Australian Government

MSA07 Manufacturing Training Package

Release: 8.4

CONTENTS

Preliminary Information **22**
List of AQF Qualifications MSA07v8.4 ..... **22**
Units of competency and their prerequisites MSA07v8.4 ..... **24**
Imported units of competency MSA07v8.4 ..... **31**
Mapping MSA07v8 ..... **51**
Mapping MSA07v8.1 ..... **67**
Mapping MSA07v8.2 ..... **68**
Mapping MSA07v8.3 ..... **78**
Mapping MSA07v8.4 ..... **81**
Overview **81**
Historical and General Information **89**
History **95**
Introduction to the Industry **101**
Qualification Framework **101**
Qualification Pathways **108**
Skill Sets in this Training Package **117**
Employability Skills **120**
Assessment Guidelines **124**
Competency Standards **138**
Appendix 1: MSA10107 Certificate I in Manufacturing (Pathways) **145**
Appendix 2: Development of the Process Manufacturing Certificates and generic manufacturing units **149**
Appendix 3: Background to the Competitive Manufacturing Qualifications **151**
Appendix 4: Technology Cadetship – metallurgy and polymer technology streams **155**
Appendix 5: Technology Cadetship – structural steel detailing stream **162**
Appendix 6: Competitive Manufacturing Vocational Graduate qualifications **168**
Appendix 7: MSA30309 Certificate III in Surface Coating Preparation and Application **174**
Appendix 8: Trade Measurement units and Skill Sets **178**
Appendix 9: Recreational Vehicle qualifications **180**
MSA10107 Certificate I in Manufacturing (Pathways) **192**
MSA10207 Certificate I in Process Manufacturing **197**
MSA20107 Certificate II in Process Manufacturing **201**
MSA20208 Certificate II in Manufacturing Technology **207**
MSA20510 Certificate II in Recreational Vehicle Service and Repair **211**
MSA20610 Certificate II in Recreational Vehicle Manufacture **219**
MSA30107 Certificate III in Process Manufacturing **227**
MSA30208 Certificate III in Manufacturing Technology **235**
MSA30309 Certificate III in Surface Preparation and Coating Application **253**
MSA30510 Certificate III in Recreational Vehicle Service and Repair **263**
MSA30610 Certificate III in Recreational Vehicle Manufacture **271**
MSA30710 Certificate III in Recreational Vehicle and Accessories Retailing **279**
MSA40108 Certificate IV in Manufacturing Technology **286**
MSA40311 Certificate IV in Process Manufacturing **303**
MSA40510 Certificate IV in Recreational Vehicles **315**
MSA40710 Certificate IV in Recreational Vehicle and Accessories Retailing **326**
MSA50108 Diploma of Manufacturing Technology **336**
MSA50311 Diploma of Production Management **355**
MSA50510 Diploma of Recreational Vehicles **364**
MSA60108 Advanced Diploma of Manufacturing Technology **373**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSASS00001 Confined space work team 391
MSASS00002 High pressure water jetting assistant 393
MSASS00003 High pressure water jetting operator 395
MSASS00004 Leading Hand/Supervisor 397
MSASS00005 License to operate a standard boiler 399
MSASS00006 License to operate an advanced boiler 400
MSASS00007 Trade Measurement Verification (Complex Measuring Instrument) 401
MSASS00008 Trade Measurement Verification (Limited Weighing Instrument) 403
MSASS00009 Trade Measurement Verification (Liquid Measuring Instrument Using Volume Measures) 405
MSASS00010 Trade Measurement Verification (Simple Measuring Instrument) 407
MSASS00011 Trade Measurement Verification (Simple Measure) 409
AUMANA001 Prepare and document quotations 411
Assessment Requirements for AUMANA001 Prepare and document quotations 414
AUMFTA001 Document manufacturing design processes 416
Assessment Requirements for AUMFTA001 Document manufacturing design processes 419
AUMGTT001 Apply trim to vehicle components 421
Assessment Requirements for AUMGTT001 Apply trim to vehicle components 425
FPICOT2238A Cut materials with a hand-held chainsaw 427
MEM23001A Apply advanced mathematical techniques in a manufacturing engineering or related environment 437
MSABLIC001 License to operate a standard boiler 443
MSABLIC002 License to operate an advanced boiler 458
MSAENV272B Participate in environmentally sustainable work practices 474
MSAENV472B Implement and monitor environmentally sustainable work practices 482
MSAENV672B Develop workplace policy and procedures for environmental sustainability 491
MSAPCI101A Adapt to work in industry 499
MSAPCI102A Apply effective work practices 509
MSAPCI103A Demonstrate care and apply safe practices at work 518
MSAPCII295A Operate manufacturing equipment 526
MSAPCII296A Make a small furniture item from timber 535
MSAPCII297A Make an object from cloth using an existing pattern 545
MSAPCII298A Make an object from metal 554
MSAPCII299A Make an object from plastic 564
MSAPMOHS100A Follow OHS procedures 574
MSAPMOHS110A Follow emergency response procedures 580
MSAPMOHS200A Work safely 586
MSAPMOHS205A Control minor incidents 594
MSAPMOHS210B Undertake first response to non-fire incidents 601
MSAPMOHS212A Undertake first response to fire incidents 609
MSAPMOHS216A Operate breathing apparatus 616
MSAPMOHS217A Gas test atmospheres 622
MSAPMOHS220A Provide initial First Aid response 628
MSAPMOHS300A Facilitate the implementation of OHS for a work group 636
MSAPMOHS400A Contribute to OHS management system 644
MSAPMOHS401A Assess risk 651
MSAPMOHS510A Manage risk 659
MSAPMOHS503A Maintain the workplace OHS management system 666
MSAPMOHS601A Establish workplace OHS management system 673
MSAPMOPS100A Use equipment 681
MSAPMOPS101A Make measurements 686
MSAPMOPS102A Perform tasks to support production 692
MSAPMOPS200A Operate equipment 698

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSAPMOPS201A Cut polymer materials 705
MSAPMOPS202A Fabricate polymer materials 713
MSAPMOPS212A Use organisation computers or data systems 721
MSAPMOPS244A Layout and cut materials 728
MSAPMOPS301A Treat corrosion 734
MSAPMOPS363A Organise on site work 741
MSAPMOPS400A Optimise process/plant area 748
MSAPMOPS401A Trial new process or product 756
MSAPMOPS404A Co-ordinate maintenance 764
MSAPMOPS405A Identify problems in fluid power system 771
MSAPMOPS406A Identify problems in electronic control systems 778
MSAPMOPS601A Design equipment and system modifications 785
MSAPMPER200C Work in accordance with an issued permit 792
MSAPMPER201A Monitor and control work permits 802
MSAPMPER202A Observe permit work 811
MSAPMPER205C Enter confined space 817
MSAPMPER300C Issue work permits 829
MSAPMPER400A Coordinate permit process 840
MSAPMSUP100A Apply workplace procedures 847
MSAPMSUP101A Clean workplace or equipment 853
MSAPMSUP102A Communicate in the workplace 859
MSAPMSUP106A Work in a team 864
MSAPMSUP172A Identify and minimise environmental hazards 869
MSAPMSUP200A Achieve work outcomes 875
MSAPMSUP201A Receive or despatch goods 882
MSAPMSUP204A Pack products or materials 889
MSAPMSUP205A Transfer loads 896
MSAPMSUP210A Process and record information 903
MSAPMSUP230A Monitor process operations 909
MSAPMSUP240A Undertake minor maintenance 915
MSAPMSUP273A Handle goods 922
MSAPMSUP280A Manage conflict at work 928
MSAPMSUP291A Participate in continuous improvement 934
MSAPMSUP292A Sample and test materials and product 939
MSAPMSUP300A Identify and implement opportunities to maximise production efficiencies 944
MSAPMSUP301A Apply HACCP to the workplace 950
MSAPMSUP303A Identify equipment faults 956
MSAPMSUP309A Maintain and organise workplace records 963
MSAPMSUP310A Contribute to the development of plant documentation 969
MSAPMSUP330A Develop and adjust a production schedule 975
MSAPMSUP382A Provide coaching/mentoring in the workplace 981
MSAPMSUP383A Facilitate a team 987
MSAPMSUP390A Use structured problem solving tools 993
MSAPMSUP400A Develop and monitor quality systems 999
MSAPMWJ201A Use high pressure water jetting equipment 1004
MSAPMWJ301A Operate a high pressure water jetting system 1014
MSARVG201A Tow a recreational vehicle safely 1025
MSARVS201A Install LP gas systems in a recreational vehicle 1033
MSARVS202A Repair/service LP gas systems in a recreational vehicle 1042
MSARVS301A Develop and update caravan industry knowledge 1051
MSARVS401A Assess and quote to service a recreational vehicle 1059

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSARVT201A Apply technical knowledge of recreational vehicle manufacturing to work activities 1065
MSATCM301A Test the mechanical properties of materials 1071
MSATCM302A Monitor ferrous melting and casting processes 1078
MSATCM303A Monitor non-ferrous melting and casting processes 1086
MSATCM304A Interpret basic binary phase diagrams 1095
MSATCM305A Demonstrate basic knowledge of casting operations 1100
MSATCM401A Prepare and examine metallographic samples 1106
MSATCM402A Monitor and test sands, cores and moulds 1112
MSATCM403A Evaluate mould design and gating 1118
MSATCM404A Undertake and interpret results of chemical analysis on metal samples 1124
MSATCM405A Determine and supervise heat treatment of metal 1132
MSATCM406A Apply basic chemical principles to metallurgy 1140
MSATCM501A Calculate and predict chemical outcomes in metallurgical situations 1147
MSATCM502A Identify and describe equipment for mineral and chemical processing plants 1154
MSATCM503A Recommend a refractory for an application 1160
MSATCM504A Select metal forming process 1166
MSATCM505A Select metal joining process 1172
MSATCM506A Monitor blast furnace operations 1178
MSATCM507A Monitor primary steel making process 1188
MSATCM508A Monitor secondary steelmaking operations 1194
MSATCM509A Recommend ferrous and non ferrous metals or alloys for an application 1200
MSATCM510A Apply metallurgical principles and techniques in welding and other thermal processes 1207
MSATCM511A Apply metallurgy principles and practice to determine metal forming and shaping processes 1214
MSATCM512A Apply metallurgy principles and practice to optimise furnace operation 1221
MSATCM513A Plan and complete metallurgical projects 1227
MSATCM514A Select surface treatment methods for metallic components or products 1236
MSATCM515A Analyse metallurgical failures of components and recommend preventative measures 1243
MSATCM516A Select non metallic materials for engineering applications 1250
MSATCM517A Determine corrosion prevention strategies for metal and alloys 1258
MSATCM518A Interpret complex binary phase diagrams 1265
MSATCS301A Interpret architectural and engineering design specifications for structural steel detailing 1270
MSATCS302A Detail bolts and welds for structural steelwork connections 1277
MSATCS501A Detail standardised structural connections 1284
MSATCS502A Detail structural steel members 1293
MSATCS503A Incorporate structural steel detailing into fabrication and construction project management 1303
MSATCS504A Detail ancillary steelwork 1310
MSATMINS301A Inspect a range of simple measures 1318
MSATMINS302A Inspect a range of simple measuring instruments 1329
MSATMINS401A Inspect a range of weighing instruments 1341
MSATMINS402A Inspect a range of liquid measuring instruments using volume measures 1353
MSATMINS403A Inspect a range of trading practices 1365
MSATMINS404A Inspect a range of pre-packaged products 1377
MSATMINS501A Inspect a range of complex measuring instruments 1389
MSATMREF301A Use and maintain reference standards 1403
MSATMVER301A Verify simple measures 1414
MSATMVER302A Verify a simple measuring instrument 1425

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSATMVER401A Verify a limited weighing instrument 1436
MSATMVER402A Verify a liquid measuring instrument using volume measures 1448
MSATMVER403A Verify inspector's class reference standards 1460
MSATMVER501A Verify a complex measuring instrument 1471
AUM4003A Interpret customer requirements 1485
AURAAA4002 Determine retail rates for work 1487
AURACA2001 Establish relations with customers 1492
AURACA3002 Establish customer requirements of a complex nature 1498
AURACA3003 Build customer relations 1504
AURAFA2004 Solve routine problems in an automotive workplace 1510
AURAFA5007 Develop and document specifications and procedures 1517
AURAKA3002 Adapt work processes to new technologies 1523
AURALA3001 Determine legal aspects of an automotive service and repair contract 1529
AURAMA3004 Maintain business image 1535
AURAMA4005 Manage complex customer issues 1541
AURAMA5006 Contribute to business improvement 1548
AURANN4001 Prepare a vehicle repair quotation 1554
AURATA3005 Estimate complex jobs 1561
AURETB3001 Repair electric braking systems 1568
AURC341903A Apply relevant finance, leasing and insurance contracts/policies 1576
AURETR2010 Fabricate, test and repair wiring harnesses and looms 1582
AURETR2012 Test and repair basic electrical circuits 1592
AURETR2015 Inspect and service batteries 1602
AURSAA2001 Process customer complaints 1610
AURSBA3002 Apply automotive parts interpretation process 1617
AURSCA2001 Select automotive parts and products 1624
AURSCA2002 Present stock and sales area 1632
AURSCA2003 Apply sales procedures 1637
AURSCA2004 Carry out cash, credit and funds transfers 1644
AURSCA2005 Sell products 1651
AURSCA2006 Promote products and services 1657
AURSLA2001 Apply legal requirements relating to product sale 1663
AURTNA5001 Estimate and calculate costs to repair, maintain or modify a vehicle 1669
AURTTA3017 Carry out vehicle safety and roadworthy inspections 1678
AURTTB2001 Inspect and service braking systems 1686
AURTTD2004 Inspect and service suspension systems 1695
AURTTJ2002 Remove and refit wheel hubs and associated brake components 1704
AURTTY3001 Repair chassis, frame and associated components 1713
AURV365356A Read and interpret vehicle body repair estimation/quotation 1722
AURVTG3011 Install side windows 1730
AURVTN2005 Remove and fit protector mouldings, transfers and decals 1739
AURVTN4032 Determine vehicle damage and recommended repair procedures 1748
AURVTP2007 Apply paint touch-up techniques 1756
AURVTS3004 Repair fibreglass and composite material components 1765
AURVTT3015 Fabricate canvas products 1774
AURVTT3016 Fabricate frame structures 1783
AURVTT3019 Fabricate and install canopies and curtains 1792
BSBCUS501C Manage quality customer service 1800
BSBFIM501A Manage budgets and financial plans 1806
BSBINM501A Manage an information or knowledge management system 1814
BSBMGT403A Implement continuous improvement 1821
BSBMGT502B Manage people performance 1827
BSBWRK510A Manage employee relations 1834

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FDFOP2005A Work in a socially diverse environment....1840
FNSORG501A Develop and manage a budget....1846
LMTCL2001B Use a sewing machine....1852
LMTCL2003B Identify fibres and fabrics....1858
LMTCL2006B Press work....1864
LMTCL2007B Lay up, mark and cut uncomplicated fabrics and lays....1870
LMTCL2008B Finish garment production....1877
LMTGN2008B Coordinate work of team or section....1882
LMTGN4002A Participate in product engineering....1888
LMTGN4016A Contribute to the development of products or processes....1894
LMTGN5004A Manage installation and commissioning of equipment and systems....1900
MEM03001B Perform manual production assembly....1906
MEM03003B Perform sheet and plate assembly....1912
MEM03004B Perform electronic/electrical assembly (production)....1918
MEM03006B Set assembly stations....1924
MEM05005B Carry out mechanical cutting....1930
MEM05007C Perform manual heating and thermal cutting....1936
MEM05012C Perform routine manual metal arc welding....1942
MEM05050B Perform routine gas metal arc welding....1947
MEM05051A Select welding processes....1953
MEM05052A Apply safe welding practices....1959
MEM06003C Carry out heat treatment....1968
MEM07001B Perform operational maintenance of machines/equipment....1974
MEM07015B Set computer controlled machines/processes....1980
MEM07024B Operate and monitor machine/process....1987
MEM07028B Operate computer controlled machines/processes....1993
MEM08002C Pre-treat work for subsequent surface coating....2000
MEM08007B Control surface finish production and finished product quality....2006
MEM08011B Prepare surfaces using solvents and/or mechanical means....2012
MEM08012B Prepare surfaces by abrasive blasting (basic)....2019
MEM08013B Prepare surfaces by abrasive blasting (advanced)....2026
MEM08014B Apply protective coatings (basic)....2032
MEM08015B Apply protective coatings (advanced)....2041
MEM08016B Control blast coating by-products, materials and emissions....2050
MEM09002B Interpret technical drawing....2056
MEM09005B Perform basic engineering detail drafting....2062
MEM09006B Perform advanced engineering detail drafting....2068
MEM09009C Create 2D drawings using computer aided design system....2074
MEM09011B Apply basic engineering design concepts....2081
MEM09155A Prepare mechanical models for computer-aided engineering (CAE)....2087
MEM09156A Prepare mechatronic models for computer-aided engineering (CAE)....2096
MEM09157A Perform mechanical engineering design drafting....2105
MEM09158A Perform mechatronics engineering design drafting....2114
MEM09204A Produce basic engineering detail drawings....2123
MEM09205A Produce electrical schematic drawings....2130
MEM09210A Create 3-D solid models using computer-aided design (CAD) system....2138
MEM09216A Interpret and produce curved 3-D shapes and patterns....2146
MEM10002B Terminate and connect electrical wiring....2151
MEM11001C Erect/dismantle scaffolding and equipment....2157
MEM11002C Erect/dismantle complex scaffolding and equipment....2164
MEM11003B Coordinate erection/dismantling of complex scaffolding/equipment....2172
MEM11004B Undertake dogging....2180
MEM11005B Pick and process order....2187

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM11006B Perform production packaging 2193
MEM11007B Administer inventory procedures 2198
MEM11010B Operate mobile load shifting equipment 2203
MEM11011B Undertake manual handling 2210
MEM11012B Purchase materials 2215
MEM11016B Order materials 2221
MEM11017B Organise and lead stocktakes 2226
MEM11021B Perform advanced operation of load shifting equipment 2231
MEM11022B Operate fixed/moveable load shifting equipment 2237
MEM12001B Use comparison and basic measuring devices 2243
MEM12002B Perform electrical/electronic measurement 2248
MEM12003B Perform precision mechanical measurement 2254
MEM12005B Calibrate measuring equipment 2260
MEM12006C Mark off/out (general engineering) 2266
MEM12022B Program coordinate measuring machines (advanced) 2273
MEM12023A Perform engineering measurements 2280
MEM12024A Perform computations 2286
MEM12025A Use graphical techniques and perform simple statistical computations 2293
MEM13001B Perform emergency first aid 2299
MEM13002B Undertake occupational health and safety activities in the workplace 2304
MEM13003B Work safely with industrial chemicals and materials 2310
MEM13004B Work safely with molten metals/glass 2316
MEM13010A Supervise occupational health and safety in an industrial work environment. 2322
MEM13013B Work safely with ionizing radiation 2330
MEM13014A Apply principles of occupational health and safety in the work environment 2338
MEM14001B Schedule material deliveries 2347
MEM14002B Undertake basic process planning 2352
MEM14003B Undertake basic production scheduling 2357
MEM14004A Plan to undertake a routine task 2363
MEM14005A Plan a complete activity 2369
MEM14085A Apply mechanical engineering analysis techniques 2376
MEM14086A Apply mechatronic engineering analysis techniques 2385
MEM14087A Apply manufactured product design techniques 2394
MEM14088A Apply maintenance engineering techniques to equipment and component repairs and modifications 2403
MEM14089A Integrate mechanical fundamentals into an engineering task 2413
MEM14090A Integrate mechatronic fundamentals into an engineering task 2421
MEM14091A Integrate manufacturing fundamentals into an engineering task 2429
MEM14092A Integrate maintenance fundamentals into an engineering task 2437
MEM15001B Perform basic statistical quality control 2446
MEM15002A Apply quality systems 2452
MEM15003B Use improvement processes in team activities 2458
MEM15004B Perform inspection 2464
MEM15005B Select and control inspection processes and procedures 2470
MEM15007B Conduct product and/or process capability studies 2477
MEM15008B Perform advanced statistical quality control 2484
MEM15010B Perform laboratory procedures 2489
MEM15011B Exercise external quality assurance 2496
MEM15012B Maintain/supervise the application of quality procedures 2502
MEM15024A Apply quality procedures 2508
MEM16002C Conduct formal interviews and negotiations 2513
MEM16003B Provide advanced customer service 2519

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM16005A Operate as a team member to conduct manufacturing, engineering or related activities 2525
MEM16006A Organise and communicate information 2532
MEM16007A Work with others in a manufacturing, engineering or related environment 2538
MEM16008A Interact with computing technology 2544
MEM16009A Research and analyse engineering information 2550
MEM16010A Write reports 2556
MEM16011A Communicate with individuals and small groups 2563
MEM16012A Interpret technical specifications and manuals 2571
MEM16013A Operate in a self-directed team 2578
MEM17001B Assist in development and deliver training in the workplace 2586
MEM17003A Assist in the provision of on the job training 2592
MEM18001C Use hand tools 2597
MEM18002B Use power tools/hand held operations 2603
MEM18003C Use tools for precision work 2609
MEM18006C Repair and fit engineering components 2616
MEM18010C Perform equipment condition monitoring and recording 2626
MEM18016B Analyse plant and equipment condition monitoring results 2632
MEM18038B Maintain wheels and tyres 2638
MEM18045B Fault find/repair electrical equipment/components up to 250 volts single phase supply 2645
MEM18055B Dismantle, replace and assemble engineering components 2652
MEM22001A Perform engineering activities 2659
MEM22002A Manage self in the engineering environment 2666
MEM22007A Manage environmental effects of engineering activities 2674
MEM22012A Coordinate resources for an engineering project or operation 2681
MEM22013A Coordinate engineering projects 2689
MEM22014A Coordinate engineering-related manufacturing operations 2698
MEM22015A Source and estimate engineering materials requirements 2707
MEM22017A Coordinate continuous improvement and technical development 2715
MEM22018A Coordinate sales and promotion of engineering-related products or services 2723
MEM23003A Operate and program computers and/or controllers in engineering situations 2731
MEM23004A Apply technical mathematics 2738
MEM23006A Apply fluid and thermodynamics principles in engineering 2744
MEM23007A Apply calculus to engineering tasks 2752
MEM23041A Apply basic scientific principles and techniques in mechanical engineering situations 2758
MEM23063A Select and test mechanical engineering materials 2765
MEM23064A Select and test mechatronic engineering materials 2773
MEM23109A Apply engineering mechanics principles 2781
MEM23111A Select electrical equipment and components for engineering applications 2789
MEM23112A Investigate electrical and electronic controllers in engineering applications 2798
MEM23113A Evaluate hydrodynamic systems and system components 2805
MEM23114A Evaluate thermodynamic systems and components 2812
MEM23115A Evaluate fluid power systems 2819
MEM23116A Evaluate programmable logic controller and related control system component applications 2827
MEM23117A Evaluate microcontroller applications 2835
MEM23118A Apply production and service control techniques 2843
MEM23119A Evaluate continuous improvement processes 2852
MEM23120A Select mechanical machine and equipment components 2861
MEM23121A Analyse loads on frames and mechanisms 2869

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM23122A Evaluate computer integrated manufacturing systems 2878
MEM23123A Evaluate manufacturing processes 2887
MEM23124A Measure and analyse noise and vibration 2897
MEM23125A Evaluate maintenance systems 2906
MEM24001B Perform basic penetrant testing 2917
MEM24002B Perform penetrant testing 2924
MEM24003B Perform basic magnetic particle testing 2931
MEM24004B Perform magnetic particle testing 2938
MEM24005B Perform basic eddy current testing 2945
MEM24006B Perform eddy current testing 2952
MEM24007B Perform ultrasonic thickness testing 2959
MEM24008B Perform ultrasonic testing 2966
MEM24009B Perform basic radiographic testing 2974
MEM24010B Perform radiographic testing 2981
MEM24011B Establish non-destructive tests 2989
MEM24012C Apply metallurgy principles 2996
MEM30005A Calculate force systems within simple beam structures 3003
MEM30006A Calculate stresses in simple structures 3009
MEM30007A Select common engineering materials 3015
MEM30008A Apply basic economic and ergonomic concepts to evaluate engineering applications 3022
MEM30009A Contribute to the design of basic mechanical systems 3028
MEM30010A Set up basic hydraulic circuits 3034
MEM30011A Set up basic pneumatic circuits 3040
MEM30012A Apply mathematical techniques in a manufacturing engineering or related environment 3046
MEM30013A Assist in the preparation of a basic workplace layout 3052
MEM30014A Apply basic just in time systems to the reduction of waste 3058
MEM30015A Develop recommendations for basic set up time improvements 3065
MEM30016A Assist in the analysis of a supply chain 3071
MEM30017A Use basic preventative maintenance techniques and tools 3076
MEM30018A Undertake basic process planning 3082
MEM30019A Use resource planning software systems in manufacturing 3088
MEM30020A Develop and manage a plan for a simple manufacturing related project 3095
MEM30021A Prepare a simple production schedule 3101
MEM30022A Undertake supervised procurement activities 3107
MEM30023A Prepare a simple cost estimate for a manufactured product 3114
MEM30024A Participate in quality assurance techniques 3120
MEM30025A Analyse a simple electrical system circuit 3126
MEM30027A Prepare basic programs for programmable logic controllers 3133
MEM30028A Assist in sales of technical products/systems 3138
MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements 3144
MEM30032A Produce basic engineering drawings 3151
MEM30033A Use computer-aided design (CAD) to create and display 3-D models 3157

Modification History

Version	Release Date	Comments
8.4	27 August 2014	ISC Upgrade to reinstate missing Skill Set: *Trade Measurement Verification (Simple Measure).*

8.3	9 February 2014	**ISC Upgrades**
		• 2 units updated to comply with new Australian Standard:
		  • MSAPMWJ201A Use high pressure water jetting equipment
		  • MSAPMWJ301A Operate a high pressure water jetting system
		• 14 qualifications updated to reflect imported units replaced by new releases.
		• Miscellaneous corrections
		Refer to MSA07v8.3 Summary Mapping for details.

8.2	5 April 2013	**ISC Upgrades** • Seven (7) competitive manufacturing qualifications not carried forward - superseded by new qualifications endorsed 20 April 2012 in MSS11v2 • Competitive manufacturing units of competency not carried forward - superseded by new units endorsed in MSS11v2 • New release of fifteen (15) qualifications - imported elective units updated to current versions (including prerequisites) • Editorial changes to six (6) units of competency • Editorial changes to two (2) licensing Skill Sets • Unit grid updated for one (1) Skill Set Refer to mapping for details.
8.1	15 October 2012	**ISC upgrade** Editorial changes to boiler units of competency to clarify WHS Regulations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Version	Release Date	Comments
8	15 May 2012	**Endorsed changes** Addition of two new units: • MSABLIC001 License to operate a standard boiler • MSABLIC002 License to operate and advanced boiler **ISC upgrades** • Inclusion of two boiler licensing Skill Sets • Inclusion of 59 units imported from MSS11v2 • Competitive Manufacturing qualifications superseded by new Competitive Systems and Practices (endorsed in MSS11v2). • Competitive Manufacturing units of competency in other MSA qualifications replaced by Competitive Systems and Practices units imported from MSS11v2. Refer to mapping for more details.
7	15 November 2011	Addition of two new qualifications: • MSA40311 Certificate IV in Process Manufacturing • MSA50311 Diploma of Production Management Inclusion of 51 additional imported units. (Refer to mapping for details.) ISC upgrades include: • Addition of a Leading Hand/Supervisor Skill Set • Updating of imported units • Minor editorial changes • Imported units updated in relevant qualifications.
6	April 2011	**Endorsed changes** Addition of eight new qualifications and six new

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Version	Release Date	Comments
		units of competency for recreational vehicle manufacture, retailing, service and repair. Inclusion of an additional 82 imported units as electives for recreational vehicle qualifications. Two new units of competency for water jetting included as electives in MSA30309. One new unit of competency to replace a deleted imported unit. **ISC upgrades** 11 qualifications adjusted for flexibility/sustainability requirements (refer to mapping for details) Minor edits to 5 MSAPM units (MSAPMOHS100A, OHS200A, OPS101A, OPS363A and SUP106A) Imported units updated and minor typographical errors corrected in mapping. ***Refer to Summary Mapping for details of changes to qualifications and units.***
5.1	July 2010	**ISC Updates**: Eight qualifications adjusted to comply with flexibility rules: MSA10107, MSA10207, MSA20107, MSA21108, MSA30107, MSA30309, MSA31108, MSA41108. Confined Space Entry units updated to comply with revised Australian Standard AS2685-2009:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Version	Release Date	Comments
		MSAPMPER200C, MSAPMPER205C and MSAPMPER300C. Sustainability units (MSAENV272B, MSAENV472B and MSAENV672B) updated to clarify terminology and to expand Range of Variables to better incorporate environmental sustainability. PML04 units of competency updated to MSL09 units in MSA30208, MSA40108, MSA50108 and MSA60108.
5	November 2009	• One new qualification - MSA30309 Certificate III in Surface Preparation and Coating Application. • Three new units of competency and an additional 35 imported units for inclusion in MSA07 aligned to the new certificate. • Fourteen (14) new units of competency and five Skill Sets for Trade Measurement (not aligned to any qualifications). **Refer to History for details.** In addition, minor corrections have been made to the Overview of Assessment Requirements in the Evidence Guide for two sustainability units (MSAENV272A and MSAENV472A).
4	27 July 2009	MSA07v4 includes two new qualifications: MSA71109 Vocational Graduate Certificate in Competitive Manufacturing MSA81109 Vocational Graduate Diploma of Competitive Manufacturing. It also includes 21 new units of competency.
3.1	12 March 2009	Version 3.1 includes six new units and the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Version	Release Date	Comments
		importation of an additional 10 MEM units for a new structural steel detailing stream in the following existing qualifications: • MSA30208 Certificate III in Manufacturing Technology • MSA50108 Diploma of Manufacturing Technology. Miscellaneous typographical errors have been corrected. Refer to Modification History for details.
3	27 August 2008	MCM04 qualifications and units of competency recoded and placed in MSA07. Key Competencies replaced in Competitive Manufacturing units with Employability Skills. Two new specialist streams for metallurgy and polymer technology have been added to the existing Technology Cadetship qualifications, now coded MSA30208 and MSA40108. Two new Technology Cadetship qualifications – MSA50108 and MSA60108. Category 1 changes to following MSAPM units resulting from review of PMA08: MSAPMPER200B, MSAPMPER205B, MSAPMPER300B and MSAPMOHS210B. Two additional MSAPM units: MSAPMPER202A and MSAPMPER400A Deletion of MSAPM302A Category 1 changes to MSA10107, MSA10207, MSA20107 and MSA30107 as a result of recoding of MCM units and changes to MSAPM units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Version	Release Date	Comments
		Additional Category 1 changes to MSA10107 to include updated versions of LMT and LMF units.
2	16 November 2007	Addition of three production support certificates and other generic units for use across the three process manufacturing Training Packages (PMA, PMB and PMC). This included the three new sustainability units. Units of competency in MSA10107 Certificate I in Manufacturing (Pathways) updated with units from PMB07 (details below).
1	April 2007	Initial release

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 8.4 - check whether this is the latest version by going to the training.gov.au website and locating information about the Training Package. Alternatively, contact Manufacturing Industry Skills Council at http://www.mskills.com.au to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Packages national code (which remains the same during its period of endorsement).

Explanation of the review date

The review date shown on the title page indicates when the Training Package is expected to be reviewed in the light of changes, such as changing technologies and circumstances. The review date is not an expiry date. Training Packages and their components remain current until they are reviewed or replaced.

MSA qualifications not carried forward

Notes:

- The Competitive Manufacturing qualifications were superseded in April 2012 by the Competitive Systems and Practices qualifications endorsed in MSS11v2.
- The Competitive Manufacturing qualifications have not been carried forward in version 8.2 of MSA07, but remain available in the system as part of previous versions of this Training Package.
- Refer to the summary mapping in MSS11v2 for details: MSS11.

LMFSF1001B	Produce basic soft furnishing accessories	Replaced by MSFSF1001
LMFSF2001B	Cut single layer fabrics	Replaced by MSFSF2001
MSACMC411A	Lead a competitive manufacturing team	Orphan unit - removed from MSA07

Mapping MSA07v8.4

Reinstatement of missing Skill Set: Trade Measurement Verification (Simple Measure).

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing peoples skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

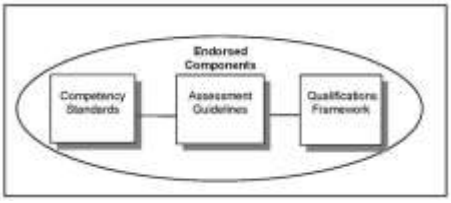
Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.



Competency Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

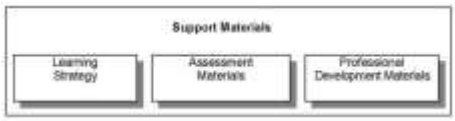
Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the 'packaging rules'. The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.



Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title**.

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example XYZ08. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example XYZ10108. Qualification codes are developed as follows:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in MSACMC210A:
- the first three characters signify the Training Package – MSA07 – in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An ‘A’ at the end of the code indicates that this is the original unit of competency. ‘B’, or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words ‘in’ for Certificates I to IV, and ‘of’ for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example: MSA10107 Certificate I in Manufacturing (Pathways)

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example: MSACMC210A Manage the impact of change on own work

Introduction to the Manufacturing Training Package (MSA07) Training Package

This Training Package has been developed as a significant step in the process of Training Package rationalisation work being undertaken by Manufacturing Skills Australia. There was an identified need for a 'whole of manufacturing' approach to many of the qualifications and units of competency contained in some of the manufacturing sector Training Packages.

Version 1

Certificate I in Manufacturing (Pathways)

The first qualification and units of competency to populate this new Training Package was the MSA10107 Certificate 1 in Manufacturing (Pathways). This will be followed closely by more units of competency and qualifications that will be applicable across all of manufacturing.

Refer to the Appendices attached to this Training Package for information on development of this certificate.

Version 2

Process Manufacturing Certificates

The process manufacturing certificates have been developed for use by the industry sectors covered by the following Training Packages:

- PMA02 Chemical, Hydrocarbons and Oil Refining Training Package
- PMB07 Plastics, Rubber and Cablemaking Training Package
- PMC04 Manufactured Mineral Products Training Package.

In the recently completed review of the Plastics, Rubber and Cablemaking Training Package it was determined that the production support certificates in PMA, PMB and PMC should be rationalised to increase flexibility and recognition across all of process manufacturing.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In keeping with the high market penetration of the Certificates in Process Manufacturing in PMB01, this title has been maintained for the common certificates. The certificates have been generalised and recoded for inclusion on MSA07 and as such, will be available across all of process manufacturing. This makes the elective units from PMA, PMB and PMC all available for selection in a Certificate in Process Manufacturing.

Other generic units

In addition to the generic support units developed for the Process Manufacturing Certificates, it has been recognised that there would be significant benefits to be gained from rationalising other units in PMA, PMB and PMC. A range of units have been developed for inclusion in MSA07, not aligned to any MSA qualifications at this time. These units are intended to be used as imported electives in the Certificates IV, Diplomas and Advanced Diplomas in PMA, PMB and PMC.

Refer to the Appendices for more details on development of the above certificates.

Version 3

MCM04 qualifications, new specialist streams for Technology Cadetship qualifications

Relocation of the MCM units and qualifications to MSA07 is the first step in a major rationalisation plan which will eventually see all the units and qualifications from the nine manufacturing Training Packages under the one framework. The changes are summarised below.

- The Competitive Manufacturing and Manufacturing Technology qualifications and units of competency have been recoded as MSA units and qualifications.
- The Competitive Manufacturing qualifications have been revised to incorporate units of competency covering sustainability skills and to include Employability Skills Summaries.
- All existing MCM units have been updated to replace Key Competencies with Employability Skills.

The MSAPMPER units and one MSAPMOHS unit have been revised as part of the current review of the Chemical, Hydrocarbons & Oil Refining Training Package.

- MSA07v2 qualifications (MSA10107, MSA10207, MSA20107 and MSA30107) updated with recoded MCM units, revised MSAPMPER units and updated LMT and LMF units.
- Addition of new metallurgy and polymer streams for the existing Certificate III in Manufacturing Technology.
- Addition of new polymer stream for the existing Certificate IV in Manufacturing Technology.
- Addition of Diploma and Advanced Diploma of Manufacturing Technology (metallurgy and polymer streams).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Full details on development of the Competitive Manufacturing qualifications and the new streams are included in the Appendices.

Version 3.1

New specialist stream for structural steel detailing in Technology Cadetship qualifications.

Six new units of competency for structural detailing and additional imported units have been added to the Manufacturing Technology qualifications to facilitate training of new entrants to this industry. Details of this development are included in the Appendices.

Version 4

Competitive Manufacturing Vocational Graduate qualifications

The need for development of Vocational Graduate qualifications in Competitive Manufacturing was identified by MSA in 2007 in response to requests for more in depth training and professional development for individuals who already had some skills or training in Competitive Manufacturing practices.

The following new qualifications are included in MSA07v4:

- MSA71109 Vocational Graduate Certificate in Competitive Manufacturing
- MSA81109 Vocational Graduate Diploma of Competitive Manufacturing

More information on this development is included in the Appendices.

Version 5

Certificate III in Surface Preparation and Coating Application

The surface preparation and protective coating application industry sector approached Manufacturing Skills Australia (MSA) in 2008 regarding the lack of a qualification for people working in this sector. MSA, the national Industry Skills Council with coverage of this area, responded to this concern by establishing a project in 2008 to ‘research existing units and develop units of competency to cover blast cleaning and coating’.

This research project identified a significant number of relevant units of competency and the need for at least one new unit of competency to cover the skill needs of this sector. As a result of this research, it also became clear that to fully respond to the industry’s need, a new qualification was required, utilising existing units in MEM05 and PMB07 and the proposed new unit(s).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Further research and consultation with the industry, the industry association and relevant RTOs identified that the appropriate level of qualification was AQF 3. MSA supported the findings and contracted Kevin Hummel, Total Training and Performance Solutions to develop the new units and packaging rules for a new Certificate III in Surface Preparation and Coating Application.

More information on this development is included in the Appendices.

Trade Measurement units and Skill Sets

In 2008, Manufacturing Skills Australia (MSA) contracted Ivan Johnstone, CIT Solutions, to undertake a scoping project to determine the scope of change required to update the Laboratory Operations Training Package (PML04). It was identified in that scoping project that because of changes to the regulatory environment for Australia's trade measurement system, there was a need to update/redevelop existing units of competency in MEM05 and/or develop new units to meet the needs of the National Measurement Institute (NMI).

- NMI is a Division of the Commonwealth Department of Innovation, Industry, Science and Research. The Institute is responsible for Australia's units and standards of measurement through the development and maintenance of standards of measurement, reference materials and reference techniques. The Institute has a wide variety of professional and technical staff who provide calibration, measurement, analysis, pattern approval testing and training services.

More information on this development is included in the Appendices.

Version 6

Recreational Vehicle qualifications

The recreational vehicle qualifications started with THC99 under the Tourism and Hospitality National Industry Training Advisory Board. This was revised to THC04 with minimal changes. With the merger of national ITABs into the ten Industry Skills Councils, THC04 came under the jurisdiction of the Service Industries Skills Councils. As the bulk of the use of these qualifications was in the fields of manufacture, service and repairs, it was realised that the recreational vehicle industry would be better served by bringing its qualifications under the coverage of the Manufacturing Industry Skills Council (Manufacturing Skills Australia – MSA). They have revised the qualifications and their associated units of competency and brought them into line with the current requirements and aligned them with similar manufacturing, service and repair qualifications.

This sector typically manufacture, repair and service recreational vehicles as required. Recreational vehicles include:

- motor homes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- caravans
- camper trailers
- slide-ons, and
- fifth wheelers

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis. Fittings are typically timber/particle board but may be any other suitable material.

More information on this development is included in the appendices.

Historical and General Information

Introduction to the Manufacturing Training Package (MSA07) Training Package

This Training Package has been developed as a significant step in the process of Training Package rationalisation work being undertaken by Manufacturing Skills Australia. There was an identified need for a 'whole of manufacturing' approach to many of the qualifications and units of competency contained in some of the manufacturing sector Training Packages.

Version 1

Certificate I in Manufacturing (Pathways)

The first qualification and units of competency to populate this new Training Package was the MSA10107 Certificate 1 in Manufacturing (Pathways). This will be followed closely by more units of competency and qualifications that will be applicable across all of manufacturing.

Version 6

Recreational Vehicle qualifications

The recreational vehicle qualifications started with THC99 under the Tourism and Hospitality National Industry Training Advisory Board. This was revised to THC04 with minimal changes. With the merger of national ITABs into the ten Industry Skills Councils, THC04 came under the jurisdiction of the Service Industries Skills Councils. As the bulk of the use of these qualifications was in the fields of manufacture, service and repairs, it was realised that the recreational vehicle industry would be better served by bringing its qualifications under the coverage of the Manufacturing Industry Skills Council (Manufacturing Skills Australia – MSA). They have revised the qualifications and their associated units of competency and brought them into line with the current requirements and aligned them with similar manufacturing, service and repair qualifications.

This sector typically manufacture, repair and service recreational vehicles as required. Recreational vehicles include:

- motor homes
- caravans
- camper trailers
- slide-ons, and
- fifth wheelers

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis. Fittings are typically timber/particle board but may be any other suitable material.

More information on this development is included in the appendices.

Version 7

Process manufacturing

The Certificate 1 to Certificate III in Process Manufacturing exist as generalist manufacturing qualifications which include technical units, but do not require any minimum number of them.

When Total Training and Performance Solutions (TaPS) undertook the Manufactured Mineral Products Training Package update project in 2009, a report was made to Manufacturing Skills Australia (MSA) suggesting the extension of the generic Certificates in Process Manufacturing to Certificate IV and Diploma level. This need was coincidentally confirmed by a hydrocarbons company in the same timeframe.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The identified need was to provide qualifications for a career path for those who already hold the Certificate III in Process Manufacturing, and also to provide qualifications to support a non-technical career path for others with technical Certificates III (or IV). While it might be argued that the Competitive Manufacturing, or the FrontLine Management qualifications already provide that, they are not seen as providing the same flexible mix of industry units as the generic Process Manufacturing qualifications which are truncated at the Certificate III because of the history of their development.

MSA supported the findings and contracted TaPS to develop the new qualifications.

Industry drivers for change

The major industry drivers for the improvements to this package are outlined below:

- Currently the Certificates I – III in Process Manufacturing exist as generalist manufacturing qualifications which include technical units, but do not require any minimum number of them. It was seen as desirous to extend these qualifications to provide a career path for those who already hold the Certificate III in Process Manufacturing.
- It was also seen as advantageous to provide qualifications to support a non-technical career path for those with technical Certificates III (or IV).

Version 8

Components for endorsement:

- Two (2) new high risk work licensing boiler operation units of competency.

The new units of competency will not be aligned to any qualifications, but will be available for use in Skill Sets and for importation into other Training Package qualifications as required.

Project background

The development of the two new units of competency follows on from Safe Work Australia's Strategic Issues Group on Occupational Health and Safety (SIG-OHS) and the review process conducted through the licensing Temporary Advisory Group (TAG). The agreement from this process resulted in the current three licensing categories for boiler operation, standard, intermediate and advanced boilers being replaced by a two tier licensing system for standard and advanced boilers. The new licensing categories need to be underpinned by endorsed units of competency specifically designed to meet regulatory requirements for skills and knowledge and a unit format compatible with other high risk work licensing units of competency already endorsed in the CPC08 Construction, Plumbing and Services, TLI10 Transport and Logistics and other national Training Packages.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The new units of competency will be supported by mandatory Assessment Instructions and Resource Requirements documentation agreed by national regulators and achievement of competency against the units will meet the educational requirements for licensing in each category.

The new licensing units of competency are not attached to any MSA qualification but can be imported to any Training Package as required. The new units will also be available as Skill Sets to allow for training and assessment to occur to support the competency requirements for licensing of boiler operations.

History

The Manufacturing Training Package (MSA07) has been developed as part of the rationalisation work being undertaken by Manufacturing Skills Australia.

Version 1

MSA07v1 contained the Certificate I in Manufacturing (Pathways).

Version 2

MSA07v2 was expanded to include the newly developed Certificates I, II and III in Process Manufacturing which are for use across the three process manufacturing sectors covered by PMA, PMB and PMC Training Packages.

Also included in Version 2 were the following units of competency that are available for importation to Certificates IV, Diplomas and Advanced Diplomas in PMA, PMB and PMC:

- MSAENV472A Implement and monitor environmentally sustainable work practices
- MSAENV672A Develop workplace policy and procedures for sustainability
- MSAPMOHS400A Contribute to OHS management system
- MSAPMOHS401A Assess risk
- MSAPMOHS503A Maintain the workplace OHS management system
- MSAPMOHS510A Manage risk
- MSAPMOHS601A Establish workplace OHS management system
- MSAPMOPS400A Optimise process/plant area
- MSAPMOPS401A Trial new process or product
- MSAPMOPS404A Co-ordinate maintenance
- MSAPMOPS405A Identify problems in fluid power system
- MSAPMOPS406A Identify problems in electronic control systems
- MSAPMSUP400A Develop and monitor quality systems

In Version 2, the PMB and process manufacturing units in MSA10107 Certificate I in Manufacturing (Pathways) were updated and recoded. Refer to Mapping of units for details.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Three environmental sustainability units have been developed by Manufacturing Skills Australia. They were included in the Process Manufacturing production support certificates and will be made available across all manufacturing Training Packages. The units are:

- MSAENV272A Participate in environmentally sustainable work practices
- MSAENV472A Implement and monitor environmentally sustainable work practices
- MSAENV672A Develop workplace policy and procedures for sustainability.

In version 3 (see below) these three units have been incorporated into the Competitive Manufacturing qualifications.

Version 3

Following are details of changes to MSA07v2:

- inclusion of the current Competitive Manufacturing and Manufacturing Technology qualifications and units of competency
- variation to existing Competitive Manufacturing qualifications to incorporate the three new units of competency covering sustainability skills and to include Employability Skills Summaries
- updating of existing MCM units to replace Key Competencies with Employability Skills
- updating of the MSAPMPER units and one MSAPMOHS unit which have been revised as part of the current review of the Chemical, Hydrocarbons & Oil Refining Training Package
- MSA07v2 qualifications (MSA10107, MSA10207, MSA20107 and MSA30107) updated with recoded MCM units, revised MSAPMPER units and updated LMT and LMF units.
- addition of new metallurgy and polymer pathways for the existing Certificate III in Manufacturing Technology
- addition of new polymer pathway for the existing Certificate IV in Manufacturing Technology
- addition of Diploma and Advanced Diploma of Manufacturing Technology (metallurgy and polymer pathways)

Version 3.1

- Version 3.1 includes six new MSA Technology Cadetship units and 10 additional MEM units as electives for a new structural steel detailing stream in MSA30208 Certificate III in Manufacturing Technology and MSA50108 Diploma of Manufacturing Technology.
- Miscellaneous typographical errors related to unit codes have been corrected in the unit tables in the following qualifications: MSA10107, MSA20107, MSA20208, MSA30208, MSA40108, MSA50108 and MSA60108.
- PMBPREP508A has been removed from the Manufacturing Technology elective bank in MSA50108 as it duplicates MEM09003B.

Version 4

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Inclusion of two new Competitive Manufacturing Vocational Graduate qualifications and the following new units:

MSACMG700A	Review continuous improvement processes
MSACMG701A	Prepare for and implement change
MSACMG702A	Review manufacturing practice tools and techniques
MSACMG703A	Analyse process changes
MSACMG704A	Facilitate improvements in the value chain
MSACMG705A	Undertake a qualitative review of a process change
MSACMG706A	Build relationships between teams in a manufacturing environment
MSACMG707A	Respond to a major non-conformance
MSACMG708A	Capture learning from daily activities in a manufacturing organisation
MSACMG709A	Facilitate improvements in the external value chain
MSACMG710A	Improve visual management in the workplace
MSACMG711A	Manage benchmarking studies
MSACMG712A	Lead a problem solving process to determine and solve root cause
MSACMG800A	Analyse data for relevance to organisational learning
MSACMG801A	Develop the competitive manufacturing approach
MSACMG802A	Audit the use of competitive tools
MSACMG803A	Develop models of future state manufacturing practice
MSACMG804A	Develop the value chain
MSACMG805A	Develop the learning processes of the manufacturing organisation
MSACMG806A	Develop and refine systems for continuous improvement in manufacturing organisations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSACMG807A	Develop problem solving capability of a manufacturing organisation

Version 5

New units of competency

Unit code	Unit title
MSAPMOPS201A	Cut polymer materials
MSAPMOPS202A	Fabricate polymer materials
MSAPMOPS301A	Treat corrosion
MSATMINS301A	Inspect a range of simple measures
MSATMINS302A	Inspect a range of simple measuring instruments
MSATMINS401A	Inspect a range of weighing instruments
MSATMINS402A	Inspect a range of liquid measuring instruments using volume measures
MSATMINS403A	Inspect a range of trading practices
MSATMINS404A	Inspect a range of pre-packaged products
MSATMINS501A	Inspect a range of complex measuring instruments
MSATMREF301A	Use and maintain reference standards
MSATMVER301A	Verify simple measures
MSATMVER302A	Verify a simple measuring instruments
MSATMVER401A	Verify a limited weighing instrument
MSATMVER402A	Verify a liquid measuring instrument using volume measures
MSATMVER403A	Verify inspector’s class reference standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSATMVER501A	Verify a complex measuring instrument

Additional imported units

MEM07001B	Perform operational maintenance of machines/equipment
MEM08002C	Pre-treat work for subsequent surface coating
MEM08007B	Control surface finish production and finished product quality
MEM08011B	Prepare surfaces using solvents and/or mechanical means
MEM08012B	Prepare surfaces by abrasive blasting (basic)
MEM08013B	Prepare surfaces by abrasive blasting (advanced)
MEM08014B	Apply protective coatings (basic)
MEM08015B	Apply protective coatings (advanced)
MEM08016B	Control blast coating by-products, materials and emissions
MEM11001C	Erect/dismantle scaffolding and equipment
MEM11002C	Erect/dismantle complex scaffolding and equipment
MEM11003B	Coordinate erection/dismantling of complex scaffolding/equipment
MEM11004B	Undertake dogging
MEM11010B	Operate mobile load shifting equipment
MEM11011B	Undertake manual handling
MEM11012B	Purchase materials
MEM11016B	Order materials
MEM11021B	Perform advanced operation of load shifting equipment
MEM11022B	Operate fixed/moveable load shifting equipment
MEM12001B	Use comparison and basic measuring devices
MEM13001B	Perform emergency first aid

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16002C	Conduct formal interviews and negotiations
MEM16011A	Communicate with individuals and small groups
MEM16013A	Operate in a self directed team
MEM17001B	Assist in the development and delivery of training in the workplace
MEM17003A	Assist in the provision of on the job training
MNMG237A	Work safely at heights
PMBPROD241C	Lay up rubber lining or lag pulleys
PMBPROD242A	Bond polymers to surfaces
PMBPROD248C	Prepare surfaces for coating
PMBPROD265C	Operate portable vulcanising equipment
PMBPROD323C	Produce powder coated products
PMBPROD375B	Vulcanise products using an autoclave

Version 6

Refer to summary mapping for details of changes to MSA07 and Recreational Vehicle qualifications and units of competency.

Version 7

Addition of two new qualifications:

- MSA40311 Certificate IV in Process Manufacturing
- MSA50311 Diploma of Production Management

Inclusion of 51 additional imported units.

Version 8

Two new units of competency

Unit code	Unit title
MSABLIC001	License to operate a standard boiler
MSABLIC002	License to operate an advanced boiler

Introduction to the Industry

The manufacturing industry

The manufacturing industry's contribution to Australia's gross domestic product (GDP) has been falling in percentage terms since the early 1960s as other industries have risen in prominence. Despite this it is still the second largest segment of the Australian economy. In 2005–06, the industry had a gross industry product of $96 billion, exports of $75 billion and employed 1,052,000 persons. Manufacturing is a major contributor to the state economies of South Australia, Victoria, Tasmania and New South Wales.

The scope of 'manufacturing' occupations covers a broad spectrum. The skills profile of the manufacturing industry covers production workers, tradespeople, technicians and associate professionals as well as professionals. These are applied in the range of manufacturing from simply transformed to elaborately transformed materials.

Qualification Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*.
http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction

receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;

take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the section of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning

take limited responsibility for the output of others.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards

take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters

take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters

demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.
-

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Qualification Pathways

Qualifications in MSA07

The new Manufacturing Training Package was initially developed to include all qualifications across the manufacturing industries as the existing manufacturing Training Packages are rationalised. Information on some of the qualifications available in MSA07 follows.

Pathways qualifications

MSA10107 Certificate I in Manufacturing (Pathways)

The Certificate I in Manufacturing (Pathways) is a cross-manufacturing certificate, utilising elective units from a range of MSA Training Packages. The packaging rules for MSA10107 are based on the agreed Pathways qualification model:

- three core Pathways units
- one industry/technical unit* to be chosen from a bank of units imported from MCM04
- balance of units from a bank of elective units imported from other MSA Training Packages.

***Note** that the industry/technical units coded "MSAPII" are designed for use only in a Pathways qualification or skills set. They should not be used in other qualifications as replacements for units that have direct job outcomes.

There is significant support from a range of manufacturing industries for the Pathways Certificate I. The certificate has been reviewed and approved by MSA's industry advisory committees, whose members represent:

- textiles, clothing, footwear and furniture
- process manufacturing
- metal and engineering.

The Certificate I in Manufacturing (Pathways) provides a generic, cross manufacturing Certificate I designed to:

- develop both employability and technical skills
- allow for selection of competency standards from a range of manufacturing Training Packages
- encourage collaborative delivery and assessment approaches\
- map to existing qualifications
- include opportunities for recognition against existing qualifications
- provide a clear pathway into other Training Package qualifications and/or employment.

The Pathways Certificate I also responds to the need to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- provide pathways for those whom access to formal vocational education and training has been limited
- ensure consistency with existing Certificate I qualifications
- ensure that employment related solutions are encouraged throughout the structure of the qualifications and that guideline materials provided are in alignment with licensing boundaries
- make employability and generic skills 'front and centre' in the development of qualifications
- provide opportunities for new pedagogical approaches and for local input.

It is expected that as manufacturing Training Packages are reviewed and/or updated, this certificate will replace a number of existing Certificates I.

MSA20208 Certificate II in Manufacturing Technology

This qualification was developed and endorsed in the Competitive Manufacturing Training Package. It applies to a learning and assessment environment where access to normal production operations is not available. A typical environment will be for application in a VET in Schools program or other simulated or trial manufacturing environment where a high degree of supervision exists. The units are suitable for delivery in a school environment and for schools to contextualize the units to local manufacturing industry activities.

Process Manufacturing qualifications

Process Manufacturing Certificates I, II, III and IV

The three Process Manufacturing Certificates (or production support certificates) cater for people working in the manufacturing industry and filling vital production support roles, but who may not have the opportunity to develop competence in sufficient technical units of competency related directly to producing products.

These certificates have been developed for inclusion in the Manufacturing Training Package (MSA07) as common certificates for use across the three process manufacturing Training Packages:

- Chemical, Hydrocarbons and Oil Refining Training Package (PMA)
- Plastics, Rubber and Cablemaking Training Package (PMB)
- Manufactured Mineral Products Training Package (PMC).

The packaging rules for these certificates allow for the importation of electives from PMA, PMB and PMC. Registered Training Organisations should refer to Training.gov.au (www.training.gov.au) to access units of competency from these packages.

Production Management qualifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Production Management Diploma

The Diploma of Production Management was developed to provide the skills needed to assist organisations improve production where competitive manufacturing (lean) processes are not fully employed. It therefore complements but does not duplicate qualifications supplying skills related to competitive manufacturing.

The qualification supplies the skills that can be applied to the design and control of production systems within an organisation, including:

- planning and scheduling
- tracking and analysing
- directing and operating.

Competitive Manufacturing qualifications

General Comments

The Competitive Manufacturing qualifications were developed as a collaborative response from Australia's manufacturing Industry Advisory Bodies to assist manufacturing industry improve manufacturing practice through the development of innovative vocational education and training (VET) qualifications and units of competency. Full details on this development are in the Appendices to MSA07.

As the Competitive Manufacturing qualifications complement manufacturing Training Packages, provision is made in the qualifications for the importation of relevant sector specific units of competency into CM qualifications. It is also expected that CM units of competency will be imported into existing manufacturing Training Packages when they are reviewed, or under continuous improvement provisions. Not all CM units of competency may be appropriate for any given sector.

Due to the nature of CM, it is expected that most delivery and assessment will be done in partnership with an enterprise, or group of enterprises, which are embarking on competitive manufacturing. A project style of delivery is envisaged for many units of competency.

It may be appropriate to grant recognition of prior learning (RPL) for certain FMI units depending on the amount and type of contextualisation applied to the FMI unit. As the equivalence will depend on the contextualisation applied, it is not possible to give general advice at this stage.

Companies embarking on competitive/lean manufacturing will frequently choose different starting points, and often different names to describe what they are doing. This Training Package allows for these differences in approach and relevant units of competency should be selected to match the starting point and the strategies being adopted.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where sector specific competencies are required, these should be imported from the relevant sector specific Training Package. Relevant units at the same level or at an AQF level one up or one below the selected CM qualification should be chosen.

Using the CM units

The CM units have been written with the intention that they be used in a number of contexts.

The units have been packaged into specific Competitive Manufacturing qualifications. These are appropriate for individuals and enterprises where the need for generic manufacturing practice skills is dominant over the need for specific technical skills. The requirements for Competitive Manufacturing qualifications are detailed in the packaging rules for each qualification.

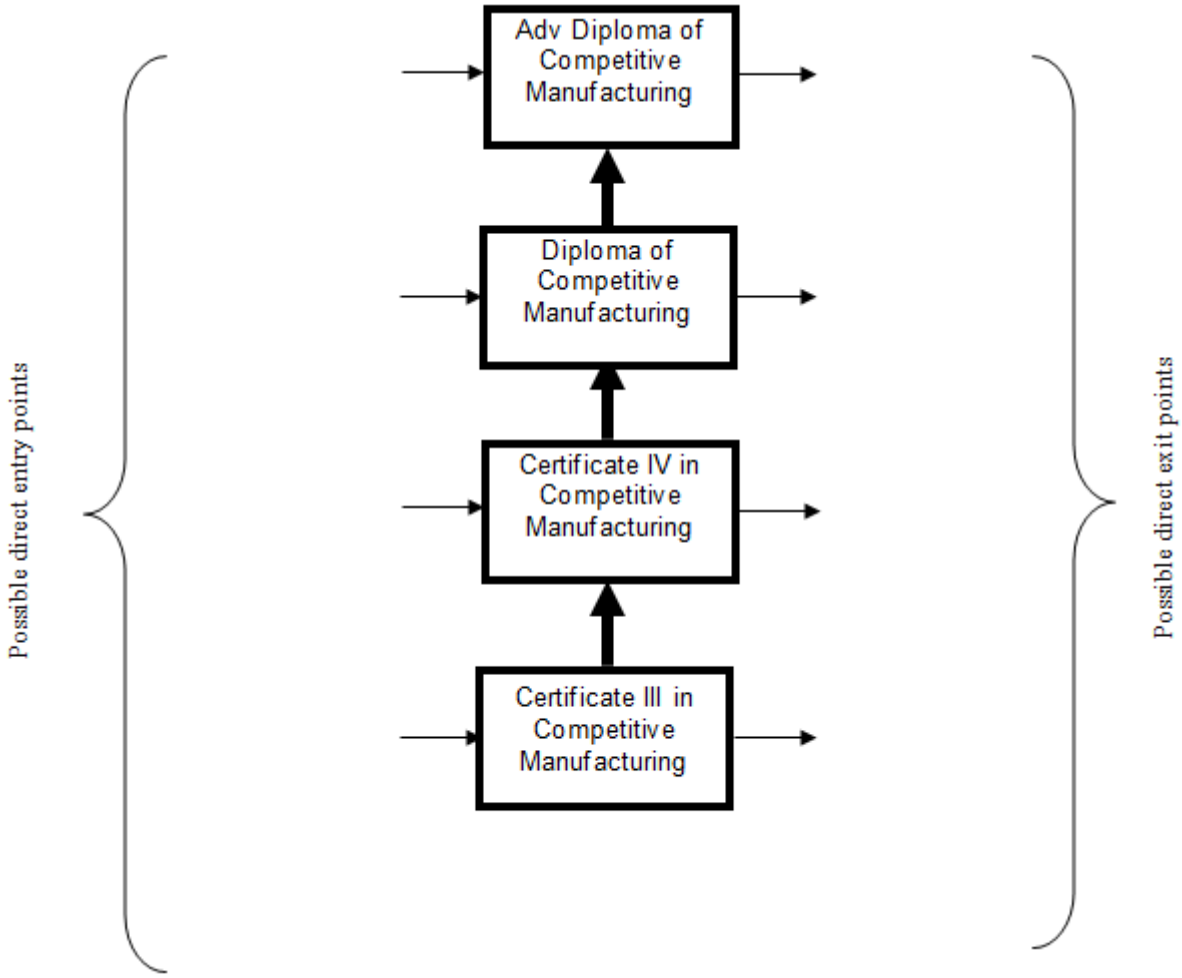
The units are also intended to be imported into sector specific Training Packages and qualifications. This would be appropriate where the need for sector specific and/or technical skills is dominant, but there is also a need for generic manufacturing practice skills. The requirements for these sector specific qualifications will be contained in their respective Training Packages and Qualifications Frameworks.

It is expected that many personnel in manufacturing will have some need of the manufacturing practice skills defined by the Competitive Manufacturing units of competency. Their importation into manufacturing Training Packages is encouraged. Imported units should show the original code number and unit title.

Qualification Pathways for Competitive Manufacturing – AQF II to VI

The diagram below represents a model of the available qualifications and pathways. Details are in the packaging rules for each qualification. Contact Manufacturing Skills Australia {www.mskills.com.au} for further details.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance



Competitive Manufacturing Vocational Graduate qualifications

The addition of these new qualifications will enable a professional development pathway to be offered for individuals who have prior experience or training in competitive manufacturing.

Industry priorities addressed in the new Vocational Graduate qualifications are to provide additional development of skills and knowledge in competitive manufacturing practices for individuals who have prior training or industry experience in competitive manufacturing. This need for additional skill is usually apparent after an enterprise has completed initial implementation of a competitive manufacturing system such as lean manufacturing and needs to progress implantation of the system to a higher level of performance beyond that achieved from the initial implementation.

Development of the Vocational Graduate Competitive Manufacturing qualifications is also a response to industry advice that not all needs for increased competency in competitive manufacturing skills is related to promotion of an individual to a position of increased responsibility. As stated in the previous paragraph the demand for increased skill and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

knowledge can also be related to the stage of an enterprise's implementation of a competitive manufacturing system

The Vocational Graduate Competitive Manufacturing qualifications also meet the industry need for in depth competitive manufacturing training in skills associated with establishing workforce understanding and participation in competitive manufacturing and for advanced value chain skills.

The new Vocational Graduate Competitive Manufacturing qualifications now offer a choice of two levels of professional development for individuals seeking to extend their knowledge of and skills in competitive manufacturing systems. Unlike the existing endorsed AQF II – VI Competitive Manufacturing qualifications they do not have assumptions that the candidate will be working at a particular level in industry (e.g. supervisor or manager). For this reason they are likely to be seen as ideal training for change agents and other expert resource people in competitive manufacturing as well as offering further skill development to any one with previous competitive manufacturing training or experience.

Consultations also indicated that the project based nature of many of the units and the lower but more intense nature of the qualifications may attract more senior and experienced personnel to the qualifications compared to the existing Diploma and Advanced Diploma of Competitive Manufacturing which are designed as high level entry level qualifications to competitive manufacturing.

Manufacturing Technology Qualifications

In August 2003 the Australian Industry Group with funding assistance from ANTA established a Manufacturing Technician Training Initiative project known colloquially as the Technology Cadetship Project. The aim of the project was to develop and promote more efficient pathways for school leavers to enter technical occupations in manufacturing industry. One of the key objectives was to establish entry level qualifications linked to on and off the job training in a cadetship arrangement. The term Technology Cadetship was developed to differentiate the level of training from that commonly found in apprenticeships and traineeships although the principle of combined off and on the training and mutual obligation of employer and employee is the same.

General Advice – Technology Cadetship arrangements

These qualifications may be delivered as part of a cadetship contract of training often called a Technology Cadetship. The units listed for all these qualifications are taken from a number of existing Training Packages. These units have been examined for suitability in a cadetship environment and repackaged to suit entry level technology based training in manufacturing.

Structure of Technology Cadetships

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Technology Cadetship related qualifications are very flexible qualifications with a minimum number of core units and specialisations that maximise flexibility. The electives have been chosen to give entry and operational skills in a wide range of manufacturing technology application areas. Each qualification consists of specialist options. Each stream indicates the units that may be taken in that particular specialisation. It is intended at a later date to add additional units and streams to the qualifications.

Manufacturing Technology specialist streams

The streams available in the Manufacturing Technology qualifications offer a significant choice of electives. In MSA07v3.1, the streams available are:

Certificate III in Manufacturing Technology

- CAD/Drafting
- Manufacturing Operations
- Laboratory Operations
- Technical Officer
- Polymer Technology
- Metallurgy
- Structural Steel Detailing

Certificate IV in Manufacturing Technology

- CAD/Drafting
- Manufacturing Operations
- Laboratory Operations
- Technical Officer
- Polymer Technology

Diploma and Advanced Diplomas of Manufacturing Technology

- Polymer Technology
- Metallurgy
- Structural Steel Detailing

Reference to these specialisations may be included on any qualification statement that is issued. This could be achieved by adding the pathway descriptor below the formal title of the qualification as shown in example 1 or by an additional sentence as shown in example 2 below.

Example 1

Certificate III in Manufacturing Technology

Manufacturing Operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Example 2

Certificate III in Manufacturing Technology

Achieved through the Manufacturing Operations specialisation

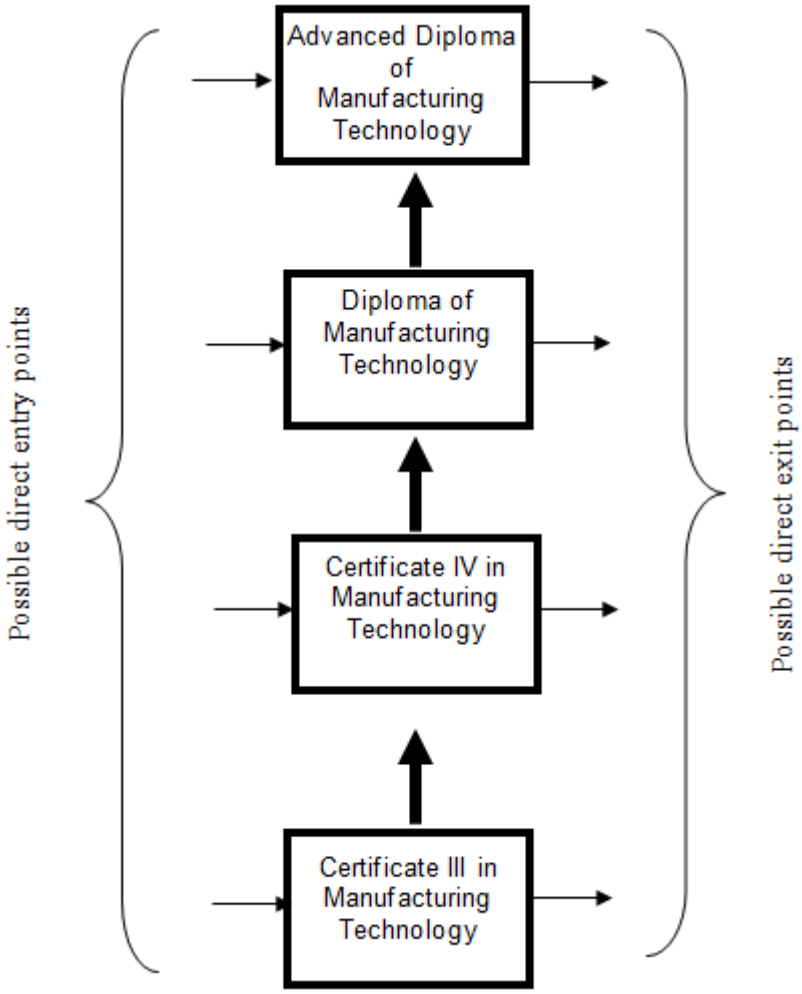
It should also be noted that a person holding the Metal and Engineering Training Package Certificate III in Engineering – Technician will satisfy all of the requirements for a Certificate III in Manufacturing Technology, and with an additional five units of competency from the particular stream chosen will satisfy the requirements for a Certificate IV in Manufacturing Technology.

Qualification Pathways for Manufacturing Technology

The diagram below represents a model of the qualifications and pathways. Details are in the packaging rules for each qualification. Contact Manufacturing Skills Australia {www.mskills.com.au} for further details.

The polymer technology pathway is intended for people who plan to become polymer technicians, and who are not currently working as operators in the polymer industries. It is recommended that those who have already achieved a Certificate II from the Plastics, Rubber and Cablemaking Training Package would be better served by completing the Certificate III in Polymer Processing.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance



Apprenticeships

The Process Manufacturing and Competitive Manufacturing qualifications within this Training Package are potential New Apprenticeships. However these qualifications have been developed primarily for existing manufacturing workers, especially those working as or likely to become team leaders. For this reason existing worker New Apprenticeships may be more appropriate than application to school leavers.

VET in Schools

The delivery and assessment of competencies aligned to AQF 2 under this Training Package in appropriately designed VET in schools programs is encouraged. However, due to the requirements to demonstrate competency, it would be difficult for a school to assess and award the Competitive Manufacturing qualifications except in close partnership with an appropriate organisation from the industry. The AQTF rules are the overriding requirements in this regard.

The Certificate II in Manufacturing Technology has been developed specifically for use as a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

VET in schools program.

Prerequisites

Some units of competency have stated prerequisites (these have been kept to a minimum). In any approved training scheme, it is expected that competency will be attained in the prerequisite units before it is attained in the unit having the prerequisites. Imported units of competency may also have prerequisites which should be observed. In this situation a unit with two prerequisites will be counted as three units towards the qualification once competency has been attained in all units.

In an assessment of existing competency, it is possible to assess the unit and its prerequisites together as an integrated assessment. In this situation as well, a unit with two prerequisites will be counted as three units towards the qualification once competency has been attained in all units.

Note that the achievement of prerequisite competencies will be recognised for the award of the qualification, regardless of the method by which the participant has gained the competencies (e.g. prior learning and/or experience). A person entering at AQF 3 and proceeding through the qualifications in an orderly manner might be expected to be assessed on the prerequisites. A person entering at a higher AQF level might expect to be able to demonstrate their competence in the prerequisite in any of a number of ways, including an assessment integrated with the higher unit. RTOs developing formal learning pathways may find the prerequisite trail useful in designing a hierarchical learning program, or they may choose to integrate the prerequisite unit into the higher level unit for purposes of delivery and assessment, or some other approach.

Skill Sets in this Training Package

Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording "these competencies meet [insert skill set title or identified industry area] need" on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2010 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment. http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

Manufacturing Skill Sets

Industry has supported the creation of a range of Skill Sets to assist with meeting the competency needs of a developing sector.

Some job roles in some sectors of the industry do require a licence, however, there is no overall industry requirement for this and so no Skill Set associated with licensing has been developed. The industry manages the competency requirements of its workforce to ensure compliance with a vast web of regulatory requirements.

The Skill Sets in MSA07 have been developed in consultation with the industry and are based on logical clusters of units which meet critical industry needs. These Skill Sets consist of clusters of competencies which are commonly practiced together. They reflect an industry need to be able to recognise that a person can undertake these defined roles.

Trade Measurement Skill Sets

Responsibility for trade measurement matters will transfer to the Commonwealth on 1 July, 2010. The National Measurement Institute (NMI) has the responsibility of administering the national trade measurement legislation which encourages and promotes accurate measurement in the sale of goods.

Currently, there are approximately 100 trade measurement inspectors who undertake trade measurement activities that can be categorised into five distinct work functions including:

- instrument verification
- pre-packaged products
- trading practices
- licensing
- investigations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In addition to the inspectors, there are approximately 2000 verifiers who work under a servicing licence to verify measuring instruments and measures used in trade measurement. The principal occupations of verifiers are fitters, mechanics, quality assurance technicians, instrument manufacturers or importers and software developers. Verification of measuring instruments only represents about 10% of their core functions and they spend the majority (90%) of their time repairing, commissioning, manufacturing or selling measuring instruments. Verification involves testing instruments using National Test Procedures to ensure they consistently measure within requirements. Instruments that pass these tests are marked to indicate they are suitable for trade use.

Trade measuring instruments vary greatly in design and complexity. Examples include, shop scales, petrol pumps, weighbridges, machines for measuring length, LPG bulk flowmetering systems, rail weighbridges, high flow rate fuel measuring systems and belt weighers. To address this diversity, the industry and the National Measurement Institute have supported the development of five (5) Skill Sets for Trade Measurement Verification. These are:

- Trade Measurement Verification (Simple Measure)
- Trade Measurement Verification (Simple Measuring Instrument)
- Trade Measurement Verification (Limited Weighing Instrument)
- Trade Measurement Verification (Liquid Measuring Instrument Using Volume Measures)
- Trade Measurement Verification (Complex Measuring Instrument).

Each Skill Set consists of two (2) units that cover the competency requirements of conducting verification tests for the specific class of trade measuring instrument listed in the title.

From 2010, verifiers will need to achieve the relevant Skill Set before being eligible to work as a verifier under a trade measurement servicing licence.

- Skill Set: Trade Measurement Verification (Simple Measure)
- Skill Set: Trade Measurement Verification (Simple Measuring Instrument)
- Skill Set: Trade Measurement Verification (Limited Weighing Instrument)
- Skill Set: Trade Measurement Verification (Liquid Measuring Instrument Using Volume Measures)
- Skill Set: Trade Measurement Verification (Complex Measuring Instrument)

High Pressure Water Jetting Skill Sets

Industry has supported the creation of a range of Skill Sets to assist with meeting the competency needs of a developing sector.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Some job roles in some sectors of the industry do require a licence, however, there is no overall industry requirement for this and so no Skill Set associated with licensing has been developed. The industry manages the competency requirements of its workforce to ensure compliance with a vast web of regulatory requirements. The Skill Sets below have been developed in consultation with the industry and are based on logical clusters of units which meet critical industry needs.

These Skill Sets consist of clusters of competencies which are commonly practiced together. They reflect an industry-wide need to be able to recognise that a person can undertake these defined roles.

- Skill Set: High pressure water jetting operator
- Skill Set: High pressure water jetting assistant
- Skill Set: Confined space work team

Boiler Operations Skill Sets

Two Skill Sets have been developed for boiler licensing:

- Licence to operate a standard boiler
- Licence to operate an advanced boiler

Employability Skills

Employability Skills replacing Key Competency information from 2006

In May 2005, the approach to incorporate Employability Skills within Training Package qualifications and units of competency was endorsed. As a result, from 2006 Employability Skills will progressively replace Key Competency information in Training Packages.

Background to Employability Skills

Employability Skills are also sometimes referred to as generic skills, capabilities or Key Competencies. The Employability Skills discussed here build on the Mayer Committee's Key Competencies, which were developed in 1992 and attempted to describe generic competencies for effective participation in work.

The Business Council of Australia (BCA) and the Australian Chamber of Commerce and Industry (ACCI), produced the *Employability Skills for the Future* report in 2002 in consultation with other peak employer bodies and with funding provided by the Department of Education, Science and Training (DEST) and the Australian National Training Authority (ANTA). Officially released by Dr Nelson (Minister for Education, Science and Training) on 23 May 2002, copies of the report are available from the DEST website at: http://www.dest.gov.au/archive/ty/publications/employability_skills/index.htm.

The report indicated that business and industry now require a broader range of skills than the Mayer Key Competencies Framework and featured an Employability Skills Framework identifying eight Employability Skills*:

- communication
- teamwork

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- problem solving
- initiative and enterprise
- planning and organising
- self-management
- learning
- technology.

The report demonstrated how Employability Skills can be further described for particular occupational and industry contexts by sets of facets. The facets listed in the report are the aspects of the Employability Skills that the sample of employers surveyed identified as being important work skills. These facets were seen by employers as being dependent both in their nature and priority on an enterprise's business activity.

* Personal attributes that contribute to employability were also identified in the report but are not part of the Employability Skills Framework.

Employability Skills Framework

The following table contains the Employability Skills facets identified in the report

Employability Skills for the Future.

Skill	**Facets** Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
Communication that contributes to productive and harmonious relations across employees and customers	• listening and understanding • speaking clearly and directly • writing to the needs of the audience • negotiating responsively • reading independently • empathising • using numeracy effectively • understanding the needs of internal and external customers • persuading effectively • establishing and using networks • being assertive • sharing information • speaking and writing in languages other than English
Teamwork that contributes to productive working relationships and outcomes	• working across different ages irrespective of gender, race, religion or political persuasion • working as an individual and as a member of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	a team • knowing how to define a role as part of the team • applying teamwork to a range of situations e.g. futures planning and crisis problem solving • identifying the strengths of team members • coaching and mentoring skills, including giving feedback
Problem solving that contributes to productive outcomes	• developing creative, innovative and practical solutions • showing independence and initiative in identifying and solving problems • solving problems in teams • applying a range of strategies to problem solving • using mathematics, including budgeting and financial management to solve problems • applying problem-solving strategies across a range of areas • testing assumptions, taking into account the context of data and circumstances • resolving customer concerns in relation to complex project issues
Initiative and enterprise that contribute to innovative outcomes	• adapting to new situations • developing a strategic, creative and long-term vision • being creative • identifying opportunities not obvious to others • translating ideas into action • generating a range of options • initiating innovative solutions
Planning and organising that contribute to long and short-term strategic planning	• managing time and priorities - setting time lines, coordinating tasks for self and with others • being resourceful • taking initiative and making decisions • adapting resource allocations to cope with contingencies • establishing clear project goals and deliverables • allocating people and other resources to tasks • planning the use of resources, including time

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	management • participating in continuous improvement and planning processes • developing a vision and a proactive plan to accompany it
	• predicting - weighing up risk, evaluating alternatives and applying evaluation criteria • collecting, analysing and organising information • understanding basic business systems and their relationships
Self-management that contributes to employee satisfaction and growth	• having a personal vision and goals • evaluating and monitoring own performance • having knowledge and confidence in own ideas and visions • articulating own ideas and visions • taking responsibility
Learning that contributes to ongoing improvement and expansion in employee and company operations and outcomes	• managing own learning • contributing to the learning community at the workplace • using a range of mediums to learn - mentoring, peer support and networking, IT and courses • applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work) • having enthusiasm for ongoing learning • being willing to learn in any setting - on and off the job • being open to new ideas and techniques • being prepared to invest time and effort in learning new skills • acknowledging the need to learn in order to accommodate change
Technology that contributes to the effective carrying out of tasks	• having a range of basic IT skills • applying IT as a management tool • using IT to organise data • being willing to learn new IT skills • having the OHS knowledge to apply technology • having the appropriate physical capacity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view Employability Skills at the qualification level and capture the key aspects or facets of the Employability Skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of Employability Skills in learning and assessment strategies.

The following is important information for trainers and assessors about Employability Skills

Summaries.

- Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.
- Employability Skills Summaries contain general information about industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.
- The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.
- Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).
- Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.

Industry Requirements for Employability Skills

This is a technology based industry and a key role of manufacturing personnel is the solving of problems. They are expected to operate in both permanent and *ad hoc* teams as required. The communication of key safety, health, environmental and procedural/operational information to other personnel is a vital requirement.

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing and registration requirements; and assessment pathways.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:

- benchmarks for assessment
-
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF

Benchmarks for Assessment

The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Principles of Assessment

All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:

- validity
- reliability
- flexibility
- fairness
- sufficiency

These principles must be addressed in the:

- design, establishment and management of the assessment system for this Training Package
- development of assessment tools, and
- the conduct of assessment.

Validity

Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

(a) assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance

(b) assessment of knowledge and skills must be integrated with their practical application

(c) judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency

Reliability

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

Flexibility

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

Fairness

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

Sufficiency

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough *appropriate* evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

Rules of Evidence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.

Valid

Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

Sufficient

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

Current

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

Authentic

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.

Assessment Requirements of the Australian Quality Training Framework

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 *Essential Standards for Registration.*

The AQTF 2010 *Essential Standards for Initial and Continuing Registration* can be downloaded from <www.training.com.au>.

The following points summarise the assessment requirements.

Registration of Training Organisations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration,* Standard 1.

Assessor Competency Requirements

Each person involved in training and assessment must be competent for the functions they perform. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration,* Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 *Users' Guide to the Essential Standards for Registration* – Appendix 2.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*..

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration.*

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Recording Assessment Outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Issuing AQF qualifications and Statement of Attainment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current *AQF Implementation Handbook* and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF and the edition of the *AQF Implementation Handbook*—available on the AQF Council website <www.aqf.edu.au >

Licensing/Registration Requirements

This section provides information on licensing/registration requirements for this Training Package, with the following important disclaimer.

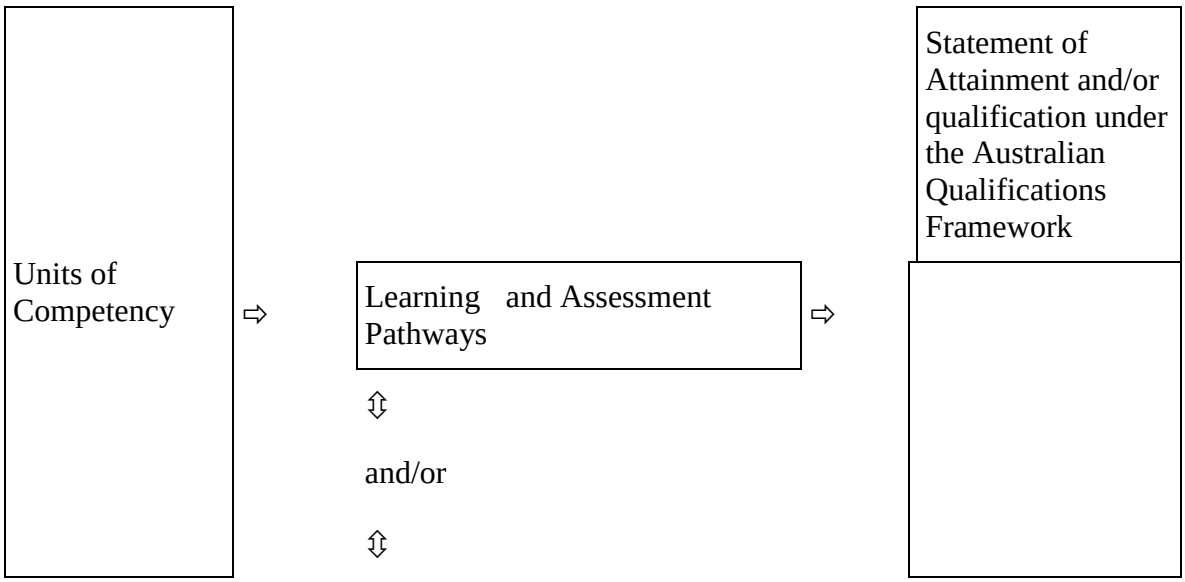
The developers of this Training Package consider that no licensing or registration requirements apply to RTOs, assessors or candidates with respect to this Training Package. Contact the relevant State or Territory Department(s) to check if there are any licensing or registration requirements with which you must comply. For further information on this topic contact www.mskills.com.au.

Pathways

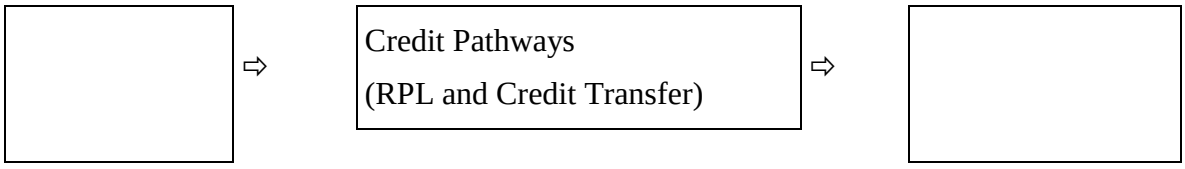
The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, or a recognition pathway, or a combination of the two as illustrated in the following diagram.



© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance



Each of these assessment pathways leads to full recognition of competencies held – the critical issue is that the candidate is competent, not how the competency was acquired.

Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package , the AQTF and, where relevant, the Australian Qualifications Framework.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Credit Pathways

Credit is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were acquired, provided that the learning is relevant to the unit of competency outcomes.

Recognition of Prior Learning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of Recognition of Prior Learning (RPL) provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;
- people returning to the workplace; and
- people with disabilities or injuries requiring a change in career.
-

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.

Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:

- questioning (oral or written)
- consideration of a portfolio and review of contents
- consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification component
- mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
- observation of performance, and
- participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

Credit Transfer

Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.

This process involves education institutions:

- mapping, comparing and evaluating the extent to which the defined *learning outcomes and assessment requirements* of the individual *components of one qualification* are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification
- making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
- setting out the agreed credit outcomes in a documented arrangement or agreement, and
- publicising the arrangement/agreement and credit available.

Combination of Pathways

Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor Requirements

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

1.4 Training and assessment are conducted by trainers and assessors who:

a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and

b) have the relevant vocational competencies at least to the level being delivered or assessed, and

c) can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and

d) continue to develop their Vocational Education and Training (VET) knowledge and skills as well as their industry currency and trainer/assessor competence.

* See AQTF 2010 *Users' Guide to the Essential Standards for Registration* – Appendix 2

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgements about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register <*www.ntis.gov.au*>.

Developing Assessment Tools

When developing their own assessment tools, assessors must ensure that the tools:

- are benchmarked against the relevant unit or units of competency;
- are reviewed as part of the validation of assessment strategies required under the AQTF; and
- meet the assessment requirements expressed in the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

Language, Literacy and Numeracy

The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory Assessment Requirements

Assessments must meet the criteria set out in the AQTF 2010 *Essential Standards for Initial and Continuing Registration*. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 *Essential Standards for Initial and Continuing Registration* are as follows:

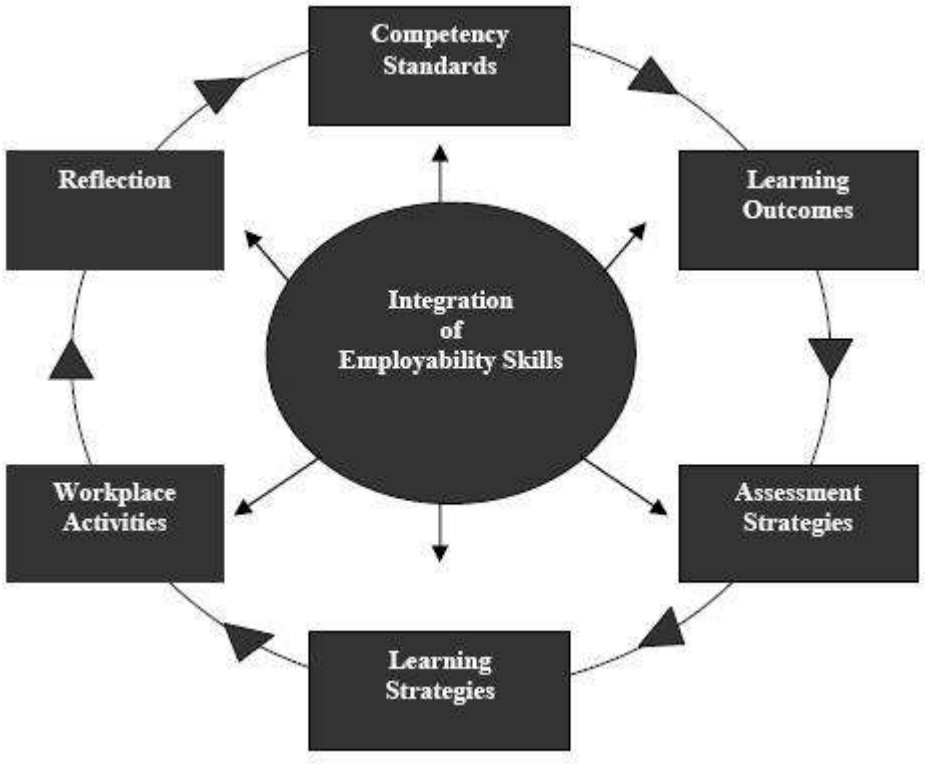
1.5 Assessment, including Recognition of Prior Learning (RPL):

a) meets the requirements of the relevant Training Package or accredited course
b) is conducted in accordance with the principles of assessment and the rules of evidence
c) meets workplace and, where relevant, regulatory requirements
d) is systematically validated.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such, they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.



Employability Skills are embedded within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

The National Quality Council has endorsed a model for assessing and reporting Employability Skills, which contains further suggestions about good practice strategies in teaching, assessing, learning and reporting Employability Skills. The model is available from <http://www.training.com.au/>.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The endorsed approach includes learners downloading qualification specific Employability Skills Summaries for Training Package qualifications from an online repository at <http://employabilityskills.training.com.au>

For more information on Employability Skills in

Manufacturing Skills Australia Training Packages go to the Manufacturing Skills Australia website at www.mskills.com.au.

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from http://employabilityskills.training.com.au "

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable Adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability.

Under the Disability Standards for Education 2005, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While 'reasonable adjustment' and 'unjustifiable hardship' are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. *Go to http://www.deewr.gov.au/tpdh/Pages/home.aspx .*

A**ssessment Resources**

Registered training organisations (RTOs) are at the forefront of vocational education and training (VET) in Australia. They translate the needs of industry into relevant, quality, client-focussed training and assessment.

RTOs should strive for innovation in VET teaching and learning practices and develop highly flexible approaches to assessment which take cognisance of specific needs of learners, in order to improve delivery and outcomes of training.

Resources can be purchased or accessed from:

- TVET Australia – provides an integrated service to enable users of the national training system to identify and acquire training materials, identify copyright requirements and enter licenses for use of that material consistent with the scope and direction of the NQC.

Competency Standards

What is competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of Units of Competency by RTOs

Registered Training Organisation (RTOs) may contextualise units of competency to reflect local outcomes required. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this endorsed Training Package must be within the bounds of the following advice. In contextualising units of competency, RTOs:

- must not remove or add to the number and content of elements and performance criteria
- may add specific industry terminology to performance criteria where this does not distort or narrow the competency outcomes
- may make amendments and additions to the range statement as long as such changes do not diminish the breadth of application of the competency and reduce its portability, and/or
- may add detail to the evidence guide in areas such as the critical aspects of evidence or resources and infrastructure required where these expand the breadth of the competency but do not limit its use.

Components of Units of Competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of

competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills statement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A standard Employability Skills statement appears in each unit of competency. This statement directs trainers and assessors to consider the information contained in the Employability Skills Summary in which the unit of competency is packaged.

Prerequisite Units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the Unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency Field (Optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of Competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance Criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required Skills and Knowledge

The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range Statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence Guide

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment
- relationships with the assessment of any other units of competency
- suitable methodologies for conducting assessment including the potential for workplace simulation
- resource implications, for example access to particular equipment, infrastructure or situations
- how consistency in performance can be assessed over time, various contexts and with a range of evidence, and expectations at the AQF qualification level involved

Employability Skills in units of competency

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

How Employability Skills relate to the Key Competencies

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

Employability Skills	**Mayer Key Competencies**
Communication	Communicating ideas and information
Teamwork	Working with others and in teams
Problem solving	Solving problems Using mathematical ideas and techniques
Initiative and enterprise	
Planning and organising	Collecting, analysing and organising information Planning and organising activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Self-management	
Learning	
Technology	Using technology

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

Explicitly embedding Employability Skills in units of competency

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

The following table contains examples of embedded Employability Skills for each component of a unit of competency. Please note that in the examples below the bracketed skills are provided only for clarification and will not be present in units of competency within this Training Package.

Example Employability Skills unit

Unit component	**Example of embedded Employability Skill**
Unit Title	Optimise process/plant area (initiative and enterprise, problem solving, technology)
Unit Descriptor	This competency covers the ability to optimise the process performance of a complete plant area. It includes ensuring that production systems comply with Health, Safety and Environment (HSE) requirements, that process, plant and equipment utilisation is planned and carried out, and that problems are solved to fully meet operational needs and ensure that production of finished goods meets customer requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	(Self management, technology, initiative and enterprise, planning and organising, problem solving)
Element	Coordinate corrective and/or optimisation action plan (Teamwork, planning and organising, communication)
Performance Criteria	Develop optimisation plan taking account of hazards identified and HSE implications and communicate to appropriate personnel. (Initiative and enterprise, learning,communication, technology, problem solving, self management, teamwork)
Range Statement	This unit describes the work conducted by senior operators, team leaders or front line managers who optimise process systems as part of their work function. It includes all items of equipment and unit operations which form part of the production process of a complete area. (Teamwork, learning, problem solving, self management, technology)
Required Skills and Knowledge	Optimising process systems requires application of detailed operational and process knowledge to address issues (Learning, planning and organising, problem solving)
Evidence Guide	While the technician is expected to take a lead technical role, and to demonstrate competence as defined above, optimisation is rarely undertaken by an individual alone and liaison with all relevant stakeholders is an expected part of this competency. (Technology, learning, communication, teamwork)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Industry Contextualisation

MSA07 – General advice for contextualisation

Competency units may, and in some cases should, be contextualised to the sub-sector and type of work environment involved. Contextualisation which:

- replaces general directions with enterprise specific needs
- replaces generic equipment/process names with enterprise specific names
- replaces general processes/specifications with enterprise specific needs

is allowed and encouraged, provided the contextualised unit is of similar level and rigour to the original competency unit.

Note that contextualising cannot be used to generate an additional competency which is closely related to an existing competency. Contextualisation can only be used to generate an alternative competency for qualifications purposes.

Contextualisation may only be done if it does not significantly change the level and rigour or change the application of the unit. Contextualisation may be done within the required knowledge, range of variables and the evidence guide. Lists in these sections should be regarded as indicative lists unless otherwise stated.

Note also that contextualisation of the elements or performance criteria is not permitted. As a minimum, the contextualised unit should:

- be of similar level and rigour
- be of a similar breadth, complexity and size
- be relevant to the industry sector and the enterprise
- not reduce the health, safety or environmental requirements
- retain the original unit code and title.

Importing units from other Training Packages

Competency units may be imported from another endorsed Training Package to customise a qualification. These imported units may be used to replace the maximum number of imported units that are identified in the packaging rules. The use of imported units is allowed if:

- they are from an endorsed Training Package and are packaged at the same AQF certificate level (the original unit title and code number must be retained)
- they are appropriate to the needs of the enterprise
- any prerequisites and co-requisites specified in the original unit and any specific assessment requirements in the host Training Package are also observed.

Exporting units to other Training Packages

Manufacturing Skills Australia encourages other industries and ISCs to access the units of competency in this Training Package which might be appropriate to their needs. These competencies may be used provided:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the original unit code and title are retained
- they are only contextualised to the extent permitted above
- any specified prerequisites and co-requisites and any specific assessment requirements in the host Training Package are observed

Manufacturing Skills Australia is advised of the specific competencies to be used to facilitate ongoing communication in the event of an update.

Appendix 1: MSA10107 Certificate I in Manufacturing (Pathways)

Research

The Certificate I in *Industry* (Pathways) developed out of research commissioned by the Australian National Training Authority and undertaken by Ratio Pty Ltd over the past three years. Initial research identified that a range of stakeholders considered that a mechanism was needed to:

- explicitly address Employability Skills as described in the report, *Employability Skills For the Future*, BCA/ACCI, 2002
- create pathways into further study, school continuation and/or employment for those for whom traditional pathways were not sufficient or accessible
- assist potential employees in making more informed choices about careers.

Phase One: 2002-2003

In summary, this stage of the research established two main points.

- Across the country a wide range of existing courses and programs sought to address these issues for equity groups which are not part of an industry Training Package and therefore the Australian Qualification Framework (AQF). They focused on the needs of the learners without providing the industry focus or achieving a nationally recognised qualification.
- Current Certificate I qualifications within Training Packages were largely generalist qualifications nestled in higher level qualifications which addressed some of the Employability Skills, but lacked a focus on technical skills. With some exceptions, they were not held in high regard by industry or RTOs.

This research recommended that a qualification be developed which is:

- a recognised qualification in a Training Package
- flexible across Training Packages
- delivered in a work context through one or more meaningful work activities.

It was anticipated that such a qualification would provide a bridge between learner needs and industry need.

Phase Two: 2004-2005

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The consultants, with the support of the State and Territory Training Authorities (STAs) and an industry reference group, worked with three Industry Skills Councils (ISCs) to develop a consistent yet customisable qualification.

The ISCs involved were:

Agri-Food Industry Skills Council
Manufacturing Skills Australia (MSA)
TDT Australia (Transport and Logistics).

Pathways qualification model

The qualification model developed was characterised by the following units of competency and structure.

- One core industry unit – this reflects a core industry activity or function and should be delivered as such, with a defined beginning, middle and end. This unit ensures that the qualification has a practical hands-on focus and provides an understanding of the industry.
- Three pathway units – these specifically address the Employability Skills and ideally should be delivered by clustering the units around the core industry unit.
- Two technical units – these provide the underpinning skills and knowledge for the core industry unit and provide articulation into higher industry qualifications.
- Up to three units from any Training Package – these provide the flexibility to cater to the needs of different learner groups, different employers and different contexts. For example, language and literacy units, units from other Training Packages or higher level units from Training Packages from within the same ISC.

Phase Three: 2005-2006

In this latest phase of the research the consultants were contracted to conduct a trial of the Pathways Certificate with a range of target groups in a range of contexts.

It was considered important to ensure that the qualification:

- was sound in structure and content so that it would be adopted across industry and valued by industry and the community
- was able to be implemented by the range of RTOs
- created meaningful pathways for the learners
- provided explicit learning in the Employability Skills.

Stakeholder consultations

Throughout the trial period there were ongoing consultations and discussions with the participating ISCs and STAs. Meetings with representatives from the relevant sections of the state training and education departments were organised to correspond with the site visits in each state.

Participating RTOs and programs delivered

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The trial deliberately set out to sample a range of RTO types across different states. The following RTOs participated.

State	**Industry**	**RTO Type**	**Name**
Victoria	Transport	Private	Banksia Consulting
New South Wales	Transport	TAFE School partnership	Hunter Institute of TAFE, Glendale Campus
Tasmania	Transport	Community owned not-for-profit Job Network provider	STEPS Education and Training Solutions
Tasmania	Agri-Food	TAFE	TAFE Tasmania, Launceston
Western Australia	Agri-Food	Residential Provider for youth at risk	Great Southern TAFE, Gnowangerup
Queensland	Agri-Food	TAFE	Brisbane TAFE
South Australia	Manufacturing	Industry/TAFE School partnership	TAFE SA Regency campus/Schefenacker Vision Systems*
South Australia	Manufacturing	TAFE	TAFE SA, Port Adelaide Campus
These RTOs are participating from February 2006 to be completed by June 2006			
Western Australia	Manufacturing	TAFE/School partner ship	Challenger TAFE with Warnbro High School
Northern Territory	Agri-Food	School	Taminmin High School, Humpty Doo

(*This trial was undertaken with Schefenacker Vision Systems providing industry experience for participants.)

Other consultations and presentations included:

- Equity advisors from each State and Territory
- CEOs of all of the ISCs
- Boards of Studies – Australian Curriculum Assessment and Certification Authority (ACACA), Victorian Curriculum and Assessment Authority (VCAA)
- Australian Chamber of Commerce and Industry (ACCI)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- TAFE NSW International Centre for VET Teaching and Learning (ICVET)
- 2005 Connecting Access Workshop through TAFE NSW in Sydney
- Brian Cramond from DFEEST SA presented to the Australian Vocational Education Training Research Association (AVETRA)
- Andrew Nicholson from the trial site at Great Southern TAFE in WA presented to the Teen Teachers Forum.

