the clinic because of</p>

**EVIDENCE GUIDE**

the testing schedule of the laboratory. The assistant reported the situation to the laboratory supervisor. The supervisor rescheduled lithium testing to match the clinic times, so that results would always be ready for the clinic consultation. This pleased the clinic staff, the patient did not waste a visit, the office staff no longer got irate phone calls and the quality of service was improved overall.

**Food processing**

A fruit processing company produced many tonnes of solid vegetable waste annually. This was dumped as landfill at considerable cost and the local council was concerned that the method of disposal was not sustainable. The laboratory assistants at the company were included in a quality improvement team to investigate the problem. The team concentrated on alternative production methods to minimise waste yields and additional production methods that would enable the waste to be profitably utilised. They identified four potential uses of the waste: a source of pectin, alcohol and sugar and conversion of raw fruit peel to glazed peel.

A cost-benefit analysis was performed in consultation with supporting industries, including a local winery to assess the merits of these value adding activities. The outcome was that the amount of waste produced by the company was significantly reduced with much of the waste channelled into marketable products with full cost recovery. After some initial doubts, the laboratory personnel realised that they were able to make useful contributions to the project. As a result, they became part of an ongoing investigation of waste minimisation and value adding practices.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
- Australia New Zealand Food Standards (ANZFS) Code
- Australian code of good manufacturing practice for medicinal products (GMP)
- customer specific requirements/standards
- National Association of Testing Authorities (NATA) Accreditation programs requirements
- principles of good laboratory practice (GLP)
- Therapeutic Goods Regulations 1009

#### Quality control procedures

Quality control procedures may include:

- standards imposed by regulatory and licensing bodies
- enterprise quality procedures
- working to a customer brief and associated quality procedures
- checklists to monitor job progress against agreed time, costs and quality standards
- the use of hold points to evaluate conformance
- the use of inspection and test plans to check compliance

#### Concepts of metrology

Concepts of metrology may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• that all measurements are estimates</li> <li>• measurements belong to a population of measurements of the measured parameters</li> <li>• repeatability</li> <li>• precision</li> <li>• accuracy</li> <li>• significant figures</li> <li>• sources of error</li> <li>• uncertainty</li> <li>• traceability</li> </ul>
<b>Sustainable energy principles and work practices</b>	<p>Sustainable energy principles and work practices may include:</p> <ul style="list-style-type: none"> <li>• examining work practices that use excessive electricity</li> <li>• switching off equipment when not in use</li> <li>• regularly cleaning filters</li> <li>• insulating rooms and buildings to reduce energy use</li> <li>• recycling and reusing materials wherever practicable</li> <li>• minimising process waste</li> </ul>
<b>Reporting</b>	<p>Reporting may involve:</p> <ul style="list-style-type: none"> <li>• verbal responses</li> <li>• data entry into laboratory information management system (LIMS) or enterprise databases</li> <li>• brief written reports using enterprise proformas</li> </ul>
<b>Quality improvement opportunities</b>	<p>Quality improvement opportunities that relate to the work of laboratory assistants could include:</p> <ul style="list-style-type: none"> <li>• improved methods for sampling, testing and recording data</li> <li>• improved hygiene and sanitation procedures</li> <li>• minimisation of waste and rework</li> <li>• improved laboratory layout and work flow</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through</li> </ul>

**RANGE STATEMENT**

	<p>state/territory or federal legislation - these requirements must not be compromised at any time</p> <ul style="list-style-type: none"> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## MSL933003A Apply critical control point requirements

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to monitor critical, quality and regulatory control points related to a person's work responsibilities. This unit of competency also covers support for ongoing improvement of the enterprise hazard analysis and critical control points (HACCP) plan.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to production operators and laboratory assistants in the food processing and manufacturing sectors. Control points refer to those key points in a work process that must be monitored and controlled.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide routine input to the HACCP plan	1.1. Obtain information about control points in the manufacturing process 1.2. Locate control points for own work area responsibilities 1.3. Perform relevant checks and inspections on materials and equipment to establish conformance to meet food safety requirements 1.4. Identify variations or common faults 1.5. Record inspection results and report to appropriate personnel
2. Contribute to the continuous improvement of the HACCP plan	2.1. Recognise non-conformance to the HACCP plan 2.2. Identify likely causes for non-conformance 2.3. Record and report non-conformances to appropriate personnel

## Required Skills and Knowledge

### Required skills

Required skills include:

- monitoring of the critical, quality and regulatory control points
- preventing contamination from occurring or recurring
- recording of information using the enterprise reporting system
- collecting and analysing data to identify variation from limits
- making approved corrective actions as required
- supporting continuous improvement through observation and communication

### Required knowledge

Required knowledge includes:

- the seven principles of HACCP and relationship to food or pharmaceutical safety
- preliminary steps for HACCP
- benefits of HACCP
- the HACCP plan, including:
  - the critical control points and control limits
  - consequences of non-conforming products being identified
- continuous improvement practices
- quality policy, procedures and responsibilities
- the methods used to monitor each critical, quality, regulatory control point
- equipment and instrument calibration requirements
- methods for systematically investigating and responding to problems
- control points and their potential impact on work systems
- relevant health, safety and environment requirements
- products and services provided by the enterprise
- layout of the enterprise, divisions, and laboratory
- organisational structure of the enterprise
- lines of communication
- role of laboratory services to the enterprise and customers
- scheduling of tests and procedures to meet customer requirements
- enterprise procedures associated with the candidate's regular technical duties

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• correctly monitor the critical, quality and regulatory control points for their work</li> <li>• prevent contamination from occurring or recurring</li> <li>• collect, record and interpret data and take corrective actions</li> <li>• support continuous improvement through observation and communication.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with</p> <ul style="list-style-type: none"> <li>• <i>MSL922001A Record and present data</i></li> <li>• <i>MSL933002A Contribute to the achievement of quality objectives.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• quality manuals and procedures</li> <li>• HACCP plans and records</li> <li>• recording equipment</li> <li>• case studies to illustrate a range of HACCP issues.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• observation of the candidate monitoring control points in the work area</li> <li>• feedback from supervisors and peers</li> <li>• review of corrective action suggestions by the candidate</li> <li>• flow charts or diagrams prepared by the candidate, alternatively, the candidate could explain existing charts or diagrams</li> <li>• candidate's response to simulated problems.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

<b>EVIDENCE GUIDE</b>	
	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Food processing</b></p> <p>The laboratory is responsible for the monitoring of the complex hazard analysis and critical control points in the food production process. The laboratory assistant gathers data at these points for the recording and checking of the process. All data outside the critical limits are immediately communicated to the laboratory manager and the production manager. Any approved corrective actions undertaken by the laboratory assistant are recorded in the laboratory log of system non-conformance. Suggestions for improvement of the system are also recorded for discussion at the regular team meeting.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. ---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review existing HACCP plans	1.1. Collect data and results from HACCP records 1.2. Identify major and minor non-conformances to the HACCP plan 1.3. Monitor critical control points to confirm performance 1.4. Analyse problem areas using appropriate quality improvement tools and techniques 1.5. Suggest corrective actions and strategies to prevent recurrence of the problem 1.6. Document required amendments to the HACCP plan 1.7. Report and present recommendations to appropriate personnel
2. Provide support for the implementation of HACCP plans	2.1. Analyse roles, duties and current competency of associated personnel in relation to HACCP responsibilities 2.2. Identify training needs and skill development in relation to the successful implementation of the HACCP plan and assist with delivery 2.3. Maintain resource requirements to support HACCP plan
3. Review the implementation plan	3.1. Implement any approved recommendations 3.2. Update any changes to the documents 3.3. Validate the effectiveness of changes to the HACCP plan

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- reviewing existing HACCP plans
- using problem solving techniques to identify causes and options to remedy problems
- assessing risk
- using quality improvement tools and techniques, including statistical process control
- constructing flow diagrams and hazard analysis tables
- delivering training to workplace personnel to assist their understanding of their roles and responsibilities for the implementation of HACCP

#### Required knowledge

Required knowledge includes:

- products and services provided by the enterprise
- the production process
- layout of the enterprise, divisions and laboratory
- organisational structure of the enterprise
- role of laboratory services to the enterprise and customers
- enterprise procedures associated with the candidate's regular technical duties
- scheduling of tests and procedures to meet customer requirements
- equipment and instrument calibration requirements
- the seven principles of HACCP and relationship to food or pharmaceutical safety
- preliminary steps for HACCP
- benefits of HACCP
- the HACCP plan, including:
  - the critical control points and control limits
  - consequences of non-conforming products being identified
- control charts, control limits and control measures
- flow chart symbols
- critical control points and their potential impact on work systems
- microbiological and chemical safety hazards
- the methods used to monitor each critical, quality, regulatory control point
- methods for systematically investigating and responding to problems
- procedures for addressing non-compliance
- communication channels and consultative arrangements

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

- |   |
|---|
| <ul style="list-style-type: none"><li>• continuous improvement practices</li><li>• quality policy, procedures and responsibilities</li><li>• relevant health, safety and environment requirements</li></ul> |
|---|

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• obtain necessary data and results</li> <li>• analyse data and identify corrective action</li> <li>• develop a corrective action plan</li> <li>• monitor and evaluate effectiveness of any changes suggested within the context of the ongoing development of HACCP plan</li> <li>• consult and communicate appropriately with associated personnel</li> <li>• recognise major and minor non-conformances</li> <li>• construct flow diagrams and hazard analysis tables</li> <li>• deliver training to workplace personnel to assist their understanding of their roles and responsibilities for the implementation of HACCP</li> <li>• document and present recommendations and changes.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL933002A Contribute to the achievement of quality objectives</i></li> <li>• <i>MSL933003A Apply critical control point requirements</i></li> <li>• <i>TAADEL301C Provide training through instruction and demonstration of work skills.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• access to all appropriate documentation, such as HACCP plan and quality manuals.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of documentation completed by the candidate as part of the development of HACCP plans</li> <li>• review of data and reports obtained from HACCP records by the candidate</li> <li>• feedback obtained from managers on implementation</li> </ul>

**EVIDENCE GUIDE**

	<p>and review of HACCP plans.</p> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Food processing</b></p> <p>The milk room at a dairy processing plant was receiving continuing high microbiological counts that were approaching levels where they could affect the safety of the final product. The laboratory supervisor began to collect and analyse information obtained from data production records, laboratory results and corrective action reports. From the information obtained, the technician produced graphs to show the microbiological count over the past few weeks. From this information he/she concluded that the contamination was due to the ineffectiveness of a sanitiser. Recommendations were forwarded to the Quality Review Committee and included a review of the:</p> <ul style="list-style-type: none"> <li>• quality of the sanitising product and an investigation of alternatives</li> <li>• amount of sanitiser ordered to ensure that it was not being stored beyond its recommended use by date</li> <li>• reliability of the suppliers to provide quality products.</li> </ul> <p>Following the Quality Review Committee's agreement, the laboratory technician updated the relevant documents</p>

<b>EVIDENCE GUIDE</b>	
	and implemented the recommendations. This resulted in the microbiological counts declining to acceptable levels.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australia New Zealand Food Standards (ANZFS) Code</li> <li>• food safety plans and/or pharmaceutical safety requirements</li> <li>• HACCP plans/documents/procedures</li> <li>• principles of good laboratory practice (GLP)</li> <li>• Australian code of good manufacturing practice for medicinal products (GMP)</li> <li>• product safety plan</li> <li>• production/quality procedures/requirements</li> <li>• quality manuals</li> <li>• standard operating procedures (SOPs)</li> <li>• state/territory/national legislation</li> <li>• pharmaceutical standards codes</li> <li>• manufacturers/suppliers specifications</li> <li>• recording sheets</li> <li>• equipment instructions</li> <li>• relevant legislation</li> <li>• equipment operation manuals</li> <li>• standard operating procedures (SOPs)</li> <li>• work instructions</li> <li>• result forms</li> </ul>
<b>Software packages</b>	Computer software packages used for the development and implementation of HACCP plans will vary between and within industry sectors
<b>Control points</b>	Control points may be:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• critical</li> <li>• quality</li> <li>• regulatory</li> </ul>
<b>Products/materials handled by laboratory assistants</b>	<p>Products/materials handled by laboratory assistants may include:</p> <ul style="list-style-type: none"> <li>• raw materials</li> <li>• ingredients</li> <li>• adjuncts/process aids</li> <li>• consumables</li> <li>• finished product</li> <li>• chemicals</li> <li>• food additives</li> </ul>
<b>Members of a HACCP team</b>	<p>Members of a HACCP team may contribute a range of expertise and relevant technical support. They would normally share responsibilities for the development of a HACCP plan</p>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Satisfy quality system requirements in daily work	1.1. Access information on quality system requirements for own job function 1.2. Record and report quality control data in accordance with quality system 1.3. Follow quality control procedures to ensure products, or data, are of a defined quality as an aid to acceptance or rejection 1.4. Recognise and report non-conformances or problems 1.5. Conduct work in accordance with sustainable energy work practices 1.6. Promote sustainable energy principles and work practices to other workers
2. Analyse opportunities for corrective and/or optimisation action	2.1. Compare current work practices, procedures and process or equipment performance with requirements and/or historical data or records 2.2. Recognise variances that indicate abnormal or sub-optimal performance 2.3. Collect and/or evaluate batch and/or historical records to determine possible causes for sub-optimal performance 2.4. Use appropriate quality improvement techniques to rank the probabilities of possible causes
3. Recommend corrective and/or optimisation actions	3.1. Analyse causes to predict likely impacts of changes and decide on the appropriate actions 3.2. Identify required changes to standards and procedures and training 3.3. Report recommendations to designated personnel
4. Participate in the implementation of recommended actions	4.1. Implement approved actions and monitor performance following changes to evaluate results 4.2. Implement changes to systems and procedures to eliminate possible causes 4.3. Document outcomes of actions and communicate them to relevant personnel
5. Participate in the development of continuous improvement strategies	5.1. Review all relevant features of work practice to identify possible contributing factors leading to sub-optimal performance 5.2. Identify options for removing or controlling the risk of sub-optimal performance

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>5.3. Assess the adequacy of current controls, quality methods and systems</p> <p>5.4. Identify opportunities to continuously improve performance</p> <p>5.5. Develop recommendations for continual improvements of work practices, methods, procedures and equipment effectiveness</p> <p>5.6. Consult with appropriate personnel to refine recommendations before implementation of approved improvement strategies</p> <p>5.7. Document outcomes of strategies and communicate them to relevant personnel</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- applying problem solving techniques and strategies
- applying statistical analysis and statistical sampling procedures
- detecting non-conforming products or services in the work area
- documenting and reporting information about quality
- contributing effectively within a team to recognise and recommend improvements in productivity and quality
- implementing and monitoring improved practices and procedures

#### Required knowledge

Required knowledge includes:

- specifications for laboratory products and services in the candidate's work area
- quality requirements associated with the individual's job function and/or work area
- scientific and technical knowledge underpinning the processes, procedures, equipment and instrumentation associated with the candidate's work tasks and duties
- workplace procedures associated with the candidate's regular technical duties
- sustainable energy principles
- relevant health, safety and environment requirements
- layout of the enterprise, divisions and laboratory
- organisational structure of the enterprise
- lines of communication
- role of laboratory services to the enterprise and customers

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example:

Biomedical sector:

- ethical requirements dealing with patient confidentiality
- animal welfare legislation and codes of practice
- guidelines for pre-transfusion testing
- gene technology regulations for large scale, small scale and planned release of genetically manipulated organisms

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• use the enterprise's quality systems and business goals as a basis for decision making and action</li> <li>• apply all relevant procedures and regulatory requirements to ensure the quality and integrity of the products/services or data provided</li> <li>• apply and promote sustainable energy principles and work practices</li> <li>• detect non-conforming products or services in the work area</li> <li>• follow enterprise procedures for documenting and reporting information about quality</li> <li>• contribute effectively within a team to recognise and recommend improvements in productivity and quality</li> <li>• apply effective problem solving strategies</li> <li>• implement and monitor improved practices and procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL924001A Process and interpret data</i></li> <li>• <i>MSL954001A Obtain representative samples in accordance with sampling plan</i></li> <li>• <i>relevant MSL974000 series units of competency</i></li> <li>• <i>relevant MSL975000 series units of competency.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• enterprise quality manual and procedures</li> <li>• quality control data/records</li> <li>• customer complaints and rectifications</li> <li>• candidate's supervisors and peers.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of documentation completed by the candidate</li> </ul>

**EVIDENCE GUIDE**

	<p>as part of regular quality control</p> <ul style="list-style-type: none"> <li>• feedback from supervisors and/or customers regarding quality of products/services and/or data regularly provided by the candidate</li> <li>• observation of the candidate's performance and participation in quality improvement teams over time in the workplace</li> <li>• review of reports from quality improvement teams where the candidate's role is clearly outlined and verified</li> <li>• verified reports of improvements suggested and implemented by the candidate individually.</li> </ul> <p>Those aspects of competency dealing with improvement processes could be assessed by the use of suitable simulations and/or a pilot plant and/or a range of case studies and scenarios.</p> <p>In all cases, practical assessment should be supported by questions to assess essential knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A quality improvement team at a chemical manufacturing plant was asked to propose a way of minimising the cost of disposing of chromium rich waste. Using appropriate techniques, the team narrowed the alternatives down to the option of burning the waste stream. An experienced technician agreed that this was feasible, but suggested that because the waste was petroleum high in chromium the team should consider</p>

**EVIDENCE GUIDE**

the environmental implications. Subsequent research indicated that the permitted chromium levels in the incinerated air waste stream would not exceed 10 ppm, which was less than the air emission standards for the plant. The technician analysed samples of the air waste stream and determined that the chromium levels were below the regulatory standards. He/she then supported the team's suggestion.

**Environmental**

The manager of an environmental testing laboratory believed that the team of laboratory technicians relied too much on external direction. As a result, the manager requested that whenever technicians asked for assistance they should also be ready to suggest a solution to the problem if at all possible. This strategy was implemented in a non-threatening manner and was accepted by the team. In time, the manager noted that many of the suggestions for solving problems and improving work practices that came from the team were effective and reasonable. Their skill in making realistic recommendations came from their familiarity with many of the issues that needed to be considered. It became the norm that the laboratory technicians were given public credit for suggesting successful strategies that improved safety, productivity and staff morale.

**Food processing**

A company that produces apple juice uses 30-35% hydrogen peroxide ( $H_2O_2$ ) to sterilise packaging. A mist of atomised  $H_2O_2$  is sprayed into pre-formed cartons and later removed with a jet of hot sterile air. The laboratory manager was concerned that some batches of product were not sterile after standing at room temperature for several days. The cause of the failure in the sterilisation procedure was not apparent and a technical officer was asked to investigate this problem.

The technical officer examined each unit operation of juice manufacture and determined that the application of  $H_2O_2$  was a critical sterilisation point where failure could occur. The concentration of  $H_2O_2$  in the atomiser and in opened containers was unpredictable and several problems were found to contribute to this.  $H_2O_2$  was left in the atomiser for up to several days between packaging runs. Containers of  $H_2O_2$  were not always used sequentially, some being opened and then not used for a

**EVIDENCE GUIDE**

long time. The containers were stored at room temperature after opening and some may have become contaminated with atmospheric particulates that catalyse the breakdown of H<sub>2</sub>O<sub>2</sub>.

The recommendations that emerged from the investigation were that:

- fresh H<sub>2</sub>O<sub>2</sub> should be used at the beginning of each packaging run
- only one stock container of H<sub>2</sub>O<sub>2</sub> should be open at any one time and stored chilled, with residuals discarded after 14 days
- care should be taken to exclude foreign material from the opened vessels of H<sub>2</sub>O<sub>2</sub> and the atomiser.

In summary, the intolerance of the company to even low incidences of faulty product and the competency of the technical officer to investigate the processing stream resulted in increased product quality without significant cost.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards, such as: <ul style="list-style-type: none"> <li>• AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories</li> <li>• AS/NZS ISO 10005:2006 Quality management systems - Guidelines for quality plans</li> <li>• AS/NZS ISO 10012:2004 Measurement management systems - Requirements for measurement processes and measuring equipment</li> <li>• AS/NZS ISO 9000 Set:2008 Quality management systems set</li> <li>• AS 1199 Sampling procedures and tables for inspection by attributes</li> <li>• BS 5750 Quality systems</li> </ul> </li> <li>• Australia New Zealand Food Standards (ANZFS) Code</li> <li>• Australian code of good manufacturing practice for medicinal products (GMP)</li> <li>• customer specific requirements/standards</li> <li>• enterprise and customer product specifications</li> <li>• National Association of Testing Authorities (NATA) Accreditation programs requirements</li> <li>• National Health and Medical Research Council (NHMRC) Guidelines</li> <li>• national measurement regulations and guidelines</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• principles of good laboratory practice (GLP)</li> <li>• quality manuals and procedures</li> <li>• Therapeutic Goods Regulations 1009</li> </ul>
<b>Quality control procedures</b>	<p>Quality control procedures may include:</p> <ul style="list-style-type: none"> <li>• standards imposed by regulatory and licensing bodies</li> <li>• enterprise quality procedures</li> <li>• working to a customer brief or batch card and associated quality procedures</li> <li>• checklists to monitor job progress against agreed time, costs and quality standards</li> <li>• preparation of sampling plans</li> <li>• the use of hold points to evaluate conformance</li> <li>• the use of inspection and test plans to check compliance</li> </ul>

<b>Co-requisite units</b>	

## MSL943001A Work safely with instruments that emit ionising radiation

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the ability to safely store, transport and operate instruments that emit ionising radiation following established safe work practices and in accordance with laboratory procedures and licensing requirements. Examples include, use of process control instrumentation, such as fluid level gauges using radioactive sources, on-site non-destructive testing of weldments using X-ray and gamma ray sources and density testing of asphaltic concrete.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to laboratory or field assistants working in construction materials testing or similar industry sectors. They work under supervision or direction of paraprofessionals.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Store instruments safely and securely	1.1. Identify state or territory requirements for storage facilities and associated document processes 1.2. Store instruments in accordance with state or territory requirements and documented procedures 1.3. Secure instruments to prevent unauthorised access 1.4. Record instruments' movements and usage in accordance with documented procedures
2. Transport instruments safely and securely	2.1. Select vehicle suitable for the purpose 2.2. Attach regulation signage in accordance with state or territory requirements to indicate that radioactive sources are being carried 2.3. Ensure that instruments are properly located and fixed securely in place 2.4. Ensure security of instruments when the vehicle is unattended
3. Use instruments safely and maintain security	3.1. Follow safe working practices to minimise own exposure to radiation 3.2. Use radiation dosimeter to monitor own exposure to radiation 3.3. Follow safe work practices to minimise exposure of others to radiation 3.4. Follow safe work practices to protect the instrument from damage 3.5. Maintain instrument security
4. Monitor radiation levels	4.1. Check operation and calibration status of radiation survey meter 4.2. Perform radiation survey following documented procedure 4.3. Report atypical conditions and/or problems to appropriate personnel
5. Maintain records	5.1. Record observations, data and results in accordance with enterprise procedures 5.2. Maintain confidentiality of enterprise information
6. Perform emergency procedures	6.1. Identify potential emergency situations 6.2. Respond to emergencies in accordance with documented procedures 6.3. Report emergency situations to appropriate personnel

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- demonstrating emergency procedures
- performing and documenting radiation surveys using radiation monitors
- using a radiation dosimeter
- placing the instrument into storage safely and securely
- transporting the instrument in a motor vehicle safely
- safely handling and maintaining the instrument and keeping other personnel clear of radiation sources
- observing, interpreting and reporting atypical situations
- promptly communicating problems to appropriate personnel

#### Required knowledge

Required knowledge includes:

- health, safety and emergency procedures relevant to radioactive devices
- factors affecting radiation intensity
- principles of external radiation protection and practical methods of minimising radiation exposure
- methods of measuring and detecting ionising radiation
- nature of radiation, different types of radiation, their characteristics, sources and shielding methods
- physiological effects of ionising radiation
- state or territory licensing requirements
- national codes of practice
- general guidelines for safe handling of radiation sources

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>perform operations in accordance with standards, codes, procedures and enterprise requirements</li> <li>safely handle, store and transport instruments keeping other people clear of radiation sources</li> <li>perform and document radiation surveys</li> <li>recognise, interpret and report problems to appropriate personnel promptly.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li><i>MSL924001A Process and interpret data</i></li> <li><i>MSL943002A Participate in laboratory/field workplace safety</i></li> <li><i>MAL974010A Perform mechanical tests.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>appropriate tools, instruments, equipment and materials</li> <li>enterprise procedures, test methods, equipment and manuals.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>analysis of work completed by the candidate over a period of time to ensure accuracy, consistency and timeliness</li> <li>observation of candidate using the instruments in a range of work contexts</li> <li>review of enterprise documentation completed by the candidate</li> <li>feedback from peers and supervisors</li> <li>use of suitable simulation and/or a range of case studies/scenarios.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those</p>

<b>EVIDENCE GUIDE</b>	
	<p>aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Construction materials testing</b></p> <p>Soil moisture density gauges are used extensively for measuring the density of soils, cement treated roadbase, roller compacted concrete and asphalt. They provide a non-destructive means of monitoring compaction operations during construction, so that additional rolling can be provided before the material sets or is covered with another layer. National and state/territory codes of practice regulate the use of equipment that emits ionising radiation. States and territories also have licensing and registration requirements for people involved in owning, storing, transporting or using such equipment.</p> <p>Soil moisture density gauges are used on construction sites, so they are transported to the test site in motor vehicles. They must be protected from damage and stored safely and securely while not in use. The operator must ensure that bystanders are kept clear to minimise radiation exposure. Owners of gauges are required to have documented procedures and ensure that operators are adequately trained. To ensure the safety and integrity of the gauge, radiation surveys are required at regular intervals. A hand-held radiation meter is used, and the results recorded.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards, such as: <ul style="list-style-type: none"> <li>• AS 2243.4-1998 Safety in laboratories - Ionising radiations</li> <li>• AS/NZS 2243.5:2004 Safety in laboratories - Non-ionising radiations - Electromagnetic, sound and ultrasound</li> </ul> </li> <li>• Australian Dangerous Goods Code</li> <li>• Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice</li> <li>• calibration and maintenance schedules</li> <li>• enterprise recording and reporting procedures</li> <li>• equipment manuals</li> <li>• equipment startup, operation and shutdown procedures</li> <li>• licensing requirements</li> <li>• material, production and product specifications</li> <li>• National Association of Testing Authorities (NATA) Accreditation programs requirements</li> <li>• national environment protection measures</li> <li>• National Health and Medical Research Council (NHMRC) Guidelines</li> <li>• occupational health and safety (OHS) national standards and codes of practice</li> <li>• production and laboratory schedules</li> <li>• quality manuals</li> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Instruments and equipment</b>	Instruments and equipment used may include:

<b>RANGE STATEMENT</b>	
<b>used</b>	<ul style="list-style-type: none"> <li>• soil moisture/density gauges</li> <li>• borehole logging probes</li> <li>• fluid density/level detectors</li> <li>• battery chargers</li> <li>• radiation monitors/dosimeters</li> <li>• motor vehicles</li> <li>• storage areas for nuclear sources</li> <li>• documentation, including user manuals and enterprise safety manuals</li> <li>• radiation warning signs</li> </ul>
<b>Hazards and problems</b>	<p>Hazards and problems may include:</p> <ul style="list-style-type: none"> <li>• jamming of the source rod in the exposed position</li> <li>• incidents during transportation</li> <li>• fire</li> <li>• theft of equipment containing radioactive sources</li> <li>• on-site accidents</li> <li>• keeping other personnel clear of instrument</li> <li>• instrument breakdown</li> </ul>
<b>Critical elements for radiation safety</b>	<p>Critical elements for radiation safety include:</p> <ul style="list-style-type: none"> <li>• time (reduce the exposure time)</li> <li>• distance (maintain greatest distance possible at all times)</li> <li>• shielding (interpose as much radiation shielding between yourself and the radiation source as possible)</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection</li> </ul>

## MSL943002A Participate in laboratory/field workplace safety

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to follow workplace occupational health and safety (OHS) policies and procedures, deal with the identification and control of hazards, work safely at all times, follow emergency response procedures and contribute to the maintenance of workplace safety.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to laboratory assistants and instrument operators working in all industry sectors. OHS responses are restricted to a 'first response' approach, including the notification of appropriate enterprise personnel. Workers will be provided with clear directions, information, training and appropriate supervision.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify, control and report OHS and environmental hazards	1.1. Routinely check immediate work area for hazards prior to commencing and during work 1.2. Address hazards within area of responsibility 1.3. Report hazards and incidents to designated personnel according to enterprise policies and procedures
2. Conduct work safely	2.1. Select, fit and use appropriate personal protective clothing and equipment 2.2. Follow enterprise procedures when carrying out work tasks 2.3. Keep all work areas clean and free from obstacles 2.4. Maintain enterprise standards of personal hygiene 2.5. Safely store, transport and dispose of hazardous materials and dangerous goods
3. Follow incident and emergency response procedures	3.1. Identify incident and emergency situations 3.2. Report and record incident and emergency situations according to enterprise procedures 3.3. Follow incident and emergency procedures as appropriate to the nature of emergency, using emergency equipment according to enterprise procedures
4. Contribute to OHS in the workplace	4.1. Raise OHS and environmental issues with designated personnel in accordance with enterprise procedures and legislated rights and obligations of employees 4.2. Participate in OHS activities within scope of responsibilities

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- recognising potential incidents and taking appropriate corrective action
- demonstrating workplace fire drill, incident, first aid and emergency evacuation procedures
- hazard identification and risk control, following OHS and environmental policies and procedures
- using, storing and maintaining personal protective equipment
- storing, transporting and disposing of dangerous goods following enterprise instructions and procedures
- using equipment to protect health and safety
- promptly communicating health and safety and environmental issues to designated personnel

#### Required knowledge

Required knowledge includes:

- roles, rights and responsibilities of self and employer
- signage, symbols and signals relating to OHS
- hazards commonly found in own job and work area and standard risk controls
- location and purpose of personal protective equipment and emergency/hazard control equipment in the work area, including first aid facilities and personnel
- use, care and storage requirements for personal protective clothing and equipment used
- location of advice and information on OHS issues, including material safety data sheets (MSDS)
- requirements and procedures for reporting OHS hazards and incidents, including injuries, illness and near misses
- the processes for raising a health and safety issue or concern
- safe work practices, including handling, storage and disposal of hazardous substances and requirements for labelling of hazardous substances
- work practices for use of handling equipment and any task-specific manual handling techniques as required by work role, according to enterprise procedures
- standard operating procedures (SOPs) for equipment used and key safety elements of the procedures
- environmental impacts and effects of interaction with hazards in the work area
- enterprise procedures and instructions that govern personal work, incidents and emergencies

**REQUIRED SKILLS AND KNOWLEDGE**

- reporting requirements for OHS issues and potentially hazardous situations
- site layout, including emergency exits, location and use of safety alarms, emergency response system, procedures and personnel
- enterprise OHS and environmental policies and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• work safely</li> <li>• recognise potential incidents and hazards and take appropriate corrective action</li> <li>• follow workplace incident, first aid and emergency response procedures</li> <li>• promptly communicate OHS and environmental issues to designated personnel.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• other relevant technical units of competency.</li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• laboratory/field work environment, equipment and materials</li> <li>• personal protective equipment</li> <li>• enterprise procedures.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• observation of the candidate preparing for and undertaking a range of work tasks</li> <li>• written and/or oral questioning to assess underpinning knowledge and likely reactions in hazardous/emergency situations</li> <li>• feedback from peers and supervisors</li> <li>• review of candidate's responses to case studies, scenarios and/or 'what ifs'.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

<b>EVIDENCE GUIDE</b>	
	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A laboratory assistant working in a laboratory was asked to produce a particular solvent-borne paint. Because of the hazardous nature of the task, the assistant referred to the MSDS which specified that a particular respirator and gloves be used. The assistant followed the requirements and safely prepared the batch of paint.</p> <p><b>Food processing</b></p> <p>One task of a laboratory assistant in a food processing company is the determination of total nitrogen in food samples by the Kjeldahl method. The assay involves digestion of the food with an aliquot of 30% hydrogen peroxide and several other reagents at more than 400°C. The assistant is familiar with the MSDS for hydrogen peroxide and uses this chemical with appropriate caution and personal protective equipment. Small spills of hydrogen peroxide sometimes occur. The assistant knows to clean these up immediately by liberally diluting the spill with water, mopping it up with a cloth and washing the hydrogen peroxide from the cloth into a sink with copious amounts of water. This attention to cleanliness is essential to minimise the risk of injury because 30% hydrogen peroxide has the appearance of water. Unlike water, it is corrosive to skin and presents a serious fire or explosion hazard if it should come into contact with many of the chemicals used in the laboratory.</p> <p><b>Biomedical</b></p> <p>After performing and verifying cell counts of plated samples, a technical assistant proceeded to dispose of the</p>

**EVIDENCE GUIDE**

waste. The wastes were placed in a biohazard bag. The bag was sealed with a sterilisation indicator sticker that was clearly visible, and placed in the autoclave. The assistant checked the colour of the indicator sticker to ensure that the waste was correctly processed before disposing of the bag in accordance with SOPs.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards such as:
  - AS 1678 Emergency procedure guide - Transport
  - AS 1940-2004 Storage and handling of flammable and combustible liquids
  - AS 2252 Biological safety cabinets
  - AS 3780-2008 The storage and handling of corrosive substances
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
- AS/NZS 1269 Set:2005 Occupational noise management set
- AS/NZS 1337 Eye protection
- AS/NZS 2161 Set:2008 Occupational protective gloves set
- AS/NZS 2210:1994 Occupational protective footwear
  - AS/NZS 2243 Set:2006 Safety in laboratories set
- AS/NZS 2982.1:1997 Laboratory design and construction - General requirements
  - AS/NZS 4452:1997 The storage and handling of toxic substances
- AS/NZS 4501 Set:2008 Occupational clothing set
  - AS/NZS ISO 14000 Set:2005 Environmental management standards set

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• HB 9-1994 Occupational personal protection</li> <li>• Australian Dangerous Goods Code</li> <li>• Australian Quarantine and Inspection Service (AQIS) Import Guidelines</li> <li>• Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice</li> <li>• gene technology regulations</li> <li>• Guide to physical containment levels and facility types</li> <li>• National Code of Practice for the labelling of workplace substances [NOHSC:2012 (1994)]</li> <li>• OHS national standards and codes of practice</li> </ul>
<b>Routine checks</b>	<p>Routine checks may include:</p> <ul style="list-style-type: none"> <li>• general housekeeping checks, such as obstructions which may cause trip hazards</li> <li>• checking of safety equipment, such as eye wash stations</li> <li>• checking reagents and equipment are safe to use</li> <li>• checking availability of emergency equipment</li> <li>• checking functionality of personal protective equipment</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• electric shock</li> <li>• microbiological organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids</li> <li>• solar radiation, dust and noise</li> <li>• chemicals, such as acids, heavy metals, pesticides and hydrocarbons</li> <li>• aerosols from broken centrifuge tubes and pipetting</li> <li>• radiation, such as alpha, beta, gamma, X-ray and neutron</li> <li>• sharps, broken glassware and hand tools</li> <li>• flammable liquids</li> <li>• cryogenics, such as dry ice and liquid nitrogen</li> <li>• fluids under pressure, such as steam, hydrogen in gas liquid chromatography and acetylene in atomic absorption spectrometry</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• sources of ignition</li> <li>• high temperature ashing processes</li> <li>• disturbance or interruption of services</li> <li>• occupational overuse syndrome, slips, trips and falls</li> <li>• manual handling, working at heights and working in confined spaces</li> <li>• crushing, entanglement and cuts associated with moving machinery or falling objects</li> <li>• pedestrian and vehicular traffic</li> <li>• vehicle and boat handling</li> </ul>
<b>Addressing hazards</b>	<p>Addressing hazards may include:</p> <ul style="list-style-type: none"> <li>• hazard and incident reporting and investigation procedures</li> <li>• elimination</li> <li>• substitution, such as review of nature of substances or processes used</li> <li>• isolation: <ul style="list-style-type: none"> <li>• use of appropriate equipment, such as biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets</li> <li>• Class PCII, PCIII, and PCIV physical containment laboratories</li> </ul> </li> <li>• engineering</li> <li>• administrative procedures, such as: <ul style="list-style-type: none"> <li>• ensuring access to service shut-off points</li> <li>• recognising and observing hazard warnings and safety signs</li> <li>• labelling of samples, reagents, aliquoted samples and hazardous materials</li> <li>• handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions</li> <li>• identifying and reporting operating problems or equipment malfunctions</li> <li>• cleaning and decontaminating equipment and work areas regularly using recommended procedures</li> </ul> </li> <li>• applying containment procedures</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• following established manual handling procedures for tasks involving manual handling</li> <li>• use of appropriate equipment and procedures to avoid personal contamination and contamination of others</li> <li>• following risk control measures to minimise environmental hazards</li> <li>• use of practices which minimise waste</li> <li>• reporting to appropriate personnel of abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates</li> <li>• minimising exposure to radiation, such as lasers, electromagnetic and ultraviolet</li> <li>• use MSDS</li> <li>• use of signage, barriers and service isolation tags</li> <li>• use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion, gloves, safety glasses, goggles, face guards, coveralls, gown, body suits, respirators and safety boots</li> </ul>
<b>Designated personnel</b>	<p>Designated personnel may include:</p> <ul style="list-style-type: none"> <li>• laboratory manager</li> <li>• supervisor</li> <li>• OHS coordinator</li> <li>• OHS representative</li> </ul>
<b>Enterprise policies and procedures</b>	<p>Enterprise policies and procedures may refer to:</p> <ul style="list-style-type: none"> <li>• OHS specific procedures, such as hazard and incident reporting, communication, consultation and issue resolution and risk management</li> <li>• controlling known hazards</li> <li>• minimising environmental threats</li> <li>• minimising and disposing of waste</li> <li>• responding to safety, emergency, fire and incidents</li> <li>• selecting/using personal protective clothing</li> </ul>

<b>RANGE STATEMENT</b>	
	and equipment
<b>Incidents</b>	<p>Incidents may include:</p> <ul style="list-style-type: none"> <li>• workplace injury and accidents</li> <li>• cutting, stabbing, puncturing, crushing, immersion in water, suffocation, hypothermia, burns, heat stress, animal bites, allergic reactions and assaults</li> <li>• biological, chemical or radioactive spills, fire, bomb threat, security threat and explosion</li> </ul>
<b>Emergency equipment</b>	<p>Emergency equipment may include:</p> <ul style="list-style-type: none"> <li>• first aid equipment</li> <li>• eye wash kit or shower</li> <li>• fire extinguisher</li> </ul>
<b>Participating in OHS activities</b>	<p>Participating in OHS activities may include:</p> <ul style="list-style-type: none"> <li>• seeking assistance to clarify obligations and procedures</li> <li>• clarifying work instructions that impact on safety and legal liability</li> </ul>
<b>OHS and environmental issues which may need to be raised by employees with designated personnel</b>	<p>OHS and environmental issues which may need to be raised by employees with designated personnel may include:</p> <ul style="list-style-type: none"> <li>• identification of hazards not otherwise addressed</li> <li>• assessment of risk and decisions on measures to control risk</li> <li>• risk reduction measures</li> <li>• problems with implementation of controls</li> <li>• problems with recycling, by-product collection and waste disposal</li> <li>• investigation of injury and incidents</li> <li>• clarification of understanding of OHS policies and procedures</li> </ul>
<b>OHS and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any</li> </ul>

**RANGE STATEMENT**

	<p>time</p> <ul style="list-style-type: none"> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sampling	1.1. Confirm the purpose, priority and scope of the sampling request 1.2. Liaise with relevant personnel to arrange site access and all necessary clearances/permits 1.3. Identify site hazards and review enterprise safety procedures 1.4. Confirm what samples are to be collected, from where, how and when 1.5. Assemble all specified sampling equipment, safety equipment, materials and containers 1.6. Conduct pre-use and cleanliness checks of all items to ensure they are fit for purpose 1.7. Check all items against given inventory and stow them to ensure safe transport
2. Conduct sampling	2.1. Locate sampling points and services at the site 2.2. Remove security devices, such as locks and covers as required 2.3. Seek advice if the required samples cannot be collected or if procedures require modification 2.4. Select and use required sampling equipment in accordance with given procedures 2.5. Closely follow sampling procedures to obtain required samples and maintain their integrity 2.6. Record all labelling information in accordance with enterprise/legal traceability requirements 2.7. Record sample appearance, environmental conditions and any other factors that may impact on sample integrity 2.8. Replace security devices, such as locks and covers as required
3. Finalise sampling	3.1. Follow enterprise procedures for the cleaning/decontamination of equipment and vehicle as necessary 3.2. Check all equipment, materials and samples against inventory and stow for safe transport 3.3. Liaise with relevant personnel to restore normal production and/or services as necessary 3.4. Maintain integrity of samples during transportation 3.5. Deliver samples to the required collection point and

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	complete all documentation to ensure traceability 3.6. On return, check and document serviceability of equipment before storage
4. Maintain a safe work environment	4.1. Use established work practices and personal protective equipment to ensure personal safety and that of others 4.2. Minimise environmental impacts of sampling and generation of waste 4.3. Dispose of all waste in accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collecting a variety of samples at a range of sites closely following sampling procedures
- collecting samples safely with minimal environmental impact
- maintaining the integrity and security of samples
- demonstrating enterprise and/or legal traceability requirements
- liaising with others to access sites and conduct sampling efficiently
- recognising own limitations the seeking timely advice

#### Required knowledge

Required knowledge includes:

- key terminology and concepts, such as sample, contamination, traceability, integrity and chain of custody
- concepts of metrology
- the international system of units (SI)
- purpose for which the samples have been collected
- the function of key sampling equipment/materials and principles of operation
- hazards, risks and enterprise safety procedures associated with routine sampling undertaken
- enterprise procedures dealing with:
  - sampling
  - waste management, clean up and spillage
  - handling, transport and storage of dangerous goods
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• correctly follow sampling procedures and plans when collecting samples</li> <li>• collect samples efficiently, safely and with minimal environmental impact</li> <li>• maintain the integrity and security of samples following the traceability requirements</li> <li>• recognise limitations and seek timely advice.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL972001A Conduct routine site measurements.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• variety of sample types</li> <li>• sampling procedures</li> <li>• a selection of sampling containers, equipment and documentation.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of sampling documentation completed by the candidate</li> <li>• review of the quality of samples collected by the candidate</li> <li>• observation of the candidate collecting a variety of samples at a range of sites</li> <li>• feedback from supervisors and clients that sampling plans were followed</li> <li>• oral/written questioning about sampling and safety procedures.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p>

<b>EVIDENCE GUIDE</b>	
	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Construction materials testing</b></p> <p>A laboratory assistant takes daily tar samples from the company's retort which is used to heat tar to reduce its moisture content. The purpose of this sampling program and subsequent testing is to ensure that the water content of the hot tar is at a safe level before the tar is transferred to a road tanker and used for road construction. Serious accidents can occur during the transfer or use of tar as high water content can cause an explosion due to escape of steam. One day, the retort operator was running behind schedule and tried to convince the laboratory assistant that the water content of the tar was the same as yesterday and didn't need to be tested. The laboratory assistant was able to explain that a high water content could lead to a serious explosion and burns for the operator.</p> <p><b>Environmental</b></p> <p>A new field assistant was collecting samples of environmental run-off during wet weather. To successfully complete the activity, the assistant made sure that they included a sample thief, pipette, or similar to extract the sample, a container with a secure lid, and an indelible marker to write on the label. In addition, the assistant remembered to take sealable, waterproof plastic bags in which to put the containers once the samples were collected and a spare bag to protect the field notebook from rain damage.</p> <p><b>Manufacturing</b></p>

**EVIDENCE GUIDE**

A production operator has been given the task of collecting samples of the recent batches of blended products, prior to drumming and customer delivery. In addition, the operator is required to sample the bulk raw materials stored on-site, and the drummed blend ingredients, including some powdered pigments.

The operator knows that the lab needs the blend samples first and after putting on chemical gloves and safety glasses, accesses each sample point on each of the blend tanks. Because the products are under pressure in the tank manifold, it is important to guard against splashes. Some of the products are flammable hydrocarbons, so the operator ensures that static leads are connected from the tank to the sample vessel during pouring. To sample the drummed product, a sample thief is used and again, safety glasses and chemical gloves are important. The pigments present a dust hazard when being sampled, so the operator applies a protective mask over their nose and mouth, to prevent ingestion while they use a small purpose-built shovel to empty the contents into the sample container.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS ISO 1000-1998 The international system of units (SI) and its application
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS ISO 14000 Set:2005 Environmental management standards set
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
- calibration and maintenance schedules
- enterprise recording and reporting procedures
- enterprise sampling procedures for specific samples, sites and clients
- environmental legislation and regulations
- equipment manuals
- equipment startup, operation and shutdown procedures
- industry codes of practice
- maps and site plans
- material safety data sheets (MSDS)
- material, production and product specifications
- National Association of Testing Authorities (NATA) documents regarding construction materials testing
- national measurement regulations and guidelines
- occupational health and safety (OHS) national

<b>RANGE STATEMENT</b>	
	<p>standards and codes of practice</p> <ul style="list-style-type: none"> <li>• quality manuals</li> <li>• safety procedures</li> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Site hazards</b>	<p>Site hazards may include:</p> <ul style="list-style-type: none"> <li>• solar radiation, dust and noise</li> <li>• wildlife, such as snakes, spiders and domestic animals</li> <li>• biohazards, such as micro-organisms and agents associated with soil, air and water</li> <li>• chemicals, such as acids and hydrocarbons</li> <li>• sharps and broken glassware</li> <li>• manual/handling of heavy sample bags and containers</li> <li>• crushing, entanglement and cuts associated with moving machinery and hand tools</li> <li>• falling objects, uneven surfaces, heights, slopes, wet surfaces, trenches and confined spaces</li> <li>• vehicle handling in rough terrain and boat handling in rough or flowing water</li> </ul>
<b>Safety procedures</b>	<p>Safety procedures may include:</p> <ul style="list-style-type: none"> <li>• use of MSDS</li> <li>• use of personal protective equipment, such as hard hats, heavy protection, gloves, safety glasses, goggles, faceguards, coveralls, gowns, body suits, respirators and safety boots</li> <li>• correct labelling of hazardous materials</li> <li>• handling and storing hazardous material and equipment in accordance with labels, MSDS, manufacturer's instructions and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontamination of equipment</li> <li>• machinery guards</li> <li>• signage, barriers, service isolation tags, traffic control and flashing lights</li> <li>• lockout and tag-out procedures</li> </ul>
<b>Types of samples</b>	<p>Types of samples may include:</p> <ul style="list-style-type: none"> <li>• grab samples</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• disturbed or undisturbed materials</li> <li>• composite samples, such as time, flow proportioned and horizontal/vertical cross section</li> <li>• quality control samples, such as controls, background, duplicate and blanks</li> </ul>
<b>Materials sampled</b>	<p>Materials sampled may include:</p> <ul style="list-style-type: none"> <li>• gas or air samples</li> <li>• water, wastewater, stormwater, sewage and sludge</li> <li>• soils</li> <li>• construction materials</li> <li>• solid wastes, such as commercial, industrial and mining</li> <li>• raw materials, start, middle, end of production run samples and final products for a wide range of manufactured items, including food and beverages</li> <li>• hazardous materials and/or dangerous goods</li> </ul>
<b>Sampling tools and equipment</b>	<p>Sampling tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• front-end loader, backhoe, excavator and drill rig</li> <li>• shovels, augers and bucket</li> <li>• sampling frames, sampling tubes, dip tubes, spears, flexible bladders and syringes</li> <li>• access valves</li> <li>• sample thief</li> <li>• weighted sample bottles, bottles, plastic/metal containers and disposable buckets</li> <li>• sterile containers, pipettes, inoculating loops and disposable spoons</li> <li>• pumps and stainless steel bailers</li> </ul>
<b>Maintenance of integrity of samples</b>	<p>Maintenance of integrity of samples could include:</p> <ul style="list-style-type: none"> <li>• appropriate containers and lids (e.g. glass, plastic, amber and opaque)</li> <li>• sealing of sample containers</li> <li>• purging of sample lines and bores</li> <li>• decontamination of sampling tools between collection of consecutive samples</li> <li>• use of appropriate preservatives (e.g. sodium</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>azide, toluene or antibiotics)</p> <ul style="list-style-type: none"> <li>• wrapping container in foil or wet newspaper</li> <li>• temperature control, which may involve prevention of direct contact between the sample and coolant</li> <li>• transfer of sterile sample into sterile container</li> <li>• monitoring of storage conditions</li> <li>• enterprise/legal traceability through appropriate sample labelling and records</li> </ul>
<b>Services</b>	<p>Services may include:</p> <ul style="list-style-type: none"> <li>• water supply, gas and electricity</li> <li>• telecommunications</li> <li>• irrigation, stormwater and drainage systems</li> <li>• production plant</li> </ul>
<b>Minimising environmental impacts</b>	<p>Minimising environmental impacts may involve:</p> <ul style="list-style-type: none"> <li>• replacement of soils and vegetation</li> <li>• driving to minimise soil erosion and damage to fauna and vegetation</li> <li>• disposal of surplus, spent or purged materials</li> <li>• recycling of non-hazardous wastes</li> <li>• appropriate disposal of hazardous waste</li> <li>• cleaning of vehicles to prevent transfer of pests and contaminants</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

### Co-requisite units

Co-requisite units		

## MSL952002A Handle and transport samples or equipment

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to pick up and transport samples or test/calibration equipment in a way which ensures the integrity of subsequent test results.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to couriers and laboratory and field assistants in all industry sectors. The person transporting the items is not necessarily responsible for sampling or testing. This unit does not cover sample collection or the ability to handle and transport animals as might be defined under prevailing animal care and ethics legislation and practices.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for pickup	1.1. Confirm pickup sequence and any licence/permit requirements with supervisor 1.2. Check that vehicle and communication devices are in working order 1.3. Check that required transport containers and materials are in the vehicle
2. Pick up and transport items	2.1. Confirm the number and nature of items to be picked up on arrival 2.2. Ensure items match paperwork 2.3. Apply enterprise requirements to the transport of samples and/or equipment 2.4. Alert laboratory personnel to any special needs that are identified on documents accompanying the items 2.5. Complete required documentation at pickup point 2.6. Stow items in the specified transport containers and under the required conditions 2.7. Maintain sample integrity at all times 2.8. Deliver items to reception point in accordance with enterprise procedures 2.9. Maintain confidentiality of information
3. Maintain transport equipment	3.1. Maintain vehicle according to enterprise requirements 3.2. Maintain state of transport containers to ensure they are fit for purpose 3.3. Requisition stocks of consumable materials as required 3.4. Replenish stocks of collecting equipment at collection centres as required
4. Maintain a safe work environment	4.1. Use established work practices and personal protective equipment to ensure personal safety and that of others 4.2. Clean up spills, if they occur, using enterprise procedures 4.3. Minimise the generation of waste 4.4. Dispose of all waste in accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- planning the picking up of items in conjunction with a supervisor
- preparing a vehicle for the required journey
- using communication devices so contact is possible between the courier, reception centre, and routine pickup locations
- communicating effectively and courteously with individuals, customers, clients and reception staff
- recording details of item exchange in relevant sections of chain of custody forms, as required
- maintaining the integrity of collected samples or equipment during transport
- containing and cleaning up spillage or breakages
- using appropriate techniques and equipment to safely dispose of waste materials
- maintaining confidentiality in all aspects of work
- reporting of problems, accidents or incidents in accordance with enterprise procedures

#### Required knowledge

Required knowledge includes:

- the relationship between effective communication with clients and customers and enterprise business
- the need for appropriate and timely transport
- control measures for minimising exposure to hazardous materials and equipment
- effect of changes in environmental conditions, vibration and shock on samples
- procedures for the containment and cleanup of spillages and breakages
- efficient waste containment and disposal practices
- maintenance requirements of equipment used in the processes of handling and transporting samples
- relevant health, safety and environment requirements
- enterprise procedures for responding to emergencies
- contact details for key personnel

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example: Biomedical samples:

- labile nature of biological and environmental samples
- possible infectivity of biological materials

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• follow required policies and procedures to maintain the integrity of collected samples or equipment during transport</li> <li>• deal with customers effectively and courteously</li> <li>• work safely</li> <li>• maintain confidentiality and report problems, accidents and incidents in accordance with procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL943002A Participate in laboratory/field workplace safety.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• vehicle</li> <li>• enterprise procedures for the handling and transport of samples or equipment</li> <li>• communication devices</li> <li>• sample containers</li> <li>• containers for transporting samples and test/calibration equipment.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of the job sheets or journal of completed activities</li> <li>• direct observation of work as a courier</li> <li>• the quality of review of results traceable to the transport of samples or equipment by candidate</li> <li>• oral or written questions to assess knowledge of the handling of unforeseen circumstances</li> <li>• simulated role plays between a courier and personnel at a reception desk or customer pickup centre.</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Calibration</b></p> <p>Calibration laboratories must take special care to ensure that they do not damage test equipment during handling, testing or storage. Information relating to equipment requiring special handling, transport or storage conditions should be provided to those responsible for collecting and transporting the items.</p> <p>A customer-orientated calibration laboratory offers a door to door calibration service to most of its clients. Once a week their driver arrives at a major facility and takes delivery of several precision measuring instruments. As always, the driver signs the acceptance note paying particular attention that all the items are recorded correctly, including listing all accessories and associated handbooks. But this time, two delicate items require unique transit cases to ensure they are stored and transported upright. Because the laboratory received prior notice, these cases were loaded into the van before setting off as well as a copy of the special transport and packaging instructions. The driver secures all the items in accordance with the accompanied written instructions to ensure their safe travel and minimise damage during transit. Upon return, the driver unloads the van and the instruments are acquitted by administration staff,</p>

**EVIDENCE GUIDE**

inspected for damage and booked into the laboratory. The lab supervisor makes sure that their technicians are aware of the special handling requirements of the two delicate instruments.

**Biotechnology**

During transit, samples must be handled and maintained under conditions which will ensure that their potency and efficacy are maintained. A courier has been asked to transport vaccine samples from the airport to the enterprise for laboratory evaluation. The supervisor faxes the courier company detailed instructions regarding pickup and handling/storage conditions during transit. In this case, the samples are in insulated containers and the temperature is monitored and recorded continuously. The courier collects the samples, puts them in the coolest part of the vehicle, ensuring that the package will not be subject to any sudden jolts, and transports them to the enterprise. After the samples arrive they are checked by the enterprise and appropriate documentation completed.

**Biomedical**

At 8 am the courier commences the day shift. The shift supervisor identifies the collection centres to be visited. The courier takes the mobile phone from the charger and checks their pager. In the vehicle, the courier logs in the odometer reading, makes a mental note of the fuel level, checks the cooler boxes and other equipment and carefully drives out. Today, there are pickups from four private hospitals and 12 collecting centres in a 200 sq km zone. As they approach the first hospital, there is a call from base with instructions to collect a tissue biopsy and bring it back immediately. He/she asks the base contact to tell haematology that their 10 am specimen arrival will be 40 minutes late because of this unforeseen diversion. Eventually, they complete the round, having remembered to replenish specimen collecting stock at each centre visited.

**Environmental (1)**

A technical assistant regularly handles and transports sensitive equipment over rough terrain in a 4WD vehicle. After reaching a field site, they are asked to transport expensive water monitoring equipment across an estuary in a small aluminium boat. The assistant notes that the equipment boxes are open to the weather and will need to be made waterproof. Because the water is choppy, the

**EVIDENCE GUIDE**

assistant adds extra packing material to cushion the most shock sensitive items. They choose to travel with the equipment rather than entrusting it to the local fisherman. Together, they carefully secure the items on the seats rather than placing them on the floor of the boat which is wet.

**Environmental (2)**

A waste management authority has sent one of their laboratory technicians to collect six containers that have been found by a member of the public on the verge of an industrial area service road. Given that the materials may be hazardous the technician assembles a full set of safety equipment. They also locate a laptop computer with MSDS information, a list of phone contacts for agencies responsible for handling hazardous materials and suitable containers for storing/transporting potentially hazardous materials. Upon arrival at the site, the technician locates six containers of concentrated sulphuric acid which are clearly labelled. The technician consults the MSDS for information on appropriate handling, storage and transportation procedures and follows them closely.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards such as:</li> <li>• AS 1678 Emergency procedure guide -Transport</li> <li>• AS 1940-2004 Storage and handling of flammable and combustible liquids</li> <li>• AS 4332-2004 The storage and handling of gases in cylinders</li> <li>• AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories</li> <li>• AS/NZS 2243 Set:2006 Safety in laboratories set</li> <li>• AS/NZS 4452:1997 The storage and handling of toxic substances</li> <li>• AS/NZS ISO 14000 Set:2005 Environmental management standards set</li> <li>• animal welfare legislation and codes of practice</li> <li>• Australia Post Guides</li> <li>• Australian Dangerous Goods Code</li> <li>• Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice</li> <li>• International Air Transport Association (IATA) Regulations</li> <li>• material safety data sheets (MSDS)</li> <li>• occupational health and safety (OHS) national standards and codes of practice</li> </ul>
<b>Paperwork and documentation</b>	Paperwork and documentation may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• enterprise protocols regarding customer liaison and communication</li> <li>• vehicle log books</li> <li>• protocols for use of pagers, mobile telephones and two-way radios</li> <li>• precautions for safe handling and handling of specific materials (e.g. toxic, infective, radioactive and dangerous goods)</li> <li>• precautions for the transport of volatile and unstable fluids</li> <li>• incident/accident report forms</li> <li>• spillage and waste containment and disposal protocols and containment materials</li> </ul>
<b>Maintenance of the integrity of samples or test/calibration equipment</b>	<p>Maintenance of the integrity of samples or test/calibration equipment could involve:</p> <ul style="list-style-type: none"> <li>• use of appropriate sample containers (glass, plastic and opaque)</li> <li>• use of appropriate preservatives</li> <li>• wrapping container in foil to exclude light</li> <li>• temperature control, which may involve prevention of direct contact between the sample and coolant</li> <li>• use of appropriate equipment boxes (insulated, shockproof and waterproof)</li> <li>• restraint of containers to prevent movement</li> <li>• checking sample viability during transport while avoiding unnecessary handling</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• biohazards, such as micro-organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids</li> <li>• chemicals, such as acids and hydrocarbons</li> <li>• sharps and broken glassware</li> <li>• manual handling of heavy sample bags and containers and equipment</li> </ul>
<b>Safety practices</b>	<p>Safety practices may include:</p> <ul style="list-style-type: none"> <li>• use of MSDS</li> <li>• use personal protective equipment, such as gloves, safety glasses, goggles and coveralls</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• use of biohazard containers</li> <li>• safe road/off road driving practices</li> <li>• correct labelling of hazardous materials</li> <li>• handling and storing hazardous material and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontaminating of equipment and vehicle</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Log samples	1.1. Record date (and time of arrival, if required) of samples at enterprise 1.2. Check and match samples with request forms before they are accepted 1.3. Enter samples into the laboratory information management system (LIMS) 1.4. Apply required document tracking mechanisms 1.5. Process 'urgent' test requests according to enterprise requirements 1.6. Ensure security and traceability of all information, laboratory data and records
2. Address customer service issues	2.1. Report to referring client when samples and request forms do not comply with enterprise requirements 2.2. Refer to supervisor for instruction where 'return to source' is inappropriate or not possible 2.3. Maintain confidentiality of all client/enterprise data and information 2.4. Ensure that information provided to customers is accurate, relevant and authorised for release 2.5. Deal with customers politely and efficiently and in accordance with enterprise procedures
3. Prepare samples for testing	3.1. Perform physical separation of the samples, as required 3.2. Prepare the required number of sub-samples 3.3. Perform chemical separation of the samples as required 3.4. Place samples in appropriate transport media, if appropriate 3.5. Monitor and control sample conditions before, during and after processing
4. Distribute samples	4.1. Group samples requiring similar testing requirements 4.2. Distribute samples to work stations maintaining sample integrity 4.3. Distribute request forms for data entry or filing in accordance with enterprise procedures 4.4. Check that samples and relevant request forms have been received by laboratory personnel
5. Maintain a safe work	5.1. Apply safe work practices to ensure personal safety

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
area and environment	and that of other laboratory personnel 5.2. Use appropriate protective equipment to ensure personal safety when sampling, processing, transferring or disposing of samples 5.3. Report all accidents and spillages to supervisor 5.4. Clean up splashes and spillages immediately using appropriate techniques and precautions 5.5. Minimise the generation of wastes and environmental impacts 5.6. Ensure the safe disposal of hazardous materials and other laboratory wastes

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- receipt and logging in of samples
- checking of samples for history and acceptable transport conditions
- preparing and sub-sampling of samples
- labelling samples accurately and completely
- using standard precautions when dealing with potentially hazardous materials
- applying knowledge of the relationship between specific sample preparation and associated tests
- clarifying specific client requirements with appropriate personnel promptly
- labelling and storing samples in a way which maintains sample integrity and traceability
- disposing of samples following required procedures
- maintaining equipment and the workspace

#### Required knowledge

Required knowledge includes:

- enterprise procedures for the receipt, documentation, distribution and storage of samples
- potentially hazardous and unstable nature of samples
- requirement of specified sample types for specific tests
- importance of maintaining effective customer relations
- sample storage and transport requirements
- relevant health, safety and environment requirements

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example: Biomedical laboratories:

- potentially infective nature of all biological materials
- nature of unstable solutions, such as anti-coagulated whole blood
- non-conformance of clotted samples for procedures, such as routine haematological tests

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• safely receive and log samples in accordance with enterprise procedures</li> <li>• apply knowledge of the relationship between sample preparation requirements and associated tests</li> <li>• deal with customers politely and efficiently</li> <li>• recognise and deal with problems according to enterprise procedures</li> <li>• maintain sample integrity and traceability.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL913001A Communicate with other people</i></li> <li>• <i>MSL943002A Participate in laboratory/field workplace safety.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• a selection of sample containers, tubes, request forms and sample documentation</li> <li>• simulated samples when an authentic sample is unavailable or inappropriate.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of sample receipt and preparation records prepared by the candidate</li> <li>• feedback from supervisors and peers</li> <li>• direct observation of sample receipt and preparation</li> <li>• questioning to assess knowledge of procedures where direct observation is difficult (such as sample receipt and preparation in the field).</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p>

**EVIDENCE GUIDE**

	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Environmental</b></p> <p>A laboratory assistant at a hazardous liquid waste recycling plant is required to log in all samples, match all samples with the in-house profile of the source of the waste, label them and activate the tracking procedure. He/she then prepares a sample for a series of standard tests which are determined by the profile of the waste material (acid or alkali, organic or heavy metal, etc). Given the hazardous nature of the waste, the laboratory assistant must use appropriate safety equipment at all times and ensure the safe disposal of all hazardous material. The assistant must work efficiently as these procedures are activated upon arrival of a road tanker and when the hazardous waste has been verified and judged acceptable for treatment at the plant by the laboratory supervisor. The laboratory assistant also liaises with the truck driver, or the referring client, should the samples (and/or subsequent tests) not comply with enterprise conditions for receiving the hazardous waste.</p> <p><b>Construction materials testing and mineral assay</b></p> <p>A laboratory assistant has received a consignment of disturbed soil samples from a client for classification testing. A test request and field logs have been sent by mail. Each sample is bagged and labelled, with the label showing the name of the client, project, date and sampling location, and a field description of the material. The laboratory policy is that samples weighing more than 20 kg must be bagged so that the individual bags do not exceed this limit and labelled as bag 1 of ..., bag 2 of ...</p>

**EVIDENCE GUIDE**

etc. The assistant checks to ensure all component bags of such samples are present. He/she is careful to handle the samples using safe manual handling techniques. The assistant arranges the samples in order of location and reconciles them with the test request and logs. Two samples have been shown on the request but have not been received. The assistant emails the technician who despatched them and subsequently is advised that they were overlooked during despatch and will be forwarded as soon as possible.

The assistant compares the samples with the field descriptions and finds that they match. Samples that are not designated for testing immediately are set aside in the laboratory store. The remainder are placed in trays for drying in the 50°C oven. The tray numbers are carefully written on the respective worksheets. When the samples have dried and cooled they are split out sufficiently for sieve analysis and plasticity testing, making allowance for the maximum particle size of each sample. The assistant is careful to avoid raising dust during the process.

**Biomedical**

A laboratory assistant has just started a shift in specimen reception and puts on a coat and gloves before touching any samples. There is a pile of samples and forms in the sample box. In some cases, the samples and forms are enclosed in a plastic bag. In other cases, they are seemingly unconnected. The assistant notices that one of the samples has a bloodstained label. She/he quickly examines the samples, isolates the leaking sample in a lockable plastic bag and places the related request form in the bag's separate compartment. The assistant then disposes of her/his dirty gloves. The assistant now logs all samples into the computer, placing to one side a sample and request form that is inadequately labelled. She/he makes a note to call the referring doctor as soon as possible. The assistant places the haematology samples in the colour-coded tray and calls the laboratory for their pickup. She/he then calls the doctor of the patient whose sample is inadequately labelled. She/he records the missing date of birth on the request form, and then barcode/labels tubes for the samples' testing. Within 30 minutes, she/he has cleared the first rush of samples. She/he takes the time to carefully empty the bin of

<b>EVIDENCE GUIDE</b>	
	wastes.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards such as:
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 2243 Set:2006 Safety in laboratories set
  - AS/NZS ISO 14000 Set:2005 Environmental management standards set
- Australia Post Guides
- Australian Dangerous Goods Code
- Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice
- enterprise operating procedures for preparing samples
- enterprise quality manuals
- gene technology regulations
- International Air Transport Association (IATA) Regulations
- material safety data sheets (MSDS)
- occupational health and safety (OHS) national standards and codes of practice
- procedure sheets for physical and chemical separation
- procedure sheets indicating how samples and sub-samples are to be labelled, processed, distributed, flagged for urgent testing or for other non-routine requirements, including referral to external laboratories

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• procedure sheets indicating transport and storage requirements</li> <li>• safety manuals describing personal protective equipment requirements, control of hazardous wastes, containment and cleanup of spillages, and disposal and recycling of wastes</li> </ul>
<b>Samples received</b>	<p>Samples received may include:</p> <ul style="list-style-type: none"> <li>• gas or air samples</li> <li>• liquid samples, such as water and waste water, stormwater, sludges and complex mixtures and sewage</li> <li>• solid samples, such as soils and sediments, rocks/minerals, concrete, quarry or mining products</li> <li>• solid wastes, such as hazardous, non-hazardous, domestic, commercial, industrial, mining and agricultural</li> <li>• biological specimens such as tissue and blood</li> <li>• raw materials, start, middle, end of production run samples and final products</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• biohazards, such as micro-organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids</li> <li>• dust and noise</li> <li>• chemicals, such as acids and hydrocarbons</li> <li>• aerosols</li> <li>• sharps and broken glassware</li> <li>• manual handling of heavy sample bags and containers</li> <li>• crushing, entanglement and cuts associated with moving machinery</li> </ul>
<b>Safe work practices</b>	<p>Safe work practices may include:</p> <ul style="list-style-type: none"> <li>• use of MSDS</li> <li>• use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots</li> <li>• use of biohazard containers and laminar flow cabinets</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling, and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontamination of equipment and work areas</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Co-requisite units

Co-requisite units		

## MSL954001A Obtain representative samples in accordance with sampling plan

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to obtain a range of samples that are representative of the source material (e.g. raw ingredients, product in process and final product) and to prepare the samples for testing. All sampling activities are conducted in accordance with a defined sampling plan. This unit does not cover the subsequent testing of the samples.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to laboratory technicians in all industry sectors. It involves:</p> <ul style="list-style-type: none"> <li>• a range of sampling plans, samples and sampling procedures, which apply to the enterprise site, plant laboratory or field sites</li> <li>• enterprise products/materials and hazardous materials</li> <li>• a range of sampling points and/locations.</li> </ul> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sampling	1.1. Confirm the sampling location, number and type of samples, and timing and frequency of sampling from enterprise or client's sampling plan 1.2. Liaise with relevant personnel to arrange site access and, if appropriate, all necessary clearances and/or permits 1.3. Select sampling equipment and conditions to achieve representative samples and preserve sample integrity during collection, storage and transit 1.4. Check that all procedures are in accordance with client or enterprise requirements, relevant standards and codes 1.5. Identify site and sampling hazards and review enterprise safety procedures 1.6. Assemble and check all sampling equipment, materials, containers and safety equipment 1.7. Arrange suitable transport to, from and around site as required
2. Conduct sampling and log samples	2.1. Locate sampling sites and, if required, services at the site 2.2. Conduct representative sampling in accordance with sampling plan and defined procedures 2.3. Record all information and label samples in accordance with traceability requirements 2.4. Record environment or production conditions and any atypical observations made during sampling that may impact on sample representativeness or integrity 2.5. Transport all samples back to base according to standard operating procedures (SOPs) and relevant codes
3. Prepare samples for testing	3.1. Prepare sub-samples and back-up sub-samples that are representative of the source 3.2. Label all sub-samples to ensure traceability and store in accordance with SOPs 3.3. Follow defined preparation and safety procedures to limit hazard or contamination to samples, self, work area and environment 3.4. Distribute sub-samples to defined work stations maintaining sample integrity and traceability requirements

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
4. Address client issues	4.1. Enter approved information into laboratory information management system (LIMS) 4.2. Report all relevant aspects of the sampling and preparation phases in accordance with enterprise procedures 4.3. Ensure that information provided to client is accurate, relevant and authorised for release 4.4. Maintain security and confidentiality of all client/enterprise data and information
5. Maintain a safe work environment	5.1. Clean all equipment, containers, work area and vehicles according to enterprise procedures 5.2. Check serviceability of all equipment before storage 5.3. Use defined safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.4. Minimise the generation of wastes and environment impacts 5.5. Ensure the safe collection of all hazardous wastes for appropriate disposal

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collecting representative samples in accordance with a sampling plan
- techniques to preserve the integrity of samples
- identifying atypical materials and samples and taking appropriate action
- maintaining sampling equipment
- completing sampling records
- working safely
- following requirements for the disposal of waste and the preservation of the environment

#### Required knowledge

Required knowledge includes:

- principles of representative samples
- principles and procedures for random, systematic and stratified sampling, consistency of sampling procedures
- preservation of the integrity of samples
- maintaining identification of samples relative to their source
- enterprise and/or legal traceability requirements
- cost effectiveness of sampling
- characteristics of product/material to be sampled and likely contaminants
- links between quality control, quality assurance, quality management systems and sampling procedures
- enterprise procedures dealing with legislative requirements for the handling, labelling and transport of hazardous goods
- links between correct occupational health and safety (OHS) procedures and personal and environmental safety particularly at high risk sites

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example: Biomedical and environmental services:

- specific legislation on biohazards
- documentation procedures for the chain of custody for samples to be used as evidence or for blood transfusion

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• collect the specified quantity of sample to enable all processing and testing to occur and back-up samples to be stored</li> <li>• obtain a sample that is representative of the bulk material</li> <li>• preserve the integrity of samples by closely adhering to procedures</li> <li>• label samples and sub-samples to satisfy enterprise/legal traceability requirements</li> <li>• identify atypical materials and samples and take appropriate action</li> <li>• maintain sampling equipment in appropriate condition</li> <li>• complete sampling records using enterprise procedures</li> <li>• follow safety regulations and enterprise OHS procedures during sampling, transport and storage</li> <li>• follow relevant legislative requirements for the disposal of waste and the preservation of the environment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL924001A Process and interpret data</i></li> <li>• <i>MSL943002A Participate in laboratory/field workplace safety</i></li> <li>• <i>relevant MSAL974000 series units of competency</i></li> <li>• <i>relevant MSAL975000 series units of competency relevant to the sampling.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• variety of sample types</li> <li>• sampling plans</li> <li>• a selection of sampling containers and sampling</li> </ul>

<b>EVIDENCE GUIDE</b>	
	equipment.
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• inspection of samples collected by the candidate</li> <li>• review of sampling documentation completed by the candidate</li> <li>• feedback from peers, customers and supervisors that sampling plans were followed</li> <li>• questioning to assess underpinning knowledge of representative sampling procedures</li> <li>• observation of the candidate taking a range of samples.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A metallurgical laboratory technician is very familiar with preparing representative samples for a range of final products in a steelmaking plant. One day, he/she is asked to sample a 50 tonne small-particle coal delivery which is believed to have a higher than acceptable sulphur content. Having never prepared representative samples for such a large quantity of material, the technician consulted their supervisor and developed an appropriate sampling plan. The technician arranged for the operator of a small front-end loader to take buckets of coal from five equally spaced points around the pile. The resulting</p>

**EVIDENCE GUIDE**

material was then combined and mixed in one heap. The technician coned and quartered the heap enough times to obtain a representative sample of about 5kg. He/she arranged for the unwanted material to be returned to the stockpile. On return to the laboratory, the technician crushed the sample and repeatedly coned and quartered the material to obtain an analytical portion.

**Environmental**

A field technician trained in sampling natural water systems is asked to sample a bright yellow industrial wastewater discharge into a small creek. The relevant sampling plan specifies that the samples should be collected where the waste water is well mixed near the centre of the creek and at the mid-depth point. The technician also notes that the samples must be collected where turbulence is at a maximum so that the settling of solids is minimal. On arrival at the site, the technician locates where the wastewater is entering the creek. He/she moves downstream to where the waste water and creek water is well mixed and there is little apparent loss of the yellow suspended solids. The technician dons the required personal protective equipment and uses a convenient bridge to collect a set of six samples and duplicates over a half-hour period using the equipment and procedures specified in the sampling plan. Using a field notebook, the technician records all information specified in the laboratory's chain of custody requirements and safety plan for handling potentially hazardous industrial waste.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS 1199 Sampling procedures and tables for inspection by attributes
  - AS 1678 Emergency procedure guide -Transport
  - AS 1940-2004 Storage and handling of flammable and combustible liquids
  - AS 3780-2008 The storage and handling of corrosive substances
  - AS 4433.2-1997 Guide to the sampling of particulate materials - Preparation of samples
  - AS/NZS 4452:1997 The storage and handling of toxic substances
- American Association of Cereal Chemists (AACC) Approved Methods of Analysis
- Australian Dangerous Goods Code
- enterprise and/or client sampling schemes and sampling plans
- enterprise recording and reporting procedures
- gene technology regulations
- material safety data sheets (MSDS)
- methods and procedures which may be written to meet enterprise, client and/or regulatory/certifying body requirements
- National Code of Practice for the labelling of workplace substances [NOHSC:2012 (1994)]
- site plans, maps and specifications

<b>RANGE STATEMENT</b>	
<b>Basic principles of sampling</b>	<p>Basic principles of sampling include:</p> <ul style="list-style-type: none"> <li>• representative samples</li> <li>• preservation of integrity of samples</li> <li>• maintaining identification of samples relative to their source, enterprise and legal traceability</li> <li>• cost-effectiveness of sampling</li> <li>• consistency of sampling procedures</li> <li>• sampling principles, including random, systematic and stratified sampling</li> </ul>
<b>Materials sampled</b>	<p>Materials sampled may include:</p> <ul style="list-style-type: none"> <li>• gas or air samples</li> <li>• liquid samples, such as water, groundwater, waste water, stormwater, sludges and sewage</li> <li>• solid samples, such as soil, sediments, rocks, concrete, quarry and mining material</li> <li>• solid wastes</li> <li>• raw materials, start, middle, end of production run samples, final products and materials used in production processes, such as flocculants</li> <li>• plants</li> <li>• animals</li> <li>• microbiological samples</li> </ul>
<b>Types of samples</b>	<p>Types of samples may include:</p> <ul style="list-style-type: none"> <li>• grab samples</li> <li>• composite samples</li> <li>• quality control samples</li> <li>• research or one-off samples</li> <li>• environmental or survey samples</li> </ul>
<b>Sampling tools and equipment</b>	<p>Sampling tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• shovels, augers and chain saws</li> <li>• sampling frames, sampling tubes, dip tubes, spears, flexible bladders and syringes</li> <li>• front-end loader, backhoe, excavator and drill rig</li> <li>• sample bottles or containers, plastic containers and disposable buckets</li> <li>• access valves</li> <li>• sample thief</li> <li>• auto samplers</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• pumps and stainless steel bailers</li> <li>• traps and cages</li> <li>• sterile containers, pipettes, inoculating loops and disposable spoons</li> </ul>
<b>Maintenance of integrity of samples</b>	<p>Maintenance of integrity of samples may include:</p> <ul style="list-style-type: none"> <li>• use of compatible container, such as glass, plastic, amber and opaque bottles</li> <li>• use of appropriate preservatives, such as sodium azide, toluene or antibiotics</li> <li>• decontamination of sampling tools between collection of consecutive samples</li> <li>• wrapping container in foil</li> <li>• purging of sample lines and boxes</li> <li>• handling and transport to avoid disturbance or damage</li> <li>• temperature control which may involve insulation of sample without direct contact with the coolant</li> <li>• wrapping in wet newspaper, cloth, sand or sawdust</li> <li>• transfer of sterile sample into sterile container</li> <li>• monitoring of storage conditions</li> </ul>
<b>Site and sampling hazards</b>	<p>Site and sampling hazards may include:</p> <ul style="list-style-type: none"> <li>• solar radiation, dust and noise</li> <li>• wildlife, such as snakes, spiders and domestic animals</li> <li>• biohazards, such as micro-organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids</li> <li>• chemicals, such as acids and hydrocarbons</li> <li>• aerosols</li> <li>• sharps and broken glassware</li> <li>• manual handling of heavy sample bags and containers</li> <li>• crushing, entanglement and cuts associated with moving machinery and hand tools</li> <li>• vehicular and pedestrian traffic</li> </ul>
<b>Safety procedures</b>	<p>Safety procedures may include:</p> <ul style="list-style-type: none"> <li>• use of MSDS</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots</li> <li>• use of biohazard containers and laminar flow cabinets</li> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling, and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontaminating equipment and work areas</li> <li>• machinery guards</li> <li>• signage, barriers, service isolation tags, traffic control and flashing lights</li> <li>• lockout and tag-out procedures</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for handblowing operations	1.1. Identify job, appropriate procedure, hazards and safety requirements 1.2. Use personal protective equipment and safety procedures specified for the job and materials to be used 1.3. Record description of the job to be undertaken, compare with specification and report any variations 1.4. Select and prepare tools and equipment in accordance with job requirements 1.5. Identify glass stocks and components required for the job
2. Follow sequence of operations for glasswork procedure to be performed	2.1. Prepare glass stocks and components as required for the job 2.2. Check and adjust equipment and tools for the job as applicable 2.3. Start up equipment using enterprise procedures 2.4. Carry out glasswork procedure using the appropriate standard method 2.5. Monitor process and rectify routine problems 2.6. Follow equipment shutdown procedures
3. Use annealing equipment	3.1. Prepare annealing equipment for the job 3.2. Start up, operate and shut down annealing equipment using enterprise procedures 3.3. Monitor, adjust and record annealing operation 3.4. Rectify routine problems
4. Maintain a safe work environment	4.1. Follow established work practices to ensure safety of self and other workers 4.2. Minimise the generation of wastes 4.3. Ensure the safe disposal of wastes 4.4. Clean, care for and maintain work area, equipment and tools 4.5. Report any hazards or incidents according to enterprise procedures
5. Maintain records	5.1. Record data as per enterprise requirements 5.2. Maintain equipment logs as per enterprise requirements 5.3. Maintain security and confidentiality of enterprise information

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- working safely with glass
- using tools and equipment to perform basic glassblowing operations
- using appropriate glassblowing hand manipulation techniques
- cutting, heating, bending, shaping, sealing and related glassworking techniques
- techniques for minimising strain
- using coefficients of expansion
- maintaining safe working pressures
- storing glass appropriately
- making and grinding components, such as stopcocks than meet specifications
- starting up, setting up, shutting down and maintaining equipment in accordance with work instructions
- selecting appropriate grades of glass and preparation for use
- optimising of equipment operating parameters
- maintaining temperature and stress parameters
- reporting atypical results and problems to appropriate personnel according to enterprise procedures
- recording and communicating of work results
- following correct occupational health and safety (OHS) and principles of good laboratory practice (GLP)

#### Required knowledge

Required knowledge includes:

- composition and nature of glass types
- function and correct use of apparatus
- basic chemical and physical concepts relating to properties and behaviour of glass
- safe startup and shutdown procedures
- critical material properties and appropriate glassworking parameters
- pre-heating procedures
- basic theory of re-entry angles and stress points
- setup and annealing/conditioning process
- relationship of temperature and temporary and permanent stress
- pre-annealing, annealing and post-annealing processes
- potential quality problems
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• use basic bench/hand glasswork techniques and equipment to fabricate general glass apparatus</li> <li>• start up, set up and shut down equipment in accordance with work instructions</li> <li>• report atypical results and problems to appropriate personnel.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• access to a scientific glassblowing facility, appropriate equipment, materials and procedures</li> <li>• a bank of case studies is required where these form part of the assessment method.</li> </ul>
<b>Method of assessment</b>	<p>It is strongly recommended that assessment is conducted through observation over time.</p> <p>The timeframe must allow for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical additional assessment techniques must be used.</p> <p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• inspection of glasswork and workplace documentation completed by the candidate</li> <li>• analysis of work outputs over a period of time to ensure accurate and consistent work is obtained within required timelines</li> <li>• feedback from peers and supervisors</li> <li>• use of suitable simulation and/or a range of case studies/scenarios.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p>

<b>EVIDENCE GUIDE</b>	
	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Education</b></p> <p>A trainee glassblower has been requested by her/his supervisor to make 100 Pasteur pipettes for a university chemistry practical class the next day. The trainee selects the appropriate glass and type and cuts 50 lengths of glass (two pipettes per length). She/he then proceeds to pull points at the designated markings in the centre of the glass tube using the bench burner. At the conclusion of this operation, the pipettes are cut to the relevant length and then flared at the other end using a specially profiled carbon hand tool. The pipettes are then annealed to eliminate stress caused by the manufacture process. After inspection through a polariscope, the pipettes are delivered to the laboratory for use.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• calibration and maintenance schedules</li> <li>• enterprise recording and reporting procedures</li> <li>• equipment manuals</li> <li>• equipment startup, operation and shutdown procedures</li> <li>• industry codes of practice</li> <li>• material safety data sheets (MSDS)</li> <li>• material, production and product specifications</li> <li>• National Environment Protection Measures</li> <li>• OHS national standards and codes of practice</li> <li>• production and laboratory schedules</li> <li>• quality manuals</li> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• bench burner, hand torch, micro torch and ribbon burner, gas supplies and gas economiser</li> <li>• dydinium glasses and polariscope</li> <li>• glassworking lathe</li> <li>• annealing oven</li> <li>• measuring and recording equipment</li> <li>• hand tools, such as carbon paddles and mandrels, range of forceps, glass tubing gauges, angle setting jigs, calipers, glass support rollers, brass shapers, carbon rods, glass knife, stainless steel gauze, vernier calipers and other measuring tools, and strain viewer</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• mechanical glass cutters and saws</li> <li>• mechanical glass grinding equipment</li> <li>• communication equipment</li> </ul>
<b>Quality problems</b>	<p>Quality problems may include:</p> <ul style="list-style-type: none"> <li>• temperature and strain problems</li> <li>• devitrification</li> <li>• non-uniform thickness of seals or joints</li> <li>• equipment problems</li> <li>• quality problems, such as poor optics, distortion, excessive breakage, non-uniform break pattern, incorrect cross bend, excessive bow, scratches and poor glass shape</li> <li>• loss of utilities</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• sharps and broken glassware</li> <li>• heat sources, such as burners and ovens</li> <li>• fluids under pressure (acetylene and oxygen)</li> <li>• glass dust</li> <li>• cuts associated with glass grinders and cutters</li> <li>• manual handling of heavy sample bags and containers</li> </ul>
<b>Safe work practices</b>	<p>Safe work practices may include:</p> <ul style="list-style-type: none"> <li>• use of personal protective equipment, such as heat resistant gloves, safety glasses, goggles, face guards, coveralls, respirators and safety boots</li> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling, and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontamination of equipment and work areas</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these</li> </ul>

**RANGE STATEMENT**

	<p>requirements must not be compromised at any time</p> <ul style="list-style-type: none"> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## MSL963002A Repair glass apparatus using simple glassblowing equipment

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to perform basic repairs to glass apparatus using simple glassblowing equipment. It includes the ability to assess the economics of salvage and to follow a procedure of disassembly/assembly of the apparatus in accordance with specifications.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to scientific glassblowers. It covers work that will sometimes be performed by less experienced workers under the guidance of an experienced scientific glassblower.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

<b>Prerequisite units</b>		
	<i>MSL963001A</i>	<i>Operate basic handblowing equipment</i>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	1.1. Identify job, appropriate procedure, hazards and safety requirements, and apparatus required 1.2. Establish correct cleaning procedure for contaminated glassware before commencing repair operations 1.3. Use personal protective equipment and safety procedures as specified for job and materials to be used 1.4. Record job description, compare with blueprint, drawing, sketch, design or similar specification and report perceived difficulties 1.5. Prepare equipment for repair in accordance with job requirements 1.6. Identify, select and prepare glass stocks and components for job
2. Repair apparatus	2.1. Check and adjust equipment and tools for job requirements 2.2. Check and adjust equipment and tools for the job 2.3. Start up equipment using enterprise procedures 2.4. Follow supplied designs and enterprise procedures to perform the repairs required 2.5. Follow equipment shutdown procedures
3. Operate annealing equipment	3.1. Prepare annealing equipment for the job 3.2. Start up, operate and shut down annealing equipment using enterprise procedures 3.3. Monitor, adjust and record annealing operation 3.4. Rectify routine problems
4. Maintain a safe work environment	4.1. Follow established safe work practices to ensure safety of self and other workers 4.2. Minimise the generation of wastes 4.3. Ensure the safe disposal of wastes 4.4. Clean, care for and maintain work area, equipment and tools 4.5. Report hazards and incidents according to enterprise procedures
5. Maintain records	5.1. Record data as per enterprise requirements 5.2. Maintain equipment logs as per enterprise requirements 5.3. Maintain security and confidentiality of enterprise

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	information

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- determining types of contaminants present on/in apparatus
- cleaning techniques for contamination carried out before repair operations are undertaken
- using appropriate treatment processes, with particular attention to risks associated with blowing used and possibly contaminated glass
- reading and following blueprints, drawings, sketches and designs relevant to repair work
- selecting appropriate grades of glass and preparing for use
- preparing apparatus for repair
- optimising and using glassblowing equipment
- identifying atypical or out of normal repair problems
- reporting problems to either supervisor or outside service technician according to enterprise procedures
- recording and communicating work results
- following correct occupational health and safety (OHS) and principles of good laboratory practice (GLP)

#### Required knowledge

Required knowledge includes:

- relevant glassblowing techniques
- the risks associated with blowing used and contaminated glass
- contamination cleaning techniques to be carried out before repair operations are undertaken
- use and function of the broken apparatus
- repair materials and reason for their choice
- use of appropriate tools and equipment
- basic chemical and physical concepts related to behaviour of glass under heat and stress
- basic knowledge of how apparatus to be repaired is used
- critical material properties and appropriate glassworking parameters
- pre-repair apparatus preparation procedures
- annealing procedures
- methods of minimising potential quality problems
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• safely repair glass apparatus following enterprise procedures</li> <li>• assess the economics of salvage</li> <li>• follow a procedure of disassembly/assembly of apparatus in accordance with specifications</li> <li>• apply contamination cleaning techniques before repair operations are undertaken</li> <li>• report problems to appropriate personnel.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL963001A Operate basic handblowing equipment.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• access to a scientific glassblowing facility, appropriate equipment, materials and procedures</li> <li>• a bank of case studies where these form part of the assessment method.</li> </ul>
<b>Method of assessment</b>	<p>It is strongly recommended that assessment is conducted through observation over time. The timeframe must allow for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical additional assessment techniques must be used.</p> <p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• inspection of glasswork and workplace documentation completed by the candidate</li> <li>• analysis of work completed over a period of time to ensure accurate and consistent work is obtained within required timelines.</li> <li>• feedback from peers and supervisors</li> <li>• use of suitable simulation and/or a range of case studies/scenarios.</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Education</b></p> <p>A trainee glassblower has been asked by his/her supervisor to repair several pieces of used and broken laboratory glassware as part of a cost saving exercise. Firstly, he/she determines whether the glassware will be used for general tasks or for qualitative analysis and how urgently the job is required. He/she then clarifies whether any hazardous material has been used in the equipment and applies the correct cleaning procedures. After determining the nature of the glass and the appropriate glassworking parameters, he/she repairs the equipment using safe apparatus. Finally the glassblower subjects the equipment to the appropriate annealing/conditioning process and checks the final outcome with his/her supervisor. Any contaminated or used glass waste is disposed of appropriately.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- calibration and maintenance schedules
- enterprise recording and reporting procedures
- equipment manuals
- equipment startup, operation and shutdown procedures
- industry codes of practice
- material safety data sheets (MSDS)
- material, production and product specifications
- national environment protection measures
- OHS national standards and codes of practice
- production and laboratory schedules
- quality manuals
- standard operating procedures (SOPs)

#### Tools, materials and equipment

Tools, materials and equipment may include:

- burners, gas supplies and gas economisers
- glassworking lathes
- mechanical glass cutters and saws
- mechanical glass grinding equipment
- annealing ovens
- measuring and recording equipment
- hand tools, such as carbon paddles and mandrels, range of forceps, glass tubing gauges, angle setting jigs, calipers, glass support rollers, brass shapers, carbon rods, glass knife, stainless steel gauze, vernier calipers and other measuring tools, and strain viewer

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• various glass types, including soda-lime, borosilicate, quartz, silica and special formula glasses</li> <li>• glass to metal seals</li> <li>• communication equipment</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• sharps and broken glassware</li> <li>• heat sources, such as burners and ovens</li> <li>• fluids under pressure (acetylene and oxygen)</li> <li>• glass dust</li> <li>• cuts associated with glass grinders and cutters</li> <li>• manual handling of heavy sample bags and containers</li> </ul>
<b>Safe work practices</b>	<p>Safe work practices may include:</p> <ul style="list-style-type: none"> <li>• use of personal protective equipment, such as heat resistant gloves, safety glasses, goggles, face guards, coveralls, respirators and safety boots</li> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling, and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontamination of equipment and work areas</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret test requirements	1.1. Review test request to identify samples to be tested, test method and equipment involved 1.2. Identify hazards and enterprise controls associated with the sample, preparation methods, reagents and/or equipment
2. Prepare sample	2.1. Record sample description, compare with specification, record and report discrepancies 2.2. Prepare sample in accordance with appropriate standard methods
3. Check equipment before use	3.1. Set up test equipment in accordance with test method 3.2. Perform pre-use and safety checks in accordance with enterprise procedures and manufacturer's instructions 3.3. Identify faulty or unsafe equipment and report to appropriate personnel 3.4. Check calibration status of equipment and report any out of calibration items to appropriate personnel
4. Perform tests on samples	4.1. Identify, prepare and weigh or measure sample and standards to be tested 4.2. Conduct tests in accordance with enterprise procedures 4.3. Record data in accordance with enterprise procedures 4.4. Perform calculations on data as required 4.5. Identify and report out of specification or atypical results promptly to appropriate personnel 4.6. Shut down equipment in accordance with operating procedures
5. Maintain a safe work environment	5.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.2. Minimise the generation of wastes and environmental impacts 5.3. Ensure safe disposal of laboratory and hazardous wastes 5.4. Clean, care for and store equipment and reagents as required

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting enterprise procedure or standard methods accurately
- using safety information, such as material safety data sheets (MSDS) and performing procedures safely
- checking test equipment before use
- completing all tests within required timeline without sacrificing safety, accuracy or quality
- calculating, recording and presenting results accurately and legibly
- maintaining security, integrity and traceability of all samples, data/results and documentation
- cleaning and maintaining equipment

#### Required knowledge

Required knowledge includes:

- concepts of metrology
- the international system of units (SI)
- purpose of test
- principles of the standard method
- pre-use equipment checks
- relevant standards/specifications and their interpretation
- sources of uncertainty in measurement and methods for control
- enterprise and/or legal traceability requirements
- interpretation and recording of test result, including simple calculations
- procedures for recognition/reporting of unexpected or unusual results
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• accurately interpret enterprise procedures or standard methods</li> <li>• complete all tests within the required timeline without sacrificing safety, accuracy or quality</li> <li>• demonstrate close attention to the accuracy and precision of measurements and the data obtained</li> <li>• maintain the security, integrity and traceability of all samples, data/results and documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL922001A Record and present data.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate equipment standards and materials</li> <li>• enterprise procedures and standard methods, and equipment manuals</li> <li>• MSDS.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of the quality of test data/results achieved by the candidate over time</li> <li>• inspection of records and workplace documentation completed by the candidate</li> <li>• feedback from peers and supervisors</li> <li>• observation of the candidate performing a range of basic tests</li> <li>• oral or written questioning to check underpinning knowledge of test procedures.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

<b>EVIDENCE GUIDE</b>	
	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>Standard testing methods may be viewed as legal requirements that must be followed to ensure that a product manufactured in a chemical plant meets the specification by which it is sold to the customer. Technical assistants perform tests in a quality control laboratory to ensure that material meets legal requirements and the material is safe and effective in use. Peroxides may be present in ether as a result of light-catalysed air oxidation. Peroxides are toxic and can give rise to mixtures which are explosive when distilled. Technical assistants test ether to ensure that the level of peroxide is within acceptable limits. The test is done by shaking ether with a solution of potassium iodide. After standing for 30 minutes in the dark the yellow colour of the aqueous phase, due to the liberation of iodine, must not be more intense than a prepared standard solution. These tests ensure the quality and safety of the ether.</p> <p><b>Food processing</b></p> <p>A snack food company produces a range of high quality, impulse purchase snack foods. Some of these products are moisture and/or oxygen sensitive and are therefore packaged in multi-layer flexible packaging to provide optimum shelflife. The packaging must also be able to withstand the rigours of the production and distribution process. While the packaging is purchased to meet the shelflife and distribution specifications, the quality</p>

**EVIDENCE GUIDE**

assurance program requires the periodic evaluation of the packaging materials against these specifications. A laboratory assistant uses standard methods to test the tearing resistance, bursting strength, impact resistance and permeability and/or leakage of the snack food packaging. Tests are also conducted on aspects of the manufacturing process that can affect shelflife. These tests involve the measuring of the heat-seam strength and the sealing performance of the closure process. The test results are recorded by the laboratory assistant to verify the conformance of the materials to the supplier specifications and of the process to the manufacturing specifications. The assistant reports any anomalies or non-conformances to the appropriate personnel.

**Construction materials testing**

A technician performs an Aggregate Stripping Test (AS 1141.50) and enters the results in the laboratory's information management system (LIMS). The resulting 20-30% stripped values (i.e. 70-80% adhering) indicate a 'fail' result. The technician notes that he has repeated the test and obtained the same 'fail' result. The laboratory manager reviews the results and asks the technician to explain how he performed the test. He describes how he prepared 3-4 mm thick plates of bitumen and binding agent in the mould and then placed 50 small clean pieces of aggregate on top. After treatment in an oven for 24 hours and a 50°C water bath in accordance with the test method, the technician had then carefully pulled out the pieces of aggregate and avoiding any twisting motion. He then estimated the % of bitumen adhering to each of the stones with the expectation that the stripped value would be about 5% (i.e. 95% adhering). The manager is satisfied that the technician has performed the test in accordance with the method and suggested that he now re-run the test with a known aggregate as a control. This test gives a stripped value of 5-7% (i.e. 93-95% adhering). The manager is now sufficiently confident of the laboratory's results to sign and issue the test report and explain the aggregate's 'test failure' to the client.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Safely use laboratory chemicals, glassware and equipment	1.1. Apply appropriate safety precautions for use of laboratory equipment and hazardous chemical materials 1.2. Use appropriate laboratory glassware and measuring equipment 1.3. Clean and store glassware and equipment in accordance with enterprise procedures
2. Make up working solutions	2.1. Identify the relevant standard methods for solution preparation 2.2. Assemble specified laboratory equipment 2.3. Select and prepare materials and solvent of specified purity 2.4. Measure appropriate quantities of reagents for solution preparation and record data 2.5. Prepare labels and log solution details in laboratory register 2.6. Transfer solutions to appropriately labelled containers
3. Check existing stock of solutions	3.1. Monitor shelf life of working solutions according to laboratory procedures 3.2. Replace out-of-date or reject solutions according to laboratory procedures 3.3. Conduct routine titrimetric analyses, if appropriate, to determine if solutions are fit for purpose

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- using appropriate materials, equipment and procedures to prepare solutions
- following appropriate occupational health and safety (OHS), and hygiene procedures, if appropriate
- using all equipment safely and efficiently
- using enterprise procedures to calculate concentrations
- identifying solutions not fit for use
- using titrations to determine the concentration of solutions
- labelling, storing and disposing of solutions appropriately
- recording and presenting data appropriately

#### Required knowledge

Required knowledge includes:

- relevant biological, chemical, food and laboratory terminology
- principles of metrology
- the international system of units (SI)
- concentration terms, such as % w/w, % w/v, % v/v, ppm (mg/L) and molarity
- basic theory of acids, bases, salts, buffers and neutralisation
- enterprise procedures for preparing solutions
- calculations required to prepare specified amounts of solutions of specified concentration
- appropriate OHS procedure for preparing, handling and disposal of solutions
- use of material safety data sheets (MSDS)
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• prepare working solutions in compliance with relevant standards, appropriate procedures and/or enterprise requirements</li> <li>• follow OHS procedures to safely use laboratory chemicals glassware and equipment</li> <li>• make up working solutions according enterprise procedures</li> <li>• check existing stocks of solutions as being fit for purpose.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL922001A Record and present data</i></li> <li>• <i>MSL943002A Participate in laboratory/field workplace safety.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate equipment and reagents</li> <li>• SOPs and testing methods</li> <li>• access to appropriate containers and storage facilities.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• inspection of solutions prepared, labelled and stored by the candidate</li> <li>• review of solution records and workplace documentation completed by the candidate</li> <li>• feedback from peers and supervisors</li> <li>• observation of the candidate preparing working solutions</li> <li>• oral or written questioning.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

**EVIDENCE GUIDE**

	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>When starting materials used for the manufacture of common household materials are in transit from the supplier to the manufacturer, they may degrade if subjected to conditions, such as heat, moisture, light and oxygen. Even when the supplier ships quality materials to the manufacturing plant, the materials may be sub-standard when they arrive. Quality control tests are designed to test starting materials to ensure they are within specification. For example, aspirin forms salicylic acid when stored under adverse conditions. Laboratory assistants prepare and monitor the quality of solutions, such as ferric chloride solution, which gives an intense violet colour when added to salicylic acid but gives no colour with aspirin. Absence of the violet colouration indicates that breakdown of the aspirin hasn't occurred.</p> <p><b>Biomedical</b></p> <p>A laboratory assistant made up 1 litre of buffer solution using buffer tablets and a 1 litre volumetric flask as specified in the method. To ensure the solution was suitable for use the assistant measured the pH and found it was within acceptable range. The assistant then appropriately labelled a storage vessel and stored the buffer according to requirements. By following enterprise procedures the shelf life of the buffer was maximised.</p>

**EVIDENCE GUIDE****Environmental**

An environmental laboratory is contracted to determine the acidity of water samples taken from local lakes and streams. A laboratory assistant is required to make up small batches of 0.01M sodium hydroxide and to determine its concentration by titrating it against a standard solution of potassium acid phthalate using phenolphthalein indicator. This procedure is carried out monthly to ensure that the concentration of the sodium hydroxide solution is accurately known. Alternatively, the laboratory assistant may be required to prepare and standardise a fresh batch of sodium hydroxide on a monthly basis. In this case, he/she must understand the underpinning knowledge of basic acid/base theory, potential problems of interferences (such as slow absorption of carbon dioxide by sodium hydroxide solution) so as to ensure that the concentrations of workup solutions are accurately known. He/she must also be skilled in calculating and performing dilution when required to prepare such low concentrations (0.01M) of working solutions.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS 2163-2000 Laboratory glassware - Measuring cylinders
  - AS 2165-1996 Laboratory glassware - Burettes AS 2162.1-1996 Verification and use of volumetric apparatus - General - Volumetric glassware
  - AS ISO 1000-1998 The international system of units (SI) and its application
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 2243 Set:2006 Safety in laboratories set
- Australian code of good manufacturing practice for medicinal products (GMP)
- calibration and maintenance schedules
- enterprise recording and reporting procedures
- equipment manuals
- equipment startup, operation and shutdown procedures
- MSDS and safety procedures
- material, production and product specifications
- national measurement regulations and guidelines
- principles of good laboratory practice (GLP)
- production and laboratory schedules
- quality manuals

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Concepts of metrology</b>	<p>Concepts of metrology may include:</p> <ul style="list-style-type: none"> <li>• that all measurements are estimates</li> <li>• measurements belong to a population of measurements of the measured parameters</li> <li>• repeatability</li> <li>• precision</li> <li>• accuracy</li> <li>• significant figures</li> <li>• sources of error</li> <li>• uncertainty</li> <li>• traceability</li> </ul>
<b>Typical test solutions</b>	<p>Typical test solutions may include:</p> <ul style="list-style-type: none"> <li>• solutions required for diagnostic/analytical and limit tests in food and chemical laboratories, such as sulphates, chlorides and heavy metals</li> <li>• solutions, such as stains for standard diagnostic/analytical procedures in biomedical/environmental laboratories, such as cell staining, fixation of cells and tissues, suspension of cells and titrimetric indicators</li> <li>• solutions required for laboratory maintenance and disinfection, such as 70% ethanol and hypochlorite</li> </ul>
<b>Laboratory equipment</b>	<p>Laboratory equipment may include:</p> <ul style="list-style-type: none"> <li>• pH meters</li> <li>• balances</li> <li>• magnetic stirrers, water baths and hot plates</li> <li>• measuring cylinders, beakers, conical flasks, volumetric flasks, pipettes and burettes</li> <li>• filter papers and funnels</li> <li>• fume cupboards</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• corrosive chemicals, such as acids and alkalis</li> <li>• sources of heat, such as burners</li> <li>• sharps and broken glassware</li> <li>• spillages</li> </ul>
<b>Safety precautions</b>	<p>Safety precautions may include:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• use of MSDS</li> <li>• use of personal protective equipment, such as safety glasses, gloves and coveralls</li> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontamination of equipment and work areas</li> </ul>
<b>Monitoring quality of solutions</b>	<p>Monitoring quality of solutions may include:</p> <ul style="list-style-type: none"> <li>• noting turbidity to exclude absorption of moisture</li> <li>• noting deposits to exclude microbial contamination or chemical degradation</li> <li>• noting crystals to exclude evaporation</li> <li>• conducting titrations to check concentration</li> <li>• noting colour changes indicating a pH shift with solutions containing indicators</li> <li>• checking expiry dates on solution containers</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare culture media	1.1.Prepare mixture of media and solvent to ensure solution and even settling of heat soluble materials 1.2.Label media to allow tracking in subsequent processes 1.3.Use a vessel large enough to endure adequate mixing and heating of the media 1.4.Dispense media into vessels for sterilisation, leaving room for expansion during heating and cooling
2. Sterilise media	2.1.Load the steriliser in keeping with maximum permitted loads and appropriate positioning of materials 2.2.Ensure a sterilisation indicator is correctly placed with the load to monitor sterilisation process 2.3.Operate sterilisation cycle in accordance with manufacturer's requirements to achieve sterilisation at the required settings 2.4.Cool media to the temperature specified in the media formulation procedures
3. Pour, label and store media	3.1.Add labile constituents where necessary, under conditions that will not lead to their denaturation or contamination of media 3.2.Ensure even mixing of additives and media before dispensing 3.3.Aseptically dispense media to minimise occurrence of procedural contamination 3.4.Label media to allow for selection, avoiding areas of the culture vessel required for examination of colony growth 3.5.Store media to maximise shelf life and minimise contamination 3.6.Date batch media to ensure correct batch rotation 3.7.Incubate control plates as a sterility check
4. Perform quality control checks	4.1.Inspect media for any evidence of possible contamination or problems with structure or sterilisation 4.2.Check useability of selective media by growth of expected organism 4.3.Check stored stocks at regular intervals for conformance to required standards

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5. Maintain work area and equipment to prevent cross-infection and contamination	5.1. Use personal protective equipment and safe work practices to ensure safety of self and others 5.2. Place disposable and reusable items into relevant receptacles 5.3. Clean and disinfect work area and equipment after use 5.4. Transport disposable and reusable contaminated materials to relevant areas for disinfection, sterilisation and cleaning or disposal

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- calculating mass and volume
- measuring accurately
- making media to support growth of the relevant micro-organism or tissue
- preventing cross-contamination
- following enterprise procedures consistently
- labelling and storing culture media according to enterprise procedures
- accurately recording data
- reporting non-compliance, anomalies or out of specification results
- sorting, collecting, treating, recycling or disposing of waste
- using appropriate personal protective equipment

#### Required knowledge

Required knowledge includes:

- basic microbiological concepts and terminology such as growth rates in culture, production of gas and haemolysis of red cells in media
- growth requirements of micro-organisms (bacteria, fungi, protozoans, viruses and multi-cellular parasites) in terms of their laboratory culture
- the purpose, content and features of culture media and the relationship between the correct preparation of culture media and the optimal growth of organisms or cells
- nature, properties and use of a range of biological media
- the relationship between sterile practices, hygiene procedures and the ability to obtain growth free of contamination
- the importance of physical requirements, such as pH and temperature on optimal growth of organisms and cells
- the effect of inappropriate storage on culture media quality and performance
- cleaning and sanitising requirements of equipment and work area
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure candidates can:</p> <ul style="list-style-type: none"> <li>• prepare culture media which is free of contamination to facilitate the optimal growth of organisms and cells</li> <li>• use appropriate sterilisation techniques, such as maintaining adequate space between containers</li> <li>• perform post-sterilisation procedures, such as dispensing or adding using aseptic technique</li> <li>• ensure the sterilised media has cooled down sufficiently to ensure that heat labile constituents, such as blood, hormones or antibodies are not inactivated when added to the media</li> <li>• consistently follow enterprise procedures</li> <li>• report non-compliances, anomalies or out of specification results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL943002A Participate in laboratory/field workplace safety</i></li> <li>• <i>MSL973004A Perform aseptic techniques.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• work schedule and enterprise procedures, including advice on safe work practices</li> <li>• relevant equipment and personal protective equipment</li> <li>• MSDS.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of quality assurance results and examination of batches of media prepared by the candidate</li> <li>• observation of the candidate preparing culture media</li> <li>• written and/or oral questioning to assess underpinning knowledge.</li> </ul>

**EVIDENCE GUIDE**

	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Food processing</b></p> <p>A laboratory assistant's task was to prepare and pour agar plates in readiness for milk sampling. The assistant collected all the equipment and material needed to make an agar plate and ensured the working area was suitably prepared. The agar solution was carefully prepared and poured into a large conical flask prior to sterilisation in the autoclave. On completion of the sterilisation cycle, the agar was cooled to 42°C in a water bath. It was then poured into the plates after flaming the neck of the flask. The lids were quickly replaced on the plates to minimise contamination. The plates were then stored. Any excess plates were bagged in a laminar flow unit and then placed in the fridge. The equipment was hot washed and the benches swabbed with 70% ethanol solution.</p> <p><b>Biomedical</b></p> <p>Media preparation is a routine task of the technical assistant. The methods and standard procedures are all documented but common working knowledge and standard 'don'ts' are not always written into the methods. Some ingredients, such as labile nutrients and antibiotics must be added under sterile conditions after the basic ingredients have been mixed and autoclaved. In one laboratory there is a list of ingredients not to be</p>

**EVIDENCE GUIDE**

autoclaved posted on the notice board, in the media recipe book and for good measure, on the autoclave itself. One day, a technical assistant who was preparing media added all the ingredients, including the glucose, then autoclaved all 20L of it. The technical assistant learned the consequences of not paying full attention to the procedure the hard way and spent most of the day removing the 'toffee' residue from inside the autoclave!