Trial outcomes

The Pathways Certificate is a viable qualification within the Training Package framework. In terms of Training Package qualifications the Pathways Certificate is unique. It:

- is an industry-based qualification, but is not specific to one job outcome
- is preparatory, but combines a practical work activity
- explicitly addresses Employability Skills and technical skills
- is sufficiently flexible to address local needs, yet it has a common across industry structure
- has unique pathways units, but uses Training Package units thereby providing some articulation
- can be used for workforce entry and re-entry, or induction
- provides for participants needs but focuses on work readiness within one particular industry
- focuses on a pathway and the destination.

Because it is practical, work-based and industry-focused it is compatible with Training Package qualifications and is consistent with the AQF. It also is a very useful tool for industries to attract potential employees and give them credit into higher qualifications.

However, it is different in that it provides work readiness as opposed to job readiness, requires a particular training methodology, and is applicable across Training Packages within an ISC; therefore it requires a special status within Training Packages.

Each of the three trialed qualifications, ie the three qualifications covering Agri-Food, Manufacturing and Transport, shares the same structure, qualifications framework and pathways units. These aspects of the qualification have been thoroughly tested and endorsed by trainers, coordinators, ISC personnel and other industry personnel. Consistency in these matters is important for maintaining the quality, achieving the outcomes and marketing and branding.

Following conditional endorsement of the trialed qualifications, it was recommended that each of the 3 ISCs submit a Certificate I (Pathways) qualification for final endorsement, utilizing the three core Pathways units and drawing on industry specific units of competency from current Training Packages.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appendix 2: Development of the Process Manufacturing Certificates and generic manufacturing units

In Phase 1 of the review of the Plastics, Rubber and Cablemaking Training Package (PMB01), the production support certificates in PMA, PMB and PMC were reviewed to determine commonalities and potential for rationalisation. The review determined that, as there were minimal differences between the existing certificates, there would be considerable benefits to both industry and RTOs if the mandatory units and the production support certificates were generalised, for use across all three packages.

It was agreed that this work would be undertaken as part of the review of PMB01 and that the common certificates would be developed for inclusion in the Manufacturing Training Package (MSA07). These certificates will be available for use across the three process manufacturing Training Packages.

The existing production support certificates in PMB01 have not been carried forward to PMB07. As part of the current review of PMA and maintenance of PMC, it is intended that the production support certificates in these packages will also be replaced by the MSA Process Manufacturing certificates.

As part of the re-development work, Certificate III in Process Manufacturing has been reviewed to bring it into line with AQF descriptors. To address this need, which was identified by industry, RTOs and Government stakeholders, the mandatory (core) units have been altered and a requirement to attain competency in a minimum number of Certificate III units has been maintained. The focus of this certificate remains on addressing training needs of people whose job roles support the production process.

In addition, it was also recognised that there was significant duplication in the support units currently available at Certificates IV, Diplomas and Advanced Diplomas in PMA, PMB and PMC. A range of rationalised support units has been developed for use across the three packages. These units will be endorsed as free electives in MSA07, not aligned to any MSA qualifications at this time, but available for importation to PMA, PMB and PMC.

This project has been overseen by the PMB Project Reference Group and the Process Manufacturing Industry Advisory Committee. Consultations were undertaken in conjunction with the review of PMB01 and have involved the State/Territory ITAB and RTO networks.

Appendix 3: Background to the Competitive Manufacturing Qualifications

The Competitive Manufacturing Training Package was developed by the Competitive Manufacturing Initiative (CMI).

Overview of the CMI

The Competitive Manufacturing Initiative (CMI) was a collaborative response from Australia's Manufacturing Industry Training Advisory Bodies (ITABs) to assist manufacturing industry improve manufacturing practice through the development of innovative vocational education and training (VET) qualifications and units of competency. The CMI development process was funded by ANTA. The original scoping project for the CMI was majority funded by industry.

The following ITABs formed the Project Management Group for the initial development of the Competitive Manufacturing Training Package.

- **Automotive Training Australia** which covered:
  - passenger vehicles
  - trucks
  - bus and trailer manufacturing
  - most coach and body building
  - vehicle repair, service and retail
  - automotive after market, and
  - some component manufacturing.
- **Light Manufacturing Training Australia** which covered:
  - the textile clothing, footwear and leather industries. and
  - the furnishing industry.
- **Manufacturing Learning Australia** which covered process manufacturing industries such as:
  - chemical
  - hydrocarbons
  - oil
  - plastics
  - rubber
  - cablemaking

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cement
- clay
- ceramic
- concrete
- refractories
- plaster, and
- fibre board.

- **Manufacturing Engineering and Related Services ITAB** which covered:
  - metal and engineering related manufacturing
  - heavy engineering
  - maintenance
  - aerospace, and
  - boating.
- **National Food Industry Training Council** which covered:
  - food and beverage
  - pharmaceutical, and
  - tobacco processing and manufacturing.

MERS ITAB acted as the secretariat for the development of Competitive Manufacturing. However, users should now contact Manufacturing Skills Australia (MSA), the national Industry Skills Council that covers manufacturing to seek specific advice relevant to their area. Contact MSA on telephone (02) 9955 5500 or at www.mskills.com.au. The CMI website should also be checked for information and advice at www.cmi.org.au.

Industry coverage

The Competitive Manufacturing qualifications cover all of the manufacturing industry. At the 2001 census, the manufacturing industry employed 1,010,179 persons or 12% of the entire workforce. Manufacturing is the biggest sector in terms of contribution to gross domestic product where it contributes 13 % of the total product[1] and is also the sector with the highest value added contributing 12% of the total value added[2] to the economy. The Australian Bureau of Statistics notes[3] that 'Manufacturing contributed more to Australian production than any other industry'.

1. Manufacturing Industry Australia, 1999-2000, ABS, 8221.0
2. Australian System of National Accounts, 2002-2003, ABS, 5204.0
3. Manufacturing Industry Australia, 1999-2000, ABS 8221.0

The CM qualifications are complementary to qualifications in existing Training Packages covering specific manufacturing sectors. These sector specific Training Packages cover the knowledge and skills specifically required by those sectors. The CM qualifications cover knowledge and skills associated with manufacturing practices and systems which are common across manufacturing sectors.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Development of the Competitive Manufacturing qualifications

This project originated out of discussions within the Board of the Foundation for Australian Manufacturing Education (FAME) and the initial scoping study was financially supported by FAME, Australian Business Ltd and ANTA. Support for the project's aims and objectives was also given by the Australian Manufacturing Centre (AMC) and the Australian Industry Group. This scoping project found that there was a bias in the then existing Training Packages of specific technical skills and insufficient coverage of the skills needed to manage, supervise and implement system skills needed in modern manufacturing. The scoping report identified a need for the development of units of competency in manufacturing practice, and possibly also qualifications in manufacturing practice.

The CMI Stage 2 project:

- investigated the scope of skills to be included in the CMI
- developed a marketing strategy and established a CMI website
- established a formal cooperative mechanism amongst the manufacturing ITABs
- established a brand and logo based on the title Competitive Manufacturing Initiative (CMI).

The CMI Stage 3 project then developed and validated a number of units of competency and qualifications. The development and validation was done by consulting industry generally and also by the use of industry experts. Care was taken through this process to ensure there was representation of each industry sector and type of manufacturing process. The use of competitive manufacturing practices is variable across the manufacturing sector, and one of the aims of developing this Training Package is to make training in these skills more widely available, so helping industry operate more effectively in a competitive environment. Initial consultation therefore focussed more on identified leaders in this area while validation focused more on the broader manufacturing industry.

Consultations undertaken as part of CMI Stage 2 and confirmed in Stage 3 indicated that the CM qualifications and units would represent new content for many RTOs and that many of the skills could only be taught and assessed in a workplace environment. CMI Stage 3 therefore included a process to allow early identification of delivery issues through a trial site process. Five trial sites were selected to cover both a number of states and also each major industry sector. The trial sites used[4] the draft CM units to map the draft units to current delivery and to validate the units and to determine any delivery issues. The trial sites were:

- Goulburn Ovens Institute of TAFE – Shepparton Campus
- Hunter Institute of Technology
- Onkaparinga Institute of TAFE
- Swinburne University – VET Division
- Western Sydney Institute of TAFE – Mt Druitt Campus

[4] As the units were not endorsed at this stage there were some practical limitations on the 'use' of these units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Technology Cadetships

In August 2003 the Australian Industry Group with funding assistance from ANTA established a Manufacturing Technician Training Initiative project known colloquially as the Technology Cadetship Project. The aim of the project was to develop and promote more efficient pathways for school leavers to enter technical occupations in manufacturing industry. One of the key objectives was to establish entry level qualifications linked to on and off the job training in a cadetship arrangement.

The origin of the project was partly Australian Industry Group work on the National Industry Skills Initiative as well as comments and concerns by Ai Group members that pathways for the development of technician level skills in manufacturing were inefficient and generally took too long to be attractive to either enterprises or young people.

The Ai Group Manufacturing Technician Training Initiative included activities in a number of areas that were broader than a normal Training Package development project. These areas were:

- Identification and/or development of appropriate content in existing and/or new Training Packages;
- Marketing of technician level contract of employment arrangements to employers, young people, industry and the community generally;
- Establishment of appropriate employment arrangements;
- Establishing arrangements for the approval of contracts of employment by State Training Agencies
- Establishment of appropriate funding arrangements for both mainstream training delivery and employer financial incentives;
- Marketing of actual placements to Ai Group members and other employers.

While the Australian Industry Group conducted much of the content research and development for this submission, both the Ai Group and ANTA realised that Ai Group would not be able to put forward the new qualifications for endorsement under current policy arrangements.

The Australian Industry Group was consulted on the development of the Competitive Manufacturing Training Package and decided that the CM was the most appropriate body to take over on a longer term basis the future content development of the Technology Cadetship and responsibility for endorsement of the work done to date. The CMI ITABs and Ai Group also agreed that the qualifications and units for the Technology Cadetship should be part of the responsibilities of the Manufacturing Industry Skills Council once it was established.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Manufacturing Industry Skills Council has now been established and it is anticipated that the Competitive Manufacturing Initiative will continue to exist as a sub committee function in the Manufacturing Skills Council and that arrangements will be made for on going participation of the Agri-Foods Skills Council and for automotive industry representation.

The term Technology Cadetship was developed to differentiate the level of training from that commonly found in apprenticeships and traineeships although the principle of combined off and on the training and mutual obligation of employer and employee is the same.

Appendix 4: Technology Cadetship – metallurgy and polymer technology streams

MSA07v3 Manufacturing Technology qualifications – metallurgy and polymer technology specialist streams

The previous Certificate III in Manufacturing Technology and the Certificate IV in Manufacturing Technology provided four specialist streams. These were:

- CAD/drafting
- Manufacturing operations
- Technical Officer
- Laboratory operations

The new polymer technology stream will provide new specialisations within both qualifications. The metallurgy stream will provide a specialisation within the Certificate III. Industry advises there is no work outcome at Certificate IV.

In addition, metallurgy and polymer technology specialist streams have been developed at the Diploma and Advanced Diploma levels, hence two new qualifications (Diploma and Advanced Diploma in Manufacturing Technology) are also part of this endorsement submission. These are the first streams for the Diploma and Advanced Diploma qualification levels to be completed. Other industry specialisations for these qualifications are under development by Manufacturing Skills Australia (MSA).

Background to the Technology Cadetships

The new streams, like all existing streams for the Certificate III and IV in Manufacturing Technology, have been developed to be undertaken as part of an entry level qualification linked to on and off the job training in a cadetship arrangement known colloquially as a *technology cadetship*. The term *technology cadetship* was developed to differentiate the level of training from that commonly found in apprenticeships and traineeships, although the principle of combined off and on the job training, a formal contract of training and mutual obligation of employer and employee is the same. As in apprenticeships and traineeships the qualifications have a separate title from that used for the cadetship.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employment arrangements for students of the metallurgy or polymer technology specialisations can vary according to the circumstances of each student. It is anticipated that most students will be undertaking a technology cadetship which will be supported by Award, enterprise agreement or Australian Workplace Agreement employment arrangements. A special Award for the employment of Technology Cadets was created by consent between the Australian Industry Group, the Engineering Employers Association South Australia, the Australian Manufacturing Workers Union and the Australian Workers Union. This Award is known as the *Manufacturing And Associated Industries – Skills Development - Wages And Conditions Award 2004*.

Project Management

Development of the metallurgy and polymer technology streams was part of a broader project known as the Competitive Manufacturing Initiative (CMI) Stage 5. This project included development of additional specialisations for the Technology Cadetships as well as development of a new school subject in manufacturing studies for higher achieving year 11 and 12 school students.

CMI Stage 5 was conducted under the oversight of the Strategic Manufacturing Initiatives Industry Advisory Committee of the Manufacturing Skills Australia Board.

Strategic Manufacturing Initiatives IAC membership

Ian Curry MSA Director	National Projects Officer Australian Manufacturing Worker's Union
David Graham MSA Director	Learning & Development Manager Huntsman Chemical Company

Day to day supervision of the CMI Stage 5 project was delegated to Bob Paton CEO and Sue Woodward Deputy CEO of MSA.

Richard Jenkins and Associates were contracted to undertake this work. Consultants who worked on the project were Richard Jenkins, Kevin Hummel and Kerrie Clarke.

Metallurgy stream

Metallurgists can be degree qualified or have qualifications issued through the vocational training and education sector. Metallurgists work across manufacturing in a number of sectors and roles. Sectors include:

- processing of ores and refining and smelting of metals;
- foundries;
- diecasting;
- steel making
- fabrication and welding of structures;
- metal protection and corrosion control.

Metallurgists are involved in the specification and supervision of the processing of metallic ores as well as metal smelting, refining, melting, pouring, joining, fabricating and finishing processes. Metallurgists working in the mining and processing of metallic ores are often called primary metallurgists while metallurgists specifying and supervising producing metal or metal products are often called industrial or secondary metallurgists. Primary metallurgists generally though not exclusively are degree qualified while secondary metallurgists can be either VTE or degree qualified. Because of the low demand for VTE primary metallurgists this pathway and submission concentrates on skills required for secondary metallurgists.

The metallurgy stream development process involved:

- initial separate approaches by the Australian Foundry Institute and Central TAFE in Western Australia to MSA for the development of metallurgy qualifications. After considering these requests MSA decided that the best approach would be to develop qualifications and units of competency as part of the Manufacturing Technology qualifications allied with the Technology Cadetship initiative as this would allow the widest coverage across manufacturing and also facilitate entry level training. It was also envisaged that the metallurgy units of competency that were to be developed would be imported into the Metal and Engineering Training Package after endorsement to enhance the range of electives available in the Diploma of Engineering –Technical and Advanced Diploma of Engineering qualifications in that Training Package.
- consultation with enterprises, industry organisations and RTOs to confirm support for the proposed stream. Consultations were both face to face and by telephone.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- a review of existing endorsed units of competency for relevance to the metallurgy stream. While a range of units relevant to metallurgy were identified, these were mostly of a supporting nature. The review found that most metallurgy related skills would need to be covered by new units of competency.
- visits to foundries in several States and to steelmaking plants in Newcastle and Wollongong to meet with metallurgists and to observe first hand their duties and work environment
- development of draft units of competency and a specialist stream qualification structure within the existing manufacturing technology qualifications. Employability skills were embedded in all new units of competency.
- preparation and distribution of first, second and final drafts for industry and RTO comment and review.

Consultations

The development of the metallurgy units and associated units of competence involved substantial industry and RTO contributions. Special mention needs to be made of the support and assistance provided by the Australian Foundry Institute, Central TAFE in Perth, Hunter Institute of Technology and Bluescope Steel.

The Australian Foundry Institute delegated its Queensland Branch to form a sub–committee especially to liaise with and assist the project consultant. This sub-committee facilitated access to workplaces and met with the project consultant numerous times to provide technical information and to review drafts.

Central TAFE in Western Australia and the Hunter Institute of Technology in Newcastle provided full access to their current State accredited metallurgy qualifications and hosted several visits by the project consultant. Central TAFE also conducted surveys of WA industry to obtain comments on the draft pathway and units of competence.

Bluescope Steel provided access on a commercial in confidence basis to several internal DACUM analyses and job descriptions for metallurgists. As well Bluescope hosted several plant visits by the project consultants.

Drafts of the metallurgy stream and units of competence were distributed to major enterprises, industry associations, relevant unions, major RTOs and State ITAB contacts. Besides the general distribution to the above organisations, a range of selected individuals in each organisation were also contacted.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Many of these organisations also passed on the drafts through their own networks. For example the Australian Industry Group advised that the drafts had been distributed to their network of industry training advisors who in turn distributed them to interested members. A list of individuals contacted directly for consultations and/or distribution of draft pathways and units follows.

Megan Lilly, Australian Industry Group (plus all Ai Group Training Advisers)

David Tiller, Australian Industry Group NSW

Ewan O'Leary, Weir Minerals Sydney

In addition to the above direct consultations the Australian Foundry Institute distributed draft copies of the units and qualifications to their members in all States and Territories. Support for the drafts was received from each Branch of the AFI.

There was substantial enthusiasm and support for the development and endorsement of the metallurgy pathway from all individuals and organisations consulted.

Polymer technology stream

The polymer technology stream covers technician level skills required by the plastics, rubber and cablemaking industries. **These industries employ a**pproximately 48,000 people and consist of:

- plastics - including injection moulding, blow moulding, blown film, rotational moulding, fabrication, composites, compounding and reclamation, extrusion and thermoforming
- rubber - including belt splicing, extrusion, rubber lining, tyre building and tyre retreading
- cablemaking - including power transmission and communication cables.

The Polymer Technology stream is intended for people who plan to become polymer technicians, and who are not currently working as operators in the polymer industries. It is recommended that those who have already achieved a Certificate II from the Plastics, Rubber and Cablemaking Training Package would be better served by completing the Certificate III in Polymer Processing.

The polymer technology stream development process used the same basic processes for development as was used for the development of the existing endorsed specialist streams. This involved:

- initial consultation with industry and RTO to re-confirm support for the proposed pathway. Initial support had been identified in the Technology Cadetship Expansion Scoping Study report by MSA in April 2005.
- review of existing endorsed units for relevance to the polymer technology stream.
- identification of gaps and writing of new units of competency to meet these gaps
- development of a specialist stream for the existing manufacturing technology qualifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- preparation of first, second and final drafts for industry and RTO comment and review.

The early consultations indicted continuing support and enthusiasm for the development of a polymer technology stream for Technology Cadetship related qualifications.

After confirming continuing support, currently endorsed units were evaluated for relevance to the proposed polymer technology stream. The two main Training Packages examined were the Plastics, Rubber & Cablemaking Training Package (PMB01) and the Competitive Manufacturing Training Package (MCM04). This examination revealed that most units required for the stream were already endorsed. A need for six new polymer technology units was identified. In addition there was support for incorporation of three generic sustainability units because of the importance of environmental and sustainability issues to the plastics, rubber and cablemaking industries.

Discussions were also held with MSA staff and consultants involved in the review of the Plastics, Rubber & Cablemaking Training Package (PMB01) to ensure that there was co-ordination between the two projects. New units developed as part of the polymer technology pathway have been coded as PMB units and have been incorporated into PMB07 which was endorsed on 16/11/07.

Consultations

Drafts of the polymer technology stream and units of competence were distributed to major enterprises, industry associations, relevant unions, State Training Authorities, major RTOs and State ITAB contacts. Besides the general distribution to the above organisations, a range of selected individuals in each organisation were also contacted.

Many of these organisations also passed on the drafts through their own networks. For example the Australian Industry Group advised that the drafts had been distributed to their network of industry training advisors who in turn distributed them to interested members. A list of individuals contacted for consultations and/or distribution of draft pathways and units follows.

Appendix 5: Technology Cadetship – structural steel detailing stream

MSA07v3.1 – Manufacturing Technology - new structural steel detailing specialist stream

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Project background

Structural steel detailing involves taking a design for a steel structure such as a steel framed building prepared by an engineer or architect and transforming it into a series of complete working drawings and erection diagrams for use by steel fabricators and builders. In preparing the drawings steel detailers are often required to liaise with engineers, architects, design draftspersons, fabricators and builders. The steel detailer is required to create drawings for all components of a steel structure including all welded and bolted connections. The work of the steel detailer is critical as they produce all the detailed instructions that enable both fabrication and construction to occur. Structural steel detailing enterprises are usually small with a range from single person businesses to 15-20 employees. There are a small number of larger structural steel detailing enterprises and an unknown number structural steel detailers also work for large builders and fabricators.

Structural steel detailing has been covered by a single specialist unit in the Metal and Engineering Training Package for approximately ten years since the first endorsement of MEM98. However as shortages of steel detailers became more apparent, industry dissatisfaction with this minimal coverage grew and MSA was approached on a sporadic basis by different enterprises and state steel detailing associations for greater coverage of steel detailing skills.

In February 2007 Manufacturing Skills Australia was approached by the Australian Steel Institute (ASI) with an offer to co-ordinate a national input and participation in the development of Training Package based qualifications in structural steel detailing. MSA accepted this offer and an industry based Steering Committee was formed chaired by an ASI senior officer. Richard Jenkins and Associates was also engaged at this time to undertake the research and development of the appropriate qualifications.

Meeting industry needs

Initial industry consultations indicated that there was significant industry interest in developing qualifications that could be used to attract young people into steel detailing as well as support training for people who were currently in employment but looking to change careers and train in steel detailing. It was decided that industry requirements could best be met through developing a structural steel detailing specialist stream in the existing Manufacturing Technology qualifications in the Manufacturing Training Package. This would allow training to be linked Technology Cadetships and to apply across all of MSA’s coverage. This decision was supported by the Steering Committee, industry associations and the AMWU which is the relevant union.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The new units and qualifications have full support of the industry. During the course of development, pre-existing State based Steel Detailing Institutes combined to form a national federation called the Australian Institute of Steel Detailing. The AISD and all State Institutes have indicated support for the draft specialist stream and units of competence. The development of the new specialist stream is also consistent with the MSA aim identified in the MSA Environmental Scan to to lift overall educational achievement levels in areas of MSA coverage.

Development has drawn on the experience and expertise of the Australian Steel Institute, industry and RTOs to make sure that the proposed specialist stream will meet training and assessment requirements well into the future.

Project management

The project was managed by Manufacturing Skills Australia and overseen by a seven person industry based Steering Committee. Apart from an ASI nominee, other members represented industry in NSW, Victoria and Tasmania, South Australia, Queensland, and Western Australia.

The Steering Committee's functions were to:

- oversee and advise on consultation processes
- provide advice on underpinning knowledge and technical content
- act as a technical advisory group in the development of new units of competency
- assist with the resolution of any issues.

The Steering Committee members are listed below.

Name	**Organisation**	**Representing**
Peter Hisco (Chair)	Fiddlistics Pty. Ltd.	Victorian Institute of Steel Detailers
Chris Velovski	EDC. Pty. Ltd.	NSW Institute of Steel Detailers
Clayton Roxborough	SteelCad Drafting Pty. Ltd.	Queensland Institute of Steel Detailers

John Lyons	PDC Consultants	WA Association of Engineering Drafting Services
Greg Hammer	Australian Steel Detailers	Association of Independent Structural Draftsmen of SA

Consultation and validation processes

Consultations were undertaken nationally, involving face to face meetings, targeted email distribution of drafts to stakeholders (including members of the State industry associations, the AMWU, RTOs, State/Territory ITBs, STAs and individual enterprises) and wider distribution via the MSA website and the MSkills email update. Individual consultations with both enterprises were also conducted to confirm content and approach. Consultations were also undertaken with a range of RTOs in each State that were considered likely to be interested in delivery of structural steel detailing. While all RTOs consulted were supportive of the drafts, because of the small and highly specialised nature of structural steel detailing not all were interested in delivery.

Following a period of public comment, final drafts were developed, distributed by email and made available for a sign-off period on the MSA website. The qualifications and units of competency now being submitted have the full support of industry and interested RTOs.

Many people made time from their work commitments to participate in this project especially the members of the Steering Committee and John Leworthy from the VISD who also provided technical input. Without their expertise and input, the project would not have been able to achieve its objectives and this is gratefully acknowledged.

Structural steel detailing – consultation list

Development of the structural steel detailing specialist stream and associated units of competency involved substantial industry and RTO contributions. This included input from the following people.

Appendix 6: Competitive Manufacturing Vocational Graduate qualifications

Development of Competitive Manufacturing Vocational Graduate qualifications

The need for development of Vocational Graduate qualifications in Competitive Manufacturing was identified by MSA in 2007 in response to requests for more in depth training and professional development for individuals who already had some skills or training in Competitive Manufacturing practices. MSA appointed Richard Jenkins & Associates to undertake the development of the qualifications with the project commencing in April 2007.

The MSA decision to provide professional development as the target approach for the graduate qualifications meant that it was also appropriate to shift the skill level of the new units of competency further towards the leading edge of competitive manufacturing practice. Identifying this leading edge was undertaken through desk research, individual consultation with enterprises and through a full day workshop with senior industry practitioners and one RTO representative who had very recent senior management experience in private industry in lean manufacturing.

The desk research and the industry workshop identified that the skills focus in the vocational graduate qualifications should not be on providing initial training in the competitive manufacturing "tools" such as Just in Time, 5S, preventative maintenance etc, whether at implementation (AQF III/IV) or initial system design (AQF V /VI). It was felt that these skills were already adequately covered in the existing Competitive Manufacturing qualifications. Rather it was felt that the emphasis should be on providing the skills for a practitioner to assist an enterprise to take existing competitive manufacturing systems to even higher levels of performance. This approach was seen to be consistent with:

- the professional development philosophy established by MSA for the Vocational Graduate qualifications in Competitive Manufacturing; and with
- industry need for the highest level of skills required to take existing enterprise performance to higher levels to address intractable problems.

Based on the advice of the workshop participants it was decided that the emphasis in the Vocational Graduate qualifications should be mostly focused in two areas:

- skills associated with improving workplace understanding and implementation of competitive manufacturing practices;
- skills associated with improving the performance of a value chain as distinct from a focus just within an enterprise.

The above approach was confirmed during both rounds of consultations with no dissenting views being received.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Industry priorities addressed in the new components of the MSA07 Training Package Training Package are to provide additional development of skills and knowledge in competitive manufacturing practices for individuals who have prior training or industry experience in competitive manufacturing. This need for additional skill is usually apparent after an enterprise has completed initial implementation of a competitive manufacturing system such as lean manufacturing and needs to progress implantation of the system to a higher level of performance beyond that achieved from the initial implementation.

The development of the Vocational Graduate Competitive Manufacturing qualifications also is also a response to industry advice that not all needs for increased competency in competitive manufacturing skills is related to promotion of an individual to a position of increased responsibility. As stated in the previous paragraph the demand for increased skill and knowledge can also be related to the stage of an enterprise's implementation of a competitive manufacturing system

The Vocational Graduate Competitive Manufacturing qualifications also meet the industry need for in depth competitive manufacturing training in skills associated with establishing workforce understanding and participation in competitive manufacturing and for advanced value chain skills.

Meeting industry needs

The existing Competitive Manufacturing qualifications as they provide formal training and recognition for skills that have long been implemented in industry under various manufacturing practice approaches such as lean manufacturing, agile manufacturing, six sigma, total productive maintenance, etc. The current qualifications cover competitive manufacturing skills across the AQF II – AQF VI range and target training for operators, tradespersons, technicians, team leaders, supervisors and managers.

As implementation of the current qualifications proceeded it became recognised that while they provided a pathway for skills development to match promotion through a supervisory pathway, they did not provide as good an opportunity for someone who was already familiar with competitive manufacturing and who wanted to increase their skills and knowledge from their current level without changing their position within the enterprise.

The qualifications now being submitted for endorsement meet this need. They also meet the need of industry in that the early gains made from the implementation of competitive manufacturing practices are often the "low hanging fruit" of obvious errors and waste, and greater skill and knowledge is needed to sustain early gains and to achieve even higher performance levels.

Specifically based on the advice of the workshop and consultations, industry needs identified and addressed in this project focused on the following key skill areas:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- culture
  - achieving a consistent approach to all of the business (i.e. the value chain)
  - problem recognition and resolution (including the customer's problems)
  - establishing a learning organisation
- relationships
  - internal relationships with employees e.g. trust, consensus decision making
  - external relationships with value chain members
  - developing the capability of people

The new components presented for endorsement have been developed and validated extensively with industry and RTO representatives. This includes representation from enterprises, industry associations, unions, and RTOs from around Australia.

Project management

Because this project has application across all of manufacturing it was directly overseen by the MSA Board. Advice from an industry technical advisory group made up of technical experts in competitive manufacturing practices was also sought at different stages.

The individuals and enterprises/organisations represented on the MSA Board are set out in the following table:

Name	**Enterprise/Organisation**
Megan Lilly	Associate Director, Education & Training Australian Industry Group
Ian Curry	National Projects Officer Australian Manufacturing Workers Union
Sam Wood	National Vice President Australian Workers Union
David Graham	Operations Learning & Development Manager Huntsman Chemical Co Australia Ltd
Doug Stevens	Central Branch Secretary National Union of Workers
Michael Brown	General Manager, Heavy Maintenance Qantas Airways

David Hoare	General Manager Sealy of Australia
Michael Grogan	Chief Executive Officer Sutton Tools Pty Ltd
Michael O'Neill	National Secretary TCFU
Jo-Ann Kellock	Executive Director TFIA
Les Chegwidden	Manager Human Resources Viridian CSR

Consultation and validation processes

This project was conducted in two stages. An initial investigation stage was conducted to examine current research and Training Package components and included the initial scoping workshop. This was followed by an implementation stage involving widespread consultation and industry visits, development and validation of two drafts and preparation of a final draft for endorsement.

Consultations were undertaken nationally and involved face to face meetings and targeted email distribution of drafts to enterprises, industry associations, unions, RTOs, State/Territory ITABs, and STAs. Wider distribution was achieved via the MSA website and their regular email newsletter.

Following each period of public comment, amendments were made and drafts circulated for acceptance.

The following people were involved in the development process and the value of their expertise and input is gratefully acknowledged.

Appendix 7: MSA30309 Certificate III in Surface Coating Preparation and Application

Development of MSA30309 Certificate III in Surface Preparation and Coating Application

This new qualification meets an industry need to have qualified operators who can suitably prepare surfaces and apply the required protective coating. There currently exist qualifications for vehicle painters and painters and decorators, but there is no qualification in this sector for a job with arguably more technical requirements.

The CSIRO estimates the cost of corrosion in Australia to be around $13 billion per year. The major role for this sector is the control of corrosion and so, the reduction of this significant cost. Protective coatings need to be applied to much of public infrastructure (e.g. bridges, pipelines), some modes of transport (e.g. ships, submarines), and many large public and private structures (e.g. hydrocarbon, chemical plants, off shore oil/gas platforms). All these items need to have their surfaces prepared correctly before beginning to apply the appropriate coating. Time between preparation and application is often critical to the overall success of the final product. The industry sought an appropriate qualification to provide common and adequate base level skills across Australasia as a fundamental way of achieving better quality.

The increasingly technical nature of the protective coating and the need to undertake both adequate preparation and surface preparation safely and in an environmentally friendly manner has increased the need for this particular qualification. These technological advances have increased the life of the item, and the period between maintenance and the overall life. However, as surface preparation and coating becomes more technical, the ability to perform both correctly becomes more critical if the intended protection is to be achieved.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

As much of this work is done 'on site' with routine only supervision, it is essential that the qualification equips the operator for this degree of independent operation.

Project management

MSA's Process Manufacturing Board Sub-committee oversaw the development process with significant technical assistance being provided by the Australasian Corrosion Association (ACA) Technical Coatings Technical Group (TCTG).

The individuals and enterprises/organisations represented on the Process Manufacturing Board Sub-committee are set out in the following table:

Name	**Enterprise/organisation**
Les Chegwidden, Chair replaced by David Graham	Pilkington/Veridian Glass Huntsman Chemicals
Bob Paton or Barbara Wallace	MSA CEO MSA QA Manager
Julie Keddie	MSA Industry Coordinator
John Maraz	MSA Industry Coordinator

In addition, Geoff White, Chair TCTG, ACA, presented the findings to the ACA annual conference. The list of recipients is not known to this project but the response was positive.

The final drafts of the new units and qualification have been validated and signed off by all major stakeholders (both industry and RTOs) with no outstanding or unresolved issues. Validation and acceptance of final drafts was undertaken by email. A separate face-to-face validation meeting was held with RTOs intending to offer this qualification (included in the list above), in particular to check on possible implementation issues. They also signed off with no unresolved issues.

Clear and full support for endorsement of the new qualification and units has been provided by all stakeholders.

Appendix 8: Trade Measurement units and Skill Sets

Development of Trade Measurement units and Skill Sets

Responsibility for Australia's trade measurement system is currently shared between the Commonwealth, States and Territories. By 2010, responsibility will transfer to the Commonwealth and in preparation for that, NMI wished to establish a nationally consistent training and skills recognition system that is competency based with qualifications (or Skill Sets) that align with the job roles of trade measurement and fair trading personnel. In particular they focused on the competency needs of Verifiers, Inspectors and Senior Inspectors.

MSA contracted Ivan Johnstone (CIT Solutions Pty Ltd) to undertake this work which included reviewing the suite of trade measurement units in MEM05. The eight MEM units in question (MEM15015-15022) are listed as specialist elective units within MEM40105 Certificate IV in Engineering. Research indicated they were not being used outside the Qld Office of Fair Trading regulatory environment, who have provided written support for the changes. The level of change proposed to the units to support the new regulatory environment that will be in place in 2010 was significant and resulted in development of 14 new units of competency.

The new units will not be aligned to any qualifications, but will be available for use in defined Skill Sets in MSA07 and for importation to proposed new qualifications under development by Government Skills Australia.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Project management

This development has been overseen by MSA's Laboratory Operations Board Sub-committee with significant technical assistance provided by NMI staff and committees.

The individuals and enterprises/organisations represented on the Board Sub-committee are set out in the following table:

Name	**Enterprise/organisation**
David Graham	Huntsman Chemicals
Duncan Jones	Science Industry Australia
Gail Silman	Ai Group
Ian Curry	AMWU
Kim Peterson	TAFE NSW
Marian Haire	National Measurement Institute
Bob Paton Barbara Wallace	MSA CEO MSA QA Manager

Consultation and validation

Consultations during the development and validation process were undertaken with the following key trade measurement personnel from all jurisdictions throughout Australia. The great value of their expertise and input is gratefully acknowledged.

Name		**Organisation**	**State**
Marion	Haire	National Measurement Institute (NMI) Sydney	NSW
Ian	Bentley	National Measurement Institute (NMI) Sydney	NSW
Mathew	Foot	National Measurement Institute (NMI) Sydney	NSW
Anne	Galvin	National Measurement Institute (NMI) Sydney	NSW
Ron	Begg	National Measurement Institute (NMI) Canberra	ACT
Darryl	Hines	Trade Measurement QLD, Fair Trading	QLD

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Name		**Organisation**	**State**
Ron	Plummer	Trade Measurement & Standards, Justice	TAS
Les	Anderson	Trade Measurement	NT
Lindsay	Tegart	Trade Measurement, Fair Trading	NSW
Russell	Jackson	Trade Measurement, Consumer Affairs	VIC
Doug	Berry	Trading Standards Branch	WA
Tony	Blefari	Trade Measurement, Fair Trading	SA
Grant	Fuller	Trade Measurement, Fair Trading	ACT
Olga	Ford	Office of Fair Trading	NSW
Lynn	Greenwood	Government Skills Australia	SA

The final drafts of the new units and Skill Sets have been validated and signed off by all major stakeholders with no outstanding or unresolved issues. Validation and acceptance of final drafts was via a workshop and email.

Marian Haire (NMI's national Training and Technology Transfer Manager with responsibility for coordination of training and recognition/assessment using the new units and Skill Sets) has signed off with no unresolved issues.

Appendix 9: Recreational Vehicle qualifications

Development of the Recreational Vehicle qualifications in MSA07v6

The recreational vehicle qualifications were originally included in THC99 under the Tourism and Hospitality National Industry Training Advisory Board. In 2004, the qualifications were revised, with minimal changes.

With the merger of national ITABs into the ten Industry Skills Councils, THC04 came under the jurisdiction of the Service Industries Skills Councils. As the needs of the recreational vehicle manufacture, service and repair sectors relate to manufacturing and engineering, the sector determined their qualification needs would be more appropriate under the coverage of the Manufacturing Industry Skills Council.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Manufacturing Skills Australia (MSA) undertook to review and update the qualifications and their associated units of competency to bring them into line with current industry needs and with similar manufacturing, service and repair qualifications.

Kevin Hummel of Total Training and Performance Solutions (TaPS) was commissioned to undertake a Scoping Study in 2009. The Scoping Study Report noted that:

- users of THC04 felt it was somewhat inflexible and thus causing some difficulties
- to increase flexibility job based units of competency should be replaced by skills based units of competency (and this may require an adjustment to the qualification packaging rules)
- where there are relevant units of competency which are used by other industry sectors, they should be used in preference to RV specific units covering the same area, unless there are RV specific contexts which they cannot meet
- units and skills sets covering restricted licence requirements should be imported where appropriate
- relevant Competitive Manufacturing units should be included as elective units, while still requiring a sufficient technical core.

MSA supported the findings and contracted TaPS to undertake the agreed changes. Further industry consultations were undertaken prior to developing a detailed specification for the new units of competence and new qualification.

Meeting industry needs

The major industry drivers for the improvements to this package are outlined below:

- RTOs currently servicing this sector support a restructuring of the qualification to make it more flexible and believe they can adapt their existing resources fairly readily. They also see a restructure as possibly making it easier to use suitable resources from other sectors.
- Industry supports increased access to training and resources and is concerned that a sufficient broad base of skills be maintained to allow for both flexibility in workforce deployment and also for portability of skills across the sector.
- This is a sector which is growing and which has wide regional coverage. It is highly concentrated in terms of manufacturing, but with a broad range of smaller manufacturers. Service and repair (and sales) tends to be many small and medium businesses, often with a formal relationship with a manufacturer. This does not prevent them from servicing/repairing any other RV.

Project management

The project was overseen by an MSA Board Sub-Committee made up of major stakeholders. The terms of reference were to:

- assist in the identification of stakeholders to be consulted for the project
- identify and assist in the resolution of industry issues in relation to strategic objectives of MSA’s projects
- provide industry input and advice on:
  - industrial issues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - training and assessment issues
  - priority areas for industry skills development
  - appropriate methods for collection, collation and consolidation of industry information
  - validity of the content of project outcomes
- provide feedback on MSA's development work undertaken for the area covered
- exchange information as appropriate between MSA, industry and other relevant professional groups covered
- provide feedback on the project development work for the area of interest
- make recommendations to the MSA Board on acceptance of the product of the project..

The individuals and enterprises/organisations represented on the MSA Board Sub-Committee are set out in the following table:

Name	**Enterprise/organisation**
Graham Attwood (Chair)	RMax
Kerryn Caulfield	Composites Australia
Richard Lindner	Manufacturing Skills Queensland
Alex Stanojevic	Ai Group
Heather Yerbury	Boral Concrete Products
Ian Booth	Australasian Corrosion Association
Sam Wood	AWU

Consultation and validation processes

Consultations during the development and validation process were undertaken with:

- technical experts from the relevant sub-sector or specialty area of expertise
- representatives of RTOs who already offer current qualifications and/or are intending to offer the qualification.

Consultation was largely by use of CAJA, face-to-face and email with expert input sought and obtained for the specific needs of the project.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Drafts of all units of competence and qualifications were then posted on the MSA website for validation and stakeholders were advised by email about how to access the site and provide feedback. This included industry stakeholders listed on the MSA database, State industry advisory bodies, and State Training Authorities.

This feedback was used to further refine the units and qualifications. In some cases, the feedback received and the units involved were reviewed again by technical experts prior to final editing.

The following individuals and organisations were involved in the development process. The great value of their expertise and input is gratefully acknowledged.

MSA10107 Certificate I in Manufacturing (Pathways)

Modification History

Release 2 - imported LMF units superseded and replaced with equivalent MSF units

Description

The Certificate I in Industry (Pathways) is designed to develop both skills that are essential for employment and skills that relate directly to a **work activity as specified in the core technical unit**. The units chosen **must** provide practical skills that are relevant and useful to the area in which the person hopes to gain employment or is currently working. The group of units should be chosen to support the project and should incorporate both the technical and employability skills needed for work.

Completion of a *Certificate I in Manufacturing* (*Pathways*) should provide the student with a set of competencies that collectively open up pathways into employment and/or further study.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY
MSA10107 Certificate I in Manufacturing (**Pathways**) The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification include**:
Communication	• complete all reporting as required • report anything unusual • alert the appropriate individuals • record results • complete logs and reports • record the result • receive and relay oral and written messages • interpret oral or written messages • respond to information • complete workplace forms
Teamwork	• working as part of a work team • role of individual in organisational structure • individual role in achieving section/team, plant and company objectives • work in a team • identify individual tasks that are part of the team requirement
Problem solving	• recognise common problems • identify problems and take required action • respond to routine problems
Initiative and enterprise	• take appropriate corrective action • select appropriate equipment • identify units to be used • distinguish between urgent and non-urgent tasks
Planning and organising	• organise relevant equipment and tools • organise requests and tasks • planning workplace procedures, scheduling and performance • plan own work • plan and organise activities • organise daily work plan
Self-management	• find out what is required for the job • recognise a situation requiring action • implement within appropriate time constraints • complete own work activities • identify task requirements and work role • plan own work • meet time lines • seek assistance from other team members where appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Learning	• recognise anything unusual • self-check numerical information • clarify cleaning duties • ask questions of appropriate person • seek advice from relevant personnel
Technology	• use equipment • turn equipment on and off as required by procedures • monitor equipment • make measurements • use computer system • use measuring devices

Packaging Rules

To be awarded a Certificate I in Manufacturing (Pathways), competency must be achieved in **nine** (**9**) units of competency:

- **three** (**3**) core units of competency
- **six** (**6**) elective units of competency, three (3) of which may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

*Note that the industry/technical units coded MSAPCII are designed for use only in a Pathways qualification or skills set. They should not be used in other instances as replacements for units that have direct job outcomes.

Core units of competency

Select all **three** (**3**) units from the following list.

Unit code	**Unit title**
MSAPCI101A	Adapt to work requirements in industry
MSAPCI102A	Apply effective work practices
MSAPCI103A	Demonstrate care and apply safe practices at work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elective units of competency

Group A - Industry/technical units*

Select a maximum of **one** (**1**) unit from the following list.

Unit code	Unit title
MSAPCII296A	Make a small furniture item from timber
MSAPCII297A	Make an object from cloth using an existing pattern
MSAPCII298A	Make an object from metal
MSAPCII299A	Make an object from plastic

Group B - Other elective units

Select **five** (**5**) units from the following list.

Unit code	Unit title
MSFFM1002	Operate basic woodworking machines
MSFFM2001	Use furniture making sector hand and power tools
MSFFM2002	Assemble furnishing components
MSFFM2003	Select and apply hardware
MSFFM2005	Join solid timber
MSFSF1001	Produce basic soft furnishings accessories
MSFSF2001	Cut single layer fabrics
LMTCL2001B	Use a sewing machine
LMTCL2003B	Identify fibres and fabrics
LMTCL2006B	Press work
LMTCL2007B	Lay up, mark and cut uncomplicated fabrics and lays
LMTCL2008B	Finish garment production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MEM03001B	Perform manual production assembly
MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MSAPMOPS100A	Use equipment
MSAPMOPS101A	Make measurements
MSAPMOPS102A	Perform tasks to support production
MSAPMOPS244A	Layout and cut materials
PMBFIN201C	Finish products and components
PMBFIN205C	Hand decorate products
PMBPREP205C	Assemble materials and equipment for production
PMBPREP206C	Prepare materials to formulae
PMBPROD236C	Operate hand held air/power equipment for production processes
PMBPROD240C	Cut materials

A maximum of three (3) relevant units can be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are available for inclusion at Certificate I or II.

The elective unit(s) from another Training Package must relate to the core function/role of the selected industry/technical unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSA10207 Certificate I in Process Manufacturing

Modification History

Not applicable.

Description

The Certificate I in Process Manufacturing is intended for entry to the industry and addresses job outcomes at this level. It has been developed as a common certificate for use across the three process manufacturing sectors:

- chemical, hydrocarbons and oil refining
- plastics, rubber and cablemaking
- manufactured mineral products.
-

Packaging Rules

Packaging Rules

To be awarded the Certificate I in Process Manufacturing, competency must be achieved in **seven** (**7**) units of competency.

- **three** (**3**) core units of competency
- **four** (**4**) elective units of competency, **two** (**2**) of which may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.
-

Core units of competency

- Select all **three** (**3**) units from the following list:

Unit code	Unit title
MSAPMOHS100A	Follow OHS procedures
MSAPMSUP100A	Apply workplace procedures
MSAPMSUP102A	Communicate in the workplace

Elective units of competency

- Select **four** (**4**) units from the following list:

Unit code	Unit title
MSAPMOHS110A	Follow emergency response procedures
MSAPMOPS100A	Use equipment
MSAPMOPS101A	Make measurements
MSAPMOPS102A	Perform tasks to support production
MSAPMSUP101A	Clean workplace or equipment
MSAPMSUP106A	Work in a team
MSAPMSUP172A	Identify and minimise environmental hazards
PMBHAN103C	Shift materials safely by hand

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Up to two (2) relevant units may be chosen from this Training Package, other endorsed Training Packages and accredited courses, where those units are available for inclusion at Certificate I.
- A maximum of one (1) unit may be chosen from units available at MSA20107 Certificate II in Process Manufacturing.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSA20107 Certificate II in Process Manufacturing

Modification History

Release 5 - Imported unit code updated to current release

Release 4 - Imported unit code updated.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release 2 - Imported unit codes updated.

Description

The Certificate II in Process Manufacturing is intended for competent production workers who undertake vital production support roles directly related to producing products. The production worker would apply a breadth and depth of knowledge to a defined range of situations and would be expected to apply this knowledge to solve a defined range of problems by applying known solutions to a limited range of predictable problems.

This qualification has been developed for use across the three process manufacturing sectors:

- chemical, hydrocarbons and refining
- plastics, rubber and cablemaking
- manufactured mineral products.

Licensing considerations

There are no specific licenses that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

MSA20107 Certificate II in Process Manufacturing

The following table contains a summary of the Employability Skills required by the process manufacturing industries for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Due to the high proportion of electives required by this qualification, the industry/enterprise requirements described for each Employability Skill are representative of the industry in general and may not reflect specific job roles. Learning and assessment strategies for this qualification should be based on the requirements of the units of competency for this qualification.

Employability Skill	**Industry/enterprise requirements for this qualification include**:
Communication	• complete logs, reports and plant documentation • access and interpret production plans and information • provide appropriate workplace information • give and follow routine instructions • provide written and oral reports
Teamwork	• work as part of a team • identify and describe own role and role of others • identify own role and responsibility within a team
Problem solving	• recognise known faults that occur during the operation • identify and take action on causes of routine faults • identify non-routine process and quality problems and take appropriate action • respond to routine problems
Initiative and enterprise	• suggest improvements • make adjustments to improve equipment performance • determine problems needing action • report problems outside area of responsibility • raise questions regarding requirements and expectations • distinguish between causes of faults • identify product out of specification • safely shutdown equipment in abnormal circumstances
Planning and organising	• plan own work • achieve production targets • identify production targets • recognise hazards and follow appropriate hazard control methods

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Self-management	• identify work requirements • plan own work requirements from production requests • operate within appropriate time constraints and work standards • select and use appropriate equipment, materials, processes and procedures • identify task outcomes and work role
Learning	• ask questions to gain information • seek clarification • participate in improvement procedures
Technology	• check process is operating within required limits • monitor equipment operation • use appropriate instruments • monitor and adjust machine functions • use forklift controls, instruments and indicators • carry out pre-operational checks on equipment

Packaging Rules

Packaging Rules

To be awarded the Certificate II in Process Manufacturing, competency must be achieved in **fourteen** (**14**) units of competency:

- **three** (**3**) core units of competency
- **eleven** (**11**) elective units of competency, four (4) of which can be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Note: Units marked with an asterisk have one or more prerequisite requirements. The prerequisites for these units are to be counted in the total number of units required in the elective group. Please refer to individual units for details.

Core units of competency

- Complete all **three** (**3**) units of competency from this list.

Unit code	**Unit title**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title
MSAENV272B	Participate in environmentally sustainable work practices
MSAPMOHS200A	Work safely
MSAPMSUP210A	Process and record information

Group A - Elective units

- Select a minimum of **eleven** (**11**) units of competency from the following list.

Support units		
Unit code	**Unit title**	**Prerequisites**
LMTGN2008B	Coordinate work of team/section	
MEM13003B	Work safely with industrial chemicals and materials	
MEM16006A	Organise and communicate information	
MEM16007A	Work with others in a manufacturing, engineering or related environment	
MEM16008A	Interact with computing technology	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MSS402002A	Sustain process improvements	
MSS402020A	Apply quick changeover procedures	
MSS402021A	Apply Just in Time (JIT) procedures	
MSS402030A	Apply cost factors to work practices	
MSS402040A	Apply 5S procedures	
MSS402050A	Monitor process capability	
MSS402051A	Apply quality standards	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Support units		
MSS402060A	Use planning software systems in operations	
MSS402080A	Undertake root cause analysis	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOHS110A	Follow emergency response procedures	
MSAPMOHS205A	Control minor incidents	
MSAPMOHS210B	Undertake first response to non-fire incidents	
MSAPMOHS212A	Undertake first response to fire incidents	
MSAPMOHS216A	Operate breathing apparatus	
MSAPMOHS217A	Gas test atmospheres	
MSAPMOHS220A	Provide initial first aid response	
MSAPMOPS100A	Use equipment	
MSAPMOPS101A	Make measurements	
MSAPMOPS102A	Perform tasks to support production	
MSAPMPER200C	Work in accordance with an issued permit	
MSAPMPER201A	Monitor and control work permits	
MSAPMPER202A	Observe permit work	*
MSAPMPER205C	Enter confined space	*
MSAPMSUP100A	Apply workplace procedures	
MSAPMSUP101A	Clean workplace or equipment	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
MSAPMSUP172A	Identify and minimise environmental hazards	
MSAPMSUP201A	Receive or despatch goods	
MSAPMSUP200A	Achieve work outcomes	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Support units		
MSAPMSUP204A	Pack products or materials	
MSAPMSUP205A	Transfer loads	
MSAPMSUP230A	Monitor process operations	
MSAPMSUP240A	Undertake minor maintenance	
MSAPMSUP273A	Handle goods	
MSAPMSUP280A	Manage conflict at work	
MSAPMSUP291A	Participate in continuous improvement	
MSAPMSUP292A	Sample and test materials and product	
PMBHAN103C	Shift materials safely by hand	
TLID2010A	Operate a forklift	
RIIRIS201B	Conduct local risk control	
Technical units		
FPICOT2238A	Cut materials with a hand-held chainsaw	
MSAPMOPS200A	Operate equipment	
MSAPMOPS212A	Use enterprise computers or data systems	
A maximum of four (4) relevant units may be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are available for inclusion at Certificate II or III. Note: a maximum of two (2) units may be chosen from Certificate III.		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSA20208 Certificate II in Manufacturing Technology

Modification History

Version 2 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Description

This qualification applies to a learning and assessment environment where access to normal production operations is not available. A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. The units are suitable for delivery in a school environment and for schools to contextualize the units to local manufacturing industry activities.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
MSA20208 Certificate II in Manufacturing Technology The following table contains a summary of the employability skills as identified by industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.	
Employability Skill	**Industry/enterprise requirements for this qualification include**:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Communication	• Access and interpret standardised documentation • Complete all reporting as required • Ask questions to increase understanding about workplace procedures • Read and interpret instructions • Respond to information • Access and use communication tools and equipment • Apply numeracy skills to work procedures
Teamwork	• Work effectively with others • Share information with peers • Understand role of individual within team process • Seek assistance with work operations as required
Problem-solving	• Recognise common problems and report inconsistencies • Monitor the job and make improvements • Respond to routine problems • Recommend improvements
Initiative and enterprise	• Take correct action and follow procedures • Recommend changes and improvements • Take action to make improvements • Adopt changes in accordance with procedures
Planning and organising	• Plan own work • Organise processes, tools and materials • Monitor own work outcomes • Organise and plan activities • Collect and organise information for work activity
Self-management	• Conduct all activities according to safety standards • Maintain housekeeping standards • Achieve planned outcomes within time constraints • Monitor own work performance • Assess own work • Seek assistance where appropriate
Learning	• Ask questions to aid learning • Identify own skill requirements • Ask questions to ensure understanding of own work requirements
Technology	• Use equipment and/or or information technology • Identify equipment appropriate for job • Use simple measuring devices • Collect and apply data and information from technology

Packaging Rules

Packaging Rules

To be awarded a Certificate II in Manufacturing Technology, competency must be achieved in **ten** (**10**) units of competency:

- **five** (**5**) core units of competency
- **five** (**5**) elective units of competency, chosen as described below.

Core units

All **five (5)** of the following units must be completed.

Unit code	Unit title
MSAENV272B	Participate in environmentally sustainable work practices
MSAPMOHS200A	Work safely
MSS402001A	Apply competitive systems and practices
MSS402051A	Apply quality standards
MSS402080A	Undertake root cause analysis

Elective units

Select **five** (**5**) elective units from Groups A, B and C, as described below.

Group A - Manufacturing practice

At least one (1) of the following units must be completed but up to four (4) may be selected.

Unit code	Unit title
MSS402002A	Sustain process improvements
MSS402010A	Manage the impact of change on own work
MSS402031A	Interpret product costs in terms of customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title
	requirements
MSS402050A	Monitor process capability

Group B - Manufacturing Technology*

At least one (1) of the following units must be completed but up to four (4) may be selected.

Unit code	Unit title
MSAPCII295A	Operate manufacturing equipment
MSAPCII296A	Make a small furniture item from timber
MSAPCII297A	Make an object from cloth using an existing pattern
MSAPCII298A	Make an object from metal
MSAPCII299A	Make an object from plastic

Group C

Up to **two** (**2**) elective units can be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses where those units are available at Certificate I or II.

*Note that the manufacturing technology units listed above (coded MSAPCII) have been specifically developed for the Certificate II in Manufacturing Technology. They are designed for use only in a Pathways qualification or Skill Set. They should not be used in other instances as replacements for units that have direct job outcomes.

MSA20510 Certificate II in Recreational Vehicle Service and Repair

Modification History

Release 5 - Imported elective unit updated to current release.

Release 4 - AU imported units updated. Prerequisites replaced by an asterisk. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSSv2 Sustainability Training Package. Imported unit codes updated.

Release 2 - Group B elective units corrected due to a transfer error.

Description

This qualification covers the skills and knowledge required to perform the wide range of service and repair tasks performed on recreational vehicles.

Job roles/employment outcomes

The Certificate II in Recreational Vehicle Service and Repair has been developed as an entry level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to work under supervision servicing and repairing recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR).

They may work in a service and repair facility or a manufacturer's factory undertaking warranty work. Work may be for an insurance claim, modifying an existing recreational vehicle or undertaking routine servicing.

Application

The sector typically services and repairs any recreational vehicle as required. This may apply to the recreational vehicle body, fittings and running gear. It may be in response to a road (or other) accident, hail damage, vehicle modification or routine servicing. They may also specify and access outside specialist services, for example, for spray painting or licence requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis. Fittings are typically timber/particle board but may be any other suitable material.

People with this qualification may be expected to:

- carry out insurance repair
- carry out other repairs
- work under warranty
- undertake modifications/refits to the recreational vehicle
- undertake routine servicing
- prepare a recreational vehicle for sale/resale.

This work will generally be undertaken in a workshop environment.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

Further qualification pathways from this qualification include MSA30510 Certificate III in Recreational Vehicle Service and Repair.

Additional qualification advice

MSA21108 Certificate II in Competitive Manufacturing and MSA30107 Certificate III in Process Manufacturing are available for team leaders or others who need a more generalist qualification covering the application of good manufacturing practice and lean principles.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing considerations

Units of competency in this qualification provide the underpinning knowledge and skills for various required licenses. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• Taking action to make improvements • Adopting changes in accordance with procedures
Planning and organising	• Planning own work • Organising processes, tools and materials • Monitoring own work outcomes • Organising and planning activities • Collecting and organising information for work activity
Self-management	• Conducting all activities according to safety standards • Maintaining housekeeping standards • Achieving planned outcomes within time constraints • Monitoring own work performance • Assessing own work • Seeking assistance where appropriate
Learning	• Asking questions to aid learning • Identifying own skill requirements • Asking questions to ensure understanding of own work requirements
Technology	• Using equipment and/or information technology • Identifying equipment appropriate for job • Using simple measuring devices • Collecting and applying data and information from technology

Packaging Rules

Packaging Rules

To be awarded the Certificate II in Recreational Vehicle Service and Repair competency must be achieved in **fourteen** (**14**) units of competency:

- **three** (**3**) core units of competency
- **eleven** (**11**) elective units of competency, as specified below:

  - a minimum of **seven** (**7**) units of competency must be selected from Group A
  - the balance of units, to a maximum of **four** (**4**), may be selected from:
    - units of competency not previously selected from Group A
    - Group B units of competency listed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Note: Up to **four** (**4**) elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified, they must be counted in the total number of units required for completion of the qualification.

Core units of competency

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMSUP102A	Communicate in the workplace	

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
AUMGTT001	Apply trim to vehicle components	
AURETR2015	Inspect and service batteries	
AURETR2012	Test and repair basic electrical circuits	
AURETR2010	Fabricate, test and repair wiring harnesses and looms	
AURETB3001	Repair electric braking systems	
AURTTB2001	Inspect and service braking systems	
AURTTD2004	Inspect and service suspension systems	
AURTTJ2002	Remove and refit wheel hubs and associated brake components	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
AURTTA3017	Carry out vehicle safety and roadworthy inspection	
AURVTN2005	Remove and fit protector mouldings, transfers and decals	
AURVTP2007	Apply paint touch-up techniques	
AURVTS3004	Repair fibreglass and composite material components	
AURTTY3001	Repair chassis, frame and associated components	
AURVTT3015	Fabricate canvas products	
AURVTT3016	Fabricate frame structures	
AURVTT3019	Fabricate and install canopies and curtains	
AURVTG3011	Install side windows	
MEM05005B	Carry out mechanical cutting	*
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM10002B	Terminate and connect electrical wiring	*
MEM12002B	Perform electrical/electronic measurement	
MEM12023A	Perform engineering measurements	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18038B	Maintain wheels and tyres	*
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	*
MSAPMOPS101A	Make measurements	
MSARVS202A	Repair/service LP gas systems in a recreational vehicle	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II.		

Group B

Unit code	Unit title	Prerequisites
MEM09002B	Interpret technical drawing	
MEM11011B	Undertake manual handling	
MEM14004A	Plan to undertake a routine task	
MEM15024A	Apply quality procedures	
MSS402021A	Apply Just in Time procedures	
MSS402040A	Apply 5S procedures	
MSS402080A	Undertake root cause analysis	
MSAPMOHS220A	Provide initial first aid response	
MSAPMOPS212A	Use enterprise computers or data systems	
MSAPMSUP100A	Apply workplace procedures	
MSAPMSUP101A	Clean workplace or equipment	
MSAPMSUP106A	Work in a team	
MSAPMSUP280A	Manage conflict at work	
MSAPMSUP291A	Participate in continuous improvement	
MSARVS301A	Develop and update caravan industry knowledge	
MSARVG201A	Tow a recreational vehicle safely	
MSARVT201A	Apply technical knowledge of recreational vehicle manufacturing to work activities	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
SIRXSLS002A	Advise on products and services	
TLID2010A	Operate a forklift	
UEGNSG604B	Fill gas cylinders	
Up to two (2) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II.

MSA20610 Certificate II in Recreational Vehicle Manufacture

Modification History

Release 5 - Imported elective unit updated to current release.

Release 4 - AU imported units updated. Prerequisites replaced by an asterisk. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release - Imported unit codes updated.

Description

This qualification covers the skills and knowledge required to perform the wide range of tasks performed in the manufacture of recreational vehicles.

Job roles/employment outcomes

The Certificate II in Recreational Vehicle Manufacture has been developed as an entry level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to work under supervision manufacturing recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR).

They may work in a large manufacturing organisation or a smaller workshop.

Application

The sector typically manufactures recreational vehicles as required. This may include special/custom orders or standard manufacturer models. They may also specify and access outside specialist services, for example, for spray painting or licence requirements.

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis. Fittings are typically timber/particle board but may be any other suitable material.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

People with this qualification may be expected to:

- carry out the various stages in recreational vehicle manufacture
- undertake modifications/refits to a recreational vehicle
- prepare a recreational vehicle for sale.

This work will generally be undertaken in a factory or workshop environment.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

Further qualification pathways from this qualification include MSA30610 Certificate III in Recreational Vehicle Manufacture.

Additional qualification advice

MSA21108 Certificate II in Competitive Manufacturing and MSA30107 Certificate III in Process Manufacturing are available for team leaders or others who need a more generalist qualification covering the application of good manufacturing practice and lean principles.

Licensing considerations

MSA30107 Certificate III in Process Manufacturing

Modification History

Release 5 - Imported elective units updated

Release 4 - Imported unit updated. MEM09003B replaced by MEM09204A. Prerequisites replaced by an asterisk. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release 2 - Imported unit codes updated. TAADEL301C replaced by TAEDEL301A.

Description

The Certificate III in Process Manufacturing is intended for advanced production workers who use a range of equipment and provide support functions directly related to producing products. They would undertake more advanced roles, working in accordance with the operating procedures and would apply their knowledge to anticipate problems and solve a range of foreseen and unforeseen problems.

This qualification is for:

- production support workers - people working in manufacturing and filling the vital production support roles but who may not have the opportunity to develop competency in sufficient technical units related directly to producing products
- those employees who operate across more than one category within process manufacturing or 'specialised processes' and elsewhere when required.

It is designed for use across the three process manufacturing sectors:

- chemical, hydrocarbons and oil refining
- plastics, rubber and cablemaking
- manufactured mineral products.

Licensing considerations

There are no specific licenses that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements depending on the work context. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

MSA30107 Certificate III in Process Manufacturing

The following table contains a summary of the Employability Skills required by the process manufacturing industries for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Due to the high proportion of electives required by this qualification, the industry/enterprise requirements described above for each Employability Skill are representative of the industry in general and may not reflect specific job roles. Learning and assessment strategies for this qualification should be based on the requirements of the units of competency for this qualification.

Employability Skill	**Industry/enterprise requirements for this qualification include**:
Communication	• complete logs and reports • use technical information and manufacturer's information • collect, analyse and organise information • communicate ideas and information • effective use of workplace documentation • maintain workplace records
Teamwork	• identify and describe own role and role of others • work within a team • resolve conflicts between team members • use teamwork strategies
Problem solving	• recognise a problem or a potential problem • determine problems needing priority action • refer problems outside area of responsibility to appropriate person, with possible causes • seek information and assistance as required to solve problems • solve problems within area of responsibility • follow through items initiated until final resolution has occurred

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• identify and isolate faults in equipment • use a range of formal problem solving techniques
Initiative and enterprise	• identify the most appropriate equipment • make adjustments to improve equipment performance • anticipate the impact of the process on the product • determine problems needing action • recommend required action • report problems outside area of responsibility • distinguish between causes of faults
Planning and organising	• plan own work requirements • plan scope of equipment checks • plan and organise activities • identify tasks to achieve team goals • organise allocation of tasks • monitor completion of allocated tasks • develop and adjust a production schedule
Self-management	• plan own work requirements from production requests • operate within appropriate time constraints and work standards • select and use appropriate equipment, materials, processes and procedures • plan to ensure effective production • apply workplace procedures • identify resource requirements, document and monitor • recognise limitations and seek timely advice
Learning	• ask questions to gain information • identify sources of information to expand knowledge and understanding • participate in improvement procedures • participate in development of continuous improvement strategies
Technology	• operation and adjustment of processes • start up and shut down equipment • set up equipment • monitor product/process quality • function and operating principles of equipment, machine components • maintain computer based workplace records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Packaging Rules

Packaging Rules

To be awarded the Certificate III in Process Manufacturing, competency must be achieved in **twenty one** (**21**) units of competency.

- **four** (**4**) core units of competency
- **seventeen** (**17**) elective units of competency, six (6) of which can be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Note: Where prerequisite units are identified they must be counted in the total number of units required for completion of the qualification.

Core units of competency

- Select all **four** (**4**) units from the following list.

Unit code	Unit title
MSAENV272B	Participate in environmentally sustainable work practices
MSS402051A	Apply quality standards
MSAPMOHS200A	Work safely
MSAPMSUP210A	Process and record information

Group A - Elective units

- Select a minimum of **five** (**5**) units from the following list.

Unit code	Unit title	Prerequisites
Support units		
MEM03001B	Perform manual production assembly	
MEM03006B	Set assembly stations	
MEM11005B	Pick and process order	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM11006B	Perform production packaging	
MEM11007B	Administer inventory procedures	
MEM12023A	Perform engineering measurements	
MEM15001B	Perform basic statistical quality control	
MEM15003B	Use improvement processes in team activities	
MEM15004B	Perform inspection	
MSS402002A	Sustain process improvements	
MSS402020A	Apply quick changeover procedures	
MSS402050A	Monitor process capability	
MSS402060A	Use planning software systems in operations	
MSS402080A	Undertake root cause analysis	
MSAPMOHS300A	Facilitate the implementation of OHS for a work group	*
MSAPMPER300C	Issue work permits	*
MSAPMPER400A	Coordinate permit process	*
MSAPMSUP300A	Identify and implement opportunities to maximise production efficiencies	
MSAPMSUP301A	Apply HACCP to the workplace	
MSAPMSUP303A	Identify equipment faults	
MSAPMSUP309A	Maintain and organise workplace records	
MSAPMSUP310A	Contribute to the development of plant documentation	
MSAPMSUP330A	Develop and adjust a production schedule	
MSAPMSUP382A	Provide coaching/mentoring in the workplace	
MSAPMSUP383A	Facilitate a team	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSAPMSUP390A	Use structured problem solving tools	
MSL973001A	Perform basic tests	
TAEDEL301C	Provide work skill instruction	
Technical units		
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	*
MSAPMOPS363A	Organise on site work	
A maximum of two (2) relevant units may be selected from this Training Package, other endorsed Training Packages and accredited courses, where those units are available for inclusion at Certificates III or IV.		

Group B - Other electives

- Select a maximum of **twelve** (**12**) units from the following list.

Unit code	Unit title
Support units	
LMTGN2008B	Coordinate work of team/section
MEM13003B	Work safely with industrial chemicals and materials
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related environment
MEM16008A	Interact with computing technology
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MSS402021A	Apply Just in Time procedures
MSS402030A	Apply cost factors to work practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title
MSS402040A	Apply 5S procedures
MSAPMOHS100A	Follow OHS procedures
MSAPMOHS110A	Follow emergency response procedures
MSAPMOHS205A	Control minor incidents
MSAPMOHS210A	Undertake first response to non-fire incidents
MSAPMOHS212A	Undertake first response to fire incidents
MSAPMOHS216A	Operate breathing apparatus
MSAPMOHS217A	Gas test atmospheres
MSAPMOHS220A	Provide initial First Aid response
MSAPMOPS100A	Use equipment
MSAPMOPS101A	Make measurements
MSAPMOPS102A	Perform tasks to support production
MSAPMPER200C	Work in accordance with an issued permit
MSAPMPER201A	Monitor and control work permits
MSAPMPER202A	Observe permit work
MSAPMPER205C	Enter confined space
MSAPMSUP100A	Apply workplace procedures
MSAPMSUP101A	Clean workplace or equipment
MSAPMSUP102A	Communicate in the workplace
MSAPMSUP106A	Work in a team
MSAPMSUP172A	Identify and minimise environmental hazards
MSAPMSUP200A	Achieve work outcomes
MSAPMSUP201A	Receive or despatch goods
MSAPMSUP204A	Pack products or materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	**Unit title**
MSAPMSUP205A	Transfer loads
MSAPMSUP230A	Monitor process operations
MSAPMSUP240A	Undertake minor maintenance
MSAPMSUP273A	Handle goods
MSAPMSUP280A	Manage conflict at work
MSAPMSUP291A	Participate in continuous improvement
MSAPMSUP292A	Sample and test materials and product
PMBHAN103C	Shift materials safely by hand
TLID2010A	Operate a forklift
RIIRIS201B	Conduct local risk control
Technical units	
FPICOT2238A	Cut materials with a hand-held chainsaw
MSAPMOPS200A	Operate equipment
MSAPMOPS212A	Use enterprise computers or data systems
A maximum of four (4) relevant units may be chosen from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate II.

MSA30208 Certificate III in Manufacturing Technology

Modification History

Version 4 - MEM elective imported units replaced by current versions. Equivalent.

Version 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Version 2 - Imported unit codes updated.

Description

This qualification is suitable for delivery as part of a one-year Technology Cadetship, or can be undertaken through an Australian Apprenticeship arrangement.

This qualification has seven specialist streams available. These are:

- CAD/drafting
- Manufacturing operations
- Laboratory operations
- Technical officer
- Metallurgy
- Polymer technology
- Structural steel detailing.

Each stream offers an opportunity for significant choice in electives and each stream requires the same core units to be completed.

Note:

- The minimum requirements for the Certificate III in Manufacturing Technology can also be met by holders of the *Certificate III in Engineering - Technician* from the Metal and Engineering Training Package.
-

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

MSA30208 Certificate III in Manufacturing Technology

The following table contains a summary of the employability skills as identified by manufacturing technology related industries for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability skill	**Industry/enterprise requirements for this qualification include**:
Communication	• use communication technologies efficiently • communicate production abnormalities, documentation and test results • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • read, interpret and communicate work related documents • communicate with all team members
Teamwork	• work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem solving	• identify and report problems and make contributions to their solution • investigate problem causes • implement changes • examine equipment for damage, missing components or other defects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability skill	**Industry/enterprise requirements for this qualification include**:
	• identify and promptly address problems or issues • assess quality of work according to specifications • determine effective work practices • problem solve machine operational requirements
Initiative and enterprise	• seek and provide feedback on procedures • gather and analyse information • record information on the quality and other indicators of production performance • identify and implement simple process improvements • coordinate work activities and manufacturing processes • use analytical and decision making skills
Planning and organising	• identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • sequence work to maximise safety and productivity • select and use appropriate tools and equipment • apply time management skills to ensure work flow
Self management	• plan own work requirements from production requests • operate within appropriate time constraints and work standards • select and use appropriate equipment, materials, processes and procedures • plan to ensure effective production • apply workplace procedures • identify resource requirements, document and monitor • recognise limitations and seek timely advice
Learning	• ask questions to gain information • identify sources of information to expand knowledge and understanding • participate in improvement procedures • participate in development of continuous improvement strategies
Technology	• operate and adjust processes • start up and shut down equipment • set up equipment • monitor product/process quality • function and operating principles of equipment, machine components • maintain computer based workplace records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Packaging Rules

Packaging Rules

To be awarded a Certificate III in Manufacturing Technology, competency must be achieved in **eleven** (**11**) units of competency:

- **three** (**3**) core units of competency
- **eight** (**8**) elective units of competency chosen as described below.

Core units

The following **three** (**3**) units must be chosen.

Unit code	Unit title
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSS402051A	Apply quality standards
MSAENV272B	Participate in environmentally sustainable work practices

Prerequisites

Note that elective units marked with an asterisk have one or more prerequisite requirements. The prerequisites for these units are to be counted in the total number of units required in the elective group. Please refer to the individual units for details.

Elective units

Group A - specialist streams

Choose **eight** (**8**) elective units as specified for a specialist stream.

Note:

- All units from each specialist stream are available in Group B as General Electives.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A maximum of two general elective units may also be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses.

CAD/drafting specialist stream

Select **eight** (**8**) elective units:

- a minimum of **six** (**6**) from the list below
- the balance may be chosen from Group B General Electives

Unit code	Unit title	Prerequisites
AUM4003A	Interpret customer requirements	
LMTGN4002A	Participate in product engineering	
MEM12024A	Perform computations	
MEM16006A	Organise and communicate information	
MEM16008A	Interact with computing technology	
MEM30031A	Operate computer-aided design (CAD) systems to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30007A	Select common engineering materials	
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30025A	Analyse a simple electrical system circuit	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Manufacturing operations specialist stream

Select **eight** (**8**) elective units as follows:

- a minimum of **six** (**6**) from the list below
- the balance may be chosen from Group B General Electives

Unit code	Unit title	Prerequisites
FDFOP2005A	Work in a socially diverse environment	
MEM15001B	Perform basic statistical quality control	
MEM16006A	Organise and communicate information	
MEM16008A	Interact with computing technology	
MEM30014A	Apply basic just in time systems to the reduction of waste	
MEM30015A	Develop recommendations for basic set up time improvements	
MEM30016A	Assist in the analysis of a supply chain	
MEM30017A	Use basic preventative maintenance techniques and tools	
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30021A	Prepare a simple production schedule	
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MSS402001A	Apply competitive systems and practices	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSS402002A	Sustain process improvements	
MSS402020A	Apply quick changeover procedures	
MSS402030A	Apply cost factors to work practices	
MSS402031A	Interpret product costs in terms of customer requirements	
MSS402050A	Monitor process capability	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems in operations	
MSS402080A	Undertake root cause analysis	
MSS403002A	Ensure process improvements are sustained	
MSS403030A	Improve cost factors in work practices	

Laboratory operations specialist stream

Select **eight** (**8**) elective units:

- a minimum of **six** (**6**) from the list below
- the balance may be chosen from Group B General Electives

Unit code	Unit title	Prerequisites
LMTGN4016A	Contribute to the development of products or processes	
MEM15001B	Perform basic statistical quality control	
MEM16006A	Organise and communicate information	
MEM16008A	Interact with computing technology	
MEM30024A	Participate in quality assurance techniques	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSL913001A	Communicate with other people	
MSL913002A	Plan and conduct laboratory/field work	
MSL922001A	Record and present data	
MSL933001A	Maintain the laboratory/field workplace fit for purpose	
MSL933002A	Contribute to the achievement of quality objectives	
MSL933003A	Apply critical control point requirements	
MSL934002A	Apply quality system and continuous improvement processes	
MSL943001A	Work safely with instruments that emit ionising radiation	
MSL943002A	Participate in laboratory/field workplace safety	
MSL952001A	Collect routine site samples	
MSL952002A	Handle and transport samples or equipment	
MSL953001A	Receive and prepare samples for testing	
MSL954001A	Obtain representative samples in accordance with sampling plan	
MSL963001A	Operate basic handblowing equipment	
MSL963002A	Repair glass apparatus using simple glassblowing equipment	
MSL973001A	Perform basic tests	
MSL973002A	Prepare working solutions	
MSL973003A	Prepare culture media	
MSL973004A	Perform aseptic techniques	
MSL973005A	Assist with fieldwork	
MSL973006A	Prepare trial batches for evaluation	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSL973007A	Perform microscopic examination	

Technical officer specialist stream

Select **eight** (**8**) elective units:

- a minimum of **six** (**6**) from the list below
- the balance may be chosen from Group B General Electives

Unit code	Unit title	Prerequisites
LMTGN4016A	Contribute to the development of products or processes	
MEM15001B	Perform basic statistical quality control	
MEM16006A	Organise and communicate information	
MEM16008A	Interact with computing technology	
MEM30007A	Select common engineering materials	
MEM30008A	Apply basic economic and ergonomic concepts to engineering designs and applications	
MEM30009A	Contribute to the design of basic mechanical systems	*
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30013A	Assist in the design of basic workplace layout	
MEM30016A	Assist in the analysis of a supply chain	
MEM30017A	Use basic preventative maintenance techniques and tools	
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in	*

Unit code	Unit title	Prerequisites
	manufacturing	
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30022A	Undertake supervised procurement activities	
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	
MSS402031A	Interpret product costs in terms of customer requirements	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems	
MSS402080A	Undertake root cause analysis	
MSS403032A	Analyse manual handling processes	

Metallurgy specialist stream

Select **eight** (**8**) elective units:

- a minimum of **five** (**5**) from the two groups below
- the balance may be chosen from Group B General Electives
-

Metallurgy group 1

Choose at least three (3) units from this list.

Unit code	Unit title	Prerequisites
MSATCM301A	Test the mechanical properties of materials	
MSATCM302A	Monitor basic ferrous melting and casting processes	
MSATCM303A	Monitor basic non-ferrous melting and casting	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
	processes	
MSATCM304A	Interpret basic binary phase diagrams	
MSATCM305A	Demonstrate basic knowledge of casting operations	

Metallurgy group 2

Choose at least two (2) units from this list.

Unit code	Unit title	Prerequisites
MEM09002B	Interpret technical drawing	
MEM13003B	Work safely with industrial chemicals	
MEM13004B	Work safely with molten metals/glass	
MEM16008A	Interact with computing technology	
MEM30007A	Select common engineering materials	*

Polymer technology specialist stream

Select **eight** (**8**) elective units:

- a minimum of **six** (**6**) from the list below
- the balance may be chosen from Group B General Electives

Note that either PMBPREP301C or PMBPREP303C may be chosen, but not both.

Unit code	Unit title	Prerequisites
MSAPMSUP303A	Identify equipment faults	
PMAOPS350B	Match and adjust colour	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
PMBPREP206C	Prepare materials to formulae	
PMBPREP301C	Set up and prepare for production	
PMBPREP303C	Set up equipment for continuous production	
PMBPREP304C	Set a die	
PMBPROD235C	Use materials and process knowledge to complete work operations	
PMBTECH301B	Use material and process knowledge to solve problems	*
PMBTECH302A	Modify existing compounds	
PMBTECH303A	Make minor modifications to products	
MSL973001A	Perform basic tests	
	Up to two (2) relevant units may be chosen from the **production** units available at Certificate III in the Plastics, Rubber & Cablemaking Training Package (PMB07), or its endorsed replacement.	

Structural steel detailing specialist stream

Select **eight** (**8**) elective units:

- a minimum of **six** (**6**) from the list below
- the balance may be chosen from Group B General Electives

Unit code	Unit title	Prerequisites
MSATCS301A	Interpret architectural and engineering design specifications for structural steel detailing	*
MSATCS302A	Detail bolts and welds for structural steelwork connections	*
MEM05051A	Select welding processes	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM09002B	Interpret technical drawing	
MEM16006A	Organise and communicate information	
MEM16008A	Interact with computing technology	
MEM30031A	Operate computer-aided design (CAD) system to produce basic engineering elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*

Group B - General electives

The balance of units for each specialist stream may be chosen from this list as specified below:

CAD/drafting:	Up to two units
Manufacturing operations:	Up to two units
Laboratory operations:	Up to two units
Technical officer:	Up to two units
Metallurgy:	Up to three units
Polymer technology:	Up to two units
Structural steel detailing:	Up to two units

Unit code	Unit title	Prerequisites
AUM4003A	Interpret customer requirements	
FDFOP2005A	Work in a socially diverse environment	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
LMTGN4002A	Participate in product engineering	
LMTGN4016A	Contribute to the development of products or processes	
MEM05051A	Select welding processes	
MEM09002B	Interpret technical drawing	
MEM12024A	Perform computations	
MEM13003B	Work safely with industrial chemicals

MSA30309 Certificate III in Surface Preparation and Coating Application

Modification History

Correction made to one prerequisite code.

Version 3 - Minor formatting. Imported unit coded updated.

Description

This qualification covers the skills and knowledge required to perform the wide range of surface preparation and protective coating application operations which occur across a range of typically heavy industry, ships and infrastructure.

Job roles/employment outcomes

The Certificate III in Surface Preparation and Coating Application has been developed as a trade level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to work under routine only supervision, preparing surfaces and/or applying protective coatings in accordance with a provided technical specification. They would be expected to recognise situations where the intended approach was not appropriate/not working and take appropriate action to ensure the final result is satisfactory.

They may work in a manufacturer's factory or they may work as contractors on the site of the plant/ship/infrastructure.

Application

The sector typically prepares surfaces for initial application, or for the reapplication, of protective coatings. In these circumstances it also applies the protective coating which may be liquid or solid. This qualification relates to surface preparation **and** coating and coating units are required.

The surfaces being prepared are typically metal (usually ferrous) and may be structural or have other mechanical requirements.

People with this qualification may be expected to:

- abrasively blast clean surfaces to Australian Standard requirements and in accordance with the specification
- otherwise prepare surfaces for coating as required by the specification
- apply liquid protective surface coatings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- apply solid polymer surface coatings (this is usually a specialised area).

This work may be undertaken:

- in a factory environment
- in an on-site, outdoors environment
- inside a vessel or other confined space
- outside a vessel or structure
- at heights
- some combination of these.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets. The skill set 'Confined Space Work Team Skill Set' was created in PMA08 Chemical, Hydrocarbons and Refining Training Package and is relevant to this qualification. Other skill sets have also been endorsed in MSA07 that relate to this qualification. Details are in 'Skill Sets in this Training Package'.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition should be granted where there is sufficient evidence of competency from work based experience.

Pathways from the qualification

Further qualification pathways from this qualification include MSA40108 Certificate IV in Manufacturing Technology, MEM40105 Certificate IV in Engineering or other relevant qualifications.

Additional qualification advice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSA41108 Certificate IV in Competitive Manufacturing is available for team leaders or others who need a more generalist qualification covering the application of good manufacturing practice and lean principles.

Licensing considerations

There are no specific licences that relate to this qualification. However, in some jurisdictions there may be licensing or regulatory requirements associated with the work. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification**
Communication	• maintain communication about multiple subjects and with multiple audiences • complete incident and other reports • use technical information and manufacturer information • collect, analyse and organise information • communicate ideas and information • use and contribute to workplace documentation • maintain workplace records
Teamwork	• identify and describe own role and role of others • work within a team • resolve conflicts between team members • teamwork strategies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Problem solving	• recognise a problem or a potential problem • determine problems needing priority action • refer problems outside area of responsibility to appropriate person • identify appropriate theory base for problem • seek information and assistance as required to solve problems • solve problems within area of responsibility • follow through items initiated until final resolution has occurred • identify and isolate faults in equipment • use a range of formal problem solving techniques
Initiative and enterprise	• identify the most appropriate process conditions for equipment • determine problems needing action • recommend required action • report problems outside area of responsibility • distinguish between causes of faults
Planning and organising	• prioritise actions to achieve required outcomes • plan own work requirements and assist others to plan theirs • plan and organise activities • identify tasks to achieve team goals • organise allocation of tasks • monitor completion of allocated tasks • develop and adjust a production schedule
Self-management	• plan own work requirements from job requests • operate within appropriate time constraints and work standards • select and use appropriate equipment, materials, processes and procedures • plan to ensure effective production • apply standard procedures • identify resource requirements • recognise limitations and seek timely advice
Learning	• ask questions to gain information • identify sources of information to expand knowledge and understanding • participate in improvement procedures • participate in development of continuous improvement strategies • assist others develop competency
Technology	• operate and adjust equipment • start up and shut down equipment • set up equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• monitor quality • function and operating principles of equipment • maintain workplace records

Packaging Rules

Packaging Rules

To be awarded the Certificate III in Surface Preparation and Coating Application competency must be achieved in **thirty one** (**31**) units of competency.

- **eleven** (**11**) core units of competency
- **twenty** (**20**) elective units of competency, five (5) of which may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Note: Where prerequisite units are identified they must be counted in the total number of units required for completion of the qualification.

Core units of competency

- Select all **eleven** (**11**) units of competency from the following list.

Unit Code	Title
MEM12023A	Perform engineering measurements
MEM12024A	Perform computations
MEM14004A	Plan to undertake a routine task
MEM14005A	Plan a complete activity
MEM15002A	Apply quality systems
MEM15024A	Apply quality procedures
MEM16006A	Organise and communicate information
MEM16007A	Work with others in a manufacturing, engineering or related

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Code	Title
	environment
MEM16008A	Interact with computing technology
MSAENV272B	Participate in environmentally sustainable work practices
MSAPMOHS200A	Work safely

Elective units of competency

Group A - Surface Preparation

- Select a minimum of **three** (**3**) units from the following list.

Unit Code	Title	Prerequisite
MEM08002C	Pre-treat work for subsequent surface coating	MEM13003B
MEM08007B	Control surface finish production and finished product quality	
MEM08011B	Prepare surfaces using solvents and/or mechanical means	MEM13003B MEM18001C MEM18002B
MEM08012B	Prepare surfaces by abrasive blasting (basic)	MEM08016B MEM13003B
MEM08013B	Prepare surfaces by abrasive blasting (advanced)	MEM08012B MEM08016B MEM13003B
MEM08016B	Control blast coating by-products, materials and emissions	MEM13003B

MSA30510 Certificate III in Recreational Vehicle Service and Repair

Modification History

Release 5 - Imported elective unit updated to current release

Release 4 - AU elective imported units replaced by current versions. Prerequisites replaced by an asterisk. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package. Imported unit version code updated.

Release 2 - Imported unit code updated.

Description

This qualification covers the skills and knowledge required to perform the wide range of service and repair tasks performed on recreational vehicles.

Job roles/employment outcomes

The Certificate III in Recreational Vehicle Service and Repair has been developed as a trade level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to work under supervision servicing and repairing recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR). They will analyse the service/repair requirements and then carry them out.

They may work in a service and repair facility or a manufacturer's factory undertaking warranty work. Work may be for an insurance claim, modifying an existing recreational vehicle or undertaking routine servicing.

Application

The sector typically services and repairs any recreational vehicle as required. This may apply to the recreational vehicle body, fittings and running gear. It may be in response to a road (or other) accident, hail damage, vehicle modification or routine servicing. They may also specify and access outside specialist services, for example, for spray painting or licence requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis. Fittings are typically timber/particle board but may be any other suitable material.

People with this qualification may be expected to:

- carry out insurance repairs
- carry out other repairs
- work under warranty
- undertake modifications/refits to the recreational vehicle
- undertake routine servicing
- prepare a recreational vehicle for sale/resale.

This work will generally be undertaken in a workshop environment.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

Further qualification pathways from this qualification include MSA40510 Certificate IV in Recreational Vehicles.

Additional qualification advice

MSA41108 Certificate IV in Competitive Manufacturing is available for team leaders or others who need a more generalist qualification covering the application of good manufacturing practice and lean principles.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing considerations

Units of competency in this qualification provide the underpinning knowledge and skills for various required licenses. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification**
Communication	• Maintaining communication about multiple subjects and with multiple audiences • Completing incident and other reports • Using technical information and manufacturer information • Collecting, analysing and organising information • Communicating ideas and information • Using and contributing to workplace documentation • Maintaining workplace records
Teamwork	• Identifying and describing own role and role of others • Working within a team • Resolving conflicts between team members • Using teamwork strategies
Problem solving	• Recognising problems or potential problems • Determining problems needing priority action • Referring problems outside area of responsibility to appropriate person with possible causes • Identifying appropriate theory base for problem

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• Seeking information and assistance as required to solve problems • Solving problems within area of responsibility • Following through items initiated until final resolution has occurred • Identifying and isolating faults in equipment • Using a range of formal problem-solving techniques
Initiative and enterprise	• Identifying the most appropriate process conditions for equipment • Determining problems needing action • Recommending required action • Reporting problems outside area of responsibility • Distinguishing between causes of faults
Planning and organising	• Prioritising actions to achieve required outcomes • Planning own work requirements and assisting others to plan theirs • Planning and organising activities • Identifying tasks to achieve team goals • Organising allocation of tasks • Monitoring completion of allocated tasks • Developing and adjusting a production schedule
Self-management	• Planning own work requirements from job requests • Operating within appropriate time constraints and work standards • Selecting and using appropriate equipment, materials, processes and procedures • Planning to ensure effective production • Applying standard procedures • Identifying, documenting and monitoring resource requirements • Recognising limitations and seeking timely advice
Learning	• Asking questions to gain information • Identifying sources of information to expand knowledge and understanding • Participating in improvement procedures • Participating in development of continuous improvement strategies • Helping others develop competency
Technology	• Operating and adjusting equipment • Starting up and shutting down equipment • Setting up equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• Monitoring quality • Understanding function and operating principles of equipment • Maintaining workplace records

Packaging Rules

Packaging Rules

To be awarded the Certificate III in Recreational Vehicle Service and Repair competency must be achieved in **twenty two** (**22**) units of competency:

- **three** (**3**) core units of competency
- **nineteen** (**19**) elective units of competency, as specified below:
  - a minimum of **thirteen** (**13**) units of competency must be selected from Group A
  - the balance of units, to a maximum of **six** (**6**) may be selected from:
    - units not previously selected from Group A
    - Group B units listed below.

Note: Up to **four** (**4**) elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

Note: Where prerequisite units are identified, they must be counted in the total number of units required for completion of the qualification.

Core units of competency

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMSUP102A	Communicate in the workplace	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
AUMGTT001	Apply trim to vehicle components	
AURETR2015	Inspect and service batteries	
AURETR2012	test and repair basic electrical circuits	
AURETR2010	Fabricate, test and repair wiring harnesses and looms	
AURETB3001	Repair electric braking systems	
AURTTB2001	Inspect and service braking systems	
AURTTD2004	Inspect and service suspension systems	
AURTTJ2002	Remove and refit wheel hubs and associated brake components	
AURTTA3017	Carry out vehicle safety and roadworthy inspection	
AURVTN2005	Remove and fit protector mouldings, transfers and decals	
AURVTP2007	Apply paint touch-up techniques	
AURVTS3004	Repair fibreglass and composite material components	
AURTTY3001	Repair chassis, frame and associated components	
AURVTT3015	Fabricate canvas products	
AURVTT3016	Fabricate frame structures	
AURVTT3019	Fabricate and install canopies and curtains	
AURVTG3011	Install side windows	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM05005B	Carry out mechanical cutting	*
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM10002B	Terminate and connect electrical wiring	*
MEM12002B	Perform electrical/electronic measurement	
MEM12023A	Perform engineering measurements	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18038B	Maintain wheels and tyres	*
MEM18045B	Fault find/repair electrical equipment/components up to 250 volts single phase supply	*
MSAPMOPS101A	Make measurements	
MSARVS202A	Repair/service LP gas systems in a recreational vehicle	
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III.		

Group B

Unit code	Unit title	Prerequisites
MEM09002B	Interpret technical drawing	
MEM11011B	Undertake manual handling	
MEM14004A	Plan to undertake a routine task	
MEM15024A	Apply quality procedures	
MSS402021A	Apply Just in Time procedures	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSS402040A	Apply 5S procedures	
MSS402080A	Undertake root cause analysis	
MSAPMOHS220A	Provide initial first aid response	
MSAPMOPS212A	Use enterprise computers or data systems	
MSAPMSUP100A	Apply workplace procedures	
MSAPMSUP101A	Clean workplace or equipment	
MSAPMSUP106A	Work in a team	
MSAPMSUP280A	Manage conflict at work	
MSAPMSUP291A	Participate in continuous improvement	
MSARVS301A	Develop and update caravan industry knowledge	
MSARVG201A	Tow a recreational vehicle safely	
MSARVT201A	Apply technical knowledge of recreational vehicle manufacturing to work activities	
SIRXSLS002A	Advise on products and services	
TAEDEL301A	Provide work skill instruction	
TLID2010A	Operate a forklift	
UEGNSG604B	Fill gas cylinders	
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III.

MSA30710 Certificate III in Recreational Vehicle and Accessories Retailing

Modification History

Release 5 - Imported units updated to current releases.

Release 4 - Imported elective units replaced by current versions. Equivalent.

Release 3 - Minor formatting. Imported unit version code updated.

Release 2 - Imported unit code updated.

Description

This qualification covers the skills and knowledge designed to reflect the role of a sales consultant in the retail sales of recreational vehicles and accessories.

Job roles/employment outcomes

The Certificate III in Recreational Vehicle and Accessories Retailing has been developed as a trade level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to work under supervision in the sale of recreational vehicles and accessories, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR). They will analyse the customer's requirements and then carry them out.

They may work in a service and repair facility or a manufacturer's factory undertaking sales work. Sales may be for a new recreational vehicle, a second-hand/refurbished recreational vehicle or spare parts and accessories. In some cases selling of the recreational vehicle may also include possible modifications which could be made to the recreational vehicle.

Application

The sector typically manufactures, services and repairs any recreational vehicle as required. Recreational vehicle sales requires specialised knowledge not only of the available range of recreational vehicle models and accessories but of the legal requirements associated with weight, towing and vehicle capacity.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis. Fittings are typically timber/particle board but may be any other suitable material.

People with this qualification may be expected to:

- sell a new or second-hand recreational vehicle
- suggest modifications/refits to a recreational vehicle
- prepare a recreational vehicle for sale/resale
- sell spare parts and accessories.

This work will generally be undertaken in a workshop or showroom environment.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification**
Communication	• Using questioning and active listening to ascertain and respond to customer needs to ensure customers enjoy a positive experience that reflects business values • Regularly carrying out verbal instructions from other team members and supervisors • Reading and interpreting simple workplace documents, completing simple written workplace forms and sharing work-related information with other team members
Teamwork	• Effectively participating in retail store teams • working independently to complete own tasks and supporting other team members where appropriate • Leading small retail teams, where required, in the context of the job role • Mentoring and supporting other team members
Problem solving	• Demonstrating sensitivity to customer needs and concerns • Anticipating problems and acting to avoid them where possible • Solving a range of operational retail store problems individually or in the context of a team structure where, after clarification, existing policies and infrastructure may be applied to source

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	information and resources and develop practical and sustainable solutions
Initiative and enterprise	• Looking for opportunities to do things better and suggesting ideas to other team members and supervisors in the context of the job role • Translating ideas into action by positively accepting and adapting to changes in procedures or arrangements at the store level
Planning and organising	• Establishing and communicating clear goals and deliverables for self and team members within the context of organisation objectives and the current store situation • Coordinating resources to ensure that work is carried out according to timelines and priorities • Coordinating and/or implementing changes arising from continuous improvement processes
Self-management	• Understanding how a personal job role fits into the context of the wider business values and directions • Working within the store culture by practising inclusive behaviour, effective management of personal presentation, hygiene and time • Efficiently prioritising and completing delegated tasks • Maintaining own knowledge of the job role, reviewing own performance and actively seeking and acting upon advice and guidance
Learning	• Identifying personal strengths and weaknesses in the context of the job role and recognising how to personally learn best at work • Seeking opportunities for formal education in the context of a current role or future retail job opportunities • Accepting opportunities to learn new ways of doing things and sharing knowledge and skills with other store team members
Technology	• Using of point-of-sale systems and/or selecting and using a range of other retail technology in the context of available equipment and store procedures • Recognising and reporting faulty equipment and following store occupational health and safety (OHS) procedures

MSAPMSUP102A	Communicate in the workplace	

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
AUMANA001	Prepare and document quotations	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
AURACA2001	Establish relations with customers	
AURC341903A	Apply relevant finance, leasing and insurance contracts/policies	
AURACA3002	Establish customer requirements of a complex nature	
AURACA3003	Build customer relations	
AURAMA3004	Maintain business image	
AURAMA4005	Manage complex customer issues	
AURSCA2002	Present stock and sales area	
AURSCA2003	Apply sales procedures	
AURSCA2004	Carry out cash, credit and funds transfers	
AURSCA2005	Sell products	
AURSCA2006	Promote products and services	
AURSAA2001	Process customer complaints	
BSBCUS501C	Manage quality customer service	
SIRXCCS201	Apply point-of-sale handling procedures	
SIRXINV004A	Buy merchandise	
SIRXRSK001A	Minimise theft	
SIRXRSK002A	Maintain store security	
SIRXSLS002A	Advise on products and services	
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III.		

Group B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	**Unit title**	**Prerequisites**
AURSCA2001	Select automotive parts and products	
AURSLA2001	Apply legal requirements relating to product sales	
AURSBA3002	Apply automotive parts interpretation process	
AURTTA3017	Carry out vehicle safety and roadworthy inspection	
MSAPMOHS220A	Provide initial first aid response	
MSAPMOPS212A	Use enterprise computers or data systems	
MSAPMSUP100A	Apply workplace procedures	
MSAPMSUP106A	Work in a team	
MSAPMSUP280A	Manage conflict at work	
MSAPMSUP291A	Participate in continuous improvement	
MSARVS301A	Develop and update caravan industry knowledge	
MSARVG201A	Tow a recreational vehicle safely	
SITXMPR401	Coordinate production of brochures and marketing materials	
SITXMPR402	Create a promotional display or stand	
UEGNSG604B	Fill gas cylinders	
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate III.

MSA40108 Certificate IV in Manufacturing Technology

Modification History

Version 4 - Imported elective units replaced by current versions. Equivalent.

Version 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Description

This qualification is suitable for delivery as part of a two year Technology Cadetship, or can be undertaken through an Australian Apprenticeship arrangement.

This qualification has five specialist streams available. These are:

- CAD/Drafting
- Manufacturing Operations
- Laboratory Operations
- Technical Officer
- Polymer Technology.

Each stream offers an opportunity for significant choice in electives and each stream requires the same core units to be completed.

Note:

- The minimum requirements for the Certificate III in Manufacturing Technology can also be met by holders of the *Certificate III in Engineering - Technician* from the Metal and Engineering Training Package.
-

Pathways Information

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Certificate IV in Manufacturing Technology

The following table contains a summary of the Employability Skills as identified by the manufacturing technology related industries for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	**Industry/enterprise requirements for this qualification include**:
Communication	• Complete workplace documentation and records • Use communication technologies efficiently • Develop work instructions, specifications and procedures • Demonstrate effective and appropriate communication and interpersonal skills when dealing with people from NESB • Communicate with all team members • Demonstrate effective and appropriate communication and interpersonal skills when dealing with clients • Use most appropriate communication method given priority, cost and customer facilities • Access, interpret and apply technical information
Teamwork	• Work cooperatively with people of different ages, gender, race or religion • Liaise with and provide support to other team members • Work as part of a team • Identify and manage performance required to rneet internal and external customer needs in own work and team • Manage technical processes and provide problem solving support to others
Problem solving	• Investigate problem causes • Identify, rectify or report potential difficulties associated with manufacture of products or provision of services • Identify environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skill	**Industry/enterprise requirements for this qualification include**:
	• Use material and process knowledge to solve problems • Identify hazards and suggest control measures • Determine production requirements • Conduct tests and analyse results to determine and assess production requirements
Initiative and enterprise	• Seek feedback on products, processes and procedures • Gather and analyse information and apply to work related processes • Record information on the quality and other indicators of products • Support achievement of efficient production processes • Determine and act on situations requiring further information or problem solving
Planning and organizing	• Identify hazards and implement appropriate hazard control measures • Demonstrate time management skills • Source and prepare materials and resources • Sequence work to maximise safety and productivity
Self management	• Interpret and apply relevant acts and regulations • Keep the work area clean and tidy at all times • Monitor own work and work of team and identify and act on any quality issues • Understand own work activities • Manage own time to meet deadlines • Implement workplace procedures and instructions
Learning	• Implement learning activities as appropriate to ensure achievement of specified production requirements • Assess competencies in meeting job requirements • Be supportive, assertive and use interpersonal skills • Identify own training needs and seek skill development if required • Gather feedback to own work to assess effectiveness in meeting objectives and integrate information into own practice
Technology	• Use computer software applications effectively • Work with technology safely and according to workplace standards • Help others use technology efficiently and safely • Use testing technology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Packaging Rules

Packaging Rules

To be awarded a Certificate IV in Manufacturing Technology, competency must be achieved in **sixteen** (**16**) units of competency:

- **four** (**4**) core units of competency
- **twelve** (**12**) elective units of competency, chosen as described below.

Core units

The following **four** (**4**) units must be chosen.

Unit code	Unit title
MEM16008A	Interact with computing technology
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSS402051A	Apply quality standards
MSAENV272B	Participate in environmentally sustainable work practices

Prerequisites

Units marked with an asterisk have one or more prerequisite requirements. The prerequisites for these units are to be counted in the total number of units required in the elective group. Please refer to the individual units for details.

Elective units

Group A - specialist streams

Choose **twelve** (**12**) elective units as specified to achieve a specialist stream.

Note:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- All units from each specialist stream are available in Group B as General Electives.
- Three elective units may also be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses, as specified below.