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes procedures and/or enterprise requirements

Standards, codes procedures and/or enterprise requirements may include:

## MSL973004A Perform aseptic techniques

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to perform aseptic techniques to maintain the integrity of both the sample source and the sample. It applies to sampling techniques in tissue culture and to generic microbiological procedures.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to laboratory assistants and technicians working in the field or laboratory in the biomedical, biological, food processing and environmental industry sectors.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for aseptic sampling or transfer	1.1.Ensure that any sampling procedure conforms with the requirements of the sampling plan 1.2.Use specified personal protective clothing and equipment 1.3.Prepare the work area for safe and effective sample transfer 1.4.Select equipment and materials specified by the procedure 1.5.Organise equipment to minimise contamination during manipulations 1.6.Label containers for clear identification 1.7.Record details in relevant log or database
2. Transfer materials aseptically	2.1.Protect the integrity of the sample source by sterilising the sampling site and the mouth of transport or culture vessel 2.2.Sterilise inoculating loops and/or pipette where used to prevent contamination 2.3.Perform transfer while minimising opportunities for contamination and cross-infection 2.4.After transfer, and before sealing the transport or culture vessel, flame the vessel mouth to maintain sterility 2.5.Re-sterilise inoculating loops, minimising the generation of aerosols 2.6.Perform quality control checks, if required 2.7.Label transport or culture vessels for clear identification
3. Maintain work area and equipment to prevent cross-infection and contamination	3.1.Place disposable and reusable items into relevant receptacles 3.2.Clean and disinfect work area and equipment after use 3.3.Transport disposable and reusable contaminated materials to relevant areas for disinfection, sterilisation and cleaning or disposal

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- sterilising equipment such as flasks, loops and pipettes
- handling of laboratory equipment and glassware to prevent contamination
- streak plating of inoculations
- sampling transfers
- labelling and storing culture media according to enterprise procedures
- recording data accurately
- reporting non-compliance, anomalies or outofspecification results
- sorting, collecting, treating, recycling or disposing of waste
- following enterprise procedures consistently
- using appropriate personal protective equipment

#### Required knowledge

Required knowledge includes:

- the relationship between sterile practices, hygiene procedures and the ability to obtain growth free of contamination
- cleaning and sanitising requirements of equipment and work area and effects of physical and chemical agents on microbial growth and death
- principles of infection control related to occupational health and safety (OHS), sampling and transfer of materials in microbiological investigations
- disinfection and sterilisation procedures used in the collection, processing and safe disposal of samples and materials
- importance of pure culture techniques and aseptic transfer to the successful microbiological investigation and correct interpretation of laboratory results
- growth requirements of micro-organisms (bacteria, fungi, protozoans, viruses and multi-cellular parasites) in terms of their laboratory culture
- relevant health, safety and environment requirements

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example:

Food processing:

- food spoilage symptoms
- food safety principles
- beneficial/detrimental organisms relevant to specific food industry sector

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>In particular, assessors should look to see that the candidate:</p> <ul style="list-style-type: none"> <li>• follows established laboratory procedures, including recording of samples, operation of equipment and cleaning/decontamination</li> <li>• prevents cross-contamination of sample source and sample</li> <li>• manipulates equipment to prevent contamination of culture medium during transfer</li> <li>• sterilises equipment as required to prevent cross-contamination of work area, personnel and environment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL943002A Participate in laboratory/field workplace safety</i></li> <li>• <i>MSL973003A Prepare culture media.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory with appropriate equipment and materials</li> <li>• enterprise procedures and standard methods</li> <li>• MSDS.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of quality assurance results and examination of samples transferred by the candidate</li> <li>• observation of the candidate successfully transferring a range of samples</li> <li>• written and/or oral questioning to assess underpinning knowledge.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

**EVIDENCE GUIDE**

	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Food processing</b></p> <p>As part of the quality assurance program at an ice-cream manufacturer, six ice-creams were removed from the production line, placed in sterile bags and then stored in a freezer in the microbiology laboratory. Later in the morning, the laboratory assistant removed the samples from the freezer, registered the samples with the date received and test code and signed the register book. She/he then placed the samples in a water bath set at 42(C. While the samples were melting, the laboratory assistant labelled the respective agar plates with the registered codes. Using aseptic techniques she/he carefully transferred 1ml of ice-cream mix into the total plate count agar. The plates were then placed in the incubator. The final results were noted and recorded.</p> <p><b>Biomedical</b></p> <p>In preparation for antibiotic sensitivity testing and biochemical identification of presumed pathogenic bacteria, a technical assistant was asked to prepare a sterile peptone suspension of a lactose fermenting colony. The colony had been previously identified by the supervisor on a MacConkey's agar plate. The assistant labelled a 5mL tube of peptone broth with the sample number and a code for the identified colony and then donned a pair of disposable gloves. Bringing the labelled tube and the MacConkey's plate near to the Bunsen, she/he took an inoculating loop and sterilised it in the</p>

## EVIDENCE GUIDE

incandescent flame. She/he carefully cooled the loop in a sterile area of the agar and gently scraped off half the colony. With the other hand, and in the vicinity of the heated air of the Bunsen, she/he removed the cover of the peptone tube in her/his crooked finger. In a continuous and coordinated way she/he flamed the lip of the tube and emulsified the colony in the broth. She/he then flamed the lip of the tube and replaced its cover. Finally, the technical assistant re-sterilised the inoculating loop by introducing and holding it in the Bunsen flame to minimise the generation of bacterial aerosols.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards, such as: <ul style="list-style-type: none"> <li>• AS/NZS 2243 Set:2006 Safety in laboratories set</li> <li>• AS/NZS 2982.1:1997 Laboratory design and construction - General requirements</li> <li>• AS/NZS 4187:2003 Cleaning, disinfecting and sterilising reusable medical and surgical instruments and equipment and maintenance of associated environments in health care facilities</li> <li>• AS/NZS ISO 14000 Set:2005 Environmental management standards set</li> </ul> </li> <li>• HB 9-1994 Occupational personal protection</li> <li>• Australia New Zealand Food Standards (ANZFS) Code</li> <li>• Australian code of good manufacturing practice for medicinal products (GMP)</li> <li>• Australian Dangerous Goods Code</li> <li>• client and product specifications</li> <li>• manufacturer's instructions or verbal direction from laboratory manager, supervisor or senior technician</li> <li>• material safety data sheets (MSDS)</li> <li>• National Code of Practice for the labelling of workplace substances [NOHSC:2012 (1994)]</li> <li>• National Health and Medical Research Council (NHMRC) Guidelines</li> <li>• OHS national standards and codes of practice</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• operation and maintenance manuals for automated media preparation equipment</li> <li>• principles of good laboratory practice (GLP)</li> <li>• production schedules and instructions</li> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Personal protective equipment</b>	<p>Personal protective equipment may include:</p> <ul style="list-style-type: none"> <li>• gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits and respirators</li> <li>• biohazard containers and laminar flow cabinets</li> </ul>
<b>Sample pot and transfer media and the subculturing and/or passaging of culture</b>	<p>Sample pot and transfer media and the subculturing and/or passaging of culture to:</p> <ul style="list-style-type: none"> <li>• sterile broth</li> <li>• media for isolation of colony</li> <li>• tissue culture media</li> <li>• media for continuous culture systems</li> </ul>
<b>Samples</b>	<p>Samples may include:</p> <ul style="list-style-type: none"> <li>• body fluids and liquids</li> <li>• water and soil</li> <li>• sterile pharmaceuticals</li> <li>• yeasts and moulds</li> <li>• milk and yoghurt</li> <li>• swabs and smears</li> <li>• propagation tissue</li> <li>• plant material</li> <li>• fermented foods and beverages</li> </ul>
<b>Equipment</b>	<p>Equipment may include:</p> <ul style="list-style-type: none"> <li>• transfer equipment, such as inoculating loops, pipettes (quantitative and qualitative), flasks, tubes and spatulas</li> <li>• Bunsen burners and bench incinerators</li> <li>• anaerobic jars</li> <li>• incubators, water baths, refrigerators, freezers and possibly dry ice and liquid nitrogen cylinders</li> <li>• laminar flow units and biohazard cabinets</li> <li>• autoclave or pressure cooker</li> <li>• swabs</li> <li>• continuous culture systems</li> </ul>

<b>RANGE STATEMENT</b>	
<b>The range of material</b>	<p>The range of material may involve:</p> <ul style="list-style-type: none"> <li>• solid and/or liquid media</li> <li>• supplied media, such as media manufactured in the enterprise or raw material supplies for media</li> <li>• disinfecting and sterilising agents and materials, such as methylated spirits, ethanol and ether</li> <li>• disposable equipment and clothing</li> <li>• tissue culture media</li> <li>• growth media in broths, plates, deeps or slopes</li> <li>• receptacles for safe disposal of wastes and for processing of reusable materials</li> <li>• bar coding material and labels</li> </ul>
<b>Sterilisation techniques</b>	<p>Sterilisation techniques may include:</p> <ul style="list-style-type: none"> <li>• autoclaving</li> <li>• flaming</li> <li>• steam and membrane filtration</li> <li>• boiling</li> <li>• microwaving</li> <li>• radiation</li> <li>• high temperature</li> <li>• high pressure steam</li> <li>• gas and chemical treatments</li> </ul>
<b>Quality control checks</b>	<p>Quality control checks may include:</p> <ul style="list-style-type: none"> <li>• streaking out of cultures to a single colony</li> <li>• lawn cultures</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• accessing the sample from difficult or dangerous areas</li> <li>• dry ice and liquid nitrogen vapour</li> <li>• ultraviolet (UV) light sources</li> <li>• heat from Bunsen burners</li> <li>• molten agar</li> <li>• sharps</li> <li>• hazardous substances and/or infectious agents</li> </ul>
<b>Workplace information</b>	<p>Workplace information may include:</p> <ul style="list-style-type: none"> <li>• SOPs</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• specifications for safe waste disposal of bio-hazardous materials</li> <li>• production schedules and instructions</li> <li>• work notes</li> <li>• MSDS</li> <li>• manufacturer's instructions</li> <li>• verbal instructions from laboratory manager, supervisor or senior technician</li> <li>• guidelines for small scale genetic manipulation work</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## MSL973005A Assist with fieldwork

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency describes the ability to perform tasks associated with the organisation of fieldwork and field surveys. It also covers basic field survival skills and collection of samples in the field.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to laboratory and field assistants working in the environmental, mining, construction materials testing and rural industry sectors.</p> <p>All aspects of field and laboratory work covered by this unit of competency would be supervised by a scientific officer or technical officer. Though a supervisor may not always actually be present, the worker will follow standard operating procedures that clearly describe the permitted scope of practice. This unit of competency does not include gaining clearance for animal trapping, tagging, keeping or experimentation. It does not cover animal handling techniques.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist with organisation of fieldwork	1.1. Purchase supplies and equipment as specified by senior staff 1.2. Assemble supplies and equipment and check against inventory 1.3. Pack supplies and equipment appropriately for safe transport
2. Support field operations	2.1. Check unpacked items against inventory 2.2. Store supplies and equipment as specified 2.3. Restock supplies as necessary 2.4. Collect and/or dispose of waste in accordance with enterprise and environmental requirements
3. Assist with field activities	3.1. Assemble equipment and materials for fieldwork as directed 3.2. Collect samples, if required, in accordance with enterprise procedures, animal care and ethics and other legislative requirements 3.3. Store samples in accordance with special requirements for continued wellbeing, viability or integrity of sample 3.4. Perform simple field measurements as directed 3.5. Collect and maintain records of site data as directed
4. Demonstrate basic field survival skills	4.1. Follow specified safety procedures 4.2. Follow specified survival procedures in the event of emergencies and accidents 4.3. Wear suitable clothing as protection against solar radiation, extreme temperatures and impact injury
5. Assist with the completion of fieldwork	5.1. Pack supplies, equipment and samples appropriately for safe return transport 5.2. Check and clean used equipment to prevent deterioration and contamination 5.3. Check that the condition of vehicles, equipment and materials comply with environmental/quarantine requirements for preventing transfer of pests 5.4. Return supplies and equipment to storage at enterprise location 5.5. Conduct a stocktake of equipment and supplies for replenishment where required 5.6. Assist with the dispatch of collected samples for laboratory analysis, as necessary

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- using two-way radio and satellite phone in accordance with enterprise procedures
- using basic field survival strategies, such as map reading, use of compass and global positioning system (GPS) and 'stay with vehicle' in the event of accident or emergency
- organising, packing/unpacking and stowing materials and equipment with close attention to detail
- collecting samples in accordance with enterprise procedures and legislative requirements
- storing and maintaining samples in accordance with special requirements for continued wellbeing, viability and integrity of sample
- maintaining accurate and complete data records and checklists
- working safely and in accordance with environmental requirements
- cleaning equipment and collecting and disposing of wastes in accordance with safety and environmental requirements

#### Required knowledge

Required knowledge includes:

- terms used to describe the relevant industry sector's field equipment, materials, samples and specimens
- enterprise procedures relating to sample collection, maintenance and storage
- enterprise procedures relating to field testing
- specific legislation and codes of practice related to sample and animal collection (if relevant in the industry sector)
- principles of safety relating to fieldwork, such as use of LPG, operation of generators and use of protective clothing
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>perform all field activities according to enterprise procedures, legislative and environmental requirements, industry guidelines and codes of practice</li> <li>complete all tasks efficiently and safely.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li><i>MSL913001A Communicate with other people</i></li> <li><i>MSL913002A Plan and conduct laboratory/field work.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>enterprise procedures, regulations and codes of practice</li> <li>relevant field equipment, samples, test kits and reagents.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>review of performance with a focus on completing field activities safely and efficiently, collection of field samples and data, basic field survival skills, teamwork and accurate record keeping</li> <li>paper exercises associated with organisation of fieldwork, fieldwork operations and basic field survival strategies</li> <li>role plays based on possible accident and emergency situations requiring use of communication procedures and basic field survival strategies</li> <li>oral or written questions.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p>

<b>EVIDENCE GUIDE</b>	
	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Environmental (1)</b></p> <p>On a field trip to determine the biodiversity of an island fringing reef, a technical assistant assists with constructing a grid map of the study area. The assistant counts the number of six different species of plant in part of the grid, taking care to minimise the impact on the environment. He/she also accurately records the data on a map to show the location of each plant using a predetermined key.</p> <p><b>Environmental (2)</b></p> <p>A technical assistant is asked to pack and safely transport water sampling and monitoring equipment to a distant field site. Firstly, the assistant checks that all the equipment is in working order and that he/she is able to use and maintain it. Given that the technical assistant is licenced to operate a small boat and is a competent underwater diver, he/she also performs a simple underwater survey of macrophytes in a lake in the study area. The assistant follows standard safety and operating procedures and records the results on a grid map and in the daily log book.</p> <p><b>Construction materials testing</b></p> <p>A contract laboratory has assigned a team of three to conduct pavement investigations in a rural/remote region. The field assistant uses a checklist to assemble all the required equipment and supplies for a three day trip. The assistant checks the vehicle, toolkit and spares, communication equipment, GPS, water, first aid kit and</p>

**EVIDENCE GUIDE**

personal protective equipment. He/she also checks that the generator, fuel, jackhammer, dynamic cone penetrometer (DCP), sample bags, measuring devices and camera are all present and in good working order. Because the team will be working away from base for three days, the assistant knows that it is vital that all items are present and stowed safely before he/she tells the team leader that the vehicle is ready for departure.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

## MSL973006A Prepare trial batches for evaluation

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to prepare trial batches of materials for evaluation. Materials can include soil, minerals and manufactured products, such as concrete, asphalt, food, plastics, paint and other industrial chemicals.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to laboratory assistants working in all industry sectors. It describes work conducted by laboratory assistants, generally working under the guidance of a senior technician or laboratory supervisor/manager.</p> <p>Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for trial batch mixing	1.1. Identify the job, materials, appropriate procedures and safety requirements 1.2. Record description of the job to be undertaken, compare with specification and report any variations 1.3. Select and prepare tools, equipment and materials in accordance with job requirements 1.4. Confirm the properties and quantities of materials to be used 1.5. Confirm that the required materials are available and ready for use
2. Mix trial batch for evaluation	2.1. Measure out quantities of materials ready for mixing 2.2. Mix the materials according to established procedures 2.3. Discharge the mixture ready for inspection and testing according to established procedures 2.4. Record details of the mix and any observations according to established procedures
3. Evaluate properties of the mixture by inspection and standard test methods	3.1. Obtain representative samples of the mix for testing 3.2. Perform specified tests according to established procedures 3.3. Handle and transport samples in accordance with established procedures 3.4. Label samples and record details in accordance with established procedures
4. Clean equipment and dispose of materials	4.1. Clean mixing, measuring, sampling and testing equipment after use 4.2. Return unused materials to storage 4.3. Dispose of excess materials safely and ethically
5. Maintain records	5.1. Record data in accordance with established procedures 5.2. Maintain equipment records in accordance with established procedures 5.3. Maintain confidentiality of enterprise information
6. Maintain a safe work environment	6.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 6.2. Minimise the generation of wastes and environmental impacts

ELEMENT	PERFORMANCE CRITERIA
	<p>6.3.Ensure safe disposal of laboratory and hazardous wastes</p> <p>6.4.Clean, care for and store equipment and reagents as required</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- performing simple calculations
- making accurate measurements of volume and mass
- representative sampling
- working safely with equipment and hazardous materials
- working safely in laboratory and field conditions
- setting up and maintaining tools and equipment
- using tools and equipment to perform basic sampling and testing techniques
- observing and recording information on testing and sampling
- handling, transporting and storing materials
- observing interpreting and reporting atypical situations

#### Required knowledge

Required knowledge includes:

- the international system of units (SI)
- concepts of metrology
- the properties of mixing materials and how they affect the properties of the final product
- hazards involved with materials and equipment involved
- representative sampling
- uses of various materials/enterprise products
- basic testing methods for relevant materials
- enterprise traceability requirements
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• perform operations in accordance with laboratory and/or enterprise procedures, and appropriate legislative requirements</li> <li>• accurately measure, calculate and record batch quantities, concentrations and other relevant parameters</li> <li>• evaluate properties of the mixture by inspection and standard test methods</li> <li>• recognise and report problems and atypical situations to relevant personnel.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL952002A Handle and transport samples or equipment</i></li> <li>• <i>MSL954001A Obtain representative samples in accordance with sampling plan</i></li> <li>• <i>MSL973001A Perform basic tests.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard facility with appropriate tools, equipment and materials</li> <li>• enterprise procedures, MSDS and product formulation/specifications.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• analysis of trial batches prepared by the candidate over a period of time to ensure accurate and consistent work is obtained within required timelines</li> <li>• inspection of workplace documentation completed by the candidate</li> <li>• feedback from peers and supervisors</li> <li>• use of suitable simulation and/or a range of case studies/scenarios.</li> </ul>

**EVIDENCE GUIDE**

	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<p><b>This competency in practice</b></p>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Construction materials</b></p> <p>A laboratory assistant works for a concrete manufacturer. A client requires concrete for a specific project that cannot be supplied using existing standard mixes. The manufacturer must use special aggregates and cement to meet the durability and strength specifications for the project. The laboratory manager obtains quantities of the materials for evaluation purposes. The assistant tests the aggregates to determine their grading properties. From these results, he/she designs a mix to satisfy the project specifications using a standard design method. The mix requires the use of pozzolanic materials and admixtures that were obtained from the suppliers.</p> <p>The manager provides the assistant with the batch quantities required to produce one cubic metre of concrete. To test the mix design, the assistant will produce a 20litre batch in the laboratory. He/she calculates that this quantity will provide sufficient material for the required tests, without undue waste. He/she calculates the quantity of each material required for the trial batch. The assistant selects and prepares the tools and equipment she needs to mix, sample and test the concrete. He/she wears overalls, safety boots and glasses, and uses a barrier cream. He/she measures out</p>

**EVIDENCE GUIDE**

the quantities required for the trial batch, charges the mixer and allows it to mix for the specified time. He/she then discharges the concrete onto a suitable surface. He/she checks its slump, cohesiveness and air content, recording the data on standard enterprise forms. The manager inspects the concrete, and decides that it is over-sanded and has excessive slump. He/she adjusts the batch quantities and draws up amended values. He/she disposes of the excess concrete and cleans the equipment and tools.

He/she then mixes a new batch using the amended figures. This process continues until the manager is satisfied with the concrete quality. He/she then mixes a larger batch so that he/she can prepare specimens for testing its hardened-state properties.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards such as:</li> <li>• AS ISO 1000-1998 The international system of units (SI) and its application</li> <li>• enterprise recording and reporting procedures</li> <li>• enterprise sampling procedures for specific samples, sites and clients</li> <li>• equipment manuals</li> <li>• equipment startup, operation and shutdown procedures</li> <li>• maps and site plans</li> <li>• material safety data sheets (MSDS)</li> <li>• material, production and product/formulation specifications</li> <li>• national measurement regulations and guidelines</li> <li>• production and laboratory schedules</li> <li>• safety procedures</li> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Materials, tools and equipment</b>	<p>Materials, tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• soils, concrete, asphalt, aggregates, polymers, ceramics, metals, foodstuffs and solvents</li> <li>• ovens, sieves, balances, volumetric measures and mixers</li> <li>• hand tools, including shovels, scoops and spatulas</li> <li>• consumables, including sample bags and labels</li> <li>• documentation, including specifications,</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>manufacturers' handbooks and worksheets</p> <ul style="list-style-type: none"> <li>• test equipment appropriate to the various materials</li> </ul>
<b>Simple calculations</b>	<p>Simple calculations may include:</p> <ul style="list-style-type: none"> <li>• proportion, ratio and percentage for batch quantities</li> <li>• concentrations</li> <li>• other relevant parameters</li> </ul>
<b>Concepts of metrology</b>	<p>Concepts of metrology may include:</p> <ul style="list-style-type: none"> <li>• that all measurements are estimates</li> <li>• measurements belong to a population of measurements of the measured parameters</li> <li>• repeatability</li> <li>• precision</li> <li>• accuracy</li> <li>• significant figures</li> <li>• sources of error</li> <li>• uncertainty</li> <li>• traceability</li> </ul>
<b>Typical problems</b>	<p>Typical problems may include:</p> <ul style="list-style-type: none"> <li>• not following SOPs</li> <li>• measurement errors</li> <li>• calculation errors</li> <li>• materials of unreliable quality</li> <li>• insufficient mixing</li> <li>• poor sampling procedures</li> <li>• equipment breakdown and breakage</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• electric shock</li> <li>• biohazards, such as microbiological organisms and agents associated with soil, air and water</li> <li>• solar radiation, dust and noise</li> <li>• chemicals</li> <li>• sharps, broken glassware and hand tools</li> <li>• flammable liquids and gases</li> <li>• fluids under pressure</li> <li>• manual handling heavy objects</li> <li>• crushing, entanglement and cuts associated</li> </ul>

<b>RANGE STATEMENT</b>	
	with moving machinery or falling objects
<b>Safety procedures</b>	<p>Safety procedures may include:</p> <ul style="list-style-type: none"> <li>• recognising hazard warnings and safety signs</li> <li>• use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion, gloves, safety glasses, goggles, face guards, coveralls and safety boots</li> <li>• use of MSDS</li> <li>• following established manual handling procedures</li> <li>• regular cleaning and/or decontaminating of equipment and work areas</li> <li>• ensuring access to service shut-off points</li> <li>• identifying and reporting operating problems or equipment malfunctions</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret test requirements	1.1. Review test request to identify samples to be tested, test method and equipment involved 1.2. Identify hazards associated with the sample, preparation methods and equipment and implement enterprise control measures
2. Set up work area for preparation and examination of samples	2.1. Collect equipment and arrange the workspace so that equipment can be used safely and efficiently 2.2. Perform pre-use and safety checks to ensure equipment is fit for purpose and report faulty or unsafe equipment to appropriate personnel
3. Prepare samples for examination	3.1. Log and label samples according to enterprise procedures to ensure traceability 3.2. Check suitability of the original and prepared sample for the examination and report unsuitable samples to appropriate personnel 3.3. Prepare and store the sample for examination following enterprise methods
4. Set up and use a light microscope	4.1. Set up the light path to optimise resolution 4.2. Select the appropriate objectives and filter for the sample being examined 4.3. Ensure that the lenses are clean 4.4. Adjust settings and alignment of the light path to optimise performance 4.5. Place sample correctly on the stage
5. Observe, identify and report sample characteristics	5.1. Recognise and identify significant sample characteristics 5.2. Perform required calculations accurately 5.3. Prepare and view control samples and check that results are consistent with expected values 5.4. Identify and report out of specification or atypical results promptly to appropriate personnel 5.5. Record and report data in accordance with enterprise procedures
6. Maintain a safe work environment	6.1. Ensure safety and minimise cross-contamination through the use of personal protective clothing and safety equipment 6.2. Handle all samples and equipment in accordance with enterprise safety protocols 6.3. Clean up spills using appropriate techniques to

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	protect personnel, work area and environment 6.4.Minimise generation of waste and environmental impacts 6.5.Collect and dispose of all wastes safely 6.6.Report hazards and incidents to designated personnel using enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- setting up the workbench and microscope ergonomically
- setting up, cleaning and using a light microscope to achieve optimum resolution of the specimen
- using personal protective clothing and other safety equipment correctly
- performing counts on samples
- performing basic measurements using grids
- logging and tracking samples through all steps from receiving a sample through to completion of a procedure and reporting
- interpreting and recording test results, including simple calculations
- correctly handling and storing samples and equipment

#### Required knowledge

Required knowledge includes:

- parts and functions of a light microscope
- importance and appropriate use of controls and certified reference materials
- hazards and risks in laboratories associated with performing microscopic examination
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements

#### Specific industry

Additional knowledge requirements may apply for different industry sectors. For example:

Biological industry:

- basic structure and function of cells and organelles
- basic classes and classification of organisms of organisms, such as prokaryotes, eukaryotes, plants, animals, bacteria, viruses and prions
- cell physiology and processes, such as simple and facilitated diffusion, plasmolysis, osmosis, tonicity, active transport, energy production, mitosis, motility, phagocytosis and pinocytosis
- purposes and mechanisms of staining (e.g. Gram +ve and -ve)

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• follow enterprise standards, procedures and practices</li> <li>• prepare suitable samples</li> <li>• recognise, identify and document significant sample characteristics</li> <li>• set up a light microscope for optimal resolution</li> <li>• maintain personal safety and that of others</li> <li>• minimise cross-contamination and contamination of the laboratory and environment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL922001A Record and present data</i></li> <li>• <i>MSL933002A Contribute to the achievement of quality objectives</i></li> <li>• <i>MSL943002A Participate in laboratory/field workplace safety</i></li> <li>• <i>MSL953001A Receive and prepare samples for testing.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate equipment, such as light microscopes and samples</li> <li>• enterprise procedures, standard methods and materials.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• observation of the candidate performing microscopic examinations</li> <li>• review of data records prepared by the candidate, such as counts, observations and results</li> <li>• feedback from supervisors and peers about adherence to enterprise/technical procedures</li> <li>• questioning to assess underpinning knowledge.</li> </ul>

**EVIDENCE GUIDE**

	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p><b>Construction materials testing</b></p> <p>The supply of river sand is running out and quarries are accessing alternative sources of sand for use in concrete mixes in construction. The sand should not be an aggregate that is likely to break down into smaller particles. A technician in a quarry company is required to analyse samples of crushed rock using a light microscope. The technician looks for characteristics of the sample, such as angularities, roundness, sharpness, cracks, presence of organic matter, mineral structure and whether the particles are a conglomerate. If the sample does not meet the characteristics, the company will need to treat it to make it suitable for use in concrete mixes (for example by washing, crushing and sieving).</p> <p><b>Food processing</b></p> <p>A customer complaint is received about the baking properties of a flour delivery. The laboratory assistant at the flour mill is given the task of testing the starch content of the suspect flour. He/she prepares iodine stained samples of the returned flour and a range of baked and partially baked products prepared from it. First, the assistant makes up fresh iodine staining solution and then prepares slides of each sample for microscopic examination. He/she identifies the</p>

**EVIDENCE GUIDE**

characteristic starch granules of the flour sample and records the degree of gelatinisation in the starch granules in the baked samples. He/she discusses the results with the supervisor and prepares a report for the customer.

**Biomedical**

A laboratory assistant works in the microbiology laboratory of a public hospital and is responsible for preparing and staining sputum smears from patients for micro and culture. The assistant puts on a clean gown and gloves before collecting the specimens from the reception area of the laboratory. The assistant prepares cultures of the sputum specimens on simple and selective media before preparing, fixing and staining smears for microscopic examination. The results are checked by the supervisor, entered into the laboratory information management system (LIMS) and sent to the appropriate section of the hospital.

**Environmental**

A laboratory assistant prepares media for plant tissue culture. There has been some contamination of Gram-positive bacteria in the last two batches and the supervisor has initiated an overhaul of the preparation and aliquotting procedure. The laboratory assistant has been asked to follow the new procedure exactly and to remove samples at each stage of ingredient addition for microscopic examination. The laboratory assistant records the exact addition amounts, batch numbers and brands of the reagents, the location of the addition (which biohazard cabinet), the equipment used and the pre-sterilisation records of all equipment.

The laboratory assistant then prepares slides, fixes them and performs a Gram stain on each of the aliquots removed from the new preparation run. Microscopic analysis of each aliquot reveals nil contamination. The supervisor decides that there has been a breach in the old procedure and the laboratory assistant is asked to follow the new procedure and to perform a routine microscopic check on all batches for the next month.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
  - AS/NZS 2243 Set:2006 Safety in laboratories set
- principles of good laboratory practice (GLP)
- Australian code of good manufacturing practice for medicinal products (GMP)
- safety manuals
- quality manuals and equipment and procedure manuals
- standard operating procedures (SOPs)
- material safety data sheets (MSDS)
- enterprise recording and reporting procedures
- production and laboratory schedules
- material, production and product specifications

#### Preparation of samples

Preparation of samples may include:

- aseptic transfer of specimen
- centrifugation
- cooling
- drying
- filling a counting chamber in one continuous flow without bubbles or overflow
- filtration

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• fixing of films to minimise cell damage and the production of artefacts</li> <li>• labelling</li> <li>• mounting of stained films, sections and whole mounts to ensure long term preservation</li> <li>• permanent labels for smears, films and sections for presentation, storage and retrieval</li> <li>• physical or chemical separation</li> <li>• selection of diluent to preserve or enhance visibility of the cells to be counted</li> <li>• selection, filling and cover slipping of a clean, dry counting chamber to ensure even distribution of cells during filling</li> <li>• serial dilution to enable individual cells to be reliably counted</li> <li>• staining of fixed material to illustrate required characteristics</li> <li>• sub-sampling</li> <li>• thin film or smear on a slide</li> </ul>
<b>Checking sample condition</b>	<p>Checking sample condition may include:</p> <ul style="list-style-type: none"> <li>• labelling</li> <li>• spillage</li> <li>• spoilage due to incorrect storage and transport conditions</li> <li>• temperature control</li> <li>• suitability for the examination</li> </ul>
<b>Pre-use checks</b>	<p>Pre-use checks may include:</p> <ul style="list-style-type: none"> <li>• calibration</li> <li>• cleaning/checking use by dates of reagents</li> <li>• routine maintenance</li> </ul>
<b>Equipment</b>	<p>Equipment may include:</p> <ul style="list-style-type: none"> <li>• glass slides</li> <li>• counting chambers (e.g. haemocytometer)</li> <li>• optical graticules and stage micrometers</li> <li>• tissue culture flasks</li> </ul>
<b>Light microscopes</b>	<p>Light microscopes may include:</p> <ul style="list-style-type: none"> <li>• bright field illumination microscopic examination up to 1000x magnification</li> <li>• stereomicroscopes and dissection microscopes</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• compound microscopes</li> <li>• phase contrast microscopes</li> <li>• inverted microscopes</li> </ul>
<b>Biological samples</b>	<p>Biological samples may include:</p> <ul style="list-style-type: none"> <li>• smears, impression smears, sections, squashes, films and whole mounts</li> <li>• a monolayer of cells in smears and films</li> <li>• fixed smears for demonstration of bacteria by the methylene blue and Gram staining techniques</li> <li>• blood films stained by a Romanowsky technique to clearly show differentiation of granulocytes</li> <li>• stained sections of animal tissues using regressive haematoxylin and eosin to differentiate cytoplasmic and nuclear detail</li> <li>• differentially stained monocotyledon and dicotyledon stem sections to demonstrate the structure of vascular bundles (xylem, phloem and cambium)</li> <li>• stained whole mounts of helminths</li> <li>• whole mounts, such as liver flukes, planaria and samples of animal faeces to demonstrate ova, cysts and larvae</li> <li>• pond water organisms</li> <li>• onion root tip squash</li> <li>• midstream sample of urine</li> </ul>
<b>Physical samples</b>	<p>Physical samples may include:</p> <ul style="list-style-type: none"> <li>• sand</li> <li>• asbestos fibres</li> <li>• coal samples</li> <li>• construction testing materials</li> <li>• geological specimens</li> </ul>
<b>Checking prepared samples</b>	<p>Checking prepared samples may include looking for:</p> <ul style="list-style-type: none"> <li>• clean and scratch-free microscope slides to reduce artefacts</li> <li>• preparation according to SOPs</li> <li>• a homogeneous suspension of sample</li> <li>• films and smears that have been fixed rapidly</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• thin films with a monolayer of cells</li> <li>• appropriate whole mounts for intact organisms</li> <li>• correct sample identification during and after processing</li> </ul>
<b>Sample characteristics</b>	<p>Sample characteristics are restricted to what can be viewed by bright light microscopy and may include:</p> <ul style="list-style-type: none"> <li>• shape and size of particles</li> <li>• presence of contamination</li> <li>• colour</li> <li>• consistency and variability</li> <li>• number of cells (e.g. cells in blood or other particulate samples, such as a yeast suspension or pollen grains)</li> <li>• type of cells, percentage of atypical cells, presence/absence of cells, size of cells, viable and non-viable cells and trajectory</li> <li>• presence of stained material, such as starch</li> <li>• colour/staining and morphology</li> <li>• motility</li> </ul>
<b>Calculations</b>	<p>Calculations may include:</p> <ul style="list-style-type: none"> <li>• dilutions</li> <li>• percentage viability</li> <li>• number of cells in original sample after dilution</li> <li>• calculation of cells/ml in a number of squares of a counting chamber</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• micro-organisms and agents associated with soil, air, water, blood and blood products and human or animal tissue and fluids</li> <li>• chemicals and stains</li> <li>• sharps and broken glassware</li> <li>• aerosols</li> </ul>
<b>Safety practices and personal protective equipment</b>	<p>Safety practices and personal protective equipment may include:</p> <ul style="list-style-type: none"> <li>• use of MSDS</li> <li>• use of personal protective equipment, such as safety glasses, gloves and coveralls</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• use of biohazard containers and laminar flow cabinet</li> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling and storing hazardous materials and equipment in accordance with labels, MSDS and manufacturer's instructions</li> <li>• ergonomic layout, correct illumination and organisation of workbench</li> <li>• regular cleaning and/or decontamination of equipment and work areas</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

Co-requisite units		

## MSL973012A Assist with geotechnical site investigations

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to prepare for and assist with site activities such as excavations, sampling and testing as part of a geotechnical investigation team. Personnel are expected to identify common site problems and seek advice to deal with situations beyond their own technical competence.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit of competency is applicable to laboratory assistants working under the close supervision of a senior technician in the construction, mining and drilling industry sectors.  Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for on-site operations	1.1. Confirm details of the job, location, work instructions, appropriate sampling/test procedures and safety requirements with supervisor 1.2. Identify likely site hazards, personal protective equipment and safety procedures that are specified for the job and materials used 1.3. Collect, check, and stow all tools, equipment and materials required at the site 1.4. Confirm site access requirements such as entry permits and participate in safety induction as required
2. Assist with excavation of boreholes, test pits and/or trenches	2.1. Confirm specified sampling/testing locations with supervisor 2.2. Excavate to the specified sampling/testing depth, minimising disturbance and potential contamination of the site 2.3. Ensure materials from different strata are kept separate 2.4. Recognise materials and record changes of strata, test results
3. Assist with site sampling	3.1. Prepare and check sampling equipment and materials 3.2. Take disturbed and undisturbed samples as directed and in accordance with enterprise methods/procedures 3.3. Label samples and record samples/site conditions in accordance with enterprise methods/procedures
4. Assist with site testing	4.1. Conduct pre-use checks of test equipment 4.2. Perform basic tests as directed and in accordance with test methods or enterprise procedures 4.3. Record data in accordance with test methods or enterprise procedures 4.4. Recognise obvious errors or atypical data and seek advice
5. Assist with finalising site operations	5.1. Reinststate the site in accordance with instructions 5.2. Clean all equipment (and vehicle as necessary) avoiding environmental damage, stormwater contamination or spread of pests 5.3. Check all equipment/materials prior to re-stowing them for safe transport 5.4. Handle and transport samples in accordance with

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>enterprise procedures</p> <p>5.5. Notify appropriate site personnel on completion of tasks and prior to leaving site (if unsupervised)</p> <p>5.6. On return to base, check serviceability of test equipment before storage</p>
6. Assist with maintaining records	<p>6.1. Complete relevant parts of site safety plans, equipment logs and test reports in accordance with enterprise procedures</p> <p>6.2. Maintain confidentiality of enterprise information</p>
7. Maintain a safe work environment	<p>7.1. Use safe work procedures and protective equipment to ensure personal safety and that of others</p> <p>7.2. Minimise environmental impacts of testing/sampling and generation of waste</p> <p>7.3. Collect and/or dispose of all waste in accordance with enterprise procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting maps, site plans and drawings
- recognising site services, sampling and testing sites
- setting up, checking, using and cleaning/maintaining tools and equipment
- taking representative samples, handling and transporting samples
- recognising soil, rock and fill materials
- recognising site features and geotechnical conditions
- performing basic insitu tests and site measurements (e.g. location and depth)
- maintaining accurate and complete records
- communicating problems to appropriate personnel
- driving safely on and off-road
- working safely on construction sites around heavy equipment and earthmoving plant

#### Required knowledge

Required knowledge includes:

- the basic concepts, purposes and principles of geotechnical site investigation
- site safety and management rules (safety induction, risk assessments, controlled entry/exit to site and required protective equipment and clothing)
- simple methods for identifying and classifying materials
- basic engineering properties of soil and rock materials and their use in engineering and construction
- basic principles of representative sampling and testing
- basic insitu testing methods
- relevant occupational health, safety (OHS) and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• prepare for site operations and perform geotechnical sampling, testing and site reinstatement under direction</li> <li>• work safely at geotechnical investigation sites</li> <li>• follow instructions and work as part of a small team.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment through observation over time. The timeframe must allow for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical, additional assessment techniques must be used.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL952002A Handle and transport samples or equipment</i></li> <li>• <i>MSL952001A Collect routine site samples</i></li> <li>• <i>MSL973001A Perform basic tests.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• access to geotechnical sites, tools, equipment</li> <li>• enterprise procedures, sampling plans, test methods and equipment manuals.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of work outputs over a period of time to ensure accurate and consistent work is obtained within required timelines</li> <li>• examples of completed workplace documentation</li> <li>• feedback from peers and supervisors</li> <li>• oral or written questioning.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p>

**EVIDENCE GUIDE**

	<p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Construction materials</b></p> <p>A geotechnical consultancy company is carrying out the investigation for the construction of an industrial complex involving building pads and roadways. A contract drilling company has been hired to carry out auger drilling for the building pad foundations. The drill rig will be used to perform standard penetration tests in some boreholes to determine bearing capacities. Undisturbed sample tubes will be pushed to obtain samples for consolidation testing in the laboratory.</p> <p>A senior technician is in charge of site activities and arranges for the drill rig to be on-site. She/he plans a program of drilling, sampling and testing and a laboratory assistant is assigned to assist with drilling, testing and sampling operations at the site. The senior technician has a marked-up plan of the site showing borehole locations to help him/her direct where to drill.</p> <p>The drilling contractor operates the drill rig, takes tube samples, performs the standard penetration tests and cases the hole if required, as directed by the senior technician. The assistant assists with recording and sampling the soil profile, sealing the sample tubes with wax and labeling them. He/she also records the SPT readings and bags and labels the material from the split-spoon sampler. Each borehole is capped to prevent access by unauthorised persons so that the assistant can record the standing water level 24 hours after the hole has been drilled. The assistant wears a helmet, work boots and earmuffs while working near the rig. He/she</p>

**EVIDENCE GUIDE**

	<p>covers up and wears sunscreen while working in the sun and drinks large quantities of water.</p> <p>The assistant also excavates hand auger holes to a depth of 1 m at regular intervals in the proposed roadways to obtain samples for California Bearing Ratio (CBR) tests. Adjacent to each, he/she performs a dynamic cone penetrometer test to 2 m to assess the insitu material. He/she records the logs of the auger holes and the test results on the company's standard data sheets and backfills each auger hole immediately after sampling.</p>
--	---

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards, such as: <ul style="list-style-type: none"> <li>• AS ISO 1000-1998 The international system of units (SI) and its application</li> <li>• AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories</li> <li>• AS/NZS ISO 14000 Set:2005 Environmental management standards set</li> <li>• AS/NZS ISO 9000 Set:2008 Quality management systems set</li> </ul> </li> <li>• calibration and maintenance schedules</li> <li>• enterprise recording and reporting procedures</li> <li>• environmental legislation and regulations</li> <li>• equipment manuals</li> <li>• equipment startup, operation and shutdown procedures</li> <li>• industry codes of practice</li> <li>• material, production and product specifications</li> <li>• National Association of Testing Authorities (NATA) documents regarding construction materials testing</li> <li>• OHS national standards and codes of practice</li> <li>• production and laboratory schedules</li> <li>• quality manuals</li> <li>• standard operating procedures (SOPs)</li> </ul>
<b>Site hazards</b>	<p>Site hazards may include:</p> <ul style="list-style-type: none"> <li>• solar radiation, dust and noise</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• manual handling of heavy materials and equipment</li> <li>• working in/on trenches, confined spaces, wet and uneven surfaces, heights and slopes</li> <li>• vehicular and pedestrian traffic</li> <li>• underground services such as gas and electricity</li> </ul>
<b>Safety procedures</b>	<p>Safety procedures may include:</p> <ul style="list-style-type: none"> <li>• location of site services before investigations commence</li> <li>• use of material safety data sheets (MSDS)</li> <li>• use of personal protective equipment, such as hard hats, hearing protection, sunscreen, gloves, masks, goggles, coveralls and safety boots</li> <li>• handling and storage of (hazardous) materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning of equipment and vehicles</li> <li>• machinery guards</li> <li>• signage, barriers, flashing lights and traffic control</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools, including shovels, crowbars, scoops, spanners, wrenches and tape measure</li> <li>• consumables, including sample bags, labels, sample tubes and wax</li> <li>• documentation, including maps, plans and worksheets</li> <li>• field test equipment, including dynamic cone penetration (DCP) testing, standard penetration testing (SPT), shear vane, pocket penetrometers and water level indicator</li> <li>• safety clothing and equipment, including helmets, boots, gloves, earmuffs and glasses</li> <li>• excavation equipment, including hand and power augers, powered excavators, generators and jack hammers</li> </ul>
<b>Common site problems</b>	<p>Common site problems may include:</p> <ul style="list-style-type: none"> <li>• caving in of excavation walls</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• drilling difficulties</li> <li>• sample loss during retrieval</li> <li>• knowing when to stop a hole, or what and when to test and sample</li> <li>• misidentification of samples and sampling locations</li> <li>• equipment breakdown and breakage</li> <li>• environmental impacts of construction activities on wildlife, vegetation, waterways and inclement weather</li> <li>• working close to earth moving equipment, trucks and overhead loads</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare solutions	1.1. Select appropriate procedure for solution preparation 1.2. Select equipment, materials and solvent of specified purity 1.3. Measure appropriate quantities of reagents for solution preparation and record data. 1.4. Select and assemble specified laboratory equipment and appropriate grade of glassware 1.5. Perform specified dilutions 1.6. Prepare solutions to achieve homogeneous mix of the specified concentration 1.7. Label and store solutions to maintain identity and stability
2. Standardise and use volumetric solutions	2.1. Assemble appropriate laboratory equipment 2.2. Perform serial dilutions as required 2.3. Standardise the solution to the required specified range and precision 2.4. Label and store solutions to maintain identity and stability 2.5. Use standard volumetric solutions to determine concentration of unknown solutions
3. Calculate and record data	3.1. Calculate specified concentrations 3.2. Use authorised procedure if data is to be modified 3.3. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 3.4. Record all relevant details according to laboratory procedures and report results 3.5. Report concentration with appropriate units
4. Monitor the quality of laboratory solutions	4.1. Check solutions for visual deterioration and expiry date 4.2. Restandardise or dispose of dated or deteriorated solutions 4.3. Record details and label solutions according to laboratory procedures
5. Maintain a safe work environment	5.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.2. Clean up spills using appropriate techniques to protect personnel, work area and environment 5.3. Minimise generation of waste and environmental

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	impacts 5.4.Ensure the safe collection of laboratory and hazardous waste for subsequent disposal 5.5.Store equipment and reagents as required

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting and following enterprise standard operating procedures (SOPs)
- determining equivalence points using indicators and graphical methods
- using calculation methods, including appropriate units, uncertainties, balancing equations, the concentration of the solution given the chemical reaction for the titration
- using apparatus and reagents to prepare standard solutions such as balances and volumetric glassware
- selecting and using primary and secondary standards and indicators
- performing quality assurance checks for solution performance
- performing titrations
- recognising control results that are not within acceptable range
- interpreting and using safety information, such as that provided by material safety data sheets (MSDS) and follow relevant safety procedures

#### Required knowledge

Required knowledge includes:

- solution terminology, chemistry of acids, bases, buffers, redox reactions and complexiometric reactions
- concepts of metrology
- grades of glassware, reagents and their use
- reactions used for standardisation and desirable characteristics
- enterprise communication and reporting procedures
- occupational health and safety (OHS) procedures, including those for using corrosive materials
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• use balances and volumetric glassware</li> <li>• select and use primary and secondary standards</li> <li>• select and use indicators</li> <li>• perform quality assurance checks for solution performance</li> <li>• perform titrations using laboratory procedures with required accuracy and precision and within required timelines</li> <li>• calculate the concentration of the solution given the chemical reaction for the titration</li> <li>• recognise control results that are not within acceptable range</li> <li>• record results to enterprise standards</li> <li>• label and store solutions in accordance with enterprise procedures</li> <li>• interpret and follow enterprise SOPs</li> <li>• interpret and use safety information, such as that provided by MSDS and follow relevant safety procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>relevant MSAL974000 series units of competency, and</i></li> <li>• <i>relevant MSAL975000 series units of competency dealing with sampling, tests and measurements.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate volumetric equipment</li> <li>• laboratory reagents and equipment</li> <li>• SOPs and testing methods.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p>

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• inspection and/or testing of solutions prepared by the candidate</li> <li>• review of records and workplace documentation completed by candidate</li> <li>• review of work outputs by the candidate over time to ensure accuracy, consistency and timeliness</li> <li>• feedback from peers and supervisors</li> <li>• observation of the candidate preparing, standardising and using a range of solutions</li> <li>• oral or written questioning.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A standard solution is used to determine the concentration of unknown solutions. The quality of these analyses is critically related to the accuracy with which the concentration of the standard solution is known. Therefore, laboratory technicians spend considerable effort to ensure that the materials and methods used for the preparation and standardisation will lead to a solution of accurately known concentration. For example, anhydrous sodium carbonate is often used to prepare solutions to determine the concentrations of acids. The sodium carbonate is heated at a suitable temperature to remove any trace of moisture and cooled in a dessicator. An appropriate quantity is dissolved in distilled water</p>

**EVIDENCE GUIDE**

and made up to volume in a volumetric flask. This solution of known concentration is then titrated with acids of unknown concentration and the concentration of the acids determined.

**Environmental**

A laboratory technician was required to determine the total acidity of a water sample as part of a quality control program. The total acidity was measured by titrating the water sample with sodium hydroxide of known concentration using an appropriate indicator. The concentration of the sodium hydroxide was determined via a volumetric titration against a primary standard of potassium hydrogen phthalate.

The value of the total acidity was determined by multiplying the volume of sodium hydroxide used with a numerical 'factor' which had been determined by the laboratory supervisor in order to save time. The value of the 'factor' was displayed on the titration equipment. However, a new technical assistant did the full calculation and found that his/her result differed slightly from that obtained using the 'factor'. After discussion with the laboratory supervisor it was agreed that the error was in the 'factor' and the assumption that each new batch of sodium hydroxide prepared was exactly the same concentration as all previous batches. This was incorrect as the concentration of each batch differed slightly and its actual concentration was determined accurate, using the primary standard. The procedure was changed so that the full calculation was required for all tests.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS 2163-2000 Laboratory glassware - Measuring cylinders
  - AS 2165-1996 Laboratory glassware - Burettes AS 2162.1-1996 Verification and use of volumetric apparatus - General - Volumetric glassware
  - AS ISO 1000-1998 The international system of units (SI) and its application
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 2243 Set:2006 Safety in laboratories set
- Australian code of good manufacturing practice for medicinal products (GMP)
- calibration and maintenance schedules
- enterprise recording and reporting procedures
- equipment manuals
- equipment startup, operation and shutdown procedures
- MSDS and safety procedures
- material, production and product specifications
- national measurement regulations and guidelines
- principles of good laboratory practice (GLP)

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• production and laboratory schedules</li> <li>• quality manuals</li> <li>• SOPs</li> <li>• waste minimisation and safe disposal procedures</li> </ul>
<b>Solutions</b>	<p>Solutions may include but are not limited to:</p> <ul style="list-style-type: none"> <li>• solutions of strong/weak acids and bases</li> <li>• oxidising/reducing agents</li> <li>• solutions used for complexometric or precipitation titrations</li> <li>• stains for cells and tissues, enzymes, buffers and antibodies</li> <li>• diluents for maintaining isotonicity</li> <li>• organic solutions and histological fixatives</li> </ul>
<b>Apparatus and reagents to prepare standard solutions</b>	<p>Apparatus and reagents to prepare standard solutions may include:</p> <ul style="list-style-type: none"> <li>• balances</li> <li>• pipettes, burettes, volumetric glassware and weighing bottles</li> <li>• dessicators and filtering media</li> <li>• ovens and muffle furnaces</li> <li>• solutions, indicators and primary and secondary standards</li> <li>• auto titrators, pH meters and other related meters and electrodes for determining equivalence points, top pan and analytical balances</li> <li>• magnetic stirrers and heaters, and water baths</li> </ul>
<b>Checking useability of solutions</b>	<p>Checking useability of solutions may include:</p> <ul style="list-style-type: none"> <li>• examining stained samples for correct staining reactions</li> <li>• performing pH checks</li> <li>• confirming enzyme activity</li> <li>• checking red cell suspensions for haemolysis</li> <li>• ferric chloride for phenolic solutions</li> <li>• isotonicity for saline</li> </ul>
<b>Hazards</b>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• chemicals, such as strong acids and bases, and stains</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• sharps and broken glassware</li> <li>• burners, hot plates, ovens and furnaces</li> </ul>
<b>Safe work practices</b>	<p>Safe work practices may include:</p> <ul style="list-style-type: none"> <li>• use of MSDS</li> <li>• use of personal protective equipment, such as gloves, safety glasses, goggles, faceguards, coveralls and gowns</li> <li>• use of biohazard containers, laminar flow cabinets and fume hoods</li> <li>• correct labelling of reagents and hazardous materials</li> <li>• handling and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</li> <li>• regular cleaning and/or decontaminating of equipment and work areas</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</li> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for on-site operations	1.1. Identify the job, location, work instructions, appropriate sampling/test procedures and safety requirements 1.2. Identify site hazards and identify appropriate personal protective equipment and safety procedures that are specified for the job and materials used 1.3. Record description of the job to be undertaken, compare with specification and report any variations 1.4. Arrange for the collection, checking, stowing and transport of all tools, equipment and materials required at the site 1.5. Ensure site access requirements, such as entry permits and safety inductions have been organised
2. Arrange excavation of boreholes, test pits and/or trenches	2.1. Identify the sampling/testing location 2.2. Excavate or oversee excavation to the sampling/testing depth, minimising disturbance and potential contamination of the site 2.3. Identify materials and record changes of strata, test results and other relevant information 2.4. Ensure materials from different strata are kept separate 2.5. Terminate the excavation at the appropriate depth and record the reason for termination
3. Conduct site sampling	3.1. Prepare and check sampling equipment and materials 3.2. Take disturbed and undisturbed samples in accordance with enterprise methods/procedures 3.3. Label and record samples in accordance with enterprise methods/procedures 3.4. Recognise and record details of site conditions that may impact on sample integrity or site interpretation
4. Conduct testing	4.1. Prepare and conduct pre-use checks of test equipment 4.2. Perform, or assist with performing, tests in accordance with test methods or enterprise procedures 4.3. Record test data in accordance with test methods or enterprise procedures 4.4. Recognise obvious errors or atypical data and take appropriate corrective actions

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5. Finalise site operations	5.1.Backfill or seal any excavation and ensure that it is left in a safe and uncontaminated condition 5.2.Reinststate surfaces disturbed by sampling or testing 5.3.Clean all equipment (and vehicle, as necessary) avoiding environmental damage, stormwater contamination or spread of pests 5.4.Check all equipment/materials prior to re-stowing them for safe transport 5.5.Handle and transport samples in accordance with established practices 5.6.Notify appropriate site personnel on completion of investigations and prior to leaving site 5.7.On return to base, check serviceability of test equipment before storage
6. Maintain records	6.1.Maintain equipment records in accordance with established practices 6.2.Complete site safety plans, equipment logs and test reports in accordance with enterprise procedures 6.3.Maintain confidentiality of enterprise information
7. Maintain a safe work environment	7.1.Use safe work procedures and protective equipment to ensure personal safety and that of others 7.2.Minimise environmental impacts of testing/sampling and generation of waste 7.3.Collect and/or dispose of all waste in accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting maps, site plans and drawings
- identifying and locating site services, sampling and testing sites (e.g. global positioning system (GPS))
- setting up, checking, using and cleaning/maintaining tools and equipment
- taking representative samples, handling and transporting samples
- identifying soil, rock and fill materials
- observing, interpreting and reporting site features and geotechnical conditions
- performing basic in situ tests and site measurements (e.g. location and depth)
- maintaining accurate and complete records
- communicating problems to appropriate personnel
- driving safely on and off-road
- working safely on construction sites around heavy equipment and earthmoving plant

#### Required knowledge

Required knowledge includes:

- the basic concepts, purposes and principles of geotechnical site investigation
- identification and classification of materials
- engineering properties of soil and rock materials
- representative sampling and testing
- uses of soil and rock materials in engineering and construction
- in situ testing methods
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• identify and locate site services, sampling and testing sites and recognise site problems</li> <li>• use tools and equipment effectively and efficiently</li> <li>• collect representative samples and handle and transport them correctly</li> <li>• record sampling and testing information</li> <li>• identify and describe materials accurately</li> <li>• observe, interpret and report geotechnical conditions</li> <li>• communicate problems to appropriate personnel and seek advice</li> <li>• record and communicate work results</li> <li>• work safely.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment through observation over time. The timeframe must allow for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical, additional assessment techniques must be used.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL952002A Handle and transport samples or equipment</i></li> <li>• <i>MSL954001A Obtain representative samples in accordance with sampling plan</i></li> <li>• <i>MSL973001A Perform basic tests.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• access to sites, tools and equipment</li> <li>• enterprise procedures, sampling plans, test methods and equipment manuals.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of work outputs over a period of time to ensure accurate and consistent work is obtained within required timelines</li> </ul>

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• examples of completed workplace documentation</li> <li>• feedback from peers and supervisors</li> <li>• oral or written questioning.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Construction materials</b></p> <p>A geotechnical consultancy company is carrying out the investigation for the construction of an industrial complex involving building pads and roadways. A contract drilling company has been hired to carry out auger drilling for the building pad foundations. The drill rig will be used to perform standard penetration tests in some boreholes to determine bearing capacities. Undisturbed sample tubes will be pushed to obtain samples for consolidation testing in the laboratory.</p> <p>A senior technician is in charge of site activities, and arranges for a drill rig. She/he plans a program of drilling, sampling and testing. A laboratory assistant is allocated to carry out the majority of site activities. These include overseeing drilling, testing and sampling operations. He/she is provided with a marked-up plan of the site showing borehole locations so that he/she can direct where to drill. The senior technician makes site visits every second day to oversee the work.</p> <p>The drilling contractor operates the drill rig, takes tube</p>

**EVIDENCE GUIDE**

samples, performs the standard penetration tests and cases the hole if required, as directed by the senior technician. The assistant records and samples the soil profile, seals the sample tubes with wax and labels them. He/she also records the SPT readings and bags and labels the material from the split-spoon sampler. Each borehole is capped to prevent access by unauthorised persons so that the assistant can record standing water level 24 hours after the hole has been drilled. He/she wears a helmet, safety boots and earmuffs while working near the rig. He/she covers up and wears sunscreen while working in the sun and drinks large quantities of water.

The assistant also excavates hand auger holes to a depth of one metre at regular intervals in the proposed roadways to obtain samples for California Bearing Ratio (CBR) tests. Adjacent to each, he/she performs a dynamic cone penetrometer test to two metres to assess the insitu material. He/she records the logs of the auger holes and the test results on the company's standard data sheets and backfills each auger hole immediately after sampling.

He/she reports each day's activities to the senior technician using the company's standard summary form. He/she is confident to identify soil types thus minimising the need for laboratory testing of the samples taken. Based on the field logs, cross-sections of the site can be drawn so that the designer can assess its geotechnical characteristics and determine the extent of any further investigations.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	Standards, codes, procedures and/or enterprise requirements may include: <ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• environmental legislation and regulations</li> <li>• standard operating procedures (SOPs)</li> <li>• equipment manuals</li> <li>• equipment startup, operation and shutdown procedures</li> <li>• calibration and maintenance schedules</li> <li>• quality manuals</li> <li>• enterprise recording and reporting procedures</li> <li>• production and laboratory schedules</li> <li>• material, production and product specifications</li> </ul>
<b>Site hazards</b>	Site hazards may include: <ul style="list-style-type: none"> <li>• solar radiation, dust and noise</li> <li>• manual handling of heavy materials and equipment</li> <li>• working in/on trenches, confined spaces, wet and uneven surfaces, heights and slopes</li> <li>• vehicular and pedestrian traffic</li> </ul>
<b>Safety procedures</b>	Safety procedures may include: <ul style="list-style-type: none"> <li>• location of site services before investigations commence</li> <li>• use of material safety data sheets (MSDS)</li> <li>• use of personal protective equipment, such as hard hats, hearing protection, sunscreen, gloves, masks, goggles, coveralls and safety boots</li> <li>• handling and storage of (hazardous) materials</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations</p> <ul style="list-style-type: none"> <li>• regular cleaning of equipment and vehicles</li> <li>• machinery guards</li> <li>• signage, barriers, flashing lights, traffic control</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools, including shovels, crowbars, scoops, spanners, wrenches and tape measures</li> <li>• consumables, including sample bags, labels, sample tubes and wax</li> <li>• documentation, including maps, plans and worksheets</li> <li>• field test equipment, including dynamic cone penetration (DCP) testing, standard penetration testing (SPT), shear vane, pocket penetrometers and water level indicator</li> <li>• safety clothing and equipment, including helmet, boots, gloves, earmuffs and glasses</li> <li>• excavation equipment, including hand and power augers</li> </ul>
<b>Common site problems</b>	<p>Common site problems may include:</p> <ul style="list-style-type: none"> <li>• caving of the excavation</li> <li>• drilling difficulties</li> <li>• not knowing the requirements of the design engineer</li> <li>• not understanding the nature of the item being designed (e.g. retaining wall, piled structure and earthworks)</li> <li>• sample loss during retrieval</li> <li>• knowing when to stop a hole, or what and when to test and sample</li> <li>• misidentification of samples and sampling locations</li> <li>• equipment breakdown and breakage</li> <li>• environmental problems and issues, including site access, inclement weather, traffic, wildlife, vegetation and construction activities</li> </ul>
<b>Occupational health and safety (OHS) and environmental management requirements</b>	<p>OHS and environmental management requirements</p> <ul style="list-style-type: none"> <li>• all operations must comply with enterprise</li> </ul>

**RANGE STATEMENT**

	<p>OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time</p> <ul style="list-style-type: none"> <li>• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied</li> <li>• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health</li> </ul>

<b>Co-requisite units</b>		

## MSL974003A Perform chemical tests and procedures

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to interpret chemical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine chemical tests/procedures. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit of competency is applicable to laboratory or technical assistants and instrument operators in all industry sectors.  Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and schedule test requirements	1.1. Review test request to identify samples to be tested, test method and equipment/instruments involved 1.2. Identify hazards and enterprise control measures associated with the sample, preparation/test methods, reagents and/or equipment 1.3. Plan work sequences to optimise throughput of multiple samples, if appropriate
2. Receive and prepare samples	2.1. Log samples using standard operating procedures (SOPs) 2.2. Record sample description, compare with specification and note and report discrepancies 2.3. Prepare samples and standards in accordance with chemical testing requirements 2.4. Ensure traceability of samples from receipt to reporting of results
3. Check equipment before use	3.1. Set up equipment/instruments in accordance with test method requirements 3.2. Perform pre-use and safety checks in accordance with relevant enterprise and operating procedures 3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel 3.4. Check equipment calibration using specified standards and procedures, if applicable 3.5. Quarantine out of calibration equipment/instruments 3.6. Ensure reagents required for the test are available and meet quality requirements
4. Test samples to determine chemical species or properties	4.1. Operate equipment/instruments in accordance with test method requirements 4.2. Perform tests/procedures on all samples and standards, if appropriate, in accordance with specified methods 4.3. Shut down equipment/instruments in accordance with operating procedures
5. Process and interpret data	5.1. Record test data noting atypical observations 5.2. Construct calibration graphs, if appropriate, and compute results for all samples from these graphs 5.3. Ensure calculated values are consistent with expectations 5.4. Record and report results in accordance with

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>enterprise procedures</p> <p>5.5. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required</p> <p>5.6. Interpret trends in data and/or results and report out of specification or atypical results promptly to appropriate personnel</p> <p>5.7. Determine if obvious procedure or equipment problems have led to atypical data or results</p>
6. Maintain a safe work environment	<p>6.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel</p> <p>6.2. Minimise the generation of wastes and environmental impacts</p> <p>6.3. Ensure the safe collection of laboratory and hazardous waste for subsequent disposal</p> <p>6.4. Care for and store equipment and reagents as required</p>
7. Maintain laboratory records	<p>7.1. Enter approved data into laboratory information management system</p> <p>7.2. Maintain confidentiality and security of enterprise information and laboratory data</p> <p>7.3. Maintain equipment and calibration logs in accordance with enterprise procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- using calculation methods, including appropriate units, uncertainties, balancing equations, and the concentration of the solution given the chemical reaction for the titration
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

#### Required knowledge

Required knowledge includes:

- chemical principles and concepts underpinning test/procedure
- purpose of the tests
- concepts of metrology
- principles and concepts related to equipment/instrument operation and testing
- function of key components of the equipment/instrument and/or reagents
- effects of modifying equipment/instrument variables
- use of calibration procedures
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• interpret test methods/procedures accurately</li> <li>• prepare and test samples using procedures appropriate to the nature of sample</li> <li>• perform calibration checks (if required)</li> <li>• safely operate test equipment/instruments to enterprise standards and/or manufacturer's specification</li> <li>• prepare calibration graphs and calculate results using appropriate units and precision</li> <li>• apply basic theoretical knowledge to interpret gross features of data and make relevant conclusions</li> <li>• identify atypical results as out of normal range or an artefact</li> <li>• traces and source obvious causes of an artefact</li> <li>• communicate problems to a supervisor or outside service technician</li> <li>• record and communicate results in accordance with enterprise procedures</li> <li>• maintain security, integrity, traceability of samples, sub-samples, test data and results and documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL924001A Process and interpret data</i></li> <li>• <i>MSL974001A Prepare, standardise and use solutions.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate test equipment/instruments, standards and reagents</li> <li>• enterprise procedures and standard methods.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of test data/results obtained by the candidate</li> </ul>

**EVIDENCE GUIDE**

	<p>over a period of time to check accuracy, consistency and timeliness of results</p> <ul style="list-style-type: none"> <li>• review of test records and workplace documentation completed by the candidate</li> <li>• observation of candidate conducting a range of chemical tests and procedures and sample preparation</li> <li>• feedback from peers and supervisors</li> <li>• oral or written questioning of chemical principles and concepts, test methods and enterprise procedures.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>Ultraviolet spectroscopy is a suitable method for determining the concentration of sulphanilamide in pharmaceutical preparations. The ultraviolet absorption spectrum is pH dependent, with the wavelength maximum different in acid and alkaline solutions.</p> <p>Example: a technician was conducting an analysis and noted that the wavelength maxima had moved from approximately 250nm to below 230nm. After reviewing the procedure being used and checking for possible errors, the technician found that an incorrect solvent had been used for the analysis. The hydrochloric acid solvent was replaced with sodium hydroxide, as per the standard method, and the correct absorption spectrum was obtained.</p>

**EVIDENCE GUIDE****Environmental**

A technician was asked to test water samples from a local lake over several days to determine the lake's nutrient levels following reports of algal blooms in the lake over the preceding weeks. He/she used a field colorimeter kit to determine both nitrates and orthophosphates using SOPs. Because the same colorimetric cells were used for the nitrate and orthophosphate tests, they were carefully washed and rinsed with distilled water between all tests (as specified in the SOP). After reviewing the results from the first three days, the technician noted that the first orthophosphate result, which was done immediately after all the nitrate tests, was much higher than subsequent orthophosphate tests which were all consistently low. The technician argued that the 'high' results for the first orthophosphate test may be due to cross-contamination from trace amounts of reagents used in previous nitrate tests despite having closely followed the cleaning/rinsing SOPs. After discussion with his/her supervisor, the technician modified the field procedures by using totally different colorimetric cells for the nitrate and orthophosphate tests. For all subsequent tests no 'high' orthophosphate results were obtained for the first sample. As a result, the laboratory supervisor amended the SOPs to incorporate this new requirement.

**Food processing**

Regular checks are conducted on the percentage of salt in cheese at a dairy company's laboratory. A technician checks the results from the aromatic salt-titration equipment and, if the results are abnormal, notifies the supervisor before taking appropriate action. After obtaining a high result, for example, the assistant notified the supervisor and then began checking the machine to identify a possible reason for the high reading. He/she found that the supply bottle of silver nitrate used in the test was almost empty. This had resulted in less solution being pumped through the equipment than required, leading to graph readings that indicated a high percentage of salt. After replacing the silver nitrate bottle and recalibrating the equipment, the assistant retested the cheese samples and found that they contained the expected 1-2% salt.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

## MSL974005A Perform physical tests

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the ability to interpret physical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine physical tests. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit of competency is applicable to laboratory or technical assistants and instrument operators working in the manufacturing, environment, food and construction materials testing industry sectors.  Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and schedule test requirements	1.1. Review test request to identify samples to be tested, test method and equipment/instruments involved 1.2. Identify hazards and enterprise control measures associated with the sample, preparation/test methods and/or equipment 1.3. Plan work sequences to optimise throughput of multiple samples, if appropriate
2. Receive and prepare samples	2.1. Log samples using standard operating procedures (SOPs) 2.2. Record sample description, compare with specification and note and report discrepancies 2.3. Prepare samples and standards in accordance with physical testing requirements 2.4. Ensure traceability of samples from receipt to reporting of results
3. Check equipment before use	3.1. Set up equipment/instruments in accordance with test method requirements 3.2. Perform pre-use and safety checks in accordance with relevant enterprise and operating procedures 3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel 3.4. Check equipment calibration using specified procedures, if applicable 3.5. Quarantine out of calibration equipment/instruments
4. Test samples to determine physical properties	4.1. Operate equipment/instruments in accordance with test method requirements 4.2. Perform tests/procedures on all samples and standards, if appropriate, in accordance with specified methods 4.3. Shut down equipment/instruments in accordance with operating procedures
5. Process and interpret data	5.1. Record test data noting atypical observations 5.2. Ensure calculated values are consistent with expectations 5.3. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 5.4. Record and report results in accordance with enterprise procedures 5.5. Interpret trends in data and/or results and report out

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>of specification or atypical results promptly to appropriate personnel</p> <p>5.6.Determine if obvious procedure or equipment problems have led to atypical data or results</p>
6. Maintain a safe work environment	<p>6.1.Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel</p> <p>6.2.Minimise the generation of wastes and environmental impacts</p> <p>6.3.Ensure the safe collection of laboratory and hazardous waste for subsequent disposal</p> <p>6.4.Care for and store equipment and materials as required</p>
7. Maintain laboratory records	<p>7.1.Enter approved data into laboratory information management system</p> <p>7.2.Maintain confidentiality and security of enterprise information and laboratory data</p> <p>7.3.Maintain equipment and calibration logs in accordance with enterprise procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- using instruments for qualitative and/or quantitative analysis
- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- metrology techniques underpinning test/procedure including estimating uncertainty
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

#### Required knowledge

Required knowledge includes:

- physical principles and concepts underpinning the test/procedure
- purpose of tests
- function of key components of the equipment/instrument
- effects on test of modifying equipment/instrument variables
- sample preparation procedures
- concepts of metrology
- basic equipment/method troubleshooting procedures
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• interpret test methods/procedures accurately</li> <li>• prepare and test samples in accordance with specified methods</li> <li>• perform calibration checks (if required)</li> <li>• safely operate test equipment/instruments to enterprise standards and/or manufacturer's specifications</li> <li>• apply basic knowledge of physical properties of materials to interpret gross features of data and make relevant conclusions</li> <li>• identify atypical results, such as out of normal range or an artefact</li> <li>• trace and source obvious causes of an artefact</li> <li>• communicate problems to a supervisor or outside service technician</li> <li>• calculate, record and communicate results in accordance with enterprise procedures</li> <li>• maintain security, integrity and traceability of samples, sub-samples, test data/results and documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL924001A Process and interpret data.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate test equipment/instruments, standards and materials</li> <li>• enterprise procedures and standard methods.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of test data/results obtained by the candidate over a period of time to check accuracy, consistency and timeliness of results</li> </ul>

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• review of test records and workplace documentation completed by the candidate</li> <li>• observation of candidate conducting a range of physical tests and procedures and sample preparation</li> <li>• feedback from peers and supervisors</li> <li>• oral or written questioning of physical principles and concepts, test methods and enterprise procedures.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Manufacturing</b></p> <p>A technical assistant was measuring the specific density of a shipment of glycerol using a standard laboratory procedure. The result did not agree with the manufacturer's certificate of analysis. The assistant notified the manufacturer who came to the plant and checked the delivered material. It had been raining while the glycerol was in transit and rain water had entered the drum, diluting the glycerol. The drum was returned to the manufacturer and a new drum was supplied to the manufacturing plant. The manufacturer investigated the seals on the glycerol drums and took action to ensure that new seals would protect the product in transit.</p> <p><b>Food processing</b></p> <p>A technician was testing the melt flow index of a new type of polymer that was to be used as a sealant for</p>

**EVIDENCE GUIDE**

packages of freeze dried coffee. The technician measured the melt flow rate and found it was much too high. The technician then checked the melt flow equipment as per the manufacturer's directions and found the machine was out of calibration. After recalibration using recommended standards, another sample was obtained and retested. This time, the polymer was within specification and was released for use in production.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Codes of practice</b>	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
<b>Standards, codes, procedures and/or enterprise requirements</b>	<p>Standards, codes, procedures and/or enterprise requirements may include:</p> <ul style="list-style-type: none"> <li>• Australian and international standards, such as: <ul style="list-style-type: none"> <li>• AS ISO 1000-1998 The international system of units (SI) and its application</li> <li>• AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories</li> <li>• AS/NZS 2243 Set:2006 Safety in laboratories set</li> <li>• AS/NZS ISO 9000 Set:2008 Quality management systems set</li> </ul> </li> <li>• Australian code of good manufacturing practice for medicinal products (GMP)</li> <li>• calibration and maintenance schedules</li> <li>• data quality procedures</li> <li>• enterprise recording and reporting procedures</li> <li>• equipment startup, operation and shutdown procedures</li> <li>• material safety data sheets (MSDS)</li> <li>• material, production and product specifications</li> <li>• national measurement regulations and guidelines</li> <li>• principles of good laboratory practice (GLP)</li> <li>• production and laboratory schedules</li> <li>• quality manuals, equipment and procedures manuals</li> <li>• SOPs</li> </ul>
<b>Physical principles and concepts</b>	Physical principles and concepts underpinning the

<b>RANGE STATEMENT</b>	
<b>underpinning the test/procedure</b>	<p>test/procedure may include:</p> <ul style="list-style-type: none"> <li>• matter, interatomic and intermolecular forces and states of matter</li> <li>• mass, weight, forces, pressure, energy, friction and slip resistance</li> <li>• properties of gases, pressure/volume/temperature, density, diffusion and compressibility</li> <li>• cohesive/adhesive forces, hydrostatic pressure, fluid flow, viscosity and friction</li> <li>• thermal expansion, thermal conductivity and coefficients of expansion</li> <li>• changes of state, energy content, enthalpy change and endothermic and exothermic processes</li> <li>• electromagnetic spectrum, primary/secondary colours, reflection, refraction diffraction and interference of light</li> <li>• electrical concepts, including electric field, voltage, current, resistance and AC/DC</li> <li>• electromagnetic concepts, including magnetic field and flux, and electromagnetic induction</li> <li>• sound concepts, including wave properties, amplitude, frequency and loudness (dB)</li> <li>• elasticity, hardness, strength of materials, plasticity, permeability and dispersion</li> <li>• electrical safety concepts including voltage, current, resistance, conductors/insulators and AC/DC</li> </ul>
<b>Preparation of samples</b>	<p>Preparation of samples may include processes, such as:</p> <ul style="list-style-type: none"> <li>• drying, washing, grinding, sieving, melting and moisture conditioning</li> <li>• cutting, trimming or machining of test specimens, etching</li> </ul>
<b>Physical tests and procedures</b>	<p>Physical tests and procedures may include:</p> <ul style="list-style-type: none"> <li>• precise measurement of position, orientation and dimensions: <ul style="list-style-type: none"> <li>• three-dimensional setup of manufacturing tools using inclinometers, verniers and laser</li> <li>• thickness using vernier, X-ray and gamma</li> </ul> </li> </ul>

**RANGE STATEMENT**

	<p>ray</p> <ul style="list-style-type: none"> <li>• particle size using sieving and laser</li> <li>• dimensional stability involving expansion, contraction and weathering</li> <li>• movement using strain gauge and accelerometer</li> <li>• mass, density and specific gravity: <ul style="list-style-type: none"> <li>• moisture/density relationship</li> <li>• compaction</li> <li>• loose and compacted density</li> </ul> </li> <li>• thermal tests: <ul style="list-style-type: none"> <li>• thermal conductivity</li> <li>• coefficients of expansion (e.g. linear and volume)</li> <li>• melt flow index</li> <li>• calorimetry, (e.g. specific heat and latent heat)</li> <li>• combustion properties (e.g. enthalpy and energy content)</li> <li>• drying times</li> <li>• thermal stability of products</li> </ul> </li> <li>• optical tests: <ul style="list-style-type: none"> <li>• flatness and surface finish</li> <li>• refractive index</li> <li>• optical rotation</li> <li>• transmission/absorption of filters</li> <li>• colour matching of products</li> </ul> </li> <li>• acoustic tests: <ul style="list-style-type: none"> <li>• absorption, reflection and transmission</li> <li>• intensity, attenuation and loudness (dB)</li> <li>• amplitude and frequency</li> </ul> </li> <li>• electrical tests: <ul style="list-style-type: none"> <li>• conductance, resistance and insulation</li> <li>• temperature dependence of dielectrics</li> </ul> </li> <li>• magnetic tests: <ul style="list-style-type: none"> <li>• permeability</li> <li>• retentivity, hysteresis loss and coercivity</li> <li>• intrinsic induction</li> </ul> </li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and schedule test requirements	1.1. Review test request to identify samples to be tested, test method and equipment/instruments involved 1.2. Identify hazards and enterprise control measures associated with the sample, preparation/test methods and/or equipment 1.3. Plan work sequences to optimise throughput of multiple samples, if appropriate
2. Receive samples and prepare test pieces	2.1. Log samples using standard operating procedures (SOPs) 2.2. Record sample description, compare with specification and note and report discrepancies 2.3. Prepare test pieces, and standards if appropriate, in accordance with mechanical testing requirements 2.4. Ensure traceability of samples from receipt to reporting of results
3. Check equipment before use	3.1. Set up equipment/instruments in accordance with test method requirements 3.2. Perform pre-use and safety checks in accordance with relevant enterprise and operating procedures 3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel 3.4. Check equipment calibration using specified procedures, if applicable 3.5. Quarantine out-of-calibration equipment/instruments
4. Test samples to determine mechanical properties	4.1. Operate equipment/instruments in accordance with test method requirements 4.2. Perform tests/procedures on all test pieces and standards, if appropriate in accordance with specified methods 4.3. Shut down equipment/instruments in accordance with operating procedures
5. Process and interpret data	5.1. Record test data noting atypical observations 5.2. Ensure calculated values are consistent with expectations 5.3. Record and report results in accordance with enterprise procedures 5.4. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 5.5. Interpret trends in data and/or results and report out

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>of specification or atypical results promptly to appropriate personnel</p> <p>5.6.Determine if obvious procedure or equipment problems have led to atypical data or results</p>
6. Maintain a safe work environment	<p>6.1.Use established work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel</p> <p>6.2.Minimise the generation of wastes and environmental impacts</p> <p>6.3.Ensure the safe collection of laboratory and hazardous waste for subsequent disposal</p> <p>6.4.Care for and store equipment, used test pieces and back-up samples as required</p>
7. Maintain laboratory records	<p>7.1.Enter approved data into laboratory information management system (LIMS)</p> <p>7.2.Maintain confidentiality and security of enterprise information and laboratory data</p> <p>7.3.Maintain equipment and calibration logs in accordance with enterprise procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- using instruments for qualitative and/or quantitative analysis
- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- metrology techniques underpinning test/procedure including estimating uncertainty
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

#### Required knowledge

Required knowledge includes:

- mechanical principles and concepts underpinning the test/procedure
- purpose of tests
- metrology techniques underpinning test/procedure
- principles and concepts related to equipment/instrument operation and testing
- function of key components of the equipment/instrument
- effects on test of modifying equipment/instrument variables
- sample preparation procedures
- basic equipment/method troubleshooting procedures
- calibration procedures
- calculation steps to give results in appropriate units and precision
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• interpret test methods/procedures accurately</li> <li>• prepare and test samples in accordance with specified methods</li> <li>• perform calibration checks (if required)</li> <li>• safely operate test equipment/instruments to enterprise standards and/or manufacturer's specifications</li> <li>• apply basic knowledge of physical properties of materials to interpret gross features of data and make relevant conclusions</li> <li>• identify atypical results, such as out of normal range or an artefact</li> <li>• trace and source obvious causes of an artefact</li> <li>• communicate problems to a supervisor or outside service technician</li> <li>• record and communicate results in accordance with enterprise procedures</li> <li>• maintain security, integrity and traceability of samples, sub-samples, test data/results and documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL924001A Process and interpret data.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• standard laboratory equipped with appropriate test equipment/instruments, standards and materials</li> <li>• enterprise procedures and standard methods.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of test data/results obtained by the candidate over a period of time to check accuracy, consistency and timeliness of results</li> </ul>

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• review of test records and workplace documentation completed by the candidate</li> <li>• observation of candidate conducting a range of mechanical tests and sample preparation procedures</li> <li>• feedback from peers and supervisors</li> <li>• oral or written questioning of mechanical principles and concepts, test methods and enterprise procedures.</li> </ul> <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Construction materials</b></p> <p>A technical assistant is responsible for compressive strength testing of concrete cylinders. Typically, there are 20 to 30 to be tested each day. On arrival in the morning the assistant records the maximum and minimum temperatures of the curing tanks, locates the particular cylinders to be tested and removes them from the tanks. She/he dries each cylinder, weighs it and measures its diameter and length using a comparator gauge. The ends are checked for excessive roughness and non-parallelism. She/he then starts the compression test machine and checks that the load pacer is set to the correct loading rate. She/he places a rubber cap on the finished end of each cylinder in turn and places it centrally on the platen of the load frame. The assistant closes the protective screen, applies load at the specified rate until failure occurs, and records the maximum load. After the</p>

**EVIDENCE GUIDE**

cylinder has failed, the assistant removes it from the platen and checks for invalid failure modes. When this occurs (e.g. a shear failure) she/he puts the cylinder aside for further investigation. Any debris is removed from the platen and the next cylinder is tested. When all cylinders have been tested, the assistant cleans away any material left on the compression machine and switches it off. She/he enters all the data in into the laboratory information management system (LIMS) which calculates the unit mass and ultimate compressive strength of each cylinder. Finally, the assistant reviews the data for unusual or unexpected results that may indicate an error.

**Manufacturing**

A technician is asked to test a new polymeric material that is to be used to manufacture children's toys. The technician makes several representative test pieces and measures the elastic properties of the polymer as well as the durability of the polymer to flex many times without cracking. Because the polymer is to be used in a toy, the technician also dispatches samples of the polymer for chemical testing by a consulting laboratory to determine whether any toxic monomer could leach out if a child sucked the toy.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS 1012 Methods of testing concrete
  - AS 1289 Methods for testing soils for engineering purposes
  - AS ISO 1000-1998 The international system of units (SI) and its application
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 2243 Set:2006 Safety in laboratories set
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
  - ISO 5269 Pulps - Preparation of laboratory sheets for physical testing
  - ISO 9142:2003 Adhesives - Guide to the selection of standard laboratory ageing conditions for testing bonded joints
- Australian code of good manufacturing practice for medicinal products (GMP)
- calibration and maintenance schedules
- data quality procedures
- enterprise recording and reporting procedures
- equipment startup, operation and shutdown procedures
- material safety data sheets (MSDS)
- material, production and product specifications
- national measurement regulations and

<b>RANGE STATEMENT</b>	
	<p>guidelines</p> <ul style="list-style-type: none"> <li>• principles of good laboratory practice (GLP)</li> <li>• production and laboratory schedules</li> <li>• quality manuals, equipment and procedures manuals</li> <li>• SOPs</li> </ul>
<b>Mechanical principles and concepts underpinning the test/procedure</b>	<p>Mechanical principles and concepts underpinning the test/procedure may include:</p> <ul style="list-style-type: none"> <li>• matter, interatomic and intermolecular forces and states of matter</li> <li>• mass, weight, forces, pressure and energy</li> <li>• cohesive/adhesive forces, friction and slip resistance</li> <li>• elasticity, hardness, ductility, malleability, strength of materials, elastic limit, elastic moduli and ultimate stress</li> <li>• electrical concepts, including electric field, voltage, current, resistance and AC/DC</li> <li>• elasticity, hardness, strength of materials, plasticity, permeability and dispersion</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and schedule test requirements	1.1. Review test request and sample documentation to identify required test parameters and intended use of bulk material 1.2. Identify hazards and enterprise control measures associated with the sample, preparation/testing methods and equipment 1.3. Inspect samples, compare with specifications, record and report discrepancies 1.4. Liaise with client when samples and/or request forms do not comply with enterprise procedures 1.5. Match required parameters with suitable test methods, available equipment and instrument specifications 1.6. Plan parallel work sequences to optimise throughput of multiple sets of samples, as required
2. Prepare and measure test specimens	2.1. Prepare test specimens in accordance with test method 2.2. Conduct preliminary measurements to establish initial dimensions and conditions 2.3. Store test specimens and residual sample materials to maintain their integrity
3. Check equipment before use	3.1. Set up equipment/instruments in accordance with test method 3.2. Perform pre-use and safety checks in accordance with enterprise procedures and manufacturers specifications 3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel 3.4. Check calibration status of equipment and quarantine out of calibration or faulty items
4. Test samples	4.1. Position and secure test specimen in test equipment/instrument 4.2. Conduct preliminary measurements to determine optimum test conditions and instrument settings 4.3. Perform each measurement stage in sequence, terminating each stage at the appropriate end point 4.4. Record all test measurements, observations and factors that may impact on quality of results 4.5. Remove test piece and conduct post-test measurements

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	4.6. Shut down equipment and store used test pieces in accordance with enterprise procedures
5. Process and analyse data	5.1. Confirm data is the result of valid measurements 5.2. Perform required calculations and ensure results are consistent with estimations and expectations 5.3. Record results with the appropriate accuracy, precision and units 5.4. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 5.5. Analyse trends in data and/or results and report out of specification or atypical results promptly to appropriate personnel 5.6. Troubleshoot procedure or equipment problems which have led to atypical data or results
6. Maintain a safe work environment	6.1. Use established safe work practices to ensure personal safety and that of other laboratory personnel 6.2. Minimise the generation of wastes and environmental impact 6.3. Ensure the safe disposal of laboratory wastes 6.4. Clean, care for and store equipment and consumables in accordance with enterprise procedures
7. Maintain laboratory records	7.1. Enter approved data and results into laboratory information management system 7.2. Maintain security and confidentiality of enterprise information and laboratory data 7.3. Maintain equipment and calibration logs in accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting client requests, complex tests and sample preparation methods accurately
- applying enterprise procedures
- planning work sequences involving multiple/parallel tasks
- interpreting safety information, such as material safety data sheets (MSDS) and working safely
- checking and using test equipment in accordance with enterprise procedures
- maintaining concentration and applying multi-stage test methods accurately
- estimating/calculating scientific quantities (e.g. total and effective stress, strain and pressure)
- using calibration charts
- interpreting significant features of data and graphs and making logical conclusions
- identifying atypical data, errors and unexpected results and tracing any obvious causes
- recording and presenting results accurately and legibly
- maintaining security, integrity and traceability of all samples/test pieces, data/results and technical records
- cleaning and maintaining equipment
- seeking advice from a supervisor
- communicating with clients or outside service technician
- demonstrating a professional approach and positive company/organisation image

#### Required knowledge

Required knowledge includes:

- complex test methods routinely used in job role, including:
  - purpose and principles of test
  - relationship between the engineering properties and uses of construction materials
  - key sample preparation stages
  - key treatment/measurement stages
  - calculation steps to give results in appropriate units and precision
  - expected values for sample type
  - sources of uncertainty and methods for their control
- principles and concepts underpinning the test method, such as:

## **REQUIRED SKILLS AND KNOWLEDGE**

- stress, strain, pressure, total and effective stress, fatigue, creep, failure modes of materials, strength/consolidation of materials and permeability
- electrical safety concepts including voltage, current, resistance, conductors/insulators and AC/DC
- principles and concepts related to equipment/instrument operation including the function of key components and effects on test of modifying variables
- pre-use checks and operating procedures for test equipment/instruments routinely used in job role
- basic equipment/method troubleshooting procedures
- enterprise and/or legal traceability requirements for samples, test pieces, test data and results
- procedures for recording and reporting test results, calculations, test observations and unexpected or atypical results and equipment problems
- health, safety and environmental management requirements relevant to job role
- confidentiality requirements relevant to job role

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> <li>• select test methods, operating parameters and test ranges to suit the material and its intended use</li> <li>• prepare and orient test pieces precisely</li> <li>• safely set up, start up and shut down equipment</li> <li>• maintain close attention to measurement procedures, accuracy and precision during lengthy complex tests</li> <li>• calculate/determine required engineering properties with appropriate accuracy, precision and units</li> <li>• recognise atypical data/results and trace artefacts and problems with procedures or equipment</li> <li>• record and report data/results in accordance with enterprise procedures</li> <li>• maintain security, integrity and traceability of all samples, test pieces and documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> <li>• <i>MSL925001A Analyse data and report results.</i></li> </ul> <p>Resources may include:</p> <ul style="list-style-type: none"> <li>• engineering materials testing laboratory with appropriate test equipment, instruments and samples</li> <li>• SOPs and test methods.</li> </ul>
<b>Method of assessment</b>	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> <li>• review of results obtained by the candidate over a period of time to ensure accurate and consistent results are obtained within required timelines</li> <li>• inspection of testing records and workplace documentation completed by the candidate</li> <li>• observation of candidate conducting a range of complex tests on engineering materials</li> <li>• feedback from clients, peers and supervisors</li> <li>• oral or written questioning.</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
<b>This competency in practice</b>	<p>Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p><b>Construction materials</b></p> <p>A consulting company is investigating a possible dam site and needs to assess a particular soil in the foundation. They request a geotechnical testing authority to determine the permeability of the soil. A senior technician checks the client request and inspects the soil sample, noting that it is plastic, clay and fissured. He/she checks the dam design parameters and notes that the overburden pressure will be 500 kPa.</p> <p>The senior technician uses a triaxial permeability test using a constant head configuration. He/she trims a cylindrical test piece, determines the sample's bulk density and uses the trimmings to determine its moisture content. The test piece is mounted in a triaxial test cell and the equipment carefully de-aired. All pressure gauges, regulators and transducers are checked and the equipment is leak tested. A confining stress is applied and after allowing the sample to come to equilibrium, it is back saturated. The cell pressure is increased to 500 kPa and as the sample consolidates, the technician monitors the sample volume change and pore water pressure. A differential pressure is applied in stages and the water flow through the sample is optimised. After reaching a steady state the flow rate is monitored to</p>

**EVIDENCE GUIDE**

determine the sample permeability.

After taking sufficient readings to ensure a valid measurement, the senior technician prepares plots of permeability and time and reports the steady state values. After completing the test, he/she shuts down the equipment in the recommended sequence, cleans and restores all items. He/she then removes the test piece and determines the after-test moisture content.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

#### Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS ISO/IEC 17025 General requirements for the competence of testing and calibration laboratories
  - AS 1289 Methods of testing soils for engineering
  - AS 1012 Methods of testing concrete
  - AS 2981 Methods of sampling and testing asphalt
  - DIN 19683 series - Soil testing in agricultural hydrology - Physical laboratory tests
  - ISO/IEC Guide 98-3:2008 Uncertainty of measurement - Part 3 Guide to the expression of uncertainty in measurement (GUM)
- National Association of Testing Authorities (NATA) supplementary requirements for the relevant field of testing
- NATA technical notes and guides
- MSDS
- standard operating procedures (SOPs)
- quality manuals, equipment and procedures manuals
- equipment startup, operation and shutdown procedures
- calibration and maintenance schedules
- enterprise recording and reporting procedures

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• production and laboratory schedules</li> <li>• material, production and product specifications</li> </ul>
<b>Preparation of samples</b>	<p>Preparation of samples may include:</p> <ul style="list-style-type: none"> <li>• moisture conditioning and compaction of soil</li> <li>• trimming to required size and shape</li> <li>• orientation of test pieces</li> <li>• polishing</li> <li>• curing concrete test pieces</li> </ul>
<b>Test methods and procedures</b>	<p>Test methods and procedures may include:</p> <ul style="list-style-type: none"> <li>• consolidation of soil (e.g. one-dimensional and triaxial)</li> <li>• shear testing of soil and rock (e.g. total stress, effective stress, direct stress and triaxial stress)</li> <li>• permeability of soil, rock and concrete (e.g. falling head and constant head)</li> <li>• California Bearing Ratio (CBR) (4 point)</li> <li>• fatigue and creep of metals, polymers and concrete</li> <li>• wheel tracking in asphalt</li> <li>• stiffness and creep of asphalt</li> </ul>

<b>Unit sector</b>	Testing
--------------------	---------

## Competency field

Competency field	
------------------	--

## Co-requisite units

Co-requisite units		

## **MSS015002A Develop strategies for more sustainable use of resources**

### **Modification History**

Not applicable.

### **Unit Descriptor**

This unit of competency covers identifying strategies for more sustainable uses of resources. The unit includes the identification of waste as defined in lean manufacturing (muda) as part of a strategy for achieving better sustainability outcomes in a process as well as quantifying theoretical and actual resource (including energy) consumption.

### **Application of the Unit**

This unit applies inside organisations and their value chains and specifically applies to the use of resources as part of an overall response to improving sustainability. The unit has been developed with manufacturing operations as a focus. However, because of the range of organisations in a typical manufacturing value chain it may also be applied to other types of organisations.

The unit assumes that a decision to attempt to achieve more sustainable use of resources has already been made. The unit covers the skills needed for developing a strategic approach to resource use at the organisation or value chain level.

The unit does not cover the technical skills required to implement specific initiatives that may be identified as part of the strategic plan. However, there is a requirement to present and organise data. The complexity of this requirement will vary according to the type and scale of the organisation's processes. Where required, appropriate mathematics and statistics units should be selected from the MEM05 Metal and Engineering Training Package or other appropriate Training Package.

Where the carbon footprint (or water footprint or similar) of an enterprise or value chain is known, the unit can be applied to developing strategies for the reduction of that footprint. It would typically be undertaken by a manager or technical specialist who had a major responsibility for sustainability as part of a broader work role, or sustainability may be their primary work responsibility.

For specific techniques covering the auditing of water, energy, emissions and transport, refer to relevant sustainability audit units.

### **Licensing/Regulatory Information**

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills

## Elements and Performance Criteria Pre-Content

Not applicable.

## Elements and Performance Criteria

- |   |   |
|---|---|
| 1 Quantify resource consumption           | 1.1 Identify all significant resources used by process            |
|   | 1.2 Identify consumption measurements available for each resource |
|   | 1.3 Determine consumption for each resource                       |
| 2 Quantify resource loss                  | 2.1 Determine theoretical consumption of each resource            |
|   | 2.2 Compare theoretical consumption with actual consumption       |
|   | 2.3 Determine loss (emission) for each resource                   |
| 3 Recommend strategies for reducing waste | 3.1 Short-list high emission process steps                        |
|   | 3.2 Analyse process to identify emission steps or locations       |
|   | 3.3 Determine root cause of emission                              |
|   | 3.4 Investigate methods for reducing emission                     |
|   | 3.5 Develop strategies and recommendations for improvement        |
| 4 Prepare resources use audit report      | 4.1 Identify purpose of report and key stakeholders               |
|   | 4.2 Compile data, implications and recommendations                |
|   | 4.3 Consult with stakeholders as appropriate                      |
|   | 4.4 Draft and present report                                      |

## Required Skills and Knowledge

Required knowledge includes:

- the concept of muda. Muda is usually summarised under the headings of the ‘seven wastes’ which include:
  - overproduction
  - delay/waiting
  - transportation
  - over processing
  - excess inventory
  - unnecessary motion
  - defects and rework
- methods of material balancing
- methods of energy balancing
- methods of comparing theoretical with actual resource consumption
- methods for mapping manufacturing processes and resources consumed
- methods of measuring actual resource usage
- concept of muda and muda categories
- muda reduction methods and strategies
- AS/NZS ISO 14000 Environmental Management Standards

Required skills include:

- calculating, manipulating and interpreting numerical data, including establishing series, means and averages, absolute and proportional material and energy usage per product or process, correlations and rates of change
- analysing and conducting root cause analysis
- calculating theoretical consumption of resources as the minimum amount of resources per product or process step as defined by the customer multiplied by the rate of production or process
- calculating actual consumption of resources per unit (e.g. per product, operation, site or value chain)
- writing technical reports
- consulting with technical experts and internal and external stakeholders

## Evidence Guide

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to identify and quantify resources and waste in a process, recommend strategies to reduce waste and prepare a report with recommendations.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include: <ul style="list-style-type: none"> <li>• quantifying significant resource consumption and emission using materials balancing</li> <li>• identifying and consulting with stakeholders</li> <li>• developing strategies for reducing emissions</li> <li>• preparing and presenting a resources use report.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit of competency is to be assessed in the workplace or a simulated workplace environment.</li> <li>• Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</li> <li>• This unit of competency may be assessed with other relevant units addressing sustainability at the enterprise level or other units requiring the exercise of the skills and knowledge covered by this unit.</li> <li>• The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work-like environment.</li> </ul>
<b>Guidance information for assessment</b>	

## Range Statement

<b>Waste</b>	Waste in this unit is used in the broader sense of ‘muda’ as used in lean manufacturing and the competitive manufacturing units of competency developed by Manufacturing Skills Australia (MSA)
<b>Emissions</b>	<p>Emissions means all materials which enter the process/site but which do not leave as part of the product and so includes:</p> <ul style="list-style-type: none"> <li>• known or able to be physically measured emissions of: <ul style="list-style-type: none"> <li>• gases, vapours and fumes</li> <li>• liquids</li> <li>• solids</li> </ul> </li> <li>• assumed emissions through material balancing</li> <li>• assumed emissions through energy loss, including heat, friction and other energy conversion yield losses</li> </ul>
<b>Theoretical consumption</b>	Theoretical consumption of resources is the minimum amount of resources per product as defined by the customer multiplied by the rate of production
<b>Actual consumption</b>	Actual consumption is the amount of a resource entering the value chain
<b>Significant resources</b>	<p>Significant resources includes resources which are deemed to be significant because they are:</p> <ul style="list-style-type: none"> <li>• high volume</li> <li>• high value</li> <li>• high environmental significance</li> <li>• important to the product or process</li> <li>• covered by legislation or regulation</li> <li>• important to the enterprise</li> </ul> <p>It need not include resources which are incidental to the activity and which are not otherwise significant</p>

## Unit Sector(s)

Sustainability

## **Custom Content Section**

Not applicable.

## **MSS015015A Evaluate sustainability impact of a process**

### **Modification History**

Not applicable.

### **Unit Descriptor**

This unit of competency covers evaluating the impact on sustainability of an entire process (manufacturing, logistics, office or other process) or the product from such a process. It does not specifically address the regulatory requirements for an environmental impact statement.

### **Application of the Unit**

This unit applies to establishing the overall or broad sustainability impact of a process and making recommendations for mitigating negative sustainability impacts. It may apply to value chains beyond the boundary of an organisation, or the entire value chain within an organisation. The unit scope includes products made, services offered, and use of sites by an organisation or part or all of its value chain. This unit covers the application to substantial portions of value chains and may be beyond the boundaries of the organisation. For portions of value chains within an organisation consider MSS014002A Evaluate sustainability impact of a work or process area.

Environmental sensitivities referred to in this unit are at the issue level. The technical measurement of operational performance or measurement of emissions or other environmental impact is not covered by this unit.

If the impact is to be evaluated across a value chain and the extent of the value chain is not known, MSACMS601A Analyse and map a value chain should also be selected.

It would typically be undertaken by a manager or technical specialist who had a major responsibility for sustainability as part of a broader work role, or sustainability may be their primary work responsibility. The manager or technical specialist may undertake this alone or as part of a team.

The technical measurement of operational performance or measurement of emissions or other environmental impact is not covered by this unit.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills

## Elements and Performance Criteria Pre-Content

Not applicable.

## Elements and Performance Criteria

- |   |   |
|---|---|
| 1 Evaluate the value chain for the selected process | 1.1 Select portion of the value chain for analysis<br>1.2 Identify process steps along the chain<br>1.3 Identify the change which occurs at each step<br>1.4 Define the interactions with the environment at each step  |
| 2 Determine sustainability issues for the process   | 2.1 Identify environmental sensitivities at each step in the value chain<br>2.2 Identify other sustainability issues at each step in the value chain<br>2.3 Short-list sustainability issues which will require action to mitigate or eliminate negative sustainability impacts   |
| 3 Analyse sustainability issues for the process     | 3.1 Determine root cause of each short-listed issue<br>3.2 Develop possible solutions to root causes<br>3.3 Develop alternative mitigation strategies where needed<br>3.4 Estimate resources required for solutions and alternative mitigation strategies<br>3.5 Rank possible solutions strategies by desirability<br>3.6 Produce and present report to stakeholders |

## Required Skills and Knowledge

Required knowledge includes:

- value chain mapping and analysis with regard to sustainability
- process and changes which occur within the process
- environmental impacts of materials and energy used/emitted
- environmental sensitivities of all areas impacted by the value chain (and related areas where impact spreads beyond immediate area, e.g. by loss of containment)
- root cause analysis and problem solving
- mitigation strategies
- benefit/cost analyses techniques
- methods of dealing with sustainability issues and the benefits arising from each
- AS/NZS ISO 14000 Environmental Management Standards

Required skills include:

- analysing and prioritising issues
- consulting and negotiating with stakeholders on possible solutions and strategies for sustainability improvement
- using problem-solving techniques, including root cause analysis
- mapping the value chain

## Evidence Guide

<b>Overview of assessment</b>	A person who demonstrates competency in this unit must be able to evaluate the sustainability impact of a whole process or internal or external value chain, determine root cause for sustainability issues and propose and rank solutions.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> <li>• identifying steps in the process and portion of manufacturing value chain</li> <li>• determining ecological and sustainability impacts of processes</li> <li>• determining root causes of impacts</li> <li>• evaluating solution and mitigation strategies.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• This unit of competency is to be assessed in the workplace or a simulated workplace environment.</li> <li>• Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</li> <li>• This unit of competency may be assessed with other relevant units addressing sustainability at the enterprise level or other units requiring the exercise of the skills and knowledge covered by this unit.</li> <li>• The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work-like environment.</li> </ul>
<b>Guidance information for assessment</b>	

## Range Statement

<b>Process</b>	<p>Process may include:</p> <ul style="list-style-type: none"> <li>any operational, manufacturing, logistics, administrative, information technology or business process in a manufacturing value chain (e.g. manufacturer, supplier of goods or services or a customer)</li> </ul>
<b>Interactions with the environment</b>	<p>Interactions with the environment may include:</p> <ul style="list-style-type: none"> <li>drawing physical resources from the environment</li> <li>releasing materials to the environment (e.g. emissions)</li> <li>drawing energy from/releasing energy to the environment</li> </ul>
<b>Environmental sensitivities</b>	<p>Environmental sensitivities may include:</p> <ul style="list-style-type: none"> <li>fragile areas and rare or threatened species</li> <li>heritage or religious issues</li> <li>hazardous emissions</li> <li>regulated emissions or other regulatory issues</li> <li>community perceptions or other issues</li> </ul>
<b>Sustainability issues</b>	<p>Sustainability issues may include:</p> <ul style="list-style-type: none"> <li>resource footprint (e.g. carbon and water) of product and process</li> <li>current and future availability of raw materials</li> <li>current and future availability of energy</li> <li>waste generation and disposal</li> <li>efficiency of process</li> <li>the extent to which the production process and product affects the environment, including effects on: <ul style="list-style-type: none"> <li>climate</li> <li>quality of local air and water</li> <li>ecology</li> <li>noise</li> </ul> </li> <li>relationship with the local and broader community (e.g. effect of operations on aesthetic appearance, preservation of heritage, and proximity to schools and religious facilities)</li> <li>extent of regulatory oversight and cost of compliance</li> </ul>
<b>Desirability ranking</b>	<p>Desirability ranking includes:</p> <ul style="list-style-type: none"> <li>direct dollar benefit/cost</li> <li>customer benefit</li> <li>stakeholder perception:</li> </ul>

	<ul style="list-style-type: none"><li>• shareholders</li><li>• employees</li><li>• community</li><li>• financial community</li><li>• other</li><li>• life cycle improvements</li></ul>

## Unit Sector(s)

Sustainability

## Custom Content Section

Not applicable.

## **MSS402001A Apply competitive systems and practices**

### **Modification History**

New unit, superceding MSACMS200A Apply competitive manufacturing practices - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to implement basic improvement practices within an organisation using competitive systems and practices. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to operations. It would typically be carried out working as part of a team.

### **Application of the Unit**

This unit applies to an individual in an organisation that has embarked on competitive systems and practices. The unit covers the skills and knowledge required to contribute to the competitive systems and practices processes and assumes that they are to be used within the scope of the individual's job and authority.

This unit requires the application of skills associated with planning and organising an individual's own role within the competitive systems and practices framework.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |                                       |     |   |
|---|---------------------------------------|-----|---|
| 1 | Identify own place in the value chain | 1.1 | Identify customers relevant to own work and their needs/requirements                          |
|   |                                       | 1.2 | Identify suppliers for own work   |
|   |                                       | 1.3 | Identify value contributions along the chain  |
|   |                                       | 1.4 | Identify and recommend methods of increasing own contribution to the value chain              |
| 2 | Improve the product and process value | 2.1 | Identify customer features/benefits in the product and process                                |
|   |                                       | 2.2 | Identify aspects of product and process which contribute to customer features/benefits        |
|   |                                       | 2.3 | Identify aspects of product and process which do not contribute to customer benefits/features |
|   |                                       | 2.4 | Recommend methods of reducing waste and increasing features/benefits                          |
| 3 | Use competitive systems and practices | 3.1 | Identify competitive systems and practices used in organisation and own work area             |
|   |                                       | 3.2 | Apply practices appropriate for the job or process  |
|   |                                       | 3.3 | Monitor the job/process and make adjustments to improve it in accordance with procedures      |
|   |                                       | 3.4 | Identify own skill requirements and seek skill development, if required                       |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others to clarify scope of competitive systems and practices implementation and contributing suggestions for improvement
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)

### Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from operations
- suppliers, their capabilities and contribution to value (this may be obtained from an existing value stream map or other enterprise documentation)
- waste (muda)
- relevant competitive systems and practices for own job and how to apply them
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will work effectively in a competitive systems and practices environment, making continual positive contributions to the improvement of the business within the scope of their job.
Critical aspects for assessment and	A person who demonstrates competency in this unit must

evidence required to demonstrate competency in this unit	<p>be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope of competitive systems and practices implemented in their work area</li> <li>• identify services and/or functions supplied by suppliers and to customers</li> <li>• identify own tasks and responsibilities and relate them to organisation and customer requirements</li> <li>• identify aspects of products and process which add to or detract from customer benefit</li> <li>• contribute suggestions for improvement.</li> </ul>
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads, and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

	accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control And Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Customers</b>	<p>Customers may include:</p> <ul style="list-style-type: none"> <li>• internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable</li> <li>• final customers used as the basis for the identification of value and waste</li> </ul> <p>The individual does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and customer features</p>
<b>Suppliers</b>	<p>Suppliers may be:</p> <ul style="list-style-type: none"> <li>• internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable</li> </ul> <p>The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit</p>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the organisation</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>

## **MSS402002A Sustain process improvements**

### **Modification History**

New unit, superseding MSACMS201A Sustain process improvements - Not equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to prevent process improvements in their own work from slipping back to former practices or digressing to less efficient practices.

### **Application of the Unit**

This unit applies to organisations implementing competitive systems and practices and continuous improvement. It covers the skills needed to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any of a number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to employees.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

This unit requires the application of skills associated with problem solving, initiative and enterprise and self-management in order to understand implement and monitor improvement practices. It also requires the ability to identify and address personal skill gaps in order to manage own ability to implement change.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |                                |     |  |
|---|--------------------------------|-----|--|
| 1 | Examine previous improvements  | 1.1 | Identify impact of previous process improvements to equipment, operations, services or products in own work area |
|   |                                | 1.2 | Identify improvements where objectives have not been met   |
| 2 | Implement corrective actions   | 2.1 | Identify corrective actions that can be taken by self on process improvements that have not met objectives       |
|   |                                | 2.2 | Obtain any required approvals  |
|   |                                | 2.3 | Identify any additional, personal skill gaps and seek skill development  |
|   |                                | 2.4 | Adopt improved processes   |
| 3 | Check changes                  | 3.1 | Identify claimed improvements  |
|   |                                | 3.2 | Identify methods of observing and measuring claimed improvements in own work area                                |
|   |                                | 3.3 | Check if claimed improvements are occurring and report problems in accordance with procedures                    |
| 4 | Check for further improvements | 4.1 | Look for areas of possible further improvement   |
|   |                                | 4.2 | Discuss further improvements with peers and supervisors  |
|   |                                | 4.3 | Take action to implement improvements in accordance  |

with procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators in own work and work area

### Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from own work area operations
- suppliers to own work area, their capabilities and contribution to customer benefit
- waste (muda)
- relevant competitive systems and practices for own job and how to apply and monitor the outcomes
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will be able to demonstrate their willing adoption of new equipment, processes, procedures and practices as well as their expertise at implementing them and making critical
------------------------	--

	reviews of their performance in line with their level of competence and authority.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• implement and monitor process improvements in own work area against objectives</li> <li>• contribute suggestions for further improvement/s</li> <li>• apply procedures for seeking approvals and reporting non-conformances.</li> </ul>
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

	accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and industry sector</li> </ul>
<b>Customers</b>	<p>Customers may be:</p> <ul style="list-style-type: none"> <li>• internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable</li> <li>• final customers used as the basis for the identification of value and waste</li> </ul> <p>The individual does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and customer features</p>
<b>Suppliers</b>	<p>Suppliers may be:</p> <ul style="list-style-type: none"> <li>• internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable</li> </ul> <p>The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit</p>
<b>Measuring improvements</b>	<p>Measuring improvements may include:</p> <ul style="list-style-type: none"> <li>• personally taking measurements</li> <li>• arranging for measurements to be taken/made by appropriate personnel</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipe</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and</li> </ul>

	<p>government regulations</p> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>written, verbal, computer-based or in some other format</li> </ul>
<b>Improvements</b>	<p>Improvements include:</p> <ul style="list-style-type: none"> <li>techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke)</li> <li>techniques that generate warning signals were a mistake is about to be performed (poka-yoke)</li> </ul>

## **MSS402010A Manage the impact of change on own work**

### **Modification History**

New unit, superseding MSACMC210A Manage the impact of change on own work - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by an employee to effectively manage the changes in their own work resulting from their organisation's implementation of competitive systems and practices.

### **Application of the Unit**

This unit applies to an employee in an organisation implementing competitive systems and practices that affect the employee's own work. The unit includes the skills required to positively participate in ongoing and continuous change as it affects their work. The employee will be expected to deal with these changes as part of a team and to give feedback from their own perspective.

This unit requires the application of skills associated with problem solving, planning and organising and self-management for assessing and managing the impact of change on own work. This unit also requires the ability to seek information and feedback from team members on the impact of changes and suggested improvements.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Examine the impact of change on own work practices | 1.1 | Identify competitive systems and practices relevant to changes in own work                                       |
|   |  | 1.2 | Examine changes to work flow   |
|   |  | 1.3 | Examine changes to equipment/process/physical environment  |
|   |  | 1.4 | Examine changes to work relationship with team members and other teams   |
|   |  | 1.5 | Examine changes to data collection needs   |
|   |  | 1.6 | Examine changed work for impacts on health, safety and environment (HSE)   |
|   |  | 1.7 | Examine changes to quality requirements  |
|   |  | 1.8 | Identify any additional individual skill needs   |
|   |  | 1.9 | Identify other areas requiring assistance  |
| 2 | Implement change                                   | 2.1 | Review changes which may have an adverse impact with team leader   |
|   |  | 2.2 | Adopt changes to individual work practice  |
|   |  | 2.3 | Seek assistance in gathering/processing data, as required  |
|   |  | 2.4 | Implement the data collection/processing and take actions on resulting information in accordance with procedures |
|   |  | 2.5 | Seek assistance/training to meet needs caused by change  |

- 3 Implement continuous improvement
  - 3.1 Critically examine all changes
  - 3.2 Identify impacts of changes both up and down the immediate value stream
  - 3.3 Identify areas for improvement
  - 3.4 Make recommendations for improvement in accordance with procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying the competitive systems and practices being implemented in the organisation that are relevant to own work, including, if implemented:
  - Just in Time (JIT) and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. root cause analysis (RCA))
- analysing own work procedures
- communicating with others in work area, team leaders and other employees relevant to changes in own work
- solving problems relevant to changes in own work
- identifying sources of assistance in organisation if difficulty is experienced with changes
- interpreting relevant procedures and instructions
- working as part of a team

### Required knowledge

Required knowledge includes:

- features of common competitive systems and practices sufficient for identification, including:
  - JIT and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. RCA)
- current processes and principles of operation
- sources of data on the process/plant and possible applications to information
- methods of determining own skill needs and developing skills, if required
- HSE principles as relevant to own job

- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the competitive systems and practices used in their own work</li> <li>• identify changes to their own work flowing from the implementation of the relevant competitive systems and practices</li> <li>• implement changes</li> <li>• know when and how to seek assistance with work changes</li> <li>• make suggestions for improvements.</li> </ul>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess response to contingencies.</li> </ul>
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> </ul>

	<ul style="list-style-type: none"> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on.</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Managing impact of change</b>	<p>Managing impact of change may include:</p> <ul style="list-style-type: none"> <li>• elements being undertaken individually or as part of a team</li> <li>• seeking assistance from team leaders for areas outside the employee's range of responsibility and authority</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• all work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheet</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<b>Gathering and monitoring</b>	<p>The gathering and monitoring of performance data may</p>

<b>performance data</b>	<p>be:</p> <ul style="list-style-type: none"> <li>• undertaken manually by individual employees through charts, tally sheets or keypad/board entry</li> <li>• collected automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems</li> </ul>
<b>Continuous improvement</b>	<p>Continuous improvement in competitive systems and practices (often referred to as kaizen) includes:</p> <ul style="list-style-type: none"> <li>• the continual evaluation and improvement of all process in terms of time required, resources used, resultant quality, and other aspects relevant to the process</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>

## **MSS402020A Apply quick changeover procedures**

### **Modification History**

New unit, superseding MSACMT220A Apply quick changeover procedures - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to apply quick changeover procedures in an organisation implementing competitive systems and practices.

### **Application of the Unit**

This unit applies to individuals in an organisation which is implementing competitive systems and practices and is pursuing quick changeover as one of its competitive operations tools. The unit can apply to quick changeovers of equipment, processes, batches or product type.

This unit covers the carrying out of these quick changeovers and also recommending improvements within the scope and authority of the individual's job.

Particular technical skills may also be required in some operations sectors and for some jobs. These skills should be gained from the Training Package relevant to the individual's industry and occupation.

This unit requires the application of skills associated with applying quick changeover procedures, including the planning and organising of own work, identifying problems and making suggestions for improvement of procedures.

This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. The unit is also not applicable to a maintenance/PVI shutdown as experienced by the continuous process manufacturers.

However, where there is continuous operation on a campaign basis, it may be applied to the changeover between campaigns or similar changeovers.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Prepare for changeover                       | 1.1 | Determine when changeover will be required                         |
|   |  | 1.2 | Review plans and instructions for quick changeover                 |
|   |  | 1.3 | Identify role of others in quick changeover                        |
|   |  | 1.4 | Obtain all required tools/parts/materials for changeover           |
|   |  | 1.5 | Organise process and tools/parts/materials ready for changeover    |
| 2 | Make quick changeover                        | 2.1 | Plan changeover according to quick changeover principles           |
|   |  | 2.2 | Liaise and work with relevant people in quick changeover           |
|   |  | 2.3 | Complete changeover according to procedures                        |
|   |  | 2.4 | Check output meets specification                                   |
|   |  | 2.5 | Debrief with all relevant stakeholders                             |
|   |  | 2.6 | Note any steps which cause a problem                               |
|   |  | 2.7 | Recommend changes to problematic steps                             |
| 3 | Improve occupational health and safety (OHS) | 3.1 | Identify hazards to self or others in all steps/actions            |
|   |  | 3.2 | Determine risks from each hazard                                   |
|   |  | 3.3 | Identify actions which may be performed in a more ergonomic manner |

3.4 Recommend changes to improve OHS

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- determining/predicting when a changeover will occur through knowledge of products and processes in own work area
- communicating with others to clarify scope and procedures for quick changeover and contributing suggestions for improvement
- planning own tasks in quick changeover
- identifying and working to target changeover time
- working as part of a team
- setting up quick changeover using appropriate tools, process skills and procedures
- following OHS procedures and regulatory requirements and notifying risks

### Required knowledge

Required knowledge includes:

- principles of quick changeover, including:
  - setting of target time for changeover
  - conversion of internal set-up time to external set-up time, where appropriate
  - simplification of changeover steps
  - monitoring and continuous improvement of changeovers
- relevant operational procedures
- target time for changeover
- relevant OHS regulations and requirements
- purposes/requirements of changeover
- methods of recommending changes
- quality requirements for products and processes
- minimisation of changeover waste (e.g. scrap and energy )

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

---

## Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope and equipment to be used in a quick changeover implemented in their work area</li> <li>• identify the target time</li> <li>• understand the difference between internal and external changeover steps</li> <li>• identify own tasks and responsibilities in a quick changeover</li> <li>• identify problems in quick changeovers</li> <li>• contribute suggestions for improvement.</li> </ul>
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess response to contingencies.</li> </ul>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Changeover</b>	<p>Changeover may refer to:</p> <ul style="list-style-type: none"> <li>• an exchange of equipment (often dies or tools (traditional))</li> <li>• a change between products/batches or between campaigns or processes. It may be any quantum change to produce a different product or undertake a different process</li> </ul> <p>In competitive systems and practices equipment-based quick changeover techniques in manufacturing can often be referred to under different names, for example:</p> <ul style="list-style-type: none"> <li>• single minute exchange of die (SMED) – The term originated with die changeovers but now often refers to the ability to perform any set-up activity in a minute or less of machine or process downtime</li> <li>• single-digit set-up – performing a set-up activity in a single-digit number of minutes (i.e. fewer than ten)</li> <li>• one touch exchange of die (OTED) – literally, changing a die with one physical motion, such as pushing a button; broadly, an extremely simple procedure for performing a set-up activity</li> </ul>
<b>Set-up</b>	<p>Set-up can be divided into two types:</p> <ul style="list-style-type: none"> <li>• internal set-up (work that can be done only when the machine or process is not actively engaged in production)</li> <li>• external set-up (work that can be done concurrently with the machine or process performing production duties)</li> </ul> <p>The same distinction can be applied to non-production equipment-based work areas where changeovers of processes or operations can be:</p> <ul style="list-style-type: none"> <li>• internal (requires work to stop, be reset, computers</li> </ul>

	<p>restarted, and so on)</p> <ul style="list-style-type: none"> <li>external (where work can continue during the changeover)</li> </ul>
<b>Set-up time</b>	<p>Set-up time includes:</p> <ul style="list-style-type: none"> <li>the work time required to change over a machine or process from one item or operation to the next item or operation</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>work instructions</li> <li>standard operating procedures</li> <li>formulas/recipes</li> <li>batch sheets</li> <li>temporary instructions and similar instructions provided for the smooth running of operations, processes, plant and equipment</li> <li>good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>written, verbal, computer-based or in some other format</li> </ul>

## **MSS402021A Apply Just in Time procedures**

### **Modification History**

New unit, superseding MSACMT221A Apply Just in Time (JIT) procedures - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to work in an organisation implementing Just in Time (JIT) procedures.

### **Application of the Unit**

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Respond to indicator of demand	1.1	Identify pull of product through work role
		1.2	Recognise indicator of flow authorisation
		1.3	Identify production or service required
2	Make products or deliver service to demand	2.1	Make product or deliver service as required by ticket
		2.2	Identify any factors likely to prevent demand being satisfied in own work or work of the team
		2.3	Take action in accordance with procedures
3	Update demand information as required	3.1	Record information on ticket to procedures, as required
		3.2	Facilitate operation of flow authorisation as part of work
4	Recommend improvements	4.1	Examine the operation of the JIT system as it relates to own work
		4.2	Identify areas for improvement
		4.3	Identify any additional personal skill requirements to implement JIT procedures
		4.4	Recommend improvements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- receiving ticket, kanban, order or other indicator of demand and interpreting correctly for own work function, including quantity, quality, time and delivery requirements
- ensuring that all production and movement of parts/material or delivery of a service for which the individual is responsible for takes place only as required by a downstream operation
- recognising and taking appropriate action on faults and other issues that may threaten the JIT delivery of own product or service
- reading and recording information on tickets or other indicators of demand
- suggest improvements to JIT system, as appropriate
- performing technical functions to meet indicators of demand from downstream and to issue indicators of demand upstream

### Required knowledge

Required knowledge includes:

- relevant indicator of demands for own job
- own role in flow authorisation
- JIT methods relevant to job
- procedures for recommending improvements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the indicators of demand and the flow authorisation system in their work area</li> <li>• relate products and services supplied by suppliers and</li> </ul>
--	---

	<p>customers to the flow authorisation system</p> <ul style="list-style-type: none"> <li>• identify own tasks and responsibilities and relate them to the flow authorisation system</li> <li>• interpret received indicators of demand correctly for quantity, quality and time of delivery</li> <li>• contribute suggestions for improvement.</li> </ul>
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess response to contingencies.</li> </ul>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using some combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally</p>

	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p>
--	---

	<ul style="list-style-type: none"> <li>the stage of implementation of competitive systems and practices</li> <li>the size of the enterprise</li> <li>the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>JIT</b>	<p>JIT is a scheduling concept that calls for any item or service needed for an operation, whether a service, raw material, finished item, or anything in between to be available:</p> <ul style="list-style-type: none"> <li>precisely when the service, product or operation is to be produced or undertaken</li> <li>in the right quantity and at the right quality</li> </ul>
<b>Product</b>	<p>Product may include:</p> <ul style="list-style-type: none"> <li>a physical product</li> <li>a supporting utility service, such as water, gas, power</li> <li>some other service (e.g. cranes and forklifts)</li> </ul>
<b>Flow authorisation</b>	<p>Flow authorisation refers to:</p> <ul style="list-style-type: none"> <li>a system which authorises the worker to make a product without reference to another authority</li> </ul>
<b>Indicator of demand</b>	<p>An indicator of demand may include:</p> <ul style="list-style-type: none"> <li>kanban bin, ticket or similar</li> <li>some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software)</li> </ul> <p>In continuous operations organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar</p>
<b>Ticket</b>	<p>A ticket may include:</p> <ul style="list-style-type: none"> <li>kanban or some other record, paper or electronic, which constitutes the whole or part of the flow authorising system (where kanban bins are used, there may be no other record)</li> </ul>
<b>Kanban</b>	<p>Kanban refers to:</p> <ul style="list-style-type: none"> <li>a card or sheet used to authorise production or movement of an item and may vary in format or</li> </ul>

	content between organisations and departments
<b>SCADA</b>	<p>SCADA refers to:</p> <ul style="list-style-type: none"> <li>• a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action</li> </ul>
<b>Pull system</b>	<p>A pull system refers to:</p> <ul style="list-style-type: none"> <li>• an operations planning system based on making on demand, as opposed to a push system based on making for stock using a sales forecast</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>

## Unit Sector(s)

Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS402030A Apply cost factors to work practices**

### **Modification History**

New unit, superseding MSACMT230A Apply cost factors to work practices - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by an individual to identify cost components in their work and to be able to determine, in general terms, the cost impacts of alternative actions.

### **Application of the Unit**

This unit applies to an individual who is required to contribute to, and be involved in, the assessment of cost factors in their work. This may be done individually or in a team environment.

The unit covers the skills to be able to assess the relative costs of the alternatives and use this as one of the key factors in making decisions. Decisions are made within the scope of the employee's authority and according to procedures. Typical decisions include those that contribute to the efficient organisation of own work and the improvement of production time and cycle times.