CAD/drafting specialist stream

Select **twelve** (**12**) elective units:

- a minimum of **ten** (**10**) from the list below
- the balance may be chosen from Group B General Electives.

Unit code	Unit title	Prerequisites
AUM4003A	Interpret customer requirements	
LMTGN4002A	Participate in product engineering	
MEM12024A	Perform computations	
MEM16006A	Organise and communicate information	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30007A	Select common engineering materials	
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	
MEM30010A	Set up basic hydraulic circuits	
MEM30011A	Set up basic pneumatic circuits	
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30018A	Undertake basic process planning	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30025A	Analyse a simple electrical system circuit	*
MSS402002A	Sustain process improvements	
MSS402030A	Apply cost factors to work practices	
UEPMNT420A	Perform electrical/electronic drafting	
	One (1) relevant specialist elective unit may be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses.	

Manufacturing operations specialist stream

Select **twelve** (**12**) elective units:

- a minimum of **ten** (**10**) from the list below
- the balance may be chosen from Group B General Electives.

Unit code	Unit title	Prerequisites
FDFOP2005A	Work in a socially diverse environment	
MEM15001B	Perform basic statistical quality control	
MEM16006A	Organise and communicate information	
MEM30014A	Apply basic just in time systems to the reduction of waste	
MEM30015A	Develop recommendations for basic set up time improvements	
MEM30016A	Assist in the analysis of a supply chain	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM30017A	Use basic preventative maintenance techniques and tools	
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30021A	Prepare a simple production schedule	
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MSS402001A	Apply competitive systems and practices	
MSS402002A	Sustain process improvements	
MSS402020A	Apply quick changeover procedures	
MSS402030A	Apply cost factors to work practices	
MSS402031A	Interpret product costs in terms of customer requirements	
MSS402050A	Monitor process capability	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems in operations	
MSS402080A	Undertake root cause analysis	
MSS403002A	Ensure process improvements are sustained	
MSS403030A	Improve cost factors in work practices	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
	One relevant specialist elective unit may be chosen from other qualifications in this Training Package,

Unit code	Unit title	Prerequisites
	other endorsed Training Packages and accredited courses.	

Laboratory operations specialist stream

Select **twelve** (**12**) elective units:

- a minimum of **ten** (**10**) from the list below
- the balance may be chosen from Group B General Electives.

Unit code	Unit title	Prerequisites
LMTGN4016A	Contribute to the development of products or processes	
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30024A	Participate in quality assurance techniques	*
MSS402061A	Use SCADA systems in operations	
MSL913001A	Communicate with other people	
MSL913002A	Plan and conduct laboratory/field work	
MSL922001A	Record and present data	
MSL933001A	Maintain the laboratory/field workplace fit for purpose	
MSL933002A	Contribute to the achievement of quality objectives	
MSL933003A	Apply critical control point requirements	
MSL934001A	Contribute to the ongoing development of HACCP plans	
MSL934002A	Apply quality system and continuous improvement	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
	processes	
MSL943001A	Work safely with instruments that emit ionising radiation	
MSL943002A	Participate in laboratory/field workplace safety	
MSL952001A	Collect routine site samples	
MSL952002A	Handle and transport samples or equipment	
MSL953001A	Receive and prepare samples for testing	
MSL954001A	Obtain representative samples in accordance with sampling plan	
MSL963001A	Operate basic handblowing equipment	
MSL963002A	Repair glass apparatus using simple glassblowing equipment	
MSL973001A	Perform basic tests	
MSL973002A	Prepare working solutions	
MSL973003A	Prepare culture media	
MSL973004A	Perform aseptic techniques	
MSL973005A	Assist with fieldwork	
MSL973006A	Prepare trial batches for evaluation	
MSL973007A	Perform microscopic examination	
MSL973012A	Assist with geotechnical site investigations	
MSL974001A	Prepare, standardise and use solutions	
MSL974002A	Conduct geotechnical site investigations	*
MSL974003A	Perform chemical tests and procedures	
	One relevant specialist elective unit may be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited

MSA40311 Certificate IV in Process Manufacturing

Modification History

Release 4 - Imported elective units updated to current releases.

Release 3 - Imported elective units updated to current versions. Equivalent.

Release 2 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package. Imported unit version code updated.

Release 1 - New qualification

Description

This qualification covers the skills and knowledge required to perform a range of high level technical operations and manufacturing tasks required for producing products.

Job roles/employment outcomes

The MSA40311 Certificate IV in Process Manufacturing is intended for advanced production workers who use a range of equipment and are involved in solving complex problems which require theoretical knowledge, combined with an understanding of operating procedures directly related to producing products.

Application

This qualification is typically used to develop employees performing a technical role that includes the ability to work independently and conduct technical problem solving according to the needs of the work required to produce products.

This qualification is designed to develop employees who operate across more than one category within process manufacturing or other product conversion processes in manufacturing. Typical applications would be in chemical, hydrocarbons, refining, minerals processing, plastics, rubber, cablemaking, manufactured mineral products, and other areas as appropriate.

Non-technical team leaders, coordinators and supervisors may be better served by a qualification in competitive manufacturing.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pathways Information

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications. In particular, the core units and most of the elective units are common to qualifications in the three Process Manufacturing Training Packages (coded PMA, PMB and PMC). Where competency has already been achieved, credit will be granted towards this qualification.

The units of competency in this qualification reflect competencies which are practised within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

Further qualification pathways from this qualification include MSA50311 Diploma of Production Management.

The MSA51108 Diploma of Competitive Manufacturing (or latest version) is also appropriate for those needing a qualification covering manufacturing practice and lean principles.

Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, in some jurisdictions some units of competency in this qualification may have regulatory requirements. Local regulations should be checked for details.

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	• Complete workplace documentation and records • Use communication technologies efficiently • Develop work instructions, specifications and procedures • Communicate with all team members • Demonstrate effective and appropriate communication and interpersonal skills when dealing with clients • Use most appropriate communication method given priority, cost and customer facilities • Access, interpret and apply technical information
Teamwork	• Work cooperatively with people of different ages, gender, race or religion • Liaise with, and provide support to, other team members • Work as part of a team • Identify and manage performance required to meet internal and external customer needs in own work and team • Manage technical processes and provide problem solving support to others
Problem-solving	• Investigate problem causes • Identify, rectify or report potential difficulties associated with manufacture of products or provision of services • Identify environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided • Use material and process knowledge to solve problems • Identify hazards and suggest control measures • Determine production requirements • Conduct tests and analyse results to determine and assess production requirements
Initiative and enterprise	• Seek feedback on products, processes and procedures • Gather and analyse information and apply to work-related processes • Record information on the quality and other indicators of products • Support achievement of efficient production processes • Determine and act on situations requiring further information or problem solving
Planning and organising	• Identify hazards and implement appropriate hazard control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	measures • Demonstrate time management skills • Source and prepare materials and resources • Sequence work to maximise safety and productivity
Self-management	• Interpret and apply relevant Acts and regulations • Keep the work area clean and tidy at all times • Monitor own work and work of team and identify and act on any quality issues • Understand own work activities • Manage own time to meet deadlines • Implement workplace procedures and instructions
Learning	• Implement learning activities, as appropriate, to ensure achievement of specified production requirements • Assess competencies in meeting job requirements • Be supportive, assertive and use interpersonal skills • Identify own training needs and seek skill development if required • Gather feedback on own work to assess effectiveness in meeting objectives and integrate information into own practice
Technology	• Use computer software applications effectively • Work with technology safely and according to workplace standards • Help others use technology efficiently and safely • Use testing technology

Packaging Rules

To be awarded the MSA40311 Certificate IV in Process Manufacturing competency must be achieved in a total of **twenty six (26)** units of competency.

- **five (5)** core units of competency
- **twenty one (21)** elective units of competency, as specified below.

Elective units must include:

- a minimum of **four (4)** units from Group A
- the balance of units, to a maximum of **seventeen (17)** may be chosen from Groups A, B and C (with a maximum of eleven (11) units from Group C).

Up to **seven (7)** elective units may be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses, as specified below in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Groups B and C.

Note: Units marked with an asterisk have one or more prerequisite requirements. Please refer to the individual units for details. Prerequisites are to be counted towards the total number required to complete the qualification.

Core units of competency

Unit code	Unit title
MSS402051A	Apply quality standards
MSAENV272B	Participate in environmentally sustainable work practices
MSAPMOHS200A	Work safely
MSAPMSUP200A	Achieve work outcomes
MSAPMSUP210A	Process and record information

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
MSS403002A	Ensure process improvements are sustained	
MSS403010A	Facilitate change in an organisation implementing competitive systems and practices	
MSS403011A	Facilitate implementation of competitive systems and practices	
MSS403013A	Lead team culture improvement	
MSS403021A	Facilitate a Just in Time system	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSS403030A	Improve cost factors in work practices	
MSS403040A	Facilitate and improve implementation of 5S	
MSS403041A	Facilitate breakthrough improvements	
MSS403051A	Mistake proof an operational process	
MSS404050A	Undertake process capability improvements	*
MSS404052A	Apply statistics to operational processes	
MSS404060A	Facilitate the use of planning software systems in a work area or team	
MSS404081A	Undertake proactive maintenance analyses	
MSS404082A	Assist in implementing a proactive maintenance strategy	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
MSAPMOHS400A	Contribute to OHS management system	*
MSAPMOHS401A	Assess risk	
MSAPMOPS400A	Optimise process/plant area	*
MSAPMOPS401A	Trial new process or product	
MSAPMOPS404A	Co-ordinate maintenance	
MSAPMOPS405B	Identify problems in fluid power system	
MSAPMOPS406A	Identify problems in electronic control systems	
MSAPMPER400A	Coordinate permit process	*

MSA40510 Certificate IV in Recreational Vehicles

Modification History

Release 5 - Imported elective unit updated to current release.

Release 4 - Imported elective units replaced by current versions. Prerequisites replaced by an asterisk. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package. Imported unit version code updated.

Release 2 - Imported unit code updated.

Description

This qualification covers the skills and knowledge required to facilitate the performance of, and to perform, high level manufacturing, service and repair tasks required for recreational vehicles.

Job roles/employment outcomes

The Certificate IV in Recreational Vehicles has been developed as a post-trade level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to lead work teams and provide supervision of people undertaking the manufacture, service and repair of recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR). They will provide technical leadership as well as undertake some tasks themselves.

They may work in a service and repair facility or a manufacturer's factory. Work may include building a new recreational vehicle, repairs for an insurance claim or other repairs, modifying an existing recreational vehicle or undertaking routine servicing.

Application

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The sector typically manufactures, services and repairs recreational vehicles as required. This may apply to the recreational vehicle body, fittings and running gear. Repairs may be in response to a road (or other) accident, hail damage, vehicle modification or routine servicing. They may also specify and access outside specialist services, for example, for spray painting or licence requirements.

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis which may be manufactured by the recreational vehicle manufacturer or bought. Fittings are typically timber/particle board but may be any other suitable material.

People with this qualification may be expected to lead and also undertake one or more of:

- manufacture of a recreational vehicle
- insurance repairs
- other repairs
- work under warranty
- modifications/refits to the recreational vehicle
- routine servicing
- preparation of a recreational vehicle for sale/resale.

This work will generally be undertaken in a workshop environment or factory.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Further qualification pathways from this qualification include MSA50510 Diploma of Recreational Vehicles.

Additional qualification advice

MSA41108 Certificate IV in Competitive Manufacturing is available for team leaders or others who need a more generalist qualification covering the application of good manufacturing practice and lean principles.

Licensing considerations

Units of competency in this qualification provide the underpinning knowledge and skills for various required licenses. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification**
Communication	• Completing workplace documentation and records • Using communication technologies efficiently • Developing work instructions, specifications and procedures • Communicating with all team members • Demonstrating effective and appropriate communication and interpersonal skills when dealing with clients • Using most appropriate communication method given priority, cost and customer facilities • Accessing, interpreting and applying technical information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Teamwork	• Working cooperatively with people of different ages, gender, race or religion • Liaising with and providing support to other team members • Working as part of a team • Identifying and managing performance required to meet internal and external customer needs in own work and team • Managing technical processes and providing problem-solving support to others
Problem solving	• Investigating problem causes • Identifying, rectifying or reporting potential difficulties associated with manufacture of products or provision of services • Identifying environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided • Using material and process knowledge to solve problems • Identifying hazards and suggesting control measures • Determining production requirements • Conducting tests and analysing results to determine and assess production requirements
Initiative and enterprise	• Seeking feedback on products, processes and procedures • Gathering and analysing information and applying to work-related processes • Recording information on the quality and other indicators of products • Supporting achievement of efficient production processes • Determining and acting on situations requiring further information or problem solving
Planning and organising	• Identifying hazards and implementing appropriate hazard control measures • Demonstrating time-management skills • Sourcing and preparing materials and resources • Sequencing work to maximise safety and productivity
Self-management	• Interpreting and applying relevant Acts and regulations • Keeping the work area clean and tidy at all times • Monitoring own work and work of team, and identifying and acting on any quality issues • Understanding own work activities • Managing own time to meet deadlines • Implementing workplace procedures and instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Learning	• Implementing learning activities as appropriate to ensure achievement of specified production requirements • Assessing competencies in meeting job requirements • Being supportive and assertive, and using interpersonal skills • Identifying own training needs and seeking skill development if required • Gathering feedback on own work to assess effectiveness in meeting objectives and integrating information into own practice
Technology	• Using computer software applications effectively • Working with technology safely and according to workplace standards • Helping others use technology efficiently and safely • Using testing technology

Packaging Rules

Packaging Rules

To be awarded the Certificate IV in Recreational Vehicles competency must be achieved in **thirty two** (**32**) units of competency:

- **three** (**3**) core units of competency
- **twenty nine** (**29**) elective units of competency, as specified below:

  - a minimum of **two** (**2**) units of competency must be selected from Group A
  - a maximum of **fourteen** (**14**) units of competency may be selected from Groups C and D, with a maximum of **six** (**6**) from Group D
  - the balance of units must be selected from Groups A and B to bring the total to twenty nine (29).

Note: Up to **seven** (**7**) elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, as specified in Groups A, B, C and D.

Note: Where prerequisite units are identified, they must be counted in the total number of units required for completion of the qualification.

MSA40710 Certificate IV in Recreational Vehicle and Accessories Retailing

Modification History

Release 5 - Imported elective unit replaced by current release.

Release 4 - Imported elective units replaced by current versions. Prerequisites replaced by an asterisk. Equivalent.

Release 3 - MSACM unit replaced by MSS unit from MSS11v2 Sustainability Training Package. Imported unit version coded updated.

Release 2 - Imported unit code updated.

Description

This qualification covers the skills and knowledge designed to reflect the role of a supervisor or assistant manager in a recreational vehicle retail outlet.

Job roles/employment outcomes

The Certificate IV in Recreational Vehicle and Accessories Retailing has been developed as a post-trade level qualification for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to lead sales teams and provide supervision of people in the sale of recreational vehicles and accessories, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers

to meet Australian requirements, such as road worthiness and the Australian Design Rule (ADR). They will provide technical leadership as well as undertake some tasks themselves.

They may work in a service and repair facility or a manufacturer's factory undertaking sales work. Sales may be for a new recreational vehicle, a second-hand/refurbished recreational vehicle or spare parts and accessories. In some cases selling of the recreational vehicle may also include possible modifications which could be made to the recreational vehicle.

Application

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The sector typically manufactures, services and repairs recreational vehicles as required. Recreational vehicle sales requires specialised knowledge not only of the available range of recreational vehicle models and accessories but of the legal requirements associated with weight, towing and vehicle capacity.

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis which may be manufactured by the recreational vehicle manufacturer or bought. Fittings are typically timber/particle board but may be any other suitable material.

People with this qualification may be expected to:

- sell a new or second-hand recreational vehicle
- suggest modifications/refits to a recreational vehicle
- prepare a recreational vehicle for sale/resale
- sell spare parts and accessories
- manage a sales area/showroom.

This work will generally be undertaken in a workshop or showroom environment.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

Further qualification pathways from this qualification include MSA50510 Diploma of Recreational Vehicles.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification**
Communication	• Negotiating effectively with team members and other managers on business values, directions and day-to-day operational matters • Reading, analysing and communicating workplace information to team members and other managers • Writing reports and completing business documentation in the context of the job role
Teamwork	• Leading a retail or wholesale business team, and mentoring and supporting team members in the context of a retail supervision or management role • Effectively participating in wider retail business supervisory/management teams • working independently to complete own tasks and supporting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	other team members, where appropriate
Problem solving	• Implementing customer service strategies • Anticipating problems and acting to mitigate where possible • Solving a range of operational retail or wholesale operational business problems, individually or in the context of a wider team management structure • Clarifying issues and applying existing policies and infrastructure to source information and resources, and developing practical and sustainable solutions
Initiative and enterprise	• Creating an operational business team customer service and continuous improvement environment across all performance areas • Providing positive feedback, encouraging team members to do things better and be personally receptive to team members ideas • Translating ideas into action by positively accepting and initiating changes in procedures or arrangements at the business level
Planning and organising	• Establishing and communicating clear goals and deliverables for self and team members within the context of organisation objectives and the current business situation • Coordinating resources to ensure that work is carried out according to timelines and priorities • Coordinating and/or implementing changes arising from continuous improvement processes
Self-management	• Understanding how own personal job role fits into the context of the wider business values and directions • Working within the retail or wholesale business culture by practising inclusive behaviour, effective management of personal presentation, hygiene, and time • Efficiently prioritising and completing delegated tasks • Maintaining own knowledge of the job role, reviewing own performance and actively seeking and acting upon advice and guidance
Learning	• Identifying personal strengths and weaknesses in the context of the job role and recognising how to personally learn best at work • Seeking opportunities for formal education in the context of a current role or future retail job opportunities • Accepting opportunities to learn new ways of doing things and sharing knowledge and skills with other business managers and team members
Technology	• Adapting to new business related technology skill requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• Selecting and using retail or other information and communications technology, where relevant, to support business operations and planning in the context of key business performance objectives and personal job role

SIRXRSK002A	Maintain store security	
SIRXSLS002A	Advise on products and services	
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate IV.		

Group C

Unit code	Unit title	Prerequisites
AURAAA4002	Determine retail rates for work	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
AURAFA2004	Solve routine problems in an automotive workplace	
AURAKA3002	Adapt work processes to new technologies	
AURAMA5006	Contribute to business improvement	
MEM13002B	Undertake occupational health and safety activities in the workplace	
MEM13010A	Supervise occupational health and safety in an industrial work environment	*
MEM15002A	Apply quality systems	
MEM15004B	Perform inspection	
MEM16002C	Conduct formal interviews and negotiations	
MEM16006A	Organise and communicate information	
MEM22015A	Source and estimate engineering materials requiremetns	*
MSS403040A	Facilitate and improve implementation of 5S	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
MSAPMSUP200A	Achieve work outcomes	
MSAPMSUP383A	Facilitate a team	
MSAPMSUP390A	Use structured problem solving tools	
MSARVS401A	Assess and quote to service a recreational vehicle	
PSPGOV408A	Value diversity	
SITXMG501	Establish and conduct business relationships	
TAEASS401B	Plan assessment activities and processes	
TAEASS402B	Assess competence	
TAEASS403B	Participate in assessment validation

Unit code	Unit title	Prerequisites
TAEDEL301A	Provide work skill instruction	
Up to **two** (**2**) relevant elective units of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses, where they are available for inclusion at Certificate IV.		

Group D

Unit code	Unit title	Prerequisites
AURSCA2001	Select automotive parts and products	
AURSLA2001	Apply legal requirements relating to product sales	
AURSBA3002	Apply automotive parts interpretation process	
AURTTA3017	Carry out vehicle safety and roadworthy inspection	
MSAPMOHS220A	Provide initial first aid response	
MSAPMOPS212A	Use enterprise computers or data systems	
MSAPMSUP100A	Apply workplace procedures	
MSAPMSUP106A	Work in a team	
MSAPMSUP280A	Manage conflict at work	
MSAPMSUP291A	Participate in continuous improvement	
MSARVS301A	Develop and update caravan industry knowledge	
MSARVG201A	Tow a recreational vehicle safely	
SITXMPR401	Coordinate production of brochures and marketing materials	
SITXMPR402	Create a promotional display or stand	
UEGNSG604B	Fill gas cylinders

MSA50108 Diploma of Manufacturing Technology

Modification History

Release 4 - Imported elective units replaced by current versions. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release 2 - Imported unit codes updated.

Description

This qualification would normally be delivered part time over a three year period. There are three specialist streams available:

- Metallurgy
- Polymer technology
- Structural steel detailing.

Each stream offers an opportunity for significant choice in electives and each stream requires the same core units to be completed.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

MSA50108 Diploma of Manufacturing Technology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The following table contains a summary of the employability skills as identified by the manufacturing technology related industries for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability skill	**Industry/enterprise requirements for this qualification include**:
Communication	• complete workplace documentation and records • use communication technologies efficiently • develop work instructions, specifications and procedures • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from NESB • communicate with all team members • demonstrate effective and appropriate communication and interpersonal skills when dealing with clients • use most appropriate communication method given priority, cost and customer facilities • access, interpret and apply technical information
Teamwork	• work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • identify and manage performance required to meet internal and external customer needs in own work and team • manage technical processes and provide problem solving support to others
Problem solving	• investigate problem causes • identify, rectify or report potential difficulties associated with manufacture of products or provision of services • identify environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided • use material and process knowledge to solve problems • identify hazards and suggest control measures • determine production requirements • conduct tests and analyse results to determine and assess production requirements
Initiative and enterprise	• seek feedback on products, processes and procedures • gather and analyse information and apply to work related processes • record information on the quality and other indicators of products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability skill	**Industry/enterprise requirements for this qualification include**:
	• support achievement of efficient production processes • determine and act on situations requiring further information or problem solving
Planning and organising	• identify hazards and implement appropriate hazard control measures • demonstrate time management skills • source and prepare materials and resources • sequence work to maximise safety and productivity
Self management	• interpret and apply relevant acts and regulations • keep the work area clean and tidy at all times • monitor own work and work of team and identify and act on any quality issues • understand own work activities • manage own time to meet deadlines • implement workplace procedures and instructions
Learning	• implement learning activities as appropriate to ensure achievement of specified production requirements • assess competencies in meeting job requirements • be supportive, assertive and use interpersonal skills • identify own training needs and seek skill development if required • gather feedback to own work to assess effectiveness in meeting objectives and integrate information into own practice
Technology	• use computer software applications effectively • work with technology safely and according to workplace standards • help others use technology efficiently and safely • use testing technology

Packaging Rules

Packaging Rules

To be awarded a Diploma of Manufacturing Technology competency must be achieved in **twenty one** (**21**) units of competency:

- **five** (**5**) core units of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- **sixteen** (**16**) elective units of competency chosen as described below.
-

Core units

The following **five** (**5**) units must be chosen.

Unit code	Unit title
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSS402051A	Apply quality standards
MSAENV272B	Participate in environmentally sustainable work practices

Prerequisites

Units marked with an asterisk have one or more prerequisite requirements. The prerequisites for these units are to be counted in the total number of units required in the elective group. Please refer to the individual units for details.

Elective units

Group A - specialist streams

Choose **sixteen** (**16**) elective units as specified to achieve a specialist stream.

Note:

- All units from each specialist stream are available in Group B as General Electives.
- Four elective units may also be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses, as specified below.

Metallurgy specialist stream

Select **sixteen** (**16**) elective units:

- a minimum of **ten** (**10**) from the list below
- the balance may be chosen from Group B

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Note:

- at least four (4) of the ten (10) metallurgy elective units must be coded MSATCM5---.
- the unit MSATCM406A Apply basic chemistry principles to metallurgy must also be selected if it has not already been completed as part of a lower qualification.

Unit code	**Unit title**	**Prerequisites**
MEM23004A	Apply technical mathematics	
MEM23063A	Select and test mechanical engineering materials	*
MEM23109A	Apply engineering mechanic principles	*
MEM24012C	Apply metallurgy principles	
MEM30007A	Select common engineering materials	
MSATCM401A	Prepare and examine metallographic samples	
MSATCM402A	Monitor and test sands, cores and moulds	
MSATCM403A	Evaluate mould design and gating	
MSATCM404A	Undertake and interpret results of chemical analysis on metal samples	
MSATCM405A	Determine and supervise heat treatment of metal	*
MSATCM406A	Apply basic chemistry principles to metallurgy	
MSATCM501A	Calculate and predict chemical outcomes in metallurgical situations	*
MSATCM502A	Identify and describe equipment for mineral and chemical processing plants	*
MSATCM503A	Recommend a refractory for an application	
MSATCM504A	Select metal forming process	*
MSATCM505A	Select metal joining process	*
MSATCM506A	Monitor blast furnace operations	*
MSATCM507A	Monitor primary steel making process	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSATCM508A	Monitor secondary steelmaking operations	*
MSATCM509A	Recommend ferrous and non ferrous metals or alloys for an application	*
MSATCM510A	Apply metallurgical principles and techniques in welding and other thermal processes	*
MSATCM511A	Apply metallurgy principles and practice to determine metal forming and shaping processes	
MSATCM512A	Apply metallurgy principles and practice to optimise furnace operation	
MSATCM513A	Plan and complete metallurgical projects	*
MSATCM514A	Select surface treatment methods for metallic components or products	
MSATCM515A	Analyse metallurgical failures of components and recommend preventative measures	*
MSATCM516A	Select non-metallic materials for engineering applications manufacturing, engineering and structural	
MSATCM517A	Determine corrosion prevention strategies for metal and alloys	
MSATCM518A	Interpret complex binary phase diagrams	*

Polymer technology specialist stream

Select **sixteen** (**16**) elective units:

- a minimum of **eight** (**8**) from the list below
- the balance may be chosen from Group B

Unit code	Unit title	Prerequisites

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSS405075A	Facilitate the development of a new product	*
PMAOPS550B	Develop a colour formulation	*
PMBTECH501B	Analyse equipment performance	*
PMBTECH502B	Review and analyse production trials and specify re-trials	*
PMBTECH503B	Determine rheology and output of plastics materials from processing equipment	*
PMBTECH504B	Determine heat transfer loads for processing equipment	
PMBTECH505B	Choose polymer materials for an application	*
PMBTECH506B	Analyse the design of products and tools	*
PMBTECH507B	Develop fibre composite products using cored laminate techniques	*
PMBTECH508A	Develop a new compound	
PMBTECH509A	Modify an existing product	
PMBTECH510A	Analyse failure in polymeric materials	

Group C - Structural steel detailing specialist stream

Select **sixteen** (**16**) elective units:

- a minimum of **ten** (**10**) from the two groups below
- the balance may be chosen from Group B

Structural steel detailing - Group 1

All seven (7) of these specialist stream units must be chosen from this group.

Unit code	Unit title	Prerequisites

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSATCS301A	Interpret architectural and engineering design specifications for structural steel detailing	*
MSATCS302A	Detail bolts and welds for structural steelwork connections	*
MSATCS501A	Detail standardised structural connections	*
MSATCS502A	Detail structural steel members	*
MSATCS503A	Incorporate structural steel detailing into fabrication and construction project management	
MEM05051A	Select welding processes	
MEM09002B	Interpret technical drawing	

Structural steel detailing - Group 2

Three (3) units must be chosen from the list below.

Unit code	Unit title	Prerequisites
MSATCS504A	Detail ancillary steelwork	*
MEM09006B	Perform advanced engineering detail drafting	*
MEM09009C	Create 2D drawings using computer aided design system	*
MEM16012A	Interpret technical specifications and manuals	
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*

Group B - General electives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The balance of units for each specialist stream may be chosen from this list as specified below:

Metallurgy specialist stream	Up to six units
Polymer technology specialist stream	Up to eight units
Structural steel detailing	Up to six units

Unit code	**Unit title**	**Prerequisites**
AUM4003A	Interpret customer requirements	
FDFOP2005A	Work in a socially diverse environment	
LMTGN4016A	Contribute to the development of products or processes	
MEM06003C	Carry out heat treatment	
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	*
MEM09205A	Produce electrical schematic drawings	*
MEM09005B	Perform basic engineering detail drafting	*
MEM09011B	Apply basic engineering design concepts	*
MEM09216A	Interpret and produce curved 3-D shapes and patterns	
MEM09157A	Perform mechanical engineering design drafting	
MEM09158A	Perform mechatronic engineering design drafting	
MEM09155A	Prepare mechanical models for computer-aided engineering (CAE)	*
MEM09156A	Prepare mechatronic models for computer-aided engineering (CAE)	*
MEM12003B	Perform precision mechanical measurement	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM12005B	Calibrate measuring equipment	*
MEM12022B	Program coordinate measuring machine (advanced)	
MEM12023A	Perform engineering measurements	
MEM12024A	Perform computations	
MEM12025A	Use graphical techniques and perform simple statistical computations	
MEM13002B	Undertake occupational health and safety activities in the workplace	
MEM13010A	Supervise occupational health and safety in an industrial work environment	*
MEM13013B	Work safely with ionising radiation	
MEM13014A	Apply principles of occupational health and safety in the work environment	
MEM14001B	Schedule material deliveries	
MEM14002B	Undertake basic process planning	
MEM14003B	Undertake basic production scheduling	
MEM14004A	Plan to undertake a routine task	
MEM14005A	Plan a complete activity	
MEM14085A	Apply mechanical engineering analysis techniques	*
MEM14086A	Apply mechatronic engineering analysis techniques	*
MEM14087A	Apply manufactured product design techniques	*
MEM14088A	Apply maintenance engineering techniques to equipment and component repairs and modifications	*
MEM14089A	Integrate mechanical fundamentals into an engineering task	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM14090A	Integrate mechatronic fundamentals into an engineering task	*
MEM14091A	Integrate manufacturing fundamentals into an engineering task	*
MEM14092A	Integrate maintenance fundamentals into an engineering task	*
MEM15001B	Perform basic statistical quality control	
MEM15004B	Perform inspection	
MEM15005B	Select and control inspection processes and procedures	
MEM15007B	Conduct product and/or process capability studies	*
MEM15008B	Perform advanced statistical quality control	*
MEM15010B	Perform laboratory procedures	
MEM15011B	Exercise external quality assurance	*
MEM15012B	Maintain/supervise application of quality procedures	*
MEM16005A	Operate as a team member to conduct manufacturing, engineering or related activities	
MEM16007A	Work with others in a manufacturing, engineering or related environment	
MEM16010A	Write reports	*
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18003C	Use tools for precision work	
MEM18006C	Repair and fit engineering components	
MEM18010C	Perform equipment condition monitoring and recording	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM18016B	Analyse plant/equipment condition monitoring results	*
MEM18055B	Dismantle, replace and assemble engineering components	
MEM22002A	Manage self in the engineering environment	*
MEM22012A	Coordinate resources for an engineering project or operation	
MEM22013A	Coordinate engineering projects	
MEM22014A	Coordinate engineering-related manufacturing operations	*
MEM22015A	Source and estimate engineering materials requiremetns	
MEM22007A	Manage environmental effects of engineering activities	*
MEM22017A	Coordinate continuous improvement and technical development in an engineering-related project or operation	
MEM22018A	Coordinate sales and promotion of engineering-related products or services	
MEM23003A	Operate and program computers and/or controllers in engineering situations	*
MEM23004A	Apply technical mathematics	
MEM23006A	Apply fluid and thermodynamics principles in engineering	*
MEM23007A	Apply calculus to engineering tasks	*
MEM23041A	Apply basic scientific principles and techniques in mechanical engineering situations	
MEM23109A	Apply engineering mechanic principles	*
MEM23111A	Select electrical equipment and components for engineering applications	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM23112A	Investigate electrical and electronic controllers in engineering applications	*
MEM23063A	Select and test mechanical engineering materials	*
MEM23064A	Select and test mechatronic engineering materials	*
MEM23113A	Evaluate hydrodynamic systems and system components	*
MEM23114A	Evaluate thermodynamic systems and components	*
MEM23115A	Evaluate fluid power systems	*
MEM23116A	Evaluate programmable logic contoller and related control system components	*
MEM23117A	Evaluate microcontroller applications	*
MEM23118A	Apply production and service control techniques	*
MEM23119A	Evaluate continuous improvement processes	*
MEM23120A	Select mechanical machine and equipment components	*
MEM23121A	Analyse loads on frames and mechanisms	*
MEM23122A	Evaluate computer integrated manufacturing systems	*
MEM23123A	Evaluate manufacturing processes	
MEM23124A	Measure and analyse noise and vibration	*
MEM23125A	Evaluate maintenance systems	*
MEM24002B	Perform penetrant testing	*
MEM24003B	Perform basic magnetic particle testing	*
MEM24004B	Perform magnetic particle testing	*
MEM24005B	Perform basic eddy current testing	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM24006B	Perform eddy current testing	*
MEM24007B	Perform ultrasonic thickness testing	*
MEM24008B	Perform ultrasonic testing	*
MEM24009B	Perform basic radiographic testing	*
MEM24010B	Perform radiographic testing	*
MEM24011B	Establish non destructive tests	*
MEM30031A	Use computer-aided design (CAD) system to produce basic drawing elements	
MEM30032A	Produce basic engineering drawings	
MEM30033A	Use computer-aided design (CAD) to create and display 3-D models	*
MEM30005A	Calculate force systems within simple beam structures	*
MEM30006A	Calculate stresses in simple structures	*
MEM30007A	Select common engineering materials	
MEM30008A	Apply basic economic and ergonomic concepts to evaluate engineering applications	
MEM30009A	Contribute to the design of basic mechanical systems	*
MEM30013A	Assist in the preparation of a basic workplace layout	
MEM30014A	Apply basic just in time systems to the reduction of waste	
MEM30015A	Develop recommendations for basic set up time improvements	
MEM30016A	Assist in the analysis of a supply chain	
MEM30017A	Use basic preventative maintenance techniques and tools	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM30018A	Undertake basic process planning	
MEM30019A	Use resource planning software systems in manufacturing	*
MEM30020A	Develop and manage a plan for a simple manufacturing related project	
MEM30021A	Prepare a simple production schedule	
MEM30022A	Undertake supervised procurement activities	
MEM30023A	Prepare a simple cost estimate for a manufactured product	
MEM30024A	Participate in quality assurance techniques	*
MEM30027A	Prepare basic programs for programmable logic controllers	
MEM30028A	Assist in sales of technical products/systems	
MSS402002A	Sustain process improvements	
MSS402030A	Apply cost factors to work practices	
MSS402060A	Use planning software systems in operations	
MSS402061A	Use SCADA systems in operations	
MSS402080A	Undertake root cause analysis	
MSS403001A	Implement competitive systems and practices	
MSS403002A	Ensure process improvements are sustained	
MSS403010A	Facilitate change in an organisation implementing competitive systems and practices	
MSS403021A	Facilitate a Just in Time system	
MSS403030A	Improve cost factors in work practices	
MSS403032A	Analyse manual handling processes	
MSS403040A	Facilitate and improve implementation of 5S	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSS403051A	Mistake proof an operational process	
MSS404050A	Undertake process capability improvements	
MSS404052A	Apply statistics to operational processes	
MSS404060A	Facilitate the use of planning software systems in a work area or team	
MSS404061A	Facilitate the use of SCADA systems in a team or work area	
MSS404081A	Undertake proactive maintenance analyses	
MSS404082A	Assist in implementing a proactive maintenance strategy	
MSS405001A	Develop competitive systems and practices for an organisation	
MSS405002A	Analyse and map a value stream	
MSS405003A	Manage a value stream	
MSS405004A	Develop business plans in an organisation implementing competitive systems and practices	
MSS405010A	Manage relationships with non-customer external organisations	
MSS405011A	Manage people relationships	
MSS405012A	Manage workplace learning	
MSS405020A	Develop quick changeover procedures	
MSS405021A	Develop a Just in Time system	
MSS405030A	Optimise cost of product or service	
MSS405031A	Undertake value analysis of a product or process costs in terms of customer requirements	
MSS405040A	Manage 5S system in an organisation	
MSS405050A	Determine and improve process capability	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSS405060A	Develop the application of enterprise control systems in an organisation	
MSS405061A	Determine and establish information collection requirements and processes	
MSS405070A	Develop and manage sustainable energy practices	
MSS015002A	Develop strategies for more sustainable use of resources	
MSS405075A	Facilitate the development of a new product	*
MSS405081A	Develop a proactive maintenance strategy	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	
MSAPMOPS400A	Optimise process/plant area	*
MSAPMOPS401A	Trial new process or product	
MSAPMSUP303A	Identify equipment faults	
MSAPMSUP390A	Use structured problem solving tools	
MSATCM301A	Test the mechanical properties of materials	
MSATCM302A	Monitor basic ferrous melting and casting processes	
MSATCM303A	Monitor basic non-ferrous melting and casting processes	
MSATCM304A	Interpret basic binary phase diagrams	
MSATCM305A	Demonstrate basic knowledge of casting operations	
PMAOPS350B	Match and adjust colour	
PMAOPS450B	Solve colour problems	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
PMBPREP304C	Set a die	
PMBPREP305B	Change extrusion die and calibration setup	
PMBPROD235C	Use materials and process knowledge to complete work operations	
PMBPROD430B	Trial a new die/tool	
PMBPROD431B	Trial a new, advanced or complex mould	
PMBTECH301B	Use material and process knowledge to solve problems	
PMBTECH302A	Modify existing compounds	
PMBTECH303A	Make minor modifications to products	
PMBTECH401B	Predict polymer properties and characteristics	*
PMBTECH402B	Set up and remove complex dies	
PMBTECH406A	Diagnose production equipment problems	
MSL973001A	Perform basic tests	
MSL973006A	Prepare trial batches for evaluation	
MSL973007A	Perform microscopic examination	
MSL974001A	Prepare, standardise and use solutions	
MSL974003A	Perform chemical tests and procedures	
MSL974005A	Perform physical tests	
MSL974010A	Perform mechanical tests	
MSL975016A	Perform complex tests to measure engineering properties of materials	
	A maximum of four (4) general elective units may be chosen from this Training Package, other endorsed Training Packages and accredited courses where those units are available for inclusion at Diploma

MSA50311 Diploma of Production Management

Modification History

Release 4 - Correction to metadata to show PMAOPS500A as available in this qualification

Release 3 - One imported elective unit updated to current version. Equivalent.

Release 2 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release 1 - New qualification

Description

This qualification provides the skills and knowledge required to plan, direct and coordinate production activities in a manufacturing environment. The qualification has been developed with the process manufacturing sector as a focus. It may also be applied to other organisations in the value chain.

The qualification packaging has been developed on an assumption that competency will be developed through a combination of on and off-the-job learning strategies. The qualification may also be achieved through recognition processes.

Job roles/employment outcomes

The MSA50311 Diploma of Production Management specifies the competencies required for employment in job roles related to assisting organisations to improve production.

Employment outcomes related to this qualification may include roles such as a production or operations manager.

Application

This qualification provides skills that can be applied to the design and control of production systems within an organisation, including:

- planning and scheduling
- tracking and analysing
- directing and operating.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Pathways Information

Pathways into the qualification

This qualification has no entry requirement. However, entrants for the qualification should already possess operational or technical skills related to the organisation seeking production improvements either through prior relevant experience or qualifications. For this reason the qualification is not suitable as an entry level qualification for school leavers.

The units of competency in this qualification reflect competencies which are practised within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Additional qualification advice

This qualification provides the skills needed to assist organisations to improve production where competitive manufacturing (lean) processes are not fully employed. It therefore complements but does not duplicate qualifications supplying skills related to competitive manufacturing. Where these skills are required MSA51108 Diploma of Competitive Manufacturing, should be considered.

Licensing/Regulatory Information

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skill	**Industry/enterprise requirements for this qualification include:**
Communication	• Manage implementation of production improvement procedures and develop and distribute related information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• Develop standardised documentation on behalf of an area or group of work teams • Share and discuss information with others about enterprise activities • Develop and communicate workplace procedures • Provide information and clarifications to team leaders and other employees on workplace procedures in relation to production • Provide and interpret instructions, specifications, standard operating procedures and other work-related documents • Provide assistance or information to relevant personnel • Debrief on workplace changes with relevant stakeholders • Record production, emissions and other work-related information • Access and use workplace communication tools and equipment • Apply numeracy skills to work procedures • Provide information about team activities to managers, supervisors and customers
Teamwork	• Identify roles of work teams where teamwork is used as the form of work organisation • Supervise and lead others in a production environment • Share work-related information with peers, including team members, supervisors and management • Identify hazards to employees and visitors • Identify the value chain and advise other employees as to how they can contribute to the final quality of the product • Review changes to work practices and work relationships with team leaders and other employees • Provide assistance with planning work operations, as required • Seek assistance with work operations from specialists and other employees, as required • Participate in multidisciplinary teams, as required
Problem-solving	• Monitor production and maintenance activities • Analyse inconsistencies, non-compliances, faults or hazards • Identify factors within work area that are a constraint to work efficiency or reaching of production outcomes • Identify essential and non-essential practices • Implement methods of increasing features/benefits of products or processes • Monitor responsibilities of teams and make improvements to work organisation • Identify process steps which cause a problem and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	implement improvement processes • Monitor production performance and implement improvement processes • Compare shift or area required performance with actual performance • Identify situations where compliance to specifications or safety standards is unlikely • Identify, recommend and implement improvements • Identify causes of identified faults and take appropriate action • Investigate causes of deviations from targets and standards in relation to production • Undertake root cause analysis
Initiative and enterprise	• Manage procedures and systems for optimum outcomes • Analyse feedback on procedures and systems • Analyse problems, implications or suggestions for improvements • Adjust work activities according to changes in customer requirements • Identify methods of increasing contribution of work teams to production • Identify and implement changes and improvements • Monitor processes and equipment to ensure cost efficiency • Implement and monitor work practices to reduce waste • Participate in multidisciplinary teams to develop new products or processes
Planning and organising	• Ensure work areas comply with sustainability obligations and requirements • Identify and manage processes, tools and materials • Implement improvements in accordance with procedures • Distinguish between essential and non-essential practices • Implement use of planning tools within work of teams • Determine and prioritise required actions • Collect, organise and analyse information from work activities • Monitor work activities according to safety and workplace standards • Set production targets and outcomes • Interpret data and information as required by own job • Ask questions to ensure there is understanding of work requirements in teams and among other employees
Self-management	• Recommend methods of increasing own contribution to the value chain

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• Adjust work processes according to procedures and customer requirements • Identify and manage impact of change in own work • Minimise waste in own work activity • Assess own work performance • Set personal objectives for work performance • Manage own time
Learning	• Identify skill requirements of self and team members • Arrange skill development training for self and others • Adapt to changing work requirements • Ask questions to aid learning of others • Identify personal skill gaps and additional skill needs • Ask questions to ensure understanding of own work requirements • Monitor own work and identify areas for improvement • Seek feedback on work performance • Provide feedback on work performance to team leaders and team members
Technology	• Monitor technology to ensure production according to legislative requirements and workplace standards • Identify equipment and processes appropriate for jobs and skill levels of employees • Provide appropriate equipment to ensure safety and efficiency according to skill levels of employees • Assess operational efficiency of technology within own skill level and that of team members • Analyse data and other information from equipment reports • Conduct failure mode effects analyses • Use information technology appropriate for job • Manage maintenance procedures appropriate to job and processes according to skill levels of team members

Packaging Rules

To be awarded the MSA50311 Diploma of Production Management, competency must be achieved in **ten (10)** units of competency.

- **one (1)** core unit of competency
- **nine (9)** elective units of competency, as specified below

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elective units must include:

- a minimum of **two (2)** units from each of Group A, Group B and Group C
- the balance of units, to a maximum of **three (3)**, can be selected from:
- units from Group A, B or C, not previously selected
- units available at Diploma level from this Training Package, other endorsed Training Packages and accredited courses.

Note: Units marked with an asterisk have one or more prerequisite requirements. Please refer to the individual units for details. Prerequisites are to be counted towards the total number required to complete the qualification.

Core units of competency

Unit code	Unit title
MSAENV472B	Implement and monitor environmentally sustainable work practices

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
MSS405022A	Design a process layout	
MSS405030A	Optimise cost of product or service	
MSS405060A	Develop the application of enterprise control systems in an organisation	
MSS405075A	Facilitate the development of a new product	*
MSAPMOPS401A	Trial new process or product	
BSBFIM501A	Manage budgets and financial plans	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FNSORG501A	Develop and manage a budget	
MEM14001B	Schedule material deliveries	
TLIL4059A	Implement asset management systems	
TLIL5055A	Manage a supply chain	
TLIP4013A	Implement and monitor logistics planning and process	
TLIR4008A	Implement and supervise stocktaking procedures	
TLIR4009A	Implement purchasing systems	
TLIR4010A	Plan purchasing	
TLIR5006A	Develop, implement and review purchasing strategies	
TLIX5015A	Establish supply chains	

Group B

Unit code	**Unit title**	**Prerequisites**
MSS402030A	Apply cost factors to work practices	
MSS404052A	Apply statistics to operational processes	
MSS405031A	Undertake value analysis of a product or process costs in terms of customer requirements	
MSS405032A	Analyse cost implications of maintenance strategy	
MSS405050A	Determine and improve process capability	*
MSS405053A	Manage application of six sigma for process control and improvement	*
MSS405061A	Determine and establish information collection requirements and processes	
MSS405081A	Develop a proactive maintenance strategy	
MSS405082A	Adapt a proactive maintenance strategy to the process operations sector	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSAPMSUP390A	Use structured problem solving tools	
MSAPMSUP400A	Develop and monitor quality systems	
BSBMGT403A	Implement continuous improvement	
PMAOPS500A	Optimise production systems	

Group C

Unit code	Unit title	Prerequisites
MSS405041A	Implement improvement systems in an organisation	
MSS405070A	Develop and manage sustainable energy practices	
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	
MSAPMOHS401A	Assess risk	
MSAPMOHS503A	Maintain the workplace OHS management system	
MSAPMOHS510A	Manage risk	*
BSBINM501A	Manage an information or knowledge management system	
BSBMGT502B	Manage people performance	
BSBWRK510A	Manage employee relations	
MEM11007B	Administer inventory procedures	
MSS015002A	Develop strategies for more sustainable use of resources	
MSS015015A	Evaluate sustainability impact of a process	
PMASUP520B	Review procedures to minimise environmental impact of process	
PSPPM501B	Design complex projects	
PSPPM502B	Manage complex projects	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

PSPPM503B	Close complex projects	
TLIA5058A	Manage facility and inventory requirements	
TLIR4003A	Negotiate a contract	
TLIR5005A	Manage a contract

MSA50510 Diploma of Recreational Vehicles

Modification History

Release 5 - Imported elective unit updated to current release.

Release 4 - Imported elective units replaced by current versions. Prerequisites replaced with an asterisk. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release 2 - Imported unit code updated.

Description

The Diploma of Recreational Vehicles offers advanced training to people who may have completed MSA40510 Certificate IV in Recreational Vehicles or other relevant qualifications, or who have significant relevant industry experience without formal qualifications.

Job roles/employment outcomes

The Diploma of Recreational Vehicles has been developed to reflect the role of senior technicians and managers in a recreational vehicle manufacturing, repair or service enterprise for use in MSA07 Manufacturing Training Package. This qualification has been developed in response to an industry request. People with this qualification would be expected to undertake technical projects and/or manage departments or entire enterprises undertaking the manufacture, service and repair of recreational vehicles, including:

- motor homes
- caravans
- camper trailers
- slide-ons
- fifth wheelers.

They may work in a service and repair facility or a manufacturer's factory. The organisation may build new recreational vehicles, repair recreational vehicles for insurance claims, modify existing recreational vehicles or undertake routine servicing.

Application

The sector typically manufactures, services and repairs recreational vehicles as required. This may apply to the recreational vehicles body, fittings and running gear. Repairs may be in response to a road (or other) accident, hail damage, vehicle modification or routine servicing. They may also specify and access outside specialist services, for example, for spray painting or licence requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Recreational vehicles may be made from a frame (timber, aluminium or steel) and skin (aluminium or fibre composite) or a manufactured wall panel or some other technology. They are typically mounted on a steel chassis which may be manufactured by the recreational vehicle manufacturer or bought. Fittings are typically timber/particle board but may be any other suitable material.

People with this qualification may be expected to manage the work and perhaps undertake initial design or design modifications of a recreational vehicle, its repair or the process used.

This work will generally be undertaken in a workshop or factory facility.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship or Apprenticeship arrangement.

Pathways into the qualification

This qualification may be accessed by direct entry.

The units of competency contained within this qualification are common with other qualifications and credit should be granted towards this qualification where competency has already been achieved.

Credit should also be granted towards this qualification where competency has been achieved in units of competency contained within relevant skill sets.

The units of competency in this qualification reflect competencies which are practiced within the industry and recognition of prior learning (RPL) should be granted where there is sufficient evidence of competency from work-based experience.

Pathways from the qualification

Currently are no higher recreational vehicle qualifications.

Additional qualification advice

MSA51108 Diploma of Competitive Manufacturing is available for managers or others who need a more generalist qualification covering the application of good manufacturing practice and lean principles.

Licensing considerations

Units of competency in this qualification provide the underpinning knowledge and skills for various required licenses. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	**Industry/enterprise requirements for this qualification**
Communication	• Managing implementation of occupational health and safety (OHS) procedures, and developing and distributing related safety information • Developing standardised documentation on behalf of an area or group of work teams • Sharing and discussing information with others about enterprise activities • Developing and communicating workplace procedures • Providing information and clarifications to team leaders and other employees on workplace procedures • Providing and interpreting instructions, specifications, standard operating procedures (SOPs) and other work-related documents • Providing assistance or information to relevant personnel • Debriefing on workplace changes with relevant stakeholders • Recording production or other work-related information • Accessing and using workplace communication tools and equipment • Applying numeracy skills to work procedures • Providing information about team activities to managers, supervisors and customers
Teamwork	• Identifying roles of work teams where teamwork is used as the form of work organisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• Supervising and leading others in a production environment • Sharing production or work-related information with peers, including team members, supervisors and management • Identifying hazards to employees and visitors • Identifying the value chain and advising other employees as to how they can contribute to the final quality of the product • Reviewing changes to work practices and work relationships with team leaders and other employees • Providing assistance with planning work operations, as required • Seeking assistance with work operations from specialists and other employees, as required • Participating in multidisciplinary teams, as required
Problem solving	• Monitoring production and maintenance activities • Analysing inconsistencies, non-compliances, faults or hazards • Identifying factors within work area that are a constraint to work efficiency or reaching of production outcomes • Identifying essential and non-essential practices • Implementing methods of increasing features/benefits of products or processes • Monitoring responsibilities of teams and making improvements to work organisation • Identifying process steps which cause a problem and implementing improvement processes • Monitoring OHS performance and implementing OHS improvement processes • Comparing shift or area required performance with actual performance • Identifying situations where compliance to specifications or safety standards is unlikely • Identifying, recommending and implementing improvements • Distinguishing between random and identifiable causes of work problems • Identifying causes of identified faults and taking appropriate action • Investigating causes of quality deviations • Undertaking root cause analysis • Identifying deviations and fault patterns
Initiative and enterprise	• Managing procedures and systems for optimum outcomes • Analysing feedback on procedures and systems • Analysing problems, implications or suggestions for improvements • Adjusting work activities according to changes in customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	requirements • Identifying methods of increasing contribution of work teams to the value chain • Identifying and implementing changes and improvements • Monitoring processes and equipment to ensure cost-efficiency • Managing 5S procedures • Implementing and monitoring work practices to reduce waste • Participating in multidisciplinary teams to develop new products or processes
Planning and organising	• Planning work of teams to meet required standards • Ensuring work areas comply with OHS procedures • Identifying and managing processes, tools and materials • Implementing improvements in accordance with procedures • Monitoring and adjusting production/process • Distinguishing between essential and non-essential practices • Implementing use of planning tools within work of teams • Monitoring implementation of 5S procedures in teams • Determining and prioritising required actions • Collecting, organising and analysing information from work activities • Monitoring work activities according to safety and workplace standards • Setting production targets and outcomes • Interpreting data and information as required by own job • Asking questions to ensure understanding of work requirements in teams and among other employees
Self-management	• Recommending methods of increasing own contribution to the value chain • Adjusting work processes according to procedures and customer requirements • Identifying and managing impact of change in own work • Minimising waste in own work activity • Assessing own work performance • Setting personal objectives for work performance • Managing own time
Learning	• Identifying skill requirements of self and team members • Arranging skill development training for self and others • Adapting to changing work requirements • Asking questions to aid learning of others • Identifying personal skill gaps and additional skills needs • Asking questions to ensure understanding of own work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	requirements • Monitoring own work and identifying areas for improvement • Seeking feedback on work performance • Providing feedback on work performance to team leaders and team members
Technology	• Monitoring technology to ensure safety according to legislative requirements and workplace standards • Identifying equipment and processes appropriate for jobs and skill levels of employees • Providing appropriate equipment to ensure safety and efficiency according to skill levels of employees • Assessing operational efficiency of technology within own skill level and that of team members • Acting on reports of faulty operation of equipment • Analysing data and other information from equipment reports • Conducting failure mode effects analyses • Using information technology appropriate for job • Managing maintenance procedures appropriate to job and processes according to skill levels of team members

Packaging Rules

Packaging Rules

To be awarded the Diploma of Recreational Vehicles competency must be achieved in **ten** (**10**) units of competency:

- **three** (**3**) core units of competency
- **seven** (**7**) elective units of competency, as specified below:

  - a minimum of **two** (**2**) units of competency must be selected from Group A
  - the balance of units, to a maximum of **five** (**5**), may be selected from:
    - units not previously selected from Group A
    - Group B units listed below.

Note: Up to **two** (**2**) elective units of competency may be selected from this Training package, other endorsed Training Packages and accredited courses, as specified in Groups A and B.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Note: Where prerequisite units are identified, they must be counted in the total number of units required for completion of the qualification.

Core units of competency

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMSUP210A	Process and record information	

Elective units of competency

Group A

Unit code	Unit title	Prerequisites
AURV365356A	Read and interpret vehicle body repair estimation/quotation	
AURVTN4032	Determine vehicle body damage and recommend repair procedures	
MEM09002B	Interpret technical drawing	
MEM09204A	Prepare basic engineering detail drawings	*
MEM09009C	Create 2D drawings using computer-aided design (CAD) system	*
MEM09210A	Create 3-D solid models using computer aided design system	*
MEM16008A	Interact with computing technology	
MEM16009A	Research and analyse engineering information	*
MEM16012A	Interpret technical specifications and manuals	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements	
MSS405075A	Facilitate the development of a new product	*
Up to **one** (**1**) relevant elective unit of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses where that unit is available for inclusion at the Diploma level.		

Group B

Unit code	Unit title	Prerequisites
AUMFTA001	Document manufacturing design processes	
AURALA3001	Determine legal aspects of an automotive service and repair contract	
AURAMA5006	Contribute to business improvement	
AURAFA5007	Develop and document specifications and procedures	
AURTNA5001	Estimate and calculate costs to repair, maintain or modify a vehicle	
BSBFIM501A	Manage budgets and financial plans	
MEM11007B	Administer inventory procedures	
MEM11012B	Purchase materials	
MEM11017B	Organise and lead stocktakes	*
MEM14001B	Schedule material deliveries	
MEM15004B	Perform inspection	
MEM15005B	Select and control inspection processes and procedures	*
MEM16006A	Organise and communicate information	
MSS404052A	Apply statistics to operational processes	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSS405041A	Implement improvement systems in an organisation	
MSS405081A	Develop a proactive maintenance strategy	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
MSAPMSUP400A	Develop and monitor quality systems	
MSARVS301A	Develop and update caravan industry knowledge	
PSPGOV408A	Value diversity	
Up to **one** (**1**) relevant elective unit of competency may be selected from this Training Package, other endorsed Training Packages and accredited courses where that unit is available for inclusion at the Diploma level.

MSA60108 Advanced Diploma of Manufacturing Technology

Modification History

Release 5: unit codes corrected in Group B electives:

- MEM14091A Integrate manufacturing fundamentals into an engineering task
- MEM14092A Integrate maintenance fundamentals into an engineering task

Release 4 - MEM imported elective units replaced by current version. Equivalent.

Release 3 - MSACM units replaced by MSS units from MSS11v2 Sustainability Training Package.

Release 2 - Imported unit codes updated.

Description

This qualification is suitable for delivery part time over a four year period. There are two specialist streams available:

- Metallurgy
- Polymer Technology.

Each stream offers an opportunity for significant choice in electives and each stream requires the same core units to be completed.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

MSA60108 Advanced Diploma of Manufacturing Technology

The following table contains a summary of the Employability Skills as identified by the manufacturing technology related industries for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	**Industry/enterprise requirements for this qualification include**:
Communication	• Communicate with members of supply chain • Use information and communication technology to interpret and analyse market and supply chain information and research new processes and products • Calculate costs • Use a range of communication and marketing tools to present concepts to a variety of audiences • Negotiate contracts with national and international networks • Complete documentation and maintain records
Teamwork	• Network with clients, industry professionals, supply chain personnel and all levels of internal management • Provide product information to others in the team
Problem-solving	• Interpret and evaluate market information for use in current and future practices • Determine cost effective supply of materials and resources through the supply chain • Analyse consumer behaviour to inform marketing processes and identify market opportunities • Calculate cost estimates • Map and establish supply chain processes • Evaluate designs and identify opportunities for improvement
Initiative and enterprise	• Secure new networks with industry professionals and clients • Implement new product development processes • Participate in product improvement processes • Implement sales and marketing plans
Planning and organising	• Undertake effective planning of own and others' work to achieve desired outcomes within agreed time-frames • Schedule meetings and correspondences with networks • Monitor quality processes and analyse outcomes • Plan and implement contingency plans to respond to incidents and problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	• Coordinate quality assurance • Coordinate people and processes to achieve desired goals • Define roles and responsibilities of others
Self-management	• Manage work plans and priorities and define responsibilities • Manage client and industry relationships and networks • Manage data flows and record keeping • Monitor own work against industry standards
Learning	• Develop or adjust processes based on new information • Conduct research to increase knowledge of industry practices and opportunities • Develop contacts and networks to support work activity
Technology	• Use information and communication technology to acquire, manage and share data and maintain communication networks. • Use computer-aided design technology to develop new products

Packaging Rules

Packaging Rules

To be awarded an Advanced Diploma of Manufacturing Technology competency must be achieved in **thirty one** (**31**) units of competency:

- **six** (**6**) core units of competency
- **twenty five** (**25**) elective units of competency chosen as described below.

Core units

The following **six** (**6**) units must be chosen:

Unit code	**Unit title**
MEM16006A	Organise and communicate information
MEM16008A	Interact with computing technology
MEM23001A	Apply advanced mathematical techniques in a manufacturing, engineering or related environment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment
MSS402051A	Apply quality standards
MSAENV272B	Participate in environmentally sustainable work practices

Prerequisites

Units marked with an asterisk have one or more prerequisite requirements. The prerequisites for these units are to be counted in the total number of units required in the elective group. Please refer to the individual units for details.

Elective units

Choose **twenty five (25)** units as specified below for each specialist stream.

Group A - specialist streams

Choose **twenty five** (**25**) elective units as specified to achieve a specialist stream.

Note:

- All units from each specialist stream are available in Group B as General Electives.
- Five elective units may also be chosen from other qualifications in this Training Package, other endorsed Training Packages and accredited courses, as specified below.
-

Metallurgy specialist stream

Select **twenty five** (**25**) elective units:

- a minimum of **fourteen** (**14**) from the list below
- the balance may be chosen from Group B

Note:

- at least six of the 14 metallurgy elective units must be coded MSATCM5---
- the unit *MSATCM406A Apply basic chemistry principles to metallurgy* must also be selected if it has not already been completed as part of a lower qualification

Unit code	Unit title	Prerequisites

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM22001A	Perform engineering activities	
MEM22002A	Manage self in the engineering environment	*
MEM23004A	Apply technical mathematics	
MEM23063A	Select and test mechanical engineering materials	*
MEM23109A	Apply engineering mechanic principles	*
MEM24012C	Apply metallurgy principles	
MEM30007A	Select common engineering materials	
MSATCM401A	Prepare and examine metallographic samples	
MSATCM402A	Monitor and test sands, cores and moulds	
MSATCM403A	Evaluate mould design and gating	
MSATCM404A	Undertake and interpret results of chemical analysis on metal samples	
MSATCM405A	Determine and supervise heat treatment of metal	*
MSATCM406A	Apply basic chemistry principles to metallurgy	
MSATCM501A	Calculate and predict chemical outcomes in metallurgical situations	*
MSATCM502A	Identify and describe equipment for mineral and chemical processing plants	*
MSATCM503A	Recommend a refractory for an application	
MSATCM504A	Select metal forming process	*
MSATCM505A	Select metal joining process	*
MSATCM506A	Monitor blast furnace operations	*
MSATCM507A	Monitor primary steel making process	*
MSATCM508A	Monitor secondary steelmaking operations	*
MSATCM509A	Recommend ferrous and non ferrous metals or alloys for an application	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MSATCM510A	Apply metallurgical principles and techniques in welding and other thermal processes	*
MSATCM511A	Apply metallurgy principles and practice to determine metal forming and shaping processes	
MSATCM512A	Apply metallurgy principles and practice to optimise furnace operation	
MSATCM513A	Plan and complete metallurgical projects	*
MSATCM514A	Select surface treatment methods for metallic components or products	
MSATCM515A	Analyse metallurgical failures of components and recommend preventative measures	*
MSATCM516A	Select non metallic materials for engineering applications manufacturing, engineering and structural	
MSATCM517A	Determine corrosion prevention strategies for metal and alloys	
MSATCM518A	Interpret complex binary phase diagrams	*

Polymer technology specialist stream

Select **twenty five** (**25**) elective units:

- a minimum of **ten** (**10**) from the two groups below
- the balance may be chosen from Group B

Polymer technology group 1

Choose at least one of the following units:

Unit code	Unit title	Prerequisites
PMBTECH601B	Develop a new product	*
PMBTECH602B	Develop a new die or tool	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
PMBTECH603B	Design structural/mechanical polymeric components	*

Polymer technology group 2

Choose up to nine of the following units:

Unit code	Unit title	Prerequisites
MSS405075A	Facilitate the development of a new product	*
PMAOPS550B	Develop a colour formulation	
PMAOPS600C	Modify plant	
PMBTECH501B	Analyse equipment performance	*
PMBTECH502B	Review and analyse production trials and specify re-trials	*
PMBTECH503B	Determine rheology and output of plastics materials from processing equipment	*
PMBTECH504B	Determine heat transfer loads for processing equipment	*
PMBTECH505B	Choose polymer materials for an application	*
PMBTECH506B	Analyse the design of products and tools	*
PMBTECH507B	Develop fibre composite products using cored laminate techniques	*
PMBTECH508A	Develop a new compound	
PMBTECH509A	Modify an existing product	
PMBTECH510A	Analyse failure in polymeric materials	

Group B - General electives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The balance of units for each specialist stream may be chosen from this list as specified below:

Metallurgy specialist stream	Up to 11 units
Polymer technology specialist stream	Up to 15 units

Unit code	**Unit title**	**Prerequisites**
AUM4003A	Interpret customer requirements	
FDFOP2005A	Work in a socially diverse environment	
LMTGN4016A	Contribute to the development of products or processes	
LMTGN5004A	Manage installation and commissioning of equipment and systems	
MEM06003C	Carry out heat treatment	
MEM09002B	Interpret technical drawing	
MEM09204A	Produce basic engineering detail drawings	*
MEM09205A	Produce electrical schematic drawings	*
MEM09005B	Perform basic engineering detail drafting	*
MEM09157A	Represent mechanical engineering design drafting	
MEM09158A	Represent mechatronic engineering design drafting	
MEM09155A	Prepare mechanical models for computer-aided engineering (CAE)	*
MEM09156A	Prepare mechatronic models for computer-aided engineering (CAE)	*
MEM12003B	Perform precision mechanical measurement	
MEM12005B	Calibrate measuring equipment	*
MEM12022B	Program coordinate measuring machine (advanced)	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM12023A	Perform engineering measurements	
MEM12024A	Perform computations	
MEM12025A	Use graphical techniques and perform simple statistical computations	
MEM13002B	Undertake occupational health and safety activities in the workplace	
MEM13010A	Supervise occupational health and safety in an industrial work environment	*
MEM13013B	Work safely with ionising radiation	
MEM14001B	Schedule material deliveries	
MEM14002B	Undertake basic process planning	
MEM14003B	Undertake basic production scheduling	
MEM14005A	Plan a complete activity	
MEM14085A	Apply mechanical engineering analysis techniques	*
MEM14086A	Apply mechatronic engineering analysis techniques	*
MEM14087A	Apply manufactured product design techniques	*
MEM14088A	Apply maintenance engineering techniques to equipment and component repairs and modifications	*
MEM14089A	Integrate mechanical fundamentals into an engineering task	*
MEM14090A	Integrate mechatronic fundamentals into an engineering task	*
MEM14091A	Integrate manufacturing fundamentals into an engineering task	*
MEM14092A	Integrate maintenance fundamentals into an engineering task	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM15001B	Perform basic statistical quality control	
MEM15004B	Perform inspection	
MEM15005B	Select and control inspection processes and procedures	*
MEM15007B	Conduct product and/or process capability studies	*
MEM15008B	Perform advanced statistical quality control	*
MEM15010B	Perform laboratory procedures	
MEM15011B	Exercise external quality assurance	*
MEM15012B	Maintain/supervise application of quality procedures	*
MEM16010A	Write reports	*
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18003C	Use tools for precision work	
MEM18006C	Repair and fit engineering components	
MEM18010C	Perform equipment condition monitoring and recording	
MEM18016B	Analyse plant/equipment condition monitoring results	*
MEM18055B	Dismantle, replace and assemble engineering components	
MEM22002A	Manage self in the engineering environment	*
MEM22012A	Coordinate resources for an engineering project or operation	
MEM22013A	Coordinate engineering projects	
MEM22014A	Coordinate engineering-related manufacturing operations	*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit code	Unit title	Prerequisites
MEM22015A	Source and estimate engineering materials requirements	
MEM22007A	Manage environmental effects of engineering activities	*
MEM22017A	Coordinate continuous improvement and technical development in an engineering-related project or operation	
MEM22018A	Coordinate sales and promotion of engineering-related products or services	
MEM23007A	Apply calculus to engineering tasks	*
MEM23003A	Operate and program computers and/or controllers in engineering situations	*
MEM23004A	Apply technical mathematics	
MEM23006A	Apply fluid and thermodynamics principles in engineering	*

MSASS00001 Confined space work team

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway

These units of competency can provide credit towards Certificates II and III in PMA08 Chemical, Hydrocarbons&Refining Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units

MSAPMOHS200A Work safely

MSAPMPER200C Work in accordance with an issued permit

MSAPMPER202A Observe permit work

MSAPMPER205C Enter confined space

Target Group

Target group

Persons entering a confined space must do so in accordance with the relevant Australian Standard. Where members of a work team are expected to undertake multiple roles in regard to the confined space entry, then they must be competent in all those roles. This skills set is targeted at such a work team. This training would occur before starting work requiring entry to a confined space. This may occur either as part of safety training to work on the site or more commonly as separate training after initial safety induction.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from MSA07 Manufacturing Training Package meet the minimum industry requirements for members of a confined space work team.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSASS00002 High pressure water jetting assistant

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway

These competencies can provide credit towards relevant qualifications in the MSA07 Manufacturing and MEM05 Metal and Engineering Training Packages

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units

MSAPMWJ201A Use high pressure water jetting equipment

MSAPMOHS110A Follow emergency response procedures

MSAPMOHS200A Work safely

MSAPMPER200C Work in accordance with an issued permit

Target Group

Target group

Members of the water jetting team who are not competent to operate independently need to have basic competencies before working under supervision. This not only involves technical competence in high pressure water jetting but also requires safe operation within the worksite which may not be familiar to the operator.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSASS00004 Leading Hand/Supervisor

Modification History

Release 3 - MSACM unit updated in unit grid. No change to outcomes.

Release 2 - MSACM unit replaced by MSS unit from MSS11v2 Sustainability Training Package.

Description

The Skill Set below has been developed in consultation with the industry and is based on a logical cluster of units which meet critical industry needs in the area of supervision and safety. The Skill Set consists of a cluster of competencies which are commonly practiced (and possibly trained) together. It reflects an industry need to be able to recognise that a person can undertake this defined role.

Pathways Information

These competencies can provide credit towards relevant qualifications in all MSA training packages.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units:

MSAPMOPS212A	Use enterprise computer or data systems
MSAPMOHS300A	Facilitate the implementation of OHS for a work group
MSS403011A	Facilitate implementation of competitive systems and practices
TAEDEL301A	Provide work skill instruction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Target Group

Entrants to the Leading Hand/Supervisor Skill Set will be required to have completed a Certificate III qualification in a manufacturing related area, or equivalent. This Skill Set addresses the need for coordination and supervision of trainees, apprentices and other production staff to ensure work place safety, quality and production requirements are maintained and monitored.

Suggested words for Statement of Attainment

These competencies from the MSA07 Manufacturing and other Training Packages meet the minimum industry requirements for supervision of staff working in a manufacturing environment

MSASS00005 License to operate a standard boiler

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set can be a stand-alone licensing outcome or the unit it comprises credited in any qualification where it is included as core or an elective option.

Licensing/Regulatory Information

Meets national High Risk Work Licensing for standard boiler operation

Skill Set Requirements

MSABLIC001 Licence to operate a standard boiler

Target Group

The target group is boiler operators operating standard boilers that require occupational licensing by a State and Territory OHS regulator.

Suggested words for Statement of Attainment

This unit of competency meets the minimum industry requirements for high risk work licensing of standard boiler operation.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSASS00006 License to operate an advanced boiler

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set can be a stand-alone licensing outcome or the unit it comprises credited in any qualification where it is included as core or an elective option.

Licensing/Regulatory Information

Meets national High Risk Work Licensing for advanced boiler operation

Skill Set Requirements

MSABLIC002 Licence to operate an advanced boiler

Target Group

The target group is boiler operators operating advanced boilers that require occupational licensing by a State and Territory OHS regulator.

Suggested words for Statement of Attainment

This unit of competency meets the minimum industry requirements for high risk work licensing of advanced boiler operation.

MSASS00007 Trade Measurement Verification (Complex Measuring Instrument)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway

These competencies can provide credit towards qualifications within the Manufacturing Training Package. If verifiers seek employment as trade measurement inspectors, these competencies may provide recognition towards the new Diploma of Government (Trade Measurement).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units

- MSATMVER501A Verify a complex measuring instrument
- MSATMREF301A Use and maintain reference standards.
-

Target Group

Target group

This Skill Set is appropriate for experienced personnel such as fitters, mechanics, instrument manufacturers or importers and software developers who wish to work under a servicing licence to verify complex measuring instruments used in trade measurement. Examples of complex measuring instruments include, LPG dispensers, LPG bulk flowmetering systems, flowmetering systems tested using master meter or gravimetric methods, automatic rail weighbridges, continuous totalising automatic weighing instruments (belt weighers) and totalising hopper weighing instruments.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This Skill Set reflects the minimum requirements for licensing. However, the regulator or individual traders may impose additional requirements before a verifier can start work on some sites. Entrants to this Skill Set should have sufficient workplace skills in OH&S, communication and teamwork that provide underpinning competency to acquire and apply the Skill Set.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies are taken from the Manufacturing Training Package and provide training that meets the minimum requirements for licensing as a verifier of a complex measuring instrument.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSASS00008 Trade Measurement Verification (Limited Weighing Instrument)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway

These competencies can provide credit towards qualifications within the Manufacturing Training Package. If verifiers seek employment as trade measurement inspectors, these competencies may provide recognition towards the new Certificate IV in Government (Trade Measurement).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units

- MSATMVER401A Verify a limited weighing instrument
- MSATMREF301A Use and maintain reference standards.
-

Target Group

Target group

This Skill Set is appropriate for experienced personnel such as fitters, mechanics, instrument manufacturers or importers and software developers who wish to work under a servicing licence to verify limited weighing instruments used in trade measurement. Examples of limited weighing instruments include, non-automatic weighing machines tested without substitution loads, automatic Class Y(a) Catchweighers and automatic Class Y(b) Catchweighers.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This Skill Set reflects the minimum requirements for licensing. However, the regulator or individual traders may impose additional requirements before a verifier can start work on some sites. Entrants to this Skill Set should have sufficient workplace skills in OH&S, communication and teamwork that provide underpinning competency to acquire and apply the Skill Set.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies are taken from the Manufacturing Training Package and provide training that meets the minimum requirements for licensing as a verifier of a limited weighing instrument.

AUMANA001 Prepare and document quotations

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMANA3001 Prepare and document quotation

Application

This unit describes the performance outcomes required to determine job requirements and produce a quotation for a customer.

It applies to those in an automotive environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Competency Field

Manufacturing - Common

Unit Sector

Loss Assessment or Repair Quoting

Elements and Performance Criteria

Elements Elements describe the essential outcomes	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Determine customer requirements	1.1 Customer requirements are established and job parameters specified according to workplace procedures 1.2 Customer requirements are compared with existing workplace products and services 1.3 Variations required by the customer are established
2. Estimate the job	2.1 Variations from standard workplace product or service are identified and estimated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
	2.2 Additional processes, parts and skills required to meet customer requirements are estimated 2.3 Workplace job costing procedures, including ***cost-reduction initiatives***, are used to estimate materials, parts, labour and equipment costs for the job 2.4 Estimates for contingencies and changed work requirements are included in the total job cost
3. Document and confirm quotation	3.1 Quotation is prepared and confirmed with client according to workplace procedures 3.2 Customer purchase and payment arrangements are negotiated 3.3 Changes and variations are negotiated to meet customer and workplace needs 3.4 Workplace record and customer file are processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	• identify job and customer requirements • interpret workplace procedures and specifications relating to quotation.
Writing skills to:	• produce job requirements and material lists • legibly complete quotation, associated workplace records and customer file.
Oral communication skills to:	• communicate and negotiate with customers.
Numeracy skills to:	• identify customer specifications • determine job budget including, materials, parts, labour and equipment costs • estimate contingencies and changed work requirements • produce a quotation that has mathematical information legibly embedded.
Planning and organising skills to:	• determine order and timing of processes.
Problem-solving skills to:	• determine process needed to fulfil customer product or service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills	Description
	requirements.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cost-reduction initiatives must include:	• continuous improvement programs • waste avoidance.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMANA001 Prepare and document quotations

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMANA3001 Prepare and document quotation

Performance Evidence

Before competency can be determined, individuals must have competently prepared and documented a quotation on a minimum of three occasions.

Individuals must demonstrate they can:

- prepare a detailed estimate of job labour, parts, equipment and materials based on customer requirements
- accurately estimate the job, allowing for contingencies
- prepare a detailed, legible quotation document
- follow workplace procedures when preparing and processing the quotation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for determining and negotiating customer requirements in order to prepare a quotation
- procedures for planning and estimating a job, including:
  - methods of determining labour rates and job time length
  - methods of determining job processes and material requirements
  - methods of planning for contingencies
- cost minimisation and waste avoidance procedures and practices
- workplace quotation flow chart.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to quotations they have prepared.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- real or simulated customer product or service requiring a quotation
- workplace documentation for estimating and preparing a quotation
- workplace procedures for preparing and processing a quotation.

AUMFTA001 Document manufacturing design processes

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMFTA3001 Document designs

Application

This unit describes the performance outcomes required to document the design details of the production processes of vehicles and their components.

It applies to those in an automotive and related manufacturing environment and involves the application of skills and knowledge at a specialist level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Passenger Vehicle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Identify document needs	1.1 Design brief and ***requirements*** are identified and confirmed with appropriate personnel 1.2 Production processes, drawings, technical specifications and instructions are identified and clarified with participating personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
2. Develop draft documents	2.1 Draft ***documents*** relating to the specification, costing, manufacture and assembly of products are prepared according to workplace procedures 2.2 Draft document content is confirmed with relevant personnel and their feedback integrated as appropriate
3. Finalise documentation process	3.1 Approved documents are communicated to relevant production, management and engineering personnel 3.2 Documents are distributed and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	• interpret production and work area requirements • interpret workplace procedures and product specifications • interpret design brief.
Writing skills to:	• legibly complete design documents.
Oral communication skills to:	• communicate and negotiate with workplace personnel on document design and content.
Numeracy skills to:	• quantify workplace document needs • determine document budget, materials and resources • produce a document with mathematical information.
Digital literacy skills to:	• use workplace computer programs and design applications.
Initiative skills to:	• adapt to document design requirements.
Planning and organising skills to:	• manage document research, design and development time.
Problem-solving skills to:	• identify problems, particularly in production, to meet performance indicators • access, interpret and apply workplace procedures and instructions to ensure documents meet workplace template requirements and standards.
Teamwork skills to:	• work in a design consultation process.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Requirements must include:	• design quality • materials • production processes • testing and costing.
Documents must include:	• budgets • material requirements • production processes • resources • specified parameters • test requirements • timelines.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMFTA001 Document manufacturing design processes

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMFTA3001 Document designs

Performance Evidence

Before competency can be determined, individuals must have competently developed and designed workplace documents on a minimum of two occasions.

Individuals must demonstrate they can:

- comply with workplace procedures when designing production documents
- apply working knowledge of production practices and systems
- identify design requirements
- communicate with internal personnel to seek their input into and approval of documents
- design and modify documents
- incorporate design quality, materials, production processes, testing and costing into document design process
- complete, disseminate and store design documents.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace documents covering procedures, specifications, schedules, quality instructions, procedures and performance indicators
- workplace communication protocols for developing and disseminating design documentation
- processes to identify design requirements
- processes to identify critical product quality, materials, tests and costing
- processes for developing and storing documents.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automotive production documents that they have designed, e.g. a copy of the production documents.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- real or simulated automotive production document requirements
- automotive production document design brief and development instructions
- computer system and design software
- workplace procedures relating to the design of automotive production documents.

AUMGTT001 Apply trim to vehicle components

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTT2001 Apply trim to components

Application

This unit describes the performance outcomes required to measure, cut and attach trim materials to vehicle components.

It applies to those in an automotive manufacturing environment and involves the application of skills and knowledge at a production worker level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Bus, Truck and Trailer

Unit Sector

Technical - Trimming and Upholstery

Elements and Performance Criteria

Elements Elements describe the essential outcomes	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Plan and prepare	1.1 Work orders, job specifications and working drawings are identified, interpreted and confirmed 1.2 Trim materials, tools and equipment are selected and inspected, and faults repaired or reported
2. Match materials	2.1 Trim materials are matched, measured and cut according to job specifications and workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
	2.2 Material characteristics are identified and selected for use 2.3 Attaching or bonding information is identified and interpreted from ***appropriate sources***
3. Attach materials	3.1 ***Workplace procedures*** are identified and followed 3.2 Trim materials are pre-fitted and checked for alignment, appearance and quality according to job specifications 3.3 Trim materials are attached to components by approved methods
4. Complete work processes	4.1 Tools and equipment are cleaned, inspected and stored according to workplace procedures 4.2 Faulty equipment is identified, reported and tagged 4.3 Work areas are cleaned, and unused materials stored 4.4 Waste materials are removed and disposed of or recycled according to workplace environmental procedures 4.5 Work sheets are completed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	• interpret work health and safety (WHS) requirements and workplace procedures • interpret machine safe operating procedures • interpret job specifications, work orders and working drawings.
Writing skills to:	• complete work sheets and job schedules • prepare work plans and inspection reports • complete machine maintenance forms • complete faulty equipment tags • complete job consumable lists.
Oral communication skills to:	• confirm work orders and job specifications with appropriate personnel • report faults with materials, tools and equipment.
Numeracy skills to:	• calculate material length, width and height • calculate measurements from working drawings • mark out materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• set trimming machine settings • use measuring equipment • identify common 2D and 3D trim shapes.
Initiative skills to:	• adapt to changing work conditions.
Planning and organising skills to:	• interpret and apply information on job requirements, quality and workplace procedures • plan work from work orders.
Self-management skills to:	• take responsibility for organising own work.
Problem-solving skills to:	• access, interpret and apply information on workplace procedures and instructions.
Teamwork skills to:	• solve problems particularly in teams in order to meet job outcomes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Appropriate sources must include:	• customer requirements • material and product specifications.
Workplace procedures must include:	• procedures for recording and reporting the application of trim to vehicle components • use of tools and equipment for applying trim to vehicle components • WHS requirements for applying trim to vehicle components • workplace quality standards relevant to applying trim to vehicle components.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMGTT001 Apply trim to vehicle components

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTT2001 Apply trim to components

Performance Evidence

Before competency can be determined, individuals must have competently applied trim to vehicle components on a minimum of three occasions.

Individuals must demonstrate they can:

- locate, interpret and apply work information and specifications relating to applying trim to vehicle components
- use trimming, bonding and attaching equipment safely
- cut covers and trim to job specifications
- select appropriate bonding and attaching processes for applying trim to vehicle components
- attach trim to vehicle components according to workplace procedures and work health and safety (WHS) requirements
- complete work sheets relating to applying trim to vehicle components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- WHS requirements relevant to applying trim to vehicle components
- procedures for trim matching, measuring and calculating required trim dimensions
- trim cutting procedures
- trim application and removal methods
- trim adjustment methods
- types and use of materials and equipment relevant to applying trim to vehicle components, including:
  - glues
  - rivets
  - trim cutting equipment
  - trim forming equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - trim stapling equipment
- sewing procedures of vehicle trim.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components to which they have applied trim, e.g. production work sheets.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- trim application work sheets, instructions and job specifications
- vehicle trimming materials, equipment and consumables
- vehicle components that require trimming
- personal protective equipment (PPE) relevant to applying trim to vehicle components.

FPICOT2238A Cut materials with a hand-held chainsaw

Modification History

Release 2

Release 2 created to reflect that FPICOT2238A supersedes both FPICOT2206A and FPICOT2206B. Equivalent

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to prepare and cut materials with a hand-held chainsaw. This unit includes basic operator maintenance checks

More comprehensive servicing and maintenance procedures are covered in FPICOT2237A Maintain chainsaws

General legislative, regulatory and workplace requirements apply to this unit; however there are no specific licensing or certification requirements at the time of publication

This unit replaces FPICOT2206B Cross cut materials with an hand-held chainsaw

Application of the Unit

Application of the unit

The unit involves cutting materials with a hand-held chainsaw in a variety of work settings including a construction, saw mill, forest products factory, timber retail yard or horticultural environment

The skills and knowledge required for competent performance are to be used within the scope of the person's job and authority

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for operation	1.1. Applicable ***Occupational Health and Safety*** (***OHS***), environmental, ***legislative***, ***organisational requirements*** and manufacturer's specifications relevant to cutting ***materials*** with a hand-held chainsaw are identified and followed 1.2. ***Job requirements*** are reviewed and clarified with ***appropriate personnel*** 1.3. ***Tools and equipment*** are selected appropriate to job requirements and checked for operational effectiveness in line with manufacturer's recommendations and site procedures 1.4. Tasks are identified and planned in line with job requirements 1.5. ***Communication*** with others is established and maintained in line with OHS requirements and site procedures 1.6. Requirements for recycling or disposal of waste material are identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Cut material	2.1. Work area is prepared, checked and ***cleared*** in line with OHS requirements and site procedures
	2.2. ***Supports*** are placed as required to ensure a stable base
	2.3. Material is visually assessed for defects in line with site standards
	2.4. ***Cutting techniques*** are used to maximise volume and quality of recovery in line with work order and industry standard lengths
	2.5. Material is cut within site standard tolerances for length and angle relative to centre line in line with OHS requirements
	2.6. Chainsaw is operated in line with OHS and site procedures, and manufacturer's recommendations
	2.7. Debris is cleared and disposed of in line with site procedures and environmental requirements
	2.8. Production and quality ***records and reports*** are processed in line with site procedures and organisational requirements
	2.9. ***Problems*** are identified and reported in line with site procedures
3. Conduct chainsaw maintenance	3.1. Damaged saws or cutting attachments are identified and dealt with according to site procedures and manufacturer's recommendations
	3.2. Chainsaw is cleaned, ***maintained*** and stored in line with manufacturer's recommendations and site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills

- Technical skills sufficient to safely and efficiently use a hand-held chainsaw and carry out lock-out procedures on associated machinery; use and maintain relevant tools, machinery and equipment; use appropriate methods to cut materials with a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

hand-held chainsaw and maximise volume and quality recovery
- Communication skills sufficient to interact effectively with colleagues and others
- Literacy skills sufficient to review and accurately identify work requirements and accurately locate, record and report information
- Numeracy skills sufficient to estimate and measure lengths and calculate time to complete a task
- Problem solving skills sufficient to identify defects and problems and appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for cutting materials with a hand-held chainsaw
- Organisational and site standards, requirements, policies and procedures for cutting materials with a hand-held chainsaw; organisational communication channels and protocols; and procedures for the recording and reporting of workplace documentation and information
- Environmental protection requirements including the safe disposal of waste material
- Operation and maintenance requirements of a hand-held chainsaw including consequences of blunt or damaged saws
- Effects of defects on recovery
- Common industry terminology
- Communication and interpersonal techniques
- Industry standard length dimensions
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to provide evidence that they can use a hand-held chainsaw while demonstrating the correct procedures for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	cutting materials in line with organisational guidelines
Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of: • following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS and environmental, relevant to cutting materials with a hand-held chainsaw • following organisational policies and procedures relevant to cutting materials with a hand-held chainsaw • following applicable licensing or certification requirements • effective communication and safe working practices • safe cutting of materials using a hand-held chainsaw • cutting materials to maximise volume and quality of recovery according to job requirements • cleaning, maintaining and storing saw • identifying and reporting faults, malfunctions or irregular operation of hand-held chainsaw • appropriate recycling or disposal of waste materials

Context of and specific resources for assessment	• Competency is to be assessed in the workplace or realistically simulated workplace
	• Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
	• Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
	• Assessment is to comply with relevant regulatory or Australian Standards requirements
	• The following resources should be made available:
	  • workplace location or simulated workplace
	  • materials and equipment relevant to undertaking work applicable to this unit
	  • specifications and work instructions

Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

workplace relevant contexts) together with application of underpinning knowledge

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- awareness of danger zone for kickback
- manual handling including shifting, lifting and carrying
- potential falling objects
- procedures for cutting on slopes
- location of other workers

Legislative requirements: are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- Australian Standards
- OHS
- the environment
- equal opportunity
- relevant industry codes of practice
- award and enterprise agreements
- industrial relations
- confidentiality and privacy
- duty of care
- heritage and traditional land owner issues
- legal

Organisational requirements may include:

- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS
- emergency and evacuation procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• fire prevention procedures • recording and reporting requirements • equipment use and maintenance and storage requirements • environmental management requirements (waste disposal, recycling and re-use guidelines) • access and equity principles and practices
Materials may include:	• logs • packs of timber • individual pieces of timber
Job requirements relate to:	information and instructions relevant to cutting operations including: • processing location details • materials to be cut • environmental requirements and features • site plan and may be verbal
Appropriate personnel may include:	• supervisors • clients • colleagues • line management
Tools and equipment may include:	• chainsaws • specific safety attire • maintenance tools
Communication may include:	• verbal and non-verbal language • hand or other agreed signals • eye contact with other operators or personnel • use of electronic devices
Cleared	refers to work area and may include: • clearing the work area of off-cuts and shorts • ensuring saw clearance around material • depositing off-cuts, shorts and debris in recognised areas • clearing surfaces of debris likely to cause saw damage in the cutting area
Supports	are timber or mechanical apparatus that are put under material to stabilise and give clearance to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	ground and may include: • timber bearers • specific frames/benches • timber/steel trolleys
Cutting techniques may relate to:	• cutting positions • work order requirements • industry standard lengths • cutting patterns • maximising volume and quality of recovery • securing the section on each side of the planned cut • cutting procedures to ensure saw clearance around the material to minimise capping and splitting of material
Records and reports may include:	• log book recording of maintenance outcomes, faults, malfunctions and damage, hazards and incidents • may be compiled using a computer-based system or other appropriate organisational communication system to record and report
Problems	may occur in relation to: • defects in material • performance of chainsaw • communication • hazards and risks at the work site • capping and splitting of material • danger zone for kickback
Maintained	refers to maintenance during operation to optimise saw performance and includes: • refuelling • bar checks and oil top up • air filter check, clean and replacement • cleaning of saw body, air intake vents and cooling fans • fitting spare chain and tension chain

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Graph exponential and logarithmic functions and solve exponential and logarithmic equations.	1.1. Simplify arithmetic and algebraic expressions using the laws of indices and logarithms. 1.2. Sketch the graphs of exponential and logarithmic functions. 1.3. Convert logarithms between bases. 1.4. Draw curves of best fit, interpolate data and estimate constants. 1.5. Solve problems involving growth and decay.
2. Graph trigonometric functions and solve trigonometric equations.	2.1. Sketch graphs of simple trigonometric functions. 2.2. Simplify trigonometric expressions. 2.3. Solve trigonometric equations.
3. Apply basic computer numerical methods to engineering	3.1. Apply appropriate number systems to a range of engineering applications requiring manipulations of decimal, binary and hexadecimal information.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
situations.	3.2. Apply computer techniques to the solution of engineering problems involving products, sums, divisions and subtraction of variables. 3.3. Apply computer techniques to the solution of engineering problems involving linear, quadratic, logarithmic, trigonometric equations. 3.4. Apply computer techniques to the solution of engineering problems and vector analysis.
4. Sketch and describe complex figures mathematically.	4.1. Sketch complex figures including intersections to implement pattern developments. 4.2. Describe complex figures mathematically. Relate mathematical models to computer graphics models.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- simplifying arithmetic and algebraic expressions using the laws of indices and logarithms
- correctly sketching exponential and logarithmic functions
- accurately converting logarithms from one base to another
- drawing curves of best fit for given sets of data
- accurately interpolating data from plotted data and/or drawn curves
- solving problems involving growth and decay
- accurately sketching trigonometric functions
- simplifying trigonometric expressions using trigonometric identities
- correctly solving trigonometric equations
- selecting an appropriate number system
- developing an appropriate program for the engineering situation
- running a program to achieve an appropriate solution

Required knowledge

Look for evidence that confirms knowledge of:

- the laws of indices and logarithms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• the procedures for simplifying arithmetic and algebraic expressions • the procedures for sketching exponential and logarithmic functions • the effects on the curve due to variation in size of constants • the procedures for converting logarithms between bases • the procedures for drawing curves of best fit and interpolating results • the procedures for estimating constants in suggested relationships • the concept of growth and decay • the procedures for solving problems involving growth and decay • the significance of amplitude, period and phase angle • the procedures for sketching trigonometric functions • the trigonometric identities • the procedures for using trigonometric identities to simplify trigonometric expressions • matching of engineering situations to appropriate number systems • use of number systems for particular applications • identification and description of engineering situations appropriate for analysis using simple programming techniques • procedure for using programs to analyse engineering situation and the identification of program limitations

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply advanced mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying mathematical concepts to engineering applications, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Complex figures	May include cones, pyramids, spheres, frustums and intersections of figures singularly or in combination

MSABLIC001 License to operate a standard boiler

Modification History

Release 3 - Title corrected to 'Licence'.

Release 2 – Content reinstated following Safe Work Australia approval. Editorial changes to clarify WHS Regulations.

Release 1 - New unit of competency, endorsed by NSSC. Content not available pending endorsement by Safe Work Australia, the national agency for Work Health and Safety (WHS) high risk work licensing purposes.

Unit Descriptor

This unit of competency covers the operation of a standard boiler that uses a single fuel source and does not have a pre-heater, superheater or economiser attached.

Operation includes boiler start up, handover, monitoring, shut down and storage. Also covered are preparation for inspection procedures as specified in manufacturer recommendations, identification of maintenance requirements and relevant risk control measures.

Application of the Unit

The standard boilers covered by this unit would typically include boilers with fixed and modulating combustion controls, fixed and modulated air supply, and a single heat source. Operation may include a battery of boilers and boilers that have a single thermal or solar heat source. Boilers meeting the definition of ‘advanced boiler’ are excluded.

This unit in its current form meets state and territory high risk work licensing requirements. Any alteration to the content or outcomes would not be acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, High Risk Work.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan work	1.1	Potential workplace hazards and appropriate risk control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment
	1.2	Type of boiler is identified and boiler operations planned according to procedures
	1.3	Personal protective equipment is identified necessary for the work requirements
	1.4	Suitable communication methods are identified and confirmed with appropriate personnel
	1.5	Appropriate records are located and reviewed to prepare for boiler operation
2 Start up boiler	2.1	Risk prevention and risk control measures are applied to the work area according to procedures
	2.2	Communication equipment is selected and inspected for serviceability
	2.3	All necessary equipment is selected and inspected for operational effectiveness according to procedures, including establishing water level
	2.4	Boiler is visually checked for any damage or defects with any found reported and recorded according to procedures with appropriate action taken
	2.5	Boiler is vented to atmosphere prior to start up

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	2.6	Pre-start up checks are carried out on the boiler and the boiler brought online safely according to procedures
	2.7	Maintenance requirements and any visual faults are identified and reported according to procedures
	2.8	Start up following maintenance and/or repairs, and associated isolations are confirmed, completed, logged and the equipment made serviceable
3 Monitor boiler operation	3.1	Operating status of the boiler is diagnosed
	3.2	Operating log is maintained clearly and accurately according to procedures
	3.3	Boiler, valves, fittings and pressure gauges are monitored according to procedures
	3.4	Boiler water level gauges are blown through both steam and water sides
	3.5	Standby plant and equipment are tested according to procedures
	3.6	Boiler water quality tests, where required, are conducted and results recorded according to procedures
	3.7	Boiler water chemicals, where required, are adjusted after tests, where appropriate, according to procedures with downstream users notified if necessary
	3.8	Automatic blowdown and, where required, boiler is blown down to adjust total dissolved solids (TDS) levels to recommendations
	3.9	Handover information regarding boiler status and operation is communicated clearly to relevant personnel according to procedures
	3.10	Any boiler emergency is responded to immediately in accordance with procedures
4 Shut down boiler	4.1	Boiler is shut down for inspection according to procedures
	4.2	Maintenance requirements and any visual faults are identified and reported according to procedures
	4.3	Where required, boiler is cleaned internally and externally to manufacturer recommendations and procedures
	4.4	Isolations associated with in-service maintenance are completed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		according to procedures
	4.5	Boiler operating log is completed for shut down
5 Store boiler in shut down mode	5.1	Storage time and condition of storage are identified, where required
	5.2	Boiler is stored in safe condition for access in accordance with manufacturer recommendations and procedures
	5.3	Stored boiler water and chemicals are tested, where required, and handled in accordance with procedures, where storage is for extended periods

Required Skills and Knowledge

Required skills include:

- complying with legislation, Australian Standards, organisational workplace standards, policies, relevant codes of practice, and required safe practices and procedures for planning work, starting and monitoring a boiler, and shutting down and storing a boiler
- performing routine safety and operational procedures
- reading and interpreting maintenance records, operating logs and safety data sheets (SDS)
- communicating faults, malfunctions and workplace hazards accurately to appropriate personnel using suitable communication techniques
- accurately completing reports, operational records and maintenance information in relation to boiler operation
- applying task instructions
- using relevant tools, equipment and personal protective clothing safely
- interpreting boiler operation tables and figures
- applying boiler testing techniques and adjusting boiler water quality
- verifying any problems and boiler faults, demonstrating appropriate response procedures
- applying appropriate risk assessment and risk management techniques
- demonstrating emergency operating procedures
- identifying the boiler energy source required to be isolated and made safe for maintenance, inspection and repairs
- applying boiler cleaning and storage techniques

Required knowledge includes:

- Commonwealth, state and territory work health and safety (WHS) legislation, codes of practice, standards, and advisory standards relevant to boiler operation
- basic principles of heat transfer and thermodynamics in relation to boiler operations
- boiler steam equipment operating principles and operating methods
- types and characteristics of feedwater systems and treatment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- type and use of equipment and fittings for operation and maintenance of boilers
- function, purpose and operation of main steam stop valve
- boiler auxiliary equipment characteristics and capabilities
- essential fittings required where more than one boiler is installed (e.g. battery of boilers)
- processes for confirming operational status of a boiler
- workplace communication techniques and procedures
- responsibilities for checking and testing boilers
- location and inspection procedures and techniques for inspection and explosion doors
- steam and boiler hazards for cold start and handover
- hierarchy of risk control
- use and application of personal protective equipment
- type and limitations of corrective action and/or adjustments that can be made in response to routine boiler operation problems and emergencies
- various harmful energy sources in boiler operation and the means to effectively isolate these energy sources and make them safe
- modes of boiler storage and procedures for storing boiler in open or closed condition
- SDS and safe chemical handling and storage methods for boiler operation and cleaning
- procedures for cleaning boilers internally and externally
- procedures for recording, reporting and maintenance of workplace records and information

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	• Successful assessment of this unit meets the competency requirements of the Model WHS Regulations, Part 4.5 High Risk Work. • State and territory WHS regulators have mandated use of the Assessment Instruments for this unit which have been endorsed by the national body responsible for WHS matters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must ensure that candidates can competently and consistently: • comply with WHS licensing legislation • effectively communicate and work safely with others in the work area • effectively conduct hazard identification and risk assessment procedures • effectively demonstrate the ability to identify

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	harmful energy sources and the means to make them safe • effectively plan work, start up, monitor and shut down a boiler according to procedures • effectively conduct boiler diagnosis, testing and handover operation to other personnel.

Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instruments.
	• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
	• Assessors must ensure that assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area are made available to suit the assessment and the workplace.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant appropriate standard requirements.
	• Applicants must have access to:
	  • personal protective equipment for the purpose of the Performance Assessment
	  • appropriate boiler and equipment in safe condition
	  • communication equipment (e.g. two way radios, mobile phones, landline telephones and computers, as applicable).

Method of assessment	Assessment must be conducted using the national WHS endorsed Assessment Instruments. These Instruments provide advice on their application. The use of simulation in the assessment of this unit of competency may be acceptable in certain operational and safety circumstances. • Assessment should be conducted on a one-on-one basis with the assessor. • Assessment may be conducted in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	• Further information about endorsed Assessment Instruments may be obtained from state/territory WHS regulators.

Range Statement

Hazards	Hazards may include, but are not limited to:
	• asbestos lagging
	• chemical hazards
	• thermal hazards
	• manual handling hazards
	• machinery guard requirements
	• hot exposed steam pipe
	• leakage of steam
	• leakage of fuel
	• odour of gas
	• fumes from a liquid chemical spill
	• faulty/broken ladder or hand rail
	• working at heights
	• flammable liquids
	• fire and explosion
	• electrical hazards
	• work area:
	  • illumination
	  • excessive noise from machinery
	  • spillage of oil
	  • rubbish and combustibles
	  • obstruction

Risk control methods	Risk control methods refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control: Elimination Substitution Isolation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Engineering controls Administrative controls Personal protective equipment
Appropriate standards	Appropriate standards may include, but are not limited to: • legislation • codes of practice • manufacturer specifications • Australian Standards • technical standards (International) • industry standards (where applicable)
Type of boiler	Type of standard boiler may include: • fire tube • water tube • once through boilers • waste heat • electrical • novel or unique

Standard boiler	Standard boiler includes:
	• vessel or an arrangement of vessels and interconnecting parts, wherein water is heated above atmospheric pressure by the application of:
	  • fire
	  • the products of combustion
	  • electrical power
	  • similar means
	The boiler may have:
	• fixed and modulating combustion controls, fixed and modulated air supply, a single fuel source and will have:
	  • valves
	  • gauges
	  • fittings
	  • controls
	  • boiler setting and directly associated equipment

Procedures	Procedures may include, but are not limited to: • manufacturer guidelines (e.g. instructions, specifications or checklists)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• industry operating procedures • workplace procedures (e.g. work instructions, operating procedures or checklists)
Equipment	Equipment may include, but is not limited to: • gas monitoring equipment • water testing equipment • fire-fighting equipment • workplace first aid equipment • work platform and associated gear, such as walkways
Communication methods	Communication methods may include, but are not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Appropriate personnel	Appropriate personnel may include, but are not limited to: • production workers • maintenance workers • supervisors and managers • other boiler operators • suppliers • colleagues
Records	Records may include, but are not limited to: • operating log books • maintenance records • records of faults and potential faults • isolation procedures • safe operating procedures • daily operating inspections • repairs carried out according to manufacturer recommendations and operating procedures • workplace record keeping requirements • details of any daily or periodic maintenance work • details of yearly programmed or additional maintenance work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Risk control measures	Risk control measures may include, but are not limited to:
	• barricades and controls
	• machine guarding
	• fall prevention
	• pedestrian controls
	• adequate illumination
	• noise controls
	• signage
	• personal protective equipment:
	  • thermally insulated gloves
	  • hard hat protection
	  • ear protection (muffs or plugs)
	  • chemical resistant gloves and apron
	  • respiratory devices
	  • eye protection
	  • working protective gloves
	  • whole body fire-resistant clothing

Communication equipment	Communication equipment may include, but is not limited to: • two way radios • mobile phones • intercoms • landline telephones • pagers • satellite phones • computers
Pre-start up checks	Pre-start up checks may include, but are not limited to: • testing warning lamps or visual warning indicators • control panel checks • checks of feedwater supply system • fuel supply/heat source system • operation and position of boiler valves • combustion air supply system • boiler water level • essential fittings and gauges • selection of personal protective equipment • inspection and location of inspection and explosion doors (where applicable) • identification of hazards and management of risks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	and maintenance problems • fire-fighting equipment • manufacturer recommendations and checklists • relevant records and logs
Start up	Start up may include, but is not limited to: • purge boiler furnace • heat input • warm-up reticulation system • venting the boiler of air • steam traps and steam line purge system operations • reticulation line pressure • steam usage and supply
Maintenance	Maintenance may include, but is not limited to: • leaking steam pipe • pressure gauge accuracy • exposed electrical wiring • defective illumination in the workplace • leaking fuel pump gland • leaks in high pressure feed line • leaking gauge glass mounting • leaking safety valve • isolation procedures, hardware and equipment
Faults	Faults may include, but are not limited to: • abnormal operating conditions • boiler tube failure • feedwater supply and/or other major auxiliary loss • wet steam • high dissolved oxygen • pH of water • high conductivity • actuator or valve mechanical or electrical fault/failure • instrument failure • steam leak

Diagnosed	Diagnosed may include, but is not limited to:
	• senses:
	  • audio
	  • smell

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• touch • visual • remote or local indicators and recorders • computers and alarms: • visible • audible
Operating log	Operating log may include, but is not limited to: • date and time of checking • each check, examination and results • printed and signed name of person who performed the checks • date and time of any lockout or equipment malfunction • results of tests on boiler or feedwater • changes in operation
Valves and fittings	Valves and fittings may include, but are not limited to: • safety valves • gauge glasses • main steam stop valve • feedwater stop valve • feed check valve • blow down valve • steam side/line drain valves • flame failure detection device • water level controller • boiler steam pressure gauge
Monitored	Monitored may include, but is not limited to: • water supply system • checks of steam reticulation line pressure • usage and supply of steam • quality of steam • combustion/heat source system and management • feedwater system • fuel system • combustion air supply • water level • boiler steam pressure • boiler and steam manifold valves (where fitted) • soot blowers (where fitted) • operation of control/safety devices, including

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	control panels
Tested	Tested may include, but is not limited to: • response checks • standby plant ‘cut in’ tests • valve operating checks • hydrostatic tests • performance tests • alarm and protection tests
Tests	Tests may include, but are not limited to: • pH levels • conductivity • oxygen • TDS • hardness • other contaminants
Chemicals	Chemicals may include, but are not limited to: • oxygen scavenger • feedwater additives • other chemicals • hardness • condensate chemicals • pH buffers
Handover	Handover may include, but is not limited to: • previous load requirements • maintenance issue, including equipment isolated for maintenance • operational incidences • read operating log • general inspection of boiler to detect any defects • accept responsibility of boiler • noted equipment malfunctions • required equipment tests
Emergencies	Emergencies may include, but are not limited to: • tube failure • loss of water level • power failure • inadequate housekeeping • explosion • fire

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• bomb threat • terrorism • personal accidents • chemical spills • major steam leaks • major water leaks and flooding • natural disasters • oil spills Appropriate emergency responses may include, but are not limited to: • identification of emergency • isolation of heat source • selection and application of appropriate fire-fighting equipment and personal protective equipment • notification of downstream users • operation of boiler only when safe to do so • notification of appropriate regulatory authorities, such as state, territory, federal and boiler manufacturer
Shut down	Shut down may include, but is not limited to: • checks of water level • cooling down process • valve settings • equipment isolation • boiler pressure/vacuum • fuel/heat source isolation in accordance with manufacturer recommendations • boiler post-purge
Storage mode	Storage mode may include, but is not limited to: • wet and dry storing • open or closed position

MSABLIC002 License to operate an advanced boiler

Modification History

Release 3 - Title corrected to 'Licence'.

Release 2 - Content reinstated following Safe Work Australia approval. Editorial changes to clarify WHS Regulations

Release1 - New unit of competency, endorsed by NSSC. Content not available pending endorsement by Safe Work Australia, the national agency for Work Health and Safety (WHS) high risk work licensing purposes.

Unit Descriptor

This unit of competency covers the operation of an advanced boiler, including a standard boiler, which may have one or more of the following:

- multiple fuel sources
- pre-heater
- super-heater
- economiser.

Operation includes boiler start up, handover, monitoring, shut down and storage. Also covered are preparation for inspection procedures as specified in manufacturer recommendations, identification of maintenance requirements and relevant risk control measures.

Application of the Unit

The boilers covered by this unit are standard boilers and advanced boilers, including boilers defined in AS 2593:2004 Safety management and supervision systems and AS 3873:2001 Pressure equipment – Operation and maintenance and typically have a modulating combustion air supply and heat source.

This unit in its current form meets state and territory high risk work licensing requirements. Any alteration to the content or outcomes would not be acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, High Risk Work.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan work	1.1	Potential workplace hazards and appropriate risk control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment
	1.2	Type of boiler, with associated equipment, is identified and boiler operations planned according to procedures
	1.3	Personal protective equipment is identified necessary for the work requirements
	1.4	Suitable communication methods are identified and confirmed with appropriate personnel
	1.5	Appropriate records are located and reviewed to prepare for boiler operation
2 Start up boiler	2.1	Risk prevention and control measures are applied to the work area according to procedures
	2.2	Communication equipment is selected and inspected for serviceability
	2.3	All necessary equipment is selected and inspected for operational effectiveness according to procedures, including establishing water level
	2.4	Boiler and associated equipment are visually checked for any

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		damage or defects with any found reported and recorded according to procedures with appropriate action taken
	2.5	Boiler is vented to atmospheric pressure prior to start up
	2.6	Pre-start up checks are carried out on the boiler and the boiler and associated equipment brought online safely according to procedures
	2.7	Maintenance requirements and any visual faults are identified and reported according to procedures
	2.8	Start up following maintenance and/or repairs, and associated isolations are confirmed, completed, logged and the equipment made serviceable
3 Monitor boiler operation	3.1	Operating status of the boiler and associated equipment is diagnosed
	3.2	Operating log is maintained clearly and accurately according to procedures
	3.3	Boiler valves, fittings, pressure gauges, combustion management systems, air heaters, super-heaters and economisers (where fitted) are monitored according to procedures
	3.4	Boiler water level gauges are blown through both steam and water sides
	3.5	Standby plant and equipment are tested according to procedures
	3.6	Boiler water quality tests, where required, are conducted and results recorded according to procedures
	3.7	Boiler water chemicals, where required, are adjusted after tests, where appropriate, according to procedures with downstream users notified if necessary
	3.8	Automatic blowdown and, where required, boiler is blown down to adjust total dissolved solids (TDS) levels to recommendations
	3.9	Handover information regarding boiler and associated equipment status and operation is communicated clearly to relevant personnel according to procedures
	3.10	Any boiler emergency is responded to immediately in accordance with procedures
4 Shut down boiler	4.1	Boiler and associated equipment are shut down for inspection according to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	4.2	Maintenance requirements and any visual faults are identified and reported according to procedures
	4.3	Where required, boiler and associated equipment are cleaned internally and externally to manufacturer recommendations and procedures
	4.4	Isolations associated with in-service maintenance are completed according to procedures
	4.5	Boiler operating log is completed for shut down
5 Store boiler in shut down mode	5.1	Storage time and condition of storage are identified, where required
	5.2	Boiler and associated equipment are stored in safe condition for access in accordance with manufacturer recommendations and procedures
	5.3	Stored boiler water and chemicals are tested, where required, and handled in accordance with procedures, where storage is for extended periods

Required Skills and Knowledge

Required skills include:

- complying with legislation, Australian Standards, organisational workplace standards, policies, relevant codes of practice, and required safe practices and procedures for planning work, starting and monitoring a boiler, and shutting down and storing an advanced boiler
- performing routine safety and operational procedures
- reading and interpreting maintenance records, operating logs and safety data sheets (SDS)
- communicating faults, malfunctions and workplace hazards accurately to appropriate personnel using suitable communication techniques
- accurately completing reports, operational records and maintenance information in relation to advanced boiler operation
- applying task instructions
- using relevant tools, equipment and personal protection clothing safely
- interpreting advanced boiler operation tables and figures
- applying advanced boiler testing techniques and adjusting boiler water quality
- verifying any problems and boiler faults, demonstrating appropriate response procedures
- applying appropriate risk assessment and risk management techniques
- demonstrating emergency operating procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identifying all boiler energy sources required to be isolated and made safe for maintenance, inspection and repairs
- applying advanced boiler cleaning and storage techniques

Required knowledge includes:

- Commonwealth, state and territory work health and safety (WHS) legislation, standards, codes of practice and advisory standards relevant to boiler operation
- basic principles of heat transfer and thermodynamics in relation to boiler operations
- boiler and steam equipment operating principles and operating methods, including advanced
- types and characteristics of multiple fuel systems for advanced boilers
- types and characteristics of feedwater systems and treatment, including de-aerator
- type and use of equipment and fittings for operation and maintenance of boilers, including advanced
- function, purpose and operation of:
  - pre-heater
  - super-heater
  - economiser
  - air heater
  - feedwater heater
  - attemperator
  - super-heater safety valves
  - economiser relief valves
  - main steam stop valve
- standard and advanced boiler and auxiliary equipment characteristics and capabilities
- essential fittings required where more than one boiler is installed (e.g. battery of boilers)
- processes for confirming operational status of a boiler
- workplace communication techniques and procedures
- responsibilities for checking and testing advanced boilers, including advanced
- location and inspection procedures and techniques for inspection and explosion doors
- steam and boiler hazards for cold start and handover
- hierarchy of risk control
- use and application of personal protective equipment
- type and limitations of corrective action and/or adjustments that can be made in response to routine boiler operation problems and emergencies
- various harmful energy sources in boiler operation and the means to effectively isolate these energy sources and make them safe, with particular consideration to advanced boilers
- modes of standard and advanced boiler storage and procedures for storing boiler in open or closed condition
- SDS and safe chemical handling and storage methods for boiler operation and cleaning
- procedures for cleaning boilers internally and externally, including advanced
- procedures for recording, reporting and maintenance of workplace records and

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	• Successful assessment of this unit meets the competency requirements of the Model WHS Regulations, Part 4.5 High Risk Work • State and territory WHS regulators have mandated use of the Assessment Instruments for this unit which have been endorsed by the national body responsible for WHS matters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must ensure that candidates can competently and consistently: • comply with WHS licensing legislation • effectively communicate and work safely with others in the work area • effectively conduct hazard identification and risk assessment procedures • effectively demonstrate ability to identify harmful energy sources and the means to make them safe • effectively plan work, start up, monitor and shut down an advanced boiler according to procedures • effectively conduct advanced boiler diagnosis, testing and handover operation to other personnel.
Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instruments. • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting. • Assessors must ensure that assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area are made available to suit the assessment and the workplace. • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• Assessment is to comply with relevant appropriate standard requirements.
	• Applicants must have access to:
	  • personal protective equipment for the purpose of the Performance Assessment
	  • appropriate advanced boiler and associated equipment in safe condition
	  • communication equipment (e.g. two way radios, mobile phones, landline telephones and computers, as applicable)

Method of assessment	• Assessment must be conducted using the national WHS endorsed Assessment Instruments. These Instruments provide advice on their application. The use of simulation in the assessment of this unit of competency may be acceptable in certain operational and safety circumstances. • Assessment should be conducted on a one-on-one basis with the assessor. • Assessment may be conducted in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	• Further information about endorsed Assessment Instruments may be obtained from state/territory WHS regulators.

Range Statement

Hazards	Hazards may include, but are not limited to: • asbestos lagging • chemical hazards • thermal hazards • manual handling hazards • machinery guard requirements • hot exposed steam pipe • leakage of steam

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• leakage of fuel
	• odour of gas
	• fumes from a liquid chemical spill
	• faulty/broken ladder or hand rail
	• working at heights
	• flammable liquids
	• fire and explosion
	• electrical hazards
	• work area:
	  • illumination
	  • excessive noise from machinery
	  • spillage of oil
	  • rubbish and combustibles
	  • obstruction

Risk control methods	Risk control methods refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control: Elimination Substitution Isolation Engineering controls Administrative controls Personal protective equipment
Appropriate standards	Appropriate standards may include, but are not limited to: • legislation • codes of practice • manufacturer specifications • Australian Standards • technical standards (International) • industry standards (where applicable)
Type of boiler	Type of boiler may include: • standard boilers • advanced boilers
Standard boiler	Standard boiler includes: • vessel or an arrangement of vessels and interconnecting parts, wherein water is heated above atmospheric pressure by the application of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• fire
	• the products of combustion
	• electrical power
	• similar means
	The boiler may have:
	• fixed and modulating combustion controls, fixed and modulated air supply, a single fuel source and will have:
	  • valves
	  • gauges
	  • fittings
	  • controls
	  • boiler setting and directly associated equipment

Advanced boiler	Advanced boiler includes:
	• vessel or an arrangement of vessels and interconnecting parts, wherein water is heated above atmospheric pressure by the application of:
	  • fire
	  • the products of combustion
	  • electrical power
	  • similar means
	The boiler may have one or more of the following features:
	• fixed and modulating combustion controls, fixed and modulated air supply, multiple fuel sources, pre-heaters, super-heaters, economisers and will have:
	  • valves
	  • gauges
	  • fittings
	  • controls
	  • boiler setting and directly associated equipment

Procedures	Procedures may include, but are not limited to: • manufacturer guidelines (e.g. instructions, specifications or checklists) • industry operating procedures • workplace procedures (e.g. work instructions, operating procedures or checklists)
Equipment	Equipment may include, but is not limited to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• gas monitoring equipment • water testing equipment • fire-fighting equipment • workplace first aid equipment • work platform and associated gear, such as walkways
Communication methods	Communication methods may include, but are not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocols
Appropriate personnel	Appropriate personnel may include, but are not limited to: • production workers • maintenance workers • supervisors and managers • other boiler operators • suppliers • colleagues
Records	Records may include, but are not limited to: • operating log books • maintenance records • records of faults and potential faults • isolation procedures • safe operating procedures • daily operating inspections • repairs carried out according to manufacturer recommendations and operating procedures • workplace record keeping requirements • details of any daily or periodic maintenance work • details of yearly programmed or additional maintenance work
Risk control measures	Risk control measures may include, but are not limited to: • barricades and controls • machine guarding

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• fall prevention
	• pedestrian controls
	• adequate illumination
	• noise controls
	• signage
	• personal protective equipment:
	  • thermally insulated gloves
	  • hard hat protection
	  • ear protection (muffs or plugs)
	  • chemical resistant gloves and apron
	  • respiratory devices
	  • eye protection
	  • working protective gloves
	  • whole body fire-resistant clothing

Communication equipment	Communication equipment may include, but is not limited to: • two way radios • mobile phones • intercoms • landline telephones • pagers • satellite phones • computers
Pre-start up checks	Pre-start up checks may include, but are not limited to: • testing warning lamps or visual warning indicators • control panel checks • checks of feedwater supply system • fuel supply/heat source systems • operation and position of boiler valves • combustion air supply system • boiler water level • essential fittings and gauges • selection of personal protective equipment • inspection and location of inspection and explosion doors (where applicable) • identification of hazards and management of risks and maintenance problems • fire-fighting equipment • manufacturer recommendations and checklists • relevant records and logs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Associated equipment	Associated equipment may include, but is not limited to: • multiple fuel sources • pre-heater • super-heater • economiser Associated equipment may also include but is not limited to: • super-heater safety valves • economiser relief valves • air heater • feedwater heater • attemperator • main steam stop valve
Start up	Start up may include, but is not limited to: • purge boiler furnace • heat input • warm up reticulation system • venting the boiler of air • steam traps and steam line purge system operations • reticulation line pressure • steam usage and supply • super-heater • air heater • feedwater heater • economiser
Maintenance	Maintenance may include, but is not limited to: • leaking steam pipe • pressure gauge accuracy • exposed electrical wiring • defective illumination in the workplace • leaking fuel pump gland • leaks in high pressure feed line • leaking gauge glass mounting • leaking safety valve • isolation procedures, hardware and equipment
Faults	Faults may include, but are not limited to: • abnormal operating conditions • boiler tube failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• feedwater supply and/or other major auxiliary loss • wet steam • high dissolved oxygen • pH of water • high conductivity • actuator or valve mechanical or electrical fault/failure • instrument failure • steam leak • associated equipment failure

Diagnosed	Diagnosed may include, but is not limited to:
	• senses:
	  • audio
	  • smell
	  • touch
	  • visual
	• remote or local indicators and recorders
	• computers and alarms:
	  • visible
	  • audible

Operating log	Operating log may include, but is not limited to: • date and time of checking • each check, examination and results • printed and signed name of person who performed the checks • date and time of any lockout or equipment malfunction • results of tests on boiler or feedwater • changes in operation
Valves and fittings	Valves and fittings may include, but are not limited to: • safety valves • gauge glasses • main steam stop valve • feedwater stop valve • feed check valve • blow down valve • steam side/line drain valves • flame failure detection device • water level controller • boiler steam pressure gauge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• economiser relief valve • super-heater safety valve
Monitored	Monitored may include, but is not limited to: • water supply system • checks of steam reticulation line pressure • usage and supply of steam • quality of steam • combustion/heat source system and management • feedwater system and condensate returns • fuel systems • combustion air supply • water level • boiler steam pressure • boiler and steam manifold valves • soot blowers • operation of control/safety devices, including control panels
Tested	Tested may include, but is not limited to: • response checks • standby plant ‘cut in’ tests • valve operating checks • hydrostatic tests • performance tests • alarm and protection tests
Tests	Tests may include, but are not limited to: • pH levels • conductivity • oxygen • TDS • hardness • other contaminants
Chemicals	Chemicals may include, but are not limited to: • oxygen scavenger • feedwater additives • other chemicals • hardness • condensate chemicals • pH buffers
Handover	Handover may include, but is not limited to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• previous load requirements • maintenance issues, including equipment isolated for maintenance • operational incidences • read operating log • general inspection of boiler to detect any defects • accept responsibility of boiler • noted equipment malfunctions • required equipment tests
Emergencies	Emergencies may include, but are not limited to: • tube failure • loss of water level • power failures • inadequate housekeeping • explosion • fire • bomb threat • terrorism • personal accidents • chemical spills • major steam leaks • major water leaks and flooding • natural disasters • oil spills Appropriate emergency responses may include, but are not limited to: • identification of emergency • isolation of heat source • selection and application of appropriate fire fighting equipment and personal protective equipment • notification of downstream users • operation of boiler only when safe to do so • notification of appropriate regulatory authorities, such as state, territory, federal and boiler manufacturer
Shut down	Shut down may include, but is not limited to: • checks of water level • cooling down process • valve settings • equipment isolation • boiler pressure/vacuum

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• fuel/heat source isolation in accordance with manufacturer recommendations • boiler post-purge
Storage mode	Storage mode may include, but is not limited to: wet and dry storing open or closed position

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the outcomes required to effectively measure current resource use and carry out improvements including those reducing negative environmental impacts of work practices. This unit is based on the sustainability guideline standard GCSSUS01A Participate in environmentally sustainable work practices.

Application of the Unit

Application of the unit	This competency applies to operators/team members who are required to follow procedures so as to work in an environmentally sustainable manner. This ensures regulatory compliance and also aims at minimising environmental risks and maximises the environmental performance of the process and the organisation. It includes: • Resources used • Potential environmental hazards • Improving environmental performance (within scope of competency and authority). This competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office, warehouse etc. This unit will need to be appropriately contextualised as it is applied across an

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	organisation and across different industry sectors.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	This unit has **no** prerequisites	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify current resource use and environmental issues.	1.1. Identify workplace ***environmental and resource efficiency issues***. 1.2. Identify resources used in own work role. 1.3. ***Measure*** and record current usage of resources using ***appropriate techniques***.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4. Identify and report workplace environmental hazards to appropriate personnel.
2. Comply with environmental regulations.	2.1. Follow ***procedures*** to ensure ***compliance***. 2.2. Report environmental **incidents** to appropriate personnel.
3. Seek opportunities to improve environmental practices and resource efficiency.	3.1. Follow ***enterprise plans*** to improve environmental practices and resource efficiency. 3.2. Make ***suggestions*** for improvements to workplace practices in own work area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include the ability to: • report as required by procedures • follow procedures and instructions and respond to change • ask questions and seek clarifications relating to work requirements Reading and writing is required in order to interpretrequired procedures and complete required workplace forms/reports. Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.
Required knowledge
Competency includes sufficient knowledge to: • have a basic understanding of sustainability • know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level) • know the relevant environmental and resource efficiency systems and procedures for own work area • know the impact of laws and regulations to a level relevant to the work context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competence in this unit must be able to provide evidence of the ability to follow workplace procedures according to instructions given and to participate in the improvement of environmental and resource efficient work practices at own level of responsibility. Evidence must be strictly relevant to the particular workplace role.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • identify and measure resources used in their job • identify situations likely to lead to an environmental incident • follow procedures related to environmental performance. Consistent performance should be demonstrated. For example, look to see that: • work is routinely to procedures • the minimum of resources is used consistent with the job requirements, good practice and the procedures.
Context of and specific resources for assessment	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. Depending on the selected methods of assessment access may be required to: • workplace procedures and plans • documentation in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case study/scenarios
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed: • by demonstration in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• using targeted questioning for appropriate portions • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	All operations are performed in accordance with procedures including all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.
Environmental and resource efficiency issues	Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by: • minimisation of waste, through implementation of the waste management hierarchy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• efficient and effective use of energy and other resources • seeking alternative sources of energy • efficient use of materials and appropriate disposal of waste • use of controls to minimise the risk of environmental damage from hazardous substances • efficient water use • reducing emissions • life cycle analysis applied to issues such as energy supply, materials, transport, production
Measure	Measure should be interpreted in a manner consistent with the scope of the job and may include things like: • counting the number of items entering/leaving a work area • reading indicators in the work area • obtaining relevant information from support personnel • other simple means
Appropriate techniques	Appropriate techniques include: • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data.
Compliance	Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and mandated codes of practice. It also includes any codes and standards that the enterprise applies voluntarily.
Incidents	Incidents include: • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance.
Enterprise plans	Enterprise plans include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• documented policies and procedures • work plans to minimise waste, increase efficiency of water/energy use, minimise environmental hazards
Suggestions	Suggestions include ideas that help to: • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • reduce waste • increasing the reusability/recyclability of wastes/products • reduce water usage and/or water wastage.

MSAENV472B Implement and monitor environmentally sustainable work practices

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the outcomes required to effectively analyse the workplace in relation to environmentally sustainable work practices and to implement improvements and monitor their effectiveness. This unit is based on the sustainability guideline standard GCSSUS02A Implement and monitor environmentally sustainable work practices.

Application of the Unit

Application of the unit	This competency applies to those who have responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools. It includes: • Identifying areas for improvement • Developing plans to make improvements • Implementing and monitoring improvements in environmental performance. This competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office, warehouse etc. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

Pre-Requisites

Prerequisite units	This unit has **no** prerequisites	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	1.1 Identify environmental regulations applying to the enterprise. 1.2 Assess procedures for assessing ***compliance*** with environmental regulations. 1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate. 1.4 Measure and record current resource usage by members of the work group.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.5 Analyse and record current purchasing strategies. 1.6 Analyse current work processes to access information and data and assist in identifying areas for improvement.
2. Set targets for improvements.	2.1 Seek input from stakeholders, key personnel and specialists. 2.2 Access external sources of information and data as required. 2.3 Evaluate alternative solutions to workplace environmental issues. 2.4 Set efficiency targets.
3. Implement performance improvement strategies.	3.1 Source ***techniques***/***tools*** to assist in achieving targets. 3.2 Apply continuous improvement strategies to own work area of responsibility and communicate ideas and possible solutions to the work group and management. 3.3 Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them. 3.4 Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate. 3.5 Implement costing strategies to fully value environmental assets.
4. Monitor performance.	4.1 Document outcomes and communicate reports on targets to key personnel and stakeholders. 4.2 Evaluate strategies. 4.3 Set new targets and investigate and apply new tools and strategies. 4.4 Promote successful strategies and reward participants where possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• using relevant environmental and resource efficiency systems, tools and procedures • applying quality assurance systems relevant to own work area • applying relevant supply chain procedures • measurement and calculation techniques • communication/consultation skills to ensure information is supplied to the work group Reading and writing is required to comprehend documentation and interpret environmental and energy efficiency requirements and to document and maintain records Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.
Required knowledge
Required knowledge includes: • how to access and use relevant environmental and resource efficiency systems, tools and procedures • understanding of best practice approaches relevant to own area of responsibility • strategies to maximise opportunities and minimise impacts relevant to own work area • relevant environmental and resource efficiency issues specific to industry practices • methods for measuring and calculating resource usage

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• monitor and investigate current resource usage • develop plans to improve sustainability • implement environmental improvements. Consistent performance should be demonstrated. For example, look to see that: • environmental performance is routinely monitored and investigated • areas for improvements are followed through and the implemented changes are in turn monitored and investigated.
Context of and specific resources for assessment	This section should be read in conjunction with the range of variables for this unit of competency. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed: • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	similar assessment.
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Environmental and resource efficiency issues	Environmental and resource efficiency issues include:
	• addressing environmental and resource sustainability initiatives such as Environmental Management Systems, action plans, surveys and audits
	• reference to standards, guidelines and approaches such as:
	  • ISO 14001 Environmental Management Systems
	  • Life Cycle Analyses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Cradle to cradle • Global Reporting Initiative • Ecological footprinting • Triple Bottom Line reporting • Product Stewardship • determining enterprise's most appropriate waste treatment including waste to landfill, recycling, re-use and wastewater treatment • applying the waste management hierarchy in the workplace • initiating and/or maintaining appropriate enterprise procedures for operational energy consumption, including stationary energy and non stationary (transport) • efficient use of water • minimising greenhouse gas emissions • use of controls to minimise the risk of environmental damage from hazardous substances
Measure	Measuring techniques include: • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data • others as appropriate to the specific industry contexts.
Techniques and tools	Techniques and tools may includeÂ : • visual workplace concepts • measurement, display and/or recording devices • changed work practices/procedures • competence development and awareness training • process and equipment items
Compliance	Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and codes of practice.
Incidents	Incidents include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance
Purchasing strategies	Purchasing strategies include: • influencing suppliers to take up environmental sustainability • selecting materials/components with a lower environmental profile.
Stakeholders, **key personnel and specialists**	Stakeholders, key personnel and specialists include individuals and groups both inside and outside the organisation that have some direct interest in the enterprise's conduct, actions, products and services, including: • employees at all levels of the organisation • customers • suppliers • other organisations • key personnel within the organisation, and specialists outside it who may have particular technical expertise
Suggestions	Suggestions includes ideas that help to: • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • make more efficient use of energy, water and other resources • maximise opportunities to re use and recycle materials • identify strategies to offset or mitigate environmental impacts. e.g. purchasing of carbon credits • express purchasing power through the selection of suppliers with improved environmental performance. e.g. purchasing renewable energy and materials with lower embedded carbon • eliminate the use of hazardous and toxic materials increasing the reusability/recyclability of wastes/products.

MSAENV672B Develop workplace policy and procedures for environmental sustainability

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the outcomes required to develop and implement a workplace sustainability policy, including the modification of the policy to suit changed circumstances. This unit is based on the sustainability guideline standard GCSSUS03A Develop workplace policy and procedures for sustainability.

Application of the Unit

Application of the unit	This competency applies to team leaders/supervisors/managers who are required to develop approaches to environmental sustainability within workplaces, including the development and implementation of policy. It includes: • Communicating with relevant stakeholders • Developing and monitoring sustainability policies • Reviewing and improving sustainability policies. This competency applies to all sectors of the manufacturing industry. It may also be applied to all sections of an organisation, including office, warehouse etc. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

Pre-Requisites

Prerequisite units	This unit has **no** prerequisites	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy.	1.1 Define ***scope of sustainability policy***. 1.2 Identify and consult ***stakeholders*** as a key component of the policy development process. 1.3 Review environmental sustainability ***strategies*** relevant to all stages of work covered by the policy 1.4 Make recommendations for policy options based on likely effectiveness, timeframes and cost. 1.5 Develop policy is that reflects the organisation's commitment to sustainability as an integral part of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	business planning and as a business opportunity. 1.6 Agree upon appropriate methods of implementation.
2. Communicate the policy.	2.1 Promote the policy, including its expected outcome to key stakeholders. 2.2 Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned.
3. Implement the policy.	3.1 Develop and communicate procedures to help implement the policy. 3.2 Implement ***strategies*** for continuous improvement in resource efficiency. 3.3 Establish record systems for tracking continuous improvements in sustainability approaches and assign responsibilities.
4. Review policy implementation	4.1 Record outcomes and provide feedback to key personnel and stakeholders. 4.2 Investigate success or otherwise of policy. 4.3 Monitor records to identify trends that may require remedial action, and use to promote continuous improvement of performance. 4.4 Modify policy and or ***procedures*** as required to ensure improvements are made.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- developing and implementing systems and procedures to aid in the achievement of sustainability in the workplace
- applying quality assurance systems relevant to own enterprise
- accessing and applying other relevant enterprise polices, procedures and protocols
- relevant industry competency
- interpreting business/strategic plans

This unit requires the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• read and evaluate complex and formal documents such as policy and legislation • research, analyse and present information • prepare written reports requiring precision of expression and language and structures suited to the intended audience • adjust communication to suit different audiences • deal with different points of view and dissenting stakeholders.
Required knowledge
Required knowledge includes: • understanding of relevant policy development and implementation processes and practices • understanding of the principles, practices and available tools and techniques of sustainability management relevant to the particular industry context • best practice approaches relevant to own work area • equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy/s being developed

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competence in this unit must be able to provide evidence of the ability to develop and implement integrated sustainability policies and procedures within an enterprise. The review of the policy after implementation will also need to be evidenced.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • develop relevant policy and procedures that comply with the regulatory requirements and business plans • develop a workable implementation strategy • include measurable criteria for reviewing improvement. Consistent performance should be demonstrated. For

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	example, look to see that: • policy implementation is reviewed • policy is developed to be become part of the routine practices of the organisation.
Context of and specific resources for assessment	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment. Competence in this unit may be assessed: • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Scope of sustainability policy	Scope of sustainability policy include:
	• The area/s of environmental sustainability to be targeted and whether social and economic sustainability will be incorporated
	• The parts of the enterprise to which it is to apply, including whether it is for the whole enterprise, one site, one work area or combinations of these
	• An investigation of the particular business and market context of the industry/ enterprise
	• Addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
	  • ISO 14001 Environmental Management Systems
	  • Life Cycle Analyses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Cradle to grave/cradle to cradle • Global Reporting Initiative • Ecological Footprint Assessment • Triple Bottom Line reporting • Product Stewardship.
Stakeholders	Stakeholders include individuals and groups both inside and outside the organisation that have some direct interest in the enterprise's conduct, actions, products and services, including: • employees at all levels of the organisation • customers • suppliers • regulators • other organisations.
Strategies	Implementation strategies include: • awareness raising among stakeholders • training of staff in principles and techniques of sustainability • promotional activities. Continuous improvement strategies include ongoing measuring, improving and monitoring such as: • Plan, do, check, act cycles • Kaizen (continuous improvement) • Kaizen blitz (breakthrough improvement event) • Six sigma approaches Environmental sustainability strategies include: • reducing toxic material and hazardous chemical use • minimising resource use through changes in processes, facility design and management • supply chain and life cycle management approaches • sourcing renewable energy and low carbon footprint materials • reducing, re-using, recycling and waste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	reduction • product and process improvements • carbon offsets • reducing greenhouse gas and other emissions

MSAPCI101A Adapt to work in industry

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the fundamental knowledge and skills needed when taking up employment within the manufacturing industry. It includes the application of industry and workplace guidelines and procedures in a day to day work context as well as appropriate work behaviour.

The elements of this unit should always be assessed in conjunction with other units that form part of a specified job function.

Training and assessment against this competency unit must incorporate all relevant legislative and regulatory requirements.

Application of the Unit

Application of the Unit

The unit has applications in qualifications for all occupations in the manufacturing industry and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities and related workplaces.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage one's own learning	1.1 One's personal goals or vision are considered and articulated
	1.2 Opportunities for learning new ideas and techniques in relation to personal goals are identified
	1.3 Personal learning needs and **skill gaps** are recognised
	1.4 Opportunities for **skills development activities** are identified in liaison with relevant personnel
	1.5 A range of **learning tools and practices** are accessed and applied to the job
	1.6 Advantage is taken of **on-the-job** and **off-the-job learning opportunities**
2 Adapt to and demonstrate appropriate work practice	2.1 Work requirements are identified and interpreted with advice from appropriate persons
	2.2 **Appropriate dress and behaviour** are observed in the workplace
	2.3 Work and personal priorities are identified and a balance is achieved
	2.4 **Time management strategies** are applied to work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	duties
	2.5 Interactions with others is tailored to take into account different backgrounds, cultures and languages
3 Work within organisational requirements	3.1 **Organisational requirements** and key activities of the workplace are identified
	3.2 Relevant **workplace policies and guidelines** are identified and applied to work undertaken
	3.3 **The range of organisational values and cultural norms** are interpreted
	3.4 Any uncertainties are discussed with key personnel and clarified
4 Identify the sectors of the industry	4.1 The **main sectors** of the manufacturing industry, their key activities and the way in which they inter-relate are identified
	4.2 The **roles and responsibilities** of the manufacturing industry are clarified
	4.3 **Key industry representatives** and their roles are identified
	4.4 **Current issues or events** impacting on the industry are identified
5 Identify industry sector products and services	5.1 The **products** provided by the industry sector are identified
	5.2 The **services** provided by the industry sector are identified
	5.3 Appropriate **standards of service** across the industry sector are identified
	5.4 **Quality standards** for products and services as identified by the industry are clarified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED KNOWLEDGE

Knowledge and understanding are essential to apply this competency standard in the industry and workplace. The requirements for this competency standard are a knowledge and basic understanding of:

- current events, activities, products and services of the manufacturing industry
- workplace policies, procedures and guidelines
- time management strategies and appropriate workplace etiquette
- workplace equipment, tools and other technologies used in the manufacturing industry and where and how to obtain information and instructions on their safe use and basic care and servicing
- sources of information on the industry sector and skills development activities

REQUIRED SKILLS

To achieve the performance criteria, some complementary skills are required. These are the ability to:

- following directions
- literacy skills in regard to written and verbal communication in the workplace
- basic interpersonal and communication skills (including listening and questioning, receiving feedback)(
- workplace technology skills where appropriate or required
- following relevant OHS and environmental protection procedures and responsibilities
- time management strategies (
- adapt and modify activities depending on differing workplace contexts and environment
- apply relevant industrial or other legislative requirements
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
- recognise limitations, ask for helpand seek clarification or information about work requirements and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Assessment must confirm appropriate knowledge and skills to: • identify and interpret information on sectors in the manufacturing industries • identify and interpret information on the range of products and services produced by manufacturing industries • complete work tasks in accordance with workplace requirements, standards and applicable regulations • adapt to and apply workplace procedures and practice • identify and take advantage of learning opportunities in the workplace • Performance is demonstrated consistently over a period of time and in a suitable range of contexts • Consistently applies required knowledge and skills when adapting to workplace requirements: • Consistently shows evidence of application of relevant workplace procedures, policies, instructionsand regulations, including: • relevant regulatory requirements • workplace procedures, policies and standards • relevant manufacturer's guidelines relating to the operation and use of equipment • Action is taken promptly to report and/or rectify any workplace problems in accordance with workplace procedures • Recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others • Work is completed systematically with required attention to detail without damage to goods, equipment or personnel
Context of assessment	• Assessment of this unit must be carried out or managed by a registered training organisation: • assessment of knowledge must be conducted

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	through appropriate written/oral examinations and questions • practical assessment must occur: • in suitable simulations of a work environment organised by the registered training organisation, and/or • in an appropriate workplace
Specific resources required for assessment	Access is required to opportunities and appropriate resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to adapt to workplace requirements(usually as part of a holistic assessment involving other competency units) • participate in actual workplace activities that demonstrate the skills and knowledge to adapt to workplace requirements

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

1. What are **skill gaps**?	**Skill gaps** include a range of skills needed for the workplace or for a particular job which are currently not developed within an individual. They are different from an individual's 'personal learning needs' as they are skills specifically relevant and required for a particular job. They may include: • physical capacity skills • workplace technology skills such as business equipment, computer technology, machinery, hand tools, bags, security systems • numeracy and literacy skills • customer service skills • communication skills such as listening and understanding, speaking clearly/directly, reading, writing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- technical skills

2. What are **skill development activities**?

Skill development activities may include:

- training courses
- IT courses
- human resources programs
- coaching and mentoring programs
- having access to a mentor for questions and advice
- having the chance to learn a new task or to operate a new piece of equipment or workplace technology
- participating in an external or internal training program
- guided workplace experience

3. What are **learning tools and practices**?

Learning tools and practices may include:

- learning through note taking
- reviewing manuals and training guides
- discussion
- practice
- observation
- trial and error
- or a combination of any of these

4. What **on-the-job opportunities** might be accessed and used?

On-the-job opportunities may include:

- filling in for a co-worker in a new area
- attending talks or seminars arranged by the workplace
- shadowing another co-worker in a different area
- receiving on the job training and supervised practice

5. What **off-the-job opportunities** might be accessed and used?

Off-the-job opportunities may include:

- taking a course with a training provider
- attending conferences or seminars
- attending site visits with supervisor
- participating in workplace social events
- participating in community events

6. What is appropriate **dress and behaviour**?

Appropriate dress and behaviour may include:

- personal dress, safety equipment and dress, presentation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- demeanour and attitude displayed to customers and fellow employees

7. What are **time management strategies**?

Time management strategies may include:

- being punctual
- goal setting
- balancing work and personal priorities or agendas
- prioritisation of required tasks or activities
- planning daily or weekly work
- overcoming procrastination
- dealing with interruptions (contingency planning)
- organising your work environment

8. What are **organisational requirements**?

Organisational requirements may include:

- organisational policies and guidelines
- common organisational practice
- performance plans
- OHS policies, procedures and programs

9. What are **workplace policies and guidelines**?

Workplace policies and guidelines may include but are not limited to:

- attendance
- punctuality
- standards for health and fitness
- obeying orders
- confidentiality
- dress codes
- alcohol and drug restrictions
- personal safety and duty of care related to OHS
- terms and conditions of employment

10. What are **organisational values**?

Organisational values generally refers to those mentioned in a mission or vision statement of a company and may include:

- innovation
- community responsibility
- environment responsibility

11. What are **cultural norms**?

Cultural norms may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- manners
- meanings specific to the language of the workplace
- history
- workplace etiquette

12. What are the **main sectors** of the industry?

Main sectors of industry may include:

- textiles, clothing & footwear
- furniture
- chemical manufacturing
- plastics and rubber products manufacturing
- maintenance and engineering
- manufacture of glass or concrete products

13. What are the **roles and** responsibilities of the industry?

The **roles and responsibilities of the industry** may include:

- providing quality products and services
- providing quality customer service
- providing proper training to those in the industry

14. Who are **key industry representatives**?

Key industry representatives may include:

- industry associations
- enterprises
- unions
- legislative bodies

15. What might **current issues or events** include?

Current issues or events may include:

- economic
- environmental
- political
- technological
- supply and demand

16. What are **industry products**?

Industry products are the outcomes of manufacturing processes and may include:

- clothing and footwear
- concrete and glass products
- tyres and plastic car components
- electronic components
- metal products

17. What are **industry services**?

Industry services may include:

- customer support

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- product advice
- health, diet advice
- delivery services
- consulting services
- warrantees and/or guarantees

18. What are **service standards**?

Service standards will vary from industry to industry and even from workplace to workplace depending on the job role and context. It may include:

- developing and maintaining product and service knowledge
- identifying customer needs and expectations correctly
- meeting reasonable needs and request of customers within acceptable time frames
- taking opportunities to enhance the quality of products and services
- dealing with conflict situations
- responding to customer complaints
- maintaining a positive and cooperative manner
- establishing relationships with customers
- following appropriate hygiene and safety procedures
- referring difficult complaints to appropriate persons

19. What are **quality standards**?

Quality standards may include:

- consistency standards
- quality specifications
- time requirements
- meeting customer requirements

MSAPCI102A Apply effective work practices

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the knowledge and skills needed to apply effective work practices in an industry. It includes planning, organising and completing work, communicating effectively, working with others, solving problems and adapting to changes.

The elements of this unit should always be assessed in conjunction with other units that form part of a specified job function

Training and assessment against this competency unit must incorporate all relevant legislative requirements.

Application of the Unit

Application of the Unit

The unit has applications across industries and it should be regarded as an integrating unit. When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities.

When delivered/assessed as part of a qualification, the unit will be customised to ensure its relevance to the real or simulated work activities and related workplaces.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan, organise and complete daily work	1.1 **Work instructions** and priorities are identified and interpreted in consultation with supervisor
	1.2 An appropriate work plan or daily routine is determined and mapped out
	1.3 Materials, resources or information needed to complete work is determined, collected, and organised
	1.4 Work tasks are completed within designated timelines, quality standards, and instructions
	1.5 Problems that arise are dealt with in a practical, timely and appropriate manner and assistance is sought when required
	1.6 Feedback is sought on work performance and improvements made as required
2 Communicate effectively	2.1 **Appropriate lines of communication** with supervisors, colleagues and customers are identified
	2.2 Effective **communication skills** and **numeracy skills** are used to gather and convey information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3 Appropriate non-verbal behaviour is demonstrated
3 Work with others	3.1 Work roles of self and others in the workplace are identified
	3.2 Individual responsibilities and duties to the team are undertaken in a positive manner and in a range of situations to promote cooperation and good relationships
	3.3 Customers and colleagues who have **diverse backgrounds** are respected
4 Use workplace technology	4.1 Appropriate **workplace technology** is selected and used according to workplace and manufacturer's guidelines and instructions
	4.2 Workplace technology is inspected to ensure it is not damaged and is working properly and **precautions** are taken to reduce risks
	4.3 **Appropriate action** is taken when problems with workplace technology occur
	4.4 Workplace technology is cared for according to workplace and manufacturer's guidelines and instructions
5 Solve work problems	5.1 Identify problems and develop practical or creative solutions within the scope of individual responsibility to rectify them
	5.2 Ask for assistance from **key personnel** when appropriate
	5.3 Report workplace problems as required using appropriate **workplace procedures**
6 Adapt to change	6.1 New work requirements or situations are identified, clarified and adapted to
	6.2 A range of possible practical or creative options to deal with workplace challenges are considered
	6.3 A willingness to be open to and trial new ideas and techniques is demonstrated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge required for this unit.

REQUIRED KNOWLEDGE

Knowledge and understanding are essential to apply this competency standard in the industry and workplace. The requirements for this competency standard are a knowledge and basic understanding of:

- workplace procedures, policies and instructions
- workplace structures and the roles and responsibilities of individuals and team/group members
- basic mathematical operations and techniques
- procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- typical problems in the workplace and appropriate action and solutions
- systems and equipment used in the workplace and the instructions, processes and precautions for their use
- basic principles of teamwork in the workplace

REQUIRED SKILLS

To achieve the performance criteria, some complementary skills are required. These are the ability to:

- use literacy skills in regard to written and verbal communication in the workplace
- use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- interpret and follow a designated work plan or set of instructions for a job
- plan a daily routine to complete required workplace tasks follow relevant OHS and environmental protection procedures and responsibilities
- time management strategies
- work cooperatively and collaboratively with others to complete tasks
- adapt and modify activities depending on differing workplace contexts and environment
- useappropriate techniques to solve or report problems identified when completing work tasks
- carry out calculations that may be required when completing work tasks, particularly including the four basic mathematical operations
- take appropriate initiatives to deal with problems and to complete tasks
- identify and correctly use equipment, tools and other technology required to complete workplace tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- keep required records of workplace activities
- apply relevant industrial or other legislative requirements
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others
- recognise limitations, ask for helpand seek clarification or information about work requirements and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Assessment must confirm appropriate knowledge and skills to: • interpret and plan own work activities • complete work activities in collaboration with others in accordance with instructions, procedures and applicable regulations • communicate effectively in the course of work activities • carryout basic calculations required to complete work activities • apply relevant ethical practices and codes of practice in the course of work activities • Performance is demonstrated consistently over a period of time and in a suitable range of contexts • Consistently shows evidence of application of relevant workplace procedures, policies, instructionsand regulations • Action is taken promptly to report and/or rectify any problems in accordance with workplace procedures • Recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	others(• Work is completed systematically with required attention to detail without damage to goods, equipment or personnel
Context of assessment	Assessment of this unit must be carried out or managed by a registered training organisation and must include an undertaking of a range of different work tasks within reasonable workplace timeframes which includes participation in various, typical workplace communication situations and use a range of workplace technologies. Assessment of knowledge must be conducted through appropriate written/oral examinations. Appropriate practical assessment must occur: • in suitable simulations of a work environment organised by the registered training organisation, and/or • in an appropriate workplace • within reasonable workplace timeframes
Specific resources required for assessment	Access is required to opportunities and appropriate resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work effectively (usually as part of a holistic assessment involving other competency units) • participate in actual workplace activities that demonstrate the skills and knowledge to work effectively • access to a range of workplace technologies such as computers, fax machines, telephones, photocopiers and the like

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

different work environments and situations that may affect performance.

1. What are **work instructions**?

Work instructions may include:

- job sheets
- patterns
- plans
- drawings
- designs
- verbal directions
- customer orders

2. What are effective **communication skills**?

Communication in the workplace may include:

- listening and understanding
- speaking clearly and directly
- reading independently
- writing to audience needs
- group interaction
- the chain of command in which to report
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting
- routine written reporting
- participation in routine meetings in the workplace
- basic recording of discussions

4. What are effective **numeracy skills**?

Effective **numeracy skills** are those which related to the job or specific task and may involve the operations of multiplication, division, addition, subtraction, percentages and/or fractions, and may include those related to:

- estimates of the quantities of materials and resources required to complete a work task
- money (cost, invoices, change, etc.)
- volume
- weight
- time
- length and distance
- speed
- area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- perimeter

5. What are **diverse backgrounds**?

A **diversity of backgrounds** may include, but is not limited to different:

- ages
- genders
- culture
- personal values or beliefs
- race
- religion
- political persuasion

6. What is **workplace technology**?

Workplace technology may vary widely from industry to industry and may include:

- business equipment such as fax machines, telephones, photo copiers, cutting machines, cameras, voice recorders
- computer technology such as laptops, PCs, digital cameras, zip drives, modems, scanners, printers
- other technology such as machinery, hand tools, , lifts, security systems

7. What are **precautions**?

Workplace technology **precautions** may include:

- routine checking of equipment
- regular backups of data
- keeping a log book of detected faults
- checking that repairs have been carried out
- using appropriate clothing

8. What is **appropriate action**?

Appropriate action may include:

- contacting a supervisor, manager
- contacting the manufacturer
- contacting a service provider
- reporting and documenting the problem

9. Who are **key personnel**?

Key personnel may include:

- supervisor
- manager
- fellow colleagues
- team members

10. What are **workplace procedures**?

Workplace procedures may include but are not limited to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- organisational policies and guidelines
- common organisational practice
- performance plans
- OHS policies, procedures and programs
- relevant legislative requirements in areas such as OHS, privacy , anti-discrimination, environmental protection, trade practices, etc
- relevant licence requirements and related regulations

Unit Sector(s)

Unit sector Manufacturing Pathways

MSAPCI103A Demonstrate care and apply safe practices at work

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the knowledge and skills needed to understand, apply and satisfy safe work practices in an industry. It includes identifying and following work procedures for hazards and risks, monitoring and maintaining cleanliness and tidiness at work, and reporting hazards and risks in appropriate ways. It may apply to occupational health and safety (OHS) requirements and/or internal workplace policies and procedures.

The elements of this unit should always be assessed in conjunction with other units that form part of a specified job function.

Training and assessment against this competency unit must incorporate all relevant OHS and related legislative requirements.

Application of the Unit

Application of the Unit

The unit has applications across industries. When delivered/ assessed as part of a qualification the unit will be customised to ensure its relevance to the real or simulated work activities. The workplace environment may include a school classroom or workshop equipped with the appropriate workplace equipment, RTO premises, or an enterprise environment where a high level of supervision exists.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Follow workplace OHS procedures	1.1 Relevant OHS, workplace **hazard control procedures** and **safe work practices** are identified, interpreted and applied to work
	1.2 Workplace procedures for reporting hazards are identified and adhered to in a prompt and efficient manner
	1.3 All relevant work activities are undertaken in a safe manner according to OHS guidelines, enterprise policies and procedures
	1.4 The work area is assessed regularly and procedures to report, remove or minimise potential **hazards** are followed
	1.5 **Personal protection clothing and equipment** is correctly used in accordance with established safety and workplace procedures
2 Maintain personal well-being in the	2.1 **Risks to personal well-being** which may affect safe performance in the workplace are

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
workplace	identified and strategies to prevent them are put into place
	2.2 Procedures for maintaining a tidy and clean personal work area are identified, interpreted and followed
3 Be aware of and report on safety of self and others	3.1 Situations which may endanger the individual or other workers are identified and corrected or reported
	3.2 Incidents and injuries to self or others on the job are dealt with in a timely manner and reported to **appropriate persons**
	3.3 **Participative arrangements** to foster safe working practises are contributed to, as appropriate
4 Deal with emergency situations	4.1 **Emergency situations** are recognised and required action is taken within scope of individual responsibility
	4.2 Emergency procedures are followed in accordance with organisational procedures
	4.3 Assistance from colleagues and/or other authorities is sought where appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge required for this unit.

REQUIRED KNOWLEDGE

Knowledge and understanding are essential to apply this competency standard in the industry and workplace. The requirements for this competency standard are a knowledge and basic understanding of:

- procedures related to OHSto be followed in the work area concerned
- workplace hazards and ways to minimise or remove them
- workplace equipment, materials, housekeeping equipment and the processes and precautions for their use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- personal protective clothing and equipment relevant to the job and job context
- appropriate hygiene and safety standards

REQUIRED SKILLS

To achieve the performance criteria, some complementary skills are required. These are the ability to:

- use literacy skills in regard to written and verbal communication in the workplace
- use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- report workplace hazards and occupational health and safety incidents and relatedaction
- solve or report problems identified when dealing with safety hazards and applying appropriate hazard control procedures
- use required personal protection equipment and clothing and other equipment required when following OHS procedures
- recognise limitations and ask for help

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Assessment must confirm appropriate knowledge and skills to: • follow workplace procedures for hazard identification and risk control • use relevant personal protective clothing and equipment • communicate effectively with others as required when following safety procedures • Performance is demonstrated consistently over a period of time and in a suitable range

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	of contexts • Consistently applies required knowledge and skills when completing workplace hazard prevention tasks and following relevant procedures • Consistently shows evidence of application of relevant workplace procedures, policies, instructionsand regulations, including: • OHS regulations and hazard prevention policies and procedures • relevant manufacturer's guidelines relating to the operation and use of equipment • Action is taken promptly to report and/or rectify any safety incidents in accordance with workplace procedures • Recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others • Work is completed systematically with required attention to detail without damage to goods, equipment or personnel
Context of assessment	• Assessment of this unit must be carried out or managed by a registered training organisation: • assessment of knowledge must be conducted through appropriate written/oral examinations • appropriate practical assessment must occur: • in suitable simulations of a work environment organised by the registered training organisation, with a range of equipment suitable for the job role, and/or • in an appropriate workplace
Specific resources required for assessment	Access is required to opportunities and appropriate resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely (usually as part of a holistic assessment involving other competency units), and/or • participate in actual workplace activities that demonstrate the skills and knowledge to work safely

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

1. What are **hazard control procedures**?

Hazard control procedures may include:

- emergency, fire and accident procedures
- hazard identification and removal or, if this is not possible, establish a hazard control
- use of personal protective
- relevant manufacturer's guidelines relating to the operation and use of equipment
- OHS regulations
- safe use of mechanical, pneumatic, hydraulic and/or electrical equipment
- safe use of chemicals and toxic substances

2. What are **hazards** in the workplace?

Workplace **hazards** may include:

- untidy work conditions including poor and unnecessary obstacles and equipment in work areas
- sharp instruments, or equipment
- noise
- hot substances and equipment
- electricity and water
- electrical equipment
- being careless when using cutting equipment or dealing with heat or hot surfaces
- damaged equipment
- moving machinery
- materials handling
- gases and liquids under pressure
- working at heights
- confined spaces
- inappropriate lifting practices
- dangerous floor surfaces
- movements of equipment, goods, vehicles
- chemicals and other harmful substances including fumes and dust

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- toxic substances
- damaged packing material and containers
- inflammable materials and fire hazards
- waste management and disposal
- extremes in weather conditions
- unsuitable lighting levels
- water hazards
- dangerous storage areas

3. What are **safe work practices**?

Safe work practices may include, but are not limited to:

- manual handling procedures
- correct posture
- safe lifting and bending
- using appropriate personal protection equipment
-

4. What are **risks to personal well-being**?

Risk to personal well-being are actions by an individual which affect their ability to work safely and may include:

- smoking, alcohol and drug use
- lack of sleep
- poor diet
- lack of exercise
- stress
- not using appropriate methods when lifting or moving heavy objects
- not wearing proper personal protective equipment

5. What are **personal protection clothing and equipment**?

Personal protection clothing and equipment may include but are not limited to:

- gloves
- masks
- uniform
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

6. Who are **appropriate persons**?

Appropriate persons may include:

- workplace personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

- supervisors
- team leaders
- management
- OHS personnel
- other persons authorised or nominated by the organisation

7. What are **emergency situations**?

Emergency situations may include:

- accidents, including those that do not result in injury
- overheating equipment
- injuries such as cuts, scalds, burns
- health conditions such as fainting, asthma attacks, allergic reactions
- spills and leakages of harmful gas and liquids
- structural failures and breakages
- robbery
- fire
- flooding
- power failures or shorts

8. What are **participative arrangements**?

Participative arrangements may include:

- workplace meetings
- suggestion schemes
- regular communications with team leaders
- information sessions

Unit Sector(s)

Unit sector Manufacturing Pathways

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSAPCII295A Operate manufacturing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the operation of production equipment and the resolving of routine problems in a simulated or trial manufacturing environment where there is a high degree of direct supervision. This competency is intended to be applied to any item of routine production equipment. This competency can be performed by operators working either independently or as part of a work team.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available . A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of direct supervision exists. The unit covers the making of a product or products to meet established quality standards and workplace requirements using routine manufacturing equipment. It includes: • checking specifications and work requirements • following established OHS and hazard minimisation procedures • monitoring equipment operation and reporting process variations • checking product for quality and conformity to specifications • dealing with non-conforming products/materials in accordance with procedures • identifying and rectifying/reporting on routine process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	problems • completing pro-forma production logs and reports.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Check job requirements.	1.1. Identify ***workplace*** requirements by following established ***procedures*** and practices 1.2. Identify product, materials and ***equipment*** requirements for job(s)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Control hazards.	2.1. Identify ***hazards*** in the production work area 2.2. Assess the risks arising from those hazards 2.3. Implement measures to control or avoid those risks in line with procedures and duty of care to fellow workers.
3. Prepare equipment for operation as required	3.1. Perform ***pre-start up checks*** 3.2. Suspected unusual or non standard product, materials and equipment are reported to an appropriate person 3.3. If required notify other team members on the intended equipment function and start up 3.4. Check/supply materials to equipment as required 3.5. Start up the item of equipment as required 3.6. Bring to specified conditions and build operating rate steadily, checking expected performance at various stages in accordance with procedures
4. Operate equipment	4.1. Monitor ***equipment operating conditions*** 4.2. Monitor ***product characteristics*** 4.3. Recognise conditions and characteristics which indicate a ***problem or a potential problem*** 4.4. Take ***appropriate action*** in response to problem or potential problem 4.5. Maintain supply of materials and removal of products as required 4.6. Complete required ***records*** 4.7. Keep equipment and work area in a clean, organised and safe condition
5. Prepare equipment for shut down as required	5.1. Perform emergency pause, stop or shutdown as required 5.2. Ensure equipment is free of product or purged as required 5.3. Shut down equipment in accordance with procedures 5.4. Make sure equipment and area is left in a safe condition and ready for ***need***

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• observation • following procedures for start up, operation and shut down of equipment • analysis • problem solving • communication • documenting
Required knowledge
• all major components of the equipment and describe the function of each • principles of equipment operation • equipment operating parameters • equipment and product variables and their interactions. • apply and/or explain: • impact of materials and properties • start-up and shutdown processes • construction and limitations of the equipment • out of specification situations • distinguish between causes of faults such as: • raw materials • instrument failure/malfunction • electrical failure/malfunction • mechanical failure/malfunction • variations in product parameters (temperature, flows, pressure&levels).

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The competent person will be able to carry out the day to day operation of a piece of production equipment, meeting the demands of productivity and quality while resolving routine problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
What critical aspects of evidence is required to demonstrate competency in this unit?	It is essential that the equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential or actual problem situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to avoid problems rather than on recovery from a problem. Consistent performance should be demonstrated. In particular look to see that: • process conditions are maintained within limits • quality is monitored to minimise wastage • start-up and shutdown occurs first time • signals and alarms are responded to immediately • process measurements are continually made or observed • all OHS requirements are followed. • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution • pre-start checks are made to ensure equipment is lined up to the plant in accordance with procedures and/or manufacturers specifications. Besides assessing actual operation of manufacturing equipment many aspects may be also be assessed using a range of scenarios, case studies or what ifs as the assessment method. These assessment activities should include a range of problems, including new, unusual situations that may have been generated from past history
In what context should assessment occur?	Assessment will need to occur on an operating item of production equipment although some aspects especially problem solving may be assessed through simulation.
Are there any other units which could or should be assessed with this unit or which relate directly to this	This unit could be assessed concurrently with other relevant units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
unit?	
What method of assessment should apply?	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.
What are the specific resource requirements for this unit?	Access to an operating item of production equipment over an extended time.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Workplace	Workplace for this unit covers a manufacturing environment specifically established for learning introductory manufacturing skills. It may be: • a school classroom or workshop equipped to teach manufacturing principles and practices • RTO premises equipped to teach manufacturing principles and practices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• an enterprise environment where above average supervision exists and training is occurring. The normal production imperatives have been modified to take into account the training being delivered.
Procedures	Procedures includes all work instructions, standard operating procedures, formulas/ recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of equipment and processes. They may be written, verbal, computer based or in some other form. For the purposes of this Training Package, ' procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.
Equipment	Equipment for the purposes of this unit covers routine or common manufacturing equipment suitable for students operating in a simulated or trial manufacturing environment where there is a high degree of direct supervision. examples include but are not limited to: • guillotines • bending and folding machines • non CNC lathes, especially bench and training lathes • soldering equipment • pedestal drills • bench grinders
Hazards	Workplace hazards include: • hazardous materials • gases and liquids under pressure • moving machinery • cutting edges • electrical equipment • materials handling • environments subject to heat, noise, dusts or vapours.
Pre-start up checks	Pre-start up checks include: • visual checks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• completing checklists • checking that safety guards, gates etc are in position and are operational • other checks required by standard operating procedures and manufacturer's instructions
Equipment operating conditions	Equipment operating conditions will be monitored using a range of techniques including: • monitoring of measured or indicated data as shown by gauges, charts etc., (eg. speed, hours on line, pressure, temperature, flow, vibration) • the senses of smell, sight, sound and feel as appropriate.
Product characteristics	Product characteristics includes: • product quality • production rate • defect rate
Problem/potential problem	Problem/potential problem includes: • changes to operating conditions • adverse changes to product characteristics • adverse changes to waste
Appropriate action	Appropriate action includes: • making adjustments in accordance with procedures • stopping the equipment in accordance with procedures • reporting to appropriate person.
Records	Records include: • log sheets/books • job/work sheets • electronic/paper records • verbal/voicemail/email reports
Need	Need includes: • leaving the equipment ready for restart • leaving it safe for maintenance • preparing for a medium/long term shut down

MSAPCII296A Make a small furniture item from timber

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency standard covers the skills required to make a small timber furniture item in accordance with the requirements of an established design and in a simulated or trial manufacturing environment where there is a high degree of direct supervision. The work may or may not involve electrical machinery. The elements of this unit should always be assessed in conjunction with other units that relate to the requirements of a specified work or job function. Training and assessment against this competency unit must incorporate all relevant OHS and related legislative requirements.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available . A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. The unit has applications in qualifications for the broad manufacturing of timber furniture products where the project is based upon the construction of a simple timber item such as:, jewellery boxes, CD racks, timber stools and stationery trays and picture frames. The unit should be applied to a specific 'project'/ or task which has a defined beginning, middle and end, occurs over an extended period of time, and is reflective of furniture manufacturing industry and/or organisation. When delivered/assessed as part of a qualification the unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	should be customised to ensure its relevance to a real or simulated work activity and related workplaces and must be delivered and assessed over a period of time.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify job requirements	1.1. Specifications for ***small furniture item*** are identified from ***work instructions***. 1.2. Design is interpreted to determine tool, equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	and materials and space requirements. 1.3. Cutting, joining and finishing requirements are identified 1.4. OH&S requirements are considered
2. Prepare for work	2.1. ***Suitable work area*** is selected for the task. 2.2. Work area is prepared according to OH&S and ergonomic requirements. 2.3. ***Appropriate tools***, ***equipment*** and ***materials*** are selected in accordance with the specifications for work. 2.4. Equipment and machinery are cleaned, checked, and adjusted in accordance with workplace procedure. 2.5. ***Potential hazards*** are identified from observation of the tools, equipment, materials and workplace and either rectified or reported to supervisor 2.6. ***Records*** are kept in accordance with workplace requirements.
3. Produce work	3.1. Timber is cut according to ***specifications*** and OH&S requirements. 3.2. Edges and surfaces are ***prepared*** according to specifications and OH&S requirements. 3.3. Timber pieces are ***joined*** according to item specifications and OH&S requirements . 3.4. Work is checked against specifications at the identified checkpoints 3.5. Non-conformity with the required specifications including quality standards is ***rectified*** . 3.6. Work is ***finished*** according to specifications, including quality standards and OH&S requirements .
4. Complete work	4.1. Completed work is checked against specifications. 4.2. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures. 4.3. Work area is cleaned, tools and equipment are returned to storage. 4.4. Documentation is completed following workplace procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Skills required to apply this competency standard in the workplace include: • communicate and work effectively and safely with others • complete a basic furniture construction project to specifications, • comply with OH&S requirements, • correct and safe use of hand tools and power equipment • comply with safety instructions and any OH&S legislation /regulations /codes of practice applicable to workplace operations • collect, organise and understand information related to basic plans • plan and organise activities • use mathematical ideas and techniques for measuring and calculation of areas and estimated materials requirements. • ability to follow instructions and specifications and ask for help where needed
Required knowledge
• workplace procedures and work instructions • quality requirements • furniture construction terminology • tool, equipment and material types and uses • plans, drawings and specifications • safety precautions with hazardous materials and equipment • organisational or workplace structure • evaluation and review procedures • creative thinking techniques

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Knowledge and application of relevant sections of: • occupational, health and safety legislation; statutory

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	legislation; • enterprise/site safety procedures; • enterprise/site emergency procedures • preparation and planning of work • perform normal operator maintenance of work area to enable work to be conducted safely and efficiently • relevant standards and procedures • interpret work instructions and locate and apply relevant information. • apply safe handling requirements for equipment, products and materials, including use of personal protective equipment. • follow work instructions, operating procedures and inspection practices to: • minimise the risk of injury to self or others • prevent damage to goods, equipment or products • achieve required production output and product quality. • adapt or vary furnishing product designs. • construct, assemble and finish at least one basic furnishing product from the list in the range statement. • work effectively with others. • modify activities to cater for variations in workplace contexts and environment.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.
Specific resources required for assessment	Access to plans, hand and/or power tools, equipment, materials, woodworking machinery and a work area. Access is required to opportunities and appropriate resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely (usually as part of a holistic assessment involving other competency units), and/or • participate in actual workplace activities that demonstrate the skills and knowledge to work safely

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
What can a small furniture item include?	A *small furniture item* from timber can include: • small decorative box, with or without a lid • wooden photo album • simple stool/ chair • shelving • CD rack • chopping board • simple table.
What are the work instructions?	Work instructions may include: • job sheets • patterns • plans • drawings and sketches • verbal or illustrated directions from supervisor • number and type of objects to be produced • quality requirements. • OH&S requirements • environmental requirements
What can OH&S requirements include?	OH&S requirements may include: • equipment safety instructions • hazardous and dangerous goods codes • local safe operating procedures • specific workplace rules regarding personal protective wear and equipment.
What can a suitable work area include?	A suitable work area may include: • workbench • desk or table • workshop • shed • floor suitable for layout and assembly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
What can appropriate tools, equipment and materials include?	Appropriate tools will vary according to the project, but may include: • manual saw • jigsaw • hacksaw • clamp • hammer • mallet • screw driver • punch • pliers and pincers • file • miter cutter • 90 degree angle • staple gun • paintbrush • rags • measuring tapes/ rulers • spirit level • bevel • chisel Appropriate equipment could include: • electric saw • electric sander • electric screw driver • power drills • panel laners • horizontal borers • vertical drill presses • pedestal grinders • pencils and marking devices • blades • lathes Appropriate materials could include: • timber • manufactured boards • adhesives • screws • nails

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• bolts • glue • hinges and metal fasteners • steel • plastics • sandpapers • primers • paints and stains.
What potential hazards include?	Potential hazards may include: • broken or faulty equipment • unnoticed sharp objects • poor lighting • inadequate ventilation • inadequate attention to the activities of others • electrical shortages and power overload • disorganised or cluttered workspace (poor housekeeping) • poor attention when dealing with tools and equipment. • environmental chemicals, heat, dust, noise, gas and oil.
What could records include?	Records could include: • plant and maintenance records • job cards • check sheets • reporting requirements • documenting equipment and/or material defects Workplace procedures relating to the use of tools and equipment. • equipment booking forms and records • attendance records.
What could specifications include?	Specifications could include: • measurements and dimensions • shape • joining methods • surface finish, for example paint, varnish etc. • quality standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• materials to be used
What is involved in making sure edges and surfaces are prepared?	Preparing edges and surfaces could include: • filing • sanding • beveling.
What is involved in making sure timber pieces are joined?	Joining timber pieces could include attaching pieces together with: • nails • screws • glue • staples.
What is involved in making sure non-conformities are rectified?	Rectifying non-conformities could involve: • disassembly of the furniture item • reshaping /resizing or re-cutting component materials • reassembly.
What is involved in making sure work is finished?	Finishing work can include: • sanding • priming • painting • sealing • staining • decorating.
What documentation could be relevant?	Documentation could include: • completing necessary paperwork • communicating with supervisor that you have completed the task • photographing the finisher piece • filing necessary paperwork.

MSAPCII297A Make an object from cloth using an existing pattern

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency has been primarily developed for use in a simulated or trial manufacturing environment where there is a high degree of direct supervision. It covers the skills required to make an object from cloth (such as basic decorative items or clothing) following the requirements of an identified pattern. It may or may not require machinery. The elements of this unit should always be assessed in conjunction with other units that relate to the requirements of a specified work or job function Training and assessment against this competency unit must incorporate all relevant OHS and related legislative requirements.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available . A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. The unit applies to the construction of a cloth item that does not require complex sewing or finishing or the development of a pattern. Typical items include tablecloths, hats, towels, cushions, BBQ covers, place mats, cloth bags, scarves, wall hangings, external awnings, and cloth pencil or tool cases. The unit should be regarded as an integrating unit which

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	has application in Certificate I and II qualifications that act as general introductory qualifications to manufacturing industry. It should be applied to a specific 'project' or task which has a defined beginning, middle and end, occurs over an extended period of time, and is reflective of clothing manufacturing industry and/or organisation. When delivered and assessed as part of a qualification the unit should be customised to ensure its relevance to a real or simulated work activity and related workplaces and must be delivered and assessed over a period of time.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Job requirements for making the ***object from cloth*** are identified from ***work instructions*** 1.2. Instructions for designing and sequencing of work are considered 1.3. Particular measurements or adjustments are interpreted and mapped out 1.4. ***OH&S requirements*** are considered, planned for and observed
2. Prepare for work	2.1. ***Suitable work area*** is selected for the task 2.2. Appropriate ***tools***, ***equipment and materials*** are selected 2.3. ***Potential hazards*** are identified from observation of the tools, equipment, materials 2.4. Required tools and materials are laid out in sequence according to job requirements and work instructions 2.5. Equipment, if required, is checked and adjusted in accordance with workplace procedure
3. Create work	3.1. Fabric is measured, cut and laid out according to specifications 3.2. Fabric is secured or sewed according to quality requirements 3.3. Work is checked against patterns and work sheets at the identified checkpoints 3.4. Non-conformity with the required pattern or quality standard is rectified.
4. Complete work	4.1. Completed work is checked against required quality standards 4.2. Documentation is completed following workplace ***reporting procedures*** 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures

Required Skills and Knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• collect, organize and understand information related to basic plans and safety procedures • coordinate work • plan and organise activities • work with others • the ability to ask for limitations and ask for help where needed; and • use mathematical ideas and techniques to correctly complete measurements and calculate areas and estimated materials requirement
Required knowledge
• workplace procedures and work instructions • organisational structure • evaluation and review procedures; • creative thinking techniques.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
What critical aspects of evidence are required to demonstrate competency in this unit?	• identify appropriate materials for use in making cloth items, and any special sewing or handling requirements for those materials. • apply safe operating and handling practices for equipment, products and materials. • interpret work order and locate and apply relevant information. • use patterns select and use tools and equipment appropriate to the task. • follow work instructions, operating procedures and inspection practices to: • prevent damage to goods, equipment or products • maintain required production output and product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	quality • minimise the risk of injury to self or others. • work effectively with others. • modify activities to cater for variations in workplace contexts and environment. • report process or materials faults, damaged products or equipment. Assessment must confirm appropriate knowledge and skills to: • follow workplace procedures for hazard identification and risk control • use relevant personal protective clothing and equipment • communicate effectively with others as required when following safety procedures Performance is demonstrated consistently over a period of time and in a suitable range of contexts Consistently applies required knowledge and skills when completing workplace hazard prevention tasks and following relevant procedures: Consistently shows evidence of application of relevant workplace procedures, policies, instructions and regulations, including: • OHS regulations and hazard prevention policies and procedures • relevant manufacturer's guidelines relating to the operation and use of equipment Action is taken promptly to report and/or rectify any safety incidents in accordance with workplace procedures Recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others Work is completed systematically with required attention to detail without damage to goods, equipment or personnel
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, and work instructions and specifications. Assessment of this unit must be carried out or managed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	by a registered training organisation: Assessment of knowledge must be conducted through appropriate written/oral examinations Appropriate practical assessment must occur: • in suitable simulations of a work environment organised by the registered training organisation, and/or • in an appropriate workplace
Specific resources required for assessment	Access is required to opportunities and appropriate resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely (usually as part of a holistic assessment involving other competency units), and/or • participate in actual workplace activities that demonstrate the skills and knowledge to work safely

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
What does an object from cloth include?	An object from cloth is a cloth item that does not require sewing of complex shapes or finishing or the development of a pattern and may include: • basic cushions • soft tableware such as placemats or serviettes • basic clothing such as a scarf, simple cloth hat not requiring blocking or a circle skirt, • a basic carry bag • handkerchief • tea towel • wall hanging

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• pencil case
What are the work instructions?	Work instructions may include: • job sheets including number and type of objects to be produced • patterns for making an object from cloth • plans • drawings and sketches • operating instructions for equipment including safety procedures • designer instructions • quality requirements • verbal directions from a supervisor or instructor
What do OH&S requirements include?	OH&S requirements may include: • legislation • regulations • material handling instructions including hazardous and dangerous goods codes • local safe operating procedures • specific workplace rules and regulations regarding personal protective wear and equipment
What is a suitable work area?	A suitable work area may include: • a bench top or desk • a sewing or layout table • a sewing table with a sewing machine
What are tools, **equipment and materials**?	Tools and equipment may include: • measuring equipment such as tapes and rulers • calculating equipment such as calculators and computers • general cutting and sewing tools including scissors, drills, sewing machines, hemming machines, glue guns • personal protection equipment Materials may include: • plain and patterned fabric • velvet • threads

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• wadding • foam • tape • fasteners including buttons and hooks
What are potential hazards?	Potential hazards may include broken or faulty equipment, damaged needles, a lack of lighting, untidy working conditions, wet or slippery floors, improperly secured sewing machines, damaged or frayed electrical cables and connections,
What are reporting procedures?	Workplace reporting procedures may include: • completing necessary paperwork • communicating with a supervisor or key person that you are completed with the task • reporting, accidents, injuries and faulty equipment or materials • filing necessary paperwork

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify job requirements	1.1. Specifications for ***metal*** item are identified from ***work instructions*** 1.2. Design is interpreted to determine process, tool, equipment and materials requirements 1.3. ***OH&S requirements*** are considered and observed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	throughout the ***workplace***
2. Prepare for work	2.1. ***Suitable work area*** is selected for the task 2.2. Work area is prepared according to OH&S and ergonomic requirements 2.3. ***Appropriate tools***, ***equipment*** and ***materials*** are selected in accordance with the specifications determined for the work 2.4. Equipment and machinery is cleaned, checked, and prepared for operation in accordance with OH&S requirements and workplace procedure 2.5. ***Potential hazards*** associated with the use of tools, equipment, materials and the workplace are identified and steps taken to eliminate them in accordance with OH&S legislative requirements and established workplace procedures. 2.6. Where required , ***records*** are kept in accordance with workplace requirements
3. Produce work	3.1. Dimensions are transferred from job specifications and/or drawings or sketches and material is marked out to conform to ***specifications*** and templates are ***formed*** using appropriate machinery or tools 3.2. Edges and surfaces are ***prepared*** according to specifications. 3.3. Components are ***joined*** according to project requirements 3.4. Work is checked for conformance with specifications. 3.5. Non-conformity with specifications or quality standard is ***rectified*** 3.6. Work is ***finished*** according to specifications and quality standards
4. Complete work	4.1. Completed work is checked against required quality standards 4.2. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Where required, documentation and records are completed and maintained following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- apply occupational health and safety standards
- observe relevant statutory requirements and codes of practice
- use, update and where appropriate produce sketches and basic drawings
- select materials and resources
- use and apply basic quality standards
- apply quality procedures
- communicate effectively
- communicate ideas and information to obtain confirmation of work requirements and specifications, coordination with other workers and the reporting of work outcomes and problems.
- collect, organise and understand information related to work orders, basic plans and safety procedures.
- plan and organise activities, including preparation for work and obtaining equipment and materials.
- work with others and in a team to optimise efficient workflow and productivity.
- apply pre-checking and quality techniques to anticipate construction problems, avoid reworking and avoid wastage.
- use of routine workplace tools, equipment, materials and measuring devices.

Depending on the object to be made required skills may also include:

- use cutting and heating equipment
- use of mechanical cutting equipment
- use of workshop plant and equipment
- use of hand and portable power tools

Required knowledge

- the interpretation of a plan representing the product to be made
- the concept of workflow and its relation to manufacture of objects
- identification of appropriate hand and power tools, materials, equipment, processes and procedures.
- occupational health and safety standards and practices.
- relevant statutory requirements and codes of practice
- hand and portable power tools and their application
- mechanical cutting techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• paints, sealants and glues • jigs and templates • workshop plant and equipment • manufacture and assembly techniques • common materials used in the manufacture of metal objects • mathematical techniques • communication principles

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Knowledge and application of relevant sections of: • occupational, health and safety legislation; statutory legislation; • enterprise/site safety procedures; • enterprise/site emergency procedures • preparation and planning of work • lay out, marking off/out and developing techniques and procedures • fabrication techniques • shaping techniques • cutting techniques • perform normal operator maintenance of work area to enable work to be conducted safely and efficiently • relevant standards and procedures • completion of work procedures
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.
Specific resources required for assessment	Access to plans, hand and/or power tools, equipment, materials and a work area. Access is required to opportunities and appropriate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely (usually as part of a holistic assessment involving other competency units; and/or • participate in actual workplace activities that demonstrate the skills and knowledge to work safely

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
What can metal include?	Metal ***may include***: • mild steel • galvanised steel • stainless steel • aluminium • brass
What can object from metal include?	***An*** *object from metal* ***can include***: • a small decorative box, with or without a lid • desk pencil holder • metallic photo album • cabinet • shelving • CD rack • metallic picture frame.
What are the work instructions?	***Work instructions*** may include: • job sheets • patterns • plans • drawings and sketches

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• verbal or illustrated directions from supervisor • number and type of objects to be produced • quality requirements. • OH&S requirements • environmental requirements
What can OH&S requirements include?	***OH&S requirements*** *may include*: • legislative requirements • hazardous and dangerous goods codes • safe operating procedures • specific workplace rules regarding personal protective wear and equipment such as disposable overalls, dust mask, eye and ear protection and gloves.
Workplace	Workplace for this unit means a manufacturing environment specifically established for learning introductory manufacturing skills. It may be: • a school classroom or workshop equipped to teach manufacturing principles and practices • RTO premises equipped to teach manufacturing principles and practices • an enterprise environment where above average supervision exists and training is occurring. The normal production imperatives have been modified to take into account the training being delivered.
What can a suitable work area include?	*A suitable work area* may include: • workbench • desk or table • workshop • shed • durable space
What can appropriate tools, equipment and materials include?	*Appropriate tools* will vary according to the project, but may include: • measuring tapes or rulers • hammers • mallets • squares • bevels • chisels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• files • planes • hand saws • cordless drills/ screwdrivers • fixing and joining devices • jigs • clamping devices • pincers *Appropriate equipment* could include: • power saws • power drills • band saws • vertical drill presses • protective eye ware • protective gloves • dust masks • overalls or protective clothing *Appropriate materials* could include: • metal • adhesives • screws • nuts • bolts • hinges and metal fasteners • pencils and markers • paints.
What potential hazards include?	*Potential hazards* may include: • broken or faulty equipment • unnoticed sharp objects • poor lighting • inadequate ventilation • inadequate attention to the activities of others • electrical shortages and power overload • disorganised or cluttered workspace (poor housekeeping) • poor attention when dealing with tools and equipment. • environmental chemicals, heat, dust, noise, gas and oil.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
What could records include?	***Records*** could include: • plant and maintenance records • job cards • check sheets • reporting requirements • documenting equipment and/or material defects • workplace procedures relating to the use of tools and equipment.
What could specifications include and what does it mean for materials to be formed?	***Specifications*** could include: • measurements and dimensions • forming methods could include cutting, bending, rolling, beading.
What is involved in making sure edges and surfaces are prepared?	*Preparing edges and surfaces* could include: • filing • sanding • cleaning • grinding • polishing
What is involved in making sure metal pieces are joined?	*Joining metal pieces* could include attaching pieces together with: • screws, rivets, nuts and bolts • hinging • soldering
What is involved in making sure non-conformities are rectified?	*Rectifying non-conformities* could involve: • deconstructing the assembled pieces • reshaping /resizing or re-cutting elements • reassembling elements.
What is involved in making sure work is finished?	*Finishing work* can include: • filing • polishing • grinding • painting and decorating.

MSAPCII299A Make an object from plastic

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency standard covers the skills required to make a component from plastic in accordance with the requirements of an established design and in a simulated or trial manufacturing environment where there is a high degree of supervision. The work may or may not involve plastics processing machinery. The elements of this unit should always be assessed in conjunction with other units that relate to the requirements of a specified work or job function. Training and assessment against this competency unit must incorporate all relevant OHS and related legislative requirements.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available . A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. The unit has applications in qualifications for the broad manufacturing of plastic products where the project scope can be based upon the construction of a simple plastic item such as:, tool trays and picture frame or could extend to include the production of consumer products or moulded components. The unit should be applied to a specific 'project'/ or task which has a defined beginning, middle and end, occurs over an extended period of time, and is reflective of the plastics manufacturing industry and/or organisation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	When delivered/assessed as part of a qualification the unit should be customised to ensure its relevance to a real or simulated work activity and related workplaces and must be delivered and assessed over a period of time.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify job requirements	1.1. Specifications for ***plastic product*** are identified from ***work instructions***. 1.2. Customer requirements are recognised and identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	in the product specification 1.3. Assembly and finishing requirements are identified 1.4. Health, safety and environmental hazards are identified and hazard control measures are implemented. 1.5. Materials, housekeeping and waste management needs are considered
2. Prepare for work	2.1. Equipment requirements are checked and equipment adjusted to appropriate process settings 2.2. ***Materials*** requirements are checked and adjusted as required 2.3. ***Records*** are kept according to company requirements 2.4. Pre-start checks are completed as required 2.5.
3. Operate equipment to produce component	3.1. Equipment is started up following workplace and hazard control procedures 3.2. Process is monitored to ensure quality 3.3. Product quality is monitored as required 3.4. Quality and other problems are identified and rectified
4. Complete work	4.1. Product is assembled according to specifications as required 4.2. Completed work is checked against specifications and customer requirements 4.3. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures. 4.4. Work area is cleaned; tools and equipment are returned to storage. 4.5. ***Documentation*** is completed following workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• communicate and work effectively and safely with others • complete a basic plastic product manufacturing project to specifications • comply with OHS&E requirements, • correct and safe use of hand tools and power equipment • comply with safety instructions and any OH&S legislation /regulations /codes of practice applicable to workplace operations • collect, organise and understand information related to basic plans • plan and organise activities • use mathematical ideas and techniques for measuring and calculation of areas and estimated materials requirements. • follow instructions and specifications and ask for help where needed
Required knowledge
• workplace procedures and work instructions • quality requirements • plastics industry terminology • tool, equipment and material types and uses • plans, drawings and specifications • safety precautions with hazardous materials and equipment • organisational or workplace structure • evaluation and review procedures • creative thinking techniques

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Knowledge and application of relevant sections of: • occupational, health and safety legislation; statutory legislation; • enterprise/site safety procedures; • enterprise/site emergency procedures • environmental requirements Preparation and planning of work Perform normal operator maintenance of work area to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	enable work to be conducted safely and efficiently Relevant standards and procedures Interpretation of work instructions and locate and apply relevant information. Application of safe handling requirements for equipment, products and materials, including use of personal protective equipment. Following work instructions, operating procedures and inspection practices to: • minimise the risk of injury to self or others • prevent damage to goods, equipment or products • achieve required production output and product quality. Ability to adapt or vary plastic component designs. Ability to construct, assemble and finish at least one basic plastic component from the list in the range statement. Ability to work effectively with others. Ability to modify activities to cater for variations in workplace contexts and environment.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.
Specific resources required for assessment	Access to plans, equipment, materials Access is required to opportunities and appropriate resources to either: Carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely as part of a holistic assessment involving other competency units, and/or Participate in actual workplace activities that demonstrate the skills and knowledge to work safely

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
What can a plastic product include?	A plastic product can include: • small container • picture frame • toys • tool box • automotive plastic products • household items • electrical goods • playground equipment • small boat • any other product made from polymers
What processes can be used to make a plastic product?	A plastic product can be made from: • injection moulding • blow moulding • thermo forming • composite • extrusion • fabrication • rotational moulding • other plastic processing methods
What are the work instructions?	Work instructions may include: • job sheets • patterns • plans • drawings and sketches • verbal or illustrated directions from supervisor • number and type of objects to be produced • quality requirements. • OHS&E requirements
What can OHS& E requirements include?	OHS&E requirements may include: • equipment safety instructions • hazardous and dangerous goods codes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• local safe operating procedures • specific workplace rules regarding personal protective wear and equipment. • environmental controls • risk assessment • emergency procedures
What can a suitable work area include?	A suitable work area may include: • on-site host company maintenance or tooling workshop • simulated workshop in RTO • on-site production facilities
What can appropriate tools, **equipment and materials include**?	Appropriate tools will vary according to the project, but may include: • manual saw • jigsaw • hacksaw • clamp • hammer • mallet • screw driver • punch • pliers and pincers • file • miter cutter • 90 degree angle • staple gun • paintbrush • rags • measuring tapes/ rulers • spirit level • bevel • chisel • rollers/scissors Appropriate equipment could include: • electric saw • electric sander • electric screw driver • power drills • vertical drill presses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• pedestal grinders • plastics processing equipment • plastics welders such as hot air guns, ultrasonic • injection moulders/blow moulders/rotational moulding equipment/thermoforming equipment Appropriate materials could include: • plastics raw material • extruded plastic sheeting (e.g. perspex, acrylic, polycarbonate) • adhesives • screws • bolts • glue • hinges and metal fasteners • sandpapers • primers • paints
What could potential hazards include?	Potential hazards may include: • broken or faulty equipment • unnoticed sharp objects • poor lighting • inadequate ventilation • inadequate attention to the activities of others • electrical shortages and power overload • disorganised or cluttered workspace (poor housekeeping) • poor attention when dealing with tools and equipment. • environmental chemicals, heat, dust, noise, gas and oil • hot equipment and materials • cuts • back strain
What could records include?	Records could include: • plant and maintenance records • set up, date, batch and materials • check sheets • reporting requirements • documenting equipment and/or material defects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• workplace procedures relating to the use of tools and equipment. • equipment booking forms and records • attendance records • quality reports • production reports • log sheets
What could specifications include?	Specifications could include: • measurements and dimensions • shape • joining methods • quality standard • materials to be used • appearance • colour/finish
What is involved in making sure plastic pieces are joined?	Plastic pieces can be joined together by: • glue • ultrasonic/hot air welding • clips • metal fasteners (e.g. screws, bolts, rivets.).
What is involved in making sure non-conformities are rectified?	Rectifying non-conformities could involve: • disassembly of the furniture item • reshaping /resizing or re-cutting component materials • reassembly • refinishing • adjusting process conditions.
What is involved in making sure work is finished?	Finishing work can include: • sanding • priming • painting • decorating. • assembly • polishing • trimming

Competency field	

Co-requisite units

Co-requisite units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSAPMOHS100A Follow OHS procedures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

On completion of this unit, the worker will be able to recognise hazards commonly occurring at the workplace and follow health and safety instructions and procedures in the workplace.

Application of the Unit

Application of this unit

This competency applies to workers who are required to follow OHS instructions and procedures relating to the work being undertaken. Workers will be aware of the importance of maintaining their own health and safety and the health and safety of others in the workplace. Individual workers will also be capable of dealing with incidents and emergencies within their own scope of responsibility and under the direction of the supervisor.

While the instructions and procedures must be derived from the relevant organisation OHS policies, the worker is not required to understand or interpret these policies. This interpretation should be undertaken by the supervisor when informing workers of the OHS requirements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Recognise hazards.	1.1 Identify hazards commonly found in the workplace. 1.2 Check work area routinely before and during work. 1.3 Describe causes of identified hazards.
2. Follow procedures for hazard control.	2.1 Follow procedures to remove or minimise hazards, within the scope of responsibilities and competencies. 2.2 Use required personal protective and other safety equipment. 2.3 Describe the potential consequences of failing to follow these procedures and instructions.
3. Follow emergency procedures.	3.1 Recognise emergency/emergency alarm. 3.2 Go to muster point following procedure. 3.3 Follow instructions related to the emergency.
4. Report problems.	4.1 Report to appropriate people in accordance with workplace procedures when hazards arise.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge and understanding is required of the workplace occupational health and safety (OHS) system sufficient to recognise situations affecting OHS and to take the appropriate action to rectify the situation.

Awareness is required that OHS issues are regulated by State/Territory Acts, regulations, codes of practice and industry standards.

Employees need to be able to follow OHS procedures.

Competence includes the ability to apply and describe procedures for:

- recognising hazards in the workplace
- recognising safety signs and symbols
- recognising hazards commonly found in the workplace and standard controls
- reporting hazards identified to the designated person/according to procedure.

Competence also includes the ability to:

- describe the rights and responsibilities of employees under the OHS legislation
- use and maintain appropriate PPE where required
- communicate OHS issues
- locate and follow OHS procedures under direct supervision.

Language, **literacy and numeracy requirements**

This unit requires the ability to recognise and interpret safety signs and other basic safety information. It also requires the ability to report hazards in an appropriate way and to follow emergency instructions.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations that will include disruptions to normal, smooth operation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- describe the workplace OHS system and know the importance of critical procedures
- recognise potential situations requiring action
- implement appropriate corrective action.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Emphasis should be on the ability to avoid a critical incident rather than on recovery from a disaster.

Consistent performance should be demonstrated. For example, look to see that:

- hazards and application of appropriate risk controls are known
- other hazards in the workplace that may arise are known and reporting/taking actions are according to procedure.

Assessment method and context

Assessment for this unit of competency will be on a manufacturing site or in a manufacturing environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual work environment and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit requires a body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the work environment (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

Assessment will require access to a manufacturing plant or working environment over an extended period of time, or a suitable method of gathering evidence of knowledge and understanding over a range of situations. A bank of scenarios, case studies, and 'what ifs' will be required, as will a bank of questions which will be used to check the reasoning behind the 'observable actions.'

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit of competency describes OHS requirements applicable for all workers whose work involves the use of workplace policies and procedures to maintain a safe work environment for themselves and others.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is expected that this competency may be applicable in combination with other industry, occupation or workplace-specific competencies. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards and hazard causes

Known hazards, such as those identified in procedures or training, are recognised. The underlying causes of these identified hazards are also described, eg *the identified hazard is slipping, the cause is spilled granules*.

Tools and equipment

This competency includes use of and checks on equipment and tools such as:

- housekeeping checks, such as obstructions on the floor which may create slip/trip hazard
- guards in place
- equipment in safe condition
- work area clear and organised
- nothing unusual/different
- emergency equipment available
- PPE is functional.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours
- fire and explosion.

Problems

Reporting problems means 'apply procedures to recognise and report hazards'.

Typical problems may include:

- recognition of hazards
- problems encountered in controlling risks associated with hazards
- observation of an injury and/or incident which occurred in the workplace
- clarification of understanding of OHS policies and procedures.

Personnel

Appropriate personnel for OHS referrals may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- employer
- supervisor
- employees elected as OHS representatives
- other personnel with OHS responsibilities.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Know when emergency happens.	1.1 Locate emergency signals and controls on machines and/or at the worksite. 1.2 Interpret the signals to take appropriate action. 1.3 Identify emergency where there is no mechanical/ electronic signal.
2. Follow emergency procedures.	2.1 Report emergency according to procedures. 2.2 Identify emergency leader. 2.3 Follow workplace procedures and work instructions for dealing with a range of emergencies, under direct supervision of emergency leader. 2.4 Describe the potential consequences of failing to follow these procedures and instructions. 2.5 Describe what to do if the emergency leader cannot be located when emergency occurs.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Knowledge and understanding of the emergency response procedures sufficient to recognise emergency situations and then determine the appropriate action.

Knowledge of the relevant OHS and environmental requirements, and organisation standard operating procedures, is required along with an ability to implement them in a manner that is relevant to emergency response practices.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence includes the ability to:

- identify location of emergency signals on machines and/or at the worksite
- identify emergency situations in which there is no mechanical/electronic signal
- report identified emergency signals/situations to the designated person
- identify the emergency leader
- follow emergency procedures.

Evidence of knowledge of all relevant workplace procedures will include:

- emergency, fire and accident procedures
- chemical spill procedures
- procedures for the use of personal protective clothing and equipment
- organisation standard operating procedures (SOPs)
- hazard policies and procedures
- safety procedures
- personal protective clothing relevant to the required response to the emergency situation.

Language, **literacy and numeracy requirements**

This unit requires the ability to recognise and respond to emergency signals or other communication of an emergency.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

Assessment will occur over a range of situations that will include disruptions to normal, smooth operation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise potential emergency situations
- take the appropriate action.

Emphasis should be on the ability to follow proper procedures in order to save oneself from possible injury and/or death.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Consistent performance should be demonstrated. For example, look to see that:

- emergency situations are recognised and communicated promptly
- emergency procedures are understood and followed.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems that may have been generated from the past incident history of the workplace and incidents on similar operations around the world.

Assessment method and context

Assessment for this unit will be on a processing plant or in a manufacturing environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual work environment and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. Emergency drills are a common and appropriate simulation.

This unit of competency requires a body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

It is expected that this competency may be applicable in combination with other industry, occupation or workplace-specific competencies. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Specific resources for assessment

Assessment will require access to an operating plant or work environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios, case studies and 'what ifs' will be required as will a bank of questions that will be used to probe the reasoning behind the observable actions.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit of competency describes emergency situation requirements applicable to all workers. It involves the use of workplace policies and procedures to maintain a safe work environment for oneself and others.

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as PPE required for emergency response.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours
- fire and explosion.

Personnel

Appropriate personnel for reporting of emergency may include:

- employer
- supervisor
- employees elected as emergency team leader
- other personnel with emergency team leader responsibilities.

Emergency issues

Emergency issues that may need to be raised by workers with designated personnel/ responded to may include:

- observation of injury or incident in the workplace
- fires
- chemical or oil spills
- gas leak or vapour emission
- utilities failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- bomb scares
- failure or malfunction of plant/machinery.

Emergency signals

Emergency signals include:

- visual - flashing lights
- auditory - alarms.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify hazards and assess risk.	1.1 Identify hazards in the work area before and during work. 1.2 Assess risks for the identified hazards. 1.3 Identify controls for these hazards from procedures. 1.4 Review effectiveness of controls within the scope of authority. 1.5 Identify and report remaining risk.
2. Follow procedures for risk control.	2.1 Control risks when working under minimal supervision by following workplace procedures. 2.2 Select, use and maintain relevant personal protective equipment (PPE). 2.3 Handle and store hazardous materials safely.
3. Follow emergency procedures	3.1 Recognise emergency situations. 3.2 Take appropriate initial emergency action. 3.3 Follow procedures for dealing with a range of emergencies.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
4. Initiate suggestions to	4.1 Raise OHS issues with designated personnel in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
enhance task/job-specific safety.	accordance with workplace procedures and relevant requirements of OHS legislation. 4.2 Contribute to participative arrangements for OHS management in the workplace within organisation procedures and the scope of responsibilities and competencies. 4.3 Provide input to minimise hazards in work area in line with organisation OHS procedures. 4.4 Provide input to opportunities for development of work group's competencies in relation to OHS. 4.5 Support the implementation of procedures to control risks using the hierarchy of control and in accordance with organisation procedures. 4.6 Report to appropriate people in accordance with workplace procedures when non-routine hazards arise.
5. Apply knowledge of OHS legislation and the organisation OHS policies and procedures	5.1 Follow workplace procedures to achieve a safe working environment in accordance with all relevant OHS legislation, including codes of practice relating to particular hazards within the workplace or industry. 5.2 Identify the rights and responsibilities of employees and employers under the relevant OHS legislation. 5.3 Complete (personally or with assistance) hazard, accident or incident reports as required by workplace procedures and relevant sections of OHS legislation.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding is required of the workplace OHS system and relevant industry standards, sufficient to participate in OHS activities and within the scope of work responsibilities and competencies.

Competence includes the ability to apply and describe:

- the identification of hazards and hazardous areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods for assessing risk
- the identification of standard controls for the hazards
- a simple evaluation of the effectiveness of the controls
- an awareness of the need for further action
- the rights and responsibilities of employees under the OHS legislation
- management systems and procedures for OHS
- the hierarchy of control
- hazard policies, procedures and information
- safety procedures
- emergency, fire and accident procedures
- emergency procedures for handling hazardous materials
- consequences of inappropriate handling of hazardous materials.

Competence also requires the ability to:

- locate, understand and follow workplace OHS procedures
- identify and interpret signs and symbols, including emergency alarms
- recognise hazards common to the industry and in their own workplace
- locate sources of OHS information within the workplace
- select and use personal protective clothing and equipment
- correctly use equipment for handling of chemicals/materials
- interpret and apply relevant Material Safety Data Sheets (MSDS).

Language, **literacy and numeracy requirements**

This unit requires the ability to read and apply hazard information in the workplace and make suggestions to enhance safety.

Writing is required to the level of completing required safety/incident reports.

Numeracy is required to complete incident reports and interpret hazard information.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations that will include disruptions to normal, smooth operation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Consistent safe working is the critical aspect for which evidence should be sought.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise potential situations requiring action
- implement appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that relevant workplace procedures are understood, in particular:

- hazard policies and procedures
- emergency, fire and accident procedures
- procedures for the use of personal protective clothing and equipment
- hazard identification and risk assessment procedures.

The following should also be known and understood:

- the hazards and potential risks in the workplace
- the consultation processes, either general or specific to OHS
- OHS information (what is there and how to access it)
- specific hazard policies procedures.

These aspects may be best assessed using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new, unusual and extreme situations, which may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities and similar sources.

Assessment method and context

Assessment for this unit of competency will be on a manufacturing site or in a manufacturing environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

It is expected that this competency may be applicable in combination with other industry, occupation or workplace-specific competencies. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Specific resources for assessment

Assessment will require access to a manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies and 'what ifs' will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit of competency describes OHS requirements applicable for all workers whose work involves the use of workplace policies and procedures to maintain a safe work environment for themselves and others.

It is expected that workers will be provided with clear directions, information, instruction, training and appropriate supervision regarding the relevant State/Territory OHS legislation, codes of practice, relevant industry standards, workplace procedures and work instructions.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Identify hazards

Hazard identification is the identification of known hazards in the workplace such as might be included in procedures, training and other workplace methods of identifying hazards.

Assess risks

Risk assessment is used in compliance with the relevant OHS acts and regulations. Assessment is to the extent required by the acts and regulations and is as relevant to the job.

Identify hazard controls

Identification of hazard controls is identifying the controls specified in the procedures or similar. Reviewing their effectiveness includes checking that they are in place and operational in accordance with standard procedure.

Tools and equipment

This competency includes use of equipment and tools such as:

- PPE
- handling aids
- other safety equipment.

Personal Protective Equipment (PPE)

Typical PPE includes:

- hard hats
- goggles/glasses/face shields

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hearing protection (ear muffs, plugs)
- dusk masks/canister masks/ SCBA/ long range breathers
- gloves/gauntlets
- safety boots
- antistatic equipment
- overalls/aprons/acid jackets/pants.

Selecting and using PPE includes:

- outlining the functions for each type of PPE used in the work environment
- identifying the situations in which specific types of PPE would be used
- using PPE correctly as required in a working environment.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights,
- confined spaces
- heat
- noise
- dusts or vapours
- fire and explosion
- dangerous goods.

Personnel

Appropriate personnel for OHS referrals may include:

- employer
- supervisor
- employees elected as OHS representatives
- other personnel with OHS responsibilities.

OHS Issues

OHS issues which may need to be raised by workers with designated personnel may include:

- recognition of hazards/methods of identifying hazards
- problems encountered in controlling risks associated with hazards (any of the controls as per the hierarchy of control which are relevant)
- observation of an injury and/or incident which occurred in the workplace
- clarification of understanding of OHS policies and procedures.

Recognise emergency situation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Recognition of emergency situations is from alarms, signals or other obvious mechanisms in the workplace.

Unit Sector(s)

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSAPMOHS205A Control minor incidents

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers control of minor incidents. The competency would be possessed generally by most/all operations personnel and some non-operations personnel. It would require training in addition to that which might typically be part of an induction program, but does not require specialist training such as is given to members of an incident response team. The general purpose of this initial response is to prevent any incident from escalating. In the event of an incident this person may be expected to respond to an incident team member in line with procedures.