This unit requires the application of skills associated with problem solving to identify cost factors and cost implications of own work and self-management to apply cost-effective practices.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |   |     |   |
|---|---|-----|---|
| 1 | Identify the major cost components of product or process in own work area | 1.1 | Identify cost components in the product or process in own work area   |
|   |   | 1.2 | Recognise the impact of current or alternative actions on costs   |
| 2 | Identify constraints to cost-efficiency                                   | 2.1 | Identify required production/process rate and major costs   |
|   |   | 2.2 | Identify costs factors under individual or team control   |
|   |   | 2.3 | Relate identified costs factors to impact on overall cost of production/process   |
|   |   | 2.4 | Identify cost factors that are a constraint to cost-efficiency in own work area   |
| 3 | Apply cost-efficient work practices                                       | 3.1 | Identify and explain to relevant people the implications of possible actions/changes to improve cost-efficiency in simple financial terms |
|   |   | 3.2 | Identify non-financial implications of proposed changes in discussion with relevant people  |
|   |   | 3.3 | Select actions which minimise overall costs   |
|   |   | 3.4 | Monitor actions to ensure cost-efficiency in own work area is maintained  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- identifying fixed and variable cost components relevant to own work, including where applicable:
  - power/energy
  - materials, plant and equipment
  - production or process time, including impact on salary and wages
  - office expenses
  - government taxes and charges

### Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense and income
- major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope of their own and their teams work</li> </ul>
--	---

	<p>and relate it to the overall flow of work in the organisation</p> <ul style="list-style-type: none"> <li>• express cost factors in specific terms (e.g. cost per item, process and task) and not just in a general manner</li> <li>• identify and express costs factors in simple financial terms</li> <li>• use cost factors to select lower cost alternatives when making decisions.</li> </ul>
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul>
--	---

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Cost components</b>	<p>Cost components include:</p> <ul style="list-style-type: none"> <li>• fixed and variable costs, such as power/energy, materials, plant and equipment, production or process time, including impact on salary and wages</li> <li>• office expenses, such as telephone</li> <li>• government taxes and charges</li> </ul>
<b>Process</b>	<p>Process may include:</p> <ul style="list-style-type: none"> <li>• a production, maintenance, logistics, office or other support process in an organisation</li> </ul>
<b>Overall cost</b>	<p>Overall cost may include:</p> <ul style="list-style-type: none"> <li>• the assessment of negative and positive financial implications</li> <li>• negative long-term issues, such as occupational health and safety (OHS), environmental and regulatory issues</li> </ul>

## **MSS402031A Interpret product costs in terms of customer requirements**

### **Modification History**

New unit, superseding MSACMT231A Interpret product costs in terms of customer requirements - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by an individual to be able to identify the major cost components of either products or processes, the basic relationship of these to customer benefit, and use this to help minimise waste (defined as anything not delivering value as defined by the customer). It has a different focus to MSS402030A Apply cost factors to work practices, which focuses on costs in isolation, whereas this unit regards all costs not directly leading to customer benefit as waste.

### **Application of the Unit**

This unit applies to an individual who uses their understanding of the customer's requirements of the product or process being undertaken as the basis for investigating work processes to identify waste sources and then takes action relevant to their level of competency and authority to reduce this waste. It requires an understanding of both the cost factors in the products they make and also the benefits which the customer derives from the product. This competency may be performed individually or in a team-based environment.

This unit requires the application of skills associated with analysis and problem solving to identify waste and determine ways to minimise waste. This unit requires initiative and enterprise and application of learning in concepts of waste and waste minimisation.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Identify cost components deriving from customer benefit and other costs	1.1	Identify customer features/benefits in product or process being undertaken
		1.2	Identify cost components which deliver customer features/benefits and those which do not
2	Compare required performance of product or process steps with actual performance	2.1	Identify performance required to meet customer needs in own work and that of team
		2.2	Identify actual performance
		2.3	Compare cost components of products or process with current customer-related targets
		2.4	Separate costs components into those that contribute to customer features/benefits and those that do not
		2.5	Determine non-contributing cost components which are under control of the individual or team
3	Minimise waste	3.1	Recommend changes to eliminate or reduce waste
		3.2	Adopt changes which minimises waste
		3.3	Monitor effect of changes to ensure gains are made against customer features/benefits

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying customer benefit in own work and that of the individual's team
- identifying financial and other performance indicators for own work and of team, including where appropriate, takt time
- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- classifying fixed and variable cost components in terms of relevancy to customer benefit, including where applicable:
  - power/energy
  - materials, plant and equipment
  - production or process time, including impact on salary and wages
  - required and unnecessary downtime
  - office expenses
  - government taxes and charges

### Required knowledge

Required knowledge includes:

- value as defined by the customer and the relevancy to own and team's work
- ability to access company information about:
  - customer features/benefits
  - cost components of products made
  - costs concepts, such as expense and income
  - major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify customer benefit from own and team's work</li> <li>• express cost factors (financial and other factors) in specific terms (e.g. cost per item, process and task), and not just in a general manner</li> <li>• identify and express costs factors in simple financial terms</li> <li>• contribute suggestions for improvement to minimise waste and overall costs.</li> </ul>
Context of and specific resources for assessment	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will</p>

	<p>be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just In Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Customer features/benefits</b>	<p>Customer features/benefits include:</p> <ul style="list-style-type: none"> <li>• characteristics of the product or service which add value to the customer, this value may be assessed in financial or features terms</li> </ul> <p>The customer may be:</p> <ul style="list-style-type: none"> <li>• internal or external</li> </ul>
<b>Performance</b>	<p>Performance may include:</p> <ul style="list-style-type: none"> <li>• the rate of output of the plant compared to the rate required to meet demand</li> <li>• takt, where takt time is the allowable time to produce one product at the rate and quality customers are demanding it (this is NOT the same as cycle time, which is the normal time to complete an operation on a product – which should be less than or equal to takt time)</li> </ul>
<b>Customer-related targets</b>	<p>Customer-related targets include:</p> <ul style="list-style-type: none"> <li>• internally set financial and operational targets that contribute to meeting customer features/benefits</li> </ul>
<b>Contributing and non-contributing cost components</b>	<p>Contributing costs include:</p> <ul style="list-style-type: none"> <li>• costs that make a direct contribution to customer features/benefits. These costs continue to need to be incurred (although they may be minimised) in order to gain the customer feature/benefit</li> </ul> <p>Non-contributing costs include:</p> <ul style="list-style-type: none"> <li>• other costs that do not contribute to customer features/benefits. These may be costs that must be maintained, such as regulatory compliance and occupational health and safety (OHS) costs and other</li> </ul>

	costs which are not required and do not contribute to customer features and so should be eliminated if possible (this is also defined in terms of <i>waste</i> – see below)
<b>Waste</b>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) includes:</p> <ul style="list-style-type: none"> <li>• any activity which does not contribute to customer or organisation benefit/features in the product</li> </ul> <p>Categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> </ul> <p>Waste for this unit may include activities which do not yield any benefit to the organisation or any benefit to the organisations customers</p>

## MSS402040A Apply 5S procedures

### Modification History

New unit, superseding MSACMT240A Apply 5S procedures in a manufacturing environment  
- Equivalent

### Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee to apply 5S procedures to their own job and work area. The unit assumes the employee has a particular job and an allocated work area and that processes in the work area are known by the individual.

### Application of the Unit

This unit applies to an individual in an organisation who works in an operational position as part of production, maintenance, logistics, and so on. The unit can also apply to individuals in other organisations who have a discrete role and responsibility for individually managed processes. For employees in an office, the specific office-related unit *MSS402041A Apply 5S in an office* should be selected.

This unit applies where an organisation has decided to embark on a competitive systems and practices strategy and as part of this has adopted the philosophy of 5S as one of the tools to improve performance. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.

This unit requires the application of skills associated with planning and organising, problem solving and self-management, in order to identify and implement 5S housekeeping practices.

### Licensing/Regulatory Information

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |                                 |     |   |
|---|---------------------------------|-----|---|
| 1 | Sort needed items from unneeded | 1.1 | Identify all items in the work area   |
|   |                                 | 1.2 | Sort items to achieve deliverables and value expected by downstream and final customers |
|   |                                 | 1.3 | Sort items required for regulatory or other required purposes                           |
|   |                                 | 1.4 | Place any non-essential item in a appropriate place other than the workplace            |
|   |                                 | 1.5 | Regularly check that only essential items are in the work area                          |
| 2 | Set the workplace in order      | 2.1 | Identify the best location for each essential item                                      |
|   |                                 | 2.2 | Place each essential item in its assigned location                                      |
|   |                                 | 2.3 | After use immediately return each essential item to its assigned location               |
|   |                                 | 2.4 | Regularly check that each essential item is in its assigned location                    |
| 3 | Shine the work area             | 3.1 | Keep the work area clean and tidy at all times  |
|   |                                 | 3.2 | Conduct regular housekeeping activities during shift                                    |
|   |                                 | 3.3 | Ensure the work area is neat, clean and tidy at both beginning and end of shift         |

- 
- |   |                        |     |  |
|---|------------------------|-----|--|
| 4 | Standardise activities | 4.1 | Follow procedures  |
|   |                        | 4.2 | Follow checklists for activities, where available  |
|   |                        | 4.3 | Keep the work area to specified standard   |
| 5 | Sustain the 5S system  | 5.1 | Clean up after completion of job and before commencing next job or end of shift                        |
|   |                        | 5.2 | Identify situations where compliance to standards is unlikely and take actions specified in procedures |
|   |                        | 5.3 | Inspect work area regularly for compliance to specified standard                                       |
|   |                        | 5.4 | Recommend improvements to lift the level of compliance in the workplace                                |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others to clarify issues during 5S implementation, communicate results and contribute suggestions for improvement
- visualising operations in terms of flow and contribution to customer outcomes
- planning own tasks in implementation of 5S
- implementing 5S in own work area according to instructions
- identifying waste (muda)
- prioritising activities and items
- reading and interpreting documents describing procedures
- recording activities and results against templates and other prescribed formats
- working with others
- solving problems

### Required knowledge

Required knowledge includes:

- operations and processes relevant to own job
- meaning and application of 5S steps to own job and work area
- principles of efficient workplace organisation
- purposes of 5S
- methods of making/recommending improvements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify own tasks and responsibilities and relate them to organisation and customer requirements</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• identify and explain the stages of 5S</li> <li>• implement 5S in own work area</li> <li>• identify waste (muda) in the work area.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory</li> </ul>
---	---

	environment and the industry sector
<b>5S</b>	<p>5S is a system of work organisation originally developed in Japan based around housekeeping principles. A close translation of the five stages in the housekeeping approach is:</p> <ul style="list-style-type: none"> <li>• sort</li> <li>• set in order</li> <li>• shine</li> <li>• standardise</li> <li>• sustain</li> </ul>
<b>Sort</b>	<p>Sort involves keeping only what is absolutely necessary for the processes in the work area. Sort includes:</p> <ul style="list-style-type: none"> <li>• clearing the work area of all non-essential equipment and materials</li> </ul> <p>Non-essential items are those not required to either produce product, conduct process or operations, or make required adjustments to equipment during process or operations</p>
<b>Set in order</b>	<p>Set in order includes:</p> <ul style="list-style-type: none"> <li>• assigning required equipment and materials appropriate locations in the work area</li> </ul>
<b>Shine</b>	<p>Shine includes:</p> <ul style="list-style-type: none"> <li>• keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time and, on most occasions, at the end of a job</li> </ul>
<b>Standardise</b>	<p>Standardising includes:</p> <ul style="list-style-type: none"> <li>• activities that help maintain the order and the housekeeping standards</li> <li>• using procedures and checklists developed from a procedure</li> </ul>
<b>Sustain</b>	<p>Sustain includes:</p> <ul style="list-style-type: none"> <li>• making sure that daily activities are completed every day regardless of circumstance</li> <li>• cleaning up after a job</li> <li>• undertaking inspections, including: <ul style="list-style-type: none"> <li>• informal inspections carried out often, at least weekly</li> <li>• formal inspections carried out at least monthly</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>generating continuous improvement actions from daily activities</li> <li>following up specific actions to generate continuous improvement</li> </ul>
<b>Items in work area</b>	<p>Items in work area may include:</p> <ul style="list-style-type: none"> <li>tools</li> <li>jigs/fixtures</li> <li>materials/components</li> <li>plant and equipment</li> <li>manuals</li> <li>personal items (e.g. bags, lunch boxes and posters)</li> <li>safety equipment and personal protective equipment</li> <li>other items which happen to be in the work area</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>work instructions</li> <li>standard operating procedures</li> <li>formulas/recipes</li> <li>batch sheets</li> <li>temporary instructions and similar instructions provided for the operation of the plant</li> <li>good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>written, verbal, computer based or in some other format</li> </ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS402050A Monitor process capability**

### **Modification History**

New unit, MSACMT250A Monitor process capability - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required for gathering of data and the interpretation of simple information to determine the compliance of the process and the taking of action as defined by the procedures where the information reveals the process is out of control parameters.

### **Application of the Unit**

This unit applies to an individual in an organisation adopting specific competitive systems and practices, usually either six sigma or statistical process control/three sigma, as a means of determining and improving the capability of their process to customer requirements. The individual is involved in collecting specified data and performing specified manipulations to the data (typically by plotting on a chart or by entering into a nominated computer program). The information is typically presented to team members in terms of graphs/charts which they are expected to interpret at a basic level and then take action in accordance with procedures to restore the process to being under control parameters.

This unit requires the application of skills associated with entering and monitoring operational data and information and requires initiative, enterprise and problem solving in identifying production variations and making improvement recommendations.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

1	Collect and process data	1.1	Take specified measurements/readings, as required
		1.2	Enter data in log, computer or other record
		1.3	Manipulate and/or chart data as required by procedures
2	Identify variations that are not random and take action	2.1	Examine chart and/or reliability information
		2.2	Distinguish between random variations and those with an identifiable cause
		2.3	Take action specified in procedures when a variation with an identifiable cause occurs
3	Assist in process improvement	3.1	Collect data for process capability improvement trials
		3.2	Make recommendations for improvement
		3.3	Implement revised capability monitoring procedures

## Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - formulas/recipes
  - production and batch sheets
  - temporary instructions
  - other provided operating instructions
- monitoring performance data against specifications and control parameters
- examining equipment procedures, products and processes for possible causes of variations
- identifying when corrective action is required by reference to procedures

### Required knowledge

Required knowledge includes:

- data collection methods for operations in work area
- data processing techniques required
- basic variability and normal distribution
- recognition of identifiable causes in accordance with procedures
- causes of different types of identifiable causes as defined by procedures
- actions to be taken for the different causes

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>Evidence should be available of data collected and processed. There may also be evidence of assignable causes recognised and action taken. There should not be evidence of assignable causes being ignored.</p> <p>A person who demonstrates competency in this unit must</p>
--	--

	<p>be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope of operations, including required performance parameters in their work area</li> <li>• collect, enter and process data, including normal performance and variations</li> <li>• read and interpret data, including identifying variation to set parameters</li> <li>• determine where assignable causes can be allocated to variations and take appropriate action</li> <li>• participate in data collection, when required, for process capability trials</li> <li>• contribute suggestions for improvement.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems.</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Six sigma</b>	<p>Six sigma is a process improvement methodology based on statistical process control with six sigma limits which equates to 3.4 defects per million opportunities for each product or service transaction</p> <p>Six sigma is also often used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package</p>
<b>Three sigma</b>	<p>Three sigma includes:</p> <ul style="list-style-type: none"> <li>• statistical process control with three sigma limits which equates to 3 defects per thousand opportunities for each product or service transaction</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other form</li> </ul>
<b>Random variation</b>	<p>Random variation is the term used in statistical control to refer to those variations for which no cause can be found</p>
<b>Identifiable cause</b>	<p>Identifiable cause (also referred to as assignable cause or special cause) refers to:</p>

	<ul style="list-style-type: none"><li>those variations for which a cause can be found and so the cause of the variation eliminated</li></ul>
<b>Process capability</b>	Process capability means the capability of the process to deliver to customer defined requirements. Process capability includes process stability against standardised practices and documentation to eliminate variation against customer requirements

## MSS402051A Apply quality standards

### Modification History

New unit, superseding MSACMT251A Apply quality standards - Equivalent

### Unit Descriptor

This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units.

### Application of the Unit

This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met.

This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |   |     |  |
|---|---|-----|--|
| 1 | Assess own work   | 1.1 | Continuously check completed work against workplace standards relevant to the operation being undertaken   |
|   |   | 1.2 | Demonstrate an understanding of how the work activities and completed work relate to the next production process or processes and to the final products or services concerned                                  |
|   |   | 1.3 | Identify and isolate faulty components, products or processes  |
|   |   | 1.4 | Record and/or report faults and any identified causes to the supervisor concerned, where required, in accordance with workplace procedures   |
| 2 | Assess quality of received components, parts or materials | 2.1 | Continuously check received components, parts, materials, information, service or final products against workplace standards and specifications for conformance  |
|   |   | 2.2 | Demonstrate an understanding of how the received components, parts or materials, information or service relate to the current operation and how they contribute to the final quality of the product or service |
|   |   | 2.3 | Identify and isolate faulty components, parts, materials or information that relate to the operator's work   |
|   |   | 2.4 | Record and/or report faults and any identified causes in accordance with workplace procedures  |
|   |   | 2.5 | Identify causes of any identified faults and take corrective action as specified in workplace procedures   |

- |   |  |     |  |
|---|--|-----|--|
| 3 | Measure components, parts or materials     | 3.1 | Measure materials, component parts, information, service or products, as required, using the appropriate measuring instruments in accordance with workplace procedures |
| 4 | Record information on production indicator | 4.1 | Record basic information on quality and other indicators of process performance in accordance with workplace procedures  |
| 5 | Investigate causes of quality deviations   | 5.1 | Investigate and report causes of deviations from specified quality standards for components  |
|   |  | 5.2 | Recommend suitable preventative action based on workplace quality standards and the identified causes of deviations from specified quality standards of materials      |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- interpreting work instructions, specifications, standards and patterns appropriate to own work
- carrying out relevant visual inspections of materials, component parts and final products
- carrying out relevant physical/chemical measurements or tests
- maintaining accurate work records in accordance with procedures
- carrying out work in accordance with occupational health and safety (OHS) policies and procedures
- meeting work specifications
- communicating effectively within defined workplace procedures
- interpreting and applying defined procedures

### Required knowledge

Required knowledge includes:

- relevant quality standards, policies and procedures
- relevant production processes, materials and products
- basic characteristics of materials used in the relevant production processes
- safety and environmental aspects of relevant production processes
- relevant measurement techniques and quality checking procedures
- workplace procedures
- reporting procedures

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• interpret, relevant work instructions, standards and specifications appropriate to own work</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• check and measure relevant quality parameters</li> <li>• interpret results of quality checks in terms of specifications, patterns and work standards</li> <li>• take required action where standards of materials, component parts, final product or work processes are found to be unacceptable</li> <li>• maintain accurate records.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted</p>
--	--

	<p>so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Quality parameters</b>	<p>Quality parameters may include:</p> <ul style="list-style-type: none"> <li>• finish</li> <li>• size</li> <li>• durability</li> <li>• product or process variations</li> <li>• materials</li> <li>• alignment</li> <li>• colour</li> <li>• damage and imperfections</li> <li>• time</li> </ul>
<b>Quality checks</b>	<p>Quality checks are against set parameters for the process or product. Examples include:</p> <ul style="list-style-type: none"> <li>• visual inspection</li> <li>• physical measurements</li> <li>• chemical tests</li> <li>• checks against patterns, templates and guides</li> <li>• processing time</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• physical raw materials</li> <li>• orders, forms and other documentation</li> <li>• services required for undertaking an operation (e.g. power, water, compressed air and fuel)</li> </ul>
<b>Measure</b>	<p>Measure includes:</p> <ul style="list-style-type: none"> <li>• those measurements which may be taken by the employee in the workplace/at their work station</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the operation of the plant</li> <li>• good operating practice as may be defined by</li> </ul>

	<p>industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</p> <ul style="list-style-type: none"> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<b>Indicators of production performance</b>	<p>Indicators of production performance may include:</p> <ul style="list-style-type: none"> <li>• number of items/production rate</li> <li>• delays and causes of delays (where known)</li> <li>• other information as specified in the procedures</li> </ul>
<b>Data entry/recording</b>	<p>Data entry/recording may include:</p> <ul style="list-style-type: none"> <li>• keyboard</li> <li>• written (including ticks or signs)</li> <li>• verbal</li> </ul>
<b>Sources of information/ documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• quality and Australian standards and procedures</li> <li>• work instructions, patterns, designs and recipes</li> <li>• organisation work procedures</li> <li>• manufacturer instructions for materials and equipment</li> <li>• organisational or external personnel</li> <li>• customer requirements</li> </ul>

## **MSS402060A Use planning software systems in operations**

### **Modification History**

New unit, superseding MSACMT260A Use planning software systems in manufacturing -  
Not equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to access planning software (often known as Enterprise resource Planning (ERP), Materials Resource Planning (MRP and MRPII), and often by a proprietary name, to make routine business decisions required of the person as a regular part of their job.

### **Application of the Unit**

This unit applies to an individual in an organisation using a planning software system and who must interface with that system. The unit applies to both accessing information from the planning software system and using it as an aid to decision making. This unit requires the application of communication, planning, and problem solving associated with using planning software in own work.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Use interface	<p>1.1 Identify terminals relevant to own work station and functions</p> <p>1.2 Use keyboards, track ball/mouse and monitor and/or other peripherals to access system</p> <p>1.3 Navigate through system and screens to find program menu and data relevant to own work</p> <p>1.4 Identify and input information on own work processes at required frequency and to required detail</p> <p>1.5 Access message section and acknowledge messages</p> <p>1.6 Identify problems and make suggestions for improvements to relevance of planning software to own work</p>
2	Access information	<p>2.1 Identify work processes that require information from planning software system</p> <p>2.2 Obtain relevant data and information on current operations from the planning software system</p> <p>2.3 Identify the status of items in the value stream</p> <p>2.4 Access historical data and information</p> <p>2.5 Interpret information and identify and prioritise any</p>

## actions required in response to information

- |   |  |     |   |
|---|--|-----|---|
| 3 | Take appropriate actions in accordance with procedures | 3.1 | Take actions in response to information obtained from planning software           |
|   |  | 3.2 | Follow up as appropriate to ensure anticipated results have occurred              |
|   |  | 3.3 | Record adjustments and variations according to procedures                         |
|   |  | 3.4 | Identify any learning needs to use planning software and seek appropriate support |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - formulas/recipes
  - production and batch sheets
  - temporary instructions
  - other provided operating instructions
- working within access control requirements of the planning software system
- identifying modules, screens, files, and so on, of software relevant to own work
- logging in and using terminals and planning software at a level of access appropriate to own work
- accurately inputting data
- searching and retrieving data
- accessing nominated assistance with planning software

### Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- planning software system and operation, including:
  - terminal locations and types
  - security and access arrangements
  - range of information held in planning software relevant to own work
  - data collection methods for operations in work area
  - assistance arrangements for users of planning software
  - business activities exercised by/through the planning software system
- value created by operations for customers

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the

---

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope and relevance of planning software system to their own work</li> <li>• enter and retrieve data, including normal performance and variations</li> <li>• use planning software system to assist in own work</li> <li>• contribute suggestions for improvement to performance and relevance of planning software to own work area.</li> </ul>
<p>Context of and specific resources for assessment</p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Planning software</b>	<p>Planning software includes:</p> <ul style="list-style-type: none"> <li>• software systems which integrate a range of business information, such as finance, logistics maintenance and production (frequently referred to as ERP, MRP, MRPII or a range of proprietary names)</li> </ul>
<b>Relevant data and information</b>	<p>Relevant data and information may include:</p> <ul style="list-style-type: none"> <li>• technical and other drawings</li> <li>• standard operating procedures and other work instructions</li> <li>• production schedules including historical data</li> <li>• orders and order tracking information</li> <li>• stock control</li> <li>• contact lists</li> <li>• occupational health and safety (OHS) information</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement, stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>

<b>Items in the value stream</b>	<p>Items in the value stream refer to information held within the planning software system that contributes to creating value as determined by the customer. Depending on the organisation it may include:</p> <ul style="list-style-type: none"> <li>• physical elements of the production system, such as sites, work stations, equipment, material, including stock, work in progress and finished products</li> <li>• information needed to meet customer requirements, such as designs, drawings, work instructions, standard operating procedures, standards, material lists and pricing</li> <li>• information not directly related to current customer requirements but required by the organisation</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>

## MSS402061A Use SCADA systems in operations

### Modification History

New unit, superseding MSACMT261A Use SCADA systems in manufacturing - Equivalent

### Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to interact with a System Control and Data Acquisition (SCADA) system as part of their job.

### Application of the Unit

This unit applies to an individual in an organisation using a SCADA system and the individual must interface with that system. The individual will need to access this system as part of their routine and take actions based on the information they obtain from the SCADA system in accordance with procedures.

This unit requires the application of skills associated with using communication tools and technology for management of own work, planning and problem solving.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |   |   |
|---|---|---|
| 1 | Use operator interface                              | 1.1 Identify SCADA terminals relevant to own work station and functions   |
|   |   | 1.2 Use keyboards, track ball, monitor and/or stand alone controllers to access/interrogate system                    |
|   |   | 1.3 Use correct level of access and find all relevant screens and information   |
|   |   | 1.4 Access message section and acknowledge messages   |
|   |   | 1.5 Input and output information correctly according to program and organisation requirements                         |
| 2 | Use information                                     | 2.1 Obtain data and information from SCADA, as required, including process, supply and product chain data             |
|   |   | 2.2 Interpret data and information as required by own job   |
|   |   | 2.3 Find and use relevant historical data and information   |
|   |   | 2.4 Use manufacturer manuals or specifications, as required, to expand knowledge of SCADA system relevant to own work |
|   |   | 2.5 Determine and prioritise required actions   |
| 3 | Make required changes in accordance with procedures | 3.1 Adjust production/process in response to SCADA information  |
|   |   | 3.2 Record adjustments and variations to specifications/schedules and report to appropriate personnel                 |
|   |   | 3.3 Seek feedback and information on adjustments to further improve procedures, where required                        |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- using SCADA terminals and other input devices
- reading and interpreting electronic and hard copy SCADA operating instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - temporary instructions
  - other provided operating instructions
- working within security and access control requirements of the SCADA system
- identifying modules, screens, and so on, of SCADA system relevant to own work
- accurately inputting and outputting data
- searching and retrieving data
- accessing SCADA system nominated assistance, when required

### Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope and relevance of the SCADA system to their own work</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• access correct levels of the SCADA system</li> <li>• enter and retrieve data, including normal performance and variations</li> <li>• use SCADA system to assist in own work.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented ,or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being</p>

	performed.
--	------------

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as SCADA software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>SCADA</b>	<p>SCADA refers to:</p> <ul style="list-style-type: none"> <li>a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action</li> </ul> <p>In some industry sectors, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as Distributed Control System (DCS). These sectors may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system).</p> <p>SCADA systems may provide information from outside of the process, such as stock/material levels in a customer plant and/or available supply, supply rates and pricing from a supplier plant. This information may all be accessed by the SCADA system and the employee using it in order to make production rate and other control decisions (either automatically or human assisted) about their own operations and work processes</p>
<b>Supply and product chains</b>	<p>The supply chain Includes:</p> <ul style="list-style-type: none"> <li>all suppliers in the chain from the initial raw material up to the current step in the operations process</li> </ul> <p>The product chain includes:</p> <ul style="list-style-type: none"> <li>all steps after the current step up to the final customer</li> </ul> <p>Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes:</p> <ul style="list-style-type: none"> <li>the product sale</li> <li>outlet</li> <li>the final assembler</li> <li>product design</li> <li>raw material mining and processing</li> <li>all tiers of the value stream (sometimes called the supply chain)</li> </ul> <p>Any truly 'competitive' system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive systems and practices can reach its full potential without including the entire 'organisation' in its planning</p>

<p><b>Procedures</b></p>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>

## **MSS402080A Undertake root cause analysis**

### **Modification History**

New unit, superseding MSACMT280A Undertake root cause analysis - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA) by any person. This will often be undertaken by people working in a team. This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

### **Application of the Unit**

This unit applies to individuals working in an organisation which is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

Where training in a wider range of problem solving techniques and tools is required the unit MSAPMSUP390A Use structured problem solving tools should be selected.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Recognise problems	1.1	Identify features or occurrences indicative of a problem
		1.2	Use appropriate tools, techniques and charts to define the problem
2	Implement quick fix	2.1	Recommend a quick fix within the scope of competency and authority
		2.2	Use technology or processes relevant to the problem to implement quick fix
3	Determine root cause	3.1	Identify a range of possible causes
		3.2	Gather data and other information to eliminate or confirm possible causes
		3.3	Use available data and information to link causes and effects
		3.4	Seek assistance, as required
		3.5	Identify root cause

- 4 Develop permanent solution
  - 4.1 Identify a range of methods to eliminate the root cause or break the cause tree
  - 4.2 Select the most appropriate solution
  - 4.3 Liaise with relevant people
  - 4.4 Recommend or implement solution within the limits of competency and authority
  - 4.5 Monitor impact of solution and make further recommendations, as required

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- cooperating and working with others on problem solving
- assessing and recording information from a variety of sources
- defining potential problems factually, including:
  - location and extent of problem or incident
  - sequence of events where relevant
  - extent of deviation from normal operation or performance
- analysing potential problems across a range of varied activities and knowledge applications
- reading and constructing simple charts, such as cause and effect diagrams

### Required knowledge

Required knowledge includes:

- RCA methodology, including difference between quick fixes and root cause elimination or breaking of causal tree
- principles and normal operation of equipment, plant and processes in own work area sufficient to undertake a RCA and propose solutions
- common variances to normal performance that are indicators of a problem
- use of relevant analysis tools (e.g. cause/effect diagrams, Pareto charts and 5 Whys)
- operations in own work area

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• undertake problem identification</li> <li>• use appropriate processes to achieve root cause</li> </ul>
--	--

	<p>identification</p> <ul style="list-style-type: none"> <li>• prioritise solutions</li> <li>• recommend solutions and implementation procedures to problems within own area and range of technical skills and knowledge</li> <li>• evaluate implementation of solutions.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess response to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for</b>	Assessment processes and techniques must be culturally

<b>assessment</b>	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p>
--	--

	<ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Features or occurrences indicative of a problem</b>	<p>Examples of features or occurrences indicating problems include:</p> <ul style="list-style-type: none"> <li>• variation to normal plant or equipment operation</li> <li>• unplanned or non-conforming process or operations outcomes</li> <li>• out of specification products</li> <li>• excess scrap</li> <li>• accidents and emergencies</li> <li>• regulatory breaches</li> <li>• customer returns and complaints</li> <li>• reduction or loss of sales</li> </ul>
<b>Root cause</b>	<p>There are many possible causes of any problem. The root cause contrasts with other possible causes of a problem which when eliminated have no impact or only ameliorate the problem. Elimination of the root cause permanently eliminates the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found.</p>
<b>Cause tree</b>	<p>The series of causes is referred to as the cause tree. Not all root causes are accessible and able to be eliminated. Breaking the cause tree is such a way that the problem cannot recur is an acceptable alternative.</p> <p>Not all situations can wait for the RCA and eventual elimination of the root cause as there may be serious current impacts. The quick fix will control these immediate impacts, but does not eliminate the root cause.</p>
<b>Quick fix</b>	<p>A quick fix is not a short cut or side step for a permanent solution to the root cause. It is a necessary step designed to control the immediate impacts of a problem, for example, to prevent ongoing errors or to ameliorate damage.</p>
<b>Appropriate techniques/charts</b>	<p>Appropriate techniques/charts may include:</p> <ul style="list-style-type: none"> <li>• control charts</li> <li>• Pareto charts</li> <li>• run charts</li> <li>• flow charts</li> </ul>

	<ul style="list-style-type: none"><li>• cause and effect diagrams</li><li>• tree diagrams</li><li>• 5 Whys analysis</li></ul>
--	---

## Unit Sector(s)

Unit sector                      Competitive systems and practices

## Custom Content Section

Not applicable.

# **MSS402081A Contribute to the application of a proactive maintenance strategy**

## **Modification History**

New unit, superseding MSACMT281A Contribute to the application of a proactive maintenance strategy - Equivalent

## **Unit Descriptor**

This unit of competency covers the skills and knowledge required to make a positive contribution to proactive maintenance strategies, including actions that contribute to equipment uptime and overall equipment effectiveness (OEE).

## **Application of the Unit**

This unit applies to an individual in an organisation which is following a predictive, preventative or reliability-centred maintenance strategy and which requires commitment from all employees. The employee should 'own' their equipment/plant and take an active part in the implementation of the strategy within the scope of their authority.

This unit requires the application of skills associated with accessing and maintaining equipment/plant documentation, It also requires problem solving, initiative and enterprise to continually monitor and maintain operational performance of equipment/plant used in work role.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

Not applicable.

## **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Maintain equipment/plant	1.1	Keep equipment/plant within area of responsibility clean
		1.2	Ensure equipment/plant is serviced and adjusted, as required, in accordance with procedures and own level of responsibility
		1.3	Access manufacturer manuals and specifications, where required, to expand knowledge on the maintenance of equipment/plant
		1.4	Access and update documentation on equipment/plant operation and maintenance as appropriate to workplace procedures
2	Monitor operation of equipment/plant	2.1	Regularly check key conditions of the equipment/plant as defined in workplace procedures
		2.2	Regularly check equipment/plant OEE
		2.3	Note any deviation from conditions specified in procedures
		2.4	Identify any previous occurrences of this deviation
3	Identify deviations and patterns	3.1	Identify any previous occurrences of a deviation
		3.2	Identify any related deviations which have occurred
		3.3	Identify any unusual occurrence which may be related to a deviation

- 4 Take action appropriate to competency and authority on deviation
  - 4.1 Liaise with relevant people regarding the deviation and the solution
  - 4.2 Implement solution and/or assist with the implementation of the solution, as appropriate

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- reading and interpreting electronic and hard copy plant, equipment, and process instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - workshop manuals and instructions from equipment manufacturers in regards to plant or equipment operation, regular maintenance, troubleshooting, and record of use or production
  - production and batch sheets
  - temporary instructions
  - other provided operating instructions
- examining equipment procedures, products and processes for possible causes of deviations from patterns of normal use
- interpreting OEE rates
- servicing and maintaining plant and equipment consistent with area of responsibility and own technical skills

### Required knowledge

Required knowledge includes:

- normal behaviour of the equipment/plant
- indicators of abnormal performance
- principles of operation of plant and equipment sufficient to recognise problems and propose solutions
- appropriate cleaning and adjusting for the equipment/plant/area as required by procedures
- concept of OEE as:  $availability \times performance \times quality\ rate$

where:

- availability takes into account losses due to breakdown, set up and adjustments
- performance takes into account losses due to minor stoppages, reduced speed and idling
- quality rate takes into account losses due to rejects, re-works and start-up waste

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• recognise deviations from normal performance patterns and deal with them appropriately</li> <li>• undertake operational service and maintenance on plant and equipment according to instructions.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• OEE</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Uptime</b>	<p>Uptime refers to:</p> <ul style="list-style-type: none"> <li>• the overall availability of the plant – it is the inverse of downtime or the unavailability of the plant. Ideal uptime is 100%</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS403001A Implement competitive systems and practices**

### **Modification History**

New unit, superseding MSACMS400A Implement a competitive manufacturing system - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to implement and review competitive systems and practices in a person's own work within a team or work area, including the consideration of the impact on the work of others. The unit focuses on the holistic application of competitive systems and practices to achieve improved performance in own work and in activities with others in the team or work area that contribute to improving customer benefit.

### **Application of the Unit**

This unit applies to individuals who are applying competitive systems and practices to their own work in a way that integrates with others in the team or work area who are also implementing competitive systems and practices. Depending on the operations or processes in the team or work area the unit may also include interaction with other teams and work areas. The unit is suitable for individuals who have formal responsibility for the work of others, such as team leaders. It is also suitable for individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit applies to the areas of cost, quality, delivery, safety/environment, and employee capability including continuous reviewing of performance against these five areas in liaison with other relevant people. Improvement initiatives in these five areas are usually developed and implemented with the support of technical support staff. Whereas other units may emphasise the competence to use one or more competitive practices, this unit emphasises the ability to advance on all five key areas over a moderate time period.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to identify opportunities to make improvements and maximise performance. Communication, the ability to work in a team and planning and organising skills are required to implement improvements and address any conflicts that arise. This unit also requires an ability to identify appropriate technology, and to consider and integrate feedback on how personal performance can be improved.

### **Licensing/Regulatory Information**

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Contribute to the improvement of the operations system in team or work area	1.1	Identify key performance indicators for area of operations
		1.2	Implement and review competitive systems and practices to improve health, safety and environment (HSE) performance of self and others
		1.3	Implement and review competitive systems and practices to maximise quality consistency
		1.4	Implement and review competitive systems and practices and identify any skill and training issues that need to be addressed to improve capability of self and others
		1.5	Implement and review competitive systems and practices to maximise customer benefit/cost ratio
		1.6	Implement and review competitive systems and practices to reduce lead time to delivery within the scope of authority and responsibility
		1.7	Work with relevant stakeholders to resolve conflicts which arise from implementation of competitive systems and practices

- 1.8 Select improvements which will deliver the greatest overall benefit for the resources required/available without reducing current performance on individual factors
  
- 2 Implement improvements
  - 2.1 Implement the chosen improvement/s
  - 2.2 Check the selected improvements improve the system as a whole and do not result in unintended consequences
  - 2.3 Monitor implementation and make adjustments, as required

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others to clarify scope of implementation of competitive systems and practices, including:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of key performance indicators/metrics
  - identification and elimination of waste (muda)
- monitoring performance in key areas, including:
  - HSE performance
  - quality consistency
  - capability and performance by team members
  - customer benefit/cost ratio
  - reduce lead time to delivery
- contributing suggestions for improvement
- analysing operational procedures in terms of flow and contribution to customer outcomes
- planning tasks to support competitive systems and practices implementation
- identifying and implementing appropriate data gathering and analysis techniques within area of responsibility to identify change over time in indicators relating to:
  - cost
  - quality
  - delivery
  - safety/environment
  - employee capability and support for competitive systems and practices
- solving problems to root causes

### Required knowledge

Required knowledge includes:

- customers and the value they derive from products and processes of the organisation or area
- cost components and their relationship to customer benefits/features
- suppliers and their capabilities
- waste (muda)
- factors causing variability in a product and how to control them
- factors that promote standardisation
- relevant competitive systems and practices tools for area and how to apply them
- factors impacting on the product, process and waste, particularly those wholly or partially under own and other immediate area employees control (and how to control them)
- good HSE practice and factors impacting on HSE performance
- own capability and how to improve it
- optimisation techniques appropriate to the organisation and the job
- application of quality standards and processes

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• identify key performance indicators appropriate to their own work area</li> <li>• implement and review competitive systems and practices in own work, including interaction with others in the work area in the areas of:             <ul style="list-style-type: none"> <li>• HSE performance</li> <li>• quality consistency</li> <li>• capability and performance by team members</li> <li>• customer benefit/cost ratio</li> <li>• reduce lead time to delivery</li> </ul> </li> <li>• select improvements that deliver the greatest overall benefit</li> <li>• monitor the implementation of improvements and make appropriate adjustments.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p>

	<p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning for appropriate portions</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p><b>Guidance information for assessment</b></p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the

performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<p><b>Competitive systems and practices tools</b></p>	<p>Competitive systems and practices tools include:</p> <ul style="list-style-type: none"> <li>• 5S</li> <li>• 6 sigma</li> <li>• continuous improvement</li> <li>• cause effect diagrams</li> </ul>

<b>Customer</b>	<p>Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes:</p> <ul style="list-style-type: none"> <li>• the product sales outlet</li> <li>• the final assembler</li> <li>• product design</li> <li>• raw material mining and processing</li> <li>• all tiers of the value stream (sometimes called the supply chain)</li> </ul> <p>Customer may include:</p> <ul style="list-style-type: none"> <li>• internal or external customers, and should also include the final customer as the basis for the identification of waste</li> </ul> <p>The unit does not require interfacing directly with the external customer, but there should be sufficient information to identify customer benefits and features</p>
<b>Supplier</b>	<p>Supplier may include:</p> <ul style="list-style-type: none"> <li>• an internal supplier</li> <li>• an external supplier</li> </ul> <p>The unit does not require interfacing directly with external suppliers, but there should be sufficient information to enable identification of supplier abilities</p>
<b>Waste</b>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• other activities which do not yield any benefit to the organisation or any benefit to the organisations customers</li> </ul>
<b>Operations</b>	<p>Operations indicate:</p> <ul style="list-style-type: none"> <li>• the holistic combination of the process, plant and equipment, procedures and practices, including the skills and work organisation of the workforce, which</li> </ul>

	make up the productive organisation
<b>Implement improvements</b>	Implementation of improvements may be undertaken: <ul style="list-style-type: none"><li>• within own job role</li><li>• as part of processes and operations in the work area or team</li></ul>

## Unit Sector(s)

Unit sector                      Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS403002A Ensure process improvements are sustained**

### **Modification History**

New unit, superseding MSACMS401A Ensure process improvements are sustained - Not equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to ensure that the gains which have been made by using improved methods, processes and equipment are sustained as the new baseline/standard for an area of work and so prevent regression to former practices, or digression to less efficient practices.

### **Application of the Unit**

This unit applies to individuals working in a team or work area who have already implemented competitive systems and practices related improvements in their own work and who must work effectively with others implementing competitive systems and practices to ensure that performance improvement gains are sustained.

The unit is also suitable for individuals who have formal or informal responsibility for the work of others, such as team leaders; individuals, such as senior operators, who must mentor others; or individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

The unit covers the implementation of practices to ensure that process improvements are sustained and opportunities taken to suggest further improvements. If mistake proofing is used as one of the methods for ensuring that process improvements are sustained, the unit MSS403051A Mistake proof a production process should be selected.

Improvement initiatives can be made by any of any number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known.

This unit requires the application of skills associated with problem solving, initiative and enterprise, and planning and organising in order to check and monitor the impacts of change. It also requires communication and the ability to work with others to assess the impact of change in own work and on other's work, as well as self-management and learning to adapt improvements according to new information and feedback.

### **Licensing/Regulatory Information**

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Examine previous improvements	1.1	Identify impact of previous process improvements to systems, equipment, operations or products in work area
		1.2	Identify improvements that have not met objectives
2	Ensure corrective actions are implemented	2.1	Identify corrective actions that can be taken on process improvements that have not met objectives
		2.2	Liaise with relevant people associated with the anticipated corrective action
		2.3	Obtain any required approvals
		2.4	Ensure the supply of resources
		2.5	Check impacts of corrective action on occupational health and safety (OHS), quality and environmental systems in work area and take action in accordance with procedures, if required
		2.6	Check that self and others in team or work area have required skills for corrective actions
		2.7	Monitor implementation of corrective action

- 2.8 Make required adjustments
- 3 Verify systems support improvement
  - 3.1 Ensure procedures reflect improvements
  - 3.2 Check that training and assessment activities in team or work area reflect improvements
  - 3.3 Liaise with relevant people to ensure their support of the new or modified system/s
- 4 Audit the change
  - 4.1 Determine an appropriate audit period/cycle
  - 4.2 Agree relevant measures/indicators for the improvement
  - 4.3 Measure performance at agreed times using agreed measures
  - 4.4 Investigate causes of under-performance
  - 4.5 Take appropriate corrective action to improve performance
  - 4.6 Re-audit the improvement on an agreed basis

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- examining normal operational procedures in terms of flow and contribution to customer benefit
- planning own tasks, including the impact on others to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators for own work and work area

### Required knowledge

Required knowledge includes:

- overall procedures for and process of operations relative to improvements being made
- appropriate measures of performance
- business performance goals sufficient to determine best measures of improved performance

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

--	------------

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> </ul>
---	---

	<ul style="list-style-type: none"> <li>the size of the enterprise</li> <li>the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Improvement</b>	Improvement may be any change aimed at reducing waste (muda). This unit is not about making the improvements, but ensuring beneficial changes remain in place
<b>Customers</b>	<p>Customers may include:</p> <ul style="list-style-type: none"> <li>internal or external customers, including final customers, as these should be used as the basis for the identification of value and waste</li> </ul> <p>The individual does not need to interface directly with the external customer, but should be able to sufficiently identify customer benefit and customer features in processes and operations of their team and their work area</p>
<b>Suppliers</b>	<p>Suppliers may be:</p> <ul style="list-style-type: none"> <li>internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable</li> </ul> <p>The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit</p>
<b>Systems</b>	<p>Systems are used to mean any/all of the equipment, processes, procedures and work practices that are used to produce the product. A term often used in this context includes:</p> <ul style="list-style-type: none"> <li>kaizen - the philosophy of continual improvement that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality and other aspects relevant to the process</li> </ul>
<b>Resources</b>	<p>Resources for corrective actions may include:</p> <ul style="list-style-type: none"> <li>equipment</li> <li>modifications</li> <li>consumables</li> <li>people</li> <li>suitable work area</li> </ul>
<b>Procedures</b>	Procedures may include:

	<ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the organisation</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<p><b>Improvements</b></p>	<p>Improvements include:</p> <ul style="list-style-type: none"> <li>• techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke)</li> <li>• techniques that generate warning signals were a mistake is about to be performed (poka-yoke)</li> </ul> <p>Improvements may be sustained by:</p> <ul style="list-style-type: none"> <li>• use of technology so that it is impossible to do the job any other way</li> <li>• changes to process or procedures or other changes to the operations system which, if followed, will sustain the change and this unit may be applied to all these situations</li> </ul>
<p><b>Measuring performance</b></p>	<p>Measuring improvements may include:</p> <ul style="list-style-type: none"> <li>• personally taking measurements</li> <li>• arranging for measurements to be taken/made by appropriate personnel</li> </ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS403010A Facilitate change in an organisation implementing competitive systems and practices**

### **Modification History**

New unit superseding MSACMC410A Lead change in a manufacturing environment - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by individuals responsible for facilitating change processes in an organisation implementing competitive operational practices.

### **Application of the Unit**

This unit applies to people who facilitate the change process resulting from implementing one or more competitive systems or practices. This implementation may also be associated with other changes, such as the introduction of new products, processes or equipment. The unit will usually apply to people whose responsibility is at the team, area or section level rather than the whole organisation. The responsibility may be formally designated or be informal, as in mentoring and assisting fellow employees.

This unit assumes that consultation and agreement on the implementation of the competitive systems and practices and other associated changes has already occurred and the nature and extent of the change has been agreed.

This unit does not cover the negotiation of change in a formal industrial relations sense but does cover the skills needed to identify real or potential change implementation issues, including those that may need to be referred to formal consultation and/or dispute settlement procedures.

This unit has a strong emphasis on planning, encouraging and facilitating in a changing environment within the organisation, including using appropriate communication, teamwork, problem solving, initiative and self-management.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Define nature and impact of change for designated area and processes | 1.1 | Identify the organisation's aims and objectives for the competitive systems and practices techniques related to the change process |
|   |  | 1.2 | Identify opportunities for implementation of change within work area   |
|   |  | 1.3 | Determine impacts of change for work area, including potential benefits and impacts on own work and work of fellow employees       |
| 2 | Identify key performance indicators (KPIs)                           | 2.1 | Liaise, where required, with managers, engineers and other staff responsible for designing and/or implementing change              |
|   |  | 2.2 | Identify KPIs for own work responsibility and that of the work area  |
|   |  | 2.3 | Communicate KPIs to fellow employees   |
|   |  | 2.4 | Check that data collection and processing are appropriate for KPIs   |
|   |  | 2.5 | Raise and resolve issues related to KPIs with relevant personnel   |

- |   |   |   |
|---|---|---|
| 3 | Liaise with key stakeholders                | 3.1 Identify key stakeholders impacted by the change  |
|   |   | 3.2 Communicate with key stakeholders within scope of authority   |
|   |   | 3.3 Identify and address issues and concerns of each stakeholder if within scope of authority   |
|   |   | 3.4 Develop and/or locate information required to address key concerns  |
|   |   | 3.5 Refer issues and concerns outside of scope of authority to appropriate personnel  |
| 4 | Develop a strategy to help implement change | 4.1 Identify or develop a work plan for implementing change   |
|   |   | 4.2 Make information required to support change available to team members   |
|   |   | 4.3 Communicate/circulate draft work plan to other employees in work area, supervisors, technical experts and other appropriate personnel for comment |
|   |   | 4.4 Assess suggested changes and incorporate into work plan, where appropriate  |
| 5 | Implement change                            | 5.1 Obtain authorisation to commence change implementation in accordance with organisation procedures   |
|   |   | 5.2 Implement change in accordance with work plan and organisational occupational health and safety (OHS) and consultation procedures                 |
| 6 | Monitor implementation of change            | 6.1 Maintain open communication channels with all stakeholders during implementation  |
|   |   | 6.2 Monitor KPIs during implementation  |
|   |   | 6.3 Encourage and facilitate improvement suggestions of team members  |
|   |   | 6.4 Identify areas requiring improvement in change  |

implementation

- 6.5 Make improvements to implementation according to organisation procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying the competitive operational practices being implemented in the organisation, including:
  - Just in Time (JIT) and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. root cause analysis (RCA))
- identifying other products, processes or equipment changes being implemented within area of responsibility
- identifying the work and culture changes required for effective implementation of the competitive systems and practices being implemented and other products, processes or equipment changes
- identifying organisation KPIs and contextualise for area of responsibility to determine successful change implementation
- planning strategies for change implementation, including:
  - required communication with others
  - negotiations if any required with internal and external suppliers, customers and delegates
  - analysis of any skill gaps in self and others
  - required training
  - data collection
  - work organisation and procedure changes
  - risk identification and contingency measures
- monitoring performance against KPIs and taking appropriate corrective action in the event of a non-conformance
- identifying and communicating with sources of assistance if difficulty is experienced with changes

### Required knowledge

Required knowledge includes:

- features of common competitive operational practices, including:

- JIT and kanban systems
- preventative maintenance
- 5S housekeeping
- continuous improvement processes (e.g. kaizen)
- waste (muda) elimination
- formal problem solving procedures (e.g. RCA)
- health, safety and environment (HSE) principles and requirements for area of responsibility
- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation
- processes to develop work plans, including consideration of timetable, KPIs, training needs, OHS implications, contingency plans and responsibilities (the work plan must be capable of being coherently communicated to others)

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the competitive systems and practices used in their own work</li> <li>• identify changes to their own work flowing from the implementation of the relevant competitive systems and practices</li> <li>• implement changes</li> <li>• know when and how to seek assistance with work changes</li> <li>• make suggestions for improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard</li> </ul>

	<p>control/management</p> <ul style="list-style-type: none"> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using some combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Team</b>	<p>Team may include:</p> <ul style="list-style-type: none"> <li>• work teams from all sections of an organisation, including production or other operational areas, maintenance, technical, administration/finance, and sales/marketing</li> </ul>
<b>Change</b>	<p>The philosophy of continual improvement is that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality, and other aspects relevant to the process.</p> <p>Superimposed on this is the concept of breakthrough change when a large change/improvement is made which can shift the direction or operation of the organisation.</p>

	Once such breakthrough change is the introduction of competitive operational practices.
<b>Work plan for change</b>	<p>The work plan for change covers the designated work area and may include, depending on the organisation and work area processes:</p> <ul style="list-style-type: none"> <li>• timetable</li> <li>• KPIs</li> <li>• training needs</li> <li>• OHS implications</li> <li>• contingency plans</li> <li>• responsibilities with team members and senior managers, engineers and other staff responsible for designing and/or implementing change</li> </ul>
<b>Issues and concerns</b>	<p>Issues and concerns may be communicated formally and informally and may include:</p> <ul style="list-style-type: none"> <li>• individual and group concerns</li> <li>• those expressed by and through industrial processes</li> </ul>
<b>Gathering and monitoring performance data</b>	<p>Performance data may be gathered and monitored:</p> <ul style="list-style-type: none"> <li>• manually by individual employees through charts, tally sheets or keypad/board entry</li> <li>• automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems</li> </ul>

## Unit Sector(s)

Unit sector                      Competitive systems and practices

## Custom Content Section

Not applicable.

# MSS403011A Facilitate implementation of competitive systems and practices

## Modification History

New unit, superseding MSACMC411A Lead a competitive manufacturing team - Not equivalent

## Unit Descriptor

This unit of competency covers the skills and knowledge required by individuals who facilitate, lead or mentor others in competitive systems and practices implementation in a work area.

## Application of the Unit

This unit applies to people responsible for facilitating others in implementing competitive systems and practices in their work. It may apply to formally designated team leaders or people given special roles in the implementation process that go beyond their own work and which involve guiding, facilitating or mentoring others. The unit applies to competitive systems and practices implementation activities at the work area or section level.

The unit requires an individual to integrate a range of competitive systems and practices knowledge and skills as part of their role. The unit covers assisting others to understand and apply a holistic view of their job and their role within an organisation, including the objectives that must be met as part of competitive systems and practices used by the organisation.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management.

This unit has a strong emphasis on planning and implementation, and also requires an ability to learn from experience and feed new information back into strategies to improve own performance and that of others.

For implementation of competitive systems and practices techniques in an office, the specialist unit *MSS403006A Facilitate implementation of competitive systems and practices in an office*, should be selected instead of this unit.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Facilitate the development of process and competitive systems and practices knowledge	1.1	Ensure necessary technical documentation and information about the process and competitive systems and practices is available
		1.2	Assist and mentor others in accessing information
		1.3	Identify work activities which may inhibit the ongoing development of competitive systems and practices skills and knowledge of others
		1.4	Arrange for the provision of workforce development and training for self and others, as appropriate
		1.5	Encourage others to apply technical knowledge to the improvement process
2	Facilitate commitment to efficiency improvements	2.1	Ensure budgets, operating procedures and other related documentation is available
		2.2	Assist others to apply this information to their work responsibilities
		2.3	Encourage the identification of waste
		2.4	Encourage an environment where efficiency improvements are recommended by fellow employees

- |   |  |     |   |
|---|--|-----|---|
| 3 | Encourage a competitive systems and practices approach to work | 3.1 | Encourage and, where necessary, develop communications between specialists and work group members   |
|   |  | 3.2 | Lead development of strategies to monitor and deal with identified waste issues   |
|   |  | 3.3 | Resource and encourage other employees to identify and take appropriate action on potential problems  |
|   |  | 3.4 | Arrange for workforce development and training for self and others, as required, in relevant competitive systems and practice procedures and techniques     |
|   |  | 3.5 | Guide others in relating identified problems to the maintenance strategy, and developing any required changes, to ensure awareness, learning and commitment |
| 4 | Implement process and organisation improvements                | 4.1 | Plan the implementation of work group suggestions and externally suggested improvements   |
|   |  | 4.2 | Facilitate commitment to, and involvement in, the implementation planning of improvements and to follow improvements to their conclusion                    |
|   |  | 4.3 | Encourage the application of the 'plan, do, measure, improve, control' approach to the job  |
|   |  | 4.4 | Arrange for workforce development and training, as required, to facilitate continued involvement by others in improvement processes                         |
|   |  | 4.5 | Involve work group and other key personnel in identification of skill needs and means of skills acquisition to fill any identified gaps                     |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- facilitating goals, activities, communications and access to resources, including process mapping
- solving problems
- identifying waste (muda)
- data gathering and analysis
- explaining and leading others in implementation at the work group level of:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of key performance indicators (KPIs)/metrics
  - identification and elimination of waste (muda)
- communicating effectively to conduct informal and formal meetings, and to relate to personnel at all levels
- providing effective feedback
- effectively encouraging team spirit and morale
- transferring knowledge and skills through informal one-on-one mentoring

### Required knowledge

Required knowledge includes:

- information technology systems used in the organisation
- principles of competitive systems and practices and their application to the organisation, including:
  - value stream mapping
  - 5S
  - JIT
  - mistake proofing

- process mapping
- establishing customer pull
- kaizen and kaizen blitz
- setting of KPIs/metrics
- identification and elimination of waste (muda)
- monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP), and proprietary systems, which may be used within the organisation
- methods of gathering data against KPIs, such as:
  - waste walk
  - document tagging
  - tracking/log sheets
  - spaghetti diagrams
  - existing information technology and enterprise resource systems (e.g. SCADA, ERP and MRP)
- facilitation techniques to encourage team development and improvement
- organisational policies, plans and procedures

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify processes and products of their organisation and work area</li> <li>• analyse current and future skill development needs of team</li> <li>• act as an effective communication link between team and internal and external competitive systems and practices specialists and managers</li> <li>• lead team in identifying efficiency improvements and elimination of waste.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> </ul>

	<ul style="list-style-type: none"> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of

the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<p><b>Budgets</b></p>	<p>Budgets include:</p> <ul style="list-style-type: none"> <li>• financial</li> <li>• time</li> <li>• materials/products</li> <li>• other business plans which are relevant to the team and the work area</li> </ul>
<p><b>Waste</b></p>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not</p>

	<p>contribute to customer benefit/features in the product. Categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• activities which do not yield any benefit to the organisation or any benefit to the organisations customers</li> </ul>
<p><b>Key reliability issues</b></p>	<p>Key reliability issues include those which are most likely to lead to failure, such as:</p> <ul style="list-style-type: none"> <li>• cleanliness</li> <li>• poor lubrication</li> <li>• incorrect adjustment</li> <li>• poor training and instructions for employees</li> </ul>

## **MSS403013A Lead team culture improvement**

### **Modification History**

New unit, superseding MSACMC413A Lead team culture improvement - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by a team leader or other person responsible for developing a culture within a team appropriate for supporting competitive systems and practices.

### **Application of the Unit**

This unit applies where an organisation has embarked on competitive systems and practices and a team leader or other responsible person is required to change or improve the team culture to be consistent with that required to maximise the benefits from competitive systems and practices.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a changing team environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance.