This unit does NOT apply to major incidents (see *MSAOHS210A Control non-fire incidents* and *MSAOHS212A Control fire incidents*).

Application of the Unit

Application of this unit

This competency applies to operators who may be called upon to control small incidents in the workplace.

It includes:

- fires of the A,B,C,D,E and F classes
- fuel and other spills
- process overheating
- equipment failure.

The person would:

- safely use first response equipment and coordinate with other actions
- operate incident equipment
- report the use of incident equipment
- mark or position incident equipment to indicate that it has been used and requires servicing.

Generally the person would be part of a team during an incident response. However, he/she may be required to take independent action. At all times they would be liaising and cooperating with other members of the team.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Evaluate the incident	1.1 Recognise an incident has occurred or is about to occur. 1.2 Assess the incident for type of response and the likely effectiveness of first response action. 1.3 Identify the hazards arising from the incident.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	1.4 Raise the alarm and seek assistance as required. 1.5 Select appropriate response to control incident. 1.6 Determine hazard control measures to be employed. 1.7 Recommend evacuation if appropriate.
2. Control the incident.	2.1 Maintain personal safety at all times. 2.2 Confine the incident to the area of origin where possible. 2.3 Select appropriate equipment to control incident. 2.4 Use equipment in accordance with procedures. 2.5 Clear and secure the incident area. 2.6 Monitor the incident and surrounding conditions and modify response as appropriate. 2.7 Handover to specialist incident response personnel as appropriate.
3. Conclude the incident control.	3.1 Report the use of equipment according to procedures. 3.2 Mark or position incident control equipment after use to indicate it requires servicing or replacing. 3.3 Participate in incident debrief and reporting in accordance with procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

The knowledge referred to in the Evidence Guide for this unit includes:

- classification of fires and incidents
- limitations of first response equipment
- situations that must not be responded to because of the risk to life
- the hazards involved with first response action
- understanding relevant workplace procedures
- selecting appropriate first response equipment
- understanding the theory of fire and other relevant incidents.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence also includes the ability to isolate the causes of problems within the incident response system and to be able to distinguish between causes of problems indicated by:

- damage to first response equipment
- exceeding the limitations of use of incident control equipment or facilities
- inappropriate actions when first response action is undertaken
- inadequacies in facilities that may be used to confine emergencies
- inappropriately identifying the type of incident
- the incorrect use of equipment.

Language, literacy and numeracy requirements

This unit requires the ability to recognise and respond to the signs of an incident and communicate to relevant people as part of the response.

Writing is required to the level of completing required workplace forms and reports.

Numeracy is required to respond to relevant incident data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

Assessment will occur using a simulation and will be undertaken in a work-like environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- correctly respond to incident situations
- implement appropriate action.

Emphasis should be on the ability to stay ahead of the problem rather than to have to take drastic action in order to recover the situation.

Consistent performance should be demonstrated. For example, look to see that:

- the incident is evaluated appropriately
- an appropriate response to the incident, and appropriate response equipment, is selected
- the safety of persons is given the highest priority
- actions taken are effective and do not cause escalation or other incidents
- all reporting is completed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

These assessment activities should cover a range of problems, including new, unusual and improbable situations which may have been generated from past workplace incident history, incidents in similar workplaces around the world, hazard analysis activities and/or similar sources.

Assessment method and context

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Competence in this unit may be assessed:

- in an appropriate, industrial scenario
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit applies to all sectors of the industry.

This unit will assist individuals to meet some of their obligations under the relevant State/Territory legislation. Responsibility for appropriate contextualisation and application of the unit to ensure compliance however, remains with the individual organisation.

Organisations within the Chemical, Hydrocarbons and Oil Refining industries may find themselves falling under the provisions of various Major Hazard Facilities legislation. In developing this unit consideration has been given to the requirements of Sections 8 and 9 of the National Standard for the Control of Major Hazard Facilities [NOHSC:1014(2002)] and the National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016(1996)].

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

All operations to which this unit applies are subject to stringent Health, Safety and Environment (HSE) requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Tools and equipment

This competency includes use of equipment and tools such as:

- fire doors
- fire sprinkler systems
- fire alarm systems
- First Aid kits
- fire extinguishers
- hose reels
- smoke vents
- spill control kits.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- determining the nature and size of the incident
- predicting the incident's likely development
- lack of support in an incident
- inappropriate or lack of a means of escape
- lack of availability of control equipment or facilities.
-

MSAPMOHS210B Undertake first response to non-fire incidents

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit deals with recognising and responding to an emerging incident (except for fire) to provide an appropriate first response

Application of the Unit

Application of the unit	This competency applies to operators who are required to respond to an incident such as a leak, spill or other incident. The worker is not expected to deal with the emerging incident, but to provide an initial first response in order to contain the incident and/or secure the immediate area in order to minimise resultant damages and loss. In this unit it is assumed that the worker is acting according to established workplace procedures.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess level of severity.	1.1. Recognise an incident has occurred or is about to occur. 1.2. Access hazard information as appropriate. 1.3. Assess frequency, duration, actual and potential outcome. 1.4. Evaluate and communicate in a timely and appropriate manner the location, nature and extent of the incident.
2. Undertake routine response to minimise affect of the incident.	2.1. Determine first response requirements to contain the incident or evacuate the affected areas. 2.2. Select the appropriate response from the incident procedures and equipment. 2.3. Apply incident procedures as appropriate. 2.4. Clear and secure the incident area. 2.5. Safely locate, access and operate incident response equipment.
3. Notify responsible authorities.	3.1. Follow incident reporting procedures. 3.2. Identify appropriate authorities and notify. 3.3. Clearly and unambiguously communicate information concerning the incident in a timely manner.
4. Undertake safe evacuation.	4.1. Evacuate the area in a safe and controlled manner when first response has failed to control the incident or has proven inappropriate. 4.2. Secure the immediate area of the incident to ensure no further loss occurs to people, equipment, materials, process and environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
Competence includes the ability to apply and explain procedures for: • identifying hazard and emergency signs and labels • evacuation of different areas • operating various pieces of incident response equipment • communicating details of an incident situation clearly. Language, literacy and numeracy requirements • This unit requires the ability to respond to data and information indicating an incident. • Writing is required to the level of completing required workplace forms and reports. • Numeracy is required to the level of interpreting and reporting relevant data.
Required knowledge:

• Knowledge and understanding of the incident response procedures and equipment, sufficient to recognise standard and non-standard situations and then determine the appropriate action which is consistent with operating guidelines.
• Knowledge of the relevant OHS and environmental requirements, and organisation standard operating procedures is required along with an ability to implement them in a manner that is relevant to incident response practices.
• Evidence of knowledge of all relevant workplace procedures will include:
  • principles of operation of the incident response equipment
  • hazards policies and procedures
  • incident, fire and accident procedures
  • procedures for the use of personal protective clothing and equipment
  • organisation standard operating procedures (SOPs).

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The unit will be assessed in as holistic a manner as is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Assessment will occur with simulated industrial incidents and will be undertaken in a work-like environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • recognise and analyse potential situations requiring action • implement the appropriate corrective action. The reasoning process behind the problem analysis and determining the required actions should be assessed. The emphasis should be on the ability to minimise the affect of an incident situation. Consistent performance should be demonstrated. For example, look to see that: • incident situations are recognised and communicated promptly • action is taken to ensure that the effects of the incident situation are controlled promptly • potential to involve others in the incident is recognised and appropriately communicated • incident procedures are understood and followed. These aspects may be best assessed using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities (eg HAZOP) and similar sources.
Context of and specific resources for assessment	Assessment for this unit will be on a processing plant or in a manufacturing environment. Assessment will require access to an operating plant or manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions. This unit requires a body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *PMPOHS200 Participate in workplace safety procedures* • *PMASUP220 Monitor and control environmental hazards*.
Method of assessment	Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency covers all emerging incidents except for fire.
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Tools and equipment	This competency includes use of equipment and tools as required for the situation such as:
	• personal protective equipment such as breathing apparatus
	• incident response equipment such as hand held extinguishers, hose reels, fire blankets
	• evacuation equipment
	• survival equipment
	• standard operating procedures (SOPs)
	• external personnel such as:
	  • police
	  • fire brigade
	  • ambulance.

Hazards	Typical hazards include: • chemicals and hazardous materials • gases and liquids under pressure • moving machinery • materials handling • working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours.
Problems	'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include: • accidents • chemical or oil spills

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• gas leak or vapour emission • utilities failure • bomb scares.
Personnel	Appropriate personnel for OHS referrals may include: • employer • supervisor • employees elected as incident team leader • other personnel with incident team leader responsibilities.
OHS issues	OHS issues which may need to be raised by workers with designated personnel may include: • recognition of different types of emergencies • problems encountered in control measures and implementation • observation on injury and/or incident occurred in the workplace.
Required functions	Required functions include: • containment of incident, eg chemical/oil spill or gas/vapour leak • communication with internal and external personnel.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

MSAPMOHS212A Undertake first response to fire incidents

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit is designed to ensure that an appropriate first response to fire incidents in onshore and offshore situations/emergencies is achieved.

Application of the Unit

Application of this unit

This competency applies to operators who are required to respond to fires in the workplace (other than evacuating to the assembly point). It covers the first response (only) to fire, and does not include aggressive fire fighting. Typically this response would be undertaken to contain/extinguish a minor fire or to contain a more major fire while external help arrived.

An ability to work under supervision and/or alone is required. This competency may be delivered as part of an induction program.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify fire emergency and raise alarm.	1.1 Evaluate and communicate the location, nature and extent of the fire emergency in a timely and appropriate manner. 1.2 Determine first response requirements in order to evaluate the need to attack the fire emergencies or evacuate the affected areas.
2. Initiate basic fire responses.	2.1 Maintain personal safety at all times in accordance with OHS guidelines. 2.2 Put on appropriate protective clothing in accordance with organisation procedures. 2.3 Select appropriate extinguishing agents based on knowledge of fire and fuel types. 2.4 Operate basic fighting equipment safely, according to manufacturer specifications and organisation procedure, in order to contain the fire emergency. 2.5 Observe changing conditions at the fire and their effects on fire behaviour are noted and reported.
3. Notify responsible authorities.	3.1 Follow emergency reporting procedures. 3.2 Identify appropriate authorities and notify. 3.3 Clearly and unambiguously communicate information concerning the emergency in a timely manner.
4. Undertake safe evacuation.	4.1 Evacuate area in a safe and controlled manner when first response has failed to control the fire emergency, or has proven inappropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	4.2 Secure immediate area of the emergency to ensure no further loss occurs to people, equipment, process and environment.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process sufficient to recognise fire situations and then determine an action that is appropriate within operating guidelines and the scope of their responsibilities and competencies. It would be expected that a person would have skills in fire identification, assessment and application of control measures and be able to demonstrate the use and application of a range of first response fire fighting safety equipment.

A person undertaking this competency must be able to demonstrate knowledge of:

- site specific alarm procedures
- characteristics of fire and fuel types
- composition and uses of extinguishing agents
- basic fire fighting equipment
- site or organisation emergency procedures and response plans
- site specific isolation procedures
- liaison techniques with third parties
- procedures to isolate pipeline sectors.

Language, **literacy and numeracy requirements**

This unit requires the ability to identify different fire fighting media and different fuels.

Writing is required to the level of completing required workplace reports/forms.

Numeracy is required to interpret and report relevant data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise and analyse potential situations requiring action
- implement appropriate corrective action.

The emphasis should be on the ability to minimise the effects of the critical situation

Consistent performance should be demonstrated. For example, look to see that:

- identification of different types of fires
- selection and use of appropriate extinguishing agent
- application of defensive fire fighting tactics and techniques
- selection and use of appropriate protective clothing.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities (eg HAZOP) and similar sources.

Assessment method and context

Assessment for this unit of competency will be on an operating plant or in a manufacturing environment.

Assessment will occur using a simulated fire and will be undertaken in a work-like environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what if scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

In a major hazard facility, it may be appropriate to assess this unit concurrently with PMPOHS200 Work safely.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will require access to an operating plant or manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions that will be used to probe the reasoning behind the observable actions.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

Those persons working, operating or who regularly travel within an onshore or offshore installation or facility would require this competency.

This unit could be applied to any of the following installation or facilities:

- factories and production plants
- onshore/offshore rig/installation
- island based facility
- floating production vessel or platform
- onshore production, processing pipeline systems and/or storage facilities
- pipeline easements
- maintenance bases.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Tools and equipment

This competency includes use of equipment and tools such as:

- personal protective equipment
- such as breathing apparatus
- hand held extinguishers
- hose reels
- fire blankets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- smoke or self rescue respirators
- mobile and portable equipment
- First Aid equipment
- pipeline repair clamps
- lamb air movers
- barricades and signage
- communications equipment: two-way radios, mobile and satellite phones and pagers
- fire extinguishing media, including water, foam, extinguishing powder, gaseous extinguishing agents, vapourising liquids, other fire extinguishing substances.

Hazards

Typical hazards include:

- smoke, darkness and heat
- electricity
- gas
- structural hazards
- structural collapse
- industrial - machinery, equipment, product
- hazardous products and materials
- unauthorised personnel.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Variables

Key variables to be monitored include:

- failure to control fire with first response methods
- adverse change in weather conditions
- change in flame colour and size
- change in smoke colour
- fire spread and/or other material becoming involved in fire
- signs of structural collapse.

Tactics

Fire fighting tactics may include:

- direct attack
- indirect attack
- combination attack
- exposure protection

but does NOT include internal/offensive attacks.

External personnel

External personnel may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- police
- fire brigade
- ambulance.
-

MSAPMOHS216A Operate breathing apparatus

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers competence associated with the operation and maintenance of breathing apparatus equipment in an irrespirable atmosphere.

Application of the Unit

Application of this unit

This competency applies to operators who are required to wear breathing apparatus for part of their job - because they are working in a confined space, with hazardous gases/vapours, in an anoxic atmosphere or for other applications requiring the wearing of breathing apparatus. They may also be required to wear it in emergency situations, however this is not the prime focus of this unit, and so makes this unit different from *PUAFIR207A Operate breathing apparatus open circuit*, as it has no prerequisite and is much broader in its application.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Conduct pre-donning checks and tests on breathing apparatus.	1.1 Inspect breathing apparatus for immediate use in accordance with procedures. 1.2 Report/record faulty or damaged equipment in accordance with procedures.
2. Operate breathing apparatus.	2.1 Identify, monitor and control hazards in accordance with the procedures. 2.2 Establish and maintain communication with appropriate personnel throughout the activity. 2.3 Demonstrate effective application of breathing apparatus, undertaking activities as a member of a team, in accordance with procedures. 2.4 Implement entrapment procedures in accordance with procedures. 2.5 Maintain personal safety at all times.
3. Conclude operations.	3.1 Close down breathing apparatus set in accordance with procedures. 3.2 Remove breathing apparatus set in accordance with procedures. 3.3 Undertake after-use cleaning and maintenance of breathing apparatus in accordance with procedures. 3.4 Make equipment ready for operational use in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Underpinning knowledge:

- respiratory system, effects of irrespirable atmospheres on the body, protective equipment
- characteristics, component parts, operation of compressed air breathing apparatus
- operational testing, standard operating procedures and safe work practices when wearing breathing apparatus
- operating breathing apparatus
- use of procedures, personal lines and tallies
- pre-use tests and checks, including serviceability of components, integrity of components, cylinder pressure, integrity of air flow system, ancillary equipment.
- breathing apparatus control, including principles of BA Control, organisation procedures, Stage 1 (one entry point), Stage 2 (multiple entry points), entry/exit control point, entry/exit control officer, timing device
- entrapment procedures, including cease all strenuous activity, activate the distress signal unit, remain calm, relocate to safest available place, call for assistance
- communications, including distress signal unit, portable radio, communications sets, signal lines, hand signals.

Underpinning skills:

- Inspecting, donning, operating in, removal, cleaning, maintaining and returning to operational status of breathing apparatus.

Language, **literacy and numeracy requirements**

This unit requires the ability to interpret any permits or other documentation associated with the wearing of breathing apparatus for the job.

Writing is required to the level of completing required workplace reports.

Numeracy is required to enable the determination of the available working time from a breathing apparatus set and similar activities.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment. Assessors must be satisfied that the person can consistently perform the competency as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will occur using industrial breathing apparatus and will be undertaken in a work-like environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

In accordance with AS/NZ 17151716, it is essential that competence is demonstrated in the ability to:

- appropriately conduct pre-donning tests
- correctly don breathing apparatus
- operate breathing apparatus
- move in conditions of reduced visibility
- use breathing apparatus in emergency procedures
- follow organisation procedures
- correctly remove breathing apparatus
- return breathing apparatus to operational status.

Assessment method and context

Competence in this unit may be assessed:

- by using an appropriate, industrial breathing apparatus and scenarios
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to breathing apparatus and associated equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to anyone required to wear breathing apparatus as part of their job.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of breathing apparatus, including:

- open circuit
- airline equipment.

Hazards

Typical hazards include:

- fire
- failure to maintain a face seal
- exhaustion of air supply
- malfunction of equipment
- disorientation in smoke/darkness or confinement
- structural hazards and/or hazardous materials
- entrapment.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Variables

Key variables to be monitored for an irrespirable atmospheres include

- heated atmospheres
- asphyxiating atmosphere (oxygen deficient)
- (non-skin absorption) toxic or poisonous atmosphere
- smoke or suspended particles/fibres in atmosphere.

MSAPMOHS217A Gas test atmospheres

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit is about testing the working atmosphere to determine if it is safe for the proposed work. Testing involves the use of electronic test apparatus.

Application of the Unit

Application of this unit

In a typical scenario an individual may be required to carry out gas testing of an atmosphere prior to entering a specific area or workspace. The competency requires the person to interpret readings and take actions based on the interpretation.

This unit is modelled on the Public Safety unit PUAFIR307A Monitor hazardous atmospheres, but does not have the prerequisites, which are not required in the industrial context. The unit is more focused on the needs of that sector and has some wording changes.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Prepare for gas testing.	1.1 Determine type of gas/atmosphere to be tested. 1.2 Select and calibrate equipment in accordance with procedures. 1.3 Determine gas testing regime/sampling pattern required. 1.4 Identify hazards from possible atmosphere contaminants. 1.5 Implement hazard control measures, including use of appropriate personal protective equipment.
2. Test gas.	2.1 Use gas testing equipment to test gas as required. 2.2 Interpret and report readings. 2.3 Monitor gas on an ongoing basis as required. 2.4 Take required action(s) if readings are unacceptable.
3. Maintain equipment.	3.1 Clean and maintain gas testing equipment in accordance with procedures. 3.2 Inspect and fault find monitoring equipment in accordance with procedures. 3.3 Return gas testing equipment to required location and in required condition. 3.4 Maintain records of tests and results in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

As may be relevant to the plant/site/process, knowledge of the following may be required:

- common chemical asphyxiants, including hydrocarbons, carbon dioxide, carbon monoxide, hydrogen cyanide, and hydrogen sulphide
- common irritants and corrosives, including chlorine, ammonia and acid bases
- common flammable gases, including acetylene, petroleum, methane, ethane, propane and butane
- narcotics
- (explosive range, upper and lower explosive limits)
- exposure standards (time weighted average, short term exposure limits, peak limitation values, examination of toxic effect at the level of a range of flammable gases)
- conditions under which atmospheres become hazardous
- units of measurement used to express concentration of atmospheric contaminants (mg/cubic m. ppm, % v/v).

Underpinning skills could include interpretation and communication of results of sampling.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret a meter and then communicate the conclusions.

Writing is required to the level of completing required workplace reports/forms.

Numeracy read the instrument and interpret the results as being safe/not safe and so determine the required actions.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- apply personal safety principles
- interpret atmospheric conditions using atmospheric monitoring equipment
- recommend appropriate action
- maintain monitoring equipment.

Consistent performance should be demonstrated. For example, look to see that:

- gathered evidence covers a range of variables, all using different types of monitoring equipment.

Assessment method and context

Assessment will occur using industrial test equipment on an industrial site/plant and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- through written assignments
- by a demonstration activity using workplaces/atmospheres with detectable but safe levels of contaminants should be used
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

Working environment may be hazardous, unpredictable, subject to time pressure, chaotic and expose responders to risk, on land or water, by day or night.

Safety information and procedures must include relevant legislation, Australian Standards, codes of practice, manufacturer instructions and organisational procedures.

Situations include

- confined spaces
- enclosed and partially enclosed spaces
- storage tanks, silos, pits, pipes, shafts, ducts, transport vehicles and ships
- testing as part of issuing a work permit
- monitoring as part of working under a work permit
- open areas
- holding the gas tester by hand
- lowering the gas tester into a space, eg on a line.

Workplace atmospheres may

- include visible and invisible hazards
- include hazardous surfaces
- range from safe to unsafe.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

All operations to which this unit applies are subject to stringent Health, Safety and Environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Tools and equipment

This competency includes use of equipment and tools such as:

- portable instruments
- radiation detectors
- sampling tubes and pumps
- oxygen level meter
- carbon monoxide detector
- combustible gas detectors.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

MSAPMOHS220A Provide initial First Aid response

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit deals with the provision of essential First Aid in recognising and responding to an emergency using basic life support measures.

Application of the Unit

Application of this unit

This competency applies to operators who have a First Aid role as part of their job. The 'first aider' is not expected to deal with complex casualties or incidents, but to provide an initial response where First Aid is required. In this unit it is assumed the 'first aider' works under supervision, either individually or as part of a team, and/or according to established workplace First Aid procedures and policies.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Assess the situation.	1.1 Identify physical hazards to own and others' health and safety. 1.2 Minimise immediate risk of hazard to self and casualty's health and safety in accordance with OHS requirements. 1.3 Assess the casualty's vital signs and physical condition in accordance with workplace procedures.
2. Apply basic First Aid techniques.	2.1 Provide First Aid management in accordance with established First Aid procedures. 2.2 Reassure and make casualty comfortable in a caring and calm manner using available resources. 2.3 Seek First Aid assistance from others in a timely manner and as appropriate. 2.4 Monitor and respond to casualty's condition in accordance with effective First Aid principles and workplace procedures. 2.5 Accurately record details of casualty's physical condition, changes in conditions, management and response to management in line with organisational procedures. 2.6 Finalise casualty management details according to casualty's needs and First Aid principles.
3. Communicate details of the incident.	3.1 Request medical assistance using relevant communication media and equipment. 3.2 Accurately convey details of casualty's condition and management activities to emergency

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	services/relieving personnel. 3.3 Prepare reports to supervisors in a timely manner, presenting all relevant facts according to established company procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of basic life support measures sufficient to provide an initial response where First Aid is required within the scope of their responsibilities and competencies.

Knowledge and application of the Australian Resuscitation Council (ARC) guidelines.

The following knowledge should be demonstrated in assessment:

- basic anatomy and physiology
- company standard operating procedures (SOPs)
- legal responsibilities and duty of care
- dealing with confidentiality
- knowledge of the first aiders' skills and limitations
- Occupational Health and Safety legislation and regulations and requirements
- how to gain access to and interpret materials safety data sheets (MSDSs)
- First Aid management
- State and Territory workplace health and safety requirements
- allergies the casualty may have
- location and nature of the workplace
- the environmental conditions, eg electricity, biological risks, weather, motor vehicle accidents
- location of emergency service personnel
- the use and availability of First Aid equipment and resources
- infection control
- established First Aid principles, including:
    - checking the site for danger to self, casualty and others and minimising the danger
    - checking and maintaining the casualty's airway, breathing and circulation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence should demonstrate the following skills:

- resuscitation
- demonstration of First Aid casualty management principles - assessing and minimising danger, maintaining the casualty's airway, breathing and circulation
- safe manual handling of casualty
- consideration of the welfare of the casualty
- report preparation
- communication skills
- ability to interpret and use listed documents.

Underpinning knowledge and skills:

- basic anatomy and physiology
- duty of care
- resuscitation
- bleeding control
- care of unconscious
- infection control
- airway management
- State/Territory regulatory requirements relating to currency of skills and knowledge
- decision-making
- legal requirements
- assertiveness skills
- communication skills.

Language, **literacy and numeracy requirements**

This unit requires the ability to communicate both verbally and in writing with relevant people regarding the casualty's condition and treatments initiated.

Writing is required to the level of completing required workplace forms and reports.

Numeracy is required to read, interpret and report numeric data relevant to the casualty and the treatments.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will occur using industrial treatment scenarios and will be undertaken in a work-like environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- work individually, under supervision or as part of a First Aid team.

Assessment method and context

Competence in this unit may be assessed:

- by using appropriate, industrial scenarios
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

In a major hazard facility, it may be appropriate to assess this unit concurrently with:

- PMPOHS200 Work safely
- PMASUP220 Monitor and control environmental hazards.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to people with a First Aid role.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- defibrillation units
- pressure bandages
- thermometers
- First Aid kits
- eyewash
- thermal blankets
- pocket face masks
- rubber gloves
- dressing
- spacer device
- cervical collars
- mobile phones
- satellite phones
- HF/VHF radio
- flags
- flares
- two way radio
- email
- electronic equipment
- medication which includes aerosol bronchodilators for asthma; casualty's own (or from First Aid kit) in accordance with State/Territory legislation, adrenaline for severe allergic reactions; subject to casualty's own regime.

Hazards

Typical hazards include:

- workplace hazards
- environmental hazards
- proximity of other people
- hazards associated with the casualty management process.

Problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Variables

Key variables to be monitored include:

- vital signs, including breathing, circulation, consciousness.

Variables indicating the casualty's condition, including:

- abdominal injuries
- allergic reactions
- bleeding
- burns - thermal, chemical, friction, electrical
- cardiac conditions
- chemical contamination
- cold injuries
- crush injuries
- dislocations
- drowning
- envenomation - snake, spider, insect and marine bites
- environmental conditions such as hypothermia, dehydration, heat stroke
- epilepsy, diabetes, asthma and other medical conditions
- eye injuries
- fractures
- head injuries
- minor skin injuries
- neck and spinal injuries
- needle stick injuries
- poisoning and toxic substances
- respiratory management of asthma and/or choking
- shock
- smoke inhalation
- soft tissue injuries, including sprains, strains, dislocations
- substance abuse, including drugs
- unconsciousness, including not breathing and no pulse.

Risks

Risks may include:

- worksite equipment, machinery and substances
- environmental risks
- bodily fluids
- risk of further injury to the casualty
- risks associated with the proximity of other workers and bystanders.
-

MSAPMOHS300A Facilitate the implementation of OHS for a work group

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

On completion of this unit, the worker will be able to implement and monitor defined OHS policies and procedures for a work group or area, within their scope of responsibilities.

Application of the Unit

Application of this unit

This competency applies to operators who are capable of coaching the team in participating and contributing to OHS management issues. The worker will be able to perform duties that are required of a safety committee member or safety representative in an organisation. Typically this worker might be a team leader or on the OHS committee.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *MSAOHS200A Work safely*.

Employability Skills Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Communicate OHS information for co-workers in team.	1.1 Accurately and clearly explain to the work group basic OHS rights, responsibilities and requirements. 1.2 Provide, in a readily accessible manner, information on the relevant organisation OHS policies, procedures and programs, and accurately and clearly explain them to the work group. 1.3 Regularly provide relevant information about identified hazards and the outcomes of risk assessment and risk control procedures, and accurately and clearly explain them to the work group.
2. Coach co-workers in team.	2.1 Establish mutual support groups, eg buddy system, to encourage effective development of individual and group competencies in OHS. 2.2 Provide personal encouragement and assistance to team members to contribute to the management of OHS at the workplace.
3. Facilitate the consultative process.	3.1 Deal with, and promptly resolve, issues raised through consultation or refer to the appropriate personnel for resolution in accordance with workplace procedures. 3.2 Seek input from work group on OHS issues and proposed changes to process, procedures or work place. 3.3 Encourage and use feedback from individuals and teams to identify and implement improvements in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	management of OHS. 3.4 Promptly inform the work group of the outcomes of consultation over OHS issues.
4. Implement and monitor organisation procedures for identifying hazards, and assessing and controlling risk.	4.1 Implement and monitor adherence to work procedures to identify hazards and assess and control risk. 4.2 Monitor existing risk control measures and report results regularly. 4.3 Access internal and external sources of relevant OHS information. 4.4 Evaluate and identify inadequacies in existing risk control measures in accordance with the hierarchy of control, and report to designated personnel. 4.5 Identify inadequacies in resource allocation for implementation of risk control measures and report to designated personnel. 4.6 Identify actual/potential inadequacies in procedures and report to designated personnel. 4.7 Identify actual/potential inadequacies in individual or team competency and report to designated personnel.
5. Maintain and use OHS records.	5.1 Accurately and legibly complete OHS records for work area, in accordance with workplace requirements for OHS records and legal requirements for the maintenance of records of occupational injury and disease. 5.2 Use aggregated information from the area OHS records to identify hazards and monitor risk control procedures within work area according to procedures and within scope of responsibilities and competencies.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge and understanding of the workplace OHS system and State OHS legislative requirements, codes of practice and relevant industry standards sufficient to implement and monitor OHS activities for a work group or area within the scope of their responsibilities and competencies.

In these industries which are characterised by high potential hazard, employees need to exercise their duty of care responsibilities not only within the general OHS Acts and regulations, but also within those State and national standards applying to hazardous substances, dangerous goods and major hazards.

Competence includes the ability to apply and describe the:

- identification of hazards in the workplace and standard controls
- assessment of risk and implementation of risk control measures
- rights and responsibilities of employees under OHS legislation
- obligations of employers under the OHS legislation
- legislative requirements for information and consultation
- arrangements for consultation within the workplace
- management systems and procedures for OHS
- the hierarchy of control
- hazard policies and procedures
- safety procedures
- emergency, fire and accident procedures.

Competence also requires the ability to:

- locate, understand and follow workplace OHS procedures
- identify and communicate with all key personnel in the organisation
- identify and access relevant sources of information
- interpret OHS data such as tables of numbers and graphs
- select, recommend and use personal protective clothing and equipment.

Language, **literacy and numeracy requirements**

This unit requires the ability to communicate with members of the work team/area and also management. It also requires the ability to interpret and apply OHS procedures and explain them to work team members.

Writing is required to the level of being able to keep records as required and also keep notes from meetings.

Numeracy is required to interpret incident statistics and hazard data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations that will include disruptions to normal, smooth operation.

Where the assessee does not currently possess evidence of competency in *MSAOHS200A Work safely*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- communicate effectively with the work group(s)
- proactively promote consultation and participation in the OHS processes
- participate in decisions which impact on OHS for their workgroup.

Consistent performance should be demonstrated. In particular look for knowledge and understanding of:

- specific hazard policies and the use of hazard procedures (eg identify, assess, control)
- the consultation processes, either general or specific to OHS
- OHS information
- OHS record keeping
- counselling, disciplinary and issue resolution processes.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities and similar sources.

Assessment method and context

Assessment for this unit of competency will be on a processing plant or in a manufacturing environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

It is expected that this competency may be applicable in combination with other industry, occupation or workplace-specific competencies. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will require access to an operating plant or manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions that will be used to probe the reasoning behind the observable actions.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit describes OHS requirements applicable for all workers who are responsible for the organisation of OHS arrangements for a work group or area, including coaching.

It is expected that workers will be provided with clear directions, information, instruction, training and appropriate supervision regarding the relevant State/Territory OHS legislation, codes of practice, relevant industry standards, workplace procedures and work instructions.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion.

Personnel

Appropriate personnel for OHS referrals may include:

- employer
- supervisor
- employees elected as OHS representatives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other personnel with OHS responsibilities.

Participative arrangements

Participative arrangements for OHS management may involve:

- making safety suggestions
- information sessions on existing or new issues
- meetings between employer and employees or representatives
- access to relevant workplace information
- use of clear and understandable language.

OHS Issues

OHS issues which may need to be raised by workers with designated personnel may include:

- recognition of hazards
- problems encountered in controlling risks associated with hazards
- clarification of understanding of OHS policies and procedures.

OHS Records

OHS records include:

- hazard and incident reports
- logs/logs sheets
- inspection/start up/shut down checklists
- injury reports
- maintenance records.

OHS Information Sources

Relevant sources of OHS information include:

- OHS legislation and codes of practice
- industry standards for materials, process, equipment etc
- SA/ISO standards
- OHS authorities
- unions and industry associations
- internet, journals, magazines
- manufacturer/supplier manuals/specifications
- policies and procedures
- JSA, risk assessments, HAZOPs
- hazard, incident and injury records
- training resources
- employee information brochures, newsletters etc
- OHS reports such as inspections, technical reports.
-

MSAPMOHS400A Contribute to OHS management system

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

On completion of this unit, the worker will be able to contribute to the workplace occupational health and safety (OHS) management system and ensure that the workplace is, so far as is practicable, safe and without risks to the health of workers.

Application of the Unit

Application of this unit

This competency applies to personnel who are required to implement, monitor and improve the OHS management system. It typically applies to an OHS expert, or a supervisor or manager who has OHS particular responsibilities.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *MSAOHS300A Facilitate the implementation of OHS for a work group*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Establish and review procedures for identifying hazards, and assessing and controlling risk.	1.1 Access current, relevant information on legislative and industry requirements for hazard identification and risk assessment and control. 1.2 Identify gaps in procedures. 1.3 Develop workplace procedures to meet requirements. 1.4 Involve relevant stakeholders in procedures development. 1.5 Review the procedures on a regular basis by consulting stakeholder groups for feedback. 1.6 Inform relevant stakeholders and other work groups of any changes and implement changes in the procedures.
2. Establish and review incident procedures	2.1 Identify legal and organisation requirements. 2.2 Identify gaps in procedures. 2.3 Develop workplace procedures for dealing with incidents. 2.4 Review the procedures by consulting stakeholder groups for feedback. 2.5 Inform relevant stakeholders and other work groups of any changes and implement changes in the procedures.
3. Implement and review training program from an OHS perspective.	3.1 Identify the legal, organisational and practical requirements for OHS training. 3.2 Evaluate the workplace training program for OHS gaps.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Review the program on a regular basis by consulting stakeholders and work groups for feedback. 3.4 Take appropriate action to incorporate relevant feedback into the revised program. 3.5 Inform relevant work groups of any changes and implement changes in the OHS training program.
4. Implement and review OHS recording system.	4.1 Identify the legal and organisational requirements for OHS records. 4.2 Evaluate the workplace OHS recording system for gaps. 4.3 Review the system on a regular basis by consulting stakeholders and work groups for feedback. 4.4 Incorporate relevant feedback into the revised system in consultation with stakeholders. 4.5 Inform relevant work groups of any changes and implement changes in the management of OHS record.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the workplace OHS system and State OHS legislative requirements, codes of practice and relevant industry standards sufficient to contribute to the workplace OHS management system for a work group or area within the scope of their responsibilities and competencies.

In these industries which are characterised by high potential hazard, team leaders and supervisors must be aware that employees need to exercise their duty of care responsibilities. This will be not only within the general OHS Acts and regulations, but also within those State and national standards applying to hazardous substances, dangerous goods and major hazards.

Competence includes the ability to apply and describe the:

- identification of hazards common to the industry and standard controls
- rights and responsibilities of employees under OHS legislation
- obligations of employers under the OHS legislation
- legislative requirements for information and consultation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legislative requirements for record keeping and reporting
- appropriate consultation arrangements for the industry
- numeracy, literacy and other communication skills of work group(s)
- duty of care of employers and employees
- hierarchy of control.

Competence also requires the ability to:

- access and use the current OHSMS
- access and interpret training records
- identify and communicate with all key personnel in the organisation
- identify and access relevant sources of information.

Knowledge of related management systems, eg purchasing and IT, is also required.

Language, **literacy and numeracy requirements**

This unit requires the ability to interpret and apply complex documents with specific technical jargon.

Writing is required to the level of drafting policy and procedures.

Numeracy is required to the level of interpreting statistics and hazard data and setting up appropriate safety measurements.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations that will include disruptions to normal, smooth operation.

Where the assessee does not currently possess evidence of competency in *MSAOHS300A Facilitate the implementation of OHS for a work group*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify/describe the workplace OHS system and State OHS legislative requirements as well as the importance of critical procedures
- recognise and analyse potential situations that require action
- implement appropriate corrective action.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

There should be an underpinning understanding of the duty of care responsibilities of employer and employees.

Consistent performance should be demonstrated. For example, demonstrated knowledge and understanding of:

- all relevant workplace procedures
- the requirements that the workplace procedures should meet
- the consultation processes, either general or specific to OHS
- training and assessment of training needs
- hazard identification, risk assessment and risk control methods
- the need for specific hazard management policies and procedures
- types and sources of OHS information
- OHS record keeping systems
- the system for and process of maintenance of plant and equipment
- OHS issue resolution processes.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities and similar sources.

Assessment method and context

Assessment for this unit of competency will be on a processing plant or in a manufacturing environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

It is expected that this competency may be applicable in combination with other industry, occupation or workplace-specific competencies. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Specific resources for assessment

Assessment will require access to an operating plant or manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies and 'what ifs' will be required as will a bank of questions that will be used to probe the reasoning behind the observable actions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit covers live, real time and ongoing routine hazard identification and risk assessment.

This unit describes OHS requirements applicable for those with responsibilities for contributing to the workplace OHS management system within a work group or area. This may be as a team leader or as a supervisor. Roles and responsibilities will vary from organisation to organisation.

Review of activities may include review of written reports, performance appraisal or auditing procedures.

Competence is demonstrated in the context of an organisation where the OHS system with related policies, procedures and programs is already established. The role will relate to the maintenance and upkeep of the system.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours
- fire and explosion.

OHS Information

Sources of relevant OHS information include:

- OHS legislation and codes of practice
- industry standards for materials, process, equipment etc
- SA/ISO standards
- OHS authorities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- unions and industry associations
- Internet, journals, magazines
- manufacturer/supplier manuals/specifications
- policies and procedures
- JSA, risk assessments, HAZOPs
- hazard, incident and injury records
- training resources
- employee information brochures, newsletters etc
- OHS reports such as inspections, technical reports.
-

MSAPMOHS401A Assess risk

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

On completion of this unit, the worker will be able to identify hazards and operability problems and then analyse them by hazard analysis techniques to assess risk.

Application of the Unit

Application of this unit

A team with a broad knowledge of the system and its operation will carry out the analysis. It is expected that the risk assessment processes are already defined for the enterprise and that the risk acceptance criteria have already been established. The team will be steered by engineering experts or risk assessment specialists in the industry. This competency applies to workers who, in a typical scenario, take an active role in a HAZOP or similar methodology. They are not expected to lead the HAZOP. This unit is not restricted to HAZOPs and may be applied to other methodologies requiring similar competency. The risk assessment should be consistent with AS 4360 - Risk Management.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify hazards and potential operability problems.	1.1 Contribute to the compiling of a system description of all the machinery, equipment, operations, products and materials relevant to the everyday working procedures of the facility. 1.2 Contribute to the compiling of a checklist containing process parameters (primary key words) and guide words (secondary key words) relevant to the system. 1.3 Identify hazards, existing control measures and potential operability problems or breakdowns in control measures using the compiled system descriptions and the checklist.
2. Assess impact of risk and determine alternative strategies.	2.1 Screen for causes of deviations and establish consequences. 2.2 Determine alternative strategies for action in relation to each deviation within the range of competency and responsibility. 2.3 Review, clarify and/or analyse risk information to determine its relevance and reliability depending upon the task assigned, level of competency and area of responsibility.
3. Assess risk information against established risk criteria in risk management plan.	3.1 Check risk acceptance criteria for any changes over past period. 3.2 Compare risk information against risk acceptance criteria and procedures to assess acceptability of risk.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Conduct liaison with other Internal departments to assess impact on business if applicable. 3.4 Document findings according to company policies and procedures.
4. Develop a risk register.	4.1 Develop a risk assessment chart for each system studied containing deviation, cause, consequence, control measures and action. 4.2 Develop action plan for implementation of control measures, including any changes to procedures. 4.3 Establish or review the procedures by consulting relevant/different work groups. 4.4 Inform relevant work groups of any changes and implement, within area of responsibility, changes in the procedures. 4.5 Monitor effectiveness of the control measures including revised procedures.
5. Establish and maintain procedures for identifying hazards, and assessing and controlling risk.	5.1 Identify and develop procedures for routine hazard identification, assessment and control of risks. 5.2 Address identification of all hazards at the planning, design and evaluation stages of any changes in the workplace to ensure that new hazards are not created by the proposed changes. 5.3 Develop and maintain procedures for selection and implementation of risk control measures in accordance with the hierarchy of control. 5.4 Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and, within area of responsibility, promptly provide resources enabling implementation of new measures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to apply a consistent risk assessment methodology which is appropriate to the workplace being assessed. One example of this is the HAZOP methodology, but other methodologies may be used.

Some understanding of quantitative risk assessment, such as HAZAN, is also required.

The requirements of the relevant OHS act and regulations with regard to risk assessment should be known and followed.

Knowledge includes:

- identification of hazards and how hazard controls may break down
- an understanding of risks and how they may be reduced
- the modelling and evaluation of a wide range of failure modes
- analysis which is auditable, repeatable, verifiable and usable by other staff
- analysis systems appropriate to the system operating in the given domain and appropriate for the particular life cycle phase at which it is to be applied
- determining valid results from data of the quality and quantity actually available
- use of standard pro-formas to support the technique
- a rational technical base which may include reference to national or international standards, defence standards or published reference books.

Language, **literacy and numeracy requirements**

This unit requires the ability to interpret process plant descriptions and drawings.

Writing is required to the level of making the required reports for the process.

Numeracy is required to interpret hazard and probability data and determine risk profiles.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Assessment will occur by analysing an appropriate industrial site and will be undertaken in a work-like environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- know and understand the workplace systems and the importance of critical procedures
- apply a working knowledge of all relevant workplace procedures.

Consistent performance should be demonstrated. For example, look to see that the techniques used:

- enable identification of hazards and how hazard controls may break down
- enhance the understanding of risks and how it may be reduced
- permit the modelling and evaluation of a wide range of failure modes
- enable the analysis to be carried out in a manner that is auditable, repeatable and verifiable
- are usable by other staff
- are appropriate to the system operating in the given domain
- give valid results from data of the quality and quantity actually available
- are appropriate for the particular lifecycle phase at which it is to be applied
- provide standard pro-formas to support the technique
- have a rational technical basis which may include reference to national or international standards, defence standards or published reference books.

These aspects may be best assessed using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the plant/equipment, incidents on similar plants around the world, past hazard analysis activities and similar sources.

Assessment method and context

Competence in this unit may be assessed:

- on an appropriate, industrial plant/site
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit will be completed as a specialist unit (eg by plant technicians) requiring technical knowledge.

The aim of this competency unit is to apply a methodical examination of the system and its elements to identify hazards and the states or conditions where there may be loss of control of the hazard and the resultant consequences The results of the hazard analysis should be expressed clearly and concisely, and include where possible tables and diagrams. Team members would contribute their understanding of the process and particularly the operational aspects, and then carry out whatever tasks are assigned to them by the analysis team.

While this competency aims to enable a person to identify hazards and assess risk through a systematic approach, more than 80% of recommendations can be operability problems and are not, of themselves, hazards. Although hazard identification should be the main focus, operability problems should be identified to the extent that they have the potential to lead to a breakdown in hazard controls resulting in a health, safety or environmental violation or have a negative impact on profitability.

The degree of depth of a checklist should be dependent on the knowledge of the system at the time the study is carried out. This technique can therefore be applied at any stage of the project/process lifecycle.

Screening for deviations includes accessing internal and external data that may provide information about previous incidents or warnings of incidents. Sources of such information may include:

- internal hazard and incidents reports, maintenance records, audit reports
- reports from similar plants, factories, industry bodies, regulators, journals etc of actual incidents or reports that have relevance to the situation being analysed.

Examples of risk assessment tools may range from relatively simple to more complex HAZOP analyses and other methodologies requiring similar competency.

Procedures

All operations are performed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours
- fire and explosion.

Problems

Typical process and product problems may include:

- incidents with a potential for injury
- fires, explosions
- chemical spills
- bomb scares.

Process Parameters

Specific process parameters (primary key words) relevant to the system may include:

- flow
- temperature
- pressure
- relief
- instrumentation
- sampling
- addition
- safety
- reaction
- reduce (grind, crush)
- absorb
- isolate
- vent
- start-up
- composition
- phase
- level
- corrosion
- erosion
- services

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- utilities
- maintenance/maintain
- inserting
- purging
- contamination
- separate (settle, filter, centrifuge)
- mix
- drain
- shutdown.

MSAPMOHS510A Manage risk

Modification History

Release 2 – updated to be consistent with ISO 31000:2009 Risk Management – Principles and Guidelines. Previous unit referred to Australian Standard (AS/NZS 4360:1999). Reformatted - Equivalent.

Unit Descriptor

This unit covers the development, implementation and evaluation of an organisation-wide risk management plan. It incorporates an assessment of all potential risks facing the organisation and the approach, the management components and resources to be applied to the management of risk.

Application of the Unit

This unit applies to managers or work health and safety (WHS) specialists who are developing or maintaining a risk management plan for their site or organisation. This unit is based on ISO 31000:2009 Risk Management – Principles and Guidelines, and as such may be applied quite broadly. However, it is probably best applied to health, safety and environment risks and the business and other risks consequent on them.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MSAPMOHS401A Assess risk

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

1	Develop risk management plan	1.1	Analyse and interpret strategic position and policy on risk management
		1.2	Identify risk management context and potential areas of risk
		1.3	Analyse organisational capability to manage risk and achieve objectives
		1.4	Generate a comprehensive list of risks that could affect the achievement of the organisation’s objectives
		1.5	Establish or review risk management policies
		1.6	Evaluate the requirement for training/education for all groups and individuals
		1.7	Identify access to external specialist assistance
		1.8	Establish appropriate risk assessment techniques
		1.9	Consult stakeholders in the development of the plan
2	Implement risk management plan	2.1	Define, in consultation with stakeholders, the criteria used to evaluate the significance of risk
		2.2	Evaluate and prioritise risks for treatment
		2.3	Determine and select the most appropriate options for treating risks
		2.4	Implement and monitor risk treatment plan
		2.5	Document strategies for risk treatment options

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Evaluate risk management plan	3.1	Establish procedures to regularly review risk management activities
		3.2	Ensure stakeholders have input to the review
		3.3	Examine activities that do not achieve their objective/ performance outcomes to determine cause
		3.4	Identify targets for improvement and update plan
		3.5	Establish evaluation of risk management as a key component of all projects/activities

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- the ability to communicate high-level material using all modes of communication to all levels
- writing to the level of writing reports, policies and procedures
- numeracy to interpret and manipulate technical data

Required knowledge

The person must demonstrate understanding of specialised knowledge with depth in some areas. Required knowledge is to be limited to that which is sufficient to perform particular risk management functions. Competence includes the ability to apply and explain:

- AS/NZS ISO 31000:2009 Risk Management - Principles and Guidelines
- relevant legislation from all levels of government that effects business operation, especially in regard to WHS and environmental issues, equal employment opportunity (EEO), industrial relations and anti-discrimination
- the legal implications of deeming identified risks as acceptable
- strategic, tactical and operational plans of the organisation
- legal requirements for operating the business relevant to the area of responsibility
- relevant awards and industrial agreements
- workplace standards for WHS and environmental management
- internal or external audit methods
- focus group processes
- risk analysis processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- investigation reports
- review of data, such as risk and incident reports, maintenance records and production records

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A holistic approach should be taken to the assessment. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • develop, implement and evaluate the development of plans to eliminate, isolate or protect people (and/or equipment) in the event of a potential negative event occurring. The emphasis should be on the ability to avoid/eliminate critical incidents rather than on recovery from a disaster. These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities (e.g. HAZOP) and similar sources.
Context of and specific resources for assessment	Assessment will occur in an industrial site/plant and will be undertaken in a work-like environment. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	Questioning may take place either in the workplace, or in an adjacent, quiet facility, such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	Competence in this unit may be assessed: • on an appropriate, industrial plant/site • in a situation allowing the generation of evidence of the ability to respond to problems • by using a suitable simulation and/or a range of case studies/scenarios • through a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the required knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.
Guidance information for assessment	Assessment processes and techniques must be appropriate to the language, competency and safety requirements of the organisation and consistent with workplace systems or procedures.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Context	Risk management is defined as coordinated activities to direct and control an organisation with regard to risk. The risk management plan should specify the approach, the management components and resources to be applied to the management of risk.
External specialist assistance	External specialist assistance may include but is not

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	limited to any group or individual in the community who has the expertise to assist the organisation to deal with any event/incident which may occur.
Risk	Risk is the effect of uncertainty on objectives. Risk may include but is not limited to: • injury or disease • environmental factors • product failure • financial/economic loss/failure • damage to property/plant/equipment • industrial disputes • professional incompetence • natural disasters • security failure (including criminal or terrorist activities) • equipment/system failures • political events
Appropriate options for treating risks	Appropriate options for treating risks may include but are not limited to: • compatibility with organisation policy • feasibility of implementing • validity of proposed treatment
Legislation	Legislation, codes and national standards relevant to the workplace may include: • award and organisation agreements and relevant industrial instruments • relevant legislation from all levels of government that affects business operation, especially in regard to WHS, environmental issues, equal employment opportunity (EEO), industrial relations and anti-discrimination • relevant industry codes of practice
Procedures	All operations are performed in accordance with procedures. Procedures include: • all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state or federal legislation, and these must not be compromised at any time. Where there is an

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

MSAPMOHS503A Maintain the workplace OHS management system

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the ongoing maintenance of the OHS management system (OHSMS) within the area of managerial responsibility, in order to ensure that the workplace is, so far as is practicable, consistently safe and without risks to the health and safety of employees. It assumes that the OHSMS has been developed by persons with the relevant specialist knowledge and skills.

Application of the Unit

Application of this unit

This competency applies to personnel with a specialised responsibility for maintaining the workplace OHSMS. This will typically be a manager, team leader or a technician with particular OHS responsibilities. The work will be carried out with the support of other team members.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
1. Manage OHS information in the workplace	1.1 Take action to ensure that requirements for OHS record keeping and reporting are implemented according to workplace procedures and legislative requirements. 1.2 Access sources of OHS information and evaluate for application to the workplace. 1.3 Collect and collate data and information to provide information to managers and stakeholders on OHS requirements, trends and risk controls.
2. Support implementation of OHSMS	2.1 Determine OHS priorities in consultation with appropriate managers and stakeholders. 2.2 Identify OHS training needs for implementation and maintenance of the OHSMS. 2.3 Develop action plans taking account of priorities and training needs. 2.4 Monitor achievement of action plans and update plans accordingly.
3. Support OHS participative arrangements	3.1 Ensure OHS information and documentation is understandable and accessible to all. 3.2 Promptly address OHS issues that may arise within area of authority or refer to appropriate person. 3.3 Provide information about the outcomes of OHS consultation in a manner that is accessible to all.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
4. Collect data to evaluate currency of OHSMS.	4.1 Identify, in consultation with stakeholders and, as required expert advisors, internal data and information that provides relevant and reliable information on the performance of the OHSMS. 4.2 Conduct workplace inspections on a regular basis. 4.3 Identify workplace OHS implications of any changes to legislation. 4.4 Identify any OHS implications to proposed changes to the workplace. 4.5 Take action to arrange an OHSMS audit.
5. Analyse data and information to identify areas for improvement	5.1 Assess compliance of OHSMS with OHS legislation. 5.2 Analyse information collected to identify areas for improvement. 5.3 Consult with stakeholders, key personnel and, as required, OHS advisors. 5.4 Document and communicate outcomes of analysis to key personnel and stakeholders in an easily understood format. 5.5 Recognise limits of own expertise and seek appropriate advice.
6. Initiate and maintain improvements.	6.1 Determine priorities for OHS in consultation with stakeholder. 6.2 In consultation with stakeholders, develop an OHS plan with responsibilities and time frames. 6.3 Identify and source resources required for implementation of plan. 6.4 Monitor achievement against plan. 6.5 In consultation with stakeholders, monitor effectiveness of modifications to OHSMS on an ongoing basis.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge and understanding of the workplace OHSMS and State OHS legislative requirements, codes of practice and relevant industry standards sufficient to maintain, evaluate and improve the workplace OHS management system within the scope of their responsibilities and competencies.

Management must be aware that, while employees have OHS responsibilities, line managers are ultimately responsible, under both OHS legislation and common law duty of care, for the safety of the workplace, including ensuring that employees comply with documented work procedures. This legislation includes general OHS legislation as well as that for hazardous substances, dangerous goods and major hazard sites.

Competence in this unit includes the ability to apply a working knowledge of the workplace, relevant OHS legislation and OHSMS to:

- maintain an OHSMS already defined and established
- identify types of data and information that will provide information on the effectiveness of the OHSMS in minimising risk
- analyse the data to identify areas for improvement in elements of the OHSMS, including communication and consultation, reporting and hazard identification, risk assessment and risk control,
- develop strategies for improvement in the OHSMS
- apply the hierarchy of control to recommend actions to minimise risk
- OHS record keeping and reporting as required under:
- hazardous substances and dangerous goods legislation
- OHS legislative requirements to report serious incidents and injuries and keep records of risk assessments
- creation and management of other record such as:
- hazard and incident reports, investigation reports
- completed workplace inspection checklists and reports
- external or internal reports
- minutes of meetings.

Language, **literacy and numeracy requirements**

This unit requires the ability to communicate in all modes and at all levels conveying what is often technical content/ideas.

Writing is required to the level of writing the required reports and documents.

Numeracy is required to interpret and manipulate the necessary data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Assessment will occur on an industrial site and will be undertaken in a work-like environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- interact with the workforce to maintain the process that comprise the OHSMS
- access and analyse information to identify areas for improvement
- develop appropriate improvement strategies
- apply a quality improvement process to implement and monitor change

Consistent performance should be demonstrated. For example, look to see thatthe required level includes a working knowledge of the workplace OHSMS. Look to see knowledge and understanding of:

- OHS responsibilities of all levels in the workplace
- the consultation processes, either general or specific to OHS
- hazard identification and risk assessment
- implementation of risk control measures by applying the hierarchy of control
- new and relevant OHS information
- OHS record keeping
- OHS issue resolution legislative requirements for consultation prior to the implementation of change
- sources and types if information that provide realistic information on the performance of the OHSMS
- techniques for analysing OHS data, including simple statistical analysis and graphing of trends
- types of internal and external change that may impact on OHS.

These aspects may be best assessed in a realistic workplace. Where this is difficult to access then steps should be taken to arrange access to realistic data and a visit to a workplace. Scenarios and case studies may provide a suitable adjunct. These assessment activities should include a range of problems that may be encountered when maintaining reviewing and implementing improvement to the OHSMS.

Assessment method and context

Competence in this unit may be assessed:

- on an appropriate, industrial plant/site
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit describes OHS requirements applicable for those with managerial responsibilities for maintaining and improving an established OHSMS within the organisation. This may be as a worker or as an owner of a business. This competency assumes that the OHSMS has been established by others, either internal or external and that expert advice is available either internally or externally.

The competency is to be exhibited within the area of managerial responsibility, which may be an entire organisation or department of an organisation. Roles and responsibilities will vary from organisation to organisation.

While relevant positions for maintaining and improving the OHSMS will include managers, OHS officers/managers it should be quite clear that the legal responsibility for OHS rests with the line managers.

Analysis of data may include statistical analysis, qualitative analysis or informal review.

Procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours
- fire and explosion.

OHS Information Sources

Sources of OHS information may be external and include:

- OHS legislation, codes of practice and Australian and International standards
- OHS regulators and Australian Safety and Compensation Council (ASCC)
- industry bodies
- Internet sites, journals and newsletters
- OHS policies and procedures
- manufacturer manuals
- risk assessments, JSAs, workplace inspections
- MSDSs and registers
- hazard and incident reports.
-

MSAPMOHS601A Establish workplace OHS management system

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers the establishment and maintenance of the OHS management system (OHSMS) at the senior management level, in order to meet legislative requirements and to ensure that the workplace is, so far as is practicable, safe and without risks to the health of employees.

Application of the Unit

Application of this unit

This competency applies to managers and senior technicians who have an OHS responsibility. It typically applies when an OHSMS is being established, but could be used for a complete review of an existing OHSMS.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *MSAOHS503A Maintain the workplace OHS management system*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify needs of the OHSMS	1.1 Analyse the workplace to identify needs and workplace factors that may impact on the design of the OHSMS. 1.2 Clarify OHS legal obligations in relation to the specific workplace. 1.3 Review relevant standards relating to OHSMS. 1.4 Identify links with other functional areas and management systems. 1.5 Seek input from stakeholders on the design of the OHSMS.
2. Establish the framework for the OHSMS	2.1 Ensure OHS responsibilities and duties are documented and accountability processes are in place. 2.2 Identify and source financial and human resources required for the operation of the OHSMS. 2.3 Establish or review OHS policies and procedures. 2.4 Ensure implications of any proposed changes to the workplace are identified and addressed. 2.5 Recognise limits of own professional expertise and consult OHS specialists as necessary.
3. Establish and maintain participative arrangements for the management of OHS.	3.1 Establish and maintain appropriate participative processes with employees and their representatives in accordance with relevant OHS legislation and industry standards. 3.2 Provide information on OHS to employees in a format that is readily accessible and understandable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Promptly and effectively deal with and resolve issues raised through participation and consultation in accordance with procedures for issues resolution. 3.4 Provide information about the outcomes of participation and consultation in a manner accessible to employees.
4. Establish and maintain risk management processes	4.1 Establish or review procedures for hazard, incident and injury reporting and investigation. 4.2 Establish or review procedures for hazard identification, hazard analysis and risk assessment. 4.3 Establish or review hazard specific risk control measures currently in place to meet legal requirements and minimise risk as far as is practicable. 4.4 Establish or review procedures for on going control of identified hazards and monitoring of the effectiveness of controls.
5. Establish and maintain an OHS training program.	5.1 Conduct an OHS training needs assessment for the workgroup that takes account of legislative requirements, internal policies and procedures, skills of workgroup and risk control requirements. 5.2 Develop and implement an OHS training program to identify and fulfil employee's OHS training needs as a part of the organisation general training program. 5.3 Coordinate with relevant training experts as necessary.
6. Establish and maintain a system for OHS records.	6.1 Identify and address legal requirements for record keeping and reporting. 6.2 Identify and access sources of OHS information. 6.3 Take actions to ensure that records are accurately completed, collected and stored.
7. Implement OHS systems, strategies and plans	7.1 Determine OHS priorities in consultation with managers and taking account of participative arrangements in the workplace. 7.2 Develop plans for the implementation of OHS strategies. 7.3 Monitor and update plans for achievement as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the workplace OHSMS and State OHS legislative requirements, regulations, codes of practice and relevant industry standards, sufficient to establish and maintain the OHSMS within the scope of their responsibilities and competencies.

In these industries which are characterised by high risk hazards, it is vital that the overarching legal responsibility of managers is recognised in relation to the establishment and implementation of the OHSMS, including ensuring the compliance of operators with established policies and procedures. The responsibility applies not only within the general OHS Acts and regulations, but also within the legislation and national and industry standards applying to hazardous substances, dangerous goods and major hazards.

Competence includes the ability to apply a working knowledge of:

- all relevant State/Territory OHS legislation particularly as it relates to the roles and responsibilities of employers and employees, including supervisors and contractors, requirements for information and consultation and processes and arrangements to met these obligations, requirements for OHS record keeping and reporting and requirements for training and licensing
- elements of an OHSMS and principles and practices of effective OHS management and risk control, OHSMS requirements of other functional area and management systems including business planning, purchasing, maintenance, contractors, training
- barriers to implementation of OHS, including language and literacy, cultural diversity of workforce and workplace culture in relation to OHS
- codes of practice, relevant industry standards, workplace procedures and work instructions
- apply the hierarchy of control to develop risk control procedures.

Language, **literacy and numeracy requirements**

This unit requires the ability to communicate technical information at all levels and using all modes of communication.

Writing is required to the level of writing reports, policies and procedures.

Numeracy is required to interpret and manipulate technical data.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the assessee does not currently possess evidence of competency in *MSAOHS503A Maintain the workplace OHS management system*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the OHS issues and workgroup dynamics are understood together with the required OHS knowledge in order to frame and implement an OHSMS that is practical and relevant to the workplace. It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- develop appropriate documentation
- consult and negotiate to implement the policies and procedures
- apply a systematic process to planning and implementation.

Consistent performance should be demonstrated. For example, the required level includes a working knowledge of the OHSMS as it applies in the specific workplace. Look to see knowledge and understanding of:

- OHS responsibilities of all levels in the workplace
- the consultation processes, either general or specific to OHS
- training and assessment of training needs
- hazard identification and risk assessment
- implementation of risk control measures by applying the hierarchy of control
- the need for specific hazard policies and procedures
- new and relevant OHS information
- OHS record keeping
- the system/routine for maintenance of plant and equipment
- the system for purchasing of supplies and equipment
- OHS issue resolution processes.

These aspects are best assessed in the actual workplace and work group however they may also be assessed as a review process in a sample workgroup accessed for the purpose of the assessment supported by a range of scenarios/case studies.

Assessment method and context

Assessment will occur on an industrial site/plant and will be undertaken in a work-like environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence in this unit may be assessed:

- on an appropriate, industrial plant/site
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit of competency describes OHS requirements applicable for those with managerial responsibilities for establishment and ongoing management of the occupational health and safety management system within the organisation. This may be as a worker or as an owner of a business.

The competency is to be exhibited within the area of managerial responsibility, which may be an entire organisation or department of an organisation. Roles and responsibilities will vary from organisation to organisation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence is demonstrated in the context of an organisation where the OHS system with related policies, procedures and programs may or may not be established. Where the OHS system is established, the role will relate to the review of the OHSMS.

Workplace factors that may impact on the design of the OHSMS include:

- whether certification is required
- organisational structure
- management commitment
- management style and OHS knowledge and skills of managers
- workplace culture, including industrial relations and safety culture
- communication and consultation processes
- other management systems requiring interface or integration with the OHSMS
- resources available
- nature of hazards and level of risk
- staff profile, including language, literacy and numeracy, workplace ethnic and cultural diversity, special needs for employees.

Other functional areas\and management systems may include:

- strategic planning
- purchasing, procurement and contracting
- logistics
- HR and personnel management, including payroll
- engineering and maintenance
- information and records management
- finance and auditing
- environmental management
- quality management.

Relevant standards relating to OHS may include:

- Australian standards
- standards developed by OHS authorities
- industry standards
- standards developed by commercial organizations.

Legal requirements for record keeping will include requirements under:

- hazardous substances and dangerous goods legislation, including requirements to keep registers
- OHS and environmental legislation to report serious incidents and injuries, keep records of risk assessments.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours
- fire and explosion.

Problems

Typical process and product problems may include:

- incidents with a potential for serious injury
- fires and explosions
- chemical spills
- bomb scares.

OHS Information Sources

Sources of OHS information may be external and include:

- OHS legislation, codes of practice and Australian and International standards
- OHS regulators
- industry bodies
- internet sites, journals and newsletters

Internal sources of OHS information include:

- OHS policies and procedures
- manufacturer manuals
- risk assessments, JSAs, workplace inspections
- MSDSs and registers
- hazard and incident reports.
-

Unit Sector(s)

MSAPMOPS100A Use equipment

Modification History

Release 2 – Minor clarification changes to application and range, and minor editorial corrections.

Unit Descriptor

This unit covers the use of any item of equipment which is operated with limited application of knowledge.

Application of the Unit

This unit applies to all persons who have the responsibility for using equipment where they are not required to have any significant understanding of the equipment or the process.

In a typical situation the operator may be using, for example, a packaged chilled water refrigeration unit to supply chilled water to the plant. The operator uses simple controls and responds to fault alarms built into the equipment. Even though the equipment may be very sophisticated (e.g. using high-speed compressors and computerised monitoring and control equipment) the operator interface is relatively simple. The operator is expected to simply regard this equipment as a black box – they may know what it does, but little detail on how it does it.

This unit applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

Where greater levels of understanding and interaction are required, then the appropriate 200 series technical unit should be used.

This unit has been written to apply to fluids as well as solids and may be applied wherever ‘black box’ equipment is used.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

This unit has **no** prerequisites.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

1. Follow workplace procedures	1.1 Find out what is required for the job 1.2 Identify and follow appropriate procedures 1.3 Complete all reporting as required 1.4 Recognise and report anything unusual
2. Monitor and use the equipment/process	2.1 Turn the equipment on and off as required by procedure 2.2 Monitor equipment throughout the job using measurements, readings and senses as appropriate 2.3 Recognise deviations from standard/desired conditions 2.4 Take appropriate corrective action

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Minimal knowledge of the equipment and procedures but sufficient to recognise abnormal operating conditions and alert the appropriate individuals.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- describe appropriate safety procedures concerning the operation of the equipment, procedures relating to the reporting of hazardous conditions, and appropriate shutdown procedures
- recognise a situation requiring action and take the action specified in the procedures, and report the situation as specified in the procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Language, literacy and numeracy requirements

This unit has minimal literacy and numeracy requirements other than those required to start and stop the equipment and recognise common problems (e.g. reading gauges).

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- use the equipment for the specified purpose
- operate the equipment within the prescribed operating limits
- identify when the equipment is not operating as prescribed
- correctly monitor the equipment's operation
- report equipment malfunctions or problems according to procedures.

Consistent performance should be demonstrated. For example, look to see that:

- standard procedures are followed
- deviations from desired conditions are recognised
- action specified in the standard procedures is carried out
- work is carried out safely.

Assessment method and context

Assessment will occur on an appropriate item of equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.
Specific resources for assessment	This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Standards and codes	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency applies to operators new to the job or operators at any level using equipment where significant understanding of the equipment or process is not required. It applies to any item of equipment which may be used in any sector. It may include: • compressors (packaged plant) • refrigeration (packaged plant) • fans • blowers • portable generators • air conditioning units

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- other equipment with similar operating requirements

Packaged plant Packaged plant includes:

- all items of equipment which come in a 'ready to use' form, and are often skid mounted, portable or designed for use by untrained and inexperienced people

Procedures All operations are performed in accordance with procedures.

Procedures mean all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards Typical hazards include:

- rotating components
- drive chains or belts
- hot or cold equipment parts
- dust, vibration, noise or fumes
- oil spills
- fuel leaks

Corrective action Taking appropriate corrective action includes:

- reporting to the appropriate people or such other specific actions which have been previously defined for specific occurrences

Variables Key variables to be monitored include:

- equipment production outputs
- equipment operating conditions
- operating temperatures and pressures

MSAPMOPS101A Make measurements

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers the making or taking of measurements in a variety of sites and locations.

Application of the Unit

Application of this unit

This unit applies to people who are required to apply basic knowledge and skills in performing routine measurements for industry related operations. It is typically performed by people working either independently or as part of a work team.

The worker will:

- make measurements using physical and/or chemical measuring equipment
- record results using either a manual or computer system
- identify problems and take required action
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify appropriate measurements.	1.1 Select appropriate measuring equipment. 1.2 Identify units to be used, and the detail required. 1.3 Check measuring equipment is in calibration.
2. Perform measurements	2.1 Explain range of results that may be obtained 2.2 Identify and take account of relevant external factors. 2.3 Perform measurements using appropriate techniques 2.4 Compare measurements against the range of expected results 2.5 Self-check numerical information for accuracy and correctness. 2.6 Explain the need for calibration and use calibrated equipment to make measurements.
3. Record measurements as required.	3.1 Accurately record the result in the appropriate format. 3.2 Record the result to the appropriate level of detail.
4. Respond to routine problems in accordance with procedures	4.1 Recognise known faults that occur during the measurement. 4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine problems and report to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	designated person.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process sufficient to recognise non-standard situations and then determine appropriate action which is consistent with operating guidelines. For example, in gel coating, a coating less than 5 mils thick may wrinkle, especially when brush marks are present. Thickness is checked using a gel coat thickness gauge.

Knowledge and the ability to implement the organisation's procedures and relevant regulatory requirements, within appropriate time constraints and work standards.

Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge in measurement sufficient for consistent performance to specifications including:

- basic units of measurement (eg kilogram, metre, second)
- correct selection and use of measuring devices
- application of relevant mathematical calculations and procedures, including additions, subtractions, division, fractions, percentages
- use of dial, scale and digital readouts
- the need for calibration and methods of checking equipment is within calibration.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of basic arithmetical manipulations and the interpretation of the significance of numbers and variations of readings.

Evidence Guide

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to

- take accurate measures using the appropriate measuring device
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that

- standards in taking measurements are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur over a range of situations requiring the taking of measurements and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by observation or questioning to indicate understanding and knowledge
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all routine measurements within a manufacturing environment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- measuring devices, including gauges, dip-sticks, thermometers, weighing scales, length/thickness measuring
- calculators
- computers for recording results
- relevant personal protective equipment.

Hazards

Typical hazards include:

- dusts/vapour
- temperature
- hazardous substances
- manual handling hazards.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'.

Typical problems may include:

- measuring instrument not fit for use (eg not within calibration)
- appropriate measuring device not available
- deviations from normal range of readings
- effect of temperature on material properties.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

Variables

Key variables to be monitored include:

- extent
- dimension
- quantity
- mass
- capacity
- capability.
-

MSAPMOPS102A Perform tasks to support production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the performance of largely manual tasks that are performed in support of the production process working under close supervision. It applies to all sectors of the industry.

Application of the Unit

Application of this unit

This competency applies to operators who are not operating equipment but are making product and contributing to the production process. It might also apply to a more experienced operator working outside their field of expertise and under close supervision. This competency is typically performed by all operators working either independently or as part of a work team.

It includes:

- 'fetch and carry' type tasks
- making product under close supervision but not operating process equipment (see *MSAPMOPS100A Use equipment*), following safe working procedures and using personal protective equipment.
-

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Perform general cleaning duties.	1.1 Clarify cleaning duties. 1.2 Select and use personal safety equipment, where needed, in accordance with organisation procedures. 1.3 Determine, prepare and mix appropriate cleaning equipment and chemicals/detergents for specific tasks. 1.4 Follow procedures for handling and storage of cleaning liquids in accordance with organisation or manufacturer specifications. 1.5 Clean as required.
2. Perform general duties and tasks.	2.1 Perform tasks as directed. 2.2 Ask questions of appropriate person to confirm unusual requirements. 2.3 Organise relevant equipment and tools and check to confirm good working condition.
3. Transfer, remove or supply materials/ product where required	3.1 Organise, confirm and record requests and tasks according to specified procedures. 3.2 Identify and organise appropriate equipment for transferring material where relevant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Load and unload material using suitable aids. 3.4 Transfer/move material to the correct destination in a safe manner.
4. Complete documentation accurately.	4.1 Complete documentation for tasks, where relevant, accurately in accordance with required organisation procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Required knowledge and skills include:

- machine and equipment operation
- procedures to handle products and materials
- use of products and materials
- quality requirements
- relevant OHS legislation, codes of practice, policies and procedures
- maintenance planning and workplace procedure
- reporting procedures
- loading and unloading materials
- applying all relevant safety practices
- use and disposal of a range of chemical cleaning agents, sealants and lubricants, where required
- communicating effectively within the workplace
- interpreting and applying established procedures
- documenting and transferring information.

Language, **literacy and numeracy requirements**

This unit has minimal literacy and numeracy requirements other than those required to carry out the job (eg recognise labels and signs).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- undertake basic production tasks
- handle material and products
- locate and transport materials and products
- clean equipment, machines and work environment
- document work and maintain records as required
- apply workplace heath and safety policies in work operations.

Consistent performance should be demonstrated. For example, look to see that production standards are met consistently.

Assessment method and context

Assessment will occur in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- original manufacturer instructions and guidelines for the use of any equipment
- relevant procedures relating to safe working practices prescribed for the equipment
- local OHS legislation and/or Regulations
- site specific instructions based on production requirements.

Tools and equipment

This competency includes use of equipment and tools such as:

- cleaning equipment
- detergents and other chemicals hand and power tools
- hand trolleys pallet trucks
- but not more complex equipment such as forklifts, overhead cranes, or front end loaders.

Loading and unloading aids

Loading and unloading aids include various types of equipment other than regulated load shifting equipment and must conform to materials handling requirements, safe work practices and manual handling techniques, and workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards

Typical hazards include:

- slips, trips and falls
- manual handling injuries
- dust, dirt and vapours
- cuts and abrasions
- lack of knowledge of machine operation.

Problems

'Simple problems' means 'apply defined solutions to a narrow range of previously specified problems'.

Typical process and product problems may include:

- difficult access to the work area
- awkward work spaces
- tool failures or breakages
- defective equipment
- incorrect or defective materials
- wrong quantities of materials.

Variables

Key variables to be monitored include:

- atmospheric conditions (weather)
- condition of the work area
- placement of products or materials used in the production process
- lighting
- types of aids to production being used.
-

MSAPMOPS200A Operate equipment

Modification History

Release 2 – Minor clarifications to application and range, and minor editorial corrections.

Unit Descriptor

This unit covers the skills and knowledge needed to operate a plant item/unit of equipment and the resolving of routine problems in accordance with procedures. This competency is for units of equipment/plant items which are not otherwise covered in this Training Package and may be organisation specific.

Application of the Unit

This unit applies to a person who has the responsibility for undertaking the routine operation of an individual unit of equipment or a plant item. The key factors are operating to organisation requirements, meeting quality standards and other workplace requirements. The type of people to whom this unit may apply include (but are not limited to):

- plant operators.

This unit applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator as appropriate.

This unit applies:

- typically to ‘outside’ or ‘field’ operators, but may also apply to
- ‘panel’ or ‘control room’ operators.

This unit requires a detailed knowledge about the unit being operated and some knowledge about related units and processes.

This unit has been written to apply to both fluid and solids processing units. It does not include the operation of any packaged unit which only requires operation as a ‘black box’ (regardless of its engineering complexity) which is covered by MSAPMOPS100A Use equipment.

If several units are combined to form a unit which must be operated as an integrated unit then please see PMAOPS300B Operate a production unit.

Pre-Requisites

This unit has **no** prerequisites.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

1	Check work requirements	1.1	Identify work requirements from work plan or request
		1.2	Check product, materials and equipment meet requirements for job(s)
		1.3	Recognise requirements which may not be in accordance with usual practice
		1.4	Ask questions of appropriate person to confirm unusual practice
		1.5	Ensure housekeeping is to requirements
		1.6	Identify hazards associated with the job and take appropriate action
		1.7	Perform other pre-operational checks in accordance with procedures
2	Start up item of equipment as required	2.1	Conduct pre-start checks
		2.2	Start up item of equipment
3	Operate equipment	3.1	Check equipment is operating within required limits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	to procedures	3.2	Check product meets specifications and quality standards
		3.3	Ensure product is consistently ready for next duty/ operation as appropriate
		3.4	Maintain supply of material(s) as required
		3.5	Complete logs and records as required
		3.6	Collect and segregate scrap, trim and other materials as required
		3.7	Keep equipment and work area clean
		3.8	Pause equipment and perform emergency stop, as required
4	Respond to routine problems to procedures	4.1	Recognise known faults that occur during the operation
		4.2	Identify and take action on causes of routine faults
		4.3	Log problems as required
		4.4	Identify non-routine process and quality problems and take appropriate action

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of the organisation's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge of and skills in the operation of the item of equipment and main components sufficient to consistently meet required specifications and standards, including:

- operation of equipment and components
- workflow sequences and materials demand
- reasons for checking process control panels and reporting readings which do not conform to the work instructions
- approved hazard control and safety procedures and the use of PPE in relation to handling materials and using equipment
- equipment operation and clean-up; potential effects of variations in raw materials and equipment operation in relation to quality of product
- waste management and importance of reusing non-conforming products wherever

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

possible
- correct selection and use of equipment, materials, processes and procedures
- monitor equipment operation and product quality
- identify factors which may affect product quality or production output and appropriate remedies
- distinguish between possible causes of routine faults, such as:
  - incorrect quantity of materials
  - contaminated materials/additives
  - equipment faults/damage
  - wrong raw materials/additives
  - machine failure.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment	A holistic approach should be taken to the assessment. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. Assessment will occur on an industrial example of the equipment and will be undertaken in a work-like environment.
Critical aspects for	It is essential that competence is demonstrated in the knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

assessment and evidence required to demonstrate competency in this unit

and skills defined in this unit. These may include the ability to:

- operating the plant unit
- following approved procedures
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement relevant emergency procedures.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- upstream and downstream communication is timely and effective operating procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (i.e. the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Competence in this unit may be assessed:

- in an appropriate, industrial item of equipment requiring demonstration of operation start and stop procedures
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Standards and codes Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context This competency applies to operators working either independently or as part of a work team.

Procedures All operations are performed in accordance with procedures.

Procedures mean all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment This competency includes use of equipment and tools, such as:

- process equipment and its major components
- hand tools used in the this process
- material loading equipment used for loading of raw materials
- relevant personal protective equipment

Hazards Typical hazards include:

- spills
- dusts/vapours
- slips trips and falls
- temperature
- hazardous substances
- moving equipment
- manual handling hazards

Problems 'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- equipment malfunction
- variations in process conditions
- variations in materials or contamination of materials
- equipment, tool, die or mould damage
- routine product faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- machine malfunction
- mould/tooling problems
- variations in materials and/or contamination of materials

Variables Key variables to be monitored include:

- atmospheric conditions
- temperature (hot/cold) variations in equipment or product
- die/product tolerances
- system/operating pressure
- programming variables
- operator variability
- timing or product cycles

Product Product includes anything produced by a process step and so includes intermediate products such as the product from one process step which then becomes the feed for another

MSAPMOPS201A Cut polymer materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to prepare and operate specialised equipment or procedures to cut polymer materials to size, shape or to a pattern, and resolve routine problems to procedures.

Application of the Unit

Application of the unit	This unit of competency applies to operators who are involved in the use of specialised equipment or processes to cut polymer material such as sheet, pipe or rod. The key factors are the making of products to meet quality standards and workplace requirements. This unit of competency is typically performed by operators working either independently or as part of a work team. It includes: • checking job sheets for work to be done and identifying the priority in which jobs/product will be made/completed • setting up equipment • preparing materials as required • ensuring that safety procedures are applied to reduce risks • identifying and taking action on routine process problems • completing logs and reports.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Check work requirements	1.1. Identify work requirements 1.2. Identify product, materials and equipment requirements for job 1.3. Recognise hazards and adopt steps required to ensure safety 1.4. Check with supervisor/appropriate person if requirements are not in accordance with usual practice
2. Conduct pre-cutting	2.1. Check hazard controls are operational and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
operations as required	appropriate 2.2. Check raw materials are correct 2.3. Mark out/lay out job for cutting 2.4. Undertake other pre-cutting requirements in accordance with procedures
3. Cut to requirements	3.1. Operate cutting tools/equipment to cut materials to procedures 3.2. Monitor dimensions, shape, quality and quantity of cuts 3.3. Remedy faults and non-conformances by correcting operation or adjusting tools/equipment as required 3.4. Collect material which is able to be recycled or reused, separate and dispose of waste and scrap
4. Resolve routine problems	4.1. Identify likely faults that occur during the operation/task 4.2. Identify and take action on causes of routine faults in accordance with procedures 4.3. Make sure appropriate records are maintained to meet procedures 4.4. Identify non-routine problems and report to designated person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

• applying knowledge of the materials, equipment and processes sufficient to recognise out of specification products, process problems and materials faults
• identifying hazards associated with the job/work environment
• applying the hierarchy of control to the hazards
• distinguishing between causes of faults such as:
  • raw materials
  • mechanical
  • electrical/instrumental
• reading and interpreting typical product specifications, job sheets, procedures, material labels and safety information as provided to operators

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• writing skills to the level of completing workplace forms • basic numeracy skills to determine that two 25 kg bags are needed to make up a requirement for 50 kg
Required knowledge
• organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards • different types of materials and their behaviour when cut, different cutting equipment and suitability for materials • controls of cutting equipment • routine faults in products and routine problems in process • causes of faults such as materials deficiencies, heat, changes to materials during the cutting process, equipment adjustments/set-up and equipment maintenance requirements • original manufacturer instructions and guidelines for the safe use of the cutting tools/equipment • relevant procedures relating to safe working practices prescribed for the equipment • local occupational health and safety (OHS) legislation and/or regulations • site-specific instructions based on production requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge required to: • recognise the importance of material properties and qualities • apply approved procedures • take appropriate action to resolve faults or report faults to appropriate personnel • explain and implement emergency shutdown procedures. Consistent performance should be demonstrated. For example, look to see that:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• material cutting production standards are met consistently • upstream and downstream communication is timely and effective • procedures and work instructions are read and interpreted correctly • problems are identified and appropriate action is taken (i.e. the problem is fixed or reported) • all safety procedures are followed.
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. Assessment may be in conjunction with assessment of other units of competency where required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Context	This unit of competency applies to operators working either independently or as part of a work team.
Work requirements	Work requirements may be determined from: • job/shop orders • plans/specifications • procedures • other means
Procedures	Procedures include: • all relevant workplace procedures • work instructions • temporary instructions • relevant industry and government codes and standards
Tools and equipment	Tools and equipment may include: • guillotines, power saws, jig saws, band saws and thermal cutting devices • controller, such as PLC (Programmable Logic Controller) if fitted • hand tools as required • relevant personal protective equipment
Hazards	Typical hazards include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• fibres and dusts - airborne and handled • manual handling hazards • power tools, leads and power supplies • stationery and moving machinery, parts and components
Problems	Respond to routine problems means apply known solutions to a limited range of predictable problems. Typical process and product problems may include: • pattern, e.g. pattern incorrect, marking errors • equipment, e.g. wear and breakage, temperature variations, loss of power or drives, controller sequence and timer issues • process, e.g. sequencing problems
Records	Records may include: • log books/sheets • electronic records • job/work sheets • other records
Variables	Key variables to be monitored include: • material characteristics • material availability • type of cutting equipment • cutting edge condition

MSAPMOPS202A Fabricate polymer materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to fabricate polymer materials to a specified shape and resolve routine problems to procedure. It applies to rubber and plastic materials.

Application of the Unit

Application of the unit	This unit of competency applies to operators who are involved in the fabrication of polymer materials, typically sheet, pipe or rod, into specified shapes. This unit of competency is typically performed by operators working either independently or as part of a work team. It includes: • setting up equipment • preparing and checking materials as required • dealing with non-conforming products, waste and scrap • identifying and taking action on routine predictable process problems • completing logs and reports. Some fabrication applications may also require competence in bonding or welding polymers in which case, competency in this unit may also require competency in: • PMBPROD242A Bond polymers to surfaces • PMBPROD287B Weld plastics materials.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Check work requirements	1.1. Identify work requirements 1.2. Check product, materials and equipment meet requirements for job 1.3. Interpret plans, patterns, designs or specifications 1.4. Recognise requirements which may not be in accordance with usual practice 1.5. Ask questions of appropriate person to confirm unusual practice 1.6. Identify hazards associated with the job and apply

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	appropriate hazard controls 1.7. Complete records as required
2. Conduct pre-fabrication operations as required	2.1. Set up tools, jigs, fixtures and equipment ready for job 2.2. Identify materials, patterns and consumables required 2.3. Check hazard controls are operational and appropriate 2.4. Mark out/lay out job for fabrication 2.5. Undertake other pre-fabrication requirements in accordance with procedures 2.6. Identify non-conformances and report to appropriate personnel
3. Form materials to shape	3.1. Arrange materials in order prior to forming 3.2. Form and fix material into shape as required 3.3. Measure and check product is to specifications, making adjustments as required 3.4. Trim and finish joints and fabricated product as required
4. Resolve routine problems	4.1. Identify likely faults that occur during the operation/task 4.2. Identify and take action on causes of routine faults in accordance with procedures 4.3. Ensure appropriate records are maintained 4.4. Identify non-routine problems and report to designated person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• applying knowledge of the materials, equipment and processes sufficient to recognise out of specification products, process problems and materials faults • identifying hazards associated with the job/work environment • applying the hierarchy of control to the hazards • planning own work including predicting consequences and identifying

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
improvements • identifying when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance • identifying and describing own role and role of others involved directly in the fabrication of materials process • reading and interpreting typical product specifications, job sheets, procedures, material labels and safety information as provided to operators • writing skills to the level of completing workplace forms. • basic numeracy skills to determine that two 25 kg bags are needed to make up a requirement for 50 kg
Required knowledge

• organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards
• process of fabricating materials and the main components sufficient for consistent production of quality products including:
  • production workflow sequences and material demand
  • identifying different types of materials and their behaviour when joined
  • identifying different, forming and joining equipment and suitability for materials
  • accurately monitoring equipment operation and product quality
  • the potential effects of variations in raw materials and outside variables in relation to quality of product
  • waste management and knowing the importance of reusing non-conforming products wherever possible
  • factors which may affect product quality of production output and appropriate remedies

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge required to: • apply the required skills and knowledge to the fabrication process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• apply approved procedures. Consistent performance should be demonstrated. For example, look to see that: • fabrication production standards are met consistently.
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment. Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Context	This unit of competency includes the processes required to form materials into specified shapes, including cutting, bending, fixing, welding and finishing to component
Work requirements	Work requirements may be determined from: • job/shop orders • plans/specifications • procedures • other means
Procedures	Procedures include: • all relevant workplace procedures • work instructions • temporary instructions • relevant industry and government codes and standards
Tools and equipment	Tools and equipment may include: • power saws, jig saws and thermal cutting devices • drilling, riveting, bolting and stitching • hand tools as required • relevant personal protective equipment
Hazards	Typical hazards include: • fibres - airborne and handled • sharp edges, swarf and scrap • manual handling • cut hazards • power tools, leads and power supplies • stationary and moving machinery, parts and components
Form	Forming may require:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• bending, heating, holding in a jig fixture or other methods of achieving the required shape
Fix	Fixing may be by: • mechanical means (e.g. rivets, bolts) • chemical means (e.g. solvents, adhesives) • thermal (e.g. welding) or other processes. Additional units of competency may need to be accessed to cover some means of fixing.
Problems	Respond to routine problems means apply known solutions to a limited range of predictable problems. Typical process and product problems may include: • pattern incorrect • marking errors • wear and breakage • loss of power or drives • controller sequence and timer issues • sequencing problems
Records	Records may include: • log books/sheets • electronic records • job/work sheets • other records

MSAPMOPS212A Use organisation computers or data systems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the use of organisation computers or data systems in order to work effectively. The operator is familiar with the system, can locate and use the appropriate data and is able to accurately record data into the system as required. This competency covers the use of computer equipment and company software programs, including selecting the correct programs for use and identifying minor faults in equipment or software.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who are required to store and retrieve data, and produce documents, spreadsheets relevant to operational or administrative functions within the organisation. It includes:

- inputting data to the systems as required
- locating and accessing data as required for production support/problem solving
- using data to support business objectives
- producing construction documents, reports and spreadsheets
- running system checks and virus scans manually if automated systems fail
- producing required documentation within the security limits imposed by the company.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify applications of computer or data system for work role.	1.1 Identify data and information available from the system and its application to work role. 1.2 Identify data from work role which needs to be entered in the system.
2. Use the computer/data system.	2.1 Adjust work station equipment to meet ergonomic requirements and use appropriate posture. 2.2 Log-on according to procedures. 2.3 Navigate system as required. 2.4 Input data or make changes as required. 2.5 Check entered or edited data is correct. 2.6 Access required data/information. 2.7 Output data as required. 2.8 Use 'Help' as needed.
3. Save file and exit system.	3.1 Save and store data in appropriate directory or folder. 3.2 Close file and exit applications programs without loss of data.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Back-up data if required in accordance with procedures.
4. Respond to routine problems with the system	4.1 Recognise known faults that occur during the operation. 4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes an understanding of the organisation data system to the level needed to use the system and recognise and resolve problems. In particular it includes the ability to:

- demonstrate the operation of and access to data from the system
- describe the scope and range of data required from the system, in order to support the solution of problems
- describe the nature of the scope and range of available data
- describe the causes and remedies of common problems such as those selected in the Range Statement
- describe principles of operation of the equipment and software, hazard policies and procedures, job procedures and work instructions
- explain the application of software in relation to work role.

Competence also includes the ability to isolate the causes of problems to a component of the organisation data system and to distinguish between causes of problems such as:

- incorrect or misleading data
- system software faults
- system equipment faults.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms

Numeracy is also required to the extent of requiring competence in essential mathematical functions including + - x and ÷.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The reasoning process behind the problem analysis and determining the required actions should be assessed.

Consistent performance should be demonstrated. For example, look to see that:

- in-plant computer programs are correctly utilised
- software problems are recognised and solved effectively and efficiently
- documents are completed to the standard required
- the operation and access to data from the system can be demonstrated
- data can be input and output from the system as required
- obvious problems in related to operation of the system are recognised and an appropriate contribution made to their solution.

Assessment method and context

Assessment will occur using industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit of competency includes organisation computer and data systems. This may include systems which cover (select relevant items):

- Word and Excel documents
- safety, safety data and injury reporting
- orders, purchasing, stock levels and scheduling
- stock control, stores, warehousing and logistics
- materials hazards, labelling, materials identification, materials safety data sheets (MSDSs)
- batch data, schedules, production planning and operations planning
- product quality, statistical control, production trends and quality control
- maintenance, maintenance planning, procedures and spare parts.

The organisation systems will usually be computerised, but may include data sheets, paper or hard copy records, manuals and instructions.

Procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- computers - stand alone and/or networked
- mobile terminals and hand held devices
- printers
- mouse, keyboard
- facsimile equipment
- onboard terminals
- scanners
- bar coders.

Software applications may include:

- CC mail and email
- Internet or intranet
- word processing, database and spreadsheet programs
- company/process specific software
- word processing, database and spreadsheet programs.

Documents may include:

- work orders
- work instructions/standard operating procedures
- email or CC mail
- faxes
- memos
- tables
- standard letters
- standard reports.

Hazards

Typical hazards include:

- repetition strain injuries
- glare from monitor screens
- damages cables or connections
- strains or injuries moving computer equipment.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- software problems, such as unable to access file, find correct page or send CC mail, input data.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- loose or disconnected cables
- 'frozen' screens
- faulty monitors
- key board problems.

Variables

Key variables to be monitored include:

- types of hardware systems
- access and log on procedures
- types of software packages
- Internet/intranet systems
- types of data to be stored and retrieved.
-

Unit Sector(s)

MSAPMOPS244A Layout and cut materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the cutting of materials to shape and the resolving of routine problems to procedure. It applies to materials used in plastics fabrication, rubber and other manufacturing industries.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in the fabrication of materials which first need to be cut into specified shapes. This competency is typically performed by operators working either independently or as part of a work team.

The operator will:

- check product for quality and conformity to specifications
- set up equipment
- prepare materials as required
- deal with non-conforming products, waste and scrap
- identify and action routine predictable process problems
- complete logs and reports.
-

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Interpret plans, patterns, designs or specifications. 1.4 Recognise requirements which may not be in accordance with usual practice. 1.5 Ask questions of appropriate person to confirm unusual practice. 1.6 Ensure housekeeping is to requirements. 1.7 Identify hazards associated with the job and take appropriate action. 1.8 Complete logs and records as required.
2. Conduct pre-start checks as required.	2.1 Set up tools, jigs, fixtures and equipment ready for production. 2.2 Identify materials, patterns and consumables required. 2.3 Ensure safety equipment is available and fit for use. 2.4 Identify non-conformances and report as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Layout materials for cutting.	3.1 Translate pattern/specification onto material. 3.2 Develop 3D or complex shapes into 2D shapes which can be cut. 3.3 Place material and prepare it for cutting.
4. Cut materials to shape.	4.1 Cut material to pattern, marking points for further processes. 4.2 Deal with faults and non-conformances by correcting operation or adjusting equipment as required. 4.3 Collect and reprocess/discard scrap/trim and other materials in accordance with workplace procedures.
5. Respond to routine problems in accordance with procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of the enterprise's procedures, relevant regulatory requirements and the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the fabricated materials process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge of and skills in the process of fabricating materials and the main components sufficient for consistent production of quality products includes:

- production workflow sequences and material demand.
- identifying different types of materials and their behaviour when cut and joined
- identifyingdifferent cutting, forming and joining equipment and suitability for materials
- accurately monitor equipment operation and product quality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the potential effects of variations in raw materials and outside variables in relation to quality of product.
- waste management and knowing the importance of re-using non-conforming products wherever possible
- identify factors which may affect product quality of production output and appropriate remedies
- radii of bending and related layout data
- development of relevant shapes into 2D cuttable shapes.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the fabrication of materials process.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, basic machine control panels, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to the fabrication process
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see thatfabrication production standards are met consistently.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment method and context

Assessment will occur using industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on an appropriate processing plant requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
  - by using a suitable simulation and/or a range of case studies/scenarios
  - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the processes required to layout and cut materials into specified shapes.

Procedures

All operations are performed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- guillotines, power saws, jig saws, band saws, thermal cutting devices
- drilling,
- hand tools as required
- relevant personal protective equipment.

Hazards

Typical hazards include:

- fibres, airborne and handled
- sharp edges, swarf and scrap
- manual handling
- cut hazards
- power tools, leads and power supplies
- stationary and moving machinery, parts and components.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- pattern incorrect
- marking errors
- wear and breakage
- loss of power or drives
- controller sequence, timer issues
- sequencing problems.
-

MSAPMOPS301A Treat corrosion

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to examine substrates and design of the object to be treated (e.g. plant, equipment and structures), determine by inspection the preparation and protection which might need to be applied and confirm that the specification received is appropriate.

Application of the Unit

Application of the unit	The unit applies to technicians who are responsible for preparing and protecting an object to a provided specification. They will be able to inspect the object and confirm that the specification is appropriate for this application. This unit is not intended to provide sufficient knowledge and skills to develop a specification. Generally the technician would operate independently or as part of a team and should be capable of performing all parts of this unit. At all times they would be liaising and cooperating with other members of the team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify nature of corrosion	1.1. Inspect object 1.2. Observe service environment and note likely causes of, and vulnerability to, corrosion 1.3. Identify the type of corrosion present or likely to occur
2. Interpret surface preparation and coating specification	2.1. Identify surface preparation method specified 2.2. Identify prepared surface specification 2.3. Identify protection method specified 2.4. Identify finished specification of protected surface
3. Confirm appropriateness of specification	3.1. Compare specification with existing or likely corrosion 3.2. Confirm that the specification is appropriate for the situation 3.3. Clarify any discrepancies between specification and expected treatment and take appropriate action
4. Monitor treatment	4.1. Identify hazards arising from the preparation and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
process	protection treatments 4.2. Implement appropriate hazard controls 4.3. Monitor the progress of the treatment 4.4. Recognise situations which might require a change to hazard controls or specifications 4.5. Take the required actions to resolve the identified situations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• observing and inspecting work environment • identifying and analysing hazards • comparing specifications • communicating with relevant personnel • identifying and solving problems
Required knowledge
• the galvanic series • electrochemical corrosion • erosion and other non-electrochemical decay of materials as relevant • corrosion of different types of metals • forms of corrosion/causes of anode formation • sacrificial protection and coating • factors controlling the rate of corrosion • types of corrosion protection used and how they work • hazards (health, safety, environmental) associated with preparation and protection and relevant hazard controls • costs and hazards of corrosion • physics and chemistry relevant to the processes and the materials involved • process parameters and limits, e.g. blast media type/size/shape, temperature, pressure, flow and pH • coating/lining types as relevant • coating/lining application methods as relevant • duty of care obligations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• hierarchy of hazard control • routine problems, faults and their resolution • corrective action appropriate to the problem cause • function and troubleshooting of major preparation and protection methods and their problems • types and causes of problems within operator's scope of skill level and responsibility

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant, equipment, structures or similar in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation. This unit of competency requires an application of the knowledge contained in the use of the corrosion control systems and their integral equipment, to the level needed to maintain control and recognise and resolve problems.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely resolution to meet requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation or case studies/scenarios may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual plant and will include 'walk-throughs' of the relevant competency components. A bank of scenarios/case studies/what ifs and questions will be required to probe the reasoning behind observable actions.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
Service environment	Service environment refers to: • the environment in which the systems or units (object) the technician is responsible for operate and may be a plant/factory area, a well head, major infrastructure or pipeline covering thousands of kilometers
Corrosion	Corrosion typically refers to: • any electrochemical process leading to the decay of metal. It may also be applied to decay processes in non-metals if appropriate
Appropriate action	Appropriate action may include: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through state/territory or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence
Hazards	Hazards may include: • dust, mists, fumes and waste disposal issues

MSAPMOPS363A Organise on site work

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers organising of work in a field situation. This unit typically applies to operators who are preparing to do work in remote mine sites, or large industrial complexes where extensive permit or clearance systems exist.

This unit covers the organising and preparation for on site work. Refer to other competency units depending on the nature of the work to be done on site.

Application of the Unit

Application of this unit

The emphasis is on the planning of the work, the arrangements that are required to allow the on-site work to proceed and the set-up of tools, equipment and materials at the site. It includes the scoping, planning, communication and hazard controls required for the job. The work may be to do with conveyor systems, tanks, pipelines, equipment or other work in situ.

The worker will:

- plan the job
- arrange all permissions and permits
- select and arrange all equipment and materials to the site
- set up tools, equipment and materials on site
- identify any hazards and take appropriate action.
-

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	and materials.
3. Set up work location.	3.1 Assemble and check materials and tools for suitability for purpose. 3.2 Establish a safe work area. 3.3 Establish isolations and tag/lock out as required. 3.4 Check tools, equipment and materials against site situation and conditions.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out-of-specification production. For example, consumables for use in the work are within recommended shelf life.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls.

Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up. This may include the preparation of Job Hazard Analysis (JHA) or similar hazard management and planning techniques.

Competence includes the ability, for the practical completion of the job, to apply and/or explain:

- interpretation of specifications, designs and/or work orders
- understanding of the operation, equipment principles and details of construction
- production workflow sequences and inherent hazards with on-site work
- design requirements and details of the work to enable the planning to and the work to be completed as required
- planning process, including breaking the work down into steps and stages
- correct selection and use of equipment, materials, processes and procedures
- products, materials and material characteristics.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identify factors which may affect product quality or production output and appropriate remedies
- identify when the operator is able to rectify faults and when assistance is required.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical work specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms, plans and job reports.

Numeracy is also required, eg to determine quantities of materials for the work.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

This unit may be co-assessed with units concerned with the nature of the work being undertaken.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and operating characteristics in relation to the condition of the equipment
- plan work process within organisational procedures and explain the reasons for the steps in the process
- take appropriate action to observe site conditions, equipment configuration, possible work-site difficulties, hazards and identify problems to be reported.

Consistent performance should be demonstrated. For example, look to see that:

- production needs are interpreted and met
- problems are anticipated from observations
- problems are efficiently resolved
- the repair runs consistently and smoothly.

Assessment method and context

Assessment will occur using industrial scenarios and will be undertaken in a work-like environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to on-site work environments and sectors typically within manufacturing or heavy industries. It covers, but may not be limited to, the preparation for on-site work.

Procedures

All operations are performed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures include all relevant workplace procedures, manufacturer specifications and procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

On-site work

On-site work covered by this competency may include (but may not be limited to):

- conveyor belt splicing and repairs
- rubber lagging of conveyor drums
- rubber lining of tanks
- polymer piping systems installation or repairs
- polymer constructions (eg fume cupboards or signs)
- refractory lining
- concrete casting
- other work to be done on-site, and not in a factory or workshop.

Work requirements

Work requirements may be determined from:

- work orders
- specifications
- job descriptions
- designs
- other documents.

Isolations

Isolations include:

- power supply
- tag locations
- process materials
- energy sources and
- equipment isolation system.

Safe work area

Safe work area includes area(s) for:

- scaffolding
- lifting gear
- lay down area
- work area
- other equipment in appropriate locations.

Tools and equipment

This competency includes planning and set-up of equipment and tools such as:

- manual handling aids
- hand winches
- portable power generators and vulcanising equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- knives and other cutting instruments
- portable hoists/lifting equipment not requiring any special permits or licences
- spanners, wrenches, hammers etc
- power operated hand tools such as drills, cutting disks, sanders
- specialised tools for the job
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling hazards
- working at heights
- dust, process liquids, process materials
- hand tools and hand held power tools (eg knife, cutting and grinding disk hazards).

Problems

Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- lack of accessibility
- equipment isolations
- logistics of materials ad equipment to work site
- variations in materials and/or contamination of materials.

Variables

Key variables to be monitored include:

- environmental conditions
- lock-out/isolation of equipment
- worksite location, remoteness, accessibility
- job variations, changes.
-

MSAPMOPS400A Optimise process/plant area

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the ability to optimise the process performance of a complete plant area. It includes ensuring that production systems comply with Health, Safety and Environment (HSE) requirements, that process, plant and equipment utilisation is planned and carried out, and that problems are solved to fully meet operational needs and ensure that production of finished goods meets customer requirements.

Application of the Unit

Application of this unit

This competency requires the application of detailed operational and process knowledge, including the principles of operation of equipment, and the chemistry and/or physics and/or biology/biochemistry of changes to materials occurring during processing. It embodies a significant breadth and depth of technical knowledge and process understanding.

Assessment of this competency should ensure that the applicant can apply this knowledge to a process, and should typically rely on the applicant undertaking, or leading, a significant process improvement project.

This competency is typically performed by a senior operator, team leader or frontline manager.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Analyse and evaluate current plant, equipment and processes.	1.1 Compare actual process, plant and equipment performance with requirements and/or historical data/records and/or design performance. 1.2 Identify abnormal or sub-optimal process, plant and equipment performance. 1.3 Identify hazards associated with the plant and equipment. 1.4 Collect and evaluate product, materials and/or process records to determine possible causes for sub-optimal performance. 1.5 Use appropriate techniques to rank possible causes from most to least probable cause.
2. Develop plan for corrective and/or optimisation action.	2.1 Analyse cause(s) to determine appropriate corrective action. 2.2 Predict the impact of a change in one unit/area on other related plant units/areas. 2.3 Predict the impact of a change on health, safety and environmental performance 2.4 Develop measurable objectives and evaluate alternatives.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.5 Identify requirements to implement change. 2.6 Consult with stakeholders regarding planned changes and impacts. 2.7 Develop optimisation plan taking account of hazards identified and HSE implications and communicate to appropriate personnel. 2.8 Evaluate optimisation action to determine measures of effectiveness.
3. Coordinate corrective and/ or optimisation action plan	3.1 Coordinate all appropriate unit areas and operations in order to rectify problem causes in process, plant and equipment performance. 3.2 Initiate and/or implement all required corrective/ optimisation actions. 3.3 Communicate corrective/optimisation outcomes to all relevant personnel. 3.4 Implement procedures/systems to eliminate possible future causes. 3.5 Record and maintain log of all relevant information.
4. Develop continuous improvement strategies.	4.1 Review sources of information to identify possible factors causing sub-optimal performance. 4.2 Identify options for removing or controlling the risk of sub-optimal performance. 4.3 Assess the adequacy of existing control and quality methods and systems. 4.4 Identify opportunities to continuously improve performance. 4.5 Develop recommendations for continual improvement of process, plant and equipment effectiveness. 4.6 Consult with appropriate personnel and implement continuous improvement strategies. 4.7 Document implementation of continuous improvement strategies.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the:

- equipment,
- processes
- systems

sufficient to

- identify hazards associated with the process
- recognise opportunities to improve and/or enhance the quality of performance of the plant.

This knowledge needs to include:

- the relevant technical theory of the plant area
- an in depth understanding across the entire plant area
- the organisation standard procedures and work instructions
- relevant regulatory requirements, including those related to OHS risk control as appropriate to process/plant area optimisation.

Competence includes the ability to:

- apply analytical skills which enable corrective or optimal conditions to prevail
- identify and control hazards by applying the hierarchy of control as part of the optimisation process
- interpret information and make appropriate process control decisions.

Competence includes the ability to distinguish between:

- optimum and marginal performance of the plant
- effective and marginal performance corrections and actions.

as is relevant to the practical operation of all major equipment/process/systems within the area.

Optimising process systems requires application of detailed operational and process knowledge to address issues such as:

- starting material quality
- yield maximisation
- throughput maximisation
- energy efficiency
- use of utilities
- labour utilisation
- overall cost
- efficient use of equipment
- reducing downtime
- minimisation of waste and rework
- improved workplace layout and workflow.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Language, literacy and numeracy requirements

This unit requires the ability to communicate at all levels about what may be complex technical matters. It also requires the ability to evaluate complex information and sort often conflicting information into *useful* and *distracting* and to rank/prioritise information.

Writing is required to the level of reading and interpreting technical information, developing and modifying plans and procedures and interpreting relevant regulatory requirements.

Numeracy is required to the level of analysing product/process performance data, interpreting process condition information and deriving useful information from technical brochures, papers and similar. Calculation will be required to assist this and to determine priorities for optimisation plans (ie benefit/cost or other quantitative criteria)

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Competence must be demonstrated in the ability to analyse and evaluate current production performance, and develop and implement plans to optimise process systems.

While the technician is expected to take a lead technical role, and to demonstrate competence as defined above, optimisation is rarely undertaken by an individual alone and liaison with all relevant stakeholders is an expected part of this competency.

Where the assessee does not currently possess evidence of competency in *MSASUP390A Use structured problem solving tools*, it may be coassessed with this unit.

Criticalaspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the equipment/process/system be understood in depth and that the importance of critical material properties/settings/readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that:

- non-routine problems are recognised and defined
- hazards are identified and controlled by applying the hierarchy of control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- possible causes of complex problems are identified based on experience and the use of analytical techniques in solving the problem, including identifying variations and cause, separating single problems from multiple problems and the recognition of recurring problems
- fundamental cause of process or equipment faults is determined
- corrective/preventative actions are developed to avoid recurrence of the problem and optimise the condition of the process, plant and equipment
- product quality and uniformity are maintained.

Competence must be demonstrated in the operation of all ancillary equipment to the level required for this competency unit.

Competence also includes the ability to implement improvements within appropriate time constraints and in a manner relevant to the operation of the equipment, processes and systems.

Context of assessment

Competence in this unit may be assessed by:

- observation over time in a processing plant allowing for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical, additional assessment techniques must be used.
- using a suitable simulation and/or a range of case studies/scenarios
- undertaking a specific project based in the plant
- a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit describes the work conducted by senior operators, team leaders or front line managers who optimise process systems as part of their work function. It includes all items of equipment and unit operations which form part of the production process of a complete area.

Typical problems will require the application of detailed operational and process knowledge over the entire production/manufacturing area, including the principles of operation of the equipment and the chemistry, physics, biology and/or biochemistry of the changes to materials occurring within that area.

All operations are performed in accordance with organisation procedures, licensing requirements, legislative requirements and industrial awards and agreements.

Procedures

All operations are performed in accordance with procedures. Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include or have been prepared from/to comply with:

- industry codes of practice
- materials safety data sheets
- equipment manuals
- equipment start up, operation and shut down procedures
- calibration and maintenance schedules
- quality manuals and procedures
- organisation recording and reporting procedures
- production and laboratory schedules
- material, production and product specifications.

Data/records

Historical data/records may include:

- hazard logs
- incident reports
- maintenance records
- product non-conformance reports
- production records.

Implementing change

Requirements to implement change may include:

- changes to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- training of operators
- equipment modifications
- ensuring all HSE requirements are addressed.

Relevant/appropriate personnel

Relevant/appropriate personnel may include:

- managers
- OHS representatives and OHS committee.

Relevant information

Relevant information logged to include:

- modifications to plant or equipment
- modifications to procedures or practices.

Sources of information

Sources of information may include:

- hazard logs
- incident reports
- maintenance records
- work practices
- procedures
- industry journals
- equipment supplier information
- industry best practice information.

Health, **Safety and Environment** (**HSE**)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Unit Sector(s)

MSAPMOPS401A Trial new process or product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency typically applies to a technician in a plant who is taking a lead technical role in the trialling of a new product or the trialling of a new or significantly altered process. This competency does not apply to minor modifications to existing products or processes. Similarly it does not apply to a technician or operator taking part in such trials, and/or who is following directions set by the technician, chemist, engineer, supervisor or manager.

The technician is expected to be a technical expert in that part of the plant/process where the trial is being conducted.

Application of the Unit

Application of this unit

The technician would be expected to operate and control all equipment required for the trial. Generally the technician would be part of a team during the trial, and would usually be working in conjunction with a process/product development expert such as a chemist or engineer. The technician is often the most technically competent member of an operational team. As such they may not have the 'hands on' role of operating items of equipment, but they are expected to have the competence to direct the operation of equipment as appropriate throughout the trial. At all times they would be liaising and cooperating with other members of the team.

Trialling refers to the scale-up and other development steps required to take a new product or process from its design/laboratory trials to full commercial operation on a plant. Trialling may be done on a pilot plant where available and/or on a full scale plant.

The technician would:

- identify and rectify operational problems within their scope
- analyse the trial, both while it is occurring and after completion, and suggest improvements
- be alert for indications of developing problems and take required action to ensure the trial remains safe to people, the environment and the plant.
-

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	equipment, materials and product characteristics. 1.6 Recommend feed rates/order/condition appropriate to the process conditions, equipment, materials and product characteristics. 1.7 Ensure hazard identification and analysis procedures are completed, including consultation with stakeholders, and findings included in plan. 1.8 Ensure recommendations meet the identified need.
2. Prepare for trials.	2.1 Determine the availability of resources required such as materials, equipment, people and skills. 2.2 Estimate time required for trial. 2.3 Liaise with relevant stakeholders. 2.4 Schedule trial at a convenient time. 2.5 Develop documentation for the trial. 2.6 Identify potential hazards and required hazard control procedures by applying the hierarchy of control. 2.7 Determine clearance requirements and special safety and storage requirements. 2.8 Verify decisions with appropriate experts/stakeholders. 2.9 Ensure people with adequate skills are available for the trial.
3. Conduct test runs/trials	3.1 Ensure hazard controls are implemented prior to commencement. 3.2 Run trials. 3.3 Maintain communication with all relevant people. 3.4 Closely monitor critical parameters. 3.5 Recognise actual and potential problems. 3.6 Make adjustments to process conditions as required during trial. 3.7 Sample and test product as required. 3.8 Record and report performance data. 3.9 Ensure all materials, products and waste are handled correctly. 3.10 Leave plant in a condition suitable for routine production to recommence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
4. Evaluate results and identify modifications.	4.1 Interpret data from trial. 4.2 Identify factors which might be related to low rates or low charge amounts. 4.3 Recommend modifications and improvements required. 4.4 Develop and check standard operating procedure. 4.5 Complete documentation and report to appropriate personnel. 4.6 Ensure all relevant staff have required skill levels for the introduction of the new process.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes an understanding of the plant systems and all integral equipment involved in the trial to the level needed to control the system and recognise and resolve problems. In particular it includes the ability to:

- identify all items on a schematic of the plant and describe the function of each
- describe the nature/condition of materials entering and leaving each stage of the process, the changes which have occurred in that stage and why they have occurred
- state the major design features of plant equipment, plant conditions and variables and the impact of these on the properties of materials passing through them
- describe the causes and remedies of common problems such as those selected in the Range Statement
- apply the hierarchy of control to minimise the risk of hazards identified
- describe methods of changing rate and the advantages and disadvantages of each
- describe methods of controlling other process variables and the advantages and disadvantages of each.

Competence also includes the ability to isolate the causes of problems to an item of equipment within the plant system and to be able to distinguish between causes of problems/alarm/fault indications such as:

- process material variations
- instrument failure/wrong reading
- electrical failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- mechanical failure
- operational problem.

Language, literacy and numeracy requirements

This unit requires the ability to communicate and liaise with people at a range of levels about technical matters.

Reading is required to the level of interpreting technical specifications, manuals and procedures; and writing technical documentation such as specifications and procedures required for the trial.

Numeracy is required to the level of interpreting technical specifications and test results, analysing process data and determining required variations in process variables.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Critical aspects

It is essential that competence is demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. For example, look to see that:

- hazards are identified and controlled
- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate and timely action is taken to ensure the safety and success of the trial
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

Context and method of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.

Competence in this unit may be assessed:

- using a pilot plant or a production plant as appropriate
- using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk-through forming part of the response
- using a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources
- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge; and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit includes all items of equipment and unit operations which form part of the trial.

Liaison

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Liaison with technical experts may (depending on trial requirements and company protocols) include one or more of:

- manufacturers
- chemists
- engineering personnel
- designers
- OHS advisors
- maintenance personnel
- potential customers.

Hazard analysis

Hazard analysis procedures may include:

- JSA/JHA (Job Safety Analysis/Job Hazard Analysis)
- hazard and operability (HAZOP) studies
- hazard analysis (HAZAN) studies
- other company specified procedures.

It is not expected that the candidate will be able to conduct technical hazard analysis procedures (such as HAZOP or HAZAN) but they should be able to interpret and use the outcomes of such analyses where relevant.

Hazards

Hazards may be determined from:

- materials safety data sheets (MSDSs)
- other relevant documentation such as hazard logs, incident reports
- company hazard identification procedures
- hazard analysis results
- standard operating procedures.

Waste handling

Waste handling may include:

- collection for re-use
- recycling
- disposal in accordance with health and environmental regulations.

Problems

Typical problems for the trial might include:

- mixing is poor
- materials do not behave as expected
- process/reaction does not proceed /proceeds too slowly
- process/reaction proceeds too quickly/runs away
- yield is low
- quality is out of specification
- process is unstable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- instrumentation is not sufficiently sensitive/too sensitive
- variable catalyst activity
- surging flow/pressure.

Health, **Safety and Environment** (**HSE**)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Unit Sector(s)

MSAPMOPS404A Co-ordinate maintenance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit applies to employees who coordinate maintenance of a manufacturing facility. It applies to all sectors of the industry.

This competency is typically performed by experienced technicians, supervisors, maintenance coordinators or team leaders, working either independently or as part of a team.

Application of the Unit

Application of this unit

This competency applies to supervisors and technicians who are required to apply knowledge of equipment operating principles, service requirements and workplace production operations to the coordination of maintenance activities. The key factors are the coordination of maintenance activities to meet the objectives of restoring the plant/equipment condition, consistent with production requirements.

The technician will:

- identify and plan maintenance work consistent with production requirements
- interpret data and information on equipment
- develop and monitor workplans for the maintenance activities
- organise materials, consumables and personnel to meet the maintenance objectives
- check tools, equipment, materials and output for conformity to job requirements
- complete logs and reports.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1. Plan maintenance.	1.1 Develop work plans for scheduled routine maintenance activities. 1.2 Develop maintenance plans for unscheduled maintenance activities. 1.3 Source maintenance providers (internal/external). 1.4 Develop costings for maintenance work. 1.5 Implement measures to control identified hazards in line with procedures and duty of care. 1.6 Document and record required production interruptions, processes and procedures. 1.7 Obtain clearances for the maintenance work.
2. Organise maintenance.	2.1 Schedule maintenance activities, with reference to production requirements and availability of resources. 2.2 Review available maintenance expertise and arrange appropriate training and assessment where necessary.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
	2.3 Obtain approvals for maintenance schedule as necessary to coordinate with production requirements.
3. Assemble maintenance requirements.	3.1 Determine resources required (equipment, personnel and consumables) to meet maintenance schedule. 3.2 Locate and coordinate supply of consumables, equipment and expertise to meet maintenance schedule. 3.3 Purchase equipment, consumables and expertise as required.
4. Complete maintenance.	4.1 Complete maintenance schedule. 4.2 Make appropriate readings, measurements and recordings and compare to equipment, product and other relevant specifications. 4.3 Identify areas requiring further testing and recommend appropriate procedures to supervisory staff. 4.4 Make appropriate adjustments to the maintenance schedule. 4.5 Complete records as required, noting areas where changes to equipment operation or routine maintenance are required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge and understanding of equipment operation, planning and maintenance practices sufficient to plan for maintenance requirements in standard and non-standard situations and then determine appropriate action which is consistent with operation guidelines is required.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving processing and material problems, including:

- characteristics and capabilities of equipment, materials and processes used
- functions and troubleshooting of internal components and their problems
- routine and non-routine causes of equipment failures and the service conditions which may increase maintenance
- urgency and timeliness factors in planning maintenance activities in relation to production requirements
- proactive, predictive, preventative and reactive maintenance principles
- implications of maintenance for production and work activities
- source requirements for maintenance
- safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup
- the hierarchy of control including engineering controls.

Competence also includes the ability to:

- identify factors in production schedules, time and resource requirements (including external sources) in scheduling maintenance activities
- schedule maintenance functions in the most timely and cost effective manner
- apply relevant agreements, codes of practice or other legislative requirements
- ensure workplace is safe for maintenance activities.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical manufacturer specifications, equipment procedures, production schedules and material labels as provided to coordinators.

Writing is required to the level of completing workplace reports and proposals.

Numeracy is also required, eg analysing statistical information/historical data in the form of tables and graphs

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to:

- recognise potential situations requiring action
- implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- early warning signs of equipment in need of attention/with potential problems are recognised
- planned work sequences are logical and conform with production schedules and work rosters
- maintenance schedules for reactive, planned and proactive maintenance are coordinated based upon the most appropriate and cost effective method to ensure equipment reliability and optimum performance
- plans are initiated and monitored, with activities modified for variations in workplace contexts and the environment, until final resolution has occurred.

Assessment method and context

It is preferred that assessment takes place in an industrial work environment.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the manufacturing industry. It does not include maintenance which would require trade level skills. It is not intended that this competency would cover performing maintenance which is carried on in a workshop.

This may include:

- predictive and preventative operational maintenance
- proactive maintenance
- reactive maintenance.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools specific for the task
- testing equipment
- measuring and aligning equipment
- computer equipment
- relevant personal protective equipment.

Hazards

Typical hazards to be considered, include:

- isolations of energy sources, motive power and process materials
- manual handling of machinery components and the need for lifting devices
- hot, cold or components containing dangerous materials
- external hazards (eg traffic into a maintenance area)

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Typical process and product problems which may require maintenance, include:

- equipment performance outside of specification or requirements
- equipment breakdown
- equipment wear and tear.

Variables

Key variables to be monitored include:

- relationship of maintenance plan to production requirements
- costs of maintenance
- availability of materials and services
- documentation and record keeping.

Data and Records

Typical information sources, observed data and plant records may include:

- plant data
- log sheets
- production schedules
- operational and performance reports
- physical aspects such as noise, smell, feel and pressure
- condition monitoring information
- planned maintenance schedules
- standard operating procedures
- manufacturer instructions, specifications and service manuals
- machine circuit diagrams for hydraulic/pneumatic and electrical/electronic circuits
- plant description manuals.
-

MSAPMOPS405A Identify problems in fluid power system

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the recognition and diagnosis of control system problems in hydraulic/pneumatic control systems on process equipment. It includes the implementation of appropriate corrective action. It applies to all sectors of the industry.

This competency is typically performed by technicians working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who are required to apply knowledge of fluid power systems and components to the identification and isolation of faults in equipment. The key factors are the diagnosis and the recommendation of action to resolve routine and non-routine faults, in order to return the equipment to production.

The technician will:

- identify and plan scope of equipment checks
- check settings, adjustments and performance of equipment
- identify and isolate faults in equipment
- propose solutions and carry out solutions within scope of authority
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify pneumatic/ hydraulic control system problems.	1.1 Categorise the types of machine malfunctions due to fluid power faults. 1.2 Describe the effects on product quality of fluid power problems. 1.3 Isolate possible faulty components from a circuit diagram and knowledge of the function of each component.
2. Implement appropriate corrective action.	2.1 Examine other possible faults. 2.2 Shortlist possible fault causes. 2.3 Conduct investigations of machine, products or data to determine most likely fault cause(s). 2.4 Take appropriate action to ensure fault is rectified. 2.5 Follow up on action to ensure completion in an appropriate time frame. 2.6 Recheck after corrective action to ensure fault has been rectified.
3. Identify maintenance	3.1 Check manufacturer instructions to determine

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
requirements.	recommended maintenance schedule. 3.2 Check fault and maintenance history to determine adequacy of current regime and special requirements. 3.3 Determine criticality of machine to production/business. 3.4 Develop maintenance schedule/requirements for machine. 3.5 Liaise with all relevant stakeholders to ensure schedule is appropriate. 3.6 Report outcome to appropriate personnel.
4. Identify pneumatic/ hydraulic control system problems.	4.1 Categorise the types of machine malfunctions due to fluid power faults. 4.2 Describe the effects on product quality of fluid power problems. 4.3 Isolate possible faulty components from a circuit diagram and knowledge of the function of each component.
5. Implement appropriate corrective action.	5.1 Examine other possible faults. 5.2 Shortlist possible fault causes. 5.3 Conduct investigations of machine, products or data to determine most likely fault cause(s). 5.4 Take appropriate action to ensure fault is rectified. 5.5 Follow up on action to ensure completion in an appropriate time frame. 5.6 Recheck after corrective action to ensure fault has been rectified.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process and the interaction of process conditions on product quality sufficient to recognise and analyse control system faults.

Knowledge of organisation procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving hydraulic system problems, including:

- principles of hydraulics/pneumatics
- fluid power circuit diagrams
- principles of circuit components
- appropriate testing procedures and use of equipment for a range of equipment faults
- urgency and timeliness factors in planning maintenance activities in relation to production requirements
- collection, analysis and reporting of data.

Competence also includes the ability to:

- identify and select testing methods based on cost and time effectiveness
- conduct inspections, checks and tests on equipment as appropriate
- read and interpret circuit diagrams for mechanical, hydraulic, pneumatic and electrical/electronic operating systems
- use technical information and manufacturer information to locate relevant data
- interpret technical specifications and manufacturer instructions
- ensure workplace is safe for testing and maintenance of equipment
- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret technical specifications and manufacturer manuals.

Writing is required to the level of writing procedures and schedules. Basic numeracy is also required to allow the interpretation of machine and product data and the comparison of actual with desired readings.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to:

- recognise potential situations requiring action and then in implementing appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- machine reliability is high.

Assessment method and context

It is preferred that assessment takes place on industrial equipment in a work environment.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal, and a range of abnormal, conditions
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom.

Additional resources might include the provision of equipment with known faults/problems to allow for assessment of the ability to identify problems.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes all common equipment used in the manufacturing industry and should be able to be applied to all equipment using fluid power control systems.

This competency applies to all work environments and sectors within the manufacturing industry. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions, manufacturer information and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- pumps
- pressure controls
- DCVs (directional control valves)
- flow control actuators
- accumulators
- filters
- heat exchangers
- proportional, servo and cartridge valves.

Hazards

Typical hazards include:

- high pressures (hydraulic and pneumatic)
- hot surfaces
- hydraulic oil spills and leakage
- noise.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'.

Distinguish between causes of faults such as:

- control system failure
- process condition
- materials
- component types.

Typical process and product problems may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- loss of flow, power
- power failure
- oil leaks (internal and external)
- component malfunction
- poor maintenance procedures
- regular maintenance
- shutdown
- using accumulator as emergency source
- motor failure effect on cycle time
- pressure loss
- short shots
- loss of clamp pressure
- oil temperature.

Variables

Key variables to be monitored include:

- oil levels
- temperatures
- cavitation/aeration/noise
- cleanliness
- poor performance
- safety aspects.
-

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process and the interaction of process conditions on product quality sufficient to recognise and analyse control system faults.

Knowledge of organisation procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving electronic control system problems, including:

- fundamentals of electricity and electronics
- electronic circuit diagrams
- principles of electronic circuit components
- principles of PLC programming, troubleshooting and diagnosis
- appropriate testing procedures and use of equipment for a range of equipment faults
- urgency and timeliness factors in planning maintenance activities in relation to production requirements
- collection, analysis and reporting of data.

Competence also includes the ability to:

- identify and select testing methods based on cost and time effectiveness
- conduct inspections, checks and tests on equipment as appropriate
- read and interpret circuit diagrams for mechanical, hydraulic, pneumatic and electrical/electronic operating systems
- use technical information and manufacturer information to locate relevant data
- interpret technical specifications and manufacturer instructions
- ensure workplace is safe for testing and maintenance of equipment
- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret technical specifications and manufacturer manuals.

Writing is required to the level of writing procedures and schedules. Basic numeracy is also required to allow the interpretation of machine and product data and the comparison of actual with desired readings.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

It is preferred that assessment takes place on industrial equipment in a work environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability to:

- recognise potential situations requiring action and then in implementing appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- machine reliability is high.

Assessment method and context

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Competence in this unit may be assessed:

- on a processing plant allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom.

Additional resources might include the provision of equipment with known faults/problems to allow for assessment of the ability to identify problems.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes all common equipment used in the manufacturing industry and should be able to be applied to all equipment using electrical/ electronic control systems.

This competency applies to all work environments and sectors within the manufacturing industry. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- application and programming of PLC (programmable logic controls) and ancillaries
- application of solid-state control/switching units
- switches, relays and solenoids
- position and pressure transducers
- temperature controllers.

Hazards

Typical hazards include:

- electricity
- temperature from hot surfaces and equipment
- malfunctioning equipment
- test equipment.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'.

Typical process and product problems may include:

- loss of flow, power
- power failure
- component malfunction
- poor maintenance procedures
- regular maintenance
- shutdown

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- motor failure effect on cycle time
- short shots
- loss of clamp pressure
- no power
- electronic/electrical faults
- analysis with PLC.

Variables

Key variables to be monitored include:

- temperatures
- cleanliness
- poor performance
- safety aspects.
-

MSAPMOPS601A Design equipment and system modifications

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge needed to design equipment and system modifications in a manufacturing situation. This unit is typically performed by high level staff, working as part of a design, development and implementation team and taking a lead technical role. It does not include the design of equipment requiring specialist engineering skills or regulatory licensing, although it may include working with a person with these skills/licence.

Application of the Unit

Application of the unit	This competency applies to people who design modifications to equipment or systems, typically used for production. The modification may be to improve productivity, improve reliability, reduce waste (muda), reduce cost or other reasons. The competency can apply to the design of equipment/system modifications associated with product changes or improvements and/or establishment of a new production line/product. Typically it will be to meet a specified end use. This will involve working closely with a range of management and operations personnel and requires balancing the business, operational and technical sides of the modified equipment/system. This unit of competency applies to the technical expert. The competency is applied under limited guidance in line with a broad plan, budget or strategy This competency is typically performed by senior technologists working in liaison with other technical experts, operations management, operators and other

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Assess requirements.	1.1. Establish modification or design requirement 1.2. Establish design concepts 1.3. Establish design limitations 1.4. Consult specialists/experts as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Evaluate options.	2.1. Define options 2.2. Determine most appropriate modification 2.3. Confirm selected option with appropriate personnel in accordance with workplace procedures
3. Design modifications.	3.1. Design modification to meet end use specifications/standards and all legislative or regulatory requirements 3.2. Verify design in accordance with enterprise procedures
4. Coordinate design implementation and testing.	4.1. Coordinate implementation of the design/modification 4.2. Assess design outcome test results to establish conformance to requirements 4.3. Assess variations to the design where necessary 4.4. Prepare documentation to meet all requirements
5. Maintain records	5.1. Maintained records of design and modification outcomes in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills may include (but may not be restricted to):

- interpret design requirements
- apply technical skills, including performing technical calculations
- conduct tests and prepare drawings/documentation
- evaluate design options
- communicate effectively within the workplace, including liaising with other departments
- establish or interpret procedures, where required
- determine report requirements and present information in appropriate formats

Required knowledge

Required knowledge, to the breadth and depth required to design equipment and system modifications may include (but may not be restricted to):

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• appropriate design techniques • relevant Australian design standards • OHS considerations and environmental factors in relation to equipment/system design • safety and environmental aspects of relevant enterprise activities • workplace procedures and reporting/recording processes • relevant regulatory requirements and codes of practice.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessment for this unit of competency will be in a work environment or a simulated work environment. Assessment must confirm appropriate knowledge and skills to: • establish design/modification requirements • assess design and modification options • organise implementation of design/modification • ensure work meets specifications • apply workplace health and safety policies in work operations • maintain accurate records
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment. This requires access to real or appropriately simulated situations involving the design of equipment and system modifications for applications within a manufacturing context. This includes real or simulated work areas, materials, equipment, and information on work specifications, manufacturer's instructions, relevant safety procedures and regulations, quality standards, organisation procedures and customer requirements.

EVIDENCE GUIDE	
Method of assessment	
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations All work will comply with procedures
Modification/design requirements	Modification/design requirements may include (but is not restricted to) the following factors: • production, • facility,

RANGE STATEMENT	
	• OHS • sustainability
Design concepts	Design concepts may include (but are not restricted to) the following requirements: • process, • material, • quantity, • cost and • outcome
Design limitations	Design limitations may be determined from (but are not restricted to) the following as applicable: • codes, • regulations and • technical documentation
Design	Design activities relate to processes which are based on established principles and practices, and that require modifications determined by experience and analysis Activities may involve (but are not limited to): • design research and consultation with internal or external specialists • assessment and evaluation of design concepts • design implementation and testing of modifications
Applicable regulations and legislation	Applicable regulations and legislation may include (but are not limited to): • occupational health and safety legislation and regulation relevant to workplace activities • relevant Australian design standards • workers' compensation legislation and regulation • environmental legislation and regulations • industry codes of practice • Australian (or other) Standards
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution

MSAPMPER200C Work in accordance with an issued permit

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit aims to ensure that people working under a permit to work understand the system, know the limitations of the permit under which they are working and comply with all the requirements of the permit. The people to whom this unit applies may be called 'permit recipients' or 'permit holders' by some organisations. Some organisations call 'permits' 'clearances' This unit covers the basic competency of working under a permit. Where entry to a confined space is required, then *MSAPMPER205B Enter confined space* is also required. The safety observer (standby person) competencies are covered by *MSAPMPER202A Observe permit work*. Atmospheric testing is covered by *MSAPMOHS217A Gas test atmospheres*. The issuing of permits is covered by *MSAPMPER300B Issue work permits*.

Application of the Unit

Application of the unit	This competency applies to persons who are required to conduct work activities under the authority of an issued permit to work and within the context and requirements of that permit. This typically applies to all work done by maintenance staff and contractors, and also to any other non-process work performed on the plant. It includes: • identifying the range and scope of work covered by the permit • checking that the right type of permit has been issued for the type of work • adequately preparing to undertake the work, including obtaining all necessary safety equipment and PPE • undertaking the work strictly in accordance with the provisions of the permit • maintaining correct housekeeping with permit activities • completing work in accordance with the permit requirements • querying or raising matters about the permit if the scope of work/nature of the tools to be used varies from that covered by the permit • handing back the permit in accordance with procedures and obtaining appropriate sign off as required.

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply for permit(s)	1.1. Confirm the scope and location of the work to be done 1.2. Identify the need for a work permit(s) for the work to be carried out. 1.3. Identify the type of work permit required. 1.4. Collate information required for the issue of the permit 1.5. Apply for the permit following the organisations requirements
2. Identify the scope of the permit.	2.1. Check that work to be done complies with the permit type. 2.2. Check that the scope and location of work comply with the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	permit issued 2.3. Check that the hazard controls specified on the permit are consistent with the hazard analysis 2.4. Check that preparations specified on the permit have been completed 2.5. Sign onto/receive the permit.
3. Prepare for permitted work.	3.1. Maintain safe working conditions and environment by using available isolation procedures, safety equipment and emergency procedures. 3.2. Monitor plant conditions and hazards to ensure work under the permit remains safe. 3.3. Ensure that appropriate safety equipment and clothing are selected and worn as required by the permit and relevant procedures. 3.4. Inspect work area to ensure safety and compliance with permit requirements and procedures.
4. Work in accordance with an issued permit.	4.1. Use required hazard reduction/control measures. 4.2. Comply with requirements of the permit including safety observer if required. 4.3. Display issued permit on work site as required 4.4. Ensure compliance with scope, location and timeframe specified in the permit or seek re-authorisation as required 4.5. Suspend job and make work site safe before leaving job. 4.6. Formally seek and receive authorised extensions to the permit when required. 4.7. Give end of day status report to permit issuer.
5. Complete permit(s) to work.	5.1. Obtain new permit(s) or have existing permit(s) revalidated before work is recommenced. 5.2. Check the work conducted against the issued permit(s) to ensure that all the nominated work requirements have been satisfied. 5.3. Monitor general housekeeping to ensure that the site has been left in a clean and safe condition. 5.4. Ensure personal lockouts/tag outs/isolations are removed in accordance with procedures 5.5. Communicate status of the work conducted and the results of the permit to relevant personnel. 5.6. Complete documentation as required and have permit signed off when job is completed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
Competence includes the ability to: • access and interpret information relevant to specific tasks (eg labels, MSDSs hazchem signs) • identify changes to conditions which may lead to the permit being revoked before the job is completed • describe and/or explain hazards associated with tasks covered by the permit, types of tests required for the issue of work permits - the types of tests to include, atmospheric/oxygen/breathability, flammability/explosivity, toxicity/TWA, temperature, humidity • the impact of the regulatory framework and organisation procedures under which the permit operates upon the particular job(s) requiring the permit. Language, literacy and numeracy requirements • This unit may require the ability to read and correctly interpret complex P&ID's; speak clearly and unambiguously in English; and to explain, describe and verify sometimes complex needs and issues. • Writing is required to the level of completing workplace forms. • Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses.
Required knowledge:
Knowledge and understanding of the relevant OHS and environmental requirements, in particular those relating to various situations requiring work permits, with an ability to implement the requirements in a manner that is relevant to the job. Knowledge of the organisation's standard procedures and work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job. Sufficient knowledge of all types of permits is required to ensure work is not carried out without the correct permit. This includes recognizing hot work and confined spaces. Knowledge of regulatory frameworks should include: • licence requirements for the job, • company policy and procedures • permit control systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Simulation may be required to allow for assessment of parts of this unit. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to distinguish between situations requiring the types of permit and to list the major requirements of each type of permit. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • provide reasons for a permit system • recognise the importance of different work permits • comply with permit conditions including the wearing of appropriate personal protective equipment (PPE) • take appropriate action to resolve faults or report faults to appropriate personnel • explain and implement incident response procedures. Consistent performance should be demonstrated, e.g. look to see that: • communications are timely and effective • deviations from permit conditions are recognised, reported, corrected and re-authorization arranged • actions specified in the permit/standard procedures are carried out • all safety procedures are followed.
Context of and specific resources	A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
for assessment	Assessment will occur over a range of situations which may include disruptions to normal, smooth operation. Competence in this unit may be assessed: • on a plant/in the work place/a work situation • by using a suitable simulation based on the actual plant and including walk throughs of the relevant competency components and/or a range of case studies/scenarios and role plays • by questioning and using 'what if' scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant • through a combination of these techniques. These aspects may be best assessed using a range of simulations/scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new or unusual situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. While oral assessments may be appropriate there needs to be a written record for audit purposes. This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions which will be used to probe the reasoning behind the observable actions will also be required to the extent that they form part of the assessment method.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.
Method of assessment	Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed and the safety standard required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version/version specified by the local regulatory authority must be used.
Context	This unit typically applies to all work done by maintenance staff and contractors, and also to any other non-process work performed on the plant. All work is to be conducted using the appropriate personal protective equipment. The types of work permits may include: • cold work/general permit to work • excavation • hot work • vehicle entry • minor repairs • working at heights • other special permits. Note that entry to a confined space is covered by *MSAPMPER205C Enter confined space*. The Australian Standard (*AS2865*) definition given for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	confined space entry is used in this Training Package. All operations are performed in accordance with standard operating procedures (SOPs). Checks to ensure a workplace is safe may include: • process isolations complete • mechanical and electrical isolations in place • atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs. • relevant personnel informed of work and agree that it is safe and appropriate to proceed.
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include: • legislation/codes • OHS legislation, codes of practice and guidance material • EPA • National and Australian standards • licence and certification requirements • internal permit control system. • process isolations complete • mechanical and electrical isolations in place • atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs. • relevant personnel informed of work and agree that it is safe and appropriate to proceed.
Information required for permit	Information required for a permit includes: • work description • tools to be used • process/methods of work/SOPs • MSDSs • JHA/JSA/SWMSs
Tools and equipment	This competency includes use of safety equipment and tools such as: • eye protection (eg goggles) • ear protection • gloves

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• clothing • respiratory protection • helmets • safety footwear.
Hazards	Typical hazards include: • heat, smoke, dust or other atmospheric hazards • sharp edges, protrusions or obstructions • limited head spaces or overhangs • equipment or product mass • slippery surfaces, spills or leaks • noise, rotational equipment or vibration.
Display issued permit	Display issued permit on work site means to have the permit on the worksite and displayed/ready to be shown as required by the site/job requirements and may include: • displaying it in a provided mounting • having it accessible in a folder which is on the work site • having it folded in overall pockets in a manner which allows it to be readily shown on request.
Problems	'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical problems may include: • provision of the wrong permit • incorrect information being supplied with the permit • errors being made in the understanding of permit data • failure to correctly correspond to the requirements of the permit • failure to seek clarification when anomalies occur.
Variables	Key variables to be monitored include: • sites under which permit activities must be applied • type of permit to be executed • types of tools and equipment to be employed • size of work team • scope and urgency of work.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

MSAPMPER201A Monitor and control work permits

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the monitoring of the operational conditions in which a permit to work has been issued, and the required activities and functions associated with the production/process of chemical, hydrocarbons, oil, and other process manufactured products. This role may be carried out by the standby person or other appropriately qualified persons.

While this competency carries with it high levels of responsibility the role is usually prescribed by the permit process and may be exercised by any competent operator.

Application of the Unit

Application of this unit

This competency applies to personnel who are required to monitor a work situation in which the activity is conducted under the auspices of a permit to work. During this activity the individual will monitor the work situation for conformance to the permit and will immediately intervene if the parameters of the permit are exceeded or work proceeds outside the boundaries set by the permit. It includes:

- identifying and understanding the requirements of the permit
- monitoring any changes in the conditions of work under the permit
- ensuring work sequences are followed as permitted by the permit
- constantly inspecting the site for changed work or site circumstances
- reporting any non-conformance with permit conditions
- withdrawing or causing work to cease outside permit conditions
- confirming conformance with permit conditions and reporting conclusion of activities.
-

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify and monitor permit conditions.	1.1 Identify permit requirements. 1.2 Monitor permit holder and conditions to ensure that the work being conducted conforms to the issued permit requirements. 1.3 Identify and communicate changes in the operating conditions or requirements of the permit to permit holders to ensure they are kept aware of any hazards.
2. Monitor work permit systems.	2.1 Control work activities to comply with the organisation or site work permit system and safety procedures. 2.2 Check and verify the permit holder's knowledge of the issued permit and its requirements before allowing any repair or maintenance work to be

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	undertaken on the production/process equipment. 2.3 Undertake site inspections to ensure that the work to be undertaken is in sequence and completed in a safe and coordinated manner. 2.4 Identify hazards, and confirm with those undertaking the permitted work that control measures, as defined in the permit are established.
3. Identify and action non-compliance.	3.1 Identify conditions of active permits. 3.2 Report and record incidents of non-compliance according to procedures. 3.3 Take corrective action upon incidences of non-compliance with permit conditions through the withdrawal or suspension of the issued permit.
4. Confirm compliance with permit.	4.1 Complete checklists in accordance with standard procedures. 4.2 Document and communicate findings to appropriate personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of permit requirements sufficient to distinguish between situations requiring permits and then implementing the appropriate corrective action where required.

Knowledge of the organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Competence includes the ability toapply and/or explain:

- an awareness of hazards associated with the permit
- Australian Standard AS2865 - Safe working in a confined space and relevant legislation
- identification of container and goods coding and HAZCHEM markings
- production workflow sequences and requirements for working in confined spaces
- focus of operation of work systems and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- application of relevant agreements, codes of practice and other legislative requirements
- hazards of the materials and process and appropriate hazard control procedures
- identification and correct use of equipment, processes and procedures
- planning own work including predicting consequences and identifying improvements; as is relevant to the practical completion of the job.

Demonstration of competence in this unit should include knowledge of the following as appropriate to the process:

- blank/blind lists and P&IDs
- tagging procedures
- isolation procedures
- incident response procedures, including evacuation
- gas types, toxicity and explosivity and limits of each
- oxygen levels
- area knowledge including plant and processes
- permit types and limitations
- product tolerances and specifications
- static electricity and cathodic protection
- environmental hazards
- hot work protective measures
- columns
- vessels
- fire fighting equipment
- blinds/blanks
- pumps
- compressors
- prime movers
- valves.

An understanding of alarm and communication systems is required.

The regulatory framework to include:

- OHS
- EPA
- OHS authorities and NOHSC
- licence and certification requirements
- company policy and permit control systems.

Language, **literacy and numeracy requirements**

This unit requires the ability to:

- read and correctly interpret complex P&IDs
- speak clearly and unambiguously in English
- explain, describe and verify sometimes complex needs and issues.

Writing is required to the level of completing workplace forms and producing reports.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

Assessment will occur using industrial equipment and will be undertaken in a work like environment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to distinguish between situations requiring the major types of permit and to list the major requirements of each type of permit. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- provide reasons for a permit system
- recognise the importance of different work permits
- comply with permit conditions including the wearing of appropriate personal protective equipment (PPE)
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement incident response procedures.

Consistent performance should be demonstrated. For example, look to see that:

- communications are timely and effective
- deviations from permit conditions are recognised, reported, corrected and re-authorisation arranged
- action specified in the permit/standard procedures is carried out
- all safety procedures are followed.

Assessment method and context

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which may include disruptions to normal, smooth operation.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Competence in this unit may be assessed:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- on an operating plant over an extended period
- by using a suitable simulation based on the actual plant and including walk throughs of the relevant competency components and/or a range of case studies/scenarios and role plays
- by questioning and using 'what if' scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant
- through a combination of these techniques.

These aspects may be best assessed using a range of simulations/scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new or unusual situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions which will be used to probe the reasoning behind the observable actions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The application of this unit is defined by the level and area of responsibility.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Legislative and site specific safety procedures and/or requirements, including in hazard identification, assessment and application of control measures, must be met.

Compliance is required with:

legislation/codes:

- OHS
- EPA
- OHS authorities and NOHSC
- licence and certification requirements
- other relevant standards
- workplace specific permit control system.

Monitor means continual personnel presence to observe conditions of the workplace and work practices to ensure compliance with permit conditions. This may include:

- supervision/monitoring of contractors
- verification of permits, licences, tests
- document control
- compliance with legislation/codes.

Corrective action may include:

- ceasing job
- leaving the job site safe if it is safe and practical to do so
- report reason for ceasing job and request new permit when safe.

Indicative functions include:

- supervision/monitoring of contractors
- verification of permits, licences, tests
- document control
- compliance with legislation/codes.

This unit may be applied to either an individual or team related context within the workplace.

Procedures

All operations are performed in accordance with procedures.

Procedures cover all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- legislation/codes
- OHS legislation, codes of practice and guidance material
- EPA
- National and Australian standards
- licence and certification requirements
- internal permit control system.
- process isolations complete
- mechanical and electrical isolations in place

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs
- relevant personnel informed of work and agree that it is safe and appropriate to proceed.

Tools and equipment

This competency includes use of equipment and tools such as:

- danger tags and lockouts
- out of service tags
- blinds/blanks
- blind/blank list
- gas testers and monitors
- lights
- ladders
- cathodic protection bonds
- barricades
- signage
- communications equipment
- process and equipment drawings.

The types of work permits may include:

- evacuation
- clearance
- hot work
- vehicle entry
- confined space
- minor repairs
- working at heights
- other special permits.

Safety equipment may include:

- eye protection (eg goggles)
- ear protection
- gloves
- clothing
- respirators and masks
- helmets.

Hazards

Typical hazards include:

- heat, smoke, dust or other atmospheric hazards
- sharp edges, protrusions or obstructions
- limited head spaces or overhangs
- equipment or product mass
- slippery surfaces, spills or leaks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- noise, rotational equipment or vibration.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- provision of the wrong permit
- incorrect information being supplied with the permit
- errors being made in the understanding of permit data
- failure to correctly correspond to the requirements of the permit
- failure to seek clarification when anomalies occur.

Variables

Key variables to be monitored include:

- sites under which permit activities must be applied
- type of permit to be executed
- types of tools and equipment to be employed
- size of work team
- scope and urgency of work

Health, **Safety and Environment** (**HSE**)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

MSAPMPER202A Observe permit work

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This competency covers the safety observer role for permits requiring a safety observer. It may be undertaken by a member of the work team or an operator may perform this role.

Application of the Unit

Application of the unit	This competency covers the knowledge and skills required for a safety observer (sometimes called a hole watcher or a fire watch). Safety observers can stop permit work, but do not have the authority to restart it. It includes: • understanding the permit system and the individual permit's requirements • observing work being performed • noting any change in conditions and taking required action.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the job	1.1. Check the permit(s) issues are appropriate and sufficient for the work to be done 1.2. Prepare a rescue/incident response plan in accordance with procedures 1.3. Check plan is workable within the approved job procedures and issued permit(s) 1.4. Request revision of job procedures and or permit(s) to ensure rescue/incident response plan is practical.
2. Control the permit site.	2.1. Interpret the hazard controls required by the permit(s) 2.2. Check all hazard controls are complied with all the time 2.3. Maintain constant communication with workers 2.4. Control entry to and exit from the work site in accordance with the requirements of the permit(s) 2.5. Monitor the environment of the work site and adjacent areas 2.6. Monitor scope and location of work as defined by the permit(s) 2.7. Withdraw permit(s) and shut down work site if conditions vary from those required by the permit.
3. Take appropriate action for potential incident.	3.1. Ensure all required first response equipment is in the location specified by the permit(s) and is in working condition 3.2. Ensure all required monitoring is carried out as required by permit(s) 3.3. Withdraw permit and shut down work site in the event of an alarm or monitoring failure 3.4. Raise the alarm in the event of an incident 3.5. Implement rescue/incident response plan as required by procedures.
4. Complete safety observer role.	4.1. Hand over to oncoming safety observer before leaving role 4.2. Complete all required documentation and reports

EVIDENCE GUIDE	
	also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what if scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to specify the requirements and then select the best solution to meet the necessary and desirable requirements.
Context of and specific resources for assessment	Assessment will require access to a plant or workplace over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with other relevant units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Context	This competency covers any work permits which requires a safety observer. Permits are called clearances by some organisations. Typical types of permit requiring a safety observer include: • excavation • hot work • confined space • other relevant permits. Requirements identified on the permit may include testing of atmospheric conditions, ventilation and control measures such as isolation, barriers, tag out/lockout signs, communications, incident response. A 'competent person' is a person who has, through a combination of training, education or experience, acquired knowledge and skills enabling that person to correctly perform a specified task. Safety structures and controls may include automatic plant shut down buttons, cords/lanyards, alarms, barriers, guards, earth leakage devices, tag out/lock out procedures, warning lights.
Incident response	The required incident response may include: • first response to fire • some initial rescues • first aid/CPR • other responses These responses are not included in this units of competency but are the subject of their own unit of competency.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Not applicable.

Unit Descriptor

Unit Descriptor	This competency covers the entry to confined spaces, for maintenance, servicing of vessels or other necessary reasons. Work in/entry to confined spaces shall conform to relevant legislation and AS2865, or its authorised update or replacement.

Application of the Unit

Application of the unit	This competency applies to persons who are required to enter confined space, for maintenance purposes, for cleaning, inspection or other reasons. It is required by all persons who are required to enter a confined space, as defined by the standard AS2865, or its authorised update or replacement. This unit includes: • preparing to enter the confined space • checking the preparations against the permit conditions • entering the confined space. AS2865 requires reassessment 'at appropriate intervals'. The industry regards reassessment on a two to three year cycle as good practice. It is expected that all standby persons will also be competent to enter confined space. See *MSAPMPER202A Observe permit work* for the standby person competency. The issuing of confined space permits is covered by *MSAPMPER300B Issue work permits*. Some sites and situations will require competency in associated units as a site corequisite. Some of these possible units are identified in the Overview of Assessment. These additional units should be accessed and may be combined

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess confined space for entry	1.1. Confirm and verify the purpose of the required entry. 1.2. Identify and assess hazards within/around the confined space. 1.3. Check a risk assessment associated with entry of the confined space has been conducted and documented. 1.4. Identify and document relevant controls.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.5. Take appropriate steps to ensure confined space is ready for entry. 1.6. Check the incident/emergency response plan is appropriate to the job 1.7. Rehearse own role in an incident/emergency response 1.8. Confirm and verify that the conditions of the permit reflect the risk assessment 1.9. Check the confined space is ready for entry.
2. Use safety equipment and PPE	2.1. Secure work site 2.2. Select, fit and wear designated PPE. 2.3. Select, test and use required instruments and monitors. 2.4. Challenge test atmosphere/atmospheric monitoring instrument if required before entry. 2.5. Confirm test/monitoring results show entry is safe
3. Work in accordance with confined space requirements.	3.1. Enter confined space safely 3.2. Work in compliance with permit requirements. 3.3. Arrange re authorisation/reissue of permits as required. 3.4. Complete confined space working documentation. 3.5. Maintain communications with all relevant personnel. 3.6. Take appropriate action if there is a change in risk/work environment.
4. Conclude confined space operations in accordance with procedures.	4.1. Recover, clean, service and store equipment. 4.2. Complete required final documentation. 4.3. Report any issues.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
Competence includes the ability to: • access and interpret information relevant to specific tasks (eg labels, MSDSs hazchem

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

signs)
- access and apply hazard controls
- identify changes to conditions which may lead to the permit being revoked before the job is completed
- describe and/or explain hazards associated with tasks covered by the permit, types of tests required for the issue of work permits - the types of tests to include, atmospheric/oxygen/ breathability, flammability/explosivity, toxicity/TWA, temperature, humidity
- interpret and respond to gas test/monitoring results/information.
- identify a change in work conditions, possible new hazards and so the required hazard controls and obtain revalidation of permit
- implement hazard controls

Language, **literacy and numeracy requirements**

This unit requires the ability to:

- read and correctly interpret required documentation relevant to the entry
- speak clearly and unambiguously in English
- explain, describe and verify sometimes complex needs and issues
- understand the permit requirements.

Writing is required to the level of completing workplace forms and producing any required reports.

Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses and interpret gas test/monitoring results.

Required knowledge:

Knowledge and understanding of the relevant OHS and environmental requirements, in particular those relating to various situations requiring work permits, with an ability to implement the requirements in a manner that is relevant to the job. Knowledge of the organisation's standard procedures and work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Sufficient knowledge of all types of permits is required to ensure work is not carried out without the correct written authority.

Knowledge of regulatory frameworks should include:

- OHS
- EPA
- OHS authorities and ASCC/NOHSC/state CSE regulations
- licence requirements
- company/organisation policy and permit control systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• other relevant standards. Knowledge of and the application to the job of relevant legislation and AS2865/2009, or its authorised update or replacement, is essential. Australian Standard HB 213-2003 Guidelines for Safe Working in Confined Spaces, or its relevant replacement, is also a useful reference. Knowledge of the organisation's confined space procedures is required.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit may be undertaken as an individual unit or in combination with other relevant units. Other possible relevant units include: • RIIRIS201AConduct local risk control • RIIOHS204AWork safely at heights • MSAPMOHS200A Work safely • MSAPMOHS216A Operate breathing apparatus • MSAPMOHS217A Gas test atmospheres • MSAPMPER200B Work in accordance with an issued permit • MSAPMPER202A Observe permit work • PUASAR005A Undertake confined space rescue.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to distinguish between situations requiring different permits and to list the major applications and scope of each type of permit. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. As working in a confined space is inherently hazardous it is essential that the worker be able to demonstrate: • recognition of a confined space • the ability to work within a confined space

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• compliance with the permit conditions • recognition and control of atmospheric hazards • use of confined space entry and exit equipment relevant to the site/job • selection, use and maintenance of appropriate PPE • use of communication equipment and processes applicable to confined space work • completion of documents and records relevant to confined space work • understanding of and the ability to initiate incident/emergency response plan. Consistent performance should be demonstrated. For example, look to see that: • communications are timely and effective • deviations from permit conditions are recognised, reported and corrected and the permit is re-authorised or re-issued by competent person • actions specified in the permit/standard procedures are carried out • all safety procedures are followed.
Context of and specific resources for assessment	Competence in this unit should be determined by a practical demonstration of a confined space entry. This may be achieved: • by using a suitable simulation based on an actual plant AND • by questioning and using 'what if' scenarios In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/ simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions. This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to a plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions which will be used to probe the reasoning behind the observable actions will also be required to the extent that they form

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.
Method of assessment	
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed and the safety standard required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicized wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version/version specified by the local regulatory authority must be used.
Confined space	The Australian standard (AS2865-2009) definition given for confined space is used in this Training Package, i.e.: 'An enclosed or partially enclosed space that is not intended or designed primarily for human occupancy, within which there is a risk of one or more of the following: (a) An oxygen concentration outside the safe oxygen range. (b) A concentration of airborne contaminant that may cause impairment, loss of consciousness or asphyxiation. (c) A concentration of flammable airborne contaminant that may cause injury from fire or explosion. (d) Engulfment in a stored free-flowing solid or a rising level of liquid that may cause suffocation or drowning.'
Entry	Entry to a confined space is defined by AS2865 as: 'when a person's head or upper body is within the boundary of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	confined space. NOTE: Inserting an arm for the purpose of atmospheric testing is not considered as entry to a confined space.'
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include: • legislation/codes • OHS legislation, codes of practice and guidance material • EPA • National and Australian standards • licence and certification requirements where relevant • internal permit control system • process isolations complete • mechanical and electrical isolations in place • atmospheric testing complete and atmosphere safe or if not safe and cannot be made safe then appropriate measures are implemented as per procedures • relevant personnel informed of work and agree that it is safe and appropriate to proceed • communication protocols with particular reference to organisation confined space requirements.
Ready for entry	Checking the confined space is ready for entry includes checking: • isolations are complete and appropriate • isolation provide positive isolation • atmosphere is safe (or if necessary relevant measure are in place to ensure safe entry into an unsafe atmosphere) • safe entry and exit methods are in place • other items to ensure compliance with procedures, permits, relevant legislation and AS2865. Appropriate steps to be taken if the confined space is not ready for entry may include reporting deficiencies and refusing to enter the space.
Conditions of the permit	Conditions of the permit include all hazard controls. Permit conditions may require atmospheric testing/monitoring in which case MSAPMOHS217A Gas test atmospheres will also be required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Secure work site	Secure work site includes selecting and erecting/deploying required: • protective equipment, • apparatus • signs • barriers • etc as defined in the confined space entry permit requirements, AS2865 and other relevant requirements.
Designated PPE	Designated PPE (personal protective clothing and equipment) may include: • eye protection (e.g. goggles) • ear protection • gloves • clothing • respiratory protection • helmets • safety footwear • lifelines and harnesses • personal monitors and alarms • other relevant PPE as defined in the confined space entry procedures and permit requirements
Required instruments and monitors	Required instruments and monitors include: • instruments used for pre entry testing appropriate to the hazards • continuous monitors appropriate for the hazards • other devices used to test the confined space atmosphere: as required by the permit conditions
Re-authorisation/ reissue of permits	Re-authorisation/reissue of permits may be required when: • there is any change to work undertaken • the work situation changes • there is a gap in work continuity • the permit requires it • other site rules require it • other reasons
Confined space permit	The confined space permit should meet the requirements of AS2865 - 2009 or other appropriate standard

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Working documentation	Working documentation includes: • entry/exit/re-entry logs • other documentation required by AS2865 (eg s2.9) • other documentation required by the permit(s) • other documentation required by the site etc.
Appropriate action if there is a change in risk	Appropriate action if there is a change in risk includes any or all of: • seeking revalidation of the permit • evacuating the confined space • instigating/undertaking testing • raising the alarm • initiating the emergency/incident response plan • other relevant action.
Final documentation	Final documentation includes: • signing off of permit • documentation related to equipment used • other required records.
Reporting of issues	Reporting of issues includes: • feedback re the work and methods of improving the work process • signs and symptoms of operational stress, • equipment malfunctions • wear and tear of equipment, tools etc • condition of safety/rescue equipment • observations of the condition of the confined space within the level of competence of the person making the report.
Hazards	Typical may hazards include: • heat, smoke, dust or other atmospheric hazards • sharp edges, protrusions or obstructions • limited head spaces or overhangs • equipment or product mass • slippery surfaces, spills or leaks • noise, rotational equipment or vibration • high/low oxygen content • hazardous atmospheres (eg combustible, toxic) • entrapment • engulfment • heat stress

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• claustrophobia • external hazards that may impact on the safety of those working in the confined space (eg exhaust fume, or other hazardous vapours, being drawn into the confined space by ventilation fans) • other hazards eg as identified in AS2865.
Variables	Key variables to be monitored include: • sites under which permit activities must be applied • type of permit(s) to be executed • types of tools and equipment to be employed • size of work team • scope and urgency of work • persons in the confined space/rotation of people in confined space • environmental conditions (eg weather).
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Modification History

Release 2 - Correction to prerequisite unit. No change in outcomes.

Release 1 - Initial release

Unit Descriptor

Unit Descriptor	This competency unit addresses the need for personnel who issue work permits to understand the permit system, know the limitations of each permit and make decisions regarding the need for and correct use of each permit. This competency unit includes the issue of any and all permits. It applies to the issuing of permits covering a single plant or plant area such as might be an operators scope of responsibility.

Application of the Unit

Application of the unit	This competency applies to personnel who are required to issues appropriate permits to work to persons conducting a variety of activities in workplace environments in which hazards exist or specific procedures need to followed and monitored to protect the safety of personnel and the integrity of plant or process. It includes: • reviewing the conditions under which the work will be undertaken • examining the site to determining the hazards and safety requirements applicable to the site • ensuring the appropriate permit(s) is (are) selected depending on the organisations procedures • determining the appropriate conditions for the permit(s) • raising, authorising and issuing the necessary permit(s) • monitoring compliance with the permit conditions • reporting any indiscretions or violations of permit conditions and where necessary revoking permits • managing the permit process especially in shift hand overs or extensions to work activities • withdrawing and signing off work permits on completion of the work and verification that the requirements of the permit have been complied with.

Pre-Requisites

RIIRIS201B Conduct local risk control

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify need for work permit	1.1. Understand work permit system. 1.2. Identify and confirm with appropriate personnel the need for work permit. 1.3. Identify the correct permit for each situation.
2. Prepare work site for authorised work	2.1. Undertake an inspection of the work site. 2.2. Identify OHS and environmental requirements. 2.3. Conduct hazard identification and risk assessment. 2.4. Ensure work site is prepared in accordance specified work permit conditions. 2.5. Check permit conditions and report to appropriate personnel. 2.6. Identify need for and carry out testing in accordance with standard operating procedures.
3. Raise and issue work permits	3.1. Ensure conditions are documented on permit. 3.2. Ensure appropriate testing carried out and results documented on permit. 3.3. Determine an appropriate validity period 3.4. Check that permit conditions are met (ie validate permit).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.5. Complete and authorise permit. 3.6. Ensure recipient(s) is advised of and agrees to abide by the requirements of the permit(s). 3.7. Ensure recipient(s) signs permit(s).
4. Monitor work for compliance	4.1. Undertake regular site inspections. 4.2. Monitor conditions and work progress and respond appropriately to changing conditions and circumstances. 4.3. Ensure permit currency and revalidate as required. 4.4. Ensure permit is displayed in prominent position. 4.5. Identify and, act on incidences of non-compliance and report promptly to relevant personnel. 4.6. Report any issues which arise with regard to work under the permit in accordance with procedures.
5. Receive end of day report	5.1. Receive end of day report from permit recipients 5.2. Confirm job progress and status. 5.3. Revalidate/arrange for revalidation of permit as required 5.4. Confirm work area has been left safe 5.5. Handover ongoing permits and status of suspended permits to oncoming shift.
6. Close work permit	6.1. Inspect job status. 6.2. Check that work undertaken satisfies permit conditions. 6.3. Ensure that work site is ready for a safe return to working conditions. 6.4. Check required returns to work status have been completed. 6.5. Sign off documentation and close permit in accordance with standard operating procedures. 6.6. Communicate work site and process status to relevant personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
Competence includes the ability to select, apply and/or explain:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- appropriate PPE
- Australian Standard AS2865 -Confined Space
- Australian Standard AS1674.1 Safety in welding and allied processes (covers all hot work)
- types of permits and what they cover
- hazards associated with each type of permit
- permit control system
- hazards of the area for which permit is being issued
- hazards that may be created by the interactions of the permit, the process and the plant area
- identification of container and goods coding and HAZCHEM markings
- production workflow sequences
- focus of operation of work systems and equipment
- application of relevant agreements, codes of practice and other legislative requirements
- methods of hazard analysis
- hazards of the materials and process and appropriate hazard control procedures, including hierarchy of control
- identification and correct use of equipment, processes and procedures
- selecting appropriate tests and knowing what the tests are for
- conducting and interpreting tests for contaminant gases and other hazards
- testing - types of testing may include:
  - atmospheric, including explosivity, O_2
  - flammability
  - toxicity
  - temperature
  - humidity
  - combustibles' oxygen, enriched or reduced
- estimating ventilation required for making vessels safe (eg for confined space entry, hot work)y including applying the formula for factors such as:
  - space turnover rate,
  - number of turnovers
- challenging/checking performance of monitoring and testing equipment against a standard sample
- supervision/monitoring of contractors.

Some sources of underpinning OHS knowledge include appropriate OHS and Dangerous Goods legislation, Australian Standards and Safework Australia, State or Territory codes such as:

- NOHSC:1010 - National Standard for Plant
- AS4024.1 Safeguarding of machinery - general principles
- NOHSC: 1003 National exposure standards for atmospheric contaminants in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
occupational environment. The regulatory framework to include: • OHS • EPA • OHS authorities and Safework Australia • licence and certification requirements • company policy and permit control systems • other relevant standards. This unit requires the ability to: • read and correctly interpret complex P&IDs • speak clearly and unambiguously in English • explain, describe and verify sometimes complex needs and issues.
Required knowledge:
Knowledge and understanding of the materials, equipment and process sufficient to recognise situations requiring different types of work permits and then implement the appropriate action. Knowledge of the organisation's standard procedures and work instructions and relevant regulatory requirements under which permit systems operate, along with the ability to implement them within appropriate time constraints and in a manner relevant to the job. Knowledge of the relevant requirements under AS2865. Writing is required to the level of completing workplace forms and producing reports. Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment.
Critical aspects for assessment and	Competence must be demonstrated in the ability to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
evidence required to demonstrate competency in this unit	distinguish between situations requiring the major types of permits and to list the major requirements of each type of permit. It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • correctly identify situations requiring work permits • identify and apply legislative requirements, relevant standards and codes of practice (which may be incorporated in the organisation's procedures) to the issuing of work permits • list the requirements of each type of permit • plan own work process within workplace procedures and explain the reasons for the steps in the process. Consistent performance should be demonstrated. For example, look to see that: • correct permit issued • hazards are identified and controlled in the permit by applying the hierarchy of control • required personal protective equipment (PPE) is specified • problems are anticipated • problems are efficiently resolved. These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new or unusual situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment. Competence in this unit may be assessed: • by use of a suitable simulation and/or a range of case studies/scenarios. Simulations should be

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	based on the actual plant and will include walk throughs of the relevant competency components • through questioning and the use of "what if" scenarios both on the plant and off the plant. • by a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.
Method of assessment	Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performedand the safety standard required.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version/version specified by the local regulatory authority must be used.
Context	This competency covers the issue of any and all work permits. Permits are called clearances by some organisations. The types of permit include: • cold work • excavation • vehicle entry • minor repairs • working at heights • hot work • confined space • electrical • increased hazard • other relevant permits. Requirements identified on the permit may include testing of atmospheric conditions, ventilation and control measures such as isolation, barriers, tag out/lockout signs, communications, incident response. A 'competent person' is a person who has, through a combination of training, education or experience, acquired knowledge and skills enabling that person to correctly perform a specified task. Safety structures and controls may include automatic plant shut down buttons, cords/lanyards, alarms, barriers, guards, earth leakage devices, tag out/lock out procedures, warning lights.
The work permit system	The work permit system includes: • types of permits • legislative/regulatory/standards framework • roles and responsibilities of parties under the permit system • equipment which can and cannot be used for types of permit • alternative ways of conducting a job
Confined space	The Australian standard (AS2865-2009) definition given for confined space is used in this Training Package, i.e.: 'An enclosed or partially enclosed space that is not intended or designed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	primarily for human occupancy, within which there is a risk of one or more of the following: (a) An oxygen concentration outside the safe oxygen range. (b) A concentration of airborne contaminant that may cause impairment, loss of consciousness or asphyxiation. (c) A concentration of flammable airborne contaminant that may cause injury from fire or explosion. (d) Engulfment in a stored free-flowing solid or a rising level of liquid that may cause suffocation or drowning.'
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include: • OHS • EPA • OHS authorities and AASCC • Australian Standards • licence requirements • company policy and permit control systems • other relevant standards.
Preparation	Preparation of work site includes: • mechanical, electrical and other energy sources, and process isolations • de-energising all sources of energy/pressure • purging of lines • lock out/tag out procedures • blinding/blanking lines.
Tools and equipment	This competency includes use of equipment and tools such as: • writing instruments • computers and printers • calculators • testing equipment.
Hazards	Typical hazards include: • unsafe conditions developing through failure to conform with the provisions of the permit • injuries to personnel • equipment failures • releases of toxic or noxious substances.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Returns to work status	Returns to work status may include: • de-isolation • removal of lockouts/tag outs • removal of drain covers • etc.
Problems	Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/ a solution recorded in the procedures. Typical process and product problems may include: • selection of the wrong permit • incorrect information being supplied with the permit • errors being made in the completion of permit data • failure to correctly correspond to the requirements of the permit • failure to seek clarification when anomalies occur.
Variables	Key variables to be monitored include: • types of permits being issued • permit issuing procedures • permit protocols for extended work activities beyond the end of shift • permit hand-over procedures.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

MSAPMPER400A Coordinate permit process

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This competency covers the issuing and auditing of any and all permits across multiple plant areas or an entire site. It is typically undertaken by a senior process technician. This may be a routine job, a role in part of a job or a temporary role in a shut down or similar.

Application of the Unit

Application of the unit	This competency covers both the issuing of permits directly and also the coordination of permits issued by others. It focuses on potential conflicts between work being undertaken as well as checking that the permit system is being used correctly. It includes: • coordinating permits and the permit system • plant preparations and isolations and the preparation system • live auditing of permit issuers, permit recipients/holders • auditing of permit paper trails • overseeing and checking test regimes • quality checking of risk assessment • coordinating the issue of additional hazard control resources

Licensing/Regulatory Information

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess planned work for conflicts.	1.1. Identify all planned work for a time period 1.2. Determine the scope and HSE impacts of each planned job 1.3. Confirm hazard analysis and controls for each planned job 1.4. Compare hazard profiles for each planned job 1.5. Identify conflicts between planned jobs 1.6. Negotiate a solution between conflicts 1.7. Communicate results of negotiations to relevant stakeholders.
2. Issue required permits.	2.1. List those jobs which will be allowed to proceed in the time period 2.2. Confirm hazard controls required for these jobs 2.3. Identify jobs which have impacts across plant areas 2.4. Ensure controls and communications are adequate 2.5. Issue/cause to be issued required permits 2.6. Report as required by procedures.
3. Audit live permits.	3.1. Audit plant preparations 3.2. Audit permit issuing process 3.3. Check appropriate controls have been specified 3.4. Audit handover/sign on process 3.5. Audit work in progress for conformance to permit conditions 3.6. Audit work completion and hand back/closing process 3.7. Audit deisolation and return to work preparations 3.8. Take immediate and appropriate action on any problems found 3.9. Report on audit as required by procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
4. Audit past permits.	4.1. Obtain relevant paper work 4.2. Check for conformance to procedures 4.3. Check for appropriateness of specified hazard controls 4.4. Identify any non-conformance 4.5. Identify systemic non-conformances 4.6. Take any immediate action which is appropriate 4.7. Report on audit as required by procedures.
5. Analyse audit findings.	5.1. Identify improvements to the permit system 5.2. Identify improvements to the implementation of the permit system 5.3. Suggest improvements to the permit system as appropriate 5.4. Suggests improvements to hazard analysis processes 5.5. Suggest improvements to the plant preparation/return to operations processes 5.6. Suggest improvements to hazard controls 5.7. Suggest training required as appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
This competency includes the following skills: • analysis • decision making • communication • priortisation • leadership • negotiation • problem solving
Required knowledge:
Competence in this unit includes the following knowledge: • the operations of the plant and each major unit in it

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• hazards associated with all plant materials, processes and process conditions • hazard analysis and control • HSE legislative requirements related to plant • plant preparation procedures • auditing principles

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what if scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to specify the requirements and then select the best solution to meet the necessary and desirable requirements.
Context of and specific resources for	Assessment will require access to an operating plant over an extended period of time, or a suitable method

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
assessment	of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with other relevant units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency covers the issue of any and all work permits. Permits are called clearances by some organisations. The types of permit include: • cold work • excavation • vehicle entry • minor repairs • working at heights • hot work • confined space • electrical • increased hazard • other relevant permits. Requirements identified on the permit may include testing of atmospheric conditions, ventilation and control measures such as isolation, barriers, tag

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	out/lockout signs, communications, incident response. A 'competent person' is a person who has, through a combination of training, education or experience, acquired knowledge and skills enabling that person to correctly perform a specified task. Safety structures and controls may include automatic plant shut down buttons, cords/lanyards, alarms, barriers, guards, earth leakage devices, tag out/lock out procedures, warning lights.
Live permits	Live permits applies to work currently being done
Past permits	Past permits applies to any permit which has been handed back/closed.
Audit permits	Auditing of permits includes all of: • selecting an individual permit and following it through • spot checking any aspect of permits • intensively checking one aspect of the process with all permits on issue
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Identify industry sector.	1.1 Identify the industry sector. 1.2 Recognise the major competitors in the industry and their products. 1.3 Identify career opportunities within the industry sector. 1.4 Explain the major external issues facing the industry.
2. Identify products and customers.	2.1 Identify company products. 2.2 Identify needs of external customers in line with organisation priorities. 2.3 Identify needs of internal customers. 2.4 Identify the role of quality processes in meeting product standards. 2.5 Identify your role in meeting customer requirements.
3. Recognise plant structure and processes.	3.1 Identify key production sites/areas. 3.2 Explain role of individual in organisational structure. 3.3 Describe the production process within own work area and relationship with other parts of the production process.
4. Identify workplace role and responsibilities.	4.1 Identify company objectives. 4.2 Identify organisational policies and guidelines in relation to job role. 4.3 Describe key responsibilities including OHS of own section/team and functional area. 4.4 Identify task requirements and work role.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	4.5 Explain individual role in achieving section/team, plant and company objectives.
5. Follow workplace procedures.	5.1 Identify existing sources of work instructions relevant to job role. 5.2 Follow work instructions in undertaking tasks. 5.3 Follow work instructions for recording process. 5.4 Seek advice from relevant personnel in clarifying work instructions when appropriate.
6. Recognise quality requirements.	6.1 Identify instances of variation in quality from specifications or work instructions. 6.2 Identify basic quality concepts to work activities. 6.3 Follow organisation procedures for reporting and managing variations. 6.4 Report problems with materials/product quality to supervisors. 6.5 Explain organisation procedures for identifying and suggesting improvements to improve product quality. 6.6 Work within the organisation quality system.
7. Plan and organise a personal daily routine	7.1 Plan daily routine to take into account rosters, industrial agreements and workplace procedures. 7.2 See clarification of requirements of tasks when appropriate. 7.3 Agree achievable time and other performance measures. 7.4 Complete tasks and identify and report variations to plan.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes an understanding of the products and functions of the organisation and the employee's role in completing tasks to meet customer, company and section/function objectives.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Language, literacy and numeracy requirements

This unit requires the ability to read and understand information contained in typical workplace documents such as standard operating procedures, OHS requirements, and maintenance logs.

Writing is required to the level of completing workplace forms and records.

Basic numeracy is needed to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand relevant organisational policies, plans and procedures
- identify production processes relevant to work role
- identify work requirements and relevant workplace documents
- request advice, effectively question and follow instructions
- identify quality standards.

Consistent performance should be demonstrated. For example, look to see that:

- industry sector and major issues facing the industry are recognised
- main internal and external customers are identified
- role of individual and team/section is identified in terms of meeting company objectives (including safety objectives) and customer requirements
- relevant workplace policies and procedures are identified and followed
- tasks are performed in accordance with safety requirements/the quality system/workplace procedures
- appropriate documentation as defined by procedures is correctly completed.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- in a situation allowing the generation of evidence of the ability to recognise and resolve to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

It may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This is a general competency that is performed by all operators in all areas of operation.

In large plants with multiple processes, it may apply to just one process in a plant if those processes do not interact with each other.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

'Tools and equipment'

This competency includes use of:

- organisation goals, objectives and targets
- business and performance plans
- access and equity principles and practice
- equal opportunity and anti-discrimination principles and practice
- OHS policies, procedures and programs
- quality and continuous improvement processes and standards
- workplace procedures
- ethical standards
- workplace agreements and awards
- unions and industry associations.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Unit Sector(s)

MSAPMSUP101A Clean workplace or equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers general housekeeping duties, as well as the cleaning of plant and equipment. This competency is typically demonstrated by all operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to personnel who are required to keep the work area, plant and equipment clean and tidy. The key factors are the identification, scheduling and performance of housekeeping requirements. This may include:

- identifying the range and scope of work required
- checking if any type of permit has been issued for the work
- knowing site safety and housekeeping standards
- adequately preparing to undertake the work, including obtaining all necessary safety equipment and PPE
- scheduling housekeeping duties
- handling chemicals and solvents safely
- keeping assigned plant and equipment clean.
- undertaking the work strictly in accordance with the provisions of any permit
- completing work in accordance with requirements
- moving work and waste materials to designated locations
- querying or raising matters about the scope of work if it varies from that normally undertaken
- completing the work in accordance with procedures and obtaining appropriate sign off as required.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify housekeeping requirements.	1.1 Explain and understand site safety and housekeeping standards. 1.2 Undertake housekeeping inspection in accordance with procedures/work instructions. 1.3 Identify and schedule housekeeping requirements as appropriate.
2. Perform general housekeeping duties.	2.1 Keep designated work areas clean to organisation specific standards. 2.2 Keep designated work areas clear of obstructions. 2.3 Handle and use chemicals and solvents as per the manufacturer guidelines and company specifications. 2.4 Ensure work area is ready for next user. 2.5 Remove work materials to designated locations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Clean plant and equipment.	3.1 Keep assigned plant and equipment clean following established organisation procedures. 3.2 Perform specialised cleaning procedures as required. 3.3 Ensure that appropriate personal protective equipment is used as required.
4. Dispose of waste materials.	4.1 Correctly identify waste materials. 4.2 Remove waste materials to a designated location.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process sufficient to recognise non-standard situations and then determine an appropriate action which is consistent with operating guidelines.

Knowledge of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the process.

Competence includes the ability to:

- apply and describe:
- duty of care
- requirements for housekeeping process
- procedures for plant maintenance
- safe handling procedures
- the standard of cleanliness required.
- distinguish between:
- re-usable materials and waste
- routine and special cleaning needs.
- plan own work, including predicting consequences and identifying improvements
- use PPE
- safely handle products and materials
- read relevant safety information and apply safety precautions appropriate to the task/ relevant to the practical operation of the process.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that:

- early warning signs for work areas in need of cleaning are recognised
- work areas are kept tidy and clean
- equipment and/or materials is/are neatly stored, in a safe manner, in the correct location at all times when not in use
- equipment is always tidy and safe when in use.

Assessment method and context

Assessment will occur using industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- in the operation of all ancillary equipment to the level required for this competency unit
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit may vary between organisations depending upon a range of practices and procedures, with consideration given to plant configuration and process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- cleaning equipment and materials
- brooms
- shovels
- solvents
- waste containers
- safety equipment.

Hazards

Typical hazards include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- materials or equipment obstructing work areas
- heat, smoke, dust or other atmospheric hazards
- sharp edges, protrusions or obstructions
- limited head spaces or overhangs
- equipment or product mass
- slippery surfaces, spills or leaks
- noise, rotational equipment or vibration

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Typical process and product problems may include:

- correct equipment not immediately available
- safety issues associated with housekeeping and/or cleaning
- ensuring that process aids rather than interferes with production.

Variables

Key variables to be monitored include:

- housekeeping and/or cleaning methods and procedures
- the type of tools and equipment used in special situations
- the use of personal protective equipment.
- correct use of tools
- waste collection and disposal
- conformance with frequency and quality of organisational reporting requirements
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Receive and relay messages	1.1 Confirm understanding of the message is correct. 1.2 Accurately record the message. 1.3 Relay message accurately to appropriate person or section within designated timelines.
2. Interpret messages.	2.1 Clarify message if necessary. 2.2 Take appropriate action.
3. Respond to information.	3.1 Acknowledge and understand the request for information. 3.2 Access information from appropriate sources. 3.3 Relay information to appropriate person or section.
4. Complete workplace forms.	4.1 Select appropriate form. 4.2 Assemble information required for form. 4.3 Complete form as required. 4.4 Submit form as required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge and ability to implement organisation policies and procedures on workplace communication, including:

- types, purpose and importance of workplace documentation
- workplace codes, including numbers, symbols, signs, colours and other codes.

Competence also includes the ability to:

- listen attentively
- formulate questions to clarify work requirements or instructions
- establish effective workplace relationship with colleagues
- adapt communication to a range of social, cultural and ethnic backgrounds.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and understand information contained in typical workplace documents such as standard operating procedures, material safety data sheets, job cards, maintenance logs. Everyday workplace language is used, including some technical termsand mathematical language.

Writing is required to the level of completing workplace forms and records. Types of text may include short sentences, symbols, codes, signs, sketches and may be conveyed in printed form or screen based.

Basic numeracy is needed to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

In all cases it may be appropriate to assess this unit concurrently with relevant team work and communication units.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- provide and assess all required information and that the information provided both verbally and in writing is completed in a clear and concise manner that is easily understood by others and in accordance with workplace requirements.
- apply approved procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Consistent performance should be demonstrated. For example, look to see that:

- all information is provided in an efficient, effective, courteous and timely manner.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- by observation and questioning to indicate understanding
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Reasonable adjustment of assessment tasks will be undertaken as required.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments.

Procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with procedures. Procedures include:

- all relevant workplace procedures
- work instructions
- temporary instructions
- relevant industry and government codes and standards
- telephone protocol , including industry timelines in answering calls.

Messages

Messages includes the following as appropriate to workplace requirements:

- written
- oral
- electronic.

Tools and equipment

This competency includes use of equipment and tools such as:

- two way radio
- computer
- telephone.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems may include:

- missing/lost messages
- required information not available
- required equipment not available
- conflict of work priorities.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

MSAPMSUP106A Work in a team

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the organisation of team activities to fit in with the scheduling of work to meet operational guidelines.

Application of the Unit

Application of this unit

This competency is typically performed by people who work within a team structure with limited discretionary powers

The worker will:

- plan and organise activities in accordance with instructions
- use appropriate interpersonal skills to contribute to effective teamwork
- seek assistance from other team members where appropriate
- complete logs and reports.
-

Licensing/Regulatory Information

	standards.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of organisation information systems, procedures and equipment sufficient to plan daily work activities in order to meet timelines.

Knowledge of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the system.

Competence also includes the ability to:

- use effective communication techniques
- identify where teams fit into the organisational structure
- apply organisation quality and safety procedures
- complete required workplace documentation
- distinguish between urgent and non-urgent tasks.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and understand typical product specifications, job sheets, procedures and work instructions, material labels and safety information as provided.

Writing is required to the level of completing workplace forms.

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability toidentify work activities and prioritise work in order to meet timelines, whilst interacting as a member of a group.

Consistent performance should be demonstrated. For example, look to see that:

- activities are planned in accordance with instructions
- willingness to participate as part of a team is demonstrated
- relevant procedures are accessed and utilised in completing activities
- timelines are adhered to
- assistance is sought from relevant personnel when difficulties arise.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- by observation over time on a processing plant or in a manufacturing environment
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors in the manufacturing industries.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as PPE.

Hazards

Typical workplace hazards include:

- chemicals and hazardous materials
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in confined spaces, or in environments subjected to heat, noise, dust or vapours.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems include:

- required information/materials not available
- required tool/equipment not available
- conflict of work priorities
- interpersonal conflict within the team.

Appropriate action for non-routine problems may be reported to designated person or other action specified in the procedures.

Unit Sector(s)

Not applicable.

MSAPMSUP172A Identify and minimise environmental hazards

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the awareness of environmental issues and organisation environmental policies and procedures to minimise environmental threats.

Application of the Unit

Application of this unit

This competency is performed by all operators in all plants. It reflects the regulatory requirements and the industry's concern to operate in an environmentally friendly manner.

The operator will:

- identify activities/materials likely to be an environmental issue
- take the appropriate action on environmental issues as required.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Individual organisations may choose to add prerequisites and co-requisites relevant to their processes.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify potential environmental threats.	1.1 Recognise the type and severity of environmental threat posed by the materials and processes used for own work. 1.2. Identify ways materials used may enter the environment. 1.3. Identify sensitive features of the local environment and their impact on work practice and procedures.
2. Identify workplace procedures and policies to minimise environmental threats.	2.1 Identify workplace policy for environmental protection. 2.2. Identify in relevant standard operating procedures environmental protection measures appropriate for work. 2.3. Explain contact procedures for personnel involved in environmental response teams. 2.4. Recognise abnormal or unacceptable emission levels.
3. Follow procedures to minimise environmental threats.	3.1 Implement environmental protection measures in relevant procedures. 3.2. Report abnormal emissions/environmental issues to appropriate personnel. 3.3. Apply containment procedures in accordance with SOPs where appropriate. 3.4. Implement approved waste management procedures and practices. 3.5. Follow approved safety procedures and use

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	personal protective equipment as specified in procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding is required of organisation environment protection systems, procedures and equipment sufficient to for work activities.

Knowledge is required of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the system.

Competenceincludes an awareness of:

- internal environmental control standards
- severity of environmental risks from materials and work processes used
- likely impact on the environment of materials and process.

Competency also includes an awareness of the local environment and environmental issues such as:

- sensitive waterways/wetlands
- flows from the plant to the environment (eg through sandy soil, local creek)
- particular environmental threats posed by materials and processes used and the work practices required to minimise these threats.

Also required is the ability to:

- communicate using in-plant reporting systems - verbal, electronic and written
- initiate first response to an environmental incident in accordance with SOPs
- use containment equipment
- use personal protective equipment
- use other required resources.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and understand typical product specifications, job sheets, procedures and work instructions, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability toidentify actual and potential environmental breaches as appropriate to the job level.

Consistent performance should be demonstrated. For example, look to see that:

- standard procedures are followed
- deviations from desired conditions are recognised
- action specified in the standard procedures is carried out
- the impact of work practices/actions on the environment is understood.

Assessment method and context

Assessment will occur using a simulation and will occur in a work like environment.

Competence in this unit may be assessed:

- by observation over time on a processing plant
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors in the industries. Responses are restricted to a 'first response' approach, including the notifying of appropriate organisation personnel.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- PPE
- spill kits.

Hazards

Typical workplace hazards include:

- chemicals and hazardous materials
- gases and liquids under pressure
- moving machinery
- materials handling.

Emissions/discharges

Typical emissions/discharges include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- noise
- light
- odour
- gas
- smoke vapour
- liquid and solids
- particulates
- fumes.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems include:

- required information/materials not available
- required tool/equipment not available

Appropriate action for non-routine problems may be reported to designated person or other action specified in the procedures.

Unit Sector(s)

MSAPMSUP200A Achieve work outcomes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

The competency covers the ability to identify and implement actions to achieve workplace targets and to suggest improvements. This unit applies to all employees who may work either individually or as part of a team.

This unit does not cover maximisation of process/equipment efficiencies undertaken as part of the normal work role, which is covered in the relevant unit of competency.

Application of the Unit

Application of this unit

This competency is typically performed by an operator, perhaps working as part of a team, in achieving required work outcomes of quality and productivity within the scope of their job. They would be liaising and cooperating with other members of the work place.

The operator will:

- understand the production process
- recognise production inefficiencies within their area
- participate in and implement ways of improving production efficiencies.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit of competency has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify raw material components and their application in production.	1.1 Outline the properties of materials/components used in the production process. 1.2 Describe or construct a flow chart of the production process relevant to the area/plant. 1.3 Outline parts of the production process where extra care and attention are required. 1.4 Identify the safety and environmental requirements for relevant materials and processes.
2. Identify production targets in work area.	2.1 Identify production targets for work area and work roles taking account of OHS requirements. 2.2 Identify techniques used to measure production performance against workplace targets/standards.
3. Recognise key areas effecting production efficiencies.	3.1 Explain importance of reducing wastage of resources. 3.2 Identify potential sources of wastage/production inefficiencies. 3.3 Outline possible approaches to minimise wastage/ inefficiencies. 3.4 Demonstrate effective techniques to ensure wastage/

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	production minimisation within scope of job.
4. Implement actions to achieve production targets.	4.1 Identify the role of the individual and/or the team in achieving production targets. 4.2 Carry out required role to achieve production targets.
5. Participate in an improvement activity in accordance with organisation procedures.	5.1 Explain organisation procedures for identifying and suggesting improvements. 5.2 Explain the use of information in developing improvements related to work area. 5.3 Investigate a problem. 5.4 Suggest options for causes of problem. 5.5 Suggest options for improvement. 5.6 Discuss a proposed improvement with appropriate people.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process, normal operating parameters and product quality to recognise non-standard situations. Knowledge of the relevant OHS and environmental requirements is required along with an ability to implement them in a manner which is relevant to determining the corrective action and provision of recommendations.

Thorough knowledge of organisation standard operating procedures is required. Some appreciation of business goals is required as a basis for decision-making and action.

Competence to include the ability toapply and explainsufficient for the identification and implementation of ways to maximise production efficiencies:

- relevant equipment and operational processes
- hazards associated with the process
- application of the hierarchy of control in controlling the hazards
- the safety implications of improving efficiencies
- organisation policies and procedures
- organisation goals, targets and measures
- organisation OHS, quality, and environmental requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- individual and team roles and responsibilities in achieving safety, quality and environmental targets
- principles of decision making strategies and techniques
- organisation information systems and data collation
- industry codes and standards.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, e.g. to interpret quality data and graphs.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Consistent performance should be demonstrated. Critical aspects of competency include:

- hazards are identified and controlled
- production targets and measures are identified
- wastage and production inefficiencies for the functional area are identified
- work is conducted in a manner to minimise wastage/inefficiencies
- organisation procedures for identifying and suggesting improvements are followed
- effective participation in process improvement teams/activities is demonstrated.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version will be used.

Context

This competency applies to all work environments and sectors within the industries.

This competency unit applies to a wide range of processes and equipment. In large plants with multiple processes, it may apply to more than one process if those processes interact with each other. It applies to all operators across all functions.

Properties of materials/components

Properties of materials/components includes:

- physical and chemical properties relevant to the process and the product
- hazardous properties.

Production targets/performance

Production targets/performance may include a range of factors where relevant to the job such as:

- volume
- quality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cost.

Wastage

Wastage may include:

- overproduction.
- waiting
- transporting
- inappropriate processing
- unnecessary inventory
- unnecessary/excess motion
- defects (quality).

Sources of information

Sources of information may include:

- yearly, monthly, weekly and daily production targets
- business objectives and goals
- control charts, run charts and graphs
- organisation manuals and procedures
- equipment specifications.

Inefficiencies

Sources of process inefficiencies and wastage may include:

- equipment downtime
- spillages
- leaks
- contamination
- raw material quality
- utilities usage
- productivity issues
- incorrect work allocation/priorities/planning
- incorrect processes/procedures.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- workplace forms and logs
- communication equipment for gathering and exchanging information such as telephones, two way radios, fax machines.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Typical problems include:

- non-routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents.
-

MSAPMSUP201A Receive or despatch goods

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the handling of materials by an operator as an adjunct to the job of making product. It applies to a limited range of materials. It is NOT intended to be an alternative warehousing competency.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who receive, process despatch orders, despatch products/materials and maintain records. The key factors are correctly identifying and selecting the goods to be despatched and ensuring they are despatched to the correct location.

It includes:

- checking order requests/consignment note documentation for products/materials to be despatched
- identifying and selecting the correct products/materials
- organising products/materials to be moved into the right place by the right time, using the appropriate handling equipment
- preparing products/materials for despatch
- completing and checking all documentation
- updating records.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify work requirements.	1.1 Read and interpret documentation. 1.2 Identify required schedules for receipt or despatch. 1.3 Identify correct product/material. 1.4 Plan work sequence using workplace and product knowledge. 1.5 Select appropriate materials handling equipment as required. 1.6 Identify OH&S requirements.
2. Move materials into/out of storage or from production.	2.1 Check paperwork and identity of materials. 2.2 Check for completeness and/or damage. 2.3 Take action on non-conforming products/materials. 2.4 Handle and move products/materials into/out of storage safely. 2.5 Store materials safely as necessary.
3. Prepare goods for	3.1 Identify and read workplace procedures for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
despatch.	assembling and completing orders. 3.2 Select and check goods for despatch. against product/material knowledge, labels and other identification systems. 3.3 Sort, assemble and consolidate products as necessary. 3.4 Secure order and place in storage areas, in accordance with schedule. 3.5 Check order against despatch schedule and order form.
4. Complete materials movement records.	4.1 Complete materials movement records (in or out). 4.2 Update records as required. 4.3 Complete other paperwork and records as required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials handling processes and requirements sufficient to recognise non-standard situations and then determine appropriate action which is consistent with operating guidelines is required.

Knowledge is required of the product/material, its properties and uses sufficient for correct receipt, storage and despatching. Knowledge of the relevant OHS and environmental requirements is required along with an ability to implement them in a manner which is relevant to the materials handled.

Competence includes the ability toapply and/or describe:

- product/material knowledge
- inventory and ordering systems
- transport requirements and restrictions for products/materials
- correct OHS procedures
- storage/handling principles and procedures
- material hazard properties and their implications for safe handling and storage
- significance of material to customers; transport requirements and restrictions for materials
- plan own work, including predicting consequences and identifying improvements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identify and describe own role and role of others involved directly in the processing of orders and despatching of products
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- distinguish between causes of problems such as product requirements and job priority as relevant to the practical completion of the job.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability torecognise and analyse potential situations requiring action and then in implementing appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that:

- packaging standards are met consistently
- procedures and work instructions are read and interpreted correctly
- potential problems are recognisedand action is taken (ie, the problem is fixed or reported)
- action is taken to ensure problems are dealt with in a timely manner
- problems caused by product/material issues are recognised and an appropriate contribution made to a solution
- items initiated are followed through until final resolution has occurred.
- effective communication between team members, supervisors and other staff is maintained.

Competence must be demonstrated in the operation of all ancillary equipment to the level required for this competency unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment method and context

Assessment will occur using industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by observation over time on a processing plant
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency covers the handling of a limited range of products/materials and their moving into and out of a plant/storage. It is NOT intended for people who, as a major function, operate a warehouse. The appropriate Transport and Distribution competencies should be used here.

This competency may require the operation of forklift trucks or other regulated load shifting devices which are NOT included in this competency, and so would be a co-requisite competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The terms order request, documentation, labels, transportation requirements 'paperwork' and 'records' mean any and all relevant information and data whether it is manual, paper based, electronic or verbal, either in person or by phone/radio.

This competency does not imply that moving materials into and from storage/plant are conducted equally, or even using similar techniques. Customers may be internal or external and the loading/unloading of products/materials may mean getting them onto/off a truck or simply from/to the next department.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- mobile plant/fork lifts
- manual handling equipment
- hand tools
- shrink wrappers
- tape machine labellers
- loose bulk packing equipment.
- computers, bar code readers
- bag filling equipment
- pallets
- wrapping machines
- personal protective equipment (PPE)
- distribution equipment, including A-frames, stillages, containers, elevated platforms and communication equipment.

Hazards

Typical hazards include:

- inappropriate movements and postures
- physical and atmospheric hazards of materials
- height or depth of storage receptacles
- stationary and moving machinery, parts or components
- noise, light, energy sources
- humidity, air temperature, radiant heat
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- special storage requirements including moisture and contamination control
- handling of incomplete loads (either in or out)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- handling of materials which do not meet specifications
- conflicting priorities
- incomplete or incorrect paperwork.
- product requirements
- job priority
- product/material variations.

Variables

Key variables to be monitored include:

- types of products or materials to be received/despatched
- handling heights
- types of equipment
- types of workplace documentation
- atmospheric conditions.
-

MSAPMSUP204A Pack products or materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the packaging of products/materials to prepare them for despatch, warehousing, or storage. This competency is typically performed by operators or store personnel working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who package products and materials for despatch or storage. The key factors are correctly identifying the packaging requirements and using the technology required to package the goods/materials. It includes:

- identifying and interpreting the packaging requirements
- selecting the appropriate technology for packaging
- loading the product or material for on-forwarding
- packaging the load
- labelling the goods/materials after packaging.
- clearing up and leaving work area in a safe condition
- completing packaging documentation.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Prepare goods/materials for packaging.	1.1 Interpret packaging specifications. 1.2 Interpret order packaging documentation. 1.3 Select appropriate technology for packaging goods/materials. 1.4 Identify packaging materials and match specifications.
2. Package finished products.	2.1 Identify the nature of the product or material and the particular handling requirements. 2.2 Conduct process according to production specifications and organisational procedures. 2.3 Conduct equipment start up and run operation as necessary. 2.4 Employ ancillary equipment as necessary and use safe working procedures.
3. Stack, label and store finished products.	3.1 Consult company warehouse schedule or manifest to determine product or material, delivery, or storage and location requirements. 3.2 Label or mark products or materials following workplace labelling standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Set up work area, handling and storage equipment taking account of safety and efficiency. 3.4 Store products where required making safe and efficient use of storage space. 3.5 Complete workplace records/documentation. 3.6 Attach invoices and picking slips (where required).
4. Clear work area.	4.1 Store unpacked products, products for packaging and handling equipment in appropriate areas. 4.2 Clean equipment and make ready for re-use. 4.3 Clean work area, making it safe and ready for the next user. 4.4 Report and document equipment faults.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the equipment and packaging processes sufficient to recognise potential problems and to take appropriate action.

Knowledge of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the equipment and packaging process.

Competence includes the ability to apply and/or describe:

- packaging procedures and processes
- safe set up of individual work area
- storage requirements for safety and efficiency
- production workflow requirements for packaging
- packaging methods to minimise waste
- identification symbols
- correct OHS procedures
- approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup
- waste management and importance of re-using non-conforming materials wherever possible

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- correct selection and use of equipment, materials, processes and procedures
- distinguish between causes of faults such as products, equipment, packaging materials and items of equipment.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- distinguish between causes of problems such aspackaging and labelling requirements and goods being damaged after packaging.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product/material specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. x

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the ability torecognise and analyse potential situations requiring action and then in implementing appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that:

- packaging standards are met consistently
- procedures and work instructions are read and interpreted correctly
- problems are identified and action is taken (ie the problem is fixed or reported)
- all safety procedures are followed
- product/material damage due to handling errors is minimised
- mislabelling opportunities are minimised

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- problems relating to work are diagnosed and solved or reported
- waste is minimised
- effective communication between team members, supervisors and other staff is maintained.

Assessment method and context

Assessment will occur using industrial equipment and will be undertaken in a work-like environment

Competence in this unit may be assessed:

- by observation over time on a processing plant
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency applies to persons handling a range of products, materials technology and the varied range of process procedures within an organisation. It includes the operation of all relevant ancillary equipment.

The terms documentation, labels and records means any and all relevant information and data whether it is manual, paper based, electronic or verbal, either in person or by phone/radio.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- original manufacturer instructions and guidelines for the use of equipment
- relevant procedures relating to safe working practices prescribed for the equipment, product or material
- local OHS legislation and/or regulations
- site-specific instructions based on production requirements.

Tools and equipment

This competency may include use of equipment and tools such as:

- mobile plant/fork lifts
- manual handling equipment
- hand tools
- shrink wrappers
- tape machine labellers
- loose bulk packing equipment.
- computers, bar code readers
- bag filling equipment
- pallets
- wrapping machines
- personal protective equipment (PPE)
- distribution equipment including A-frames, stillages, containers, elevated platforms and communication equipment.

Hazards

Typical hazards may include:

- inappropriate movements and postures
- physical and atmospheric hazards of materials
- height or depth of storage receptacles
- stationary and moving machinery, parts or components
- noise, light, energy sources
- humidity, air temperature, radiant heat
- manual handling hazards.

Problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- equipment malfunctions
- product specifications
- handling specifications
- insufficient space
- unusual size, shape or mass of products or materials
- insufficient goods to complete order
- conflicting priorities
- incomplete or incorrect paperwork.

Variables

Key variables to be monitored include:

- types of products or materials to be packed
- packing heights
- types of equipment
- types of workplace documentation
- atmospheric conditions
-

MSAPMSUP205A Transfer loads

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the movement of loads using cranes and gantries. It applies to all sectors of the industry. Licensing or certification may be required by local Worksafe or other regulatory authority.

Application of the Unit

Application of this unit

This competency applies to operators who move loads using cranes and gantries. The key factors are applying knowledge of the nature of the load to be shifted, safety precautions required and the capacity of load shifting equipment and relevant support structures. This competency is typically performed by operators working either independently or as part of a work team. It includes:

- planning the correct method to move the goods
- safely securing the materials/goods to be shifted
- ensuring that the movement pathway is clear of obstacles and personnel
- moving the goods safely without damage to the goods, personnel or equipment.

This unit does not cover the use of a forklift truck - see *TDTD1097 Operate a forklift*

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites, however appropriate licences may be required.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan operation.	1.1 Correctly identify products, goods or material to be relocated. 1.2 Identify load characteristics including mass, volume, shape, balance and dimensions. 1.3 Identify most efficient and appropriate piece of equipment to be used. 1.4 Estimate points of balance. 1.5 Consider effect of moving contents which may be loose, liquid, dangerous or hazardous. 1.6 Determine location of storage. 1.7 Carry out risk analysis for job. 1.8 Complete required hazard controls. 1.9 Identify most efficient and appropriate movement route.
2. Prepare for lift.	2.1 Select appropriate lifting equipment 2.2 Check and test lifting gear as required 2.3 Calculate safe working load (SWL) or working load limit (WLL). 2.4 Clarify any non-standard requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.5 Report and replace any unsafe. 2.6 Secure movable/loose parts of load. 2.7 Attach load suitable for transfer.
3. Transfer load.	3.1 Prepare load destination to accept load. 3.2 Move load safely to required destination in accordance with planned procedure. 3.3 Use standard communication signals to coordinate safe movement of the load. 3.4 Remove equipment/gear/accessories safely from load. 3.5 Inspect equipment/gear/accessories for wear and damage, clean, maintain and store, and record usage and condition. 3.6 Complete site/job records.
4. Respond to routine problems.	4.1 Monitor transfer frequently and critically throughout load shifting using measured/indicated data and senses (eg sight, hearing) as appropriate. 4.2 Recognise transfer problems. 4.3 Identify and take action on causes of routine faults. 4.4 Log problems as required. 4.5 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of the materials handling processes and requirements sufficient to recognise non-standard situations and then determine appropriate action which is consistent with operating guidelines. Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- apply and/or describe:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- appropriate points for locations of slings
- estimation/ calculation of mass
- requirements for safe working loads (SWL) or working load limits (WLL)
- production workflow and requirements for load shifting.
- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the transferring loads with slings
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- distinguish between causes of problems such as:
- balance points and behaviour of suspended loads
- incorrect use of equipment.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to calculate loads and estimate balance points for slinging.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply approved procedures
- take appropriate action to resolve problems or report problems to appropriate personnel.

Consistent performance should be demonstrated. For example, look to see that

- standards are met consistently
- upstream and downstream communication is timely and effective

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Assessment will occur transferring industrial loads and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency applies to operators using load shifting equipment such as cranes and gantries, slings, ropes, shackles, eye bolts, spreader beams, equalising gear, clamps, pulley systems, winches, packs, rigging screws.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- regulatory authority's licence or certification requirements
- original manufacturer instructions and guidelines for the safe use of the equipment
- relevant procedures relating to safe working practices prescribed for the equipment
- local OHS legislation and/or regulations
- site-specific instructions based on production requirements.