### **Licensing/Regulatory Information**

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Facilitate the team's understanding of the competitive systems and practices strategy	1.1	Communicate with all team members the objectives and benefits of the competitive systems and practices strategy
		1.2	Review with team members the techniques and methods that will be used in achieving the competitive systems and practices strategy
		1.3	Using a systems approach, help team members understand how the team fits into the organisation
		1.4	Establish appropriate communication and teamwork within the team and with other teams
		1.5	Develop a work structure with the team that allows for everyone to participate in the application of the competitive systems and practices strategy
2	Facilitate application of knowledge about the importance of controlling variation in competitive systems and practices	2.1	Develop the application of a statistical approach by all team members to all relevant facets of the system with a view to reducing variation
		2.2	Encourage the approach of building quality and ensuring team members assist each other in meeting requirements

- |   |  |     |   |
|---|--|-----|---|
| 3 | Facilitate the development of skills and knowledge within the team   | 3.1 | Encourage appropriate training for all team members   |
|   |  | 3.2 | Involve team members in identification of skill needs and skill gaps, and in development of a strategy for training, skills acquisition and self-improvement so as to ensure awareness, learning and commitment                             |
| 4 | Facilitate the development of commitment within the team to the competitive systems and practices strategy | 4.1 | Ensure that the team has sufficient resources and adequate equipment available to meet the requirements of the competitive systems and practices strategy   |
|   |  | 4.2 | Encourage the adoption of continuous improvement  |
|   |  | 4.3 | Encourage employee acceptance of responsibility for the quality of their own work   |
|   |  | 4.4 | Provide continuous feedback and communication of progress at all levels in implementing the strategy  |
|   |  | 4.5 | Involve team members in relating identified problems and opportunities for improvement to the competitive systems and practices strategy, and involve them in developing any required changes, to ensure awareness, learning and commitment |
|   |  | 4.6 | Establish and monitor indicators of team culture  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying and interpreting team quality standards and customer requirements
- identifying the competitive operational practices being implemented by the team
- communicating with others in the team, other team leaders, other employees and external representatives relevant to team competitive systems and practices
- ensuring team awareness of performance against requirements (e.g. through visual management techniques)
- facilitating team competitive systems and practices review activities
- solving problems to root cause
- identifying and accessing sources of assistance if difficulty is experienced with team implementation of competitive systems and practices
- interpreting relevant procedures and instructions
- identifying, analysing and evaluating information from a variety of sources

### Required knowledge

Required knowledge includes:

- competitive systems and practices strategies at a broad level, including theoretical concepts of one or more of:
  - six sigma
  - lean manufacturing/lean operations
  - agile manufacturing/agile operations
  - Just in Time (JIT)
  - supply chain management
  - value stream management
  - total quality
  - proactive maintenance
  - elimination of waste
  - Balanced Scorecard
  - 5S housekeeping
  - visual factory/visual operations
- benefits of:
  - standardised work

- customer pull
- value stream mapping
- principles of change management

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the competitive systems and practices used by the team</li> <li>• identify changes to their own work flowing from the implementation of the relevant competitive systems and practices</li> <li>• implement and monitor changes designed to improve team culture</li> <li>• know when and how to seek assistance</li> <li>• make suggestions for improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> </ul>

	<ul style="list-style-type: none"> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control</li> </ul>
--	---

	<p>systems</p> <ul style="list-style-type: none"> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Variation</b>	<p>Variation refers to:</p> <ul style="list-style-type: none"> <li>• variation from quality standards and customer requirements as expressed in production or operations schedules and technical specifications</li> </ul>
<b>Systems approach</b>	<p>A systems approach enables a person to see how work gets done, the effect of changes and shows the internal/external relationships through which products and services are produced. It may include considerations of the role and requirements of:</p> <ul style="list-style-type: none"> <li>• customers</li> <li>• suppliers</li> <li>• employees</li> <li>• other value stream members</li> <li>• members of the public and community groups</li> <li>• other external individual, group or organisation</li> <li>• technical processes and equipment</li> <li>• statutory and regulatory requirements, including occupational health and safety (OHS) and environment legislation and regulations</li> <li>• quality standards</li> </ul>

<b>Team culture</b>	<p>Team culture change is the extent to which the culture of the team is aligned to the goals of customers and the organisation. Team culture may be monitored by:</p> <ul style="list-style-type: none"> <li>• surveys</li> <li>• evaluation of toolbox or other regular meetings</li> <li>• direct discussion with team members</li> <li>• monitoring of other indicators (e.g. error rates and absenteeism)</li> <li>• analysis of root cause related to status of team culture</li> </ul>
<b>Work structures</b>	<p>The work team structure may vary (e.g. be self-directed, cross-functional, and so on, and should be appropriate to the job)</p>

## **MSS403021A Facilitate a Just in Time system**

### **Modification History**

New unit, superseding MSACMT421A Facilitate a Just in Time (JIT) system - Equivalent

### **Unit Descriptor**

This unit of competency covers skills and knowledge required to facilitate the implementation/operation of a Just in Time (JIT)/kanban system in a team or work area.

### **Application of the Unit**

This unit applies to a person who needs to monitor the operation of a JIT system and facilitate its working in a team or work area. This will involve liaison with stakeholders as well as examining the data generated. They will need to be alert to potential problems and areas for improvement.

This unit requires the application of skills associated with gathering, analysing and communicating information to facilitate implementation of the JIT system. It requires planning and organising skills and has a strong emphasis on communication and teamwork skills to ensure the JIT system is being effectively implemented. This unit also requires the ability to problem solve and take the initiative to consider performance issues and learn from experience to improve future performance.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Monitor the operation of the JIT system	1.1 Track value of key measures
		1.2 Recognise indicators of poor performance
		1.3 Take appropriate quick fix action
2	Liaise with relevant stakeholders	2.1 Regularly communicate with team or work group members regarding the operation of the JIT system
		2.2 Review JIT key performance indicators (KPIs) with team or work group members
		2.3 Communicate with relevant personnel up and down the value stream regarding the operation of the JIT system
		2.4 Identify issues with stakeholders and take appropriate quick fix action
3	Improve the JIT system	3.1 Identify areas requiring improvement in the JIT system
		3.2 Identify root cause of JIT-related problems
		3.3 Review value of key measures
		3.4 Recognise skill gaps in team members and other stakeholders
		3.5 Determine any other issues in team or work group, other stakeholders and JIT system leading to poor performance indicators
		3.6 Develop appropriate improvement solutions

- 3.7 Liaise with relevant people regarding improvement solutions
- 3.8 Implement and/or assist with the implementation of the solutions

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying KPIs for JIT system in team or area of responsibility
- analysing the JIT/kanban implementation in the team or area and the relevant sections of the internal and external value stream, including identifying people-related needs and issues
- identifying and implementing quick fix to JIT problems
- using formal problem solving procedures (e.g. root cause analysis (RCA))
- developing formal and informal communication procedures with others in work area, team leaders, other employees and value stream members relevant to JIT implementation
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing KPIs for own work

### Required knowledge

Required knowledge includes:

- JIT principles relevant to operations and processes in own area or team and in the organisation generally
- procedures for making/recommending improvements
- typical reasons for delays/storages/inventories in the team or area of responsibility and methods of reducing/eliminating them
- skill gap analysis and methods of filling skill gaps
- principles of the operations process relevant to the section/team
- production data generated by the process and its application to JIT

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	Evidence should be available of the person's facilitation of the operation of the JIT system and their making of recommendations for/making improvements.
-------------------------------	---

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the JIT system and practices used in their team or area of responsibility</li> <li>• identify and monitor JIT key measures</li> <li>• solve JIT-related problems to root cause</li> <li>• implement and monitor JIT-related changes to operations and practices.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul>
--	--

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>JIT</b>	<p>JIT refers to:</p> <ul style="list-style-type: none"> <li>• a production scheduling concept that calls for any item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later</li> </ul>
<b>Kanban</b>	<p>Kanban is a card or sheet used to authorise production or movement of an item; when fully implemented, kanban operates according to the following rules:</p> <ul style="list-style-type: none"> <li>• all production and movement of parts and material take place only as required by a downstream operation (i.e. all operations and procurement are ultimately driven by the requirements of final assembly or the equivalent)</li> <li>• the specific tool which authorises production or movement is called a kanban. The word literally means card or sign, but it can legitimately refer to a container or other authorising device. Kanban have various formats and content as appropriate for their usage (e.g. a kanban for a vendor is different than a kanban for an internal machining operation)</li> </ul> <p>Kanban is typically applied to batch type operation and the production is measured in units produced. In continuous processing organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar</p>
<b>SCADA</b>	<p>SCADA refers to:</p> <ul style="list-style-type: none"> <li>• a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action</li> </ul>

<b>Key measures</b>	<p>Key measures may include:</p> <ul style="list-style-type: none"> <li>• inventory levels</li> <li>• lead time</li> <li>• In Full, On Time and In Specification (IFOTIS) delivery</li> <li>• productivity/production rate</li> <li>• other measures of pull through the value stream</li> <li>• quality</li> </ul>
<b>Quick fix</b>	<p>Quick fix refers to:</p> <ul style="list-style-type: none"> <li>• action taken to immediately and cheaply control a problem, prevent it getting worse and/or ameliorate its impact, but which does not necessarily solve it long term</li> </ul>
<b>Pull system</b>	<p>Pull refers to:</p> <ul style="list-style-type: none"> <li>• a system of making to demand rather than for stock or to a forecast</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement, stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>

## **MSS403030A Improve cost factors in work practices**

### **Modification History**

New unit, superseding MSACMT430A Improve cost factors in work practices - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to evaluate the product or process outcomes of a team in terms of their cost components and to be able to determine, in general terms, the cost impacts of alternative actions.

### **Application of the Unit**

This unit applies to a person who is required to assess the relative costs of alternatives and use this as one of the key factors in decision making. Typical decisions include the efficient organisation of own work and that of others in a work area or within a team and the improvement of throughput and cycle times.

Decisions are made within the scope of the authority of the individual and other employees in the area or team and according to procedures.

This unit primarily requires the application of skills associated with communication and information gathering, teamwork and problem solving to analyse the cost components of work processes. Initiative and enterprise, and planning and organising are also required to identify opportunities for improved cost-efficiency. This unit also requires a degree of self-management and learning to effectively operate and maintain skills and performance.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Analyse cost components of work area or team function	1.1	Identify cost components in the product or process
		1.2	Identify costs factors under control of area or employees in the team
		1.3	Identify causes of variability in costs
		1.4	Analyse impact of costs on production or process activities undertaken
2	Improve cost-efficiency of processes and procedures	2.1	Identify methods of improving productivity and/or reducing costs within area or team's responsibility
		2.2	Determine cost/benefit ratio of alternative methods of improving productivity and/or reducing costs
		2.3	Consult with all relevant stakeholders regarding possible changes
		2.4	Recommend changes which will increase productivity and reduce cost and variability
		2.5	Implement recommended changes in consultation with relevant stakeholders

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying fixed and variable costs in products or processes
- analysing costs and determining those that can be controlled by the individuals in an area or team
- analysing costs over time and identifying variability in cost components
- determining cost/benefit ratios
- communicating and negotiating with others on changes using a variety of mediums

### Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense, income and cost/benefit
- major cost contributors to product (e.g. energy, materials, labour and distribution, and so on) depending on the product and process)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope of their own work and the team or area work and relate it to the overall flow of work in the organisation</li> <li>• express cost factors in specific terms (e.g. cost per item, process and task)</li> <li>• identify and express cost factors in basic financial</li> </ul>
--	--

	<p>terms</p> <ul style="list-style-type: none"> <li>• analyse variability in costs and recommend improvements</li> <li>• use cost/benefit to select preferred improvement strategies.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace project(</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

## **MSS403032A Analyse manual handling processes**

### **Modification History**

New unit, superseding MSACMT432A Analyse manual handling processes - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to analyse manual handling in terms of its efficiency and safety.

### **Application of the Unit**

This unit applies to an individual who is required to examine the manual handling component of a job and improve it in terms of safety, effort required and efficiency. This may be conducted for a job performed by others or it may be for the person's own job.

This unit primarily requires the application of skills associated with problem solving, initiative and enterprise to identify safe and efficient manual handling, and planning and organising to ensure processes are implemented. This unit also requires communication with, and involvement of, others to ensure they understand the approach and to facilitate training.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Assess manual handling risks	1.1	Identify manual handling hazards in work area
		1.2	Assess risks arising from manual handling hazards
2	Analyse physical effort requirements of job	2.1	Determine basic manual handling requirements of job
		2.2	Analyse requirements in terms of components, such as lift, move, place and hold
		2.3	Analyse items to be handled in terms such as weight, size, shape or other hazards
3	Determine time/effort components of physical effort	3.1	Break required movement pattern down into movement components
		3.2	Determine time and effort requirements for movements
		3.3	Develop alternative movement patterns
		3.4	Determine time and effort requirements for alternative movements
		3.5	Determine handling aids required to assist movement
		3.6	Determine preferred movement pattern

- |   |   |     |   |
|---|---|-----|---|
| 4 | Analyse the ergonomics of physical effort | 4.1 | Analyse the ergonomics of the preferred movement pattern  |
|   |   | 4.2 | Develop substitute movements for any movement which is not ergonomically sound  |
|   |   | 4.3 | Determine handling aids required to improve ergonomics of required movements  |
| 5 | Optimise application of physical effort   | 5.1 | Select movement patterns which are ergonomically sound and time and effort efficient                                      |
|   |   | 5.2 | Ensure all relevant people are trained to use these methods   |
|   |   | 5.3 | Ensure procedures and practices reflect the optimum methods   |
|   |   | 5.4 | Communicate with team members and involve them in development of alternatives to ensure awareness and facilitate learning |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with others about work processes and jobs
- identifying ergonomically sound and unsound movements both at a general level and related to individual capability
- analysing manual handling processes
- working cooperatively with others
- demonstrating or arranging to have demonstrated ergonomically correct movements
- applying basic mathematics
- solving problems

### Required knowledge

Required knowledge includes:

- relevant occupational health and safety (OHS) Acts and regulations as applied to manual handling
- principles of job and work method design as applied to efficient and safe movement
- principles of work analysis
- principles of ergonomics/safe movement
- aids than can assist with or substitute for manual handling

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• analyse manual handling requirements and risks in jobs</li> <li>• distinguish between ergonomically sound and unsound movement</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>analyse manual handling movements and risks for an individual</li> <li>relate manual handling requirements to job efficiency.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>workplace procedures and plans relevant to work area</li> <li>specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>reports from supervisors/managers</li> <li>case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using some combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>demonstration in the workplace</li> <li>workplace projects</li> <li>suitable simulation</li> <li>case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>targeted questioning</li> <li>reports from supervisors, peers and colleagues (third-party reports)</li> <li>portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being</p>

	performed.
--	------------

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> </ul>
---	---

	<ul style="list-style-type: none"> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and Responsible Care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<b>Manual handling hazards</b>	<p>Manual handling hazards may include:</p> <ul style="list-style-type: none"> <li>• loads that pose a risk of injury</li> <li>• ergonomically unsound movements</li> <li>• hazard requirements as defined by relevant OHS Acts and regulations, industry standards and best practice</li> </ul>
<b>Ergonomically unsound movements</b>	<p>Ergonomically unsound movements may include:</p> <ul style="list-style-type: none"> <li>• awkward and repetitive movements</li> <li>• carrying, pushing, pulling or lifting of heavy loads</li> <li>• carrying or movement against hard, sharp, slippery or other difficult to grasp loads</li> </ul> <p>Ergonomically unsound movements should be assessed against the capabilities of individual workers as what is a sound movement for one worker may be unsound for others depending on physique and individual condition</p>
<b>Ergonomically sound movements</b>	<p>Ergonomically sound movements are movements which decrease the risk of injury. Sound movements will vary according to the load and individual. Examples include:</p> <ul style="list-style-type: none"> <li>• keeping loads close to the body and near the person's centre of gravity</li> <li>• using diagonal foot positions for lifting</li> <li>• moving loads at waist height rather than directly from the floor</li> </ul>

## **Unit Sector(s)**

Unit sector                      Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS403040A Facilitate and improve implementation of 5S**

### **Modification History**

New unit, superseding MSACMT440A Lead 5S in a manufacturing environment - Not equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to facilitate the implementation and improvement of the 5S by self and others in a team or work area.

### **Application of the Unit**

This unit applies to individuals who facilitate 5S in a team or work area, including implementation, monitoring and improvement. The facilitation may be undertaken by formally designated supervisory staff, such as team leaders or other individuals in a competitive systems and practices implementation role, who need to provide support and encouragement to others to facilitate the achievement of 5S outcomes in the workplace. This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a 5S environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance. For planning, implementing and leading the application of 5S in an office environment see unit *MSS403039A Facilitate and improve 5S in an office*.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

- |   |                                     |  |
|---|-------------------------------------|--|
| 1 | Facilitate the set-up of 5S         | <ul style="list-style-type: none"> <li>1.1 Assist others to determine what are necessary and unnecessary items in the work area</li> <li>1.2 Assist others to determine optimum assigned location for all necessary items</li> <li>1.3 Liaise with relevant production and occupational health and safety (OHS) personnel in determining optimum locations</li> <li>1.4 Assist others to determine optimum location for unnecessary items</li> <li>1.5 Assist others to determine 5S schedule</li> <li>1.6 Ensure procedures reflect 5S practices</li> <li>1.7 Assist others to achieve the required level of skill</li> </ul> |
| 2 | Facilitate the implementation of 5S | <ul style="list-style-type: none"> <li>2.1 Ensure procedures reflect 5S practices</li> <li>2.2 Assess skill base of team or work group members in 5S and arrange for any required training</li> <li>2.3 Ensure that any damage and/or safety risks reported by the team or work group are addressed through correct mechanisms</li> </ul>  |

- 3 Monitor 5S
  - 3.1 Check work area for 5S implementation as part of normal routine
  - 3.2 Identify non-conformances
  - 3.3 Negotiate solutions to non-conformances
  
- 4 Improve 5S
  - 4.1 Work with others to find areas for improvement
  - 4.2 Assist others to develop improvement solutions
  - 4.3 Facilitate the availability of resources required for the improvement solution
  - 4.4 Facilitate the implementation of the improvement solution

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with other employees and managers to engender commitment to achieving 5S outcomes, conduct formal and informal meetings and to explain 5S and related concepts
- facilitating team or work area goals, activities and communications and accessing resources
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning and prioritising activities
- problem solving to determine potential improvements to the 5S system
- reading and interpreting the application of operating procedures for jobs within team or target work area
- analysing work practices, procedures and 5S principles to facilitate setting up the 5S system and to identify improvements
- identifying gaps in skills and/or knowledge and options to address them

### Required knowledge

Required knowledge includes:

- principles and purpose of 5S
- methods of identifying waste in the work area, such as:
  - waste walk
  - document tagging
  - tracking/log sheets
  - spaghetti diagrams
  - existing information technology and enterprise resource systems (e.g. Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems
- organisational policies, plans and procedures
- processes for identifying and addressing skill gaps
- ways of encouraging team members to find and suggest areas for improvement
- methods of identifying and evaluating options and making/recommending improvements
- methods of accessing required resources
- OHS requirements relevant to team and work area

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the scope of the services and/or functions supplied to and by the team or work area and the deliverables expected by customers, including the ultimate customer</li> <li>• facilitate a systematic approach to implementing 5S</li> <li>• lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems</li> <li>• set up systems for monitoring and improving 5S implementation</li> <li>• manage non-conformances in implementation of 5S.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> </ul>

	<ul style="list-style-type: none"> <li>targeted questioning</li> <li>reports from supervisors, peers and colleagues (third-party reports)</li> <li>portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>lean operations</li> <li>agile operations</li> <li>preventative and predictive maintenance approaches</li> <li>monitoring and data gathering systems, such as SCADA software, ERP systems MRP and proprietary systems</li> <li>statistical process control systems, including six sigma and three sigma</li> <li>Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>supply, value, and demand chain monitoring and analysis</li> <li>5S</li> <li>continuous improvement (kaizen)</li> <li>breakthrough improvement (kaizen blitz)</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and Responsible Care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<b>5S</b>	<p>5S is a system of work organisation originally developed in Japan based around a close translation of the five stages in the housekeeping approach is:</p> <ul style="list-style-type: none"> <li>• sort</li> <li>• set in order</li> <li>• shine</li> <li>• standardise</li> <li>• sustain</li> </ul>
<b>Sort</b>	<p>Sort involves keeping only what is absolutely necessary for the work processes that comprise the job and includes:</p>

	<ul style="list-style-type: none"> <li>clearing the work area of all non-essential items</li> </ul> <p>Non-essential items are items not required to either produce product, conduct process or operations or make required adjustments to equipment during process or operations</p>
<b>Set in order</b>	<p>Set in order includes:</p> <ul style="list-style-type: none"> <li>assigning required equipment and materials appropriate locations in the work area</li> </ul>
<b>Shine</b>	<p>Shine includes:</p> <ul style="list-style-type: none"> <li>keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process</li> </ul> <p>Cleaning includes:</p> <ul style="list-style-type: none"> <li>noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention</li> </ul>
<b>Standardise</b>	<p>Standardising includes:</p> <ul style="list-style-type: none"> <li>activities that help maintain the order and the housekeeping standards</li> <li>using procedures and checklists developed from a procedure</li> </ul>
<b>Sustain</b>	<p>Sustain includes:</p> <ul style="list-style-type: none"> <li>making sure that daily activities are completed every day regardless of circumstance</li> <li>undertaking inspections, including: <ul style="list-style-type: none"> <li>informal inspections that should be carried often, at least weekly</li> </ul> </li> <li>generating continuous improvement actions from daily activities</li> <li>formal inspections that should be carried out at least monthly</li> </ul>
<b>Items in work area</b>	<p>Items in work area may include:</p> <ul style="list-style-type: none"> <li>tools</li> <li>jigs/fixtures</li> <li>materials/components</li> <li>plant and equipment</li> <li>manuals</li> <li>personal items (e.g. bags, lunch boxes and posters)</li> <li>safety equipment and personal protective equipment</li> </ul>

	<ul style="list-style-type: none"> <li>• other items which happen to be in the work area</li> </ul>
<b>Team</b>	The term team is used to apply to all individuals in the target work area who are involved in the implementation of 5S. The team may or may not be a formally designated team working to a team leader
<b>Work area</b>	<p>The work area includes:</p> <ul style="list-style-type: none"> <li>• all areas where aspects of the job are performed and that are under the direct control of the employee. In a team environment 5S should be applied to all work areas under the control of the team</li> </ul>
<b>Target work area</b>	<p>The target work area may be identified as a physical and/or virtual work space:</p> <ul style="list-style-type: none"> <li>• used by a person, a team or a cross-functional group</li> <li>• common to part/s of a process or value stream (already defined)</li> <li>• shared by people who undertake a defined procedure or set of procedures</li> <li>• needed to support a particular function</li> </ul>
<b>Appropriate place</b>	<p>Appropriate places may include areas designated for:</p> <ul style="list-style-type: none"> <li>• recycling</li> <li>• rubbish removal</li> <li>• staff room/lunch room/kitchen</li> <li>• storage</li> <li>• holding area until status is confirmed</li> </ul>
<b>Optimum assigned location</b>	<p>The optimum assigned location may include:</p> <ul style="list-style-type: none"> <li>• making changes to the layout of furniture, equipment and personnel in order to facilitate the smooth and continuous flow of work through process steps taking into account OHS considerations</li> </ul>
<b>Non-conformance</b>	<p>Non-conformance includes:</p> <ul style="list-style-type: none"> <li>• incorrect or incomplete application of 5S procedures, including any daily tasks, scheduled inspections and continuous improvement procedures</li> </ul>

## Unit Sector(s)

Competitive systems and practices

## **Custom Content Section**

Not applicable.

## MSS403041A Facilitate breakthrough improvements

### Modification History

New unit, superseding MSACMT441A Facilitate continuous improvement in manufacturing -  
Not equivalent

### Unit Descriptor

This unit of competency covers the knowledge and skills required to facilitate implementation of discrete targeted improvement activities to achieve breakthrough improvements in selected processes, operations or products. Typically this approach is used for improvements in areas of waste identified through value stream mapping.

### Application of the Unit

This unit applies to team leaders and others who are providing guidance and support to assist a team of employees to identify improvements that can be implemented to operations, processes or products in a brief intensive project.

The unit also covers ensuring that the improvements are sustained. The process of achieving breakthrough improvements is often called kaizen blitz in lean terminology.

This unit assumes that one or more processes and operations have been mapped.

*MSS403033A Map an operational process* may also need to be selected if this is not the case.

For facilitation of breakthrough improvements in an office see unit *MSS403043A Facilitate breakthrough improvements in an office*.

### Licensing/Regulatory Information

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |                               |     |  |
|---|-------------------------------|-----|--|
| 1 | Prepare for improvement event | 1.1 | Engage team members in the improvement event   |
|   |                               | 1.2 | Identify process or processes to be targeted in the improvement event  |
|   |                               | 1.3 | Assist team members to identify how their own roles contribute to value to the customer                              |
|   |                               | 1.4 | Assist team to identify the boundaries of the event, including any imposed exclusions                                |
|   |                               | 1.5 | Identify key process indicators and other information required for improvement event                                 |
|   |                               | 1.6 | Identify skill needs for personnel engaged in breakthrough improvement event and arrange for any required training   |
|   |                               | 1.7 | Establish communication processes with sponsor and stakeholders  |
| 2 | Identify improvements         | 2.1 | Assist team to review current processes, operations or products and identify options for radical improvements        |
|   |                               | 2.2 | Facilitate team activities and other relevant personnel to evaluate the options and agree on improvements to be made |
|   |                               | 2.3 | Encourage and assist team and others to plan the activities and identify metrics to be monitored                     |
|   |                               | 2.4 | Facilitate allocation of resources and strategies to manage impact on routine work                                   |

- |   |                       |     |  |
|---|-----------------------|-----|--|
| 3 | Facilitate the event  | 3.1 | Assist team to gather baseline data on the selected metrics  |
|   |                       | 3.2 | Assist team to identify and address barriers to making the improvements  |
|   |                       | 3.3 | Monitor team dynamics and facilitate team focus and cooperation  |
|   |                       | 3.4 | Liaise with sponsor to communicate progress and maintain their support   |
|   |                       |     |  |
| 4 | Evaluate improvements | 4.1 | Assist team to gather and interpret data on the metrics  |
|   |                       | 4.2 | Facilitate team activities to evaluate the outcomes of the event   |
|   |                       | 4.3 | Identify causes for areas of poor performance from changes and identify any additional changes to address them |
|   |                       | 4.4 | Report to sponsor and other stakeholders on the outcomes of the event  |
|   |                       |     |  |
| 5 | Embed improvements    | 5.1 | Establish mechanisms to ensure new systems and/or practices are communicated to relevant personnel             |
|   |                       | 5.2 | Motivate team to apply the new systems and/or practices and sustain improvements                               |
|   |                       | 5.3 | Ensure the new systems and/or practices are reflected in relevant procedures                                   |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- facilitating groups of people who may not normally work together
- analysing information and data to identify variation and evaluate improvements
- measuring and calculating performance variables
- facilitating team goals, activities, communications and accessing resources
- planning and prioritising team activities
- solving problems to root cause
- identifying waste (muda)
- communicating with personnel at all levels in relation to team activities and improvement projects
- visualising normal operations and procedures in terms of flow and contribution to customer value
- contributing to procedure review and/or development
- identifying gaps in skills and/or knowledge and options to address them

### Required knowledge

Required knowledge includes:

- team and organisation deliverables and processes used to achieve them
- how organisation operations and processes contribute to the value stream
- types of waste (muda) and imposed exclusions
- organisational policies, plans and procedures
- methods of identifying and evaluating options
- occupational health and safety (OHS) requirements relevant to the target work areas

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Critical aspects for assessment and</b>	A person who demonstrates competency in this unit must
--	--

<p><b>evidence required to demonstrate competency in this unit</b></p>	<p>be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• interpret operations, processes and products in terms of value to the customer</li> <li>• identify, analyse and evaluate information from a variety of sources to identify opportunities for breakthrough improvements</li> <li>• lead and motivate others in planning, implementing and sustaining improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted</p>
--	--

	<p>so as to take into account:</p> <ul style="list-style-type: none"> <li>the stage of implementation of competitive systems and practices</li> <li>the size of the enterprise</li> <li>the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Team</b>	<p>Team for the purposes of this unit means any group of employees engaged in a breakthrough improvement event. Examples include:</p> <ul style="list-style-type: none"> <li>a permanent formally identified team</li> <li>a sub-group of a team</li> <li>a specially established group for the breakthrough event (e.g. a combined production/administration/logistics group convened for a breakthrough event addressing delivery issues)</li> </ul>
<b>Scope and benefit statements</b>	<p>Scope and benefit statements of improvement project may include:</p> <ul style="list-style-type: none"> <li>description of the business</li> <li>the target work process</li> <li>what key stakeholders seek from the improvement project</li> <li>a mission for the event</li> <li>a set of goals</li> <li>a statement of the do's and don'ts for the improvement project</li> </ul>
<b>Boundaries</b>	<p>Boundaries define the extent and limits of the breakthrough improvement event. Typically they define:</p> <ul style="list-style-type: none"> <li>the start and end point of the process being targeted</li> <li>the steps of the process to be included and excluded</li> <li>specific job roles or related processes to be included or excluded</li> <li>timeframe for the event</li> </ul>
<b>Sponsor</b>	<p>Sponsor includes:</p> <ul style="list-style-type: none"> <li>a person who is committed to achieving improvements and who has the authority to approve and allocate resources to support the activities and ensuing changes. Typically the sponsor will be a middle or senior manager in the organisation or the business owner</li> </ul>
<b>Breakthrough improvement</b>	<p>A breakthrough improvement (also known as kaizen blitz) is one that delivers a better ratio of value-add to</p>

	<p>non-value add from the customer perspective. It is characterised by:</p> <ul style="list-style-type: none"> <li>• using a formal process</li> <li>• being a discrete targeted activity that is achieved in a relatively short timeframe</li> <li>• delivering significant level of improvement</li> </ul>
<b>Mechanisms</b>	<p>Mechanisms to communicate and sustain improvements may include:</p> <ul style="list-style-type: none"> <li>• scheduled audits</li> <li>• regular monitoring and/or reporting activities</li> <li>• use of visual aids, such as targets and progress boards, process charts and procedure posters</li> <li>• communications, such as standing items for team meetings, email reminders or updates</li> </ul>
<b>Imposed exclusions</b>	<p>Imposed exclusions are wastes (muda) that are required but do not add value. They should be formally identified as muda in the competitive systems implementation. Examples include:</p> <ul style="list-style-type: none"> <li>• equipment excluded from efficiency or layout review because of budget constraints</li> <li>• regulatory requirements that do not add value</li> <li>• organisation requirements, policies or procedures beyond the influence of the team</li> </ul>
<b>Key process indicators</b>	<p>Key process indicators may include:</p> <ul style="list-style-type: none"> <li>• statistical process control data/charts</li> <li>• orders</li> <li>• lost time, injury and other OHS records</li> <li>• equipment reliability charts</li> </ul>
<b>Team</b>	<p>Team includes:</p> <ul style="list-style-type: none"> <li>• formally designated teams</li> <li>• informal groups of employees</li> <li>• other stakeholders who may be brought together for a breakthrough improvement event</li> </ul>

## Unit Sector(s)

Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS403051A Mistake proof an operational process**

### **Modification History**

New unit, superseding MSACMT451A Mistake proof a production process - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to make changes to own and others work in a work area which prevents errors and/or backsliding to a pre-improvement level of practice.

### **Application of the Unit**

This unit applies to a person who needs to analyse a process that a team is responsible for and determine methods of mistake proofing it (e.g. ensuring it only produces product within an acceptable range or error-free transport and storage of goods). The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to mistake proof the production process in their area. After improvement activities have been undertaken these improvements need to be sustained.

This unit requires the application of skills associated information gathering and analysis. Initiative, enterprise and problem solving are also required to identify mistakes and determine strategies for eliminating them. This unit also requires communication and teamwork skills to ensure mistake proofing strategies are implemented and self-management and learning skills to continually reflect on and integrate feedback about the effectiveness of strategies.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Analyse process	1.1	Identify sources of variability/non-conformance in the process
		1.2	Identify critical control points in process
		1.3	Analyse causes of variability/non-conformance
2	Develop preventative techniques/systems	2.1	Liaise with team members and other people to develop mistake proof options for performing operation
		2.2	Test and validate mistake proofing options
3	Implement permanent fix	3.1	Liaise with relevant people to have systems/procedures changed to implement solution
		3.2	Liaise with relevant people to implement the solution
		3.3	Liaise with relevant people to ensure self and others in the team or work area have an appropriate skills set
		3.4	Follow through to ensure implementation occurs
4	Monitor implementation	4.1	Critically observe the implementation
		4.2	Compare the results of the implementation against the expected outcomes

- 4.3 Modify solution to improve outcomes
  - 4.4 Ensure procedures reflect change
  - 4.5 Ensure training/assessment reflects change
  - 4.6 Audit change at agreed period/cycle
  - 4.7 Take action on any observed deviation
- 
- 5 Seek improvements
    - 5.1 Observe changes
    - 5.2 Analyse process again, if required, to ensure improvements are sustained

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with team or work group members, technical support personnel and other relevant staff
- explaining mistake proofing and related concepts
- facilitating input of others and encouraging acceptance of changes
- analysing and visualising operations in terms of flow and contribution to customer outcomes
- solving problems to determine root cause of errors and possible solutions
- analysing and interpreting information about errors and mistake proofing options in terms of cost, feasibility, regulations and value to the customer
- suggesting design changes to operations and products that eliminate the potential for errors
- suggesting mechanisms or procedures that warn of errors where operations cannot be designed to eliminate errors,

### Required knowledge

Required knowledge includes:

- mistake proofing concepts, including, in priority order:
  - eliminate the possibility of the error via changes to the process
  - prevent the error from occurring via physical or virtual barriers
  - reduce likelihood of the error by encouraging correct action
  - mitigate the impact of the error if it does occur
- understanding of processes undertaken by team
- factors in the processes which may cause variability
- methods of controlling the variability in the process
- mistake proofing methods relevant to the process/product

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

---

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse variability and non-conformances</li> <li>• identify, analyse and evaluate information from a variety of sources to identify errors and options for mistake proofing</li> <li>• facilitate implementation of mistake proofing activities that reduce waste</li> <li>• facilitate sustaining the mistake proofing activities.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and</p>

	disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul>
--	---

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Mistake proofing</b>	<p>Mistake proofing is based on the concept of zero defects. The first priority is to eliminate the possibility of an error occurring. However, where this is not feasible mistake proofing can be used to reduce the occurrence of errors and/or to minimise their impact.</p> <p>Mistake proofing should target an error in the following priority order:</p> <ul style="list-style-type: none"> <li>• eliminate the possibility of the error via changes to the process</li> <li>• prevent the error from occurring via physical or virtual barriers,</li> <li>• reduce likelihood of the error by encouraging correct action (e.g. through warning systems)</li> <li>• mitigate the impact of the error if it does occur</li> </ul> <p>Mistake proofing is also called error proofing or baka-yoke or poka-yoke</p>
<b>Options for mistake proofing</b>	<p>Factors to consider when prioritising options for mistake proofing will vary according to the process and may include:</p> <ul style="list-style-type: none"> <li>• success rate in eliminating errors</li> <li>• feasibility</li> <li>• skills required by employees</li> <li>• cost</li> <li>• capacity to reduce waste</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• all work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheet</li> <li>• temporary instructions and similar instructions provided for the operation of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> </ul>

	<ul style="list-style-type: none"><li>• government regulations</li></ul> Procedures may be: <ul style="list-style-type: none"><li>• written, verbal, computer-based or in some other format</li></ul>
--	---

## MSS404050A Undertake process capability improvements

### Modification History

New unit, superseding MSACMT450A Undertake process capability improvements\* - Equivalent

\* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

### Unit Descriptor

This unit of competency covers the skills and knowledge required to make process capability improvements, including analysing data from the process, developing improvements to eliminate variation due to assignable causes, and then implementing actions.

### Application of the Unit

This unit applies to a person who reviews a range of process capability data and information, makes/arranges for changes to be made to procedures, equipment or process and then recalculates the process capability and monitors resulting improvement actions. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to suggest and justify process capability improvements.

Process capability may have been determined using either a six sigma or three sigma processes. This unit applies to the application of statistical methods and the determination of capability based on those methods. Other related units may be *MSS404052A Apply statistics to operational processes* and *MSS404053A Use six sigma techniques*

This unit primarily requires the application of skills associated with communication, information gathering and analysis. Initiative, enterprise and problem solving are also required to identify opportunities to improve process capacity. This unit also requires aspects of self-management and learning to validate own analysis.

For a qualitative approach to improvement (one not using statistics) see *MSS403051A Mistake proof an operational process*.

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MSS404052A Apply statistics to operational processes

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Obtain required data	1.1	Identify process for study
		1.2	Obtain/organise process to obtain required data/information
2	Analyse information	2.1	Analyse data and determine assignable causes
		2.2	Develop possible improvements to eliminate assignable causes
		2.3	Incorporate own experience and learning into proposed process improvement proposals
		2.4	Develop process improvement proposals
3	Improve process capability	3.1	Obtain required authorities to implement improvements
		3.2	Liaise with relevant people to implement improvements
		3.3	Obtain/organise required data for improved process
		3.4	Recalculate process capability

- 3.5 Implement revised data collection/processing and new capability information
- 3.6 Monitor improvement actions and make adjustments, as necessary

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- performing relevant mathematical operations
- identifying and using relevant statistical methods
- communicating and explaining data-related changes and procedures to individuals and groups
- negotiating with other employees and managers on proposed improvement actions
- analysing procedures and data to establish variation
- solving problems to root cause where assignable cause of variation is not obvious
- working in a team
- using computer software relevant to required analyses and process

### Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required
- variability and normal distribution
- three sigma or six sigma processes, as relevant
- random and non-random results (recognition of assignable causes)
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Critical aspects for assessment and evidence required to demonstrate</b>	A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
---	---

<b>competency in this unit</b>	<ul style="list-style-type: none"> <li>• analyse process information</li> <li>• calculate process capability/trial limits</li> <li>• improve process capability (or organise for it to be improved)</li> <li>• analyse revised process information and recalculate process capability.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for</b>	Assessment processes and techniques must be culturally

<b>assessment</b>	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p>
--	--

	<ul style="list-style-type: none"> <li>the stage of implementation of competitive systems and practices</li> <li>the size of the enterprise</li> <li>the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Process capability</b>	<p>Process capability is:</p> <ul style="list-style-type: none"> <li>the measurable ability of a process to reliably produce within calculated limits (the limits depend on the variation of the process)</li> </ul>
<b>Variation</b>	<p>All processes have variation. The approach in this unit is to separate random variation (no assignable cause) from non-random variation (which has an assignable cause). By finding and eliminating assignable causes, total variation is reduced and process capability will be improved</p>
<b>Six sigma</b>	<p>Six sigma refers to:</p> <ul style="list-style-type: none"> <li>a statistical tool for recording defects and determining capability. Six sigma limits equate to 3.4 defects per million opportunities for each product or service transaction. Six sigma is also used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package</li> </ul>
<b>Three sigma</b>	<p>Three sigma refers to:</p> <ul style="list-style-type: none"> <li>a traditional statistical process control. Three sigma limits equate to 3 defects per thousand opportunities for each product or service transaction</li> </ul>
<b>Required data</b>	<p>The calculation of three sigma or six sigma limits requires process data. The data required depends on the nature of the limits being calculated</p>
<b>Assignable cause</b>	<p>Any non-random variation is said to have an 'assignable cause'. The methods of data analysis common to statistical capability analysis as well as other methods of root cause analysis should be used to determine the cause of this non-random variation</p>
<b>Improved process capability</b>	<p>Improvements to process capability result from eliminating the causes of non-random variation. The improvements made may be:</p> <ul style="list-style-type: none"> <li>as a result of continuous improvement with the process capability being recalculated periodically</li> </ul>

	<ul style="list-style-type: none"> <li>as a result of an improvement project with the process capability recalculated as part of that project</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>work instructions</li> <li>standard operating procedures</li> <li>formulas/recipes</li> <li>batch sheets</li> <li>temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>written, verbal, computer-based or in some other format</li> </ul>

## **MSS404052A Apply statistics to operational processes**

### **Modification History**

New unit, superseding MSACMT452A Apply statistics to processes in manufacturing - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to apply statistical theory and principles to the analysis and control of processes and operations.

### **Application of the Unit**

This unit applies to a person working in an organisation applying statistical process control on processes or operations. The statistical process control will usually be used to monitor the processes or operations and determine when action needs to be taken. The appropriate action will then be taken in accordance with standard procedures.

The unit includes applying knowledge of frequency distribution and variation to the data/chart to distinguish between random and non-random variation and assumes understanding of the process and/or equipment to help interpret those results.

This unit primarily requires the application of skills associated with gathering and analysing data and communicating statistical information to others. This unit also has a strong emphasis on problem solving, initiative and enterprise, planning and organising, and self-management to solve problems and manage processes.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Collect process data	1.1	Interpret sampling scheme
		1.2	Obtain measurements in accordance with standard procedures
		1.3	Handle data, as required
2	Interpret data	2.1	Plot data on appropriate control chart
		2.2	Distinguish between random and non-random patterns of results
		2.3	Identify results outside the control limits
		2.4	Recognise situations requiring action
		2.5	Take appropriate action in accordance with standard procedures
		2.6	Determine cost of non-conformance
3	Calculate control limits	3.1	Consult relevant stakeholders to determine appropriate limits
		3.2	Use relevant methods to calculate/revise control limits
		3.3	Plot limits on control chart

### 3.4 Explain impact of limit to relevant stakeholders

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- applying a range of sampling procedures
- analysing samples and data for variation, relevance, reliability and representativeness
- problem solving the causes of variation in a process
- communicating with other employees to obtain samples/data and to explain results and limits
- plotting or documenting results
- undertaking calculations, including:
  - basic arithmetic functions
  - mean, range, mean of means, standard deviation (using appropriate calculation aids)
- using statistics to support process and operations control

### Required knowledge

Required knowledge includes:

- sampling techniques
- purpose of sampling and measurement
- random, systematic and stratified sampling
- purpose of replication of data for statistical control
- samples, populations, finite and infinite populations and the differences
- methods of calculating means, standard deviations and the like and their purpose in statistical control
- the meaning of broad/narrow frequency distributions/range/standard deviations and skewed distributions in process terms
- concept of limits, including:
  - 1 sigma warning limits
  - 2 sigma warning limits
  - 3 sigma control limits
  - 6 sigma limits
- types of control charts and their applications to different types of process/product and for different purposes
- process causes of variation and typical cause types of non-random variation
- non-process (e.g. measurement) causes of variation
- recognition of stable and unstable processes

- causes of stability/instability in the process
- calculation of control limits/process capability and the applications of different control limits
- the standard distribution curve and confidence limits

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• follow sampling procedures</li> <li>• apply basic statistical processes</li> <li>• analyse data to identify variations and non-conformances</li> <li>• plot or document results.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> </ul>

	<ul style="list-style-type: none"> <li>targeted questioning</li> <li>reports from supervisors, peers and colleagues (third-party reports)</li> <li>portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>lean operations</li> <li>agile operations</li> <li>preventative and predictive maintenance approaches</li> <li>monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>statistical process control systems, including six sigma and three sigma</li> <li>Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>supply, value, and demand chain monitoring and analysis</li> <li>5S</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Sampling scheme</b>	<p>Sampling scheme may include:</p> <ul style="list-style-type: none"> <li>• sampling for attributes or sampling for variables</li> <li>• batch, continuous or custom made products</li> <li>• number of items/samples</li> <li>• size of sample</li> <li>• timing of sampling</li> <li>• location of sampling points</li> <li>• type of sample</li> <li>• number/type of measurements to be done on each sample</li> <li>• sampling equipment</li> <li>• measurement/testing equipment/methods</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/ recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul>

	<p>Procedures may be:</p> <ul style="list-style-type: none"> <li>written, verbal, computer-based or in some other format</li> </ul>
<b>Handle data</b>	<p>Handle data may include:</p> <ul style="list-style-type: none"> <li>calculating means, ranges, mean of means and standard deviations (using appropriate calculation aids)</li> <li>entering data into a software package</li> <li>recording data either in writing or electronically</li> <li>other required manipulations of the data</li> </ul>
<b>Control chart</b>	<p>Control charts may include:</p> <ul style="list-style-type: none"> <li>run</li> <li>tally</li> <li>mean/range</li> <li>attributes</li> <li>other relevant charts</li> </ul>
<b>Random</b>	<p>Random variation is the term used in statistical control to refer to those variations for which no cause can be found</p>
<b>Non-random</b>	<p>Non-random (also called identifiable cause, assignable cause or special cause) are those variations for which a cause can be found and so the cause of the variation eliminated. Non-random variation may also be used to predict possible breaches of the control limits</p>
<b>Control limits</b>	<p>Control limits (also referred to as process capability) are those limits within which the process will operate if it is 'under control'</p>
<b>Cost of non-conformance</b>	<p>Cost of non-conformance includes:</p> <ul style="list-style-type: none"> <li>reprocessing/rework</li> <li>expediting</li> <li>unplanned service</li> <li>excess inventory</li> <li>complaint handline</li> <li>downtime</li> <li>returns</li> <li>scrap</li> <li>labour costs</li> <li>material costs</li> <li>infrastructure costs/overhead</li> <li>utility costs</li> </ul>

<b>Appropriate limits</b>	Appropriate limits may include: <ul style="list-style-type: none"><li>• 1 sigma warning limits</li><li>• 2 sigma warning limits</li><li>• 3 sigma control limits</li><li>• 6 sigma limits</li></ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS404060A Facilitate the use of planning software systems in a work area or team**

### **Modification History**

New unit, superseding MSACMT460A Facilitate the use of planning software systems in manufacturing\* - Not equivalent

\* Prerequisite *MSACMT260A Use planning software systems in manufacturing* - removed

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to facilitate the use of planning software in an organisation in a person's work area or team. These systems are known by various generic names, such as Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII, MRP III etc.) or by proprietary names.

### **Application of the Unit**

This unit applies to a person who will access the planning software system for their own work, but will also need to provide support and organise skill development programs for their team or work group members. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to facilitate the use of the planning software system.

The planning software system will be used routinely in the work of the team or work group. This unit primarily requires the application of skills associated with using communication technology and supporting team use of planning software. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that planning software is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Identify scope of planning software	1.1	Identify categories of information held by planning software
		1.2	Identify information categories relevant to team and area processes
		1.3	Identify range of information able to be provided to planning software by team or work group
		1.4	Identify range of information able to be provided to team or work group by planning software
2	Communicate using the planning software system	2.1	Send and receive information using planning software
		2.2	Send and receive messages using planning software
3	Make decisions using planning software	3.1	Interrogate the planning software system to find required current, historical or predicted information
		3.2	Take actions appropriate to the information in accordance with procedures
4	Monitor the use of planning software	4.1	Routinely monitor planning software information
		4.2	Review performance and use of planning software with team

- 5 Support others to use planning software
  - 5.1 Regularly communicate with team or other work group members, both using planning software and face to face
  - 5.2 Identify improvements required
  - 5.3 Take appropriate actions to implement improvements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- entering and receiving information via planning software terminals
- communicating with team and organisation planning software support personnel
- engaging and motivating team in use of planning software
- identifying team or work group area information requirements
- identifying scope of information relevant to team and area available in planning software by categories
- planning and organising improvements in team's use of planning software

### Required knowledge

Required knowledge includes:

- hierarchy of planning software system and operation
- information available from/through the planning software system
- query facilities and information analysis capabilities offered by planning software
- support/training/skill development mechanisms available for access by team members

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify team or work group area information requirements and relate to planning software categories</li> <li>• lead and motivate others in using planning software</li> <li>• ensure information sent to planning software is accurate and appropriate</li> <li>• obtain regular and one-off information from planning</li> </ul>
--	--

	<p>software</p> <ul style="list-style-type: none"> <li>• make decisions using planning software generated information.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, ERP systems, MRP and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
---	--

<p><b>Planning software</b></p>	<p>Planning software is a general term applied to a number of software systems which integrate a range of business information, such as:</p> <ul style="list-style-type: none"> <li>• sales/order taking</li> <li>• finance/accounting</li> <li>• logistics</li> <li>• maintenance</li> <li>• human resources</li> <li>• production</li> </ul> <p>It is frequently referred to by names such as ERP or MRP/MRP II. In some cases it can be integrated with engineering applications, such as SCADA systems. In such cases the unit MSS402061A Use SCADA systems in operations may also be required</p>
<p><b>Information and messages</b></p>	<p>Information and messages able to be sent and received via the planning software will vary between programs and organisations. This unit assumes that a range of discretion is available to the team leader over the information and messages that can be sent or received. Examples of information and message categories include:</p> <ul style="list-style-type: none"> <li>• orders</li> <li>• production/operations processes</li> <li>• scheduling (e.g. daily/weekly)</li> <li>• finance and accounting</li> <li>• human resources (e.g. rosters, reserves, training completed and scheduled)</li> <li>• quality requirements</li> <li>• customers</li> <li>• suppliers</li> </ul>
<p><b>Value stream</b></p>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> </ul>

	<ul style="list-style-type: none"><li>• final assembler/collation/preparation</li><li>• support services (e.g. accounting, finance and legal)</li><li>• storage and delivery to customer</li><li>• after market support</li></ul>

## **MSS404061A Facilitate the use of SCADA systems in a team or work area**

### **Modification History**

New unit, superseding MSACMT461A Facilitate SCADA systems in a manufacturing team or work area\* - Not equivalent

\* Prerequisite *MSACMT261A Use SCADA systems in manufacturing* - removed

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by a team leader or technical expert to personally use and facilitate the use of System Control and Data Acquisition (SCADA), or other similar systems, and support the team in their use of SCADA.

### **Application of the Unit**

This unit applies to team leaders and others who are providing guidance and support to assist employees to use SCADA. The person will access the SCADA system for their own work, but will also need to provide support and organise skill development programs for their team members.

This competency is also relevant to maintenance personnel using a SCADA system to coordinate maintenance activities.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of SCADA systems. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that system is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Identify scope of SCADA system	1.1	Identify categories of information held in and control options of SCADA system relevant to team or area
		1.2	Identify range of information able to be provided to SCADA system by team
		1.3	Identify range of information able to be provided to team by SCADA system
		1.4	Identify team or area functions impacted by SCADA system
2	Communicate using SCADA system	2.1	Send and receive information using SCADA
		2.2	Send and receive messages using SCADA
3	Make decisions using SCADA	3.1	Interrogate the SCADA system to find required current, historical or predicted information
		3.2	Take actions appropriate to the information
4	Monitor the use of SCADA	4.1	Routinely monitor SCADA information
		4.2	Identify poor uses of SCADA system within team and system inadequacies

- 4.3 Identify system improvements required
  - 4.4 Take appropriate action to improve SCADA system and its use
- 5 Support team use of SCADA
  - 5.1 Regularly communicate with team, both using SCADA-based communication and face to face
  - 5.2 Identify skill improvement needs
  - 5.3 Identify team members who require additional support
  - 5.4 Take appropriate action to provide support

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- entering and receiving information via SCADA terminals
- communicating with team and organisation SCADA support personnel
- engaging and motivating team in use of SCADA system
- identifying team or work area information requirements
- identifying scope of team or area processes controlled by SCADA system
- planning and organising improvements in team's use of SCADA

### Required knowledge

Required knowledge includes:

- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system
- query, control and other facilities and information offered by SCADA
- support/training/skill development mechanisms available for access by team member

## Evidence Guide

## **MSS404081A Undertake proactive maintenance analyses**

### **Modification History**

New unit, superseding MSACMT481A Undertake proactive maintenance analyses - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to undertake the most common forms of analyses associated with predictive/preventative/reliability centred maintenance strategies.

### **Application of the Unit**

This unit applies to a technical expert (usually an engineer, technician or tradesperson) who is required to undertake analyses for the purpose of predictive/preventative/reliability centred maintenance as part of a competitive systems and practices strategy.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, and planning and organising in order to undertake maintenance analyses. This is normally done in the context of using computer technology, and requires aspects of learning and self-management to ensure team involvement and facilitation of learning.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Liaise with operator	1.1	Establish a relationship with the operator of equipment/plant
		1.2	Ensure the operator has the required skills and resources to keep the equipment/plant clean
		1.3	Ensure the operator is able to effectively monitor the operation of the equipment/plant
		1.4	Regularly communicate with operator about the overall equipment effectiveness (OEE) of their equipment/plant
		1.5	Involve operator, team leader and other key personnel in identification of skill needs and means of skill acquisition to fill any identified gaps
2	Analyse history	2.1	Analyse mean time between failures (MTBF) from maintenance records
		2.2	Analyse performance data of the equipment/plant
		2.3	Identify causes of changes to historic trends/status
		2.4	Determine methods of ensuring causes of improvements and resolution of deterioration are locked in

- 3 Undertake failure mode effects analysis (FMEA) or similar failure effects analysis
  - 3.1 Undertake analysis
  - 3.2 Record results of analysis
  - 3.3 Investigate methods of eliminating possibility of failure and/or minimising the impact of the failure
  - 3.4 Liaise with operator, team leader and other key personnel regarding possible solutions
  - 3.5 Select most appropriate solution
  - 3.6 Implement selected solutions
  
- 4 Undertake condition monitoring analysis
  - 4.1 Obtain data for condition monitoring analysis
  - 4.2 Interpret condition monitoring data
  - 4.3 Predict required maintenance type and timing from condition monitoring data
  - 4.4 Liaise with operator, team leader and other key personnel regarding implications of condition monitoring report
  - 4.5 Involve team members in development of changes to maintenance strategy to ensure awareness, learning and commitment

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with operators and team leaders in a variety of situations and with different media
- adapting personal communication strategy to different levels of operator and team leader literacy and numeracy
- working in formal and ad-hoc teams to undertake proactive maintenance related analyses
- analyse data to determine trends, variations, equipment history and to prioritise methods of eliminating or minimising equipment failure
- solving problems to root cause
- applying basic arithmetic and statistical methods
- planning for effective data collection
- reading and interpreting engineering specifications/drawings
- reading and interpreting charts and diagrams
- using information system terminals and computer
- recording data in hard or soft formats

### Required knowledge

Required knowledge includes:

- cleaning needs, techniques and principles of equipment in area of responsibility
- methods of assessing operator and maintenance skill gaps and filling them
- techniques for determining MTBF or similar
- techniques for undertaking FMEA or similar
- underpinning principles of competitive systems and practices strategies being implemented and how to adapt them to maintenance
- root cause analysis
- techniques to analyse condition monitoring data

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

---

## Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and analyse data and other information on the historical performance of equipment</li> <li>• involve operators, maintenance and other stakeholders in decisions on proactive maintenance strategies</li> <li>• identify root cause of failure and deterioration in equipment performance</li> <li>• select and implement failure elimination or minimisation solutions.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• OEE</li> <li>• takt time</li> <li>• process mapping</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>OEE</b>	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> <p><i>OEE = availability x performance x quality rate</i></p> <p>where:</p> <ul style="list-style-type: none"> <li>• availability takes into account losses due to breakdown, set up and adjustments</li> <li>• performance takes into account losses due to minor stoppages, reduced speed and idling</li> <li>• quality rate takes into account losses due to rejects, reworks and start-up waste</li> </ul>
<b>MTBF</b>	<p>MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing.</p> <p>There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p> <p>Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance related events may be substituted for MTBF providing they relate strategies for improving OEE.</p>
<b>FMEA</b>	<p>FMEA is a systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also</p>

	<p>identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring.</p> <p>Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.</p> <p>HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.</p>
<b>Condition monitoring</b>	<p>In this unit condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance, whether it be obtained from non-destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses. It does not require the actual undertaking of the NDT or condition monitoring assessment or test. If this is required appropriate units from other Training Packages will be required.</p>

## **MSS404082A Assist in implementing a proactive maintenance strategy**

### **Modification History**

New unit, superseding MSACMT482A Assist in implementing a proactive maintenance strategy - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by a maintenance person to assist in the implementation of a proactive maintenance strategy in an organisation. This unit includes the interaction between a maintenance worker and operators, as appropriate.

### **Application of the Unit**

This unit applies to a maintenance person in an organisation that has adopted or is implementing total preventative/productive maintenance (TPM), reliability centred maintenance (RCM) or similar strategies. As part of this, the maintenance person is expected to assist in the implementation by determining appropriate maintenance related schedules and also by providing maintenance related assistance to non-maintenance personnel, such as assisting production personnel to fulfil their role in the TPM/RCM strategy.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to analyse maintenance requirements. Communication, teamwork and planning and organising skills will be required to implement reliability strategies. This requires aspects of self-management to ensure improvement of own performance and learning.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Develop components of reliability strategy for a work/plant area	1.1	Determine manufacturer's recommended inspection, servicing and related schedules for relevant plant
		1.2	Consult with relevant people with regard to appropriate inspections, services and schedules
		1.3	Discuss any conflicts with relevant people and seek resolution of conflicts
		1.4	Develop schedules in liaison with relevant people
		1.5	Identify inspections and servicing which may be done by operations personnel in liaison with relevant stakeholders
2	Assess current practice for maintenance implications	2.1	Identify the overall equipment effectiveness (OEE) or other organisation targets for equipment/plant
		2.2	Evaluate procedures for plant/equipment reliability implications
		2.3	Discuss current practices with relevant people to determine any plant/equipment reliability implications
		2.4	Recommend changes to improve plant/equipment reliability in accordance with procedures

- 3 Assist in implementing the reliability strategy
  - 3.1 Arrange for schedules to be incorporated in relevant work plans
  - 3.2 Identify training needs in discussion with relevant personnel
  - 3.3 Assist personnel to develop required skills for inspections/servicing within scope of authority
  - 3.4 Collect data/information as required by own work plan
  - 3.5 Compare data/information with performance indicators
  - 3.6 Recommend improvements to reliability strategy in accordance with procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- explaining concepts and processes of chosen proactive maintenance strategy used by the organisation and distinguishing from traditional (breakdown) maintenance strategies
- communicating with operators, other maintenance personnel, team leaders and technical experts in a variety of situations and using different media
- adapting personal communication strategy to different levels of operator and team leader literacy and numeracy
- working in formal and ad-hoc teams to implement proactive maintenance
- solving problems to root cause
- planning proactive maintenance tasks to fit in with maintenance and production schedules and the needs of other staff
- assessing the ability of operations personnel with regard to inspections and servicing of equipment
- reading and interpreting charts and diagrams, manufacturer manuals and specifications and operating procedures

### Required knowledge

Required knowledge includes:

- requirements of the proactive maintenance strategy being implemented
- operating principles and procedures for equipment/plant subject to proactive maintenance strategy
- purpose and processes for data collection in proactive maintenance strategies
- procedures relevant to own job and organisation implementation of proactive maintenance
- methods of making/recommending improvements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Critical aspects for assessment and</b>	A person who demonstrates competency in this unit must
--	--

<p><b>evidence required to demonstrate competency in this unit</b></p>	<p>be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• source information from manuals and other technical documentation or software</li> <li>• effectively communicate with users on equipment operational and maintenance history</li> <li>• develop schedules for maintenance activities including seeking technical assistance, where appropriate</li> <li>• differentiate between proactive and traditional maintenance strategies.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to</p>

	accommodate ethnicity, age, gender, demographics and disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• OEE</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise, the work organisation, culture</li> <li>• regulatory environment and the industry sector</li> </ul>
<b>TPM</b>	TPM is an application of total quality management to maintenance with the intention of increasing reliability, getting it right first time and increasing OEE
<b>RCM</b>	RCM moves maintenance from reactive, or even planned/programmed, towards a focus on uptime and OEE
<b>Similar strategies</b>	<p>Similar strategies may include:</p> <ul style="list-style-type: none"> <li>• mean time between failure (MTBF) which is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing</li> <li>• failure mode and effects analysis (FMEA) which is a systematic approach that identifies potential failure modes in a system, product, or equipment based operations caused by either design or operation/process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring</li> <li>• industry sectors have highly adapted forms of FMEA and which may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability</li> <li>• condition monitoring which often involves quite sophisticated monitoring of equipment, including such things as vibration monitoring, instrumental analysis of lubricating oil, and so on, to determine the current state of the equipment, monitor the change in</li> </ul>

	<p>this condition and predict when it needs servicing/maintenance to maintain reliability.</p>
<b>OEE</b>	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> $OEE = \text{availability} \times \text{performance} \times \text{quality rate}$ <p>where:</p> <ul style="list-style-type: none"> <li>• availability takes into account losses due to breakdown, set-up and adjustments</li> <li>• performance takes into account losses due to minor stoppages, reduced speed and idling</li> <li>• quality rate takes into account the losses due to rejects, reworks and start-up waste</li> </ul>
<b>Uptime</b>	<p>Uptime refers to the overall availability of the plant (it is the inverse of downtime) or the unavailability of the plant. Ideal uptime is 100%</p>
<b>Inspection</b>	<p>Inspection may include:</p> <ul style="list-style-type: none"> <li>• reading dials, gauges and meters</li> <li>• observations, including those using sight, hearing, smell and feel</li> <li>• observations of product quality/faults/rejects</li> </ul>
<b>Servicing</b>	<p>Servicing may include:</p> <ul style="list-style-type: none"> <li>• cleaning</li> <li>• lubricating</li> <li>• topping up</li> <li>• adjusting</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer based or in some other format</li> </ul>

## **Unit Sector(s)**

Unit sector                      Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS404083A Support proactive maintenance**

### **Modification History**

New unit, superseding MSACMT483A Support proactive maintenance - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to lead a production team/work group or maintenance team in a proactive maintenance environment.

### **Application of the Unit**

This unit applies in a competitive systems and practices organisation where proactive maintenance strategies, such as total preventative/productive maintenance (TPM) or reliability centred maintenance (RCM) are used. This unit applies to a team leader or other person who as part of their role assists others in implementing and following the proactive maintenance practices. Team refers to formally designated teams or a group of employees in a common work area.

The unit assumes that team members and in particular the team leader or other support person are in possession of technical knowledge appropriate to their position about the organisation's operational processes and equipment and are able to apply this to the maintenance strategy. The unit covers the leading of a team in proactive maintenance activities, such as keeping records, visual checks, analysis of failures and effects on production and housekeeping. The unit does not cover breakdown maintenance, condition monitoring or non-destructive testing (NDT).

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative, enterprise, planning and organising in order to lead a team in the development and implementation of proactive maintenance strategies. This unit has a strong emphasis on developing and resourcing the team to interpret information and monitor equipment and operation.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Lead team in monitoring process and equipment	1.1	Demonstrate to team how to observe the process/equipment continuously and critically using appropriate senses (e.g. sight and hearing) to identify any potential or actual problems
		1.2	Identify to team data indicators that must be monitored and recorded
		1.3	Ensure team monitors identified data indicators frequently and critically
		1.4	Ensure symptoms of operations outside the desired range of conditions and performance are recognised
		1.5	Analyse cause of equipment non-standard performance within scope of knowledge and skill
		1.6	Ensure team members take timely and appropriate action to solve problems or to refer problems to appropriate manager or specialist
2	Apply proactive maintenance strategy	2.1	Obtain and discuss maintenance strategy with relevant people
		2.2	Identify aspects of maintenance strategy which require specific input from team
		2.3	Discuss maintenance strategy with team members

- 2.4 Ensure team members have resources and training to be able to make the required contributions
- 3 Analyse standard procedures and work practices
  - 3.1 Examine team procedures and practices for compatibility with maintenance strategy
  - 3.2 Identify areas where production procedures/practices should be changed to comply with maintenance strategy
  - 3.3 Identify areas where maintenance strategy should change to comply with production procedures and practices
  - 3.4 Identify other activities or areas where changes might increase equipment reliability
  - 3.5 Take appropriate action to have the required changes made
- 4 Facilitate team contribution to proactive maintenance
  - 4.1 Monitor team's contribution to proactive maintenance
  - 4.2 Arrange for competency development of team members, as required
  - 4.3 Facilitate ongoing examination by the team of process reliability and overall equipment effectiveness (OEE)
  - 4.4 Arrange for follow through and implementation of team originated improvements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- explaining concepts and processes to team of the proactive maintenance strategy and associated analyses used by the organisation and distinguishing from traditional (breakdown) maintenance strategies
- communicating with team members, maintenance personnel and technical experts in a variety of situations and using different media
- assessing capability of team as a whole and individually to contribute to proactive maintenance strategy
- identifying resources in the organisation to improve team capability in regards to proactive maintenance strategy
- working in a team
- solving problems

### Required knowledge

Required knowledge includes:

- the production process as it applies to the team area of responsibility
- equipment controls and function used in team's work area
- data ranges and indicators for normal team operations
- data and equipment variations and fault indicators able to be identified by team during operations
- proactive maintenance strategies used by the organisation, including:
  - range of data required from team for proactive maintenance strategy
  - typical analyses used by the proactive maintenance strategy and their implication for work of the team
  - responsibilities of the team, maintenance staff and technical experts
- OEE and relationship to team's operational capability

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• communicate effectively with team on the proactive maintenance strategy being adopted and the role expected by the team in its implementation</li> <li>• identify data required from team and for team key from the proactive maintenance strategy</li> <li>• analysing proactive maintenance strategy and current work practices of the team to identifying opportunities for better fit</li> <li>• differentiate between proactive and traditional maintenance strategies.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues</li> </ul>

	<p>(third-party reports)</p> <ul style="list-style-type: none"> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP), and proprietary systems statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> </ul>

# **MSS405001A Develop competitive systems and practices for an organisation**

## **Modification History**

New unit, superseding MSACMS600A Develop a competitive manufacturing system - Equivalent

## **Unit Descriptor**

This unit of competency covers the skills and knowledge required to develop new strategies for competitive systems and practices or make improvements to existing systems and practices.

## **Application of the Unit**

This unit applies to a manager, technical specialist or similar in an organisation implementing competitive systems and practices, or in an organisation wishing to embark on the competitive systems and practices path. The person needs to be able to analyse the needs of the organisation and develop strategies and systems for effective implementation and continuous improvement of competitive systems and practices in the organisation.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to determine effective competitive systems and practices strategies for the organisation. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices strategies.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Determine appropriate analytical techniques	1.1	Liaise with key stakeholders to determine objectives of operations strategy
		1.2	Examine current operations to determine major areas requiring improvement
		1.3	Compare possible strategies, techniques and tools against organisation needs
		1.4	Select possible strategies, techniques and tools
		1.5	Consult with key stakeholders to confirm selected strategies, techniques and tools
2	Develop competitive systems and practices strategies	2.1	Estimate benefit/cost ratio for major stakeholders and the value stream overall
		2.2	Determine preferred operations strategy
		2.3	Examine and adapt strategy to organisation needs and priorities
		2.4	Examine and adapt competitive systems and practices techniques and tools required to implement strategy
		2.5	Negotiate with key stakeholders to develop an implementation plan
		2.6	Determine key information and performance indicators

- required
- 3 Implement strategy
    - 3.1 Determine data collection required
    - 3.2 Identify and evaluate methods of collecting and processing required data
    - 3.3 Determine hardware and other resources required
    - 3.4 Evaluate skill needs required
    - 3.5 Ensure all resources/training are available and completed
    - 3.6 Implement strategy
  
  - 4 Monitor implementation of strategy
    - 4.1 Compare information/performance indicators with desired levels
    - 4.2 Liaise with key stakeholders regarding strategy issues
    - 4.3 Identify areas requiring adjustment
    - 4.4 Make required adjustments

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing current state/situation of the organisation and value stream, including appropriateness of strategy, operations and internal and external relationships, including value stream members
- determining appropriate key performance indicators (KPIs) and overseeing data collection
- selecting appropriate competitive systems and practices tools and techniques, such as:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of KPIs/metrics
  - identification and elimination of waste
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- prioritising situations and actions based on:
  - customer benefit
  - cost/benefit analysis
- reviewing and modifying strategies and KPIs, as required

### Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
  - value stream mapping
  - 5S
  - JIT
  - mistake proofing

- process mapping
- establishing customer pull
- kaizen and kaizen blitz
- setting of key performance indicators/metrics
- identification and elimination of waste
- methods of estimating costs/benefits
- acceptable benefit/cost ratios
- continuous improvement principles
- principles of motivation and leadership
- characteristics and strengths of different types of strategies, techniques and tools, such as 5S, JIT, six sigma, lean operations and agile operations
- business goals sufficient to match the strategy to the business needs
- strategic thinking
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• determine appropriate analytical techniques</li> <li>• develop strategies that deliver the greatest overall benefit</li> <li>• implement the strategies</li> <li>• monitor the implementation of the strategy.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard</li> </ul>

	<p>control/management</p> <ul style="list-style-type: none"> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<p><b>Competitive systems and practices techniques and tools</b></p>	<p>Competitive systems and practices techniques and tools may include:</p> <ul style="list-style-type: none"> <li>• value stream mapping</li> <li>• 5S</li> <li>• JIT</li> <li>• mistake proofing</li> <li>• process mapping</li> <li>• establishing customer pull</li> <li>• kaizen and kaizen blitz</li> <li>• setting of KPIs/metrics</li> <li>• identification and elimination of waste (muda)</li> <li>• standardisation</li> </ul>

<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"><li>• sales outlet/representative</li><li>• information gathering, data analysis and research</li><li>• product design</li><li>• raw material sourcing</li><li>• intermediate processing</li><li>• final assembler/collation/preparation</li><li>• support services (e.g. accounting, finance and legal)</li><li>• storage and delivery to customer</li><li>• after market support</li></ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## MSS405002A Analyse and map a value stream

### Modification History

New unit, superseding MSACMS601A Analyse and map a value chain\* - Not equivalent

\* Prerequisite *MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

### Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse and map a value stream, including the clear identification of the place of an organisation in the value stream and its contribution to the value stream. The unit includes the identification of an organisation in a value stream, their relationships and the activities undertaken by value stream organisations. The identification skills include identification at the virtual or information level, the technical or process level, and at the physical or logistic level.

The unit includes the analysis of value-adding and non-value adding activities and the information needs for successful value stream mapping, including information technology (IT) needs.

This unit covers the analysis of the supply chain, the demand chain as well as the overall value stream.

### Application of the Unit

This unit applies to a person in a senior role in an organisation, such as an operations manager, purchasing manager, senior technical officer performing planning or scheduling or similar who needs to analyse and map a value stream, a supply chain, or a demand chain in order to understand the interactions between all members and determine the value added/potential value added by each member. The value stream is represented visually according to organisation format requirements.

This information is the basis for the design of Just in Time (JIT) and for the determination of waste. Value stream analysis is not a one-off activity but rather an ongoing activity of re-analysis as the value stream changes and its members progress towards excellence in competitive systems and practices.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Map the value stream	1.1	Select a product/product group for analysis
		1.2	Identify ultimate customer
		1.3	Identify ultimate supplier
		1.4	Identify all organisations between ultimate supplier and ultimate customer
		1.5	Identify all steps in own organisation
		1.6	Map value stream
2	Define customer need	2.1	Determine the features/benefits obtained by customers from product
		2.2	Determine methods of measuring the contribution to each features/benefits
		2.3	Identify possible data sources for required measures
		2.4	Implement measurement of contribution to features/benefits
3	Assess the value added at each step	3.1	Identify value contributed by each external organisation
		3.2	Determine value added by each internal step

- 3.3 Determine method of measuring value added
- 4 Reduce waste
  - 4.1 Compare value added to customer benefit/feature
  - 4.2 Identify activities on value stream map which do not add to customer benefit/features
  - 4.3 Liaise with external value stream members to determine methods to reduce overall waste
  - 4.4 Take required actions to reduce waste

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying for an individual organisation its place in the value stream, including immediate upstream and downstream organisations
- determining flow of materials and information along the value stream, including:
  - output quantities and qualities
  - variability in quality and quantity
  - uptime
  - other key performance indicators (KPIs) indicators appropriate to the organisation and customer requirements
- classifying steps and processes into value adding and non-value adding, including determining appropriate methods for measuring value added
- mapping value stream showing flow of information and materials in either hard copy or using software
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy

### Required knowledge

Required knowledge includes:

- purpose of value stream analysis
- methods of value stream analysis and mapping
- concept of waste and value in terms of customer benefit
- types of waste and methods of reducing it
- processes, and operations used in own organisation to make products or deliver services to internal and external customers
- processes employed by other members of the value stream sufficient to have meaningful dialogue with them

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

---

## Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• review activities of organisations to determine: <ul style="list-style-type: none"> <li>• their place in value stream</li> <li>• value added by each organisation</li> <li>• non-value added steps within each organisation</li> </ul> </li> <li>• determine methods of measuring value added</li> <li>• prepare a map of a value stream that includes all value creating and non value adding steps.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>
<b>Value-added</b>	<p>Value-added is measured against its contribution to the customer benefits/features and may be in the form of:</p> <ul style="list-style-type: none"> <li>• technical benefits/features</li> <li>• location benefits/features</li> <li>• aesthetic benefits/features</li> <li>• information benefits/features</li> </ul>
<b>Map value stream</b>	<p>The map of the value stream can be completed using:</p> <ul style="list-style-type: none"> <li>• hard copy (e.g. paper or whiteboard)</li> <li>• appropriate software tools</li> </ul> <p>The map should show all participants and stages of materials and information flow and the value creating and non-value adding steps and processes</p>
<b>JIT</b>	<p>JIT refers to:</p> <ul style="list-style-type: none"> <li>• a production scheduling concept that calls for any</li> </ul>

	item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later
<b>Waste</b>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• activities which do not yield any benefit to the organisation or any benefit to the organisations customers</li> </ul>

## **MSS405003A Manage a value stream**

### **Modification History**

New unit, superseding MSACMS602A Manage a value chain\* - Not equivalent

\* Prerequisites MSACMS601A Analyse and map a value chain and MSACMT631A Undertake value analysis of product costs in terms of customer requirements - removed

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to manage a value stream, a supply chain or a demand chain, including close liaison with suppliers and customers.

This unit covers the managing of the supply chain, the demand chain as well as the overall value stream and may be applied to the managing of the chain internally/externally within an organisation.

### **Application of the Unit**

This unit applies to a person in a senior role in an organisation, such as a manager, technical specialist or similar, who needs to manage the value/supply/demand chain on an ongoing basis to achieve the best overall contribution of value added to their product in terms of customer benefit/features. The unit can be applied to value streams of large or small organisations and to internal and external value streams or a combination value stream.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

- |   |                                     |     |  |
|---|-------------------------------------|-----|--|
| 1 | Evaluate the value stream           | 1.1 | Identify all members in the value stream for products in area of responsibility  |
|   |                                     | 1.2 | Identify value added by each member of the chain   |
|   |                                     | 1.3 | Identify non-value adding steps in the value stream  |
|   |                                     | 1.4 | Identify acute and chronic issues which impact on the value stream   |
|   |                                     | 1.5 | Develop priority list of items for improvement   |
| 2 | Liaise regularly with chain members | 2.1 | Establish and maintain regular liaison with all chain members  |
|   |                                     | 2.2 | Identify current and forecast issues with each member  |
|   |                                     | 2.3 | Work with members to help them address their issues  |
|   |                                     | 2.4 | Build trust and confidence in the relationship   |
|   |                                     | 2.5 | Develop with each chain member a priority list of items for improvement  |
|   |                                     | 2.6 | Negotiate with all chain members to ensure improvements benefit chain members and improve the benefits/features perceived by the ultimate customer |

- 3 Monitor the value added at each step
  - 3.1 Identify changes in value added by each chain member
  - 3.2 Identify areas where changes to value added are required
  - 3.3 Develop a priority list of required value-added changes
  - 3.4 Work with chain member to bring about improvements to value added
  
- 4 Continue to reduce waste
  - 4.1 Identify waste in value stream
  - 4.2 Work with chain members to continually reduce waste

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- reading and interpreting a value stream map
- identifying, monitoring and managing flow of materials, information and services in the value stream, including:
  - output quantities and qualities
  - variability
  - uptime
  - other key performance indicators (KPIs) indicators appropriate to the value stream organisations and customer benefit/requirements
- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- identifying steps and processes as value adding and non-value adding
- using appropriate methods for measure value added at steps in the value stream

### Required knowledge

Required knowledge includes:

- purpose of value stream analysis
- methods of value stream analysis and mapping
- concept of waste and value in terms of customer benefit
- types of waste and methods of reducing it
- processes, and operations used in own organisation to make products or deliver services to internal and external customers
- processes employed by other members of the value stream sufficient to have meaningful dialogue with them

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

---

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• review activities of organisations to determine:</li> <li>• their place in value stream</li> <li>• value added by each organisation</li> <li>• non-value added steps within each organisation</li> <li>• determine priorities for improvement in own organisation</li> <li>• negotiate with value stream members on improvements</li> <li>• monitor improvements to determine value added.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p>

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>
<b>Value added</b>	<p>Value added is measured against its contribution to the customer benefits/features and may be in the form of:</p> <ul style="list-style-type: none"> <li>• technical benefits/features</li> <li>• location benefits/features</li> <li>• aesthetic benefits/features</li> <li>• information benefits/features</li> </ul>
<b>Value stream map</b>	<p>The map of the value stream may include:</p> <ul style="list-style-type: none"> <li>• hard copy (e.g. paper or whiteboard)</li> <li>• using appropriate software</li> </ul> <p>The map should show all participants and stages of materials and information flow and the value creating and non-value adding steps and processes</p>
<b>Waste</b>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not</p>

	<p>contribute to customer benefit/features in the product. Within operations, categories of waste include:</p> <ul style="list-style-type: none"><li>• excess production and early production</li><li>• delays</li><li>• movement and transport</li><li>• poor process design</li><li>• inventory</li><li>• inefficient performance of a process</li><li>• making defective items</li><li>• activities which do not yield any benefit to the organisation or any benefit to the organisation's customers</li></ul>

## **MSS405004A Develop business plans in an organisation implementing competitive systems and practices**

### **Modification History**

New unit, superseding MSACMS603A Develop manufacturing related business plans -  
Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to develop business plans in an organisation implementing competitive systems and practices.

### **Application of the Unit**

This unit applies to a person in an organisation implementing competitive systems and practices (e.g. a production/plant manager, purchasing/technical officer or similar) who is required to develop a section business plan to meet the requirements of the overall strategic plan of the organisation. The plan includes the impact on the value stream and other critical competitive systems and practices factors. Due to competitive pressures this may be a reasonably frequent activity and can occur at any time over the business cycle. The plan may be in response to a specific change, or it may be a plan for the next period.

This unit assumes that up-to-date information about the organisation's role in the value stream is available. For detailed mapping and analysis of the value stream refer to MSS405002A Analyse and map a value stream.

This unit primarily requires the application of skills associated with gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to develop an effective and measurable business plan. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices strategies.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Determine purpose of plan	1.1	Confirm reason for developing plan and expected outcomes from plan
		1.2	Confirm purpose of plan with all relevant stakeholders
		1.3	Check expected outcomes from plan with overall strategic plan for organisation
		1.4	Identify any potential areas for conflict between proposed plan and strategic directions
		1.5	Negotiate with relevant stakeholders to resolve issues
2	Develop objectives and strategies	2.1	Draft objectives for business plan
		2.2	Draft strategies to achieve these objectives
		2.3	Determine implications for value stream
		2.4	Determine capital or workplace layout/organisation implications for objectives and strategies
3	Develop plans to meet objectives and strategies	3.1	Negotiate with relevant stakeholders over implications for objectives and strategies
		3.2	In liaison with relevant stakeholders, develop plans to meet objectives

- 3.3 Determine relevant key performance indicators (KPIs) for plan
  - 3.4 Check KPIs are appropriate for purpose of plan
  - 3.5 Check plan will deliver planned purpose
  - 3.6 Map plan to changed value stream
  - 3.7 Adjust plan to optimise value stream
  - 3.8 Validate plan with relevant stakeholders
- 4 Monitor the implementation of the plan
- 4.1 Release plan for implementation
  - 4.2 Check the key progress points against the key stages of the plan
  - 4.3 Note any discrepancies
  - 4.4 Take appropriate action to ensure correct implementation of plan

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing organisation overall strategic plan for implications relevant to competitive systems and practices implementation
- determining appropriate KPIs and methods of data collection
- determining best means of gathering data, including data from monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems
- identifying value stream members and performance
- determining implications of business plan for value stream
- analysing data, including competitive systems and practices indicators and verifying results with stakeholders
- determining key parameters for business plan, including:
  - scope
  - period
  - objectives in terms of customer benefit
  - relationship to overall organisation objectives
  - targets
  - KPIs
  - implementation strategy
  - risk management
  - monitoring and adjustment strategy
  - approval process

### Required knowledge

Required knowledge includes:

- organisation strategic directions
- business planning methods and types of plans

- contingency planning and other risk mitigating planning tools
- the organisation's value stream
- analysis of value stream
- competitive systems and practices
- application of quality principles
- human resources and industrial relations
- occupational health and safety (OHS)

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• develop a business plan that conforms to organisation overall strategic directions</li> <li>• determine implications of business plan for competitive systems and practices practice in organisation</li> <li>• determine KPIs appropriate for business plan</li> <li>• monitor the implementation of a business plan and make adjustments as necessary.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p>

	<p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p><b>Guidance information for assessment</b></p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> </ul>
---	--

	<ul style="list-style-type: none"> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Plan</b>	<p>Plan may include:</p> <ul style="list-style-type: none"> <li>• any sort of business plan and may emphasise any of the areas for sub-plans over the others</li> </ul>
<b>Objectives</b>	<p>Objectives may include performance in terms of:</p> <ul style="list-style-type: none"> <li>• sales</li> <li>• profit</li> <li>• quality</li> <li>• OHS</li> <li>• environment</li> <li>• competitive systems and practices</li> <li>• human, physical, financial and environmental/resource use</li> </ul>
<b>Objectives and strategies</b>	<p>Objectives and strategies may include:</p> <ul style="list-style-type: none"> <li>• human and industrial relations practice</li> <li>• material/component and resources use</li> <li>• sustainable environmental practices</li> <li>• sales and marketing</li> <li>• financial</li> </ul>

	<ul style="list-style-type: none"> <li>• regulatory compliance</li> </ul>
<b>Relevant stakeholders</b>	<p>Relevant stakeholders may include:</p> <ul style="list-style-type: none"> <li>• other team members</li> <li>• other workers</li> <li>• management</li> <li>• technical specialists</li> <li>• other members of the value stream</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/ collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>

## **MSS405005A Manage competitive systems and practices responding to individual and unique customer orders**

### **Modification History**

New unit, superseding MSACMS604A Manage competitive manufacturing processes in a jobbing shop environment\* - Not equivalent

\* Prerequisites *MSACMS601A Analyse and map a value chain, MSACMT280A Undertake root cause analysis, MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to prepare for and manage the introduction of competitive systems and practices processes in an organisation that does not undertake repetitive processes or mass produce products and instead responds to individual and unique customer orders.

### **Application of the Unit**

This unit applies to the introduction of competitive systems and practices processes in an environment where the organisation or part of the organisation specialises in one-off or small batch product or operations driven by individual and unique customer orders (e.g. overhaul of equipment, jobbing manufacture, supply of customised/bespoke services or product).

This unit describes the skills needed to restructure the process and work organisation to allow the application of competitive systems and practices tools and techniques.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to manage competitive systems and practices processes in a jobbing shop environment. This unit also requires communication and teamwork skills to gather information about processes and implement redesign plans.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Analyse the existing operations	1.1	Identify organisation capability for products and processes
		1.2	Identify the major processing steps in meeting customer order or orders
		1.3	Consult with employees, managers and other major stakeholders on major expected benefits from a move to a competitive systems and practices strategy
		1.4	Identify lead times, throughput times and waiting times throughout process of meeting a customer order
		1.5	Identify variations within the process
		1.6	Identify causes of the variations
2	Draft a virtual flow process	2.1	Consider similarities in materials, processes and services for orders
		2.2	Map flow of information, material, processes and people for each product family/cluster of similar customised products/services
		2.3	Draw a current state value stream map for the process as a virtual flow process
		2.4	Analyse the current value stream map for waste

- 2.5 Draft possible future state value stream map
- 2.6 Calculate benefits flowing from future state map
- 2.7 Consult with stakeholders to validate benefits
  
- 3 Prepare proposals for process redesign
  - 3.1 Identify options for the delivery of competitive systems and practices and other changes required to move to future state value stream map
  - 3.2 Plan as to how these changes might be implemented
  - 3.3 Cost the proposed changes and determine benefit/cost ratios
  - 3.4 Prepare recommendations for change
  - 3.5 Negotiate/consult with relevant stakeholders to establish the preferred option
  
- 4 Implement the plan
  - 4.1 Arrange for altered process, as required
  - 4.2 Arrange for altered infrastructure needs, as required
  - 4.3 Monitor the implementation of the plan, making adjustments as required
  - 4.4 Review the new value stream and check that expected benefits have been obtained
  - 4.5 Put in place a continuous improvement mechanism for the new value stream

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying and draw current state maps for jobs/processes
- analysing current targets for jobs (e.g. quality, time and cost) and identifying variations from targets
- analysing current processes used in the organisation, including appropriateness of strategy, operations, and internal and external relationships, including value stream members
- identifying waste
- proposing changes and determine cost/benefit of each change
- selecting and adapting appropriate competitive systems and practices tools and techniques for a jobbing environment, such as:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - kaizen and kaizen blitz
  - setting of key performance indicators(KPIs)/metrics
  - identification and elimination of waste
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- developing future state maps

### Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
  - value stream mapping
  - 5S
  - JIT
  - mistake proofing
  - process mapping
  - kaizen and kaizen blitz

- setting of KPIs/metrics
- identification and elimination of waste
- establishing customer pull
- standardisation
- processes used in jobbing manufacture and other non-repetitive operations businesses
- capabilities of equipment
- methods of estimating costs/benefits
- acceptable benefit/cost ratios
- continuous improvement principles
- abilities and skills of personnel in organisation

## Evidence Guide

---

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• analyse existing operations and draft virtual flow process</li> <li>• determine improvements that deliver the greatest overall benefit</li> <li>• plan the implementation of competitive systems and practices strategy, techniques and tools</li> <li>• produce a current state value stream map</li> <li>• draft possible future state value stream map</li> <li>• monitor a continuous improvement strategy.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> </ul>

	<ul style="list-style-type: none"> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as</li> </ul>
--	---

	<p>Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<p><b>Variations</b></p>	<p>Variations are deviations from desired targets and may cover variations in:</p> <ul style="list-style-type: none"> <li>• quality</li> <li>• time</li> <li>• cost</li> <li>• occupational health and safety (OHS)</li> </ul>
<p><b>Waste</b></p>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit or features in the product. Within operations, categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> </ul>

	<ul style="list-style-type: none"> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• activities which do not yield any benefit to the organisation or any benefit to the organisations customers</li> </ul>
<p><b>Stakeholders</b></p>	<p>Stakeholders may include:</p> <ul style="list-style-type: none"> <li>• managers</li> <li>• supervisors</li> <li>• employees</li> <li>• shareholders</li> <li>• OHS mechanisms/representatives</li> <li>• Industrial relations mechanisms/representatives</li> <li>• suppliers</li> <li>• customers</li> <li>• service providers</li> </ul>
<p><b>Infrastructure needs</b></p>	<p>Infrastructure needs may include:</p> <ul style="list-style-type: none"> <li>• physical infrastructure, including plant, equipment, tools, systems and processes</li> <li>• information and control infrastructure</li> <li>• work organisation, including numbers of employees</li> <li>• work structure and skills and knowledge held by employees</li> <li>• workforce development and, where required, training</li> </ul>
<p><b>Value stream</b></p>	<p>The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/ collation/preparation</li> <li>• support (services e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>

## **MSS405010A Manage relationships with non-customer external organisations**

### **Modification History**

New unit, superseding MSACMS606A Manage relationships with non-customer external organisations - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to identify and manage relationships with non-customer external organisations, such as community groups, other businesses, training providers, research organisations and government departments.

### **Application of the Unit**

This unit applies to a person who has policy responsibility in an organisation for managing external relationships that may impact on the performance, community standing or regulatory compliance of the organisation. Examples of the application of this unit include department leaders, managers or similar. The unit covers managing a range of external organisations to the maximum benefit of the organisation and the organisation's customers while also identifying areas of mutual interest and benefit with the external organisations. Relationships may or may not be initiated by the person's own organisation.

This unit does not cover the analysis and improvement of relationships between members of a value stream, such as suppliers and customers.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are also required. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into relationship systems and expectations.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |  |  |
|---|--|--|
| 1 | Identify mutual interest               | <p>1.1 Clarify the reason contact was/is to be made for each relevant external organisation</p> <p>1.2 Gather information on extent of past contact and any positive or negative outcomes for own and external organisation</p> <p>1.3 Identify expectations of initiating organisation</p> <p>1.4 Analyse the breadth, depth and complexity of external organisations' expectations</p> <p>1.5 Discuss expectations, ability to meet those expectations, and areas of mutual interest with relevant internal and external representatives</p> |
| 2 | Determine contribution of relationship | <p>2.1 Identify any value contributions from relationship</p> <p>2.2 Identify waste arising from relationship</p> <p>2.3 Classify waste as necessary or unnecessary</p> <p>2.4 Set key performance indicators (KPIs) for future relationship</p>   |
| 3 | Manage the relationship                | <p>3.1 Measure current performance of relationship against expectations and KPIs</p> <p>3.2 Develop systems to enhance mutual benefit and value contributions from relationship</p> <p>3.3 Develop systems to minimise and control necessary</p>   |

waste without causing harm

- 3.4 Eliminate unnecessary waste, where possible, without causing harm
- 3.5 Monitor KPIs and determine future strategy for the relationship
- 3.6 Continue to manage terminate the relationship in a manner which enhances the organisation

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- using formal problem solving procedures, such as root cause analysis (RCA)
- analysing contributions to value from external relationships
- identifying waste (muda)
- developing formal and informal communication procedures with other individuals and organisations
- establishing sources of assistance in own organisation for external individuals and organisations
- interpreting documents, procedures and instructions for others
- establishing KPIs for relationships

### Required knowledge

Required knowledge includes:

- strategic requirements of own organisation
- strategic benefits to the organisation from liaisons with external organisations
- possible external organisations which may offer benefits
- benefits which can be offered to the external organisations
- customer benefits/features from products and processes of own organisation
- waste (muda) elimination
- formal problem solving procedures (e.g. RCA)

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse the value and waste in relationships</li> <li>• implement changes to relationships to improve</li> </ul>
--	--

	<p>outcomes for their organisation and its customers</p> <ul style="list-style-type: none"> <li>• monitor outcomes of a relationship against KPIs</li> <li>• communicate complex information to external representatives using a variety of methods and mediums.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace that is engaging with one or more non-customer external organisations.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• historical information on the relationship with external organisation and the involvement of the assessee</li> <li>• workplace procedures and plans</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to relationships with non-customer external organisations</li> <li>• reports from supervisors/managers on interaction with external non-customer organisations</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

<b>assessment</b>	literacy capacity of the candidate and the work being performed.
-------------------	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems</li> </ul>
--	---

	<p>and practices</p> <ul style="list-style-type: none"> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Reasons for contact</b>	<p>Reasons for contact may include:</p> <ul style="list-style-type: none"> <li>• research</li> <li>• innovation</li> <li>• mutual cooperation</li> <li>• strategic alliances</li> <li>• computer (or other) technology</li> <li>• emergency response</li> </ul>
<b>Waste</b>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• activities which do not yield any benefit to the organisation or any benefit to the organisation's customers</li> </ul>
<b>Necessary waste</b>	<p>Necessary waste includes:</p> <ul style="list-style-type: none"> <li>• any activity or cost which does not contribute directly to customer benefit/feature in the product, and which cannot be avoided (e.g. regulatory compliance and fixed costs)</li> </ul> <p>Necessary waste cannot be eliminated but should be managed</p>
<b>Unnecessary waste</b>	<p>Unnecessary waste includes:</p> <ul style="list-style-type: none"> <li>• any activity or cost which does not contribute directly to customer benefit/features in the product and can be avoided</li> </ul> <p>Unnecessary waste should be eliminated as quickly as practical</p>

## **Unit Sector(s)**

Unit sector

Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS405011A Manage people relationships**

### **Modification History**

New unit, superseding MSACMC611A Manage people relationships - Not equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to manage the human relationship aspects of implementing and operating competitive systems and practices.

### **Application of the Unit**

This unit applies to a person (who may be a manager, technical specialist or other person) who is required to work with employees and relevant people, encourage them to accept change and also to increase the quality, quantity and reliability of output consistent with customer requirements.

This unit primarily requires strong communication, teamwork and problem solving skills to achieve effective relationships that support a competitive systems and practices environment. Initiative, enterprise, planning and organising are also required to ensure relationships are monitored and issues are resolved proactively. The unit also includes aspects of self-management and learning to ensure improvement of own performance and communication skills.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Confirm organisation competitive systems and practices status	1.1	Establish number and status of competitive systems and practices techniques being used within the organisation
		1.2	Identify key performance indicators (KPIs) for each technique
		1.3	Identify key sections and value stream members responsible for each KPI
		1.4	Identify key personnel for communications
2	Develop an open environment	2.1	Establish and maintain regular dialogue between all levels and all relevant sections of the organisation
		2.2	Encourage a flow of communications in both directions
		2.3	Develop and maintain a formal mechanism for the flow of issues, concerns and suggestions in both directions
		2.4	Develop and maintain regular and frequent communication with all key stakeholders
3	Identify significant issues	3.1	In liaison with relevant team members/stakeholders, identify current and potential issues
		3.2	Assist team members/stakeholders to formulate issues

- 3.3 Identify and define boundary and non-negotiable issues for all team members/stakeholders
    - 3.4 Negotiate with relevant team members/stakeholders over actual and potential issues
- 4 Proactively resolve issues
  - 4.1 Liaise with team members/stakeholders to develop agreed, and where possible, win-win solutions
  - 4.2 Negotiate acceptable solutions, as required, in accordance with company practices/procedures
  - 4.3 Obtain any required official authorisations
  - 4.4 Consult with relevant stakeholders to develop implementation plan
  - 4.5 Implement solution
- 5 Monitor ongoing situation
  - 5.1 Determine relevant KPIs for plan
  - 5.2 Check that implementation is proceeding to plan
  - 5.3 Check for unforeseen consequences
  - 5.4 Take appropriate action to resolve any arising issues

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- analysing the competitive operational techniques being implemented in the organisation and the stage of implementation, including identifying people, related needs and issues
- using formal problem solving procedures, such as root cause analysis (RCA)
- analysing work procedures
- developing formal and informal communication procedures with others in work area, team leaders and other employees relevant to competitive systems and practices changes
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing KPIs for own work

### Required knowledge

Required knowledge includes:

- features and benefits of common competitive operational practices, including:
  - Just in Time (JIT) and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. RCA)
  - standardised work
- health, safety and environment (HSE) principles and requirements for organisation
- change implementation contacts and procedures for the organisation
- employee assistance mechanisms in the organisation
- current processes and principles of operation sufficient to enable communication with others on the impact of competitive operational changes
- sources of data on the process/plant and possible applications to information distribution
- methods of determining own skill needs and developing skills, if required

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify the processes used and scope of products/ services supplied by the organisation and the deliverables expected by customers
- relate processes and products/services to the competitive systems and practices implementation process and the stage of implementation
- communicate and gain support for changes made as a result of the implementation of the competitive systems and practices implementation
- develop formal and informal channels of communication, including feedback mechanisms
- proactively resolve issues and problems raised by people with the competitive systems and practices implementation process.

### Context of and specific resources for assessment

Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.

Access may be required to:

- workplace procedures and plans relevant to work area
- specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee
- documentation and information in relation to production, waste, overheads and hazard control/management
- reports from supervisors/managers
- case studies and scenarios to assess responses to contingencies.

### Method of assessment

A holistic approach should be taken to the assessment.

Competence in this unit may be assessed by using a combination of the following to generate evidence:

- demonstration in the workplace
- workplace projects
- suitable simulation

	<ul style="list-style-type: none"> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and</li> </ul>

## **MSS405012A Manage workplace learning**

### **Modification History**

New unit, superseding MSACMC612A Manage workplace learning - Not equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to manage the learning and skill development for employees within an organisation implementing competitive systems and practices.

### **Application of the Unit**

This unit applies to a person responsible for management of the identification of skills needed by employees to undertake required work in implementing competitive systems and practices, including arranging for any required learning processes. The unit does not cover trainer and assessor skills.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise in order to assess and address skill needs in an individual and in the organisation. Planning and organising is required to ensure skill development meets the needs of the organisation and aspects of self-management and learning are required to ensure improvement of performance.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Determine current skill requirements for employees	1.1	Establish range and stage of implementation of competitive systems and practices techniques in the organisation
		1.2	Consult with relevant stakeholders on skill requirements for effective implementation of competitive systems and practices techniques used in the organisation
		1.3	Ensure records/database of skill mix currently required by employees are maintained in accordance with procedures
		1.4	Re-assess and monitor the skills required by employees as organisation requirements change
		1.5	Consult with relevant stakeholders to predict any new/different skill requirements arising from changes to products, processes, equipment or work organisation
2	Determine current skill mix of employees	2.1	Ensure current records/database of skill profile of individuals are maintained
		2.2	Consult with relevant stakeholders and monitor the application of these skills in the workplace to ensure they remain current and valid
		2.3	Review the actual skill mix of employees compared to the required skill mix

- |   |   |     |  |
|---|---|-----|--|
| 3 | Make arrangements for skill development | 3.1 | Consult with employees and identify any mismatch of skills possessed and used and skills required          |
|   |   | 3.2 | Identify any new skills required due to anticipated changes  |
|   |   | 3.3 | Consult with relevant stakeholders to determine the best way to refresh existing skills/develop new skills |
|   |   | 3.4 | Develop individual skill development program   |
|   |   | 3.5 | Ensure skill development arrangements are implemented in accordance with procedures                        |
|   |   |     |  |
| 4 | Forecast possible future skill needs    | 4.1 | Examine strategic directions of organisation   |
|   |   | 4.2 | Discuss possible future directions with relevant stakeholders  |
|   |   | 4.3 | Determine possible long-term future skill requirements in consultation with relevant stakeholders          |
|   |   | 4.4 | Develop plan to ensure skills are developed in advance of when they are required                           |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- analysing the competitive operational techniques being implemented in the organisation and the stage of implementation, including establishing skill needs to support implementation
- using formal problem solving procedures, such as root cause analysis (RCA)
- analysing work procedures
- developing formal and informal communication procedures with others in work area, team leaders and other employees relevant to competitive systems and practices changes
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing key performance indicators (KPIs) for own work

### Required knowledge

Required knowledge includes:

- features and benefits of common competitive operational practices, including:
  - Just in Time (JIT) and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. RCA)
  - standardised work
- skill analysis methods or how to access skill analysis from relevant experts
- skill development methods or how to access skill development programs from relevant experts
- electronic and other systems to record and maintain training and skills records
- formal qualifications and skill standards relevant to competitive systems and practices and the processes and products of the organisation
- current processes and principles of operation sufficient to enable communication with others on the impact of competitive operational changes
- sources of data on the processes and/or products of the organisation and implications for workplace learning

- methods of determining own skill needs and developing skills, if required

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the processes used and scope of products/ services supplied by the organisation and the deliverables expected by customers</li> <li>• relate processes and products/services to the competitive systems and practices implementation process and the stage of implementation</li> <li>• establish skill needs from processes/products and competitive implementation process in the organisation</li> <li>• use formal and informal channels of communication, including feedback mechanisms to assist in identification of skill needs</li> <li>• manage delivery and recording of training to ensure required skills are gained by employees.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to past and current skill development for employees</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p>

	<ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> </ul>

## **MSS405020A Develop quick changeover procedures**

### **Modification History**

New unit, superseding MSACMT620A Develop quick changeover procedures - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to develop/improve changeovers for equipment, processes or operations. It includes critically analysing existing changeovers, applying quick changeover principles, and developing improved changeover procedures.

### **Application of the Unit**

This unit applies to managers, technical specialists or similar in an organisation that has adopted or is adopting a quick changeover approach to its changeovers. The changeovers may be to equipment, processes or operations. This unit applies to the structured development and/or improvement of the changeover procedures.

This unit requires the application of skills associated with communication, problem solving, initiative, enterprise, planning and organising in order to analyse and determine changeover procedures. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of procedures.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Analyse changeover	1.1	Critically observe changeover process
		1.2	Identify steps in changeover
		1.3	Identify start situation and required finish situation for changeover
2	Apply quick changeover principles	2.1	Identify changes to the start situation and required finish situation which are possible
		2.2	Identify internal and external changeover activities
		2.3	Identify activities which could be improved/eliminated
		2.4	Eliminate/reduce adjustments required after changeover
		2.5	Develop improved changeover process and recommendations for implementation procedure
		2.6	Liaise with relevant people to validate recommendations
3	Assess and minimise risks in changeover	3.1	Analyse hazards and risks from all steps in changeover
		3.2	Apply ergonomic principles and hierarchy of control to each equipment and manual hazard
		3.3	Assess any regulatory risk in changeover

- 3.4 Minimise hazards during changeover ensuring final risk profile is acceptable
- 4 Implement improved changeover
  - 4.1 Acquire any required resources and approvals
  - 4.2 Organise trials of improved changeover
  - 4.3 Monitor trial
  - 4.4 Make adjustments to changeover process
  - 4.5 Implement improved changeover process

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- critically analysing an existing changeover, including a detailed examination of all actions and delays and the times taken
- determining key steps in changeover
- identifying regulatory implications and other risks changes to procedures
- differentiating between habitual practice and necessary activity
- identifying opportunities to maximise external set up work
- communicating with others to explain and supervise changed procedures

### Required knowledge

Required knowledge includes:

- principles of quick changeover
- equipment and operating environment of activities subject to quick changeover
- regulatory and commercial obligations and risk environment for operations subject to quick changeover analysis
- safe movement and other relevant occupational health and safety (OHS) principles
- relevant procedures
- purposes/requirements of changeover
- sourcing of resources
- trialling procedures

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• observe and analyse steps in an existing changeover</li> <li>• manage risks in adjusting changeover procedures</li> </ul>

	<ul style="list-style-type: none"> <li>• develop changeover adjustments that deliver the greatest overall benefit</li> <li>• supervise changeover procedure trials.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenario, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory</li> </ul>
---	---

	environment and the industry sector
<b>Changeover</b>	<p>Changeover may refer to:</p> <ul style="list-style-type: none"> <li>• equipment exchanges, such as an exchange of dies/tools (traditional)</li> <li>• change between batches</li> <li>• change between campaigns (process manufacturing)</li> <li>• quantum equipment/process change to produce a different product</li> </ul>
<b>Quick changeover</b>	<p>Quick changeovers may be known by a number of alternative titles depending on the industry sector. In manufacturing quick changeovers may be referred to as:</p> <ul style="list-style-type: none"> <li>• single minute exchange of die (SMED)</li> <li>• single-digit set-up – performing a set-up activity in a single-digit number of minutes (i.e. fewer than ten)</li> <li>• one touch exchange of die (OTED) – literally, changing a die with one physical motion, such as pushing a button – broadly, an extremely simple procedure for performing a set-up activity</li> </ul> <p>While the term die is the traditional term, organisations that require changeovers using other equipment are also covered by this unit.</p> <p>This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. This is not applicable to a maintenance/pressure vessel inspection (PVI) shutdown as experienced by the continuous process manufacturers. However, where there are continuous operations on a campaign basis, it may be applied to the development of changeover procedures between campaigns or similar changeovers</p>
<b>Set-up work</b>	<p>Set-up time is the work required to change over a machine or process from one item or operation to the next item or operation. It can be divided into two types:</p> <ul style="list-style-type: none"> <li>• internal set-up work that can be done only when the machine or process is not actively engaged</li> <li>• external set-up work that can be done concurrently with the machine or process performing productive duties</li> </ul>
<b>Principles</b>	<p>The principles of quick changeover include:</p> <ul style="list-style-type: none"> <li>• the principles of efficient movement as well as an understanding of equipment features and aids, including jigs, fixtures, locating devices and</li> </ul>

	mechanical aids which will reduce human effort and time required
<b>Improved/eliminated</b>	<p>Activities which should be improved/eliminated include:</p> <ul style="list-style-type: none"> <li>• those which take time or are unreliable in terms of outcome</li> <li>• those which are difficult to do or have adverse OHS implications (e.g. repetitive strain injury, back injury and finger injuries)</li> </ul>
<b>Hazards and risks</b>	<p>Hazards and risks include those related to:</p> <ul style="list-style-type: none"> <li>• OHS</li> <li>• regulatory compliance</li> <li>• environment</li> <li>• commercial and contractual obligations</li> </ul> <p>An acceptable risk profile for changeovers is one which, at the minimum, meets regulatory and organisation requirements and does not increase the current risk profile</p>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plan</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS405021A Develop a Just in Time system**

### **Modification History**

New unit, superseding MSACMT621A Develop a Just in Time (JIT) system\* - Not equivalent

\* Prerequisite MSACMC410A Lead change in a manufacturing environment - removed

### **Unit Descriptor**

Not applicable.

### **Application of the Unit**

This unit applies to a person responsible for planning and implementing a JIT system. It includes consulting with employees, suppliers and customers regarding the change. This may require identification of training and other employee support as well as identifying possible logistical support.

The unit includes kanban-based JIT systems but also applies to other sectors and systems where a traditional kanban-type JIT may not be suitable through the unit's coverage of JIT principles.

This unit requires the application of skills associated with communication in gathering, analysing and applying information, consulting with stakeholders, problem solving, and demonstrating initiative and enterprise. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the JIT design.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Design the JIT system/system improvements	1.1	Identify value chain members
		1.2	Consult with internal and external value chain members
		1.3	Identify current storage/inventory in value chain
		1.4	Determine flow authorisation indicators
		1.5	Determine minimum and maximum operations rate
		1.6	Determine lead time for product or service
		1.7	Determine number of units per kanban
		1.8	Draft workable procedures to implement JIT
2	Implement the JIT system/improvements	2.1	Consult with key internal stakeholders to develop solutions to JIT issues
		2.2	Ensure all stakeholders have required JIT-related skills and related issues have been resolved
		2.3	Liaise with key external members of the value chain to develop solutions to JIT issues
		2.4	Develop implementation plan for JIT
		2.5	Determine key measures of JIT

- 3 Monitor the JIT system
  - 3.1 Monitor key measures of JIT
  - 3.2 Regularly liaise with key stakeholders seeking areas for improvement
  - 3.3 Identify areas in need of improvement

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing equipment, operations and value stream and determining best flow authorisation strategy, including:
  - form of kanban or flow authorisation indicator
  - integration with operations and other competitive systems and practices tools and techniques
  - key measures and monitoring strategy for JIT system
  - procedures to be adopted in the event of a non-conformance
- problem solving JIT issues and non-conformances to root cause

### Required knowledge

Required knowledge includes:

- needs of internal and external value chain members
- principles of JIT, including:
  - demand pull
  - flow authorisation
  - kanban
  - capability rate
  - monitoring
  - non-conformance procedures
- reasons for delays/storages/inventories in the value stream and methods of reducing/eliminating them
- methods of identifying skill gaps and methods of filling skill gaps
- key business objectives associated with implementing JIT
- principles of the operational processes relevant to the JIT implementation
- production data generated by the process and its application to JIT

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• develop a complete JIT system, including:             <ul style="list-style-type: none"> <li>• implementation strategy</li> <li>• key measures</li> <li>• training and support strategy for employees and value chain members</li> <li>• procedures in the event of a non-conformance</li> </ul> </li> <li>• communicate and negotiate complex issues to a wide variety of individuals</li> <li>• supervise JIT implementation and suggest improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> </ul>

	<ul style="list-style-type: none"> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p><b>Guidance information for assessment</b></p>	<p>This unit may be assessed concurrently with:</p> <ul style="list-style-type: none"> <li>• MSS405002A Analyse and map a value stream, and/or</li> <li>• MSS405050A Determine and improve process capability.</li> </ul> <p>This unit is related to:</p> <ul style="list-style-type: none"> <li>• MSS402021A Apply Just in Time procedures</li> <li>• MSS403021A Facilitate a Just in Time system</li> </ul> <p>which cover the lowest and intermediate skill levels in competitive systems and practices respectively.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA)</li> </ul>
---	--

	<p>software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>JIT</b>	<p>JIT is a production scheduling concept that calls for any item or service needed at a production operation, whether raw material, components, fuel, power, finished item, or anything else in between raw material and delivery to the final customer, to be produced and available precisely when needed, neither a moment earlier nor a moment later. JIT principles may also be applied to non-product based manufacturing operations (e.g. where services must be delivered on demand, such as transport)</p>
<b>Kanban</b>	<p>Kanban is a signal to authorise production or movement of an item to the next stage of production or operations. It is often a physical item for example a card, bin or sheet. When fully implemented, kanban operates according to the following rules:</p> <ul style="list-style-type: none"> <li>• all production and movement of parts, material or other necessary items takes place only as required by</li> </ul>

	<p>a downstream operation</p> <ul style="list-style-type: none"> <li>the specific tool which authorises production or movement is called a kanban</li> </ul> <p>Kanban is typically applied to batch type operations and the production is measured in units produced. In continuous operations organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket or order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar.</p> <p>In service operations a physical kanban may not be used – see flow authorisation indicator</p>
<b>SCADA</b>	<p>SCADA refers to:</p> <ul style="list-style-type: none"> <li>a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action</li> </ul>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>sales outlet/representative</li> <li>information gathering, data analysis and research</li> <li>product design</li> <li>raw material sourcing</li> <li>intermediate processing</li> <li>final assembler/ collation/preparation</li> <li>support services (e.g. accounting, finance and legal)</li> <li>storage and delivery to customer</li> <li>after market support</li> </ul>
<b>Flow authorisation indicator</b>	<p>Flow authorisation indicator may include:</p> <ul style="list-style-type: none"> <li>kanban bin, ticket or similar</li> <li>other indicator of demand pull</li> </ul>
<b>Pull system</b>	<p>Pull system includes:</p> <ul style="list-style-type: none"> <li>an operations planning system which makes to demand, rather than for stock or to a forecast</li> </ul>

<b>Cards/bins</b>	<p>Cards/bins include:</p> <ul style="list-style-type: none"> <li>• the indicators used for production authorisation and may be physical cards or bins or some other suitable indicator</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<b>Key measures</b>	<p>Key measures may include:</p> <ul style="list-style-type: none"> <li>• inventory levels</li> <li>• lead time</li> <li>• in full, on time and in specification (IFOTIS) delivery</li> <li>• productivity/production rate</li> <li>• other measures of pull through the value chain</li> <li>• quality</li> </ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## **MSS405022A Design a process layout**

### **Modification History**

New unit, superseding MSACMT622A Design a process layout - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to design a process layout, typically a cellular flow, for either a jobbing shop or a continuous process manufacturer.

### **Application of the Unit**

This unit provides the skill for a technical expert to apply the principles of competitive systems and practices to process design layout as distinct from volume production layout. While the application of the unit may be for an initial layout, in many cases it is likely to be for the redesign of an existing layout.

The unit is written on the assumption that there is an existing process. Where this is not the case, then additional competency in equipment/process design and selection will also be required through units from an appropriate technical qualification or Training Package. This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to design a process for the manufacture of enterprise products that incorporates team operations, product flow, infrastructure and the layout of the physical environment and related technology. This unit has a strong emphasis gathering, analysing and applying information.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Identify the products and processes used in the organisation	1.1	Obtain or develop a process map of the existing process
		1.2	Identify all/main products/classes of products
		1.3	Obtain forecast sales and sales pattern of products/classes
		1.4	Obtain profiles of products/classes
		1.5	Group the products/classes into compatible families
2	Engineer the process	2.1	Make a preliminary selection of required equipment/technology/process for each process or product family
		2.2	Estimate required resource times for each family
		2.3	Calculate total resourcing required for each family
		2.4	Estimate appropriate lot size
		2.5	Determine viability of proposed families
		2.6	Examine draft proposal for possible improvements in process consistent with the competitive systems and practices strategy of the organisation

- 3 Design the infrastructure
  - 3.1 Consult on layout needs with all stakeholders
  - 3.2 Identify physical infrastructure required by system
  - 3.3 Identify information and control infrastructure required
  - 3.4 Identify work organisation required
  - 3.5 Identify occupational health and safety (OHS) and regulatory requirements to be taken into account
  - 3.6 Identify workforce development and training requirements
  - 3.7 Check the availability of required infrastructure and compatibility with requirements
  
- 4 Layout the process
  - 4.1 Draft proposed process flow map
  - 4.2 Draft proposed configuration diagram
  - 4.3 Draft proposed space plan/layout
  - 4.4 Check availability of services/structural suitability, as appropriate
  - 4.5 Validate proposed layout with all relevant stakeholders
  - 4.6 Layout the process/work cell
  - 4.7 Develop implementation plan in liaison with relevant stakeholders
  - 4.8 Review layout after implementation

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating at all levels in the organisation and to individuals of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- producing process flow maps
- analysing the relationship between equipment, components, products, services and operators for existing and future layouts
- problem solving layout-related problems to root cause
- planning and organising implementation plans, including communication to stakeholders and any necessary training
- calculating and estimating size, volume and area and other layout related measures

### Required knowledge

Required knowledge includes:

- typical customer requirements, including:
  - order size
  - order pattern
- processing requirements of products and jobs
- capabilities and maintenance requirements (e.g. access and services) of equipment
- abilities and skills of workforce
- OHS and regulatory requirements that may affect layout
- business requirements from layout

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Critical aspects for assessment and</b>	A person who demonstrates competency in this unit must
--	--

<p><b>evidence required to demonstrate competency in this unit</b></p>	<p>be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• analyse products, operations and equipment and determine efficiencies that can be achieved by improved layout</li> <li>• determine OHS and regulatory impacts on a layout</li> <li>• supervise implementation of layouts</li> <li>• analyse implemented layouts and suggest further improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>

<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted</p>
--	--

	<p>so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Profiles</b>	<p>Profiles of products may include:</p> <ul style="list-style-type: none"> <li>• components/materials needed to manufacture</li> <li>• equipment/technology/processes required to manufacture</li> <li>• volume of activity to manufacture forecast amount</li> </ul>
<b>Compatible families</b>	<p>Compatible families include:</p> <ul style="list-style-type: none"> <li>• products/classes requiring identical or similar operations equipment, technology or processes</li> </ul>
<b>Required resource times</b>	<p>Required resource times may include:</p> <ul style="list-style-type: none"> <li>• set-up time</li> <li>• equipment time</li> <li>• person time</li> <li>• process time</li> </ul>
<b>Lot size</b>	<p>Lot size may include:</p> <ul style="list-style-type: none"> <li>• external lot size</li> <li>• internal lot size</li> <li>• transfer batch size</li> <li>• kanban size</li> </ul>
<b>Viability</b>	<p>Viability includes:</p> <ul style="list-style-type: none"> <li>• appropriate calculated processing times</li> <li>• adequacy of equipment utilisation</li> <li>• acceptable maintenance implications</li> <li>• ability to meet OHS requirements</li> <li>• ability to meet environmental requirements</li> <li>• compliance with any legislative and regulatory requirements</li> <li>• acceptable to stakeholders</li> </ul>
<b>Stakeholders</b>	<p>Stakeholders include:</p> <ul style="list-style-type: none"> <li>• customers</li> <li>• employees</li> <li>• equipment suppliers and contractors (especially if new equipment required)</li> </ul>

	<p>Depending on the process and location, stakeholders may also include:</p> <ul style="list-style-type: none"> <li>• regulatory authorities</li> <li>• local community representatives</li> <li>• utilities (e.g. water and power)</li> </ul>
<b>Physical infrastructure</b>	<p>Physical infrastructure may include:</p> <ul style="list-style-type: none"> <li>• containers</li> <li>• material handling equipment</li> <li>• utilities supply (e.g. steam, air, gas, electricity and water)</li> </ul>
<b>Information and control infrastructure</b>	<p>Information and control infrastructure may include:</p> <ul style="list-style-type: none"> <li>• quality assurance</li> <li>• statistical process control (SPC)/six sigma</li> <li>• planning systems/software</li> <li>• data collection and control systems/software</li> </ul>
<b>Work organisation</b>	<p>Work organisation includes:</p> <ul style="list-style-type: none"> <li>• number of personnel</li> <li>• skills mix of workforce</li> </ul>

# MSS405023A Develop a levelled pull system for operations and processes

## Modification History

New unit, superseding MSACMT623A Develop a levelled pull system of manufacturing - Equivalent

## Unit Descriptor

This unit of competency covers the skills and knowledge required to develop and level a customer-driven demand pull system for operations and processes in order to balance the flow of work and minimise inventories.