Tools and equipment

This competency includes use of equipment and tools such as:

- cranes and gantries
- slings, ropes, chains or nets
- block and tackle
- shackles, bolts or turnbuckles
- jemmy bars
- relevant personal protective equipment.

Hazards

Typical hazards include

- unpredicted movement of loads
- loose goods
- volatile or hazardous materials and products
- irregular shaped loads
- unlabelled goods, materials and products.

Hazard controls

Typical hazards controls include:

- obtaining a permit to work as required
- determining coordination requirements with other site personnel
- determining job method to include hazard prevention and controls,
- Australian standards for safety procedures, codes of practice and manufacturer specifications
- erecting barricades, warning signs, overhead protection to requirements.

Checking lifting gear

Checking lifting gear includes:

- checking pulleys and block and tackle for safe operation and load capacity.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- checking ropes, cable, net and chain systems before use for safe condition and conformity to specification.
- conducting testing of ropes, cable, net and chain system when required to ensure safe operating capacity
- checking sling material for conformity with equipment and safety requirements.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- variations in load capacities of various sling materials
- frayed or damaged slings
- bolt or shackle failure
- lifting equipment failure.

Variables

Key variables to be monitored include.

- type and condition of slings or ropes
- type of load to be shifted
- physical dimensions
- physical or area hazards
- type of lifting equipment
- weather conditions (if outdoors)
- lighting and visibility in the loading/unloading area.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Access information.	1.1 Identify the need for information. 1.2 Request appropriate information. 1.3 Access information in accordance with procedures. 1.4 Comply with security procedures in accessing appropriate information.
2. Provide appropriate information.	2.1 Deal with enquiries promptly and courteously. 2.2 Establish details of enquiry by questioning and summarising. 2.3 Provide appropriate information relevant to enquirer's request. 2.4 Organise information clearly, concisely and logically. 2.5 Provide information in a form that is readily understood by others. 2.6 Provide information in a timely manner. 2.7 Redirect enquiries to relevant personnel for resolution where outside the operator's area of responsibility.
3. Give and follow routine instructions.	3.1 Give accurate, clear and concise instructions that are consistent with the skills of the receiver. 3.2 Ensure that interaction with others is efficient, effective, responsive, courteous and supportive. 3.3 Confirm that instructions are understood.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.4 Follow prescribed and routine work related sequences.
4. Provide reports.	4.1 Complete all workplace reports clearly and accurately in accordance with procedures. 4.2 Report all relevant information clearly and concisely.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes the ability to:

- describe importance of workplace documentation in relation to job role
- apply organization, operational, quality and safety policies and procedures
- apply workplace codes such as numbers, symbols, signs, colour and other codes.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret work instructions, procedures, operating manuals, job card and other documents provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

Assessment will occur on the job or in a simulated workplace. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competence must be demonstrated in the ability to provide and assess all required information and that the information provided both verbally and in writing is completed in a clear and concise manner, that is easily understood by others and in accordance with workplace requirements

Consistent performance should be demonstrated. For example, look to see that:

- reports and records are completed accurately, concisely and in accordance with procedures
- all information is provided in an efficient, effective, courteous and timely manner
- completion of shift handover, log books and company production records conveys all relevant information
- information sharing demonstrates effective communication processes such as turn-taking, participating in discussions and tolerating views of others in a way that contributes to the overall discussion
- notes of discussion are prepared so that they can be clearly interpreted by the receiver
- communication distinguishes between relevant and peripheral issues.

Assessment method and context

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment.

Competence in this unit may be assessed:

- by observation and questioning to indicate understanding
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Reasonable adjustment of assessment tasks will be undertaken as required.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the industry.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes items of equipment such as:

- telephone
- two way radio
- computer equipment.

Information sources and plant documentation may include:

- operating procedures
- work instructions
- incident procedures
- operating manuals
- quality procedures
- training program contents/materials
- safety data sheets
- job cards
- maintenance logs
- non compliance reports
- incidence and accident reports
- permits
- schematics/process flows/engineering drawings.

Reports

Reports includes the following as appropriate to workplace requirements:

- oral

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- written
- electronic
- handovers (giving/receiving).

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- difficulty in quickly locating information required
- missing forms, logbooks etc.
- conflicting work priorities
- delays in reporting of information
- information is inaccessible
- absence of approver/ other signatories
- breakdown of communication equipment.

Appropriate action for non-routine problems may be reported to designated person

or other action identified in the procedures.

MSAPMSUP230A Monitor process operations

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the use of production processing equipment.

This competency is typically performed by all operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who use production processing equipment. Work involves the removal of products from equipment in strict conformity with standard operating procedures and routine quality inspection processes. The key factors are the successful operation of the equipment and the ability to recognise when the process is not working as intended. It includes:

- checking job sheets for work to be done and identifying the priority in which jobs/product will be made/completed
- discussing work progress with other workers
- following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety (OHS) legislative responsibilities
- identifying production problems
- collecting and observing products from the production process
- collecting and disposing of waste materials
- checking materials to ensure no contamination
- identifying and taking action on routine process problems.
-

Licensing/Regulatory Information

Not applicable.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	reference materials, including materials safety data sheets and equipment instructions. 2.5 Take appropriate measures to minimise risks from the identified hazards. 2.6 Establish the location and function of equipment emergency stops and ensure guards are in place. 2.7 Identify and note requirements for checking: - materials inputs and outputs - ancillary supplies and equipment - product quality requirements for the relevant process stage(s). 2.8 Obtain or arrange access to any required supplementary equipment for product quality testing or routine lubrication and adjustment.
3. Maintain operations.	3.1 Check process operations, noting product quality, production outputs and waste, in accordance with workplace practices. 3.2 Collect product outputs, check for conformity, make adjustments to the equipment (where appropriate) and store product. 3.3 Collect material which is able to be reprocessed and reused, and deal with waste and scrap in accordance with workplace procedures (where applicable). 3.4 Check readouts against standard statistical process information and enter production data into the control system. 3.5 Clean up equipment and work area and manage waste in accordance with workplace procedures.
4. Identify product quality requirements.	4.1 Monitor process and note conditions which may affect product quality standards. 4.2 Report process variations within workplace procedures. 4.3 Note and implement authorised changes in standard operating procedures and specifications.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- apply and/or explain:
  - impact of incorrect or faulty materials
  - production workflow sequences and materials demand
  - focus of operation of work systems and equipment
  - correct selection and use of equipment, materials, processes and procedures
  - hazards of the materials and process and appropriate hazard control procedures
- distinguish between causes of faults such as:
  - wrong raw materials/additives
  - incorrect quantity of materials/additives
  - contaminated materials/additives
  - product variations from specification.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the ability to:

- understand the importance of critical material properties and quantities
- recognise potential situations requiring action and implement appropriate action.

Consistent performance should be demonstrated. In particular look to see that production standards are met consistently.

Assessment method and context

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

General context

This competency applies to the operation of various forms of production equipment in all work environments and sectors within the process manufacturing industry. It includes the operation of all relevant additional equipment.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Equipment and tools

This competency includes equipment and tools such as:

- hand carts and trolleys
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- basic hand tools required for opening of material packaging
- relevant personal protective equipment.

Hazards

Typical hazards include:

- automated or rotating equipment
- dusts/vapours
- hazardous materials
- manual handling hazards
- knife hazards.

'Rectify routine problems' means 'apply known solutions to a limited range of predictable problems'.

Typical process problems include:

- equipment malfunctions
- product jamming or sticking
- power failures
- air, oil or lubricant difficulties.

Typical product problems include:

- variations in materials
- contamination of materials
- malformed or incomplete products.

All operations are performed in accordance with procedures.

Unit Sector(s)

MSAPMSUP240A Undertake minor maintenance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit applies to operators who are involved in providing basic maintenance and the resolving of routine problems to procedures. It does not cover activities normally requiring traditional trade training.

Application of the Unit

Application of this unit

In a typical scenario a plant operator does minor maintenance activities on the plant and equipment being operated. For instance the pressure drop across a filter unit may be high, indicating the filter cartridge needs changing. The operator takes the filter unit out of operation, cleans the unit, uses the correct spanner to open the lid, installs a fresh cartridge, closes the unit using the spanner again, then cleans up the area and disposes of the spent cartridge. Typically this sort of maintenance will be done on the plant and will not require workshop type facilities.

The operator will:

- be aware of and contribute to a safe working environment
- identify and check equipment for faults
- perform basic maintenance to procedures
- complete logs and reports.
-

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify maintenance requirements.	1.1 Identify equipment variations/irregularities using observed data and plant records. 1.2 Assess the urgency/priority of the situation. 1.3 Identify appropriate corrective action. 1.4 Identify correct tools and materials. 1.5 Assess the impact of the maintenance activity and communicate to appropriate personnel. 1.6 Identify hazards and risk controls. 1.7 Identify work permit requirements.
2. Prepare for maintenance activity.	2.1 Ensure equipment is turned off and isolated as required. 2.2 Clear the area of obstructions and hazardous materials. 2.3 Obtain appropriate tools, parts, materials and procedures. 2.4 Obtain the appropriate work permits and adhere to the requirements. 2.5 Communicate the impending maintenance activity to the appropriate personnel.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Perform maintenance activity.	3.1 Access all relevant information. 3.2 Undertake maintenance activity according to procedures. 3.3 Use tools and maintenance techniques correctly. 3.4 Restore equipment to normal working condition. 3.5 Leave the work area in a clean and safe condition. 3.6 Ensure permits are signed off as appropriate.
4. Test equipment.	4.1 Test equipment according to procedures. 4.2 Return equipment to service. 4.3 Ensure equipment meets normal operating requirements.
5 Record maintenance activity.	5.1 Complete maintenance logs/plant history records. 5.2 Report maintenance activity to relevant personnel. 5.3 Identify and report outstanding maintenance requirements to relevant personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of equipment operation and maintenance practices sufficient to recognise fault and no-fault conditions in standard and non-standard situations and then determine appropriate action which is consistent with operational guidelines is required.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving maintenance problems, including:

- principles of operation of the equipment to be maintained
- function and troubleshooting of major internal components and their problems
- appropriate testing procedures and use of equipment for a range of equipment faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical causes of equipment failures and the service conditions which may increase maintenance
- types and nature of maintenance (preventative, predictive, corrective) uses, benefits and limitations
- urgency and timeliness factors in maintenance
- maintenance planning/scheduling/records systems
- identification of tools, materials and spare parts
- basic techniques for using and handling tools
- physical measurement, alignment and clearance principles.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the operator is able to rectify faults and when assistance is required.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical equipment specifications schematics and diagrams.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, to interpret plant data and maintenance schedules.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the completion of this unit requires working under a permit/clearance, then competency must also be established in *PMAPER200C Work in accordance with an issued permit*, or other appropriate unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the procedures and know the importance of critical operational systems
- recognise potential situations requiring action and then implement appropriate action.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Consistent performance should be demonstrated. For example, look to see that:

- early warning signs of equipment in need of attention/with potential problems are recognised
- appropriate equipment tests are undertaken and analysed appropriately
- proposals for equipment repair are based upon the most appropriate and cost effective method to return equipment to full performance in a timely manner
- maintenance activities are completed safely and to procedures.

Assessment method and context

Assessment will occur on industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the industry. It does not include maintenance that would require trade level skills. It is not intended that this competency would cover maintenance that is carried out in a workshop.

Procedures

All operations are performed in accordance with procedures.

Procedures mean all relevant workplace procedures, work instructions, temporary instructions, standard operating procedures, plant description manuals, manufacturer instructions, specifications, service manuals, machine circuit diagrams for hydraulic/pneumatic and electrical/electronic circuits and relevant industry and government codes and standards.

Maintenance activities

This competency unit includes minor maintenance such as the following:

- operational maintenance (eg connection-disconnection of hoses, greasing, lubrication and lubricant systems, adjusting sealing glands, cleaning and changing filters, 'nipping up' flanges)
- general cleaning
- removal and replacement (eg gland packing, changing blades or cutters, replacing gaskets, replacing /maintaining seals, changing filter elements, servicing strainers).

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools
- specialised tools
- measuring and aligning equipment.

Hazards

Typical hazards include:

- rotating and moving machinery
- process materials, solids, liquids and gases under pressure or flowing
- hot surfaces or materials
- temporary connections or by-passes
- electrical, hydraulic or pneumatic energy sources
- out of specification operation.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- out-of-specification product or variations
- response of equipment to materials variations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- equipment in need of maintenance.

Variables

Key variables to be monitored include:

- equipment performance (eg speed, output, variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired).

Data and Records

Typical information sources, observed data and plant records may include:

- plant data
- log sheets
- operational and performance reports
- physical aspects such as noise, smell, feel and pressure condition monitoring information
- planned maintenance schedules
- procedures
- manufacturer specifications, instructions, service manuals and other information.
-

MSAPMSUP273A Handle goods

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the handling of materials by an operator as an adjunct to the job of making product. It applies to a limited range of materials. It is NOT intended to be an alternative warehousing competency.

Application of the Unit

Application of this unit

This competency applies to operators who receive or despatch goods from either internal or external sources. The key factors are checking and inspecting goods for conformity to documentation. This competency is typically performed by operators working either independently or as part of a work team. It includes:

- reading and interpreting receipt documentation
- identifying and following procedures for checking goods
- identifying and reporting non-conforming goods
- completing workplace documentation.

This unit does not cover the use of forklift trucks or other load shifting devices. See *PMPSUP205A Transfer loads* or *TDTD1097 Operate a forklift* as appropriate.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Identify requirements.	1.1 Interpret order/paperwork. 1.2 Check and take action on special requirements as needed. 1.3 Check identity of materials. 1.4 Check for completeness and damage. 1.5 Take action on non-conforming materials/loads.
2. Move materials to/from storage/production.	2.1 Select items to be moved based on job requirements and procedures/work instructions. 2.2 Load materials according to standard procedures. 2.3 Move materials as needed. 2.4 Store/place materials safely.
3. Complete documentation.	3.1 Complete material movement records. 3.2 Update stock records as required. 3.3 Complete other paperwork and records as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of goods and materials sufficient to recognise variance from specifications and then determine appropriate action that is consistent with operating guidelines.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- apply and/or explain procedures for receiving/despatch of goods, and reconciliation of orders and invoices
- apply and/or describe:
  - storage/handling principles and procedures
  - material hazard properties and their implications for safe handling and storage
  - significance of material to customers
  - transport requirements and restrictions for materials.
- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the receiving of goods
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- distinguish between causes of problems such as incorrect/incomplete paperwork; wrong goods.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to

- recognise the importance of material properties and qualities
- apply approved procedures
- take appropriate action to resolve problems or report problems to appropriate personnel.

Consistent performance should be demonstrated. For example, look to see that

- upstream and downstream communication is timely and effective
- procedures and work instructions are read and interpreted correctly
- problems are identified and appropriate action is taken (ie, the problem is fixed or reported)
- all safety procedures are followed.

Assessment method and context

Assessment will occur using industrial goods and will be undertaken in a work-like environment

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to operators working either independently or as part of a work team.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- goods identification numbers and codes
- manifests
- picking slips, merchandising transfers, stock requisitions and bar codes
- manufacturer specifications
- supplier and/or client instructions.

Hazards

Typical hazards include:

- stationary and moving machinery, parts or components
- noise, light, energy sources
- humidity, air temperature, radiant heat.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- incorrect goods delivered
- incomplete orders and shipments
- inappropriate packaging
- wrong or incomplete labling
- incomplete or incorrect paperwork
- special storage requirements including moisture and contamination control
- handling of incomplete loads (either in or out)
- handling of materials which do not meet specifications
- resolving conflicting priorities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ensuring the correct material arrives at the correct place at the right time.

Variables

Key variables to be monitored include:

- compliance with 'receiving' procedures
- appropriate handling of incoming goods
- completion of documentation
- condition of packaging and lifting or moving locations
- availability of lifting/moving equipment
- unloading practices
- variations in provider documentation.
-

MSAPMSUP280A Manage conflict at work

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the management of conflict in a range of situations where personal responsibility is required.

Application of the Unit

Application of this unit

This competency applies to operators who come into contact with other people either directly or indirectly and who are required to liaise and cooperate with other members of the team. It is applicable to the interaction between co-workers, between staff and customer/client, or between staff and supervisor.

This competency is typically performed working either independently or as part of a work team. The operator would:

- determine, from their behaviour or language, the other person's degree of concern or anxiety
- consider the reasons for the person's concerns and behaviour
- work towards finding common ground and opportunities for problem resolution
- consider possible courses of action and the other person's reaction to them
- take appropriate steps to resolve the conflict
- seek external assistance where the conflict could be or is escalating.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify potential sources of conflict.	1.1 Identify actions which are likely to promote a reaction in others. 1.2 Assess the other persons needs and/or concerns. 1.3 Assess ability to respond to the other persons needs. 1.4 Recognise possible causes of conflict. 1.5 Identify potential conflict situations.
2. Identify range of alternative approaches.	2.1 Discuss with the other person their needs and concerns. 2.2 Discuss with other person own needs and concerns. 2.3 Identify a possible strategy through which these requirements may be achieved. 2.4 Develop a range of alternative strategies for achieving goals.
3. Resolve conflicts.	3.1 Identify areas of common ground or objectives that can be mutually supported. 3.2 Agree on a strategy which will meet the majority of objectives for both parties.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Implement the strategy. 3.4 Check that the agreed requirements are being met and that conflict has been resolved.
4. Respond to problems.	4.1 Identify possible problems in the conflict management process. 4.2 Determine problems needing action. 4.3 Determine possible causes. 4.4 Rectify problem using appropriate solution within area of responsibility. 4.5 Follow through items initiated until final resolution has occurred. 4.6 Report problems outside area of responsibility to designated person.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process sufficient to recognise potential problems and not allow them to escalate to a conflict situation.

Knowledge of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the process.

Competence also includes the ability to:

- apply mapping of conflict situations
- design options
- apply negotiation skills
- apply mediation skills
- distinguish betweenpotential and actual conflict situations
- identify causes of conflict situations.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and understand relevant procedures and work instructions as provided to operators.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Writing is required to the level of completing workplace forms.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the process be understood and that the importance of interpersonal relationships is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that:

- willingness to resolve situations is demonstrated
- statements are used that calmly reflect the requirements of participants
- statements focus on issues and facts, not people and personalities.

Assessment method and context

Assessment for this unit of competency will be on a processing plant or in a manufacturing environment.

Competence in this unit may be assessed:

- by observation or questioning to indicate understanding
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments in the process manufacturing industries.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes all such items of equipment and unit operations which form part of the human interaction system.

These may include:

- telephones, two-way radios
- emails, faxes
- memos, letters or emails
- verbal, face-to-face communications.

Hazards

Typical workplace hazards include:

- chemical and hazardous materials
- gases and liquids under pressure
- moving machinery
- materials handling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- working at heights, in confined spaces, or in environments subjected to heat, noise, dust or vapours.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems may include:

- anger or aggression arising from industrial relations matters
- disagreements over processes or work practices
- variations in opinions about circumstances or events
- interpersonal disputes arising from changes in personal circumstances.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify customers and suppliers.	1.1 Identify internal and external customers and suppliers. 1.2 Identify individual requirements. 1.3 Identify your role in meeting customer requirements.
2. Identify areas for improvement.	2.1 Identify issues affecting output and quality. 2.2 Identify instances of variation. 2.3 Follow enterprise procedures/work instructions for reporting and managing variations. 2.4 Record non-conformance in accordance with company requirements.
3. Identify strategies for improvement.	3.1 Analyse problems/areas for improvement. 3.2 Explain the use of information in developing improvements. 3.3 Use appropriate quality tools and techniques for identifying causes of problem and areas for improvement. 3.4 Suggest options for improvement. 3.5 Discuss a proposed improvement with others in a team.
4. Participate in a team to implement an improvement proposal.	4.1 Implement changes in system and procedures. 4.2 Monitor performance improvements. 4.3 Evaluate results of improvements with others in a team.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the process, normal operating parameters and product quality to recognise non-standard situations. Knowledge of the relevant OHS and environmental requirements is required along with an ability to implement them in a manner which is relevant to determining the corrective action and provision of recommendations.

Thorough knowledge of organisation standard operating procedures is required. Some appreciation of business goals is required as a basis for decision-making and action.

Competence to include the ability toapply and explain:

- principles of operation
- principles of recording and reporting
- analytical problem solving techniques.

Competence to include the ability to distinguish between causes of problems such as:

- process
- maintenance
- materials
- operations.

relevant to the ability to improve processes and procedures at that level.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg to interpret quality data and graphs.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- appropriate documenting of the quality improvement process is undertaken
- enterprise procedures for identifying and suggesting improvements are followed
- the operator is able to participate in a team discussion
- enterprise procedures for implementing improvement proposals are followed
- standards are met consistently.

Consistent performance should be demonstrated.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to respond to problems
- by use of a suitable simulation and/or a range of case studies/scenarios
- by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Context

This competency applies to all work environments and sectors within the industries.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- workplace forms and logs
- communication equipment for gathering and exchanging information, such as telephones, two-way radios, fax machines, email.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents.
-

MSAPMSUP292A Sample and test materials and product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the taking of routine samples and the conducting of simple tests.

Application of the Unit

Application of this unit

This competency applies to operators who are required to undertake the routine sampling and testing in the workplace. Testing will typically also be done in the workplace or in a 'factory laboratory' (or bench) adjacent to/in the factory. Tests will be simple, routine tests to procedure. This competency is typically performed by operators working either independently or as part of a work team. The operator:

- takes the sample
- performs the test
- makes a simple interpretation of the test results
- takes actions specified based on the test results
- completes logs and reports.

More advanced sampling and testing should use the relevant units from *PML04 Laboratory Operations Training Package*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Take sample.	1.1 Determine type of sample and sampling equipment required. 1.2 Check sampling equipment is clean and in good order. 1.3 Take sample(s) of required type(s), from the required place(s) and at the required time(s) and place in required container(s). 1.4 Label sample(s) to procedure. 1.5 Carry sample(s) to required place.
2. Complete test.	2.1 Check test required from procedures/work instruction. 2.2 Check sample identification and integrity. 2.3 Check test equipment is clean, in good order and within calibration. 2.4 Complete test(s) required as per standard procedures/ instructions.
3. Interpret results and take action.	3.1 Note anything about sample, equipment or the test itself which may have caused it to give a bad result. 3.2 Compare results to specification.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Take action appropriate to the test results and any other observations.
4. Complete sample and test cycle.	4.1 Complete required records. 4.2 Store and/or dispose of sample as required. 4.3 Clean all equipment and leave ready for next sample/test.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the sampling and testing techniques used sufficient to recognise a suspicious test result cause by a fault in these areas.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge and skills in sampling and testing sufficient for consistent and meaningful test results including:

- basic principles of taking the particular sample
- basic principles of the particular test
- sample techniques and requirements
- test methods used and critical factors leading to good/poor test results.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical sampling and testing methods/procedures and to read and interpret numbers or other test result data.

Writing is required to the level of completing workplace forms and labelling samples.

Basic numeracy is required to read and interpret test results and undertake minor data manipulation such as might be required for the test, test interpretation or reporting.

Evidence Guide

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- take a sample correctly
- undertake tests with adequate reproducibility
- select and use the appropriate procedures.

Assessment method and context

Assessment will occur in a factory testing environment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate, industrial testing regimes
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the range of sampling and testing which may be carried out in a plant/factory, or in a manufacturing laboratory. It typically applies to operators who carry out a narrow range of tests as part of their job.

It does NOT include testing which would normally be conducted in a laboratory, nor operators carrying out a wide range of testing which is a significant part of their job role. These competencies are more properly covered by *PMLTEST300A Perform basic tests* or other units from the Laboratory Operations Training Package.

The tasks covered by this competency include:

- receiving, handling and storing samples
- preparing for sample collection
- performing sample collection
- performing sample preparation
- performing tests
- recording results.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical problems include:

- correct sampling technique
- test equipment condition/calibration
- consistent test technique according to standard procedure
- correct recording of result
- interpretation of result and the initiation of appropriate action
- correct retention/disposal of sample/test materials.
-

MSAPMSUP300A Identify and implement opportunities to maximise production efficiencies

Modification History

Release 2 - Error in title of prerequisite unit corrected - Equivalent. No change to the prerequisite.

Unit Descriptor

Unit descriptor

This competency covers the ability to identify, monitor and participate in strategies to improve production efficiencies to meet set targets. It applies to all employees who are required to provide input into process improvement initiatives. The competency is typically performed by an experienced operator, team leader or supervisor.

Application of the Unit

Application of this unit

This unit covers the improvement of production such as occurs in the workplace but does not cover maximisation of process/equipment efficiencies undertaken as part of the operator's normal role, which is covered in the relevant operation/production competency unit.

The plant operator would:

- identify variances from production targets
- monitor performance against targets
- participate in and implement areas for improving process efficiencies.

Generally the plant operator would be part of a team in developing strategies to improve process efficiencies and may be expected to perform all parts of this unit. At all times they would be liaising and cooperating with other members of the team.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify production performance.	1.1 Identify production targets for work area and work roles taking account of OHS. 1.2 Identify techniques used to measure production performance against targets/standards. 1.3 Record production performance in accordance with enterprise procedures.
2. Recognise issues that effect production process efficiencies.	2.1 Identify issues affecting output and quality. 2.2 Identify potential/actual sources of wastage. 2.3 Identify hazards and required controls associated with the process. 2.4 Identify strategies to minimise production inefficiencies without sacrificing OHS.
3. Monitor and measure performance against targets.	3.1 Monitor performance of process/equipment/raw material usage against targets. 3.2 Identify variations from targets and divergence from trends. 3.3 Use appropriate techniques to monitor actual performance against target. 3.4 Identify factors inhibiting performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
4. Participate in developing methods for improving process efficiencies.	4.1 Analyse problems/areas for improvement in process efficiencies. 4.2 Utilise appropriate problem solving tools and techniques for identifying areas for improvement. 4.3 Identify and take into account external factors. 4.4 Identify required changes to process, standards and procedures. 4.5 Recommend strategies for improvement to relevant personnel.
5. Participate in implementing process improvement strategies.	5.1 Implement developed strategies to minimise production inefficiencies and wastage. 5.2 Monitor performance improvement recommendations. 5.3 Evaluate results of improvements. 5.4 Report results to relevant personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of process sufficient to recognise deviations from target and recommend improvement strategies.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for identifying opportunities and recommending and implementing strategies, including:

- principles of the operation of the equipment
- relevant equipment and operational processes
- hazards associated with the process
- application of the hierarchy of control in controlling the hazards
- enterprise policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- enterprise goals, targets and measures
- enterprise quality, OHS and environmental requirements
- obligations of employers under OHS legislation as applied to the production process
- enterprise information systems and data collation
- industry codes and standards.

Competence also includes the ability to:

- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical process documentation and charts.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, to the level of identifying deviation from targets.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the procedures and know the importance of critical operational systems
- recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- production targets are identified and performance monitored against targets
- potential and actual issues/problems/hazards are recognised and clarified
- appropriate strategies are recommended to improve efficiency and productivity within team/department to achieve targets
- safety and environmental implications of recommendations are recognised and addressed
- participation in implementing strategies to improve process efficiencies is demonstrated.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment method and context

Assessment will occur on-the-job, in a work-like environment or in a simulated workplace.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The competency unit applies to a wide range of processes and equipment. In large plants with multiple processes, it may apply to more than one process if those processes interact with each other. It applies to all operators across all functions.

Procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with procedures.

Procedures mean all relevant workplace procedures, work instructions, temporary instructions, standard operating procedures and relevant industry and government codes and standards.

Sources of information

Sources of information may include:

- yearly, monthly, weekly and daily production targets
- business objectives and goals
- control charts, run charts and graphs
- enterprise manuals and procedures
- equipment specifications.

Sources of process inefficiencies and wastage

Sources of process inefficiencies and wastage may include:

- equipment downtime
- spillages
- leaks
- contamination
- raw material quality
- utilities usage
- productivity issues
- incorrect work allocation/priorities/planning
- incorrect processes/procedures.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- non-routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents.
-

MSAPMSUP301A Apply HACCP to the workplace

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency applies to senior operators working in sectors that make products which come into contact with food and beverages

This competency covers the application of a HACCP-based approach to food and beverage related products.

Acronyms used in this competency:

- CCP - critical control points
- CCF - critical control factors
- CCL - critical control limits
- HACCP - hazard analysis critical control points
- HAT - hazard analysis table.
-

Application of the Unit

Application of this unit

This competency unit covers the development/modification of a HACCP/HAT to the manufacture of products to be used in contact with food, beverages or pharmaceuticals. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

This competency applies to all work environments and sectors within the industry where the product comes into contact with food, beverages or pharmaceuticals or otherwise requires 'food standard' to be maintained. Standard procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

It includes:

- applying the 'seven principles' of HACCP
- developing a HAT from a HACCP
- developing a new HACCP as part of a HACCP team
- making changes to existing HACCPs/HATs, resulting from process/material changes (provided such changes are not major requiring a complete new analysis)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- helping operators to apply and use the HACCP/HAT in their routine work.
-

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	**PERFORMANCE CRITERIA**
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Apply a HAT to an existing process.	1.1 Identify CCPs. 1.2 Recognise CCFs which are outside of or approaching CCLs. 1.3 Describe hazard related to CCFs and CCLs. 1.4 Implement corrective action as per HAT.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
2. Develop/modify a HACCP.	2.1 Conduct a hazard analysis. 2.2 Determine the CCPs. 2.3 Establish critical limits. 2.4 Establish/modify a system to monitor control of the CCPs. 2.5 Establish the corrective action to be taken when monitoring indicates that a particular CCP is not under control. 2.6 Establish procedures for verification to confirm that the HACCPsystem is working effectively. 2.7 Establish/modify documentation concerning all procedures and records appropriate to these principles and their application.
3. Interpret HACCP/HAT to another worker.	3.1 Explain the purpose and rationale of HACCP. 3.2 Identify CCPs, CCFs and CCLs. 3.3 Describe indicators of CCFs not within their CCLs. 3.4 Describe impact of non-conformances. 3.5 Demonstrate corrective action. 3.6 Monitor worker implement.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the materials, equipment and process sufficient to recognise HACCP/HAT issues and take appropriate corrective action.

Knowledge of organisation standard procedures, HACCPs and HATs and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Competence includes knowledge of:

- the HACCP approach
- HAT relevance to routine production
- impacts of variations in materials, process and product on HACCP

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the relevance of the Codex Alimentarius to food/beverage/pharmaceutical packaging

and the ability to:

- apply the Codex Alimentarius to the food industry
- analyse process and material variations in terms of the HACCPand determine appropriate action(s)
- develop a new HACCP as part of a team
- recognise the need to modify an existing HACCP/HAT and make minor modifications.

Language, **literacy and numeracy requirements**

This unit requires the ability to read, interpret and write technical information and explain it to operators.

Writing is required to the level of writing technical reports and HACCP/HAT tables.

Numeracy is also required, eg to interpret quantitative data, make comparisons and interpretations.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- recognise potential situations requiring action
- implement appropriate action
- understand the procedures
- explain the importance of CCPs, CCFs and CCLs.

Consistent performance should be demonstrated. For example, look to see that HACCP standards are met consistently.

Assessment method and context

Assessment will occur on a processing plant or in a manufacturing environment and will be undertaken in a work-like manner.

Competence in this unit may be assessed:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- by using an appropriate, industrial plant/process
- in a situation allowing for the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency covers the development/modification of a HACCP/HAT to the manufacture of products to be used in contact with food, beverages or pharmaceuticals. It assumes an understanding of the operation of all relevant equipment and processes but does not necessarily require them to be used personally.

This competency applies to all work environments and sectors within the process manufacturing industries where the product comes into contact with food, beverages or pharmaceuticals. Standard procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards are:

- biological
- chemical
- physical
- product contamination
- material contamination.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- recognising CCFs approaching the CCLs.
- determining corrective action from HAT
- applying HACCP principles to situations not directly covered by HAT
- recognising the need for a new/modified HACCP/HAT
- modifying HACCP/HAT to meet changes circumstances.
-

Unit Sector(s)

MSAPMSUP303A Identify equipment faults

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit requires the application of planning, technical knowledge and skills to check and isolate routine and non-routine equipment faults used in production and report on the status of equipment. It applies to all sectors of the industry.

This competency is typically performed by operators demonstrating some relevant theoretical knowledge and using a range of well developed skills requiring some discretion and judgement

Application of the Unit

Application of this unit

This competency applies to operators who are required to apply knowledge of materials, product purpose and processes to the identification and isolation of faults in equipment. The key factors are the planning, checking and identification of routine and non-routine faults, in order to return the equipment to production.

The operator will:

- identify and plan scope of equipment checks
- check settings, adjustments and performance of equipment
- check materials for conformity to job requirements
- identify and isolate faults in equipment
- propose solutions and carry out solutions within scope of authority
- complete logs and reports.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify scope of operational check.	1.1 Identify and classify equipment components and operating systems. 1.2 Match appropriate tests and procedures to the equipment operating systems. 1.3 Identify special test procedures and parameters in manufacturer's specifications and procedures. 1.4 Explain the operating principles of hydraulic, pneumatic, mechanical and electrical/electronic systems as related to workplace equipment. 1.5 Implement measures to control identified hazards in line with procedures and duty of care. 1.6 Observe and undertake checks on the physical condition of equipment as per procedures. 1.7 Record preliminary observations. 1.8 Discuss test procedures with appropriate personnel and obtain necessary permission where required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
2. Plan operational checks.	2.1 Check specifications and notes from preliminary observations and identify areas to be clarified. 2.2 Plan testing sequence/s noting areas where results and observations should be recorded. 2.3 Identify safe area for testing. 2.4 Make arrangements for any additional resources (including other employees).
3. Check unit through full operational range.	3.1 Undertake testing, observing relevant safety and operational requirements. 3.2 Confirm results and findings.
4. Identify fault and/or formulate recommendations.	4.1 Identify impact of fault on work schedule. 4.2 Record proposals for equipment repair based on faults found, cost/time implications and workplace approval systems. 4.3 Explain report to relevant workplace personnel including any options and recommendations. 4.4 Undertake repairs where appropriate in accordance with procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of equipment operation and maintenance practices sufficient to recognise fault and no-fault conditions in standard and non-standard situations and then determine appropriate action which is consistent with operational guidelines is required.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving processing and material problems, including:

- principles of the operation of the equipment to be maintained
- functions and troubleshooting of internal components and their problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- routine and non-routine causes of equipment failures and the service conditions which may increase maintenance
- maintenance techniques, (eg reactive maintenance, predictive and preventative operational maintenance)
- appropriate testing procedures and use of equipment for a range of equipment faults
- operating principles for mechanical, hydraulic, pneumatic, electrical/electronic systems
- urgency and timeliness factors in planning maintenance activities in relation to production requirements
- collection, analysis and reporting of data.

Competence also includes the ability to:

- identify and select testing methods based on cost and time effectiveness
- conduct inspections, checks and tests on equipment as appropriate
- read and interpret circuit diagrams for mechanical, hydraulic, pneumatic and electrical/electronic operating systems
- use technical information and manufacturer information to locate relevant data
- interpret technical specifications and manufacturer instructions
- ensure workplace is safe for testing and maintenance of equipment
- identify hazards of the materials and process
- implement appropriate procedures for hazard control
- use PPE, safely handle products and materials, read relevant safety information
- apply safety precautions appropriate to the task.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical equipment specifications schematics and diagrams.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, to the level of calculating equipment throughputs and performance.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the procedures and know the importance of critical operational systems
- recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. For example, look to see that:

- early warning signs of equipment in need of attention/with potential problems are recognised
- appropriate tests are undertaken and tests are analysed appropriately
- proposals for equipment repair are based upon the most appropriate and cost effective method to return equipment to full performance in a timely manner
- items initiated are followed through until final resolution has occurred.

Assessment method and context

It is preferred that assessment takes place on industrial equipment in a work environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the industry. It does not include maintenance that would require trade level skills. It is not intended that this competency would cover maintenance that is carried on in a workshop.

Procedures

All operations are performed in accordance with procedures.

Procedures mean all relevant workplace procedures, work instructions, temporary instructions, standard operating procedures, plant description manuals, manufacturer's instructions, specifications, service manuals, machine circuit diagrams for hydraulic/pneumatic and electrical/electronic circuits and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools specific for the task
- product testing equipment (eg flowmeter, scales, tape measure, micrometer, caliper, ultrasonic thickness)
- machinery measuring equipment (eg vibration meter, tachometer, current tester, thermal imaging, temperature gauge)
- measuring and aligning equipment.

Hazards

Typical hazards include:

- rotating and moving machinery
- process materials, solids, fluids and gases under pressure or flowing
- temporary connections or by-passes
- electrical, hydraulic or pneumatic energy sources
- out-of-specification operation.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- out-of-specification product or variations
- response of equipment to materials variations
- new or changed materials
- changed equipment settings (eg higher speed or throughput)
- equipment in need of maintenance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures requiring update or modification.

Variables

Key variables to be monitored include:

- equipment performance (eg speed, output, variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired).

Data and Records

Typical information sources, observed data and plant records may include:

- plant data
- log sheets
- operational and performance reports
- physical aspects such as noise, smell, feel and pressure condition monitoring information
- planned maintenance schedules
- procedures.
-

MSAPMSUP309A Maintain and organise workplace records

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers the maintenance of workplace records in paper or electronic form. It may include sample products or materials for testing or quality purposes.

Application of the Unit

Application of this unit

This unit applies to employees who are required to maintain and organise workplace records.

The competency is normally used within approved workplace routines, methods and procedures. Discretion and judgement are required in the selection of equipment, work organisation, services and the allocation of work tasks within agreed time frames.

The employee will::

- identify and handle records in accordance with enterprise procedures
- track location of records
- apply security controls to ensure the integrity of records is not compromised
- maintain workplace records systems
- identify problems and take appropriate action.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify records to be stored.	1.1 Identify purpose(s) of records to be maintained in relation to customer requirements, quality system or production requirements. 1.2 Identify requirements for completion of workplace records in accordance with workplace procedures. 1.3 Record and collate information ensuring appropriate information and any samples are included in an appropriate manner.
2. Maintain document filing arrangements.	2.1 Identify organisation system for records. 2.2 File records following workplace conventions. 2.3 Deal with obsolete or non-conforming records following workplace procedures.
3. Respond to information requests.	3.1 Interpret requests for information and prioritise. 3.2 Identify information requested and provide information within required workplace policies and time frames.
4. Organise file movements.	4.1 Identify files to be relocated. 4.2 Complete records of movement and file following workplace procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
5. Maintain security of workplace records.	5.1 Identify security requirements for workplace records. 5.2 Maintain security arrangements for files. 5.3 Notify (any) security breaches to appropriate personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of organisation standard procedures, work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints relevant to the job.

Knowledge and skills in organising and maintaining a records system, including:

- identification and correct use of record keeping processes and procedures
- records generated at various stages of the production workflow and records access requirements
- focus of operation of record systems and equipment
- importance of records held and relevant procedures to maintain records to minimise time delays in accessing records
- maintenance of information for suppliers, customers and the enterprise.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify and describe own role and role of other employees in maintaining workplace records.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, work instructions and material labels as provided to operators.

Writing is required to the level of completing workplace forms and reports.

Numeracy is also required to the extent required by production data, work instructions and procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify and implement appropriate work processes for the filing and retrieval of workplace information
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- records are consistently filed and accessed in accordance with workplace procedures
- security precautions appropriate to the records are applied at all times.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- by direct observation and accessing the workplace records system
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments in the industry.

Work is governed by established workplace procedures, and extent of authority for adjustments and other work activities are defined

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Documentation

This unit of competency includes sources of documentation such as:

- production reports
- job specifications
- production capability statements/specifications
- relevant workplace procedures and policies
- quality standards
- enterprise manuals
- machine or equipment instructions and readouts
- manufacturer specifications
- materials safety data sheets
- reliability, human resource, financial and production information
- relevant agreements, codes of practice and other legislative requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Filing systems may be manual or computerised.

Problems

Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical problems may include:

- lost files
- misfiling
- poor controls
- insufficient space/storage facilities
- incorrect destruction of records.

Appropriate action for problems outside of area of responsibility may be reported to

an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking

questions and seeking assistance from appropriate persons/sources

Variables

Key variables to be monitored include:

- retention schedules
- records movements and location.
-

MSAPMSUP310A Contribute to the development of plant documentation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit of competency covers the development of relevant plant documentation and systems in response to identified information requirements including the development and/or amendment of workplace documents, procedures and record keeping systems.

Application of the Unit

Application of this unit

This competency is typically performed by an experienced operator, leading hand or supervisor. The employee will:

- determine what needs to be done
- draft new/revised documentation
- arrange for documentation to be checked
- follow document control procedures.
-

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify information need/deficiency.	1.1 Determine the information requirements of the organization. 1.2 Evaluate current documentation. 1.3 Recognise information need/deficiency. 1.4 Discuss information requirements with appropriate personnel.
2. Develop/revise plant documentation.	2.1 Specify information need and set/prioritise objectives 2.2 Analyse existing documentation/records in accordance with specified requirements. 2.3 Develop/amend documentation as a draft in accordance with specifications to standard format. 2.4 Issue documentation to appropriate personnel for review. 2.5 Edit documentation and amend in accordance with review requirements. 2.6 Complete documentation to satisfy the initial identified need/deficiency.
3. Communicate changes to plant documentation.	3.1 Explain and communicate documentation to all relevant personnel. 3.2 Distribute documentation to all appropriate personnel. 3.3 Evaluate implementation of documentation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.4 Amend documents if required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of organisation standard procedures, work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints relevant to the job.

Knowledge of organisation information systems, procedures, equipment and relevant documentation sufficient to be able to develop or amend company documentation.

Knowledge of the relevant OHS and environmental requirements is required along with an ability to implement them in a manner which is relevant to the drafting of all relevant documentation.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify and describe own role and role of other employees.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical product specifications, job sheets, work instructions and material labels as provided to operators.

Writing is required to the level of drafting documents for the required audience.

Numeracy is also required to the extent required by production data, work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Consistent performance should be demonstrated. For example, look to see that:

- information required is researched, and intended use is taken into account
- documentation is completed accurately, concisely and in accordance with requirements
- completed documentation is easily understood by the recipient
- information is communicated in the appropriate manner
- communication distinguishes between relevant and peripheral issues.

Assessment method and context

Assessment will occur using work-based documents and in a work-like environment.

Competence in this unit may be assessed:

- by direct observation and accessing the workplace records system
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments in the industry.

Work is governed by established workplace procedures, and extent of authority for drafting/document approval.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Documentation

This unit of competency includes sources of documentation such as:

- maintenance logs
- non-compliance reports
- incidence and accident reports
- permits
- schematics/process flows/ engineering drawings.
- job cards
- standard operating procedures
- work instructions
- operating manuals
- quality procedures
- training program contents
- materials safety data sheets.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical problems may include:

- inaccurate source documents
- out-of-date source documents
- source documents too technical/lacking detail/of wrong focus
- prioritising of document drafting with other work.

Appropriate action for problems outside of area of responsibility may be reported to an appropriate person.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify resources to meet production requirements.	1.1 Determine demand for product. 1.2 Access and verify information on orders, stocks and delivery. 1.3 Determine material requirements. 1.4 Determine human resource requirements. 1.5 Determine health, safety or environment issues in meeting requirements.
2. Develop schedules	2.1 Determine production priorities. 2.2 Identify production opportunities ('windows'). 2.3 Develop production schedules in accordance with procedures taking account of safety requirements. 2.4 Communicate and distribute production schedules to appropriate personnel.
3. Monitor production schedules.	3.1 Monitor production output against schedule. 3.2 Identify variations between production and schedule. 3.3 Record operational variation and discuss with appropriate personnel. 3.4 Identify possible cause of variation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4. Adjust schedules.	4.1 Adjust schedules in response to operational variation. 4.2 Adjust schedules in response to unexpected events. 4.3 Distribute adjusted/amended schedules to appropriate personnel. 4.4 Maintain product output in accordance with production and health, safety and environment requirements.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes the ability to apply and explain:

- production objectives, priorities, targets and resource requirements
- customer and quality requirements
- process and plant operational requirements
- hazards associated with the process
- awareness of the hierarchy of control in controlling the hazards
- impact of adjustments on process/plant efficiencies and production outcomes/targets
- safety implications for schedule/schedule changes
- planning, sequencing, monitoring and reviewing steps
- company policies and procedures

as is relevant to scheduling of production to meet operational requirements.

Language, **literacy and numeracy requirements**

This unit requires the ability to access and interpret a range of written, numeric and graphical data.

Writing is required to the level of interpreting orders (and forecasts) and producing schedules and related reports.

Numeracy is required to interpret numeric data and relevant statistics (such as trends and cycles) and from this calculate production and resource requirements.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

This unit may be best assessed using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk-through of the scheduling process forming part of the response. These assessment activities should cover a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.

Critical aspects

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to

- identify resource requirements
- record, monitor and adjust schedules in response to operational requirements.

Consistent performance should be demonstrated. For example, look to see that:

- resource requirements are correctly identified in accordance with production requirements
- schedules are planned for the most effective and efficient manner to meet operational requirements
- schedules allow for safety, health and environmental (HSE) issues and reinforce HSE priorities
- timelines are adhered to
- schedules are adjusted and resource requirements amended in response to operational variations
- variations to schedules are communicated and documented appropriately.

Context of assessment

This unit of competency will be assessed:

- on a processing plant
- in as holistic a manner as is practical
- over a range of situations which will include disruptions to normal, smooth operation
- through questioning and the use of 'what if' scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant
- by using a combination of these techniques.

Assessment for this unit of competency may:

- be integrated with the assessment of other relevant units of competency
- require simulation to allow for timely assessment of parts of the unit, eg Elements 1 and 4. Simulation should be based on the actual plant and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

Method of assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency is typically performed by an experienced operator, team leader or similar.

Indicative functions include:

- regular planning operations
- communication with all relevant personnel, including management and administration.

Unit content areas include responses to:

- immediate production needs
- future production needs
- reworking requirements.

Indicative information sources and resources include:

- customer requirements
- organisational plans, policies and procedures
- production schedules, run plans
- resource utilisation actuals and targets.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

All operations are performed in accordance with standard operating procedures.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Health, **Safety and Environment** (**HSE**)

All operations are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the scheduler needs to ensure the HSE requirements take precedence.

MSAPMSUP382A Provide coaching/mentoring in the workplace

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the skills and knowledge required to act as a mentor/coach to other individuals in the workplace. Coaching and mentoring are undertaken within the coach/mentor's area of expertise on a one on one basis.

The mentoring/coaching process applies to any area of the business or professional endeavours such as acquisition of specific business competencies, progress with overall business development, individual and personal development.

Application of the Unit

Application of this unit

This competency is typically performed by senior operators or team leaders who have significant workplace experience. At all times they would be liaising with relevant personnel when undertaking the coaching/mentoring role.

The coach/mentor would:

- facilitate the exploration of needs, motivations and thought processes to assist the individual in identifying areas for development
- observe, listen and ask questions to identify the employee's situation
- use questioning techniques to identify solutions and actions rather than take a directive approach
- support the employee in setting appropriate goals and methods of assessing progress in relation to goals
- provide encouragement, support and constructive feedback
- apply tools and techniques which may include one on one training, facilitating, counselling and networking
- evaluate outcomes of process to ensure the employee is achieving goals.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Establish coaching/ mentoring relationship.	1.1 Identify areas for development in line with organisational and individual's requirements. 1.2 Use effective communication styles to develop trust, confidence and rapport. 1.3 Make agreements on how the relationship will be conducted, including: • the amount of time involved for both parties • confidentiality of information • identification of development opportunities • development plan towards achieving goals. 1.4 Discuss and clarify expectations and goals.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	1.5 Seek input from other relevant personnel if required.
2. Provide coaching/ mentoring support.	2.1 Assist the individual to identify and evaluate opportunities to achieve agreed goals/development activities. 2.2 Share personal experiences and knowledge with the individual to assist in progress to agreed goals/development. 2.3 Provide a supportive environment to allow the individual to develop towards the achievement of goals. 2.4 Encourage the individual to make decisions and take responsibility for the courses of actions or solutions under consideration. 2.5 Provide assistance and guidance in a manner which allows the individual to retain responsibility for achievement in their goals.
3. Evaluate effectiveness of coaching/mentoring.	3.1 Recognise and openly discuss changes in the coaching/mentoring relationship. 3.2 Make adjustments to the relationship to take account of the needs of both the mentor/coach and the individual. 3.3 Seek feedback from individual and other relevant personnel to identify and implement improvements.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge of the principles of coaching and mentoring for development of competence.

Knowledge of organization standard procedures and work instructions and relevant regulatory requirements along with the ability to apply them to the coaching/mentoring process.

Competence also includes the ability to:

- work effectively with individuals who have diverse work styles, aspirations, cultures and perspectives
- use effective methods of coaching/mentoring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- apply organisation policies, procedures and plans
- apply methods and techniques for eliciting and interpreting feedback
- explain relevant career paths and competency standards in the organisation
- apply methods for identifying development opportunities
- use effective planning skills to organise activities
- give, receive and analyse feedback effectively

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret organisation requirements which may be included in:

- quality assurances and/or procedures manuals
- goals, objectives, plants, systems and processes
- legal and organisational policy/guidelines and requirements
- OHS policies, procedures and programs
- confidentiality and security requirements
- business and performance plans
- anti-discrimination and related policy
- access and equity principles and practice
- ethical standards
- quality and continuous improvement processes and standards.

Writing is required to the level of completing records and reports.

Numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that an understanding of mentoring/coaching and its role and benefits is understood. Competence must be demonstrated in communication skills in relation to listening, questioning, providing constructive feedback and non-verbal communication.

Consistent performance should be demonstrated, in particular:

- an understanding in the role and benefits of mentoring/coaching in the business

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- use of significant workplace knowledge and experience to assist another individual to achieve their goals/development needs
- application of effective communication styles
- effectively creating a learning environment that allows for open discussion, feedback, tolerance of mistakes during learning, within a safe environment, and affirmation of the individual's worthiness.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- by observation or questioning to indicate understanding
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This competency applies to all work environments in the process manufacturing industries.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- relevant process equipment, components and auxiliary equipment
- PPE.

Hazards

Typical workplace hazards include:

- chemicals and hazardous materials
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in confined spaces, or in environments subjected to heat, noise, dusts or vapours.

Problems

Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical problems may include:

- lack of materials and resources
- conflicting work priorities
- time constraints.
- lack of cooperation
- lack of willingness to receive feedback

Appropriate action for non-routine problems may include reporting to designated

person or other action specified in the procedures.

MSAPMSUP383A Facilitate a team

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the identification of team's goals and timelines, negotiating with the team to allocate tasks and ensuring the goals and timelines are met.

Application of the Unit

Application of this unit

This competency is typically performed by team leaders/operators who work within a team structure and are responsible for coordinating team functions within designated goals. It also requires the use of a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems/conflict.

The team leader will:

- collect, analyse and organise information
- communicate ideas and information
- plan and organise activities
- work within a team
- use mathematical ideas and techniques
- solve problems
- use technology.
-

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify tasks to achieve team goals.	1.1 Identify and agree on team goals, with team members input. 1.2 Identify tasks required to achieve team goals. 1.3 Identify team and individual safety responsibilities. 1.4 Allocate responsibilities of individuals within the team. 1.5 Ensure designated team goals are met by identifying strategies and timelines required to complete each task.
2. Organise allocation of tasks.	2.1 Estimate time and resources needed to complete tasks. 2.2 Identify competencies of individual team member and allocate/negotiate individual responsibilities. 2.3 Agree timelines for completion of each task. 2.4 Identify resources and support necessary for completion of job.
3. Monitor completion of allocated tasks.	3.1 Measure team performance against its goals. 3.2 Monitor individual compliance with procedures and take action as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Check at regular intervals that agreed timelines for completion of tasks are being met. 3.4 Negotiate alternative strategies to achieve allocated tasks when designated timelines are not being met. 3.5 Provide support to colleagues to ensure completion of allocated tasks.
4. Resolve conflicts between team members.	4.1 Identify conflict situations between team members. 4.2 Identify causes of conflict. 4.3 Implement conflict resolution procedures relevant to the level of conflict and to established practices. 4.4 Seek assistance as required to ensure conflict resolution.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge and understanding of the system sufficient to indicate understanding and knowledge of negotiating with team members to allocate and complete tasks to achieve team goals.

Knowledge of organization procedures, quality requirements and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risk using the hierarchy of controls applied to the manufacture of products. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving problems, including:

- effective use of teamwork
- impact of individual team member strengths/weaknesses/competencies on the allocation of responsibilities
- OHS roles and responsibilities of the individual and the team
- effective use of workplace documentation
- teamwork strategies
- working to timelines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- allocation of tasks
- health, safety and environment obligations of employers and employees imposed by the relevant legislation.

Competence includes the ability to:

- plan own work, including predicting consequences and identifying improvement
- identify and describe own role and role of others involved in the team
- identify team and individual goals relevant to the practical operation of the system
- identify team, section and organisation goals relevant to the practical operation of the system.

Language, literacy and numeracy requirements

This unit requires the ability to read and understand typical procedures and work instructions, plant drawings and safety information as provided to operators.

Writing is required to the level of completing workplace forms, quality assurance records and production reports.

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify and prioritise work activities
- negotiate and monitor work activities
- understand the impact of individual tasks on the completion of team objectives
- allocate and oversee that tasks are completed safely and within timelines
- ensure relevant procedures are followed and used when completing activities
- identify and take appropriate action on problems or potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- willingness to participate as part of a group is demonstrated
- support is sought from and given to colleagues to achieve team objectives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- all safety procedures are always followed.

Assessment method and context

Assessment will occur in work-like environment.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors in the industries.

Procedures

All operations are performed in accordance with procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Problems

Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution / a solution recorded in the procedures.

Typical problems may include:

- required information/materials not available
- required tool/equipment not available
- conflicting priorities
- short timeframe.

Variables

This competency unit may vary according to organization use of the following information sources and documentation:

- procedures/work instructions
- materials safety data sheets
- job cards
- maintenance logs
- plant drawings.

Key variables to be monitored include:

- type of communication used within each organisation
- established work practices/policies
- size and structure of the team/organisation
- group goals - individual, team and organisation
- organisation specific conflict resolution procedures.
-

MSAPMSUP390A Use structured problem solving tools

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the solving of process and other problems, beyond those associated directly with the process unit/equipment, using structured process improvement tools to identify improvements and/or solve problems.

Application of the Unit

Application of this unit

The competency is typically performed by an experienced operator, team leader or supervisor.

Generally the person would be part of a team during the solving of complex or systemic problems and would be expected to perform all parts of this unit and at all times would be liaising and cooperating with other members of the team. This includes:

- using a range of formal problem solving techniques
- identifying and clarifying the nature of the problem
- devising the best solution
- evaluating the solution
- developing an implementation plan to rectify the problem.

This unit does not cover the solving of problems undertaken as part of the operator's normal role which is covered in the relevant operation competency unit.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify the problem.	1.1 Identify variances from normal operating parameters and product quality. 1.2 Define the extent, cause and nature of the problem by observation and investigation. 1.3 State and specify the problem clearly.
2. Determine fundamental cause of problem.	2.1 Identify possible causes based on experience and the use of problem solving tools/analytical techniques. 2.2 Develop possible cause statements. 2.3 Identify fundamental cause.
3. Determine corrective action.	3.1 Consider all possible options for resolution of the problem. 3.2 Consider strengths and weaknesses of possible options. 3.3 Determine corrective action to remove the problem and possible future causes. 3.4 Develop implementation plans identifying measurable objectives, resource needs and timelines in accordance with safety and operating procedures. 3.5 Develop recommendations for ongoing monitoring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	and testing.
4. Communicate recommendations.	4.1 Prepare report on recommendations. 4.2 Present recommendations to appropriate personnel. 4.3 Follow up recommendations if required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes a thorough knowledge and understanding of the process, normal operating parameters, and product quality to recognise non-standard situations.

This unit of competency includes use of analytical techniques in problem solving such as:

- brainstorming
- fishbone diagrams/cause and effect diagrams
- process logic/process requirements
- logic tree
- similarity/difference analysis
- Pareto analysis
- force field/SWOT analysis
- flow charts
- control charts, runcharts and graphs
- scattergrams.

Action plans to solve problems are prepared including:

- priority requirements
- measurable objectives
- resource requirements
- methods for reaching objectives
- timelines
- coordination and feedback requirements
- safety requirements
- risk assessment
- environmental requirements.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of report writing and completing workplace forms.

Basic numeracy is also required, eg to interpret quality data and graphs.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to apply and explain:

- relevant equipment and operational processes
- enterprise policies and procedures
- enterprise goals, targets and measures
- enterprise quality, OHS and environmental requirements
- principles of decision-making strategies and techniques
- enterprise information systems and data collation
- industry codes and standards.

Consistent performance should be demonstrated. For example, look to see that:

- problems are recognised and clarified
- possible causes are identified, based on experience and use of analytical techniques in solving the problem, including:
  - identifying variations
  - identifying cause and effect
  - separating single problems from multiple problems
  - recognising recurring problems.
- fundamental cause of process or equipment faults is determined
- corrective/preventative implementation plans are developed to avoid recurrence of the problem
- implementation plan is presented to relevant personnel.

Assessment method and context

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment will occur on the job or in a simulated workplace.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to recognise and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The competency unit applies to a wide range of processes and equipment. The process manufacturing technical units of competency include a problem solving element where problems specific to that competency unit are to be resolved. This competency unit is where structured problem solving techniques are to be applied more broadly, or with greater depth/rigour than is implied by the problem solving element of the technical units.

In large plants or manufacturing organisations with multiple processes, it may apply to more than one process if those processes interact with each other. It applies to all operators across all functions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include leaks, spillages and equipment hazards that can occur during the walk-through of a plant.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- non- routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Establish and maintain framework for successful quality system.	1.1 Develop relevant policies which demonstrate the commitment of the enterprise to quality and a culture of improvement. 1.2 Define and allocate responsibilities in quality system. 1.3 Consult with key personnel to define role of procedures in the quality system. 1.4 Seek and provide financial and human resources to allow thorough implementation of quality system. 1.5 Develop system for communicating quality message and culture in the organisation.
2. Establish and maintain quality documentation system.	2.1 Identify quality documentation required, including records of improvement plans and initiatives. 2.2 Prepare and maintain quality documentation and keep data records. 2.3 Maintain document control system.
3. Implement structured training program in accordance with quality system requirements.	3.1 Analyse roles and duties of relevant personnel. 3.2 Identify training needs in relation to quality. 3.3 Identify training programs to meet these needs. 3.4 Implement the training program. 3.5 Develop and maintain training records.
4. Evaluate the quality system.	4.1 Undertake regular audits of the quality system, its policies and procedures. 4.2 Develop new procedures/work instructions as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	4.3 Implement improvements in the quality system.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of organisation quality systems and appropriate national and international quality standards and protocols.

Knowledge of the relevant OHS and environmental requirements and detailed knowledge of enterprise standard operating procedures is required.

An appreciation of business goals and key performance indicators is required as a basis for decision making and action.

Competence to include the ability to apply and explain the principles of:

- process improvement
- policy and procedure development
- data management and documentation.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret quality procedures and work instructions, quality manuals, equipment manuals as is applicable to developing quality systems and procedures.

Writing is required to the level of developing quality documentation.

Numeracy is also required, eg to analyse quality data or charts.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- effectively maintain and evaluate quality systems carried out
- implement relevant staff training programs
- produce adequate quality documentation including policies and procedures.

Consistent performance should be demonstrated. For example, look to see that:

- the development, implementation and evaluation of the quality system runs smoothly
- all safety procedures are always followed.

Assessment method and context

Assessment will occur in a work-like environment.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to recognise, anticipate and solve problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to a wide range of processes and equipment in all work environments and sectors in the process manufacturing industries.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of workplace documentation such as:

- organisational policies
- quality manuals
- standard operating procedures and work instructions
- company business objectives
- key performance indicators).

Quality audits and evaluations may be undertaken as an individual or as part of a team.

Hazards

Typical hazards include leaks, spillages and equipment hazards that can occur during the walk-through of an operating plant or factory.

Problems

Typical problems may include:

- lost documentation
- maintaining updated documents
- staff not following procedures
- poor communication.
-

MSAPMWJ201A Use high pressure water jetting equipment

Modification History

Release 2: ISC upgrade to incorporate changes to Australian Standard.

Unit Descriptor

This unit of competency covers the use of high pressure water jetting equipment under the supervision of a competent operator. The job may be to clean, prepare, abrade, cut or demolish concrete, steel or other plant, equipment, vessels or infrastructure. This work is undertaken in compliance with *AS/NZS 4233.1*: *2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance*, or its authorised replacement and *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013*, its state equivalent (where one exists) or the authorised replacement.

Application of the Unit

In a typical scenario, two or more operators (at least one of whom will be a competent operator) working as a team will operate a high pressure water jetting system. AS/NZS 4233.1:2013 defines this work as work with:

(*a*) *High pressure water jetting systems pressurised by positive displacement pumps with an output capability greater than 800 bar litres per minute*.

(*b*) *High pressure water jetting operations carried out at pressures above 800 bar litres per minute and includes jetting operations involving the use of additives and abrasives*.

(*c*) *Water jetting operations below 800 bar litres per minute where there is a foreseeable risk of injury to operators*.

It further defines:

High pressure water jetting systems with an output capability greater than 800 bar litres per minute and less than 5600 bar litres per minute are identified as Class A and systems with an output capability in excess of 5600 bar litres per minute are identified as Class B.

The competent operator is defined by *MSAPMWJ301A Operate a high pressure water jetting system*.

Competence may also be required in a range of other units of competency in order to be allowed to operate on site under supervision. Work will be undertaken on a worksite which may be a client's site or a site belonging to the organisation.

AS/NZS 4233.1:2013 states that ' Verification of competency or refresher training on high pressure water jetting operations shall be carried out and documented at appropriate intervals not exceeding two years to ensure the continued competency of operators'.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Prepare for work	1.1	Obtain required job details as part of a team
		1.2	Complete site access and work control requirements
		1.3	Identify site hazards and required hazard controls
		1.4	Prepare required equipment under supervision
		1.5	Participate in toolbox meeting or similar, as required
		1.6	Complete required pre-work paperwork
2	Complete on-site preparation	2.1	Arrive at site ready for job
		2.2	Liaise with job owner, as appropriate
		2.3	Obtain required permits/work authorities, as directed
		2.4	Follow job pack as directed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Check available water
		2.6	Check waste disposal
		2.7	Recognise and control job and site-specific hazards
3	Set up job under supervision	3.1	Prepare worksite
		3.2	Set up water jetting equipment
		3.3	Liaise with other work groups, as appropriate
		3.4	Establish appropriate means of communication between operators
		3.5	Ensure hazard controls are operational and adequate
		3.6	Check and use required personal protective equipment
		3.7	Test emergency shut-off
4	Undertake water jetting job in accordance with procedures	4.1	Start up high pressure water jetting system
		4.2	Communicate as appropriate
		4.3	Operate equipment to proceed with job, as specified
		4.4	Monitor job conditions
		4.5	Monitor job and equipment, as directed
		4.6	Maintain required line of sight
		4.7	Monitor hazards and activate emergency stop, as required
		4.8	Recognise faults and take appropriate action
		4.9	Complete required paperwork
5	Complete job	5.1	Shut down equipment
		5.2	Clean job site and equipment
		5.3	Service and inspect equipment under supervision, as required
		5.4	Store equipment, as required
		5.5	Restock running spares and consumables, as directed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.6 Report any issues or incidents, as required

5.7 Participate in debrief

5.8 Complete required paperwork

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- recognising conditions which will lead to out of specification product or unsafe situation
- implementing the enterprise's procedures in a manner relevant to the correct use of the equipment
- conveying information relevant to the operation of equipment clearly and effectively
- maintaining appropriate levels of environmental controls and quality assurance
- reading and interpreting safety data sheets(SDS)
- recognising equipment problems and taking action to prevent equipment failure
- reading and numeracy to interpret workplace documents, instrumentation and technical information

Required knowledge

Required knowledge includes:

- hazards associated with the process, plant and equipment where water jetting is to be carried out
- high pressure water jetting hazards
- injuries resulting from high pressure water jets and appropriate responses
- application of the hierarchy of control in controlling the hazards
- relevant safety signs and symbols
- fundamentals of hydraulics
- basic understanding of reaction force and its determination
- relevant communication systems including hand signals
- basic principles of heat stress, fatigue, hydration, physiology, biomechanics as applied to water jetting
- basic principles of how high pressure water jetting nozzles/jets work
- basic understanding of diesel engine systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic principles (only) of pressure and flow relationships

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that use of equipment is understood and that the importance of critical properties, settings and readings is known. Competence must be demonstrated in the operation of equipment to the level required for this unit of competency. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective actions. Holistic assessment of this unit of competency with other related units is preferred. Consistent performance should be demonstrated. In particular look to see that: • hazards are identified and controlled • job is completed efficiently and to required standards • quality is monitored • required measurements/observations are continually made • all health, safety and environment (HSE) requirements are followed • problems are anticipated and appropriate action is taken (i.e. problem fixed or reported). • The assessor should be able to demonstrate competence in water jetting operations and have adequate industry experience (with three to five years being a guideline) in water jetting.
Context of and specific resources for assessment	Assessment will require access to operating equipment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. Assessment will occur over a range of situations which will include disruptions to normal, smooth operations. Simulation or case studies/scenarios may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual plant and will include 'walk-throughs' of the relevant competency components. A bank of scenarios/case studies/what ifs and questions will be required to probe the reasoning behind observable actions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	All operations are performed in accordance with standard procedures. Procedures may be written, verbal, computer-based or in some other form, and may include: • all work instructions • standard operating procedures (SOPs) • Australian standards • Guidance Notes • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations
Site access requirements	Site access requirements may include: • site induction • other site/client requirements
Work control requirements	Work control requirements may include: • client/site requirements, such as permits or other authorities to enter site, commence and continue work
Prepare equipment	Preparation of required equipment may include: • selecting (e.g. from store) equipment needed for the job, under direction • checking equipment is in appropriate condition for the job, under supervision

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• checking equipment is within inspection date • loading equipment onto truck or similar, as directed • filling fuel and ensuring adequate supply of other consumables, as directed
Equipment	Equipment may include: • pump • pump motor/driver • hoses • guns, lances and nozzles • personal protective equipment • other equipment, plant, tools and hazard control devices required for the job
Job owner	Job owner may include: • client or their representative • site manager or their representative • production manager or their representative • maintenance manager or their representative • other person with prime responsibility for the plant/plant area which is the subject of the water jetting
Job paperwork	Job paperwork may be electronic, hard copy or other format and may include: • tool storeroom records • equipment loaded records • maintenance/inspection records/checklists • tag out/reports for failed equipment • hazard controls • work packs

Personal protective equipment	Personal protective equipment may include:
	• personal protective equipment as specified in:
	  • Section 4 AS/NZS 4233.1: 2013 High Pressure *Water Jetting Systems Part 1. Safe Operation and Maintenance, or its authorised replacement*
	  • *Section 5 Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013,* or its authorized replacement
	• medical alert card as specified in Section 9.5 of *AS/NZS 4233.1: 2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance, or its authorised replacement*
	• other equipment as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Liaise with job owner	Liaise with job owner may include: • confirming job owner needs and standards • confirming job and job site • checking job owner is satisfied with completed job • confirming compliance with site requirements • other job owner communications
Job pack	Job pack may include: • permits/clearances • safe work method statements • job safety and environment analysis (JSEA) or other hazard analysis and control information • Safety Data Sheets (SDS)
Water	Water is to be checked for appropriate: • amount (volume and pressure) • quality/properties • availability
Waste disposal	Waste disposal checks ensure that waste generated will be disposed of in an environmentally appropriate manner and in accordance with site requirements. Waste may include: • contaminated water • material removed by water jetting • fuel or similar waste • other wastes
Worksite preparation	Worksite preparation may include: • establishing exclusion zone (e.g. with barricades or tape) • fixing signage • ensuring safe footing for personnel • participating in/verifying isolations
Prepare water jetting equipment	Preparing water jetting equipment may include: • interpreting equipment markings • assembling equipment • checking electrical earth • flushing equipment • visual inspection of hoses
Communication	Communication may include: • hand signals • radio head phones • other appropriate means

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Hazards	Hazards may include: • high pressure hazards • site/process hazards • hazards arising from materials in job site, including materials being removed by water jetting • hose set-up and hose runs
Hazard controls	Hazard controls may include: • appropriate controls for all hazards identified • controls identified in the relevant permits to work • controls required by *AS/NZS 4233.1: 2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance, or its authorised replacement* • other appropriate controls
Job conditions	Job conditions may include: • total work hours (for day/from base) • rest/rotation periods • weather • heat stress symptoms • site conditions
Monitor job and equipment	Monitoring job and equipment includes monitoring as directed: • the pump • system efficiency • product quality • mechanical equipment
Appropriate action	Appropriate action includes: • recognising actual and potential problems • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Solutions	Solutions may include: • activating emergency switch • stopping work until situation resolved • raising alarm • responding to injury

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through federal or state/territory legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence

MSAPMWJ301A Operate a high pressure water jetting system

Modification History

Release 2: ISC upgrade to incorporate changes to Australian Standard.

Unit Descriptor

This unit of competency covers the operation of a high pressure water jetting system which may be used to clean, prepare, abrade, cut or demolish concrete, steel or other plant, equipment, vessels or infrastructure. This work is undertaken in compliance with *AS/NZS 4233.1*: *2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance*, or its authorised replacement and *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013*, its state equivalent (where one exists) or the authorised replacement.

Application of the Unit

In a typical scenario, one or more operators (the number of operators is to be in accordance with the standard) will operate a high pressure water jetting system. AS/NZS 4233.1:2013 defines this work as work with:

(*a*) *High pressure water jetting systems pressurised by positive displacement pumps with an output capability greater than 800 bar litres per minute*.

(*b*) *High pressure water jetting operations carried out at pressures above 800 bar litres per minute and includes jetting operations involving the use of additives and abrasives*.

(*c*) *Water jetting operations below 800 bar litres per minute where there is a foreseeable risk of injury to operators*.

It further defines:

High pressure water jetting systems with an output capability greater than 800 bar litres per minute and less than 5600 bar litres per minute are identified as Class A and systems with an output capability in excess of 5600 bar litres per minute are identified as Class B.

The competent operator as defined by this unit of competency will be able to operate independently. Operators who are not competent to operate independently should be competent to operate under supervision (refer to *MSAPMWJ201A Use high pressure water jetting equipment*).

Operators will also need to be competent in a range of other units of competency in order to be allowed to operate independently on site. Work will be undertaken on a worksite which may be a client's site or a site belonging to the organisation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

AS/NZS 4233.1:2013 states that ' Verification of competency or refresher training on high pressure water jetting operations shall be carried out and documented at appropriate intervals not exceeding two years to ensure the continued competency of operators'.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Prepare for work	1.1	Obtain required job details
		1.2	Complete site access and work control requirements
		1.3	Identify site hazards and required hazard controls
		1.4	Prepare equipment required for the job
		1.5	Complete personnel requirements
		1.6	Complete required pre-work paperwork
2	Complete on-site preparation	2.1	Arrive at site ready for job
		2.2	Liaise with job owner as part of preparation
		2.3	Obtain required permits/work authorities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.4	Interpret and follow job pack
		2.5	Check available water
		2.6	Check waste disposal
		2.7	Recognise and control job and site-specific hazards
		2.8	Communicate needs back to base
3	Set up job	3.1	Prepare worksite
		3.2	Set up water jetting equipment
		3.3	Liaise with other work groups, as appropriate
		3.4	Establish appropriate means of communication between operators
		3.5	Ensure hazard controls are operational and adequate
		3.6	Liaise with job owner, as required
		3.7	Select key variables
		3.8	Check and use required personal protective equipment
		3.9	Test emergency shut-off
4	Undertake water jetting job in accordance with procedures	4.1	Start up high pressure water jetting system
		4.2	Communicate as appropriate
		4.3	Operate equipment to proceed with job, as specified
		4.4	Monitor job conditions
		4.5	Monitor job and equipment and take appropriate action
		4.6	Maintain required line of sight
		4.7	Monitor hazards and activate emergency stop, as required
		4.8	Diagnose faults and take appropriate action
		4.9	Complete required paperwork
5	Complete job	5.1	Shut down equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.2 Liaise with job owner

5.3 Clean job site and equipment

5.4 Service and inspect equipment

5.5 Store equipment

5.6 Restock running spares and consumables

5.7 Report any issues or incidents, as required

5.8 Debrief relevant stakeholders

5.9 Complete required paperwork

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- recognising conditions which will lead to out of specification product or unsafe situation
- implementing the enterprise's procedures in a timely manner
- using equipment in accordance with procedures and manufacture instructions
- conveying information relevant to the operation clearly and effectively
- maintaining appropriate levels of environmental controls and quality assurance
- determining and applying pressure drop and reaction force
- interpreting and applying pressure drop charts and nozzle charts
- reading and interpreting safety data sheets (SDS)
- recognising equipment problems and taking action to prevent equipment failure
- reading and numeracy to interpret workplace documents, instrumentation and technical information

Required knowledge

Required knowledge includes:

- hazards associated with the process, plant, equipment where water jetting is to be carried out
- high pressure water jetting hazards
- injuries resulting from high pressure water jets and appropriate responses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- application of the hierarchy of control in controlling the hazards
- relevant safety signs and symbols
- principles of hydraulics
- relevant communication systems including hand signals
- heat stress, fatigue, hydration, physiology and biomechanics, as applied to water jetting
- principles and application of nozzle design
- how high pressure water jets work
- diesel engine systems
- quantitative pressure and flow relationships

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that use of equipment is understood and that the importance of critical properties, settings and readings is known. Competence must be demonstrated in the operation of equipment to the level required for this unit of competency. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective actions. Holistic assessment of this unit of competency with other related units is preferred. This unit includes all aspects of MSAWJ201A Use high pressure water jetting equipment. Assessment of this unit should automatically include evidence of competency for MSAWJ201A. Consistent performance should be demonstrated. In particular look to see that: • hazards are identified and controlled • job is completed efficiently and to required standards • quality is monitored • required measurements/observations are continually made • all health, safety and environment (HSE) requirements are followed • problems are anticipated and appropriate action is taken (i.e. problem fixed or reported). • The assessor should be able to demonstrate competence in water jetting operations and have adequate industry

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	experience (with three to five years being a guideline) in water jetting.
Context of and specific resources for assessment	Assessment will require access to operating equipment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. Assessment will occur over a range of situations which will include disruptions to normal, smooth operations. Simulation or case studies/scenarios may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual plant and will include 'walk-throughs' of the relevant competency components. A bank of scenarios/case studies/what ifs and questions will be required to probe the reasoning behind observable actions.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures	All operations are performed in accordance with standard procedures. Procedures may be written, verbal, computer-based or in some other form, and may include: • all work instructions • standard operating procedures (SOPs) • Australian standards • Guidance Notes • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government

	regulations
Site access requirements	Site access requirements may include: • site induction • other site/client requirements
Work control requirements	Work control requirements may include: • client/site requirements, such as permits or other authorities to enter site, commence and continue work
Prepare required equipment	Preparation of required equipment may include: • determining equipment required for the job • selecting (e.g. from store) equipment needed for the job • checking equipment is in appropriate condition for the job • checking equipment is within inspection date • loading equipment onto truck or similar, if required • filling fuel and ensuring adequate supply of other consumables
Equipment	Equipment may include: • pump • pump motor/driver • hoses • guns, lances and nozzles • personal protective equipment • other equipment, plant, tools and hazard control devices required by the job
Personnel requirements	Personnel requirements may include: • briefing other team members • participating in/leading toolbox meeting • checking team members are fit for work • other requirements
Job owner	Job owner may include: • client or their representative • site manager or their representative • production manager or their representative • maintenance manager or their representative • other person with prime responsibility for the plant/plant area which is the subject of the water jetting
Job paperwork	Job paperwork may be electronic, hard copy or other format and may include: • tool storeroom records

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• equipment loaded records • maintenance/inspection records/checklists • tag out/reports for failed equipment • hazard controls • work packs
Personal protective equipment	Personal protective equipment may include: • personal protective equipment as specified in: • Section 4 *AS/NZS 4233.1: 2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance,* or its authorised replacement Section 5 *Safe Work Australia Guide for Managing Risks from High Pressure Water Jetting December 2013,* or its authorized replacement • medical alert card as specified in Section 9.5 of *AS/NZS 4233.1: 2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance,* or its authorised replacement • other equipment as required
Liaise with job owner	Liaise with job owner may include: • confirming job owner needs and standards • confirming job and job site • checking job owner is satisfied with completed job • confirming compliance with site requirements • other job owner communications
Job pack	Job pack may include: • permits/clearances • safe work method statements • job safety and environment analysis (JSEA) or other hazard analysis and control information • Safety Data Sheets (SDS)
Water	Water is to be checked for appropriate: • amount (volume and pressure) • quality/properties • availability
Waste disposal	Waste disposal checks ensure that waste generated will be disposed of in an environmentally appropriate manner and in accordance with site requirements. Waste may include: • contaminated water • material removed by water jetting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• waste fuels • other wastes and emissions
Worksite preparation	Worksite preparation may include: • establishing exclusion zone (e.g. with barricades or tape) • fixing signage • ensuring safe footing for personnel • participating in/verifying isolations
Prepare water jetting equipment	Preparing water jetting equipment may include: • interpreting equipment markings • assembling equipment • checking electrical earth • compliance with relevant Australian standards • flushing equipment • visual inspection of hoses
Communication	Communication may include: • hand signals • radio head phones • other appropriate means
Key variables	Key variables may include: • pressure • flow rate • rpm of pump motor/driver • power of pump motor/driver • nozzle type and size • hose assemblies • control system variables
Hazards	Hazards may include: • high pressure hazards • site/process hazards • hazards arising from materials in job site, including materials being removed by water jetting • hose set-up and hose runs
Hazard controls	Hazard controls may include: • appropriate controls for all hazards identified • controls identified in the relevant permits to work • controls required by *AS/NZS 4233.1: 2013 High Pressure Water Jetting Systems Part 1. Safe Operation and Maintenance, or its authorised replacement*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• other appropriate controls
Job conditions	Job conditions may include: • total work hours (for day/from base) • rest/rotation periods • weather • heat stress symptoms • site conditions
Monitor job and equipment	Monitoring job and equipment includes monitoring: • the pump and its motor (means of providing motive power) • productivity • system efficiency • product quality • mechanical equipment • high pressure jet formation • waste management • hose condition
Appropriate action	Appropriate action includes: • recognising actual and potential problems • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Solutions	Solutions may include: • activating emergency stop • stopping work until situation is resolved • raising alarm • responding to injury
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through federal or state/territory legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence

MSARVG201A Tow a recreational vehicle safely

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to safely tow a recreational vehicle within a caravan park or confined workplace space and on the open road.

Application of the Unit

Application of the unit	This unit of competency applies to those involved in the manufacture, service and repair, or sale of recreational vehicles. It may be applied in different workplaces, sectors and circumstances. This unit assumes possession by the driver of a current driving licence. Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority. Type of vehicle driven must comply with that permitted by driver's licence.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess safe towing weight of recreational vehicle	1.1. Calculate the gross weight of recreational vehicle and determine aggregate mass 1.2. Check towing capacity of towing vehicle 1.3. Check and adhere to tow bar capacity of towing vehicle 1.4. Confirm the weight ratio of recreational and towing vehicle as safe in accordance with state/territory requirements and regulations
2. Prepare for towing of recreational vehicle	2.1. Prepare recreational vehicle for towing 2.2. Conduct pre-operational checks on towing vehicle and recreational vehicle 2.3. Carry out any minor routine repairs 2.4. Report any complex faults and repairs to appropriate person and coordinate repairs 2.5. Identify and act on relevant statutory regulations to reduce possible injury to self and others 2.6. Attach recreational vehicle to towing vehicle in accordance with manufacturer and state/territory specifications, requirements and regulations 2.7. Check visibility and adjust position of mirrors, if

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	necessary
3. Safely tow recreational vehicle on an open road	3.1. Identify and comply with national and state/territory road rules and laws 3.2. Show courtesy and consideration to other road users 3.3. Manoeuvre recreational vehicle in forward and reverse directions and park in accordance with requirements, manufacturer instructions and traffic regulations 3.4. Identify any driving hazards and avoid or control them, using appropriate defensive driving techniques 3.5. Follow appropriate procedures in the event of a driving emergency 3.6. Constantly monitor and act upon traffic and road conditions to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities 3.7. Reverse recreational vehicle to parking position, maintaining visibility and achieving accurate positioning
4. Safely tow vehicle in the workplace	4.1. Attach recreational vehicle to towing vehicle correctly and safely 4.2. Check visibility and adjust position of mirrors, if necessary 4.3. Identify any obstacles or hazards in planned route and remove or avoid, as appropriate 4.4. Safely tow recreational vehicle to required space and reverse in carefully 4.5. Position recreational vehicle as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • using tools and equipment correctly and safely in simple, routine maintenance and servicing of recreational vehicle in preparation for towing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• monitoring and anticipating traffic and other hazards and taking appropriate action • using safe driving techniques relative to conditions • calculating weights and towing capacity of vehicles
Required knowledge
Required knowledge includes: • state/territory road codes and laws • weight-to-vehicle towing ratios set by state/territory authorities and manufacturers • general duty of care • occupational health and safety (OHS) regulations relevant to minor servicing and towing recreational vehicles • procedures to be followed in the event of a driving emergency

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects of assessment	Evidence of the following is critical: • identifying and following enterprise procedures, and state/territory and federal legislative requirements, regarding driving on public roads and towing of recreational vehicles • safely manoeuvring and towing recreational vehicle according to OHS requirements • driving on an open road and in the workplacein a safe and courteous manner • complying with relevant state/territory roads and traffic authority driving regulations and license requirements pertaining to the class of vehicle • following OHS policies and procedures relevant to driving and towing a recreational vehicle • identifying driving hazards and using appropriate defensive driving techniques.
Context of assessment and resource implications	Assessment must ensure: • project or work activities that allow the candidate to demonstrate towing a recreational vehicle over a

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	period of time and in a suitable range of contexts • project or work activities that allow the candidate to address a range of typical minor routine repair or service needs in preparation for towing a recreational vehicle.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Road transport situations	Road transport situations may include: • operations conducted at day or night • typical weather conditions • on the open road • on a private road • while at a depot, base or warehouse • while at a client's workplace or worksite
Recreational vehicle	Recreational vehicles may include: • caravan • pop-top caravan • camper trailer • tent trailer • 5th wheeler • slide-on camper
Towing vehicle	Towing vehicles may include: • 2 wheel drive • 4 wheel drive • truck

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• van • specialised towing truck/unit • tractor

Prepare recreational vehicle for towing	Preparing recreational vehicles for towing may include:
	• safely positioning and securing:
	  • fittings
	  • furnishings materials
	  • components
	• disconnecting:
	  • power leads
	  • water pipes/hoses and drains
	  • electrical leads
	• ensuring that any stabilising fixtures are correctly positioned for travel
	The purpose of the preparation may include:
	• to eliminate danger
	• eliminate potential damage
	• avoiding weight shift during towing
	• evenly distributing weight over wheels
	• avoiding other problems with towing

Braking systems	Braking systems may include: • hydraulic • electric
Pre-operational checks	Pre-operational checks may include: • visual check of vehicle • checking and topping up fluid levels • checking tyre pressures • checking operation of vehicle lights and indicators • checking brakes
Minor routine repairs	Minor routine repairs may include: • the replacement of blown globes in vehicle lights • replacement of broken belts • dealing with flat battery • replacement of blown fuses

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• replacement of coolant hose • repairing door mirrors • repairs to rear tail-light lens • changing of tyres • repair of tyre punctures • replacement of broken coolant hose
Vehicle handling procedures	Vehicle handling procedures may include: • starting a vehicle • steering and manoeuvring a vehicle • accelerating and braking • positioning and stopping a vehicle • reversing a vehicle • correct hand positions on wheel • operating vehicle controls, instruments and indicators • using defensive driving techniques • managing engine performance
Driving hazards	Driving hazards may include: • wet and iced roads • steep inclines or sharp curves on the road • uneven surfaces • oil, rocks, mud and water on road • animals and objects on road • pedestrians and children • trees and branches • other vehicles, recreational vehicles or tents • foggy, windy or rainy conditions • flooded sections of road • fire in vehicle • leaking fuel • faulty brakes • parked vehicles on the road • faulty steering mechanism on vehicle • wet/oily work area surface • fixed workplace hazards • movable workplace hazards • other workers
Road transport situations	Road transport situations may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• positioning recreational vehicle • ensuring vehicle is level and parallel • ensuring vehicle is within reach of desired services/equipment
Occupational health and safety (**OHS**)	OHS may include: • safe worksite work practices • safe use of tools and equipment • safe handling of materials • use of personal protective equipment

MSARVS201A Install LP gas systems in a recreational vehicle

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to determine LP gas system requirements, and install and commission LP gas systems in a recreational vehicle. It applies to those involved in the manufacture of recreational vehicles in various types of enterprises. This unit is based on and equivalent *CPCPGS3006A Install LPG systems in caravans, mobile homes, water craft and mobile workplaces*.

Application of the Unit

Application of the unit	This unit of competency applies to those involved in recreational vehicle manufacturing. It may be applied in different workplaces, sectors and circumstances and applies only where relevant state/territory licensing requirements permit the installation of LP gas systems in a recreational vehicle. Licensing arrangements required by state/territory and national authorities may vary. This unit requires the determination of requirements, the installation and commissioning of LP gas systems with an operating pressure not exceeding 2.75 kPa in a recreational vehicle.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Determine LP gas system requirements	1.1. Use appropriate personal protective equipment and read and interpret any safety information relevant to the job 1.2. Obtain and interpret plans/specifications 1.3. Identify and adhere to quality assurance requirements for enterprise operations 1.4. Determine gas load/design requirements from design drawing or specifications 1.5. Calculate storage capacity using recognised formulae or tables to ensure adequacy for the required load and compliance with standards and job requirements 1.6. Identify appropriate regulator and piping in terms of size, connection sizes and capacity in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	with standards and enterprise requirements 1.7. Check that piping selected provides minimum inlet pressure to each appliance and is appropriate for the dimensions and loads given in the design drawings or instructions 1.8. Identify location of cylinders, appliances and piping set-out according to job requirements, standards and enterprise requirements 1.9. Estimate quantity of piping, components and fittings in accordance with standards and enterprise requirements 1.10. Check that type of system selected (one or two cylinders) is appropriate for given design information
2. Prepare for installation	2.1. Estimate required materials, equipment, appliances and cylinders from design drawing or on-site dimensions, and check for compliance with docket/order form and confirm acceptable condition 2.2. Identify and select appropriate tools and equipment for the installation 2.3. Use appropriate personal protective equipment, and read and interpret any safety information relevant to the job 2.4. Set out the piping system in accordance with design drawing or instructions, standards and enterprise requirements
3. Install the system	3.1. Install cylinders, regulators, associated pipework, appliances and fixings, including ventilation, in accordance with job requirements, standards and enterprise procedures 3.2. Locate and fit consumer instruction plates and labels in accordance with regulatory requirements, standards and enterprise requirements
4. Test the system	4.1. Adjust regulator to provide flow pressure in accordance with standards and enterprise requirements 4.2. Select test apparatus appropriate for the work 4.3. Test the system, including ventilation, in accordance with standards and enterprise requirements 4.4. Adjust the system to provide the required flow pressure in accordance with standards and enterprise requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.5. Record test data in the format required by relevant regulatory and enterprise requirements
5. Finalise the job	5.1. Assess job against the requirements of the job specification 5.2. Conduct a final inspection in accordance with enterprise quality standards and requirements 5.3. Complete any paperwork required in accordance with enterprise requirements 5.4. Complete required clean-up procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • reading and interpreting instructions and specifications • using and selecting tools and equipment • using and caring of tools and equipment, including portable and fixed power tools • planning and organising work activities • maintaining work area
Required knowledge
Required knowledge includes: • components and products manufactured by the enterprise • general duty of care requirements • properties of gas, gas and electrical safety, combustion principles, pressure and flow rates, and types of systems • relevant statutory and authority requirements related to the installation and testing of gas systems • the International System of Units (SI) and calculation of storage capacity • installation procedures and processes • sources of information, including the appropriate standards • the materials requirements determination process • procedures for installing and commissioning gas systems in recreational vehicles • occupational health and safety (OHS) requirements, including staff responsibilities,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
when working with gas, emergency procedures in case of an LP gas leak, LP gas material safety data sheets (MSDS), safety when working with fumes, and the selection and use of personal protective equipment • signage for hazardous materials and chemicals • working drawings of components manufactured by the enterprise

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects of assessment	Evidence of the following is critical: • installing an LP gas container, piping and two (2) appliances (stove and refrigerator) in a recreational vehicle • completing work to specifications, plans and drawings • complying with regulations, standards and enterprise quality procedures and processes • complying with all safety and OHS requirements, including use of personal protective equipment • effectively communicating with others in the team.
Context of assessment and resource implications	Assessment must ensure: • demonstration of the installation of a gas container, piping and a minimum of two (2) appliances for a recreational vehicle • demonstration of skills within a suitable workshop with appropriate tools, equipment and materials, and access to appropriate standards.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Recreational vehicles	Recreational vehicles may include: • caravan • pop-top caravan • camper trailer • tent trailer • 5th wheeler • slide-on camper • campervan
Manufacturing enterprise	The manufacturing enterprise may include: • sole proprietor • subcontractor • subcontracting manufacturer • employer/manufacturer
The LP gas system	The LP gas system includes: • cylinder (one or two) • regulator • piping • appliances and fixings • air supply • ventilation
Quality assurance	Quality assurance requirements include: • International Standards Organisation (ISO) • internal enterprise quality assurance policy and risk management strategy • Environment Protection Authority (EPA) • AS 5601:2004 Gas installations • AS/NZ 1596:2008 The storage and handling of LP gas • site safety plans • enterprise operations and procedures • relevant industry codes of practice, such as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	those issued by the Recreational Vehicle Manufacturer's Association of Australia (RVMAA)
Tools and equipment	Tools and equipment may include: • hacksaws • power cutting/grinding tools • measuring equipment • wrenches and spanners • files • flaring tools • silver brazing equipment • testing equipment • lifting/load shifting equipment, including trolleys, rollers, forklifts, blocks, hoists and jacks
Materials	Materials must comply with job specifications and appropriate standards for installation of LP gas systems and include: • gas operated appliances • gas regulators • gas cylinders • copper tubing • stainless steel • non-metallic hose assemblies • fitting/fixing materials
Occupational health and safety (OHS) requirements	OHS requirements are to be in accordance with state/territory legislation and regulations and include: • safe workshop environment/worksite work practices • safe use of tools and equipment • safe handling of materials • hazard control and hazardous materials and substances • use of personal protective equipment
Personal protective equipment	Personal protective equipment may include: • overalls • boots • hard hat/cap

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• safety glasses/goggles • gloves • ear plugs/muffs • face masks/respirators
Clean-up procedures	Clean-up procedures may include: • cleaning working surfaces and areas • cleaning and storing all tools and equipment • disposing of waste materials correctly

Sources of information	Sources of information may include:
	• job instructions, signage, plans, specifications, drawings, MSDS and diagrams
	• safe work procedures relating to the installation of LP gas systems for a recreational vehicle
	• regulatory/legislative requirements, pertaining to plumbing and gas fitting regulations, building codes, OHS and environmental requirements
	• enterprise specifications and instructions
	• recognised formulae or tables accepted by the regulatory authority
	• instructions issued by authorised enterprise personnel
	• relevant standards, such as:
	  • AS 5601:2004 Gas installations
	  • AS/NZ 1596:2008 The storage and handling of LP gas

MSARVS202A Repair/service LP gas systems in a recreational vehicle

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to repair LP gas systems in a recreational vehicle. It applies to those working in a servicing agency or in the service section of a manufacturing enterprise.

Application of the Unit

Application of the unit	This unit of competency applies to those who are responsible for recreational vehicle servicing. It applies only where relevant state/territory licensing requirements permit the repair and service of LP gas systems in a recreational vehicle. Licensing requirements by state/territory and national authorities may vary. The unit requires the determination of requirements and the repair or service of LP gas systems with an operating pressure not exceeding 2.75 kPa in a recreational vehicle.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify repair requirements	1.1. Identify or verify service or repair needs to LP gas system 1.2. Access and interpret working drawings, plans and job specifications according to model and type of recreational vehicle 1.3. Select tools and equipment to meet the job requirements and check them to ensure they are working safely 1.4. Identify any safety hazards associated with the job and use appropriate personal protective equipment
2. Assess the system	2.1. Identify and adhere to quality assurance requirements for repair or service 2.2. Assess storage capacity and regulator size to ensure they are adequate for the load and do not exceed regulatory requirements and standards 2.3. Ensure that piping and ventilation used comply with regulatory requirements and standards 2.4. Evaluate the system's piping size to ensure it is appropriate for the dimensions and loads 2.5. Check to ensure that size used for main run and branches provides minimum inlet pressure to each appliance in accordance with regulatory requirements and standards 2.6. Check the set-out of the piping system to ensure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	correct position for appliances and cylinders and compliance with regulatory requirements and standards
3. Plan and prepare the job	3.1. Plan all necessary and appropriate tasks in conjunction with others involved in or affected by the work 3.2. Inform appropriate authorities of planned work and obtain and submit work notices, where required 3.3. Estimate and order any required materials, equipment and appliances for the job and organise delivery 3.4. Check materials, equipment and appliances delivered against the order form or delivery docket to ensure they correspond and are in an acceptable condition 3.5. Identify and select appropriate tools and equipment for the repair/service 3.6. Use appropriate personal protective equipment and read and interpret any safety information relevant to the job
4. Service/repair system	4.1. Service system, repair fault or install appliance in accordance with job requirements, standards and manufacturer specifications 4.2. Repair piping system in accordance with job requirements and standards 4.3. Position appliances to ensure adequate air supply and ventilation in accordance with job requirements and standards 4.4. Locate and check consumer instruction plates, labels and compliance plates to ensure they comply with regulatory requirements and standards
5. Test the system	5.1. Adjust regulator to provide flow pressure in accordance with standards and enterprise requirements 5.2. Select test equipment which is appropriate for the work 5.3. Test the system, including ventilation, in accordance with standards and enterprise requirements 5.4. Adjust the system to provide the required flow pressure in accordance with standards and enterprise requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.5. Record test data in the format required by relevant regulatory and enterprise requirements
6. Complete the job	6.1. Assess work against the requirements of the job 6.2. Assess quality of the total job in accordance with enterprise standards and requirements 6.3. Complete all required paperwork for both customer and enterprise records 6.4. Complete required clean-up procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting instructions and specifications
- using portable and fixed power tools and equipment correctly and safely
- planning and organisation of work
- maintaining and cleaning work area
- communicating effectively with others
- recording data and monitoring records

Required knowledge

Required knowledge includes:

- components and products sourced or manufactured by the enterprise
- general duty of care requirements
- properties of gas, gas and electrical safety, combustion principles, pressure and flow rates, and types of systems
- relevant legislative and regulatoryrequirements related to the installation and testing of gas systems
- the International System of Units (SI) and calculation of storage capacity
- installation procedures and processes
- typical problems and faults associated with LP gas systems in recreational vehicles
- sources of information, including the appropriate standards
- the materials requirements determination process
- procedures for installing and commissioning gas systems in recreational vehicles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• occupational health and safety (OHS) requirements, including staff responsibilities when working with gas, emergency procedures in case of an LP gas leak, LP gas material safety data sheets (MSDS), safety when working with fumes, and the selection and use of personal protective equipment • signage for hazardous chemicals and materials • working drawings of components manufactured by the enterprise

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects of assessment	Evidence of the following is critical: • accurately assessing job requirements and problems related to repair of the LP gas system of a recreational vehicle and selecting appropriate solutions • completing work to meet customer requirements of agreed job, timelines and cost • applying customer service skills • complying with all regulatory, quality assurance, OHS and enterprise requirements.
Context of assessment and resource implications	Assessment must ensure: • demonstration of the repair or replacement of a gas container, piping and a minimum of two (2) appliances for a recreational vehicle • demonstration of skills within a suitable workshop with appropriate tools, equipment and materials, and access to appropriate standards • project or work activities that allow the candidate to use the full range of skills and knowledge to respond to a range of typical situations and problems.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

MSARVS301A Develop and update caravan industry knowledge

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to develop, update and utilise general knowledge of the caravan industry, including recreational vehicle manufacturing, servicing, retail and caravan parks.