## Application of the Unit

This unit primarily applies to volume-based manufacturing organisations. However, the skills covered by the unit may also be applied in other organisations where the business is based on high volume processes initiated by customer demand signals (e.g. orders). The unit covers the production planning skills needed to develop and level a demand pull system which meets the business needs of the organisation. This may apply to the initial development of a pull system, or the continuous improvement of an existing system.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to determine effective operations sequences and flow systems. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into system designs.

Depending on the organisation and its operations the following units may also be relevant:

- *MSS402080A Undertake root cause analysis*
- *MSS405002A Analyse and map a value stream*
- *MSS405021A Develop a Just in Time system*
- *MSS405022A Design a process layout*
- 

## Licensing/Regulatory Information

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Analyse production systems	1.1	Acquire an 'as is' value map of the process for all major products
		1.2	Separate repeated products from specials
		1.3	Consult with production, maintenance, supervisory and management workforce on current production system and processes
		1.4	Establish rate of flow required to meet customer demand
		1.5	Identify process steps causing problems
		1.6	Analyse inventories within process and determine causes of high inventories
		1.7	Determine costs of problems and inventories
		1.8	Develop improved flow sequence and future value map
2	Establish sequence	2.1	Identify equipment and processes which can be sequenced by co-location
		2.2	Identify equipment which is not suitable for co-location
		2.3	Identify pacemaker process
		2.4	Establish/review location of equipment for desired sequencing

- 
- |   |                                 |     |   |
|---|---------------------------------|-----|---|
| 3 | Initiate or develop flow system | 3.1 | Determine rate and variability of demand for product                                    |
|   |                                 | 3.2 | Compare capability of flow sequence to demand rate and variability                      |
|   |                                 | 3.3 | Set flow rate to level demand at pacemaker and handle variability                       |
|   |                                 | 3.4 | Identify trigger for pacemaker process  |
|   |                                 | 3.5 | Establish kanban system for other process parts   |
|   |                                 |     |   |
| 4 | Balance the work                | 4.1 | Determine target time per product   |
|   |                                 | 4.2 | Standardise work processes and operations and establish procedures to monitor variation |
|   |                                 | 4.3 | Adjust product/batch production to balance work   |
|   |                                 | 4.4 | Arrange for any required competency development of workforce                            |
|   |                                 | 4.5 | Arrange for implementation of system  |
|   |                                 | 4.6 | Monitor operation of system and take appropriate action                                 |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying and analysing production and other processes to identify variation from specifications
- solving problems to determine causes of variations to root cause
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing long or critical process steps and determine if they are pacemaker step
- setting and standardising operational processes around the requirements of the pacemaker process
- planning and organising implementation of a levelled pull production system
- documenting process steps
- performing calculations and interpreting data, including charts and diagrams related to establishing rate of flow and variation in process steps

### Required knowledge

Required knowledge includes:

- technical and regulatory limits that must be adhered to in operations
- processing requirements of products or services offered by the organisation
- capabilities of equipment
- capabilities and skills of the workforce
- production planning techniques
- methods of calculating rates of demand and flow of work (e.g. takt and pitch)
- techniques for achieving a smooth and consistent flow of work, such as:
  - identifying pacemaker process
  - levelling the flow of work
  - balancing the allocation of resources
  - balancing the allocation of work
  - Just in Time (JIT)
  - Heijunka boxes
  - visual displays

- relationship of level of inventory to efficiency and waste

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• acquire a value stream map for current products and processes</li> <li>• analyse process</li> <li>• perform required calculations to determine flow rate and variability</li> <li>• correctly identify pacemaker process</li> <li>• balance the work</li> <li>• monitor implementation of a levelled pull system and suggest improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> </ul>

	<ul style="list-style-type: none"> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and</li> </ul>
--	---

	<p>analysis</p> <ul style="list-style-type: none"> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Product</b>	<p>Product includes:</p> <ul style="list-style-type: none"> <li>• individual products and product groups/families</li> </ul>
<b>Inventories</b>	<p>Inventories within process may include:</p> <ul style="list-style-type: none"> <li>• cycle stock which reflects the replenishment quantity and frequency</li> <li>• buffer stock to meet demand variability and forecast errors</li> <li>• safety stock required to guard against quality and delivery failures upstream</li> </ul>
<b>Pacemaker</b>	<p>Pacemaker processes is that process which sets the pace for the flow of operations/work through the enterprise. Pacemaker processes may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• process steps which are significantly longer than other production stages</li> <li>• critical technical or quality steps in the production process</li> </ul>
<b>Takt time</b>	<p>Takt time is the time required to complete one job cycle if the customer's time and volume expectations are to be met, i.e. the available time divided by the number of units required, and so may include, but is not limited to:</p> <ul style="list-style-type: none"> <li>• time per piece where applied to piece work</li> </ul>

	<ul style="list-style-type: none"> <li>• time per tonne or litre when applied to bulk product</li> <li>• time per work item when applied to an office or service environment</li> <li>• deadlines required to meet delivery dates when applied to project work</li> </ul>
<b>Pitch</b>	Pitch is the takt time averaged over a defined period and with available resources giving the rate of flow required to meet customer demand
<b>Balance work</b>	<p>Balance work means balancing:</p> <ul style="list-style-type: none"> <li>• time of production</li> <li>• effort required by workforce and equipment</li> <li>• work organisation</li> <li>• job design</li> <li>• quality considerations</li> <li>• waste and other cost considerations between stations/equipment/processes to achieve levelled pull within allowable time per product</li> </ul> <p>Balance work consideration also means:</p> <ul style="list-style-type: none"> <li>• undertaking adequate consultation with stakeholders</li> <li>• meeting occupational health and safety (OHS) and environmental requirements</li> <li>• any other regulatory and legislative requirements</li> </ul>

## MSS405030A Optimise cost of a product or service

### Modification History

New unit, superseding MSACMT630A Optimise cost of product\* - Not equivalent

\* Prerequisite *MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

### Unit Descriptor

This unit of competency covers the skills and knowledge required to examine the costs of a product or service and determine methods of reducing costs.

### Application of the Unit

This unit applies to an individual who is required to undertake a detailed study of a product or service's costs, including analysing it by its cost components to determine the best method of lowering the cost overall. This unit differs from *MSS405031A Undertake value analysis of a product or process costs in terms of customer requirements*, in that it looks at all costs, including overheads and takes a wider and more traditional approach to the cost of the product. Information and cost reduction strategies gained from the application of this unit may support other cost approaches in the enterprise, including value stream costing.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to calculate cost components and determine cost optimisation strategies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Analyse total cost components of a product or service	1.1	Identify all cost components of product or service
		1.2	Allocate cost components to major categories, such as overhead, depreciation, energy, consumables and labour
		1.3	Distinguish between costs which directly deliver customer features/benefits and waste
2	Optimise costs	2.1	Analyse causes of costs which lead to customer features/benefit
		2.2	Determine methods of increasing the customer benefit/cost ratio
		2.3	Analyse causes of waste costs
		2.4	Determine methods of reducing/eliminating waste costs
		2.5	Analyse interactions between cost components
		2.6	Check that one method of reducing costs does not cause an increase in another cost/reduction in consumer benefit
		2.7	Check that cost reduction plans do not reduce required levels of regulatory compliance or occupational health and safety (OHS)

- 3 Implement cost optimisation
  - 3.1 Develop cost optimisation plans
  - 3.2 Negotiate with relevant people to agree on implementation plans
  - 3.3 Take actions to implement the cost optimisation
  - 3.4 Monitor the implementation of the cost optimisation
  - 3.5 Make adjustments to the plan, as required

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- identifying relevant cost component categories for organisation, product and process
- identifying customers, including final customer and features/benefits as valued by customers
- expressing customer features/benefits in cost terms
- determining application scope of cost reduction plan, including product/s, areas, employees and suppliers included in plan

### Required knowledge

Required knowledge includes:

- cost components of product
- major costs which are controllable (and how to control them)
- concept and types of waste (muda)
- interrelationship of cost components and costs and benefits, including:
  - methods of estimating costs/benefits
  - acceptable benefit/cost ratios

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• determine relevant cost categories for a product or service</li> <li>• determine which costs are waste</li> </ul>

## **MSS405031A Undertake value analysis of product or process costs in terms of customer requirements**

### **Modification History**

New unit, superseding MSACMT631A Undertake value analysis of product costs in terms of customer requirements\* - Not equivalent

\* Prerequisite *MSACMT230A Apply cost factors to work practices* - removed

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required by an employee who is required to analyse products and processes to determine the value-adding factors, including design and processing costs that most impact on meeting customer requirements and which may also include competitor benchmarking. The unit also includes implementing identified changes that increase cost-efficiency. The unit may be applied individually or in a team environment.

In this unit an employee uses an analysis of the benefits/features which a customer perceives to be in a product or service as a basis for determining appropriate or unnecessary cost and so identifying and reducing waste.

### **Application of the Unit**

This unit applies to an individual who undertakes the value analysis of a product or service, establishing the features/benefits obtained by customers from the cost components relating to those benefits. From this appropriate or waste cost will be determined and actions taken to either reduce waste or improve saleability.

This unit differs from *MSS405030A Optimise cost of a product or service*, in that it requires costs to be measured against customer features/benefits and is designed to contribute to value stream costing. *MSS405030A Optimise cost of a product or service* complements this unit by allowing detailed analysis of all costs, including overheads.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to determine cost-efficiencies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

### **Licensing/Regulatory Information**

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Analyse customer benefits to determine appropriate or waste costs	1.1	Analyse product or service to determine features/benefits perceived by customer in product
		1.2	Analyse cost components of product or service and determine those which deliver customer features/benefits and those which are either appropriate or waste
		1.3	Determine any additional features that may be added to improve saleability
		1.4	Analyse waste cost components and allocate to direct and indirect cost categories
		1.5	Determine options for reducing direct and indirect waste costs
		1.6	Select cost-related actions which maximise customer benefits and minimise costs
		1.7	Where required, undertake competitor benchmarking to provide reference points

- 2 Analyse performance variance
  - 2.1 Identify waste processing or operational steps for product or service following completion of customer benefit analysis
  - 2.2 Analyse all costs and determine methods of reducing costs/waste
  - 2.3 Develop plan and recommendations for actions required to achieve cost improvement or added customer benefits to improve saleability
  - 2.4 Submit plan and recommendations to stakeholders

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- determining customer features/benefits added to products at each operational step
- relating cost components to customer features/benefits
- distinguishing between direct and indirect costs
- identifying relevant cost component categories for product
- determining application scope of cost reduction plan, including products, areas, employees and suppliers included in plan
- undertaking competitor benchmarking for reference in cost analysis

### Required knowledge

Required knowledge includes:

- customer features/benefits from products
- impact of customer features/benefits on sales, market share and firms profitability
- performance and cycle times for products made or service provided
- major costs which are controllable (and how to control them)
- types of waste (muda)
- methods of reducing waste
- methods of reducing cycle time
- desirability of improving performance and methods of reducing cycle time

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Critical aspects for assessment and</b>	A person who demonstrates competency in this unit must

	disability.
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul>
--	---

	<p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Waste</b>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product.</p> <p>Within operations, categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• activities which do not yield any benefit to the organisation or any benefit to the organisations customers</li> </ul>
<b>Cost</b>	<p>Cost includes:</p> <ul style="list-style-type: none"> <li>• the monetary value of expenditures able to be directly identified for supplies, services, direct labour, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product</li> <li>• allocations and estimates for indirect costs (e.g. indirect labour, rent, power and water) where a direct monetary value cannot be identified</li> </ul>
<b>Determine customer feature/benefits</b>	<p>This unit does not require that customer features/benefits must be obtained by the person undertaking the unit directly contacting customers. The features/benefits may have already been determined by sales and marketing personnel and passed on to operations. However, the unit requires that the product or process must be analysed to determine how the product or process supplies the features/benefits and by which step/feature of the product or process</p>
<b>Performance</b>	<p>Performance is may be thought of as the rate of output or delivery of the performance or service compared to the</p>

	rate required to meet demand for the product or service
<b>Cycle time</b>	Cycle time includes: <ul style="list-style-type: none"><li>• the normal time to complete an operation on a product</li></ul>
<b>Pull</b>	Pull is the concept of producing to demand, rather than for stock or some forecast

## **MSS405032A Analyse cost implications of maintenance strategy**

### **Modification History**

New unit, superseding MSACMT632A Analyse cost implications of maintenance strategy - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to analyse the cost implications of different maintenance strategies and to adjust or adopt a strategy to minimise or eliminate unnecessary costs.

### **Application of the Unit**

This unit applies to an individual in an organisation who is selecting or reviewing its proactive maintenance strategy. While technical factors are significant in the choice of maintenance strategy and tools, cost factors will also impact on the selection of a maintenance strategy. This unit covers the cost analysis of maintenance strategies and complements the technical analysis covered in MSS405081A Develop a proactive maintenance strategy. The technical analysis may be performed by the same or a different person to the person undertaking the cost analysis.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying costing information and consulting with maintenance personnel. Problem solving, initiative and enterprise, and planning and organising are required to analyse and estimate the cost of maintenance strategies.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Analyse cost components of maintenance	1.1	Determine cost of failure of plant/equipment
		1.2	Determine cost of a planned maintenance shutdown activity, including costs of re-start
		1.3	Determine cost of maintenance for a planned activity
		1.4	Determine cost of maintenance for an unplanned activity
		1.5	Determine costs of condition monitoring
		1.6	Identify cost implications of different maintenance strategies
2	Estimate life cycle costs of plant/equipment	2.1	Determine initial capital cost
		2.2	Estimate servicing, maintenance and repair costs
		2.3	Estimate production and other costs associated with service, maintenance and repair
		2.4	Determine depreciation and other applicable allowances
		2.5	Estimate ancillary costs, such as training, commissioning and productivity loss
		2.6	Estimate technological life and costs of changing to current technology/costs of retaining obsolete equipment

- 2.7 Estimate annualised costs in present value terms
    - 2.8 Identify life cycle cost implications for strategy
- 3 Liaise with proactive maintenance strategy developer
  - 3.1 Identify cost implications for different strategies
  - 3.2 Negotiate a strategy which minimises total costs
  - 3.3 Monitor the implementation of the strategy to ensure the costs are minimised
  - 3.4 Make required adjustments to strategy

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- undertaking financial modelling and calculations relevant to different maintenance scenarios
- reading and interpreting charts and diagrams
- communicating with stakeholders, including technical and production staff to identify implications of maintenance strategies
- identifying sources of information on depreciation, allowances and ancillary costs
- analysing data and qualitative information on impact of different maintenance strategies on meeting customer needs
- solving problems to root cause
- preparing strategies and recommendations for stakeholders

### Required knowledge

Required knowledge includes:

- techniques, calculations and data used in different maintenance strategies
- cost components of maintenance strategies
- interrelationship of cost components and maintenance activities

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and analyse data and other information on current and potential maintenance strategies</li> <li>• communicate effectively with operators, maintenance personnel, engineers and other stakeholders on implications of maintenance strategies</li> <li>• make recommendations on optimal maintenance</li> </ul>
--	--

	strategies from a cost perspective.
<b>Context of and specific resources for assessment</b>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<p><b>Maintenance strategies and</b></p>	<p>Maintenance strategies and techniques may include:</p>

<b>techniques</b>	<ul style="list-style-type: none"> <li>• total productive maintenance (TPM)</li> <li>• reliability centred maintenance (RCM)</li> <li>• root cause analysis (RCA)</li> <li>• mean time between failures (MTBF)</li> <li>• failure mode and effects analysis (FMEA)</li> <li>• condition monitoring</li> </ul>
<b>Cost components of maintenance</b>	<p>For costing purposes, maintenance strategies should include:</p> <ul style="list-style-type: none"> <li>• direct costs, such as labour and materials, and also include comparison with cost of equipment replacement, re-engineering, and breakdown repair strategies, as well as cost of lost production under different maintenance strategies</li> </ul>
<b>TPM</b>	TPM is an application of total quality management to maintenance with the intention of increasing reliability, getting it right first time and increasing OEE
<b>RCM</b>	RCM moves maintenance from reactive, or even planned/programmed towards a focus on uptime and OEE
<b>RCA</b>	RCA is a formal problem solving technique. In RCA there are many possible causes of any problem. Eliminating some will have no impact, while eliminating others will ameliorate the problem. However, elimination of the root cause will eliminate the problem completely. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem
<b>OEE</b>	<p>OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p> $OEE = \text{availability} \times \text{performance} \times \text{quality rate}$ <p>where:</p> <ul style="list-style-type: none"> <li>• availability takes into account losses due to breakdown, set-up and adjustments</li> <li>• performance takes into account losses due to minor stoppages, reduced speed and idling</li> <li>• quality rate takes into account losses due to rejects, reworks and start-up waste</li> </ul>
<b>Uptime</b>	Uptime refers to the overall availability of the plant (it is the inverse of downtime) or the unavailability of the

	plant. Ideal uptime is 100%
<b>MTBF</b>	<p>MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing.</p> <p>There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p> <p>Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance related events may be substituted for MTBF providing they relate strategies for improving OEE.</p>
<b>FMEA</b>	<p>FMEA is a systematic approach that identifies potential failure modes in a system, product, or process caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring.</p> <p>Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification.</p> <p>HAZOP) is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.</p>
<b>Condition monitoring</b>	<p>In this unit condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance whether it be obtained from non-destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses</p>

## **MSS405040A Manage 5S system in an organisation**

### **Modification History**

New unit, superseding MSACMT640A Manage 5S system in a manufacturing environment - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required for the overall management of the 5S system in an organisation.

### **Application of the Unit**

This unit applies to an individual who is responsible for ensuring the smooth operation and continuous improvement of the 5S system in an organisation. This may be for an initial introduction of, or for the ongoing implementation and continuous improvement resulting from, 5S.

This unit requires the application of skills associated with problem solving, planning, communication and teamwork.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Organise an appropriate environment for 5S	1.1	Ensure managers and other key stakeholders support and understand 5S
		1.2	Arrange for team leaders to develop/maintain skills required for 5S
		1.3	Ensure team leaders are developing/maintaining skills required in their team members
		1.4	Ensure procedures and work practices reflect 5S needs and regulatory requirements
		1.5	Practise 5S in own work
		1.6	Eliminate roadblocks to 5S
2	Audit 5S implementation	2.1	Undertake spot checks of compliance
		2.2	Review workplace and records for indicators of compliance/non-compliance
		2.3	Encourage all levels of the workforce to routinely suggest areas for improvement
		2.4	Discuss 5S routinely with team leaders to seek ideas for implementation of improvement suggestions and encourage identification of non-conformance

- 3 Improve 5S
  - 3.1 Negotiate solutions to non-conformances
  - 3.2 Implement agreed solutions
  - 3.3 Work with team leaders to develop opportunities for improvements
  - 3.4 Provide necessary resources for improvements
  - 3.5 Ensure procedures and practices change to reflect improvements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating with stakeholders on aims and objectives of 5S program in the organisation
- mentoring and monitoring team leaders in their skills and knowledge of 5S and the organisations objectives for 5S
- conducting formal and informal meetings and explaining 5S and related concepts
- reviewing regulatory requirements for implications for 5S implementation
- facilitating team goals, activities and communications and accessing resources
- problem solving 5S poor performance and problems to root cause
- identifying requirements and negotiating resources for 5S implementation across the organisation
- planning and prioritising activities of teams
- identifying problems in 5S implementation caused by gaps in skills and/or knowledge and developing options to address them

### Required knowledge

Required knowledge includes:

- organisation operations and structure
- principles of efficient workplace organisation
- purposes and methodology of 5S
- operation procedures relevant to jobs in the organisation
- relevant regulatory requirements
- processes for identification of skill gaps
- methods of addressing skill gaps
- ways of encouraging team leaders and operators to find and suggest areas for improvement
- methods of making/recommending improvements
- methods of accessing required resources
- non-conformance, what they are, assessment of severity and action to be taken

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• encourage and monitor a systematic approach to implementing 5S</li> <li>• analyse areas and records for evidence of 5S conformance/non-conformances</li> <li>• manage non-conformances in implementation of 5S</li> <li>• lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads, hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess</p>

	<p>underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer-based or in some other format</li> </ul>
<b>Roadblocks</b>	<p>Roadblocks include:</p> <ul style="list-style-type: none"> <li>• all factors which are inhibiting the smooth implementation of 5S</li> </ul>
<b>5S</b>	<p>5S is a system of work organisation originally developed in Japan based around housekeeping principles. A close translation of the five stages in the housekeeping approach is:</p> <ul style="list-style-type: none"> <li>• sort</li> <li>• set in order</li> <li>• shine</li> <li>• standardise</li> <li>• sustain</li> </ul>
<b>Sort</b>	<p>Sort involves keeping only what is absolutely necessary for the processes in the work area. Sort includes:</p> <ul style="list-style-type: none"> <li>• clearing the work area of all non-essential equipment</li> </ul>

	<p>and materials</p> <p>Non-essential items include:</p> <ul style="list-style-type: none"> <li>those not required to either produce product, conduct process or operations or make required adjustments to equipment during process or operations</li> </ul>
<b>Set in order</b>	<p>Set in order includes:</p> <ul style="list-style-type: none"> <li>assigning required equipment and materials appropriate locations in the work area (locations should be clearly marked and labelled to show the item and proper location)</li> </ul>
<b>Shine</b>	<p>Shine includes:</p> <ul style="list-style-type: none"> <li>keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time and, on most occasions, at the end of a job</li> </ul>
<b>Standardise</b>	<p>Standardising includes:</p> <ul style="list-style-type: none"> <li>activities that help maintain the order and the housekeeping standards</li> <li>using procedures and checklists developed from a procedure</li> </ul>
<b>Sustain</b>	<p>Sustain includes:</p> <ul style="list-style-type: none"> <li>making sure that daily activities are completed every day regardless of circumstance</li> <li>undertaking inspections, including: <ul style="list-style-type: none"> <li>informal inspections carried out often, at least weekly</li> <li>formal inspections carried out at least monthly</li> </ul> </li> </ul> <p>Specific actions should be followed up to generate continuous improvement</p>
<b>Items in work area</b>	<p>Items in work area may include:</p> <ul style="list-style-type: none"> <li>tools</li> <li>jigs/fixtures</li> <li>materials/components</li> <li>plant and equipment</li> <li>manuals</li> <li>personal items (e.g., lunch boxes and posters)</li> <li>safety equipment and personal protective equipment</li> <li>other items which happens to be in the work area</li> </ul>

## MSS405041A Implement improvement systems in an organisation

### Modification History

New unit, superseding MSACMT641A Implement a continuous improvement system - Not equivalent

### Unit Descriptor

This unit of competency covers the skills and knowledge required to introduce and institutionalise continuous improvement and breakthrough improvement processes in an organisation.

### Application of the Unit

This unit applies to an individual responsible for the introduction of improvement systems across an organisation. The systems will include a continuous improvement system sometimes also known as kaizen, and breakthrough improvement sometimes known as kaizen blitz.

The continuous improvement (kaizen) system consists of strategies for continuously monitoring for and implementation of incremental improvements to processes, operations and products. Breakthrough improvement 'events' (kaizen blitz) covers the identification of improvement opportunities that are best undertaken in a single exercise.

This unit primarily requires the application of skills associated with teamwork, problem solving, initiative and enterprise, and planning and organising skills in order to identify, implement and institutionalise kaizen activity. Communication skills are required to gather information and consult with team members and other stakeholders. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into continual improvement.

Depending on the starting point for the continuous improvement program in the enterprise other relevant units may need to be selected, including:

- *MSS402080A Undertake root cause analysis*
- *MSS405011A Manage people relationships*
- *MSS405040A Manage 5S system in an organisation*
- *MSAPMSUP390A Use structured problem solving tools.*
- 

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1	Prepare for improvement systems implementation	1.1	Determine scope of improvement systems
		1.2	Identify key performance indicators (KPIs) for inclusion in improvement systems
		1.3	Prepare operating instructions and other required documentation for continuous and breakthrough improvement systems
		1.4	Ensure compliance with health, safety and environment (HSE) and other regulatory requirements are addressed in improvement instructions
		1.5	Identify and brief implementation team
		1.6	Prioritise areas operation, or processes requiring early action
		1.7	Prepare communication strategy for employees and other stakeholders
		1.8	Make infrastructure and support arrangements for improvement systems
		1.9	Obtain required approvals for commencement of improvement systems

- |   |   |     |   |
|---|---|-----|---|
| 2 | Implement improvement systems                 | 2.1 | Arrange for initial training in continuous improvement (kaizen) and related competitive systems and practices for employees   |
|   |   | 2.2 | Facilitate the development of operating protocols for continuous improvement at the team level  |
|   |   | 2.3 | Establish decision making mechanism for system level continuous improvement   |
|   |   | 2.4 | Invite suggestions for breakthrough improvements  |
|   |   | 2.5 | Establish mechanism for prioritising breakthrough improvements  |
|   |   | 2.6 | Establish breakthrough teams and implement priority breakthrough events   |
|   |   | 2.7 | Clarify points of disagreement/uncertainty over improvement systems implementation through consultation and, where required, by reference to procedures or other relevant authority |
| 3 | Monitor implementation of improvement systems | 3.1 | Consult stakeholders on processes and perceived success of early implementation of continuous and breakthrough improvement events   |
|   |   | 3.2 | Analyse processes and operations to quantify variations in KPIs over early period of implementation of improvement systems  |
|   |   | 3.3 | Identify and solve ongoing performance issues   |
|   |   | 3.4 | Negotiate any differences between problems and proposed solutions   |
|   |   | 3.5 | Develop plans and obtain agreements to implement further improvements   |
|   |   | 3.6 | Implement improvements  |
|   |   | 3.7 | Measure changes and calculate benefits  |
|   |   | 3.8 | Complete all relevant documentation   |
|   |   | 3.9 | Communicate achievements to stakeholders  |

- 4 Institutionalise continuous improvement
  - 4.1 Arrange for regular reviews of improvement systems
  - 4.2 Integrate improvement system reports with other reporting processes, including visual management systems
  - 4.3 Arrange for regular reporting of improvement system results to customers and other critical stakeholders

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- implementing continuous and breakthrough improvement in a variety of contexts, including a mixture of supportive and non-supportive team environments
- undertaking self-directed problem solving and decision-making
- communicating across all levels in the organisation and to people of different levels of literacy
- analysing customer features/benefits, organisation goals and past performance and setting KPIs for inclusion in a continuous improvement system
- prioritising improvement suggestions in terms of:
  - the extent to which they add to customer features/benefits
  - feasibility
  - cost
- preparing operating procedures and other documentation, including establishing version control and amendment procedures
- analysing information and data to identify variation and evaluate improvements
- measuring and calculating performance variables
- solving problems to root cause
- identifying waste (muda)

### Required knowledge

Required knowledge includes:

- continuous and breakthrough improvement (kaizen and kaizen blitz) philosophy and process
- competitive systems and practices, including:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - establishing customer pull
  - setting of key performance indicators/metrics
- types of KPIs and their impacts on performance
- improvement processes, including implementation, monitoring and evaluation strategies

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• interpret operations, processes and products in terms of customer features/benefits and then set appropriate KPIs</li> <li>• prepare appropriate documentation for continuous and breakthrough improvement processes</li> <li>• establish decision making processes for considering system level continuous improvement suggestions</li> <li>• encourage and lead others in implementing continuous improvement system</li> <li>• problem solve implementation issues with continuous improvement system</li> <li>• lead and motivate others in planning, implementing and sustaining improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> </ul>

	<ul style="list-style-type: none"> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• JIT, kanban and other pull-related operations control</li> </ul>
--	---

	<p>systems</p> <ul style="list-style-type: none"> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Scope of improvement systems</b>	<p>The scope of the improvement systems includes:</p> <ul style="list-style-type: none"> <li>• target divisions, operations, work processes, products and sites that stakeholders want included in a particular improvement system</li> <li>• goals and objectives of the organisation: <ul style="list-style-type: none"> <li>• levels of targeting for the continuous improvement system, including the system level focusing on the value stream and the overall achievement of customer defined features/benefits</li> <li>• process level focusing on individual processes, teams and team leaders</li> </ul> </li> </ul>
<b>Relevance of KPIs</b>	<p>Relevance of KPIs includes:</p> <ul style="list-style-type: none"> <li>• appropriateness (did they lead to/encourage desirable performance?)</li> <li>• currency (are they still encouraging desirable performance?)</li> <li>• unintended consequences (do they lead to outcomes which are not desirable – even if some performance is desirable?)</li> <li>• signal/noise (is the balance between desirable and undesirable outcomes strong and positive?)</li> </ul>

<p><b>Instructions for incremental or breakthrough improvement processes</b></p>	<p>Instructions for incremental or breakthrough improvement process include:</p> <ul style="list-style-type: none"> <li>• methods for employees to suggest incremental or breakthrough improvement</li> <li>• criteria for identifying a breakthrough improvement need</li> <li>• approval processes</li> <li>• monitoring and reporting processes</li> </ul>
<p><b>Procedures</b></p>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/ recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant, process or operation</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> <li>• required procedures under legislation or regulation, awards and enterprise agreements</li> </ul> <p>Procedures may be:</p> <ul style="list-style-type: none"> <li>• written, verbal, computer based or in some other format</li> </ul>
<p><b>Waste</b></p>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product or process. Categories of waste include:</p> <ul style="list-style-type: none"> <li>• excess production and early production</li> <li>• delays</li> <li>• movement and transport</li> <li>• poor process design</li> <li>• inventory</li> <li>• inefficient performance of a process</li> <li>• making defective items</li> <li>• activities which do not yield any benefit to the organisation or any benefit to the organisations customers</li> </ul>
<p><b>Solve performance issues</b></p>	<p>Solving performance issues includes:</p> <ul style="list-style-type: none"> <li>• generating improvement ideas (brainstorming/asking</li> </ul>

	experts) <ul style="list-style-type: none"><li>• selecting most appropriate improvement ideas to proceed with</li><li>• conducting experiments where required to test idea</li><li>• making final selection of improvement ideas</li><li>• determining most appropriate improvement strategy (i.e. incremental or breakthrough (kaizen blitz) improvement)</li></ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## Custom Content Section

Not applicable.

## MSS405050A Determine and improve process capability

### Modification History

New unit, superseding MSACMT650A Determine and improve process capability\* - Equivalent

\* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

### Unit Descriptor

This unit of competency covers the skills and knowledge required to determine the actual (as distinct from design) capability of a process and then to analyse that process to remove assignable causes and reduce random causes. This would typically be done by a manager or technical expert support person either working in a team, or in close liaison with key stakeholders. Process capability is typically calculated using standard deviations.

### Application of the Unit

This unit applies to an individual (who may be a production manager, plant/process engineer, technical specialist or similar) who is responsible for developing plans to stabilise and then improve process capability and following agreement the implementation of the plans to improve process capability. The organisation may use either a six sigma or three sigma process.

This unit primarily requires the application of skills associated with communication in gathering and analysing data and consulting with relevant personnel. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to determine causes to variations and implement solutions. This is done in an environment using computer technology and also requires aspects of self-management and learning to ensure feedback and new learning is integrated into process improvements and operations management control systems.

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MSS404052A Apply statistics to operational processes

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Obtain data for process capability study | 1.1 | Identify the process requiring capability analysis including relevant procedures                     |
|   |  | 1.2 | Identify customer specifications for product or service  |
|   |  | 1.3 | Obtain process capability data   |
| 2 | Analyse data                             | 2.1 | Identify assignable causes of variation in liaison with relevant personnel                           |
|   |  | 2.2 | Develop solutions to eliminate variation due to assignable causes in liaison with relevant personnel |
|   |  | 2.3 | Analyse random variations for possible causes in liaison with relevant personnel                     |
|   |  | 2.4 | Confirm causes of random variation   |
|   |  | 2.5 | Develop solutions to reduce random variations in liaison with relevant personnel                     |

- 3 Take action to improve process capability
  - 3.1 Develop plans to implement solutions
  - 3.2 Liaise with relevant personnel to implement solutions
  - 3.3 Gain necessary approvals, as required
  - 3.4 Monitor implementation and make adjustments, as required
  - 3.5 Determine new/revised process capability
  - 3.6 Implement revised process capability regime

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- using a variety of statistical methods and calculations
- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- negotiating with employees, suppliers and customers, where necessary, to achieve access to, or collection of, data
- planning process and data collection changes required for process improvement, including:
  - objectives
  - performance indicators to be monitored to indicate success of change
  - resources required
  - training required
  - communication and liaison required with employees, suppliers and customers
  - implementation period required
- analysing variations and categorising into assignable and random cause
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- working in and leading teams for data collection and process improvement
- using software computers and terminals, as required, to collect and analyse data

### Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required to establish variability and normal distribution
- calculate three sigma or six sigma processes, as relevant
- random and non-random results and processes for recognition of assignable causes
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• collect or obtain data relevant process capability data from a variety of sources data</li> <li>• work with people and analyse data to determine assignable causes</li> <li>• plan and prepare improvement proposals</li> <li>• monitor implementation of improvement proposals.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will</p>

	<p>be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> </ul>
--	--

	<ul style="list-style-type: none"> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Six sigma</b>	<p>Six sigma refers to:</p> <ul style="list-style-type: none"> <li>• a statistical tool for recording defects and determining capability which equates to only 3.4 defects per million opportunities for each product or service transaction</li> </ul> <p>Six sigma is also used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package</p>
<b>Three sigma</b>	<p>Three sigma refers to:</p> <ul style="list-style-type: none"> <li>• a traditional statistical process control uses three sigma limits which equates to 3 defects per thousand opportunities for each product or service transaction</li> </ul>
<b>Process capability data</b>	<p>Process capability data includes:</p> <ul style="list-style-type: none"> <li>• customer requirements for product or service</li> <li>• process stability (control chart) performance</li> <li>• other charts and data</li> </ul>
<b>Procedures</b>	<p>Procedures may include:</p> <ul style="list-style-type: none"> <li>• work instructions</li> <li>• standard operating procedures</li> <li>• formulas/recipes</li> <li>• batch sheets</li> <li>• temporary instructions and similar instructions provided for the smooth running of the plant</li> <li>• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care)</li> <li>• government regulations</li> </ul>

	Procedures may be: <ul style="list-style-type: none"><li>• written, verbal, computer-based or in some other format</li></ul>

## MSS405052A Design an experiment

### Modification History

New unit, superseding MSACMT652A Design an experiment\* - Equivalent

\* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

### Unit Descriptor

This unit of competency covers the skills and knowledge required to design experiments. The design of experiments is generally undertaken as part of black-belt six sigma but may also be undertaken independently.

### Application of the Unit

This unit applies to a technical expert who is required to design and implement experiments aimed at making breakthrough improvements in the process. They will work with other members of the process team in doing this.

This unit primarily requires the application of skills associated with problem solving, initiative and enterprise, and planning and organising skills in order to identify, implement and evaluate an experiment. Communication skills associated with gathering, interpreting and documenting information are required.

Where this unit forms part of a suite of six sigma then the following units will also be relevant:

- *MSS403010A Facilitate change in an organisation implementing competitive systems and practices*
- *MSS403051A Mistake proof an operational process*
- *MSS404081A Undertake proactive maintenance analyses*
- *MSS405002A Analyse and map a value stream*
- *MSS405011A Manage people relationships*
- *MSS405050A Determine and improve process capability*
- *MSS405053A Manage application of six sigma for process control and improvement*
- *MSAPMSUP390A Use structured problem solving tools.*
- 

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MSS403052A Apply statistics to operational processes

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Choose an improvement project	1.1	Review a process/value stream map
		1.2	Identify areas in need of improvement
		1.3	Select a process/value stream area for analysis and improvement
		1.4	Determine the objective of the experiment in consultation with relevant stakeholders
2	Design the experiment	2.1	Select appropriate factorial design
		2.2	Estimate signal to noise ratio
		2.3	Determine required number of runs and factorial fraction
		2.4	Determine resolution
		2.5	Design a sequential series of experiments
		2.6	Calculate resource requirement for this design
		2.7	Determine whether resource requirements are practical

- in consultation with relevant stakeholders
    - 2.8 Modify experiment, if required, to match available resources
    - 2.9 Determine/develop required metrics
  - 3 Conduct the experiment
    - 3.1 Conduct first run of experiment
    - 3.2 Replicate in random order for required number of runs
    - 3.3 Block out known sources of variation
    - 3.4 Conduct other experiments in series
    - 3.5 Record data/have data recorded
  - 4 Analyse and confirm the experimental results
    - 4.1 Identify aliases/confounding of variables/results
    - 4.2 Analyse data using statistics pack or similar
    - 4.3 Interpret analysed data in line with objectives
    - 4.4 Identify confidence level of analysed data
    - 4.5 Design experiment to confirm correlations identified
    - 4.6 Conduct confirming experiment
    - 4.7 Analyse data from confirming experiment
    - 4.8 Confirm results (or conduct further experiments)

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- analysing existing statistics and other data for relevance to the experiment
- determining where additional data is required and developing strategies for acquisition
- undertaking self-directed problem solving and decision-making
- solving problems
- communicating complex issues and techniques to stakeholders
- documenting procedures and results
- producing a range of charts and generating and validating required data for inclusion
- using statistics packs

### Required knowledge

Required knowledge includes:

- charting, such as:
  - Pareto charts
  - main effects plots
  - scatter plots
  - interaction plots
  - contour plots
  - response surface plots
- statistical principles and analysis, such as:
  - analysis of means (ANOM)
  - prediction equations
  - analysis of variance (ANOVA)/one-way ANOVA
  - desirability function
  - hit a target
  - advanced graphical data analysis
  - multi-variate planning
  - variation trees and funneling
  - hypothesis testing
  - central limit theorem
  - statistical analysis roadmap

- analysis for means and t-test
- correlation and regression
- factorial analysis principles and methods, such as:
  - multi-variate analysis
  - Taguchi S/N ratios
  - 2/3 level factorial
  - Taguchi L8
  - 2/4-1 half fraction
  - Plackett-Burman 8-run
  - full factorial
- acceptance criteria/confidence levels

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• design an experiment relevant to improvement strategies and targets of the organisation</li> <li>• conduct an experiment</li> <li>• confirm results, including conduct of confirming experiments.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>

<b>Method of assessment</b>	<p>A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP)</li> </ul>
--	---

	<p>systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>Improvement</b>	<p>Improvement includes:</p> <ul style="list-style-type: none"> <li>• an improvement in performance of an area/section or the whole enterprise as measured in terms of customer features/benefits</li> </ul>
<b>Objective of the experiment</b>	<p>Objective of the experiment may include:</p> <ul style="list-style-type: none"> <li>• screen factors to find the critical few</li> <li>• optimise a few critical factors</li> <li>• solve process problems</li> <li>• reduce waste</li> <li>• increase reliability</li> </ul>
<b>Factorial design</b>	<p>Factorial design may include:</p> <ul style="list-style-type: none"> <li>• 2/3 level factorial</li> <li>• Taguchi L8</li> <li>• 2/4-1 half fraction</li> <li>• Plackett-Burman 8-run</li> </ul>

	<ul style="list-style-type: none"> <li>• full factorial</li> </ul>
<b>Signal-to-noise ratio</b>	<p>Signal-to-noise ratio may be estimated from:</p> <ul style="list-style-type: none"> <li>• previous experiment design experience</li> <li>• previous process capability studies</li> <li>• statistical process control data</li> <li>• estimated from other sources</li> </ul>
<b>Resolution</b>	<p>Resolution is typically:</p> <ul style="list-style-type: none"> <li>• Resolution III design: A design where main factor effects are confounded with two factor and higher order interactions</li> <li>• Resolution IV design: A design where main effects are confounded with three factor and higher order interactions and all two factor interactions are confounded with two factor interactions and higher order interactions</li> <li>• Resolution V design: A design where main effects are confounded with four factor and higher order interactions and two factor interactions are confounded with three factor interactions and higher order interactions</li> </ul>
<b>Sequential series of experiments</b>	<p>A typical series of experiments consists of:</p> <ul style="list-style-type: none"> <li>• a screening design (fractional factorial) to identify the significant factors</li> <li>• a full factorial or response surface design to fully characterise or model the effects</li> <li>• confirmation runs to verify results</li> </ul>
<b>Required metrics</b>	<p>Required metrics may include:</p> <ul style="list-style-type: none"> <li>• quantitative measures normally associated with the process</li> <li>• other quantitative measures relevant to the experiment</li> <li>• ranking systems for normally qualitative measures, such as defectives</li> </ul>
<b>Statistics pack</b>	<p>Typical statistics packs include:</p> <ul style="list-style-type: none"> <li>• minitab</li> <li>• JMP</li> <li>• spreadsheets, such as Excel, particularly with specific add-ons, such as Sigma XL, Analyse It or other add-ons</li> </ul>

## **Unit Sector(s)**

# MSS405053A Manage application of six sigma for process control and improvement

## Modification History

New unit, superseding MSACMT653A Apply six sigma to process control and improvement\*  
- Equivalent

\* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

## Unit Descriptor

This unit of competency covers the skills and knowledge required to manage six sigma in the workplace for the purposes of process control and process improvement.

## Application of the Unit

This unit covers the skills and knowledge needed by a technical expert in managing the application of six sigma in an organisation in order to minimise defects and make improvements to processes and/or products. Depending on the need the expert will apply six sigma processes themselves or work with, and advise, other employees in applying six sigma processes.

This unit requires the application of skills associated with problem solving, initiative, enterprise, planning and organising in order to apply six sigma in the workplace. This unit requires skill in gathering, analysing and applying information and data.

Depending on the situation of the enterprise and the complexity of their operations process the following units may also be required in implementing six sigma at an enterprise:

- *MSS403010A Facilitate change in an organisation implementing competitive systems and practices*
- *MSS403051A Mistake proof a production process*
- *MSS404081A Undertake proactive maintenance analyses*
- *MSS405002A Analyse and map a value stream*
- *MSS405011A Manage people relationships*
- *MSS405050A Determine and improve process capability*
- *MSS405052A Design an experiment*
- *MSAPMSUP390A Use structured problem solving tools.*
- 

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

MSS403052A Apply statistics to operational processes

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1	Review process data	1.1	Confirm area of responsibility/study with executive leaders and other stakeholders
		1.2	Review statistical process control (SPC), process capability and other relevant data for area of responsibility/study
		1.3	Identify shifts in process performance and processes requiring improvement
		1.4	Quantify the shifts in performance which have occurred or which are desired
		1.5	Determine cost of shift in performance and cost of intervention
		1.6	Identify improvement priorities and degree of intervention
2	Apply define, measure, analyse, improve, and control and	2.1	Define improvement project
		2.2	Determine if a six sigma project team is to be established or project undertaken individually

- |   |  |   |  |
|---|--|---|--|
| standardise<br>(DMAIC) process<br>to priority areas | 2.3                                    | Determine metrics and acquire initial data  |  |
|   | 2.4                                    | Analyse data and determine possible causes of performance shifts/process improvements |  |
|   | 2.5                                    | Develop and trial improvement solutions   |  |
|   | 2.6                                    | Control and standardise the improvement   |  |
| 3   | Establish/review<br>control strategies | 3.1   | Determine sampling schedule  |
|   |  | 3.2   | Analyse data to determine process capability   |
|   |  | 3.3   | Develop process control strategy   |
|   |  | 3.4   | Confirm strategy with all stakeholders   |
|   |  | 3.5   | Identify skills required to implement and monitor process control strategy                                   |
|   |  | 3.6   | Arrange training, where required, for employees in skills and techniques needed for process control strategy |
| 4   | Review and<br>confirm<br>improvement   | 4.1   | Calculate and document benefits  |
|   |  | 4.2   | Ensure procedures and other relevant documentation is updated for improved procedure                         |
|   |  | 4.3   | Review process data after an appropriate period and confirm the improvement                                  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying and defining six sigma projects
- developing procedures for collection and analysis of data
- reporting and presenting data and quantitative information
- analysing priorities and improvement projects and determining where individual or team effort is required
- determining and completing appropriate charts for a project
- communicating and explaining DMAIC methods to others
- leading a six sigma project team
- documenting and reporting six sigma project benefits in both statistical (defect reduction) and benefit/cost terms

### Required knowledge

Required knowledge includes:

- charting, including:
  - Pareto charts
  - fishbone diagrams
  - PICK charts
  - run charts
  - scatter diagrams
- statistical principles and analysis, including:
  - confidence limits
  - analysis of variance
  - presentation data:
- frequency distribution tables
- histograms
  - measures of central tendency:
- arithmetic mean
- median
- mode
  - measures of dispersion:

- standard deviation
- range
- interquartile range
  - correlation and dependence
- acceptance criteria/confidence levels
- DMAIC methods
- failure mode and effects analysis (FMEA)
- process mapping
- suppliers, inputs, process, outputs, customers (SIPOC) mapping
- types of data (e.g. discrete/continuous/attributes) and their use in six sigma

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse statistical data and identify significant variations and other indicators for potential six sigma projects</li> <li>• apply DMAIC process individually</li> <li>• lead others in DMAIC process</li> <li>• review control strategies</li> <li>• confirm improvements.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>

<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p><b>Guidance information for assessment</b></p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Competitive systems and practices</b></p>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP)</li> </ul>
---	---

	<p>systems, Materials Resource Planning (MRP) and proprietary systems</p> <ul style="list-style-type: none"> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>DMAIC</b>	<p>DMAIC is a structured improvement methodology for existing business processes involving the following stages:</p> <ul style="list-style-type: none"> <li>• define</li> <li>• measure</li> <li>• analyse</li> <li>• improve</li> <li>• control and standardise</li> </ul>
<b>Define</b>	<p>Definition of the project to include:</p> <ul style="list-style-type: none"> <li>• completed, verified and validated as in process map</li> <li>• SIPOC diagram</li> <li>• discrepancies to current 'as is' process map</li> <li>• formation and briefing of project team</li> <li>• defining business case for project</li> <li>• problem statement</li> </ul>

	<ul style="list-style-type: none"> <li>• goal statement</li> <li>• project scope</li> </ul>
<b>Metrics</b>	<p>Metrics may include:</p> <ul style="list-style-type: none"> <li>• key measures/attributes</li> <li>• sampling schedule for project</li> <li>• defect rate</li> </ul>
<b>Analyse</b>	<p>Analyse may include:</p> <ul style="list-style-type: none"> <li>• statistical analysis of data</li> <li>• root cause analysis</li> <li>• FMEA</li> <li>• use of various other problem solving/analysis tools</li> </ul>
<b>Improve</b>	<p>Improve may include:</p> <ul style="list-style-type: none"> <li>• generating and testing of improvements</li> <li>• selecting appropriate improvements</li> </ul>
<b>Control and standardise</b>	<p>Control and standardise may include:</p> <ul style="list-style-type: none"> <li>• documenting outcomes and procedures for standardisation</li> <li>• transferring ownership of improved process</li> </ul>
<b>Sampling schedule</b>	<p>Sampling schedule may include:</p> <ul style="list-style-type: none"> <li>• sampling frequency</li> <li>• type of sample/sample method</li> <li>• sample location/type</li> <li>• type of test/data to be collected</li> </ul>
<b>Process control strategy</b>	<p>Process control strategy may include:</p> <ul style="list-style-type: none"> <li>• degree of intervention/rules for resets</li> <li>• SPC tools to be used</li> </ul>

## Unit Sector(s)

Unit sector

Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS405060A Develop the application of enterprise control systems in an organisation**

### **Modification History**

New unit, superseding MSACMT660A Develop the application of enterprise systems in manufacturing - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to continuously modify and improve or develop new enterprise-wide information technology (IT) based control systems, such as Supervisory Control and Data Acquisition (SCADA), Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII) and similar. Typically the development of such a system will be in liaison with an appropriate technical expert who may be an internal expert or an external consultant.

### **Application of the Unit**

This unit applies to an individual responsible for the development and implementation of new systems or modifications/changes to the current system. While the individual might generate the ideas for change themselves and also undertake a significant part of the final implementation, they may also be working closely with an appropriate technical expert (such as the software system supplier) who may actually make the modifications.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising skills are required to determine and implement effective enterprise systems and modifications. This unit also requires computer skills and aspects of self-management and learning to ensure feedback and new learning is integrated into system planning.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

- |   |   |     |   |
|---|---|-----|---|
| 1 | Monitor information and control needs of organisation | 1.1 | Check the use of current information  |
|   |   | 1.2 | Check the operation of current control systems  |
|   |   | 1.3 | Communicate regularly with key information users regarding any new or changed information control needs, including information needs from and to value stream |
|   |   | 1.4 | Identify short comings in information and control provision   |
|   |   | 1.5 | Take appropriate action on information and control needs to meet organisational needs   |
| 2 | Check the current system against organisation needs   | 2.1 | Check the routine use of the system   |
|   |   | 2.2 | Check any system alarm or non-conformance notification and control operation  |
|   |   | 2.3 | Communicate regularly with key stakeholders about current system use and application  |
|   |   | 2.4 | Determine effect of non-conformance on enterprise system  |
|   |   | 2.5 | Identify problems/issues  |

- 2.6 Take appropriate action on problems and issues
  
- 3 Determine developments needed in a new or significantly modified system
  - 3.1 Identify needs requiring a new system or development of modifications to the current system
  - 3.2 Draft scope, specifications and outcomes required
  - 3.3 Liaise with key stakeholders and relevant technical experts to refine scope, specifications and outcomes needed in new or modified system
  - 3.4 Agree final scope, specifications and outcomes
  
- 4 Develop system
  - 4.1 Develop project plan
  - 4.2 Ensure ongoing consultation with all relevant stakeholders
  - 4.3 Manage development project
  - 4.4 Manage trialling of modified system
  - 4.5 Ensure modified system meets organisational requirements
  
- 5 Implement modified system
  - 5.1 Liaise with all affected personnel
  - 5.2 Develop and agree an implementation strategy
  - 5.3 Ensure all personnel have required skills
  - 5.4 Implement modified system
  - 5.5 Monitor implementation and modify, as required

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- identifying organisation needs from enterprise control system, including:
  - critical features (e.g. occupational health and safety (OHS), regulatory compliance and emergency shutdown)
  - essential features and operation controls
  - access levels and access security
  - cost of installation and operation
  - interfaces (e.g. human-machine, machine-machine, and system-system, e.g. SCADA with financial control systems)
- correctly accessing and inputting information
- communicating with stakeholders on information and control requirements
- matching monitoring, control and reporting capability of system to organisation requirements
- analysing features of enterprise system and determining training needs
- solving problems to root cause
- monitoring trials and initial implementation of enterprise control system

### Required knowledge

Required knowledge includes:

- capability of resource planning/SCADA systems, as appropriate
- information and control needs of organisation/process
- project management
- support/training/skill development mechanisms available for access by personnel

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Critical aspects for assessment and evidence required to demonstrate</b>	A person who demonstrates competency in this unit must
---	--

<p><b>competency in this unit</b></p>	<p>be able to provide evidence of their ability to:</p> <ul style="list-style-type: none"> <li>• analyse organisation needs and match to enterprise control system features</li> <li>• determine critical features required in enterprise control system</li> <li>• modify system as a result of trials or changing needs.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.</p> <p>Access may be required to:</p> <ul style="list-style-type: none"> <li>• workplace procedures and plans relevant to work area</li> <li>• specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee</li> <li>• documentation and information in relation to production, waste, overheads and hazard control/management</li> <li>• reports from supervisors/managers</li> <li>• case studies and scenarios to assess responses to contingencies.</li> </ul>
<p><b>Method of assessment</b></p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed by using a combination of the following to generate evidence:</p> <ul style="list-style-type: none"> <li>• demonstration in the workplace</li> <li>• workplace projects</li> <li>• suitable simulation</li> <li>• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)</li> <li>• targeted questioning</li> <li>• reports from supervisors, peers and colleagues (third-party reports)</li> <li>• portfolio of evidence.</li> </ul> <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p>
<p><b>Guidance information for</b></p>	<p>Assessment processes and techniques must be culturally</p>

<b>assessment</b>	appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
-------------------	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Competitive systems and practices</b>	<p>Competitive systems and practices may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• lean operations</li> <li>• agile operations</li> <li>• preventative and predictive maintenance approaches</li> <li>• monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems</li> <li>• statistical process control systems, including six sigma and three sigma</li> <li>• Just in Time (JIT), kanban and other pull-related operations control systems</li> <li>• supply, value, and demand chain monitoring and analysis</li> <li>• 5S</li> <li>• continuous improvement (kaizen)</li> <li>• breakthrough improvement (kaizen blitz)</li> <li>• cause/effect diagrams</li> <li>• overall equipment effectiveness (OEE)</li> <li>• takt time</li> <li>• process mapping</li> <li>• problem solving</li> <li>• run charts</li> <li>• standard procedures</li> <li>• current reality tree</li> </ul> <p>Competitive systems and practices should be interpreted so as to take into account:</p> <ul style="list-style-type: none"> <li>• the stage of implementation of competitive systems and practices</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• the size of the enterprise</li> <li>• the work organisation, culture, regulatory environment and the industry sector</li> </ul>
<b>SCADA</b>	<p>SCADA refers to:</p> <ul style="list-style-type: none"> <li>• a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action</li> </ul> <p>In the continuous operations sector, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as distributed control system (DCS) and indeed these systems do merge in advanced systems. These organisations may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system)</p>
<b>Resource planning</b>	<p>Planning software is a general term applied to a number of software systems which integrate a range of business information, such as:</p> <ul style="list-style-type: none"> <li>• finance</li> <li>• logistics maintenance and production</li> </ul> <p>It is frequently referred to by names, such as ERP and MRP/MRP II</p>
<b>Value stream</b>	<p>The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement.</p> <p>Depending on the operations and the customer requirement stages where value stream actions may occur include:</p> <ul style="list-style-type: none"> <li>• sales outlet/representative</li> <li>• information gathering, data analysis and research</li> <li>• product design</li> <li>• raw material sourcing</li> <li>• intermediate processing</li> <li>• final assembler/collation/preparation</li> <li>• support services (e.g. accounting, finance and legal)</li> <li>• storage and delivery to customer</li> <li>• after market support</li> </ul>

## **Unit Sector(s)**

Unit sector Competitive systems and practices

## **Custom Content Section**

Not applicable.

## **MSS405061A Determine and establish information collection requirements and processes**

### **Modification History**

New unit, superseding MSACMT661A Determine and establish information collection requirements and processes - Equivalent

### **Unit Descriptor**

This unit of competency covers the skills and knowledge required to determine what information is needed to support decision-making in a competitive systems and practices environment and then to set about establishing required information collection systems. This would usually be done as part of a team and would require consultation with all key stakeholders.

### **Application of the Unit**

This unit covers the determination of data needs and collection methods for an organisation or specific plant or process. This will typically be done in liaison with a wide range of people, each of whom will have their own specific information requirements. There will need to be balanced and interpreted into a workable set of data to be collected.

This unit is primarily focused on those decisions which are non-routine and so need specific collection of data, or for those decisions which are routine, the establishment of a routine data collection protocol to allow for the decisions to be made based on appropriate, reliable data. This unit primarily requires the application of communication and problem solving skills associated with determining information requirements and processes of information collection. Initiative and enterprise, and planning and organising are also required to ensure information targets specific factors. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

- |   |  |     |  |
|---|--|-----|--|
| 1 | Analyse decisions to be made                   | 1.1 | Identify personnel to be included in the analysis process  |
|   |  | 1.2 | Determine the consequences of the decisions in liaison with relevant personnel   |
|   |  | 1.3 | Determine the variables which can be controlled  |
|   |  | 1.4 | Determine the variables which cannot be controlled   |
|   |  | 1.5 | Determine the consequences of a change in these variables in liaison with affected personnel                                     |
| 2 | Define factors which cause variables to change | 2.1 | Identify factors which are able to be controlled   |
|   |  | 2.2 | Identify factors which are not able to be controlled   |
|   |  | 2.3 | Identify means of measuring these factors, or indicators for the values of these factors   |
|   |  | 2.4 | Compile a list of measurements/indicators required.  |
|   |  | 2.5 | Communicate with team members and involve them in development of factors and changes to ensure awareness and facilitate learning |
| 3 | Develop data collection protocols              | 3.1 | Determine methods of making measurements   |
|   |  | 3.2 | Determine methods of quantifying indicators  |
|   |  | 3.3 | Determine the benefit/cost of automated (or other) collection of data  |

- 4    Develop systems to produce required information
  - 4.1    Identify user of information and their needs and abilities
  - 4.2    Determine data processing needs to produce required information
  - 4.3    Determine information distribution channels
  - 4.4    Determine skill development need for recipients of information
  - 4.5    Implement systems to produce information
  - 4.6    Monitor implementation and make adjustments, as required

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- negotiating with employees, suppliers and customers, where necessary, to achieve access to, or collection of, data
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- developing or sourcing indicators for factors not easily measured
- liaising with stakeholders on acceptable limits for benefits and costs in data collection procedures

### Required knowledge

Required knowledge includes:

- business needs of the organisation/section
- information needs of individuals within the organisation
- possible data available/potentially available to the organisation
- methods of collecting available data
- relationship between data available and information required
- methods of converting data into useful information