Application of the Unit

Application of the unit	This unit of competency applies to those involved in the retail sector of the recreational vehicle industry. It may be applied in different workplaces, sectors and circumstances. It provides the knowledge which underpins effective performance in the retail sector. In-depth knowledge is not required. It does not address the technical knowledge of recreational vehicle manufacturing which is addressed in *MSARVT202A Apply technical knowledge of recreational vehicle manufacturing to work activities*.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research information on the caravan industry	1.1. Identify and access sources of information on the caravan industry 1.2. Research information using appropriate sources for various requirements 1.3. Access specific information on relevant sector of work and related job roles and responsibilities
2. Apply technical information on recreational vehicles to work activities	2.1. Access current information about the caravan industry and issues of interest 2.2. Apply industry information in day-to-day work activities to enhance the quality of work performance
3. Develop and apply information on legal and ethical issues which impact on the caravan industry	3.1. Obtain information on legal and ethical issues to assist effective work performance 3.2. Conduct day-to-day activities in accordance with legal obligations and ethical industry practices
4. Update caravan industry knowledge	4.1. Identify and use a range of opportunities to update general knowledge of the caravan industry 4.2. Monitor issues of current concern and interest to the industry 4.3. Share updated knowledge with customers and

ELEMENT	PERFORMANCE CRITERIA
	colleagues, as appropriate, and incorporate into day-to-day working activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • Basic research skills to identify and research relevant information • questioning to obtain information • sorting and summarising information • communicating effectively with others • planning and organising work activities
Required knowledge

Required knowledge includes:
• general knowledge of caravan industry sectors and interrelationships, including:
  • manufacturing
  • service
  • retail
  • major caravan and tourism industry bodies
  • functions and responsibilities
• caravan park operations, including:
  • accommodation
  • maintenance
  • service/repair
  • emergency and safety requirements
  • environmental issues, such as waste and water management, and energy conservation
• general knowledge of the tourism industry, including:
  • tour operators and wholesalers
  • retail travel agents
  • information services sector (local, regional and national)
  • attractions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• quality assurance in the caravan industry and the role and responsibility of individual staff members • the importance and implications of customer service in the caravan industry • legislation (both state and federal) that applies across the industry in the following areas (name, primary objective and impact on individual staff only): • consumer protection and trade practices • duty of care • equal employment opportunity • anti-discrimination • workplace relations • regulations (local government) • legislation and regulations relating to recreational vehicles • general industry knowledge • economic and social significance of the caravan industry • growth potential of the caravan industry and career opportunities • caravan industry trends • caravan industry support businesses • caravan park rating systems and their application in metropolitan, regional and Australia-wide locations • factors which contribute to the development of successful caravan parks • relationship of the caravan park industry to other sectors of the hospitality and tourist industry (hotels and motels) • environmental and safety issues in the caravan industry • social profiles of caravaners and campers: • customer needs and the importance of having a customer service culture • industry associations

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects of assessment	Evidence of the following is critical: • ability to source industry information • general knowledge of the caravan industry, including main roles, functions and interrelationships of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	different sectors, with a more detailed knowledge of issues that relate to a specific sector or workplace.
Context of assessment and resource implications	Assessment must ensure: • project or work activities that allow the candidate to demonstrate the application of knowledge to specific caravan industry contexts and situations.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Sources of information	Sources of information may include: • media • reference books • libraries • unions • industry associations and organisations • industry personnel • industry journals • computer software and Internet • personal observation and experience
Current information	Current information about the caravan industry and issues of interest may include: • economic and social significance of the caravan industry and the role of local communities • growth potential of the caravan industry and career opportunities • main sectors of the caravan industry and their

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	functions and responsibilities • caravan industry trends • caravan industry support businesses • types of accommodation available in caravan parks • caravan park rating and accreditation systems • factors which contribute to the development of successful caravan parks • relationship of the caravan park industry to other sectors of the hospitality and tourist industry (hotels and motels) • environmental and safety issues • social profiles of caravaners and campers • customer needs and the importance of having a customer service culture • caravan industry associations • relationship between the caravan industry and the broader tourism industry
Sectors of the caravan industry	Sectors of the caravan industry may include: • caravan or holiday park operations • recreational vehicle manufacturing • recreational vehicle parts and components manufacturing and supply • recreational vehicle servicing • recreational vehicle and accessories retailing
Caravan industry support businesses	Caravan industry support businesses may include: • hospitality • tourism operations • entertainment, sports and activities • meetings and conferences • trades, horticulture and maintenance • conservation bodies • local councils, tourism authorities and promoters • retail and wholesale suppliers • recreational vehicle and accessories retailing • security
Environmental issues	Environmental issues may include: • protection of natural and cultural integrity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• minimal impact operations • environmental sustainability • water management • waste management • energy efficient operations • land ownership • land access and usage
Legal issues	Legal issues may include: • consumer protection • duty of care • equal employment opportunity and affirmative action • anti-discrimination • workplace relations • public liability and risk • residential tenancy legislation • local government regulations • occupational health and safety (OHS) legislation • taxation legislation
Ethical issues	Ethical issues may include: • confidentiality • commission procedures • overbooking • pricing • tipping • familiarisations • gifts and services provided free of charge • product recommendations
Issues of interest and concern	Issues of interest and concern may include: • government initiatives (federal, state/territory and local) • emerging markets • environmental and social issues • labour issues • industry expansion or retraction

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess job requirements	1.1. Assess any damage and/or identify service requirements 1.2. Select and review relevant plans, drawings or manuals according to type and model of recreational vehicle 1.3. Determine accurately the service and/or repair requirements of the job 1.4. Provide advice or make recommendations on repair and/or service, on request 1.5. Identify any options to meet customer preferences and specific job requirements 1.6. Consider and recommend any additional services which may be required
2. Quote the job	2.1. Select repair or service options and agree on scope in consultation with customer 2.2. Identify and calculate materials, parts and equipment required to meet the job requirements and appropriate sources 2.3. Calculate the costs of the job 2.4. Prepare quotation and present to customer in a professional manner 2.5. Obtain customer's agreement to quotation, details of work to be completed and timeframes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.6. Order parts, materials and equipment, where required, according to enterprise procedures 2.7. Liaise with colleagues and others, where required, to organise the job 2.8. Complete any documentation and file appropriately according to enterprise procedures 2.9. Schedule the job, as appropriate, in agreement with customer and follow booking procedures according to enterprise practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- planning and organising work activities
- applying customer service, negotiation and communication skills
- estimating and calculating materials, parts, time and labour costs
- reading and interpreting typical floor plans, drawings and manuals of recreational vehicles

Required knowledge

Required knowledge includes:

- relevant industry codes of practice, such as those issued by the Recreational Vehicle Manufacturer's Association of Australia (RVMAA)
- features of different recreational vehicle types and makes, and their design and structural features
- recommended service and maintenance requirements and schedules for recreational vehicles
- details, features and current costs of components, materials and parts
- required equipment for the job and any associated costs and transport requirements

EVIDENCE GUIDE	
	• understanding and applying safety aspects related to the design, manufacture and service of recreational vehicles relating to job role.
Context of assessment and resource implications	Assessment must ensure: • demonstration of application of knowledge to a range of typical work-related situations • work activities that allow the candidate to respond to typical challenges involved in the manufacture, service or sales of recreational vehicles in order to meet customer and enterprise requirements.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Recreational vehicle	Recreational vehicles may include: • caravan • pop-top caravan • camper trailer • tent trailer • 5th wheeler • slide-on camper • campervan • motor home
Sources of current information	Sources of current information on recreational vehicles manufacturing may include: • types, models and options currently available • local and overseas manufacturing • technical information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• regulatory and legal requirements
Apply technical information	Technical information may be applied to work activities to meet: • product • design • enterprise • customer • safety requirements
Work activities	Work activities may include: • manufacturing • servicing recreational vehicles and parts • designing • marketing • sales of recreational vehicles and accessories
Technical information	Technical information may include: • types and models of recreational vehicles • designs and design features and limitations • materials used for different models and components • structure • components, accessories and options
Legal and regulatory obligations	Legal and regulatory obligations may include: • codes of practice of the Recreational Vehicle Manufacturers' Association of Australia (RVMAA) • licensing requirements related to installation, servicing and repair of gas, electrical, plumbing, air conditioning fittings and wiring • welding, joining and adhesives • government (federal, state/territory and local) legislation
Information on products	Information on products may include: • options for components, fittings and accessories • options for layout, furniture, colour schemes, fabrics and finishes • customer requests and feedback • enterprise quality assurance processes, and

MSATCM301A Test the mechanical properties of materials

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to carry out mechanical (destructive) tests on materials and interpret the results.

Application of the Unit

Application of the unit	In a typical scenario, a technician will be required to undertake a range of mechanical tests on samples of materials and to draw some conclusions from those tests with regard to the mechanical properties of the material.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate testing procedures/ standards	1.1. Identify the relevant testing standard 1.2. Identify the need (or otherwise) for testing using a certified laboratory/test equipment 1.3. Select appropriate procedures/standards for the requirements of the test 1.4. Prepare sample according to appropriate procedures 1.5. Arrange for external testing if appropriate. 1.6.
2. Conduct tensile/compression testing	2.1. Undertake tensile test noting relevant data 2.2. Calculate tensile/compressive properties 2.3. Draw relevant conclusions from the tensile test. 2.4.
3. Conduct hardness testing.	3.1. Identify appropriate method of hardness testing 3.2. Undertake hardness test noting relevant data 3.3. Calculate hardness properties 3.4. Draw relevant conclusions from the hardness test 3.5.
4. Conduct impact testing	4.1. Undertake impact test noting relevant data 4.2. Determine impact properties 4.3. Draw relevant conclusions from the impact test 4.4.
5. Conduct fatigue/ flexing testing	5.1. Undertake fatigue/flex testing noting relevant data 5.2. Interpret fatigue/flexing data 5.3. Draw relevant conclusions from the fatigue/flexing test 5.4.
6. Conduct creep testing	6.1. Undertake creep test noting relevant data 6.2. Interpret creep data 6.3. Draw relevant conclusions from the creep test 6.4.
7. Undertake strain measurements	7.1. Identify appropriate method of strain measurement 7.2. Undertake strain measurement and note relevant data 7.3. Interpret strain measurement results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	7.4. Draw relevant conclusions from strain measurements 7.5.
8. Conduct static shear and bend test	8.1. Identify appropriate method of static shear and bend test 8.2. Undertake static shear and bend tests noting relevant data 8.3. Interpret static shear and bend test data 8.4. Draw relevant conclusions from static shear and bend tests 8.5.
9. Report result of tests	9.1. Identify reporting requirements 9.2. Prepare report to meet requirements 9.3. Circulate and file report to procedures. 9.4.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• analyse • select and set up appropriate tests • problem-solve • **perform tests** • interpret results • report results
Required knowledge

• standards
  • needs for standards
  • standards organisations
  • structure and operations of SAA
  • (Standards Association of Australia)
• role of NATA (National Association of Testing Australia)
  • tensile testing
  • methods for tensile testing e.g. AS1391 or equivalent international standard
  • determination of tensile properties
• general impact testing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• factors affecting impact properties of materials • impact testing (AS 1544), or equivalent international standard • dropweight Tear Test (AS 1330) or equivalent international standard • hardness testing • Vickers Hardness Testing (AS 1817, Part 1) or equivalent international standard • Brinell Hardness Testing (AS 1816, Part 1) or equivalent international standard • Rockwell Hardness Testing (AS 1815, Part1) or equivalent international standard • other Hardness Testing Methods (e.g. Equotip and other rebound methods) • fatigue/flex testing • factors affecting the fatigue/flex properties materials • fatigue testing procedures • presentation of Fatigue properties • creep testing • factors affecting creep behaviour of materials • creep testing procedures • stress-rupture testing • presentation of Creep properties

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the training package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to test the mechanical properties of materials. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Conduct tests and interpret results. Evidence should be provided from a number of each type of mechanical test.
Relationship with other units	This unit may be assessed concurrently with other

EVIDENCE GUIDE	
	relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment. Assessment will need to occur in a situation where mechanical testing is undertaken.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work

RANGE STATEMENT	
environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Mechanical tests	Mechanical tests include tensile, impact, hardness, fatigue/flexing and creep.
Materials	Materials includes metals, polymer based materials and other solid materials on which mechanical testing is relevant
Testing standard	Testing standard include ASNZ, ISO, ASTM, DIN or other relevant standard.
Certified	Certified equipment/laboratory refers to NATA certification or relevant equivalent.
Tensile/compressive properties	Tensile properties include: • tensile strength, • compressive strength, • elongation, • reduction of area, • yield stress, • yield point, • proof stress, • Young's modulus • elastic/plastic region and deformation or viscoelastic deformation..
Impact test	Impact testing includes Izod, Charpy, Dropweight Tear and NDT tests.
Impact properties	Impact properties include ITT, USE, Notch Sensitivity
Hardness test	Hardness testing includes Vickers, Brinell, Rockwell and Durometer tests.
Strain measurements	Strain measurements include foil method, extensometer and destructive tests

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify specifications for required casting	1.1. Identify required material specification 1.2. Identify mould requirements 1.3. Identify any special requirements for this job
2. Verify metal charges to melting	2.1. Select required components to give the required metal specification 2.2. Calculate required charge of each component 2.3. Recommend changes/additions to the charge 2.4. Monitor the preparation of the charge including checking for contaminants
3. Monitor furnace operation	3.1. Check that the furnace is in good operational condition and that appropriate lining is present 3.2. Organise for maintenance/repairs as required 3.3. Monitor a melt to ensure the product meets specification
4. Monitor pouring of molten metal	4.1. Check that the ladle is in good operational condition and that appropriate lining is present 4.2. Check pouring is to procedures 4.3. Take required samples for analysis
5. Control hazards	5.1. Identify hazards in the metal melting/pouring process 5.2. Assess the risks arising from those hazards 5.3. Implement procedures to control those hazards in line with procedures and duty of care.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- take calculations needed for determining charges
- perform visual checking of furnaces for operational condition and safety risks
- take of samples
- follow safety and quality procedures

Required knowledge:

- Charge Calculations
  - importance of composition control.
  - methods of calculation used to correct for
  - additions.
  - types of alloy additions.
- Steel
  - induction furnace melting; principles; refractories.
  - arc furnace melting; acid, basic, single slag,
  - double slag, deoxidisation, hydrogen control.
  - ladle refining
- Cast iron
  - types of cast iron
  - influence of carbon and silicon contents
  - carbon equivalent. effect of cooling rate.
  - microstructure, classification of graphite.
  - carbide stabilisers and graphite.
  - innoculation, types of innoculant.
  - spheroidal graphite formation and treatment
  - methods.
  - casting characteristics of grey, S.G and malleable
  - cast irons.
- Ferrous alloys:
  - definitions:
  - iron
  - steel
  - physical properties:
  - density
  - tensile
  - hardness
  - melting points
  - shrinkage percent
  - casting temperature

MSATCM304A Interpret basic binary phase diagrams

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to interpret phase diagrams and so predict the microstructures of binary alloys.

Application of the Unit

Application of the unit	This unit applies to the interpretation of cooling phase diagrams as used in metallurgy. The application will primarily be to phase diagrams of metals and alloys showing temperature and composition variables. In a typical scenario, a metallurgical technician will be required to recommend a phase transition process in order to obtain a required microstructure, or to predict a microstructure from a known phase transition process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the microstructures from an equilibrium cooling phase diagram	1.1. Phase diagram for metal or alloy is obtained from internal or external sources 1.2. Identify number, composition, proportion and structural arrangement of phases in binary alloys. 1.3. Describe structural changes due to varying proportion of alloying elements and temperature. 1.4. Describe the phase changes and final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment operations.
2. Identify the microstructures from a non equilibrium cooling phase diagram	2.1. Identify number, composition, proportion and structural arrangement of phases in binary alloys. 2.2. Describe structural changes due to varying proportion of alloying elements and temperature. 2.3. Describe the phase changes and final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment operations.
3. Recognise characteristic microstructures of binary alloys	3.1. .Recognise characteristic structures of dendrites (homogeneous and cored) columnar and equiaxed grains. 3.2. Recognise characteristic structures resulting from eutectic, eutectoid and peritectic reactions. 3.3. Recognise characteristic structures resulting from solid state precipitation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• produce a basic cooling phase diagram from supplied data • estimate composition from the structure of a phase diagram • predict structure from the composition from a phase diagram
Required knowledge:
Competency includes sufficient knowledge of: • methods of construction of phase diagrams for binary alloys. • the phase changes that occur in binary alloy systems as recorded by the appropriate phase diagrams. • the equilibrium and non equilibrium cooling of binary alloys and the resulting microstructures in cast and heat treated material.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The person will be able to interpret binary phase diagrams. Assessment may be by workplace project, case study or suitable alternative.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • recognise and use correct scientific terminology in regards to phase diagrams • source phase diagrams and other reference material from internal or external sources • use phase diagrams to interpret intermediate and final phase structures of binary alloys
Relationship to other units	This unit may be assessed concurrently with other relevant units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

MSATCM305A Demonstrate basic knowledge of casting operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit describes the skills to discuss basic job requirements with a tradesperson, members of a team, production manager or customer

Application of the Unit

Application of the unit	This unit covers a basic understanding of the principles and commercial metal casting practices. The unit will enable a person to be able to safely access areas of a metal casting business and to identify and explain casting processes. The unit is suitable as a VET in Schools unit and for introductory training in metallurgy where the person does not have any prior casting work experience. All work is carried out under supervision and in consultation with others.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate basic knowledge of casting processes	1.1. Identify the major areas and activities of foundry work including melting, casting, heat treatment, pattern and mould making, finishing and despatch 1.2. Identify the major items of equipment and their purpose in each foundry area 1.3. Describe the most common metals and alloys used in casting processes 1.4. Describe in the correct order the flow of metal through the foundry
2. Demonstrate knowledge of foundry terminology	2.1. Correct names are used for foundry processes and equipment 2.2. Metals and alloys are properly identified including their chemical composition
3. Identify basic understanding of commercial aspects of foundry operations	3.1. Major advantages and disadvantages of casting over other metal manufacturing processes are identified 3.2. Key cost factors are identified including energy, material, labour 3.3. A basic understanding of OHS and environmental obligations of foundries is demonstrated

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required skills:

- Explain basic metal casting processes
- Identify basic items of casting equipment
- Identify product flow through a foundry or other casting operation
- Analyse mould materials and casting processes
- Identify casting defects
- Identify and control hazards

Required knowledge:

Competency includes sufficient knowledge of:

- Classification of casting processes
  - Sand casting, investment casting, die casting, lost foam, vacuum process and protective atmospheres, ingot casting
- Preparation of a mould
  - types of mould, shell moulds, dies
  - pattern types, materials, construction, design
  - raw materials: sand, bonds, other additives
  - sand moulding processes, manual moulding, machine moulding
  - moulding equipment, machines and applications, safety around machinery
  - cores, basic coremaking procedures, equipment&machines
  - mould assembly and handling
  - ancillary equipment, sand handling, mould handling and processing
- Preparation of molten alloys
  - ferrous alloys
  - cast irons, white, grey, malleable and SG cast irons
  - cast steels, carbon steels and alloy steels
  - non-ferrous alloys
  - cast aluminium alloys
  - Al-Si alloys
  - cast copper, magnesium, titanium and zinc alloys
- Melting
  - type of furnaces with applications
  - electric-arc furnace, induction furnace
  - structure and melting principles
- Pouring
  - pouring and molten metal safety
  - pouring equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• running and gating systems • solidification process (including grain growth, effects of super heat, mould geometry, chill) • feeding: risers outline of basic principles • Cleaning of castings • shakeout • cleaning room practices: methods and equipment • removing the mould materials • removing gate and risers • finish cleaning • Inspection of castings • visual examination • magnetic, penetrant methods, • radiographic, ultrasonic methods • chemical, metallographic, mechanical testing • Repair of casting • aligning, welding, filling

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to demonstrate basic knowledge of casting operations. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Correctly identify casting processes and equipment • Demonstrate knowledge of casting principles and practices. Evidence should be provided that knowledge can be applied to a number of castings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	using different alloys and or different moulds.
Relationship to other units	This unit may be assessed concurrently with other relevant metallurgy units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an organisation where casting is done. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare chemical etchants for use with metallographic samples	1.1. Identify the hazards of the required chemical etchants and apply hazard controls 1.2. Prepare etchant solution from bulk stocks following hazard controls and good laboratory practice 1.3. Label and store etchants to standard 1.4. Standardise/check etchants as required by procedures.
2. Prepare sample for metallographic examination	2.1. Undertake mechanical sample preparation 2.2. Label/identify sample to procedure 2.3. Select etchant(s) appropriate to the metal and the examination 2.4. Etch/prepare metal surface to standard 2.5. Protect prepared surface
3. Undertake microscopic examination of sample.	3.1. Set up microscope using appropriate fittings and magnifications 3.2. Examine and identify different metallic and non-metallic phases 3.3. Identify areas requiring further examination and/or photomicrographs .
4. Prepare photomicrographs	4.1. Set up equipment and materials for photomicrograph 4.2. Adjust photomicrograph equipment, including bright and dark field illumination 4.3. Take photomicrograph 4.4. Process and record photomicrograph
5. Report result of examination	5.1. Identify reporting requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.2. Make reference to appropriate national or international standards as required 5.3. Prepare report to meet requirements 5.4. Circulate and file report to procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• nominating the appropriate cutting process • nominating the appropriate directionality of the sample plane for examination • mixing/preparing etchant solutions according to MSDS and standard operating procedure (SOP) • mixing/preparing mounting resins • basic cutting, grinding and polishing of samples including mechanical and electrolytic polishing • etching of samples • use of microscope • identify microstructures, including metallic and non-metallic features
Required knowledge:
Competency includes sufficient knowledge of: • understanding of microstructures of metals • chemical applications and safety including material safety data sheets (MSDS) • composition and suitability of etchants • knowledge of relevant standards (for example AS 1831 or equivalent international standard)

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training

	case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Hazards	Hazards to be identified by standard techniques such as Material Safety Data Sheets (MSDS) and controlled according to the hierarchy of control and SOP.
Etchants	Etchants includes all common etchants such as strong acid solutions.
Metallographic examination	**Metallographic examination includes microscopy**, **photomicrographs and other standard techniques**.
Mechanical sample preparation	Mechanical sample preparation includes cutting (eg to size/shape), mounting, grinding (e.g. to prepare flat surface) and polishing (e.g. on a lap) as required.
Process and record	Processing and recording of photomicrographs includes editing and enhancing of photographs and identification and filing using an appropriate procedure.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Control hazards	1.1. Identify hazards in the sand/mould/core making process 1.2. Assess the risks arising from those hazards 1.3. Implement procedures to control those hazards in line with procedures and duty of care.
2. Select appropriate sand characteristics for job and process	2.1. Determine requirements of the casting 2.2. Identify types of sand appropriate for the type of mould/core 2.3. Identify types of binders appropriate for the job 2.4. Select sand/binder mix appropriate for the job
3. Prepare, test and evaluate moulding sand to desired characteristics	3.1.. Monitor preparation of bonded sand mix 3.2. Test materials prepared 3.3. Evaluate test results and report as appropriate
4. Evaluate finished casting for defects related to sand characteristics.	4.1. Examine casting for sand related defects such as wash, expansion, scabbing, rat-tails etc. 4.2. Determine cause of sand related defects 4.3. Recommend improvements to sand type and/or preparation
5. Report results	5.1. Identify reporting requirements 5.2. Prepare report to meet requirements 5.3. Circulate and file report to procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• take samples • prepare standard samples • use test equipment • use and calibrate mixing machines
Required knowledge:

Competency includes sufficient knowledge of:
• Sources of sands and their characteristics
• green sand, resin and silicate bond moulds , shell moulds
• relationship of moulding sand properties and characteristics to casting defects.
• expansion, scabbing, rat-tails, hardness.
• sand grain shape and distribution, permeability, gas evolution, blow holes.
• mould properties, green strength, shatter.
• refractoriness
• mould dilation
• definition of clay bonded sand
• testing clay bonded sand
• A.F.S. standard compression sample
• moisture content
• clay content
• green compression
• green permeability
• mould hardness
• shatter index
• sieve analysis
• loss of ignition (LOI)
• A.F.S. fineness number
• other tests as appropriate
• organic and inorganic bonded and core sands
  • drying oils: stoving, characteristics
  • cold setting oils: characteristics
  • synthetic resins, characteristics and applications
  • shell moulding
  • sodium silicate binders, characteristics
  • phenolic urethanes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• furfuryl alcohol • phenolic esters • alkaline phenolics • testing hardened sands: tensile • compression hardness • choice of binder.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to monitor and test sands, cores and moulds. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Prepare and test sand samples • Monitor and interpret results • Apply corrections to the sand system as dictated by the sand testing results • Relate sand-related casting defects to sand properties and recommend corrective actions
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify specification requirements for required casting	1.1. Obtain all relevant job requirements and design specifications in accordance with workplace procedures 1.2. Identify and interpret drawing requirements and specifications
2. Evaluate proposed mould design for causes of potential defects	2.1. Select running, gating and feeding principles and techniques relevant to the particular casting 2.2. Apply relevant scientific principles and techniques appropriately 2.3. Review placement and sizing of feeder heads 2.4. Calculate the size and number of feeder heads and gating for castings
3. Report results	3.1. Identify reporting requirements 3.2. Prepare report to meet requirements 3.3. Circulate and file report to procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• Apply scientific principles to foundry mould design • Evaluate mould design to suit specific applications • Calculate mould runner and feeding systems • Select appropriate techniques and associated software and hardware technologies to suit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
specific applications in foundry mould design • Present solutions and any associated limitations referring to the original aim of the application.
Required knowledge:

• Solidification
  • Nucleation
  • Growth mechanisms (crystal and interfacial)
  • Dendrite coherency
  • Constitutional undercooling
  • Superheat
  • Eutectic and peritectic solidification
  • Grain Structure
• Running, Gating and Feeding
  • Terminology
  • Runner and gating principles (ratios)
  • Pouring basin or cup
  • Sprue design
  • Runner design
  • Ingate design
  • Inclusion control (slag, erosion, etc)
  • Metal flow (lamellar and turbulent), velocity and temperature
  • Modulus principle (calculation of feeder size)
  • Location of feeders (end and feed zones, neighbourhood effect, feeding distances)
  • Exothermic and insulating feeding aids (sleeves and topping)
  • Feeding mechanisms (liquid, mass, interdendritic, burst&solid)
  • Computer packages (runner and feeder calculations, mould simulations)
  • Yield calculations
• Defect Formation
  • Shrinkage
  • Porosity
  • Segregation
  • Hot Tearing
  • Shear

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to evaluate mould design and gating. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Calculate manually and by use of computer programs runner and feeding systems for casting designs. Evidence must be provided of manual calculations and compared to computer program results. • Evaluate mould designs. Evidence should be provided from the evaluation of a number of moulds. • Understand the interplay between moulds, cores, gating and feeding • Evaluate the resulting casting for success of gating and feeding • Compare casting results with computer simulated predictions.
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.

MSATCM404A Undertake and interpret results of chemical analysis on metal samples

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This competency covers the selection of the appropriate chemical instrumentation test method and the interpretation of the test results in the context of a foundry. It also includes the conducting of optical emission spectroscopy (OES) testing, but not the conducting of any other tests.

Application of the Unit

Application of the unit	This competency applies to technicians working in or advising foundries who are required to decide what test data is needed and then interpret the test results so they can make adjustments as necessary to the foundry process. It includes: • knowing what data is needed • selecting the test method(s) which will give that data • interpreting the test results • advising adjustments to the foundry process, materials, compositions based on the test results • actually undertaking optical emission spectroscopy OES (but no other) testing as required.

Licensing/Regulatory Information

Not applicable.

Pre-requisite Units		

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise required test(s).	1.1. Identify information and test data required. 1.2. Select appropriate test(s) which will yield the required data. 1.3. Determine the capacity to undertake required test(s). 1.4. Confirm capacity to undertake test(s) with selected body. 1.5. Make required arrangements for testing to be carried our.
2. Undertake optical emission spectroscopy as required.	2.1. Prepare sample as required by test method. 2.2. Prepare instrument as required by procedures. 2.3. Test sample 2.4. Record and check test results 2.5. Repeat test results as required.
3. Interpret test results.	3.1. Check test results are within the expected range and take appropriate action for non-conforming results. 3.2. Perform any required calculations or data manipulations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.3. Determine implications of test results for process/product. 3.4. Develop actions to be taken based on test results.
4. Implement actions	4.1. Communicate required actions as required. 4.2. Follow through on communication to check implementation. 4.3. Check results of actions. 4.4. Follow up as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• identify relevant spectra. • communicate both with other technicians and also with shop floor operatives about technical matters • Write technical reports and production specifications • understand and interpret numeric data as well as manipulate test data in order to obtain the required information • calculate concentrations and dilutions The mathematics relevant to the manipulation and interpretation of test data is also required. A knowledge of the impact of chemical composition on the foundry process and product and what adjustments should be made, and how they can be made is also required.
Required knowledge:
Competence in this unit requires knowledge of the principles of operation, uses and limitations of: • Optical Emission Spectroscopy (OES) (otherwise known as Atomic Emission Spectroscopy (AES)) • UV - Visible Spectrophotometry (UV Vis) • Infrared Spectroscopy (IR) • Gas Chromatography (GC) • X-Ray Fluorescence (XRF) • Flame Photometry • Atomic Absorption Spectrometry (AAS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• Scanning Electron Microscopy (SEM) • Traditional Wet Analysis

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	This competency requires evidence of competent operation of OES which may be obtained either in a workplace or other suitable laboratory facility. The materials being tested should be relevant to the foundry industry. This competency also requires evidence of competency in the selection of appropriate test methods for various scenarios and the interpretation of test results. The scenarios and test results should be relevant to the foundry industry and may be drawn directly from the workplace or may be simulated case studies.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • select appropriate test methods • obtain repeatable OES results • interpret test results for a foundry. Consistent performance should be demonstrated. In particular look to see that: • several scenarios requiring the selection of different test instruments have been completed successfully • reproducible test results can be obtained from OES testing across different samples requiring different sample preparation/test conditions.
Relationship to other units	This unit may be assessed concurrently with other relevant units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment. Competence in this unit may be assessed: • in a foundry • in another suitable laboratory facility, using simulation for non OES evidence • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of	Where reference is made to industry codes of practice, and/or

RANGE STATEMENT	
practice/standards	Australian/international standards, it is expected the latest version will be used.
Context	This competency applies to metallurgical technicians working in a foundry who are responsible for determining the chemical composition of materials, products and work in progress and making recommendations as to what needs to be done to produce the required product. The technician may undertake some sampling and testing themselves, and will also specify the sample requirements to be taken by an operator. The technician will be responsible for outsourcing required tests where the foundry does not have the test instrument or capability. The technician will be responsible to interpret the test results regardless of where the test is done and determine what needs to be done to make the required product.
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include: • ISO standards • ANZS • NATA requirements • Other relevant standards.
Tools and equipment	This unit of competency includes use of equipment and tools such as: • routine laboratory equipment such as glassware • sampling equipment used in foundries • emission spectroscopy equipment.
Test data	Test data includes: • composition and other quantitative data • component identification and other qualitative data.
Appropriate test(s)	Appropriate tests include: • Optical Emission Spectroscopy (OES) • UV - Visible Spectrophotometry (UV Vis) • Infrared Spectroscopy (IR) • Gas Chromatography (GC) • X-Ray Fluorescence (XRF) • Flame Photometry • Atomic Absorption Spectrometry (AAS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Scanning Electron Microscopy (SEM).
Capacity	Capacity to undertake tests include: • possession of the appropriate test instrumentation • possession of the appropriate trained people with the available time • NATA registration if relevant • cost, turn around time and other relevant commercial factors • required infrastructure to undertake the test(s). Capacity applies both to in house and out sourced test facilities.
Body	Selected body to undertake the test incudes: • university • TAFE college • commercial analytical firm • NATA approved facility • in house facility and personnel.
Required arrangements	Required arrangements include: • obtaining, labelling and transporting sample • contractual/work order or other requirements.
Prepare sample	Prepare sample includes: • taking representative sub samples • sample dissolution • sample dilution • readying the sample for the test.
Prepare instrument	Prepare instrument includes: • calibrating or checking calibration as appropriate • checking the adequacy of the supply of consumables • curve generation • setting machine conditions • checking machine function.
Actions	Actions to be taken include: • adjusting process conditions and set points • specifying additives and combinations of additives • adjusting processing times.

MSATCM405A Determine and supervise heat treatment of metal

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers applying metallurgical principles and techniques to determine and supervise the heat treatment of metal.

Application of the Unit

Application of the unit	This unit requires application of metallurgical scientific principles and techniques as a member of a design and development team or similar in support of enhancing properties of metals though heat treatment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units	*MSATCM304A*	*Interpret basic binary phase diagrams*
	MEM06003C	*Carry out heat treatment*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine heat treatment of metals to suit application requirements	1.1. Consultations and briefings are undertaken with managers, employers and customers and other sources of information researched as appropriate to determine heat treatment application requirements 1.2. The relevant scientific techniques and principles of heat treatment and associated software and hardware technologies are selected for particular application 1.3. Appropriate calculations and coherent units are used in the solution of engineering calculations 1.4. Significant figures are used in engineering calculations. 1.5. Heat treatment requirements
2. Supervise heat treatment of metal	2.1. Heat treatment parameters are communicated to appropriate personnel 2.2. Safety procedures appropriate to heat treatment process and item to be treated are determined and implemented 2.3. Supervise heat treatment techniques and use of associated software and hardware technologies to ensure required heat treatment solutions is achieved 2.4. Evaluate heat treatment process and advise on defects

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• select appropriate scientific principles to suit specific heat treatment applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• select appropriate techniques and associated software and hardware technologies, to suit specific applications in heat treatment • apply and manipulate appropriate formulas for heat treatment applications involving engineering calculations • apply appropriate calculations to engineering situations • refer solutions to the original aim of the application. • quote solutions for the application in appropriate units, using appropriate significant figures. • quote limitations of solutions for the application, due to assumptions, scientific principles and techniques used • present solutions for the application referring to the original aim of the application including elimination or containment of risks and establishing of safety procedures
Required knowledge:
Competency includes sufficient knowledge of: • heat treatment principles as given in the range statement • limitations of selected scientific principles • risks and safety procedures appropriate to heat treatment of metals and alloys

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to determine and supervise heat treatment of metal. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Select the appropriate heat treatment cycle(s) for nominated materials, so that they meet the required physical properties.
Relationship to other units	This unit could be assessed in conjunction with any other units addressing the safety, quality,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	communication, materials handling, recording and reporting associated with applying basic scientific principles and techniques in mechanical engineering situations or other units requiring the exercise of the skills and knowledge covered by this unit.
Assessment method and context	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to a situation where heat treatment of metal is undertaken. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Sources of information	• reference texts • manufacturers' catalogues and industrial magazines • websites • use of phone, email and fax information gathering
Scientific techniques and principles of heat treatment relate to:	Ferrous heat treatment • the iron-carbon equilibrium and plain carbon steels. • iron-carbon phase equilibrium • austenite-ferrite transformation • austenite-pearlite steels • influence of grain size and carbide distribution on mechanical properties. • microstructure and properties of slowly cooled steels. • effect of temperature and composition on structure and properties. • effects of alloying elements in iron-carbon alloys. • the gamma and sigma phase fields • distribution of alloying elements in steel. • effects of alloying elements in the kinetics of gamma and sigma transformations. • structural changes resulting for alloying additions. • transformation diagrams for alloy steels. • isothermal transformation of austenite. • austenite grain size • formation of pearlite

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• formation of bainite • role of alloying elements • mechanical properties of pearlite and bainite • Temperature Time Transformation (TTT) diagrams. • quenching treatments. • formation of martensite • morphology and crystallography of ferrous martensites • mechanical properties of martensites • retained austenite • quenching media - stages of quenching, effect of variables • thermal and transformation stresses, quenching defects. • transformation of austenite continuous cooling • cooling curves • Continuous Cooling Transformation (CCT) diagrams • hardening and heat treatment. • factors affecting how well a metal responds to hardening processes • use of TTT and CCT diagrams • hardenability testing e.g. Jominy • hardenability and heat treatment • tempering • tempering of irons and steels. • tempering of non ferrous metals and alloys • mechanical properties of tempered irons and steels • mechanical properties of non ferrous metals and alloys
Special heat treatments	• austempering • martempering (marquenching) • maraging steels • high-strength, low-alloy (HSLA) steels. • surface treatments • carburising • carbonitriding • nitriding • induction and flame hardening • other methods • heat treatment defects • nature and prevention of defects

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• surface • structural and property • stress related • dimensional • embrittlement
Non-ferrous heat treatments	• aluminium alloys • solutions treatments • quenching • precipitation hardening • coldworking • temper designations • copper alloys • solution annealing • age hardening • precipitation hardening • coldworking • quenching and tempering • miscellaneous non-ferrous
Significant figures	Are those relevant to accuracy and are appropriate to the process, data and desired range of results
Risks and safety procedures	• biological factors in quench tank fluids • carcinogenic oil fumes, • flash point of oils and risk of fire in oil quenching • inert atmospheres and their potential to cause asphyxiation • specification and use of personal protective equipment (PPE) • location of emergency switches • tagging and isolation procedures • atmosphere control • identification of high risk alloys and metals • appropriate transfer times to quench and from quench to temper furnace

MSATCM406A Apply basic chemical principles to metallurgy

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This competency provides basic underpinning chemistry knowledge for industrial metallurgical processes.

Application of the Unit

Application of the unit	This competency applies to metallurgists working in industrial environments including foundries, steel plants, smelters, die casting, fabrication, welding etc. The unit provides the general chemical knowledge for basic metallurgy operations. **Note**: This unit covers some but not all of the content in Year 12 chemistry subjects such as the NSW Chemistry Stage 6 syllabus and equivalents in other States and Territories. Students who have completed these chemistry subjects at school should be given the opportunity for recognition of prior learning (RPL).

Licensing/Regulatory Information

Not applicable.

Pre-requisite Units	

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate knowledge of basic chemical concepts relevant to metallurgical processes	1.1. The structure of atoms is described including sub-atomic particles, charge, atomic number, mass number, and valency . 1.2. The properties of elements is determined from the periodic table of elements. 1.3. The three states of matter are described in terms of shape, volume, and compression. 1.4. Boyles and Charles laws are used to determine the relationship between volume, temperature, and pressure for a gas. 1.5. Elements, compounds and mixtures are defined and examples given 1.6. Chemical formulae are used 1.7. The difference between organic and inorganic compounds is described 1.8. Ionic, covalent, and metallic bonding are described. 1.9. The relationship between temperature and the kinetic energy of particles is identified 1.10. The concepts of latent and sensible heat are described.
2. Contrast the physical properties of crystalline solids.	2.1. Solids are categorised from their physical properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.2. The physical properties of crystalline solids are related to the nature of the forces between particles.
3. Define the key chemical properties of metals.	3.1. The activity of metals and other key properties are described in terms of their position on the Periodic Table. 3.2. The importance of first ionisation energy in determining the relative reactivity of metals is described. 3.3.
4. Define the key chemical properties of acids and bases.	4.1. Definitions of acids and bases are described. 4.2. The pH scale is described and applied 4.3. The relationship between an acid and its conjugate base and a base and its conjugate acid is described 4.4. A range of salts which form acidic, basic or neutral solutions are identified and their acidic, neutral or basic nature explained 4.5. Strong and weak acids and bases are defined and identified. 4.6.
5. Analyse chemical reactions	5.1. Chemical reactions are described using appropriate balanced chemical equations 5.2. Chemical reactions between elements and compounds are explained in terms of atomic structures and periodicity 5.3. The heat of reaction in chemical reactions is determined. 5.4. Factors affecting reaction rate are explained including concentration, surface area, pressure, temperature and catalysis 5.5. The stoichiometry of a reaction is used to determine amounts of reactants consumed/products made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• write chemical formulae • write and balance chemical equations • calculate heat of reaction
Required knowledge:
Competence in this unit requires knowledge of: • Kinetic Theory; • Boyles Law, Charles Law, • Ideal Gas equation PV=nRT, • molar volume of a gas; • Gay-Lussac's Law, Avogadro's Law; • gas reaction calculations • symbols of common elements • importance of valence in formulae and reactions • model of an atom including electron shells. • The chemical basis of energy transformations in chemical reactions • Periodic table • Acids and Bases, • Stoichiometry

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	This competency also requires evidence of competency in the description of chemical laws, principles and terminology. The application of the chemical laws and principles to a selection of appropriate scenarios should also be required. The scenarios may be drawn directly from the workplace or may be simulated case studies.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • describe elements and compounds according to their chemical properties • use recognised and appropriate chemical symbols and terminology Consistent performance should be demonstrated. In particular look to see that: • a wide variety of elements and compounds can be described • the application of chemical laws and reactions to non laboratory situations can be explained
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. The unit is suitable for assessment in conjunction with other metallurgy units and a holistic approach should be taken to the assessment wherever possible. Competence in this unit may be assessed: • in a workplace • in a suitable laboratory facility, • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. No special resources are required. However resources may be required where holistic assessment with other units is undertaken including suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Context	This competency applies to metallurgical technicians who are responsible for determining the chemical composition of materials, products and work in progress and making recommendations as to what needs to be done to produce the required product. The unit is intended to complement other more specific metallurgy units by providing general chemical knowledge.
Physical properties of crystalline solids	Crystalline solids include molecular, metallic, ionic, extended covalent solids. Physical properties include but are not limited to - boiling point, melting point, solubility in polar and/or non-polar solvents, conductivity, ductility, brittleness, hardness.
Key properties	The key properties of metals in terms of their position on the Periodic Table are: • electrical conductivity • ionisation energy • atomic radius • melting point • boiling point • combining power (valency) • electronegativity • reactivity
Use of formulae	Formulae will be correctly written for given compounds and correct names will be written from given formulae
Definitions of acids and bases	• Arrhenius definition • BrÃ¸nsted-Lowry definition
Strong Acid	Strong acids are those that have high degrees of dissociation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	yielding hydrogen ions
Weak acids	Weak acids have partial dissociation of hydrogen ions and exist mostly in the associated form.
Strong bases	Strong bases completely or almost completely dissociate into hydroxide ions and a conjugate acid.
Weak bases	Weak bases partially dissociate into hydroxide ions and a conjugate acid.
Stoichiometry	The calculation of the quantities of chemical elements or compounds involved in a chemical reaction.

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research and identify the range of scientific principles and techniques relevant to mineral and chemical processing plants.	1.1. The scientific principles relating to mineral and chemical processing are researched and reported on from appropriate sources of information and examination of applications. 1.2. The techniques and associated technologies, software and hardware required to implement scientific principles relating to mineral and chemical proccessing plants are identified.
2. Select scientific principles and techniques relevant to *equipment inmineral and chemical proccessingplants*	2.1. Scientific techniques and principles relevant to particular mineral and chemical processing situations are selected. 2.2. Relevant techniques and associated technologies, including software and hardware, are selected for particular mineral and chemical processing situations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• select appropriate scientific principles to suit specific mineral processing and metals production applications • apply scientific principles to particular processing situations • refer solutions to the original aim of the application. • quote solutions in appropriate units, using appropriate significant figures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• quote limitations of solutions, due to assumptions, scientific principles and techniques used • present solutions referring to the original aim of the application
Required knowledge:

Competency includes sufficient knowledge of:
• basic scientific principles (as given in the range statement) including:
  • limitations of selected scientific principles
  • basic mineral and chemical processing techniques and technologies, including software and hardware associated with implementing scientific principles in mineral and chemical processing situations related to metals production

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply basic scientific principles and techniques in describing equipment for mineral and chemical processing.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • identify appropriate techniques and equipment used for mineral and chemical processing • function of each type of equipment • steps in the processing of particular minerals and chemicals including flow diagrams • identify relationship of the processing of particular minerals and chemicals to metals production
Relationship to other units	This unit may be assessed concurrently with *MCMPM518A Specify basic metal extraction processes from minerals*
Assessment method and context	Assessors must be satisfied that the person can

EVIDENCE GUIDE	
	consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment. Assessment will need to occur in a situation where mechanical testing is undertaken.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required may include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

MSATCM503A Recommend a refractory for an application

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to recommend a refractory for an application based on a knowledge of the properties, application and modes of failure of the ***principal refractories***.

Application of the Unit

Application of the unit	In a typical scenario, a metallurgical technician is involved with the development of a new product or process, or the improvement or redesign of an existing product/process. As part of this the requirements for an appropriate refractory material will need to be considered and a recommendation as to the type of refractory which will be appropriate for the situation will be made. This may also include evaluating suggestions made by refractory suppliers for their appropriateness to the situation.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the process requirements for a refractory	1.1. Identify the pH of the metallurgical slags 1.2. Determine the insulating requirements from the refractory 1.3. Determine other process requirements from the refractory 1.4. Identify likely process causes of refractory failure 1.5. Specify refractory needs in terms of physical and chemical properties required. 1.6.
2. Recommend type of refractory material	2.1. Select a refractory class suitable for the pH of the metallurgical slag 2.2. Shortlist refractory materials within that class suitable for the insulting and other process demands 2.3. Contrast the principal modes of failure for each short listed refractory with the likely process causes of refractory failure 2.4. Recommend suitable refractory material/s for the job. 2.5.
3. Consider economic and technical implications of different *modes of installation*	3.1.. Compare possible alternative refractory materials 3.2. Compare possible alternative installation methods 3.3. Consider alternative materials with different installation methods and their overall technical/economic performance 3.4. Recommend a refractory material and a method of installation which delivers the best economic and

ELEMENT	PERFORMANCE CRITERIA
	technical performance for the application. 3.5.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• Apply principles to determine the pH of metallurgical slags • Select appropriate refractories for an application • Select appropriate method of refractory installation and repair • Identify root causes of refractory failures
Required knowledge:
Competency includes sufficient knowledge of: • metals and their properties and operating temperatures • furnace operations • refractory materials, purposes, common defects, installation and fixing techniques • the limitations of refractories

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to recommend a refractory for application. Critical aspects for assessment and evidence are required to demonstrate competency in this unit. The person will be able to select appropriate materials and installation methodologies for specified

EVIDENCE GUIDE	
	situations. Assessment may be by workplace project, case study or suitable alternative. The selection should be able to be justified on technical and economic grounds.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • identify refractory requirements for particular metals, alloys, slags and processes • recommend refractories that are appropriate from both a technical and economic perspective • determine the mode of refractory failure and recommend a more appropriate solution
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessment will need to occur in an organisation using refractory materials. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of If evidence is provided from a complete reline, or an initial refractory lining, then one recommendation may provide sufficient evidence. Where evidence is from the ongoing maintenance of an existing refractory, then it will be needed from a range of activities to provide sufficient evidence.

EVIDENCE GUIDE	
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an organisation using refractories that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Principal refractories	Principal refractories includes: • silica • alumino silicates • dolomite • magnesite-chrome, • chrome-magnesite • chrome • insulation and insulating refractories • special refractories (eg graphite, silicon carbide) • monolithic refractories ie cement, plastics, ramming mixes and castables • pH pH of slags to be identified as acidic, basic or neutral in regards to their interaction with refractories.
Modes of installation	Modes of installation include: • monolithic

MSATCM504A Select metal forming process

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This competency covers the selection of the appropriate metal forming processes for an application. It requires using metallurgical principles and techniques to select a process which is appropriate for the required product end use and the metal(s) to be used.

Application of the Unit

Application of the unit	This competency applies to technicians who are required to recommend a metal forming process for making a metal product. It includes: • knowing the principles of common forming processes and their typical applications • identifying the key factors in the product to be made which will guide the forming process selection • applying basic metallurgy to the situation so as to make an appropriate recommendation.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm requirements	1.1. Communicate with stakeholders regarding technical and aesthetic specification 1.2. Identify process constraints such as timelines and cost 1.3. Identify any special requirements of product or process 1.4. Confirm product and process requirements with stakeholders.
2. Shortlist possible forming processes	2.1. Identify forming processes which may be appropriate. 2.2. Discuss suitability of different processes with stakeholders. 2.3. Guide stakeholders to determine relative benefits of individual processes 2.4. Clarify conflicts of information and benefits that arise.
3. Select metal forming process.	3.1. Select the most appropriate process for the application. 3.2. Explain reasons for selecting process to stakeholders. 3.3. Clarify any unresolved areas.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- communicate technical information both with technical and non-technical stakeholders who may be customers or managers.
- write to the level of reading technical information and writing technical reports and production specifications.
- understand and interpret numeric data.

Required knowledge:

Competence in this unit requires knowledge of the principles, strengths and weaknesses and typical applications of:

- Casting Methods including greensand, chemically-bonded sand, horizontal part, vertical part, investment, gravity die, pressure die, centrifugal, direct cast;
- Powder Metallurgy including unidirectional die pressing, isotropic pressing, power rolling, power swaging, power extrusion, explosive compacting, sintering;
- Electrometallurgy including chemical and mechanical pretreatments, electroplating, cadmium plating, zinc plating, tin plating, copper plating, nickel plating, chromium plating, electropolishing;
- Methods of metalworking including plastic deformation, recrystallisation, recovery, grain growth, structural changes, property changes, direct compression, indirect compression, tensile, bending, shearing;
- Direct compression processes including forging, rolling;
- Indirect compression processes including extrusion, wire drawing, tube drawing, deep drawing
- Tensile processes including stretching
- Bending processes including cold and hot bending
- Cutting and shearing processes including turning, milling, grinding, shearing,
- Lubrication for metal forming processes including role of lubrication, types of lubricants
- Metal forming risk factors including tool and die wear, metal fatigue, tool and product heating, (can we add some more?)
- Furnaces including melting furnaces, heating furnaces, energy sources, atmospheres, refractories
- Isotropic&anisotropic materials including directional and non-directional plastic and fracture properties, texture etc;

Competence also requires the ability to identify and ask questions which will lead stakeholders to describe the key factors and properties required.

Knowledge should also include economic and timeliness factors as well as quality, aesthetics of finish and technical differences such as strength, rigidity, corrosion resistance, grain

REQUIRED SKILLS AND KNOWLEDGE
structure, chemical composition etc.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	This competency also requires evidence of competency in the selection of appropriate processes for various scenarios. The scenarios should be relevant to the application of metallurgy to the forming process and may be drawn directly from the workplace or may be simulated case studies.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • select appropriate forming process • justify the selection of that process • ask appropriate questions to determine the required information. • Consistent performance should be demonstrated. In particular look to see that: • several scenarios requiring the selection of different processes have been completed successfully
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- identify and ask questions which will lead stakeholders to describe the key factors and properties required
- communicate technical information both with technical and non-technical stakeholders who may be customers or managers
- Write to the level of reading technical information and writing technical reports and production specifications
- understand and interpret numeric data.

Required knowledge:

Competence in this unit requires knowledge of the principles, strengths and weaknesses and typical applications of:

- Metal Joining without parent metal fusion including soldering, brazing&adhesives
- Solid phase welding&diffusion bonding including time, temperature, pressure, deformation, friction welding, explosive welding, ultrasonic welding, butterwelding
- Metal Joining - Fusion welding including heat sources, atmosphere, arc, gas, laser, electroslag, MIG and TIG welding, use of heat blankets
- Heat effects of metal joining processes including heat flow, heat affected zone, weld pool solidification etc;
- Weldability, testing, weld defects including solidification cracking, heat affected zone hot tearing, hydrogen cracking, lamellar tearing, porosity, heat treatment cracking, weld decay, stress corrosion cracking, brittle fracture, fatigue,
- Time-Temperature-Transformation TTT Curves applied to preheat, post heat and post weld heat treatment
- Welding&weldability of
  - carbon steels, low alloy steels&cast irons
  - aluminium&alloys, copper&alloys
  - stainless steels&nickel alloys
- Residual stresses in welding including causes and elimination
- Economic and timeliness factors
- Quality
- Aesthetics of finish
- Technical differences such as:
  - strength
  - rigidity
  - corrosion resistance
  - grain structure

MSATCM506A Monitor blast furnace operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to monitor and control the operation of blast iron furnace

Application of the Unit

Application of the unit	In a typical scenario, a technician will be required to utilise a SCADA system to monitor the melting of iron ores and associated materials within a blast furnace, ensuring that quantities, temperatures and all procedures are used in accordance with parameters provided and standard operating procedures.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units	*MSATCM304A*	*Interpret basic binary phase diagrams*
	MSATCM406A	*Apply basic chemistry principles to metallurgy*
	MSATCM501A	*Calculate and predict chemical outcomes in metallurgical situations*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access/interrogate SCADA system	1.1. Find all relevant screens and information within SCADA system 1.2. Interpret and acknowledge messages 1.3. Input and output information as required
2. Make required changes.	2.1. Adjust production / process in response to SCADA information in accordance with procedures 2.2. Apply metallurgical principles to determine and prioritise required actions in accordance with standard operating procedures 2.3. Record adjustments and variations to specifications / schedules and report to appropriate personnel 2.4. All events outside of parameters or standard operating procedures is immediately referred to appropriate personnel for remedial action

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• Carry out all work according to OH&S practices • Read, interpret and follow information on work specifications, standard operating procedures and work instructions and other reference material • Maintain accurate records • Meet specifications for furnace output • Communicate within the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- Apply techniques for Increasing Blast Furnace Productivity including:
  - blast temperature
  - blast humidity
  - blast volume
  - hydrogen injection
  - oxygen enrichment
  - top pressure
  - burden control/raw materials
  - size control

Required knowledge:

Competency includes sufficient knowledge of:

- Coal
- Proximate and ultimate analysis classification of coal for metallurgical coke
- Coke
  - coal carbonisation
  - technical aspects of coke making
  - coke model, coke manufacture
  - by-product ovens
  - sequence of battery operations
  - coke properties - caking and swelling
  - quality control tests for coke
  - (crucible swelling number and Gray-king coke type)
  - coke strength and abrasion, resistance CRS - reactivity tests.
- Other Fuels
  - blast furnace gas - uses
  - coke oven gas - uses
  - fuel oil - injection of auxiliary fuels
  - tar and pitch
- IronOre
  - mineralogical characteristics
  - sources of iron, locations of ore
  - chemical analysis - ore quality desirable, unwanted impurities
  - desirable properties for iron making
  - mining/preliminary treatment (ore beneficiation)
  - ore handling
  - blending/stacking (chevron/step stacking)
  - essential characteristics of iron ore -

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- reducibility/strength size distribution -
- lump ore - direction charging
- fine ore - need for agglomeration for good permeability
- testing and quality control of iron ores for iron making resistance to fines generation
- drying handling and charging resistance to decrepitation
- low temperature reduced degradation
- (Nagoyal test) height temperature
- reducibility (Gakushin test)
- softening under load
- cohesive zone of (BF)

- Ore Agglomeration
  - Need for agglomeration, sources of fines, aims for agglomeration
- Pelletising
  - use of pelletising; size and quality of ore
  - pelletising process
  - quality control needs for pellets
  - abrasion index, RDI index
- Sintering
  - sintering process
  - proportioning of raw materials
  - size of ores, blending, moisture
  - limestone and coke
  - mixing and granulation
  - sinter characteristics, sinter quality
  - size, strength, reducibility
  - chemistry (basicity ratio)
  - quality control tests for sinter
  - sieving and sizing
  - sinter tumble test (abrasion test)
  - low temperature reduction, degradation (reduction
  - degradation index - RDI), high temperature reducibility
- Miscellaneous Raw Materials
  - Fluxes: Limestone, fluorspar, quartzite
  - manganese ore, air/tonnage oxygen, water
- Iron Blast Furnace Operations
  - general description and function of blast furnace including charged materials
  - blast furnace terminology
  - blast furnace chemistry (reduction chemistry and gaseous v's solid reduction)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- thermodynamics of iron making (physio chemical principles)
- free energy charges; Ellingham
- diagram/oxygen potential
- equilibrium/equilibrium
- constant/activity
- dependence of coke/oxygen reaction and gas composition

- Blast furnace slags
  - slag/metal reactions
  - slag formation reactions
- Construction and Design of Blast Furnaces
  - furnace construction/furnace profile layout and function of processing units associated with the blast furnace
  - charging and distribution
  - ore blending, raw material bins
  - raw material control and charges
  - furnace filling
  - use of moveable armour
  - refractories and cooling systems
    - choice of refectory materials for furnace lining
    - method of cooling/under hearth
    - cooling/stave cooling
    - campaign life determinants - link between refractories and cooling system
  - blower stations:
    - hot blast stoves, tuyeres
  - gas cleaning equipment , dust extraction
  - cast house layout
    - slag/metal
    - flow-slag disposal
  - blast furnace sensors
    - computer control
    - sensors and interpretation
    - human eye
    - tuyere/casting condition
    - thermocouples
    - hot metal
    - stoves
    - brickwork
    - tip temperature probes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- pressure tapping
- level detectors
- flow meters
- flow rate of gases/hot blast
- chemical analysis
- composition of metal slag and waste gases

- Principles of Iron Making
  - furnace filling
    - mechanism of charging and of distribution segregation effects
  - blast furnace zones of operations
    - physical movement through the furnace
    - counter current process
    - solids/gas and temperature profile five internal zones lumpy/granular zone, cohesive zone, active coke zone raceway
    - hearth and deadman
    - lumpy/granular zone-zone formation
    - cohesive zone-zone formation
    - active coke zone-zone formation
    - importance of coke properties
    - zone chemistry - effects of metal, coke, alkalis and fluxes/slag.
  - raceway
    - physical structure,
    - raceway model-factor affecting shape-blast parameters
    - combustion in raceway,
    - importance of coke additives to replace coke to improve control and production.
  - hearth and deadmen-zone formation
    - (deadman boundary residence time of coke)
    - gas/liquid flow, liquid levels
    - floating levels, floating of coke bed
    - liquid permeability
    - effect of casting rate
    - fluidity of slag and metal
    - liquid flow: effect on lining wear.
  - hot metal and slag chemistry
    - hot metal - optimisation of hot metal
    - composition control of carbon, silicon, manganese, sulphur, phoporus
  - slag - mechanism of slag formation
    - optimisation of slag chemistry

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• requirements of a good slag -melting point, basicity, viscosity • ability to remove unwanted materials, (de sulphurising power) • slag volume • requirements for effective and efficient operation • importance of raw material quality and quantities • burden distribution , tuyere injectants, fuel rate • elimination of irregularities • Post Iron making Practices • reasons for post iron making productivity • control of unwanted elements • control of hot metal, composition for BOS • steelmaking and balance of exothermic reactions • de sulphurising, dephosphorisation, desiliconising • lime, magnesium, aluminium • importance of injectants and slag formers, significance of slag partitioning

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to monitor blast furnace operations. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • use OH&S practices • explain the general principles of iron making • monitor the operation of a blast furnace under direction and consistently achieve required furnace output specification
Relationship to other units	This unit may be assessed concurrently with other relevant units.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
SCADA system	System Control and Data Acquisition is a general term applied to a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action. In the continuous manufacturing sector, the ***SCADA*** system may be integrated into other sophisticated computer control systems such as DCS (Distributed control system). Organisations may simply refer to their ***SCADA*** as the DCS or other similar term (such as the proprietary name of the computer system). SCADA systems may provide information from outside of the process, such as stock/material levels in a location. This information may all be accessed by the SCADA system and the employee using it in order to make production rate and other control decisions (either automatically or human assisted) about their own process.
Metallurgical principles relate to	• preparation and selection of raw materials • characteristics of iron ore • pelletising • sintering • iron blast furnace operations • blast furnace slags • principles of iron making • techniques for increasing blast furnace productivity

Unit Descriptor	This unit covers the knowledge and skills needed to monitor and control the operation of a Basic Oxygen Steelmaking (BOS) furnace

Application of the Unit

Application of the unit	In a typical scenario, a technician will utilise a SCADA system to monitor the processing of melting steel scrap, charging of molten iron and associated materials within the Basic Oxygen Steelmaking (BOS) furnace and on completion transfer to a ladle, ensuring that quantities, temperatures and all procedures are used in accordance with parameters provided and standard operating procedures

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units	*MSATCM304A*	*Interpret basic binary phase diagrams*
	MSATCM406A	*Apply basic chemistry principles to metallurgy*
	MSATCM501A	*Calculate and predict chemical outcomes in metallurgical situations*

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access/interrogate SCADA system	1.1. Find all relevant screens and information within SCADA system 1.2. Interpret and acknowledge messages 1.3. Input and output information as required
2. Make required changes.	2.1. Adjust production/process in response to SCADA information in accordance with procedures 2.2. Apply metallurgical principles to determine and prioritise required actions in accordance with standard operating procedures 2.3. Record adjustments and variations to specifications/ schedules and report to appropriate personnel 2.4. All events outside of parameters or standard operating procedures is immediately referred to appropriate personnel for remedial action

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• carry out all work according to OH&S practices • read, interpret and follow information on work specifications, standard operating procedures and work instructions and other reference material • maintain accurate records • meet specifications for furnace output • communicate within the workplace
Required knowledge:
Competency includes sufficient knowledge of: • plant layout of the BOS furnace, identification of the processing units • process sequence of operations • scrap charging ; hot metal composition and charging; oxygen lancing • slag formation, effect of slag / metal; gas emulsion; effect of stirring with inert gas • chemistry and thermo dynamics of process including sequence of impurity element removal • influence of lance height, slagging practice- single / double number of reblows, additions of coolant • conditions for specification to end points of carbon and temperature - importance of elements C, SI, MN, P, S; residual elements, oxygen content; temperature; type of steel • conditions for final specification from end points - control of oxygen content, alloy additions and alloy recoveries, tapping of vessel, slag removal, selection of alloys. argon bubbling and temperature control of ladles • ladle transfer • metallurgical analysis in steelmaking • importance of composition of steel properties • effects of C, SI, MN, P, S and alloys NI, CR, MO, NB, TI, V, PB • effects of residual elements- CU, SN, AL, AS • effects of gases in steels- N2, O2, H2

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to monitor primary steel making

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	processes. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • use OH&S practices • explain the general principles of steelmaking • monitor the operation of a BOS furnace under direction and consistently achieve required furnace output specification
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are

EVIDENCE GUIDE	
	required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
SCADA system	System Control and Data Acquisition is a general term applied to a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action. In the continuous manufacturing sector, the ***SCADA*** system may be integrated into other sophisticated computer control systems such as DCS (Distributed control system). Organisations may simply refer to their ***SCADA*** as the DCS or other similar term (such as the proprietary name of the computer system) SCADA systems may provide information from outside of the process, such as stock/material levels in a location. This information may all be accessed by the SCADA system and the employee using it in order to make production rate and other control decisions (either automatically or human assisted) about their own process.

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce slabs to specification	1.1. Adjust contents of ladle in accordance with procedures 1.2. Monitor continuous casting process in accordance with standard operating procedure 1.3. Apply metallurgical principles to determine and prioritise required actions in accordance with standard operating procedures 1.4. Record adjustments and variations to specifications / schedules and report to appropriate personnel 1.5. All events outside of parameters or standard operating procedures is immediately referred to appropriate personnel for remedial action

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• Carry out all work according to OH&S practices • Read, interpret and follow information on work specifications, standard operating procedures and work instructions and other reference material • Maintain accurate records • Meet specifications for furnace output • Communicate within the workplace
Required knowledge:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Competency includes sufficient knowledge of:
• post steelmaking methods employed
  • ladler stirring
  • adle heating/ladle furnace
  • degassing - vacuum, ladle, stream, circulating.
  • argon oxygen decarburation (AOD)
  • lectroslag refining, remelting (ESR)
  • vacuum melting e.g. VAR
• types of steel - ingot characteristics (rimmed, capped, killed and semi-killed)
• factors contributing to successful casting
• ingots
  • influence of pouring techniques on structures of ingots
  • pit practices
  • teeming - type of ingot moulds
• mode of solidification
  • types of ingot structure
  • control of ingot structure
  • ingot defects
• continuous casting processes
  • basic principles
  • need for concast
  • development - new technologies and facilities of continuous casting for concast
  • types of concast units - VCC, HCC, curvilinear
  • description of plant equipment and process principles ,concast operations
• metallurgical aspects
  • instrumentation - sensor quality
  • solidification/internal quality
  • defects and their origin - avoidance of defects
  • compare concast units and static ingot production

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the design requirements for the material	1.1. The engineering requirement for the application is determined from specification or in consultation with others
2. Select metal or alloy for the application	2.1. Material is selected based upon the requirement and consideration of principal properties and further processing 2.2.
3. Consider economic and technical implications of different metals	3.1. Compare possible alternative materials with or without further processing 3.2. Most economic solution is recommended
4. Review final recommendation	4.1. Final recommendation is reviewed with the design team and if required with customers

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• communicate personally and in writing • write reports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- prepare basic costs and estimates
- Select appropriate metals to suit specific applications
- Apply basic metallurgical principles in preparing recommendations
- Apply and manipulate appropriate formulas for applications involving engineering calculations
- Apply appropriate calculations to engineering and metallurgical situations

Required knowledge:

Competency includes sufficient knowledge of:

- Unalloyed steels
  - iron-iron carbide phase diagram. Phases in iron carbon alloys. Slow cooling of steel, critical temperature lines. Introduction to the more common heat treatment processes including full annealing, spheroidising stress relief annealing, process annealing, normalising, hardening and tempering.
- Alloy steels
  - effect of alloying elements
  - structural changes resulting from alloy additions Phase diagrams - Fe-C-Cr. effect of alloy additions on heat treatment, austenitising temperature, time and rate of transformation, hardening and tempering.
  - Manganese steel
  - Stainless steels
    - classification
    - compositions, heat treatment, structure, properties and applications of stainless steels
    - austenitic
    - ferritic
    - duplex and super duplex ferritic-austenitic
    - martensitic
    - precipitation hardening
    - heat treatment problems - sensitisation, embrittlement, etc.
- Cast irons - classifications
  - classification - structure, carbon distribution and form.
  - factors affecting structure and properties - effect of carbon, silicon, cooling rate, etc.
- Typical cast irons
  - compositions, method of manufacture, structures, properties and applications of
  - grey cast irons
  - white cast irons
  - malleable cast irons
  - nodular (ductile) cast irons

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

• alloy cast irons
• austempered cast irons
• compacted graphite irons
• Copper alloys
  • commercial alloys from the following systems:
  • Cu-O, Cu-Be, Cu-Ni, Cu-Sn and Cu-Al.
  • the effects of casting, deformation, recrystallisation and ageing treatments on the structure and properties of the above alloys.
• Aluminium alloys
  • commercial alloys from the following systems:
  • Al-Si, Al-Cu, Al-Mg and Al-Mg-Si
  • the relationship between structure and properties of the above alloys.
• Other
  • Zinc alloys
  • tin alloys
  • nickel alloys
  • cobalt alloys
  • magnesium alloys
  • Titanium alloys

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to recommend ferrous and non ferrous metals or alloys for an application. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Understand the given application and designer's expectations, to recommend the appropriate metal alloy.

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select welding or thermal process principles and techniques relevant to particular applications	1.1. Consultations and briefings are undertaken with managers, employers and customers and other sources of information researched as appropriate to determine welding application requiring metallurgical specification and analysis 1.2. Relevant welding and thermal cutting techniques, principles and associated technologies are selected for application
2. Undertake welding and thermal process analysis and specify welding or other thermal process solutions	2.1. Relevant scientific principles are applied in a consistent and appropriate manner to obtain the required welding or thermal cutting solution. 2.2. Appropriate calculations and coherent units are used in the solution of engineering calculations. 2.3. Significant figures are used in engineering calculations. 2.4. Relevant techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain the required welding or thermal process solutions. 2.5. Analysis results are reported and welding or thermal process solution recommended

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• Select appropriate scientific principles to suit specific welding applications • Select appropriate basic mechanical techniques and associated technologies, software and hardware to suit specific applications in welding • Apply and manipulate appropriate formulas for applications involving engineering calculations • Apply appropriate calculations to engineering situations • Refer solutions to the original aim of the welding application • Quote solutions in appropriate units, using appropriate significant figures • Quote limitations of solutions, due to assumptions, scientific principles and techniques used • Present solutions referring to the original aim of the application.
Required knowledge:
Competency includes sufficient knowledge of: • Welding principles and processes as specified in the range statement, including mechanical, electrical chemical and metallurgical processes associated with welding • Limitations of scientific principles associated with welding • Other thermal processes including cutting , gouging, shaping etc.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply metallurgical principles and techniques in welding. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • select the most suitable technical and economic welding and other thermal processes for an application • present analysis results and recommendations that are relevant to the product or metallurgical

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Sources of information	• Reference texts • Manufacturers' catalogues and industrial magazines • Websites • Use of phone, email and fax information gathering

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Scientific techniques and principles	Metal forming and shaping
Plastic deformation of metals	• Revisions of the structural nature of plastic deformation of metals • Hot and cold working and recrystallisation. • Revision of material on strength and ductility test parameters. • Yielding and associatied phenomena, analysis of the complexes of stresses present in metal deformation.
Lubrication of metal surfaces	• Types of lubrication • Analysis of metal forming lubrication conditions • Typical lubricants used
Principles and methods of Rolling	Each of these topics should include knowledge of: • the physical and mechanical principles of the deformation process • industrial practices • equipment and process design; • typical products defects, advantages and disadvantages.
Principles and methods of Forging	Each of these topics should include knowledge of: • the physical and mechanical principles of the deformation process • industrial practices • equipment and process design; • typical products defects, advantages and disadvantages.
Principles and methods of Extrusion	Each of these topics should include knowledge of: • the physical and mechanical principles of the deformation process • industrial practices • equipment and process design; • typical products defects, advantages and disadvantages.
Principles and methods of Wire Drawing	Each of these topics should include knowledge of: • the physical and mechanical principles of the deformation process • industrial practices • equipment and process design;

MSATCM512A Apply metallurgy principles and practice to optimise furnace operation

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers applying metallurgical principles and practices to optimise furnace operation.

Application of the Unit

Application of the unit	This unit requires application of metallurgical principles and practices to optimise furnace operation. This may be undertaken as a member of a new furnace design and development team or as part of a team optimising the operation of an existing furnace.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units		

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select metallurgical principles and practices relevant to furnace operation	1.1. The relevant metallurgical techniques and principles and associated software and hardware technologies are selected for particular furnace design or furnace optimising situation 1.2. For existing furnaces, production records are analysed to identify opportunities for optimising furnace operation
2. Apply the relevant metallurgical principles and practices to achieve optimum furnace operation	2.1. The scientific principles are applied in a consistent and appropriate manner to obtain the best furnace operation solution taking into account metallurgical and commercial requirements 2.2. Appropriate calculations and coherent units are used in metallurgy and engineering calculations. 2.3. The techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain required solutions. 2.4. Metallurgical assesments are made of metal and or alloys to ensure furnace installation or optimisation is achieving desired outcomes.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• Select appropriate metallurgy principles to suit specific furnace applications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• Select appropriate techniques and associated technologies, software and hardware to optimise furnace operation to suit specific applications • Apply and manipulate appropriate formulas for applications involving engineering and metallurgy calculations • Apply appropriate calculations to metallurgy situations • Refer solutions to the original aim of the metallurgy application. • Report results in appropriate units, using appropriate significant figures. • State limitations of solutions, due to assumptions, scientific principles and techniques used • Present solutions referring to the original aim of the application.
Required knowledge:
Competency includes sufficient knowledge of: • Metallurgy principles (as given in the range statement) • Limitations of selected basic scientific principles • Basic metallurgical techniques and related software and hardware technologies, • The limitations of basic techniques and associated software and hardware technologies

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply metallurgy principles and practice to optimise furnace operation. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • identify and predict the reaction of metals, alloys, non metallic elements, compounds and mixtures to heat; • identify the capacity and heating range of

EVIDENCE GUIDE	
	different types of furnaces; • identify refractories appropriate for furnace and application
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Sources of information	• Reference texts • Manufacturer's catalogues and industrial magazines • Websites • Use of phone, email and fax information gathering
Furnace operation includes	• Classification of fuels • Carbonisation of coal • Properties of coke • Gaseous Fuels • Electrical energy • Heat balances • Controlled atmospheres • Temperature measurement • Combustion calculations • Refractories • Types of furnances and typical construction • Typical burners and their use in furnaces • Exhaust gas analysis for oil and gas fired furnaces

Metallurgical techniques and principles	Includes applying metallurgical techniques and principles for:
	• the prediction and analysis of the properties and metals and alloys undergoing:
	  • Smelting
	  • Refining
	  • Casting
	  • Heat treating or forging in a furnace to produce commercial metal products or to develop new alloys and processes
	• Calculation of furnace capacity, temperature range and refractory specification to achieve melting
	• Development of heat treatment or forging solutions for specified metals and alloys
	• Commercial production forecasts

MSATCM513A Plan and complete metallurgical projects

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers systematical planning, designing and problem solving within a metallurgy context.

Application of the Unit

Application of the unit	Competency in this unit includes significant contribution to the planning, design and problem solving process for metallurgy applications. Planning, problem solving and design should be implemented systematically within the context of market or customer requirements and the prevailing industrial environment in accordance with planning and design parameters such as performance, financial, legal, resource and scheduling. Applications of planning and design in metallurgy may include the conceptual development, management, design, manufacture, implementation, commissioning and maintenance of products, processes, systems or services using metals and alloys into products and components into machines and systems for domestic, commercial, industrial, entertainment, civil, medical or military applications.

		processes and construction techniques
	MEM30012A	*Apply mathematical techniques in manufacturing, engineering or related situations*
	MSATCM509A	*Recommend ferrous and non ferrous metals or alloys for an application*
	MSATCM510A	*Apply metallurgical principles and techiques in welding and other thermal processes*
	MSATCM405A	*Determine and supervise heat treatment of metal*

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret the brief and clarify internal or external client requirements	1.1. Interpret the client's requirements for a metallurgical application. 1.2. Develop the project requirements and parameters with client.
2. Research and report on the context and parameters of the metallurgy project.	2.1. Research the context and parameters of the metallurgy project including the planning, design and problem solving process 2.2. Prepare a report on the commercial and metallurgical context and parameters of the metallurgy project.
3. Prepare concept proposal for metallurgical solution	3.1. A range of different approaches to achieving project objectives are generated. 3.2. Check feasibility of a range of metallurgical solutions against project parameters.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	3.3. Assess metallurgical solutions for conformity to OHS&E requirements. 3.4. Seek opinions of colleagues and technical experts from other disciplines. 3.5. Prepare plan and concept proposal that includes results of feasibility study consideration including calculations and modelling 3.6. Concept proposal reviewed with client to improve outcomes and overcome possible problems.
4. Implement the planning, design or problem solving process for metallurgy project	4.1. Select and manage resources and processes to develop the plan or design. 4.2. Document management processes. 4.3. Appropriate components and systems are incorporated in the planning and design process. 4.4. Appropriate calculations and assumptions are used in implementing the planning and design process. 4.5. Appropriate computing hardware and software and programming techniques are used in the planning and design process. 4.6. Appropriate metallurgy and other scientific, engineering and commercial principles and knowledge are applied to implement planning and design process. 4.7. Concept proposal for metallurgical solution is reviewed against planning and design process in order to prepare firm metallurgical solution for client
5. Review metallurgical solution with client and prepare implementation plan	5.1. Review solution to ensure conformity with current specification, contract and organisational procedures, OHS and regulatory standards 5.2. Present and explain metallurgical solution and implementation plan to client including presentation of supporting documentation 5.3. Client acceptance of the design and implementation plan is achieved and documented.
6. Implement metallurgy project	6.1. All implementation documentation associated with project implementation is completed in accordance with organisational and statutory requirements. 6.2. Participate in implementation process and provide metallurgical oversight
7. Review metallurgical project	7.1. Project outcomes are reviewed in terms of the intended and actual outcomes and report is

ELEMENT	PERFORMANCE CRITERIA
outcomes	prepared.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
Competency includes sufficient knowledge of: • the planning process for a comprehensive range of metallurgical applications • market and industrial context and parameters such as financial, legal, resource and scheduling of the planning and design process for a significant and particular metallurgical application • the procedures for documenting and confirming client requirements • appropriate codes, standards, specifications and legislative and regulatory requirements • implications for sustainability and options for improved environmental outcomes • constraints and risks associated with the development and implementation of metallurgical processes • process of analysis, comparison and contrasting • concept proposal review process • metallurgical fundamentals affecting selection of components and systems • metallurgy related hardware and software • properties of metal and alloys • the significance of the document control process • procedures for initiating and gaining approval for changes to metallurgy related processes • metallurgy related tests and testing schedules • reasons for selecting tests and schedules • corrective actions to return metallurgical related processes to specification
Required knowledge:
• research and report context and parameters of the planning process for a comprehensive range of metallurgy applications • plan and implement a significant metallurgy application within a market and industrial context and in conformance with project parameters such as financial, legal, resource and scheduling. • document and confirm an internal or external client's requirements in accordance with organisational procedures and practices. • inform client of known OHS, regulatory, ethical, environmental, physical and cost

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
limitations • write specifications to meet project requirements. • document and agree on acceptance criteria with a client • review different approaches to technical feasibility, innovation and acceptance to client • documentpossible metallurgicalproduct or process concepts • analyse,, compare and contrast the relative merits of possible metallurgical processes or products • document an objective analysis of each approach (eg. Weighted "trade-off" table) • discuss proposals with colleagues and specialists • document concept proposal in accordance with organisational procedures • establish the planning and implementation team in accordance with organisational procedures • identifyresources and establish management procedures • select components and systems • negotiate, documentand monitoroutcomes and performance measures • develop work instructions • monitorand correctproject progress • perform risk analysis and corrective action • assumptions and calculations for implementation of metallurgical processes • prepare design diagrams and calculations • apply metallurgical principles and knowledge in the implementation of the plan and design process. • select metallurgicalrelated materials • selectmetallurgical methods and processes • create demonstration models • confirm a metallurgy solution and plan • authorise modifications to the metallurgy specification in accordance with organisational procedures. • incorporate corrections and improvements to the design into the revised design solution and plan • applye OHS&E and regulatory standards • completedocumentation • obtainand review feedback from the commissioning process • monitor the project outcomes or performance in the implementation environment • address deficiencies in project outcomes or performance as measured against specifications

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to plan and complete metallurgical projects. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • interpret and clarify a metallurgical brief; • research metallurgy related techniques and processes • apply metallurgical skills and knowledge to solve metallurgical related problems; • comprehensively describe the properties of metals and alloys; • describe the performance parameters of metal processing equipment and materials including test equipment, furnaces, refractories, casting vessels, sands, patterns, etc. • liaise with clients, • establish project plans; • monitor metallurgy project timelines, quality outcomes, and costs; • report project outcomes.
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or

EVIDENCE GUIDE	
	numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.
Parameters	May include: • competitiveness, • performance, • financial, legal, resource and scheduling implications of a metallurgical application.
Report	Reports will usually be written and include: • a description of the metallurgical processes involved in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	project • commercial, production and fabrication implications of different metallurgical options • occupational health, safety and environment implications of metallurgical processses related to the project Reports may be prepared by a metallurgist working alone or in conjuction with engineers, technicians and other relevant personnel.
OHS&E requirements	Include: • ensuring that all organisational and statutory requirements are met • the workforce is not exposed to hazardous worksite conditions, materials and processes • the broader community is not exposed to environmental effects of the activity.
Implementation documentation	Documentation that requires metallurgical input includes: • Gannt charts • cost and other resource requirements • standard operating procedures and other instructions for enterprise personnel • special safety and maintenance instructions; • production schedules

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify *surface treatment methods* by their principal properties	1.1. The principal properties of different surface treatments for metals and alloys are identified. 1.2. The process route for each surface treatment is identified 1.3. The advantages and disadvantages of using different methods are identified. 1.4. The effects of different types of bonding in materials are identified. 1.5. The effects of mechanical and thermal processes on the principal properties of materials are identified.
2. Select surface treatment methods for specific applications	2.1. The surface treatment requirement for the specific application is determined. 2.2. Surface treatment method is selected based on the requirement and consideration of principal properties. 2.3. Selection is confirmed according to standard operating procedures.
3. Verify selected surface treatment methods as fit for purpose	3.1. Appropriate tests for the required properties are identified. 3.2. Testing of coatings is arranged with appropriate persons, if necessary. 3.3. Test results are analysed and material choices are confirmed or modified as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• undertake research • select surface treatment process and materials to match application outcome • carry out tests appropriate to the metal or alloy and surface treatment material • read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
Required knowledge:
Competency includes sufficient knowledge of: • surface treatment methods and principles as specified in the range statement • limitations of selected surface treatment processes

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to select surface treatment methods for metallic components or products. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • identify properties of surface to be treated or protected • select appropriate surface treatment process for surface and protection need • specify and evaluate tests of surface treated metals and alloys
Relationship to other units

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare failed component for failure analysis	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and any defects identified.
2. Perform failure analysis	2.1. The most appropriate test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results and recommend preventative measures	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements. 3.4. Recommendations are made to prevent future failures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- interpret and follow procedures
- identify inspection areas
- conduct visual inspections
- identify discontinuities and defects
- select and use appropriate testing techniques, procedures and equipment
- assess risk
- perform measurements needed to meet the requirements of this unit
- undertake root cause analysis
- locate, read and interpret information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- plan, sequence operations

Required knowledge:

Competency includes sufficient knowledge of:

- cleaning and preparation processes for a range of test surfaces
- procedure, statutory and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- testing techniques and procedures for a range of situations
- tools, equipment, techniques
- hazards and safety requirements associated with testing
- maintenance and storage procedures for test equipment
- common faults and damage
- range of defects
- meaning and application of national and international codes and standards
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/australian standards, nohsc guides, state/territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Types of discontinuities and their consequences/effect on the material including:

Plastic Deformation

- elastic and plastic strain, dislocations, pile-up and interaction.
- work hardening.
- changes in strength, ductility, yield point, hardness, conductivity, corrosion resistance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Annealing • dislocation movement and realignment during heating • recovery. nucleation of strain free areas. recrystallisation. grain growth. • accompanying changes in mechanical and physical properties listed above. Hot&Cold Working • changes in deformation mechanism with rising heat input • the effects of strain rate and temperature on work hardening. • recrystallisation and dynamic recovery. • resulting microstructure and properties. Ductile and Brittle Fracture • crack theory, mechanism of fracture • factors affecting fracture modes, Brittle fracture, Ductile fracture Fatigue • mechanism of fatigue crack nucleation • mechanism of fatigue crack growth • engineering considerations of fatigue, metallurgical factors affecting fatigue Creep • creep mechanisms • metallurgical factors affecting creep

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to analyse metallurgical failures of engineering components. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • Correctly diagnose the mode of failure of selected

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common non metallic engineering materials by their principal properties	1.1. The principal properties of thermosetting and thermoplastic polymers are identified. 1.2. The principal properties of ceramics and composite materials are identified. 1.3. The effects of different types of bonding in materials are identified. 1.4. The effects of mechanical and thermal processes on the principal properties of materials are identified.
2. Select non metallic materials for specific applications	2.1. The engineering requirement for the specific application is determined in consultation with others. 2.2. Material is selected based on the requirement and consideration of principal properties and further processing. 2.3. Selection is confirmed according to standard operating procedures
3. Verify selected non metallic material as fit for purpose	3.1. Appropriate tests for the required properties are identified. 3.2. Testing of materials is arranged with appropriate persons, if necessary. 3.3. Test results are analysed and material choices are confirmed or modified as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• undertake research • select/carry out tests appropriate to the material • communicate • document • plan and sequence operations • read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
Required knowledge:
Competency includes sufficient knowledge of: • principles involved in selecting non metallic materials • compromises made to accommodate cost against properties

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to select non metallic materials for engineering applications. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • describe common non metallic materials and their properties • match common non -metallic materials to engineering applications • identify and arrange tests for common non metallic materials. Assessors must be satisfied that the candidate can

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.

Common engineering non metallic materials and required properties include:	• Structure of Materials
	• Descriptions of general non-crystalline features and shoer range order. Use as examples:
	  • linear polymers: e.g., polyethylene, PVC, polystyrene
	  • elastomer: e.g., natural rubber (polyisoprene), (acrylonitrile butadiene)
	  • three dimensional networks
	  • thermosetting polymers: e.g. Phenol formaldehyde, epoxides
	  • inorganic glasses: e.g., oxide glasses, silica, borosilicate
	  • gels: e.g., asphalt and Portland cement
	• Polymers and plastics:
	  • description of the basic structural unit 'mer', monomer, polymer.
	  • addition and condensation polymerisation, briefly, with examples.
	  • distinguish between thermoplastics and thermosets with six examples of each.
	  • discuss crystallinity in polymers with examples of crystalline polymers eg, HDPE, nylon, PP, PTFE and amorphous polymers e.g: PVC, polystyrene, PMMA.
	  • relate to crystallinity to mechanical properties like rigidity and thermal transitions.
	  • additives, to include filters, reinforcements, plasticizers, UV stabilisers, anti-oxidants, lubricants, colourings and flame retardants.
	• Plastics and polymers processing and use:
	  • Emphasise the use of additives to vary polymer properties a tailor polymer to appropriate uses. Processing descriptions to include compounding, injection moulding, extrusion, blow moulding, and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	compression moulding. • Describe the use of the major polymers in the above areas highlighting properties of importance in selected applicants by example, eg, polymers used as binders in foundry sands, dielectrical properties for electrical, low cost for agriculture, low permeability of water, oxygen for food packaging and freezer packaging. • Ceramic materials: • Describe ceramic structures of AX type with various co-ordination numbers (relate to ionic radii) use simple examples only ed, CsCl, NaCl, ZnS, Ax2, and A 2X3 types briefly with examples; two metal compounds briefly eg, BaTiO3. • Detailed structure of SiO4, tetrahedra as the basic structural unit and relate the importance to bricks, cement, glass, crockery, technical insulators. • Describe silica SiO2 and quartz. Mention refractory nature but problem of cracking under temperature chance due to structural changes. Vitreous or fused silica and properties compared to silica and especially uses with temperature change. • Introduce binary (eg, MgO-AlxO3) and ternary diagrams (eg, MgO-AlxO3-SiO2) • Manufacture of ceramic articles: • raw materials: clays, flints, feldspars, • effect of water, shaping by pressure fabrication, hydroplastic forming and slip casting. • drying and shrinkage, refer to brick and earthenware product manufacture. • describe sintering (fixing) and associated shrinkage. • engineering ceramics: eg, silicon nitride, silicon carbide. • Glass: • describe the vitreous or glassy state and the basic structural unit sio4 tetrahedra. • describes glass formers, glass modifiers and intermediates and their role in glass structure. examples of each. • properties of glass: viscosity, mechanical, optical. • special glass treatments: tempered glass, compare properties with normal annealed glass, effect of compression stresses in surface material. • explain devitrification of glass and accompanying

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	

	changes in properties. glass ceramics: applications.
	• Fibres:
	  • fibres and whiskers, metallic and non-metallic
	  • carbon fibres, glass, Al2O3, SiC fibres
	  • specific modulus and relation to strength to weight ration
	  • discuss economic viability of fibres
	• Composite materials:
	  • define and give examples, including concrete, wood fibre composites, glass reinforced plastics, foams, reinforced rubbers (tyres).
	  • describe the structure of fibre composite and function of fibre composites in actual applications: eg, aerospace, sporting goods.
	  • briefly cover concrete, portland cement and raw materials.
	  • define hydraulic cement mention the importance of portland cement, compositions and use.
	  • factors affecting concrete strength: eg, mixing, measuring, water/cement ration, aggregate/cement ration, aggregate strength and proportions and curing conditions.
	• Adhesives:
	  • briefly describe adhesion and adhesives.
	  • describe surface properties of liquids and solids especially wetting and non-wetting conditions, include surface tension briefly and relate to choice of adhesive and substrate.

Appropriate tests	Tests which can be undertaken by a technician within the organisation as well as those required to be undertaken by external organisations, including simple tests
Required properties	Properties to be tested include: • tensile strength • compression • shear characteristics • torsion • hardness • impact resistance • fatigue resistance • creep resistance • visual appearance and colour • magnetic properties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• corrosion resistance
Appropriate persons	Internal technicians and/or external organisations

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research and determine corrosion prevention or minimisation need	1.1. Corrosion prevention or minimisation need is discussed with clients, other employees and other technical experts 1.2. Product performance, cost, location and environmental factors are identified 1.3. The metallurgical techniques and principles relating to corrosion are researched and reported on from appropriate sources of information and examination of corroded material 1.4. The metallurgical techniques and associated technologies required to prevent or minimise corrosion in the application are identified
2. Determine appropriate corrosion prevention or minimisation strategy and techniques for application	2.1. Appropriate corrosion prevention or minimisation strategies are selected for application. 2.2. Corrosion prevention or minimisation strategy is documented and approvals obtained from client, managers and other technical experts as appropriate. 2.3. Instructions for implementing corrosion prevention or minimisation strategy are prepared and communicated to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• select appropriate metallurgical principles to reduce corrosion • apply metallurgical principles to particular manufacturing, engineering and structural situations • refer solutions to the original aim of the application. • quote solutions in appropriate units, using appropriate significant figures. • quote limitations of corrosion prevention or minimisation strategies.
Required knowledge:
Competency includes sufficient knowledge of: • basic metallurgical principles (as given in the range statement) • limitations of selected metallurgical principles

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to determine corrosion prevention strategies for metal and alloys. Critical aspects for assessment and evidence are required to demonstrate competency in this unit.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the ability to: • correctly identify metallurgical processes involved in corrosion and corrosion prevention; • select corrosion prevention strategies and techniques appropriate to metal or alloy application and client needs • prepare instructions for corrosion prevention for client and other appropriate personnel.
Relationship to other units	This unit may be assessed concurrently with other relevant units.
Assessment method and context	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined

EVIDENCE GUIDE	
	by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of assessment.
Resource implications	This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	will be used.
Metallurgical techniques and principles	Corrosion and Society • definition of corrosion • environments • corrosion damage • classificiation or corrosion • cost of erosion • social implications
Corrosion Principles	Electrochemical aspects • electrochemical reactions and chemical corrosion, galvanic cells, anode reactions, cathode reactions, concentrations cells, polarisation, passivity, pourbaix diagrams (simplified Pourbaix diagrams for Al, Fe and Zn), the driving force of corrosion, the rate of corrosion Environmental effects • oxygen and oxidisers, velocity, temperature, corrosive concentration, corrosion environments (water, soil, atmosphere, dry gasses) Metallurgical aspects • metal structures (defects, grain boundaries, second phases, cold work, residual stress), galvanic series, immunity, passivity.
Corrosion at Elevated Temperatures	Mechanism of oxide film growth: • rate laws • oxide defect structures • Pilling-Bedworth rule • oxidation of alloys • catastrophic oxidations • de carburisation • high temperature resistent alloys
Forms of corrosion	• Uniform corrosion (general corrosion) • Galvanic corrosion • Crevice corrosion • Pitting corrosion • Fretting corrosion • Selective attack (leaching) • Intergranular corrosion • Stray current corrosion (electrolysis) • Erosion corrosion and cavitation damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• Stress corrosion cracking • Corrosion fatigue • Hydrogen damage • Microbial corrosion
Basic principles of Corrosion Control	Material selection • metals and alloys, metal purification, nonmetallics, stress relief Alteration of environment • changing media, temperature, velocity, oxygen concentration, etc. Corrosion protection • cathodic protection, anodic, protection and passivation, corrosion inhibitors, chemical conversion coatings, metal coatings, corrosion-preventing paints, coatings of plastic and rubber, temporary corrosion prevention. Corrosion prevented by design • wall thickness, design rules (streamlining, stagnation, crevices, metallic contact, etc.)
Corrosion Characteristics of common alloys	• Steel and cast iron • Stainless steel • Aluminium and its alloys • Copper and its alloys
Methodology of corrosion investigations	• Corrosions testing • Corrosion monitering • Electrochemical investigations • Physical methods
Sources of information	• Reference texts • Manufacturers' catalogues and industrial magazines • Websites • Use of phone, email and fax information gathering

MSATCM518A Interpret complex binary phase diagrams

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit covers the knowledge and skills needed to interpret complex phase diagrams and so predict the microstructures of binary alloys and the behaviour of metals and alloys under quenching.

Application of the Unit

Application of the unit	This unit applies to the interpretation of cooling phase diagrams as used in metallurgy. The application will primarily be to phase diagrams of metals and alloys showing temperature and composition variables. In a typical scenario, a metallurgical technician will be required to recommend a phase transition process in order to obtain a required microstructure, or to predict a microstructure from a known phase transition process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units	*MSATCM304A*	*Interpret basic binary phase diagrams*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the microstructures from an equilibrium cooling phase diagram	1.1. Phase diagram for metal or alloy is obtained from internal or external sources 1.2. Identify number, composition, proportion and structural arrangement of phases including intermediate phases, in binary alloys. 1.3. Describe structural changes due to varying proportion of alloying elements and temperature. 1.4. Describe the phase changes, intermetallic compounds and solid solutions if any for chosen binary alloy 1.5. Describe the final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment and quenching operations.
2. Identify the microstructures from a non equilibrium cooling phase diagram	2.1. Phase diagram for metal or alloy is obtained from internal or external sources 2.2. Identify number, composition, proportion and structural arrangement of phases including intermediate phases, in binary alloys. 2.3. Describe structural changes due to varying proportion of alloying elements and temperature. 2.4. Describe the phase changes, intermetallic compounds and solid solutions if any for chosen binary alloy 2.5. Describe the final microstructures of binary alloys cooled under equilibrium conditions from the melt or during heat treatment and quenching operations
3. Recognise characteristic microstructures of binary alloys.	3.1.. Recognise characteristic structures of dendrites (homogeneous and cored) columnar and equiaxed grains. 3.2. Recognise characteristic structures resulting from

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	eutectic, eutectoid and peritectic reactions. 3.3. Recognise characteristic structures resulting from solid state precipitation. 3.4. Recognise characteristic structures resulting from different quenching rates

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• produce a complex binary phase diagram from supplied data • estimate composition from the structure of a phase diagram • predict structure from the composition from a phase diagram
Required knowledge:
Competency includes sufficient knowledge of: • methods of construction of complex phase diagrams for binary alloys. • the phase changes that occur in binary alloy systems through heating, slow cooling and quenching as recorded by the appropriate phase diagrams. • the equilibrium and non equilibrium cooling of binary alloys and the resulting microstructures in cast and heat treated material.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The person will be able to interpret binary phase diagrams. Assessment may be by workplace project, case study or suitable alternative.

MSATCS301A Interpret architectural and engineering design specifications for structural steel detailing

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to interpret design related information required for the commencement of a structural steel detailing project.

Application of the Unit

Application of the unit	This unit applies to the initial receiving and checking of design related information by structural steel detailers including obtaining additional information or clarifying information already received. Structural steel detailers must obtain and interpret design related information from architects and consulting engineers in order to carry out structural steel detailing. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects. The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held. Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities. This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain and check adequacy of design related information for structural steel detailing purposes	1.1. General arrangement drawings are obtained and interpreted including standard symbols, terms and figures used by designers 1.2. Adequacy of arrangement information is checked against detailer and client requirements 1.3. Design information is checked for any drawings or descriptions of any members, connections, components or details that lie outside the scope of standard structural practice 1.4. Information on suspended floors is obtained and checked 1.5. Column base layouts and schedules, if any, are

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	checked 1.6. Specifications for grades of steel and bolt grades are obtained and checked 1.7. Information on standards and other design related specifications to be shown on detail drawings is checked
2. Obtain additional information where required	2.1. Requests for further information (RFIs) are submitted according to enterprise and project procedures 2.2. Adjustments to design information are made based on RFI responses and noted according to standard drawing office procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions
- communicate at all levels about technical issues related to patterns and specifications
- reading and numeracy is required to the level of interpreting workplace documents and technical information

Required knowledge

- architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
- structural steel members and connections used in structural steel construction
- the difference between design and detail drawing processes
- drawing office procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• fabrication processes and procedures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge to: • identify and interpret architect and engineer design specifications for structural steel constructions including constructions with suspended floors • relate design information to structural steel detailing processes including checking of adequacy of design information for the construction • establish efficient administrative arrangements for liaison with designers including arrangements for formal requests for further information • establish drawing and document control procedures
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment Resource implications for this unit include: • access to real or appropriately simulated detailing of structural steel constructions including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers' catalogues or websites • access to relevant standards through either hard copy or internet access. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislative/regulatory	All work must comply with relevant Federal and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
requirements	State or Territory legislative or regulatory requirements
Drawings	For the purposes of this unit drawings refers to both hard copy and software files including CAD files
Designers	Designers include architects and consulting engineers. The design information may also be provided via drawings produced by design draftspersons
Adequacy	Adequacy means that sufficient design information is provided to enable the structural steel detailer to prepare drawings that will provide all information required for fabrication and erection
Adequacy of arrangement information	Adequacy of arrangement information refers to the information normally provided on arrangement or layout drawings provided by architects and/or consulting engineers. This information includes: • building orientation • layout on a site and relationship to any other structures • primary dimensions • floor levels • beam spacing • column centres • sizes for all members, for example, beams, trusses, columns, rafters, purlins, girts, braces, crane beams • dimensions and layout drawing for any special features, for example, stairs, landings, fire escapes, and so on
Client requirements	Client requirements may include: • shop detail drawings, erection diagrams and material schedules and lists • program and format for CAD files and models • downloading by the structural steel detailer of files direct to client computers and CNC

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	machines • size and number of hard copy drawings • specification of programs and requirements for word processed documents, spreadsheets, presentations, invoices, and so on
Suspended floors	Suspended floors may consist of reinforced concrete slab, composite slab, pre-cast planks and topping, steel plate or grating, or other specified material
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise. Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.

MSATCS302A Detail bolts and welds for structural steelwork connections

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to detail bolts and welds for structural steelwork connections consistent with design specifications.

Application of the Unit

Application of the unit	This unit applies to a structural steel detailer who has to detail various types of bolts and welds for structural steelwork connections. The detailing may be done manually or by using CAD and/or proprietary steel detailing software. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects. The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held. Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities. This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine shop and field connections from design drawings	1.1. Fabrication shop capabilities and preferences are discussed with fabricator 1.2. Connections are allocated as shop or field welded in conjunction with fabricator 1.3. Connections to be field bolted are allocated and extent of shop preparation of connections decided 1.4. Connection fittings are allocated to either columns

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	or beams to suit fabrication efficiency or design requirements 1.5. A request for further information (RFI) is made to design engineer where clarification of requirements is needed
2. Detail bolts for connections	2.1. Knowledge of standard bolting category identification system is demonstrated 2.2. Bolt types and sizes for each connection are specified using design information and consideration of commercial availability 2.3. Bolt and thread lengths are selected according to design specifications, and connection requirements 2.4. Bolt and bolt holes are detailed taking into account AS 4100 requirements, tightening and tensioning specifications and clearances 2.5. Field bolt list is prepared and checked and sent to fabricator
3. Detail welds for connections	3.1. Knowledge of joint and weld types is demonstrated 3.2. Shop and field welds are identified 3.3. Standard welding symbols are used 3.4. Clearances for welding are applied 3.5. Field weld details are placed on erection plans and shop drawings and submitted to design engineer for approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• assess design information for adequacy of information needed for structural steel detailing • liaise with design engineers • assess scope of structural steel detailing tasks and priorities • interpret design drawings, sketches and schedules • determine bolt and thread length taking into account: • shank lengths as defined in AS 1111 and AS 1252

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• whether the thread is to be included or excluded in the shear plane • grip and ply thicknesses • thread projection as per AS 4100 • nut and washer requirements • detail welds consistent with design information and AS4100 and AS 1101 Part 3 • work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions • communicate at all levels about technical issues related to patterns and specifications • reading and numeracy is required to the level of interpreting workplace documents and technical information
Required knowledge

• architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches
• structural steel members and connections used in structural steelwork
• the difference between design and detail drawing processes
• drawing office procedures
• fabrication processes and procedures
• the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing
• Australian standard bolting category identification system
• bolt and thread length considerations including:
  • shank lengths as defined in AS 1111 and AS 1252
  • inclusion or exclusion of the shear plane in the thread
  • grip and ply thicknesses
  • thread projection requirements as per AS 4100
  • nut and washer requirements
• standard welding symbols as described in AS 1101 Part 3 welding theory and processes

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge to: • identify and interpret engineering design specifications for structural steel bolted and welded connections • relate design information to structural steel detailing processes • correctly use the Australian standard bolting category identification system • understand and apply the relevant sections of AS 1101 Part 3, AS4100, AS 1111 and AS 1252
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment Resource implications for this unit include: • access to real or appropriately simulated detailing of ancillary structural steelwork including provision of suitable design information for bolts and welds • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers' catalogues or websites • access to relevant standards through either hard copy or internet access. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Bolt and thread lengths	Bolt and thread lengths may be specified by the engineer or by the detailer
Standard welding symbols	Standard welding symbols as described in AS 1101 Part 3
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.

MSATCS501A Detail standardised structural connections

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to identify bolted or welded connections for structural steelwork that is consistent with design specifications and to detail these connections in structural steelwork detailed drawings. Both steel to steel and steel to non-steel connections are covered by this unit. Portal frame haunch connections, column base plate and holding down bolt layouts, and steel to non-steel connections are also covered by this unit.

Application of the Unit

Application of the unit	This unit applies to a structural steel detailer who has to detail the various types of standard connections used in structural steelwork. Standard connections are those listed in the latest edition of the Australian Steel Institute's *Standardised Structural Connections* publication. Connections covered include flexible and rigid connections and purlin cleats. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects. The detailing may be done manually or by using CAD and/or proprietary steel detailing software. The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held. Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	*MEM09002B*	*Interpret technical drawing*
	MEM05051A	*Select welding processes*
	MSATCS301A	*Interpret architectural and engineering design specifications for structural steel detailing*

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine shop and field connections from design drawings	1.1. Fabrication shop capabilities and preferences are discussed with fabricator 1.2. Connections are allocated as shop or field welded in conjunction with fabricator 1.3. Connections to be field bolted are allocated and extent of shop preparation of connections decided 1.4. Connection fittings for structural connections are allocated to either columns or beams to suit fabrication efficiency or design requirements
2. Identify required connections	2.1. Members requiring connections are identified from design information and any potential or specified non standard connections are identified 2.2. Design information is checked for specification of standard and non standard connections 2.3. Adequacy of design information for non standard connections is checked and request for further information made if necessary 2.4. Standard connections not specified by the designer are identified and connection type specified in conjunction with the fabricator 2.5. Approval is sought from designer before detailing and fabrication
3. Detail connections	3.1. Connections suitable for standard detailing parameters are identified and detailed 3.2. Connection components are detailed using standard detailing parameters 3.3. Copes and notches are detailed for beams and columns as required 3.4. Non standard connections are detailed according to supplied design information
4. Detail purlin and girt cleats	4.1. Purlins and girts are identified on design information 4.2. Cleat length and bolt spacing is identified from purlin or girt manufacturer's instructions or design information 4.3. Cleats are detailed
5. Detail haunches for portal frame buildings	5.1. Haunch specifications, bolting information, eave and apex information supplied by designer are checked 5.2. Exact haunch sizes and dimension haunches on shop drawings and erection diagrams are calculated

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.3. Pre-sets for column tops are inserted into shop drawings and erection plans where specified in design information
6. Detail column base plates	6.1. Holding down bolt layout plan is prepared according to design information 6.2. Grouts and shims are specified for column base plates 6.3. Holding down bolts are specified from design information
7. Detail steel to non-steel connections	7.1. Edge clearances for concrete and other non-steel members or components are determined from designer or non-steel detailer 7.2. Casting plates types are identified from design information 7.3. Reinforcement locations are identified and clashes with connections avoided 7.4. Interference with post tensioning cables and holding down bolts is avoided for upper floor connections 7.5. Fixings are identified from design information 7.6. Steel to non-steel connections are detailed according to design information

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities
- interpret design drawings, sketches and schedules, to determine dimensions, layouts, types and grades of materials
- interpret manufacturers catalogues and product information
- use basic trigonometry to determine dimensions not given in design information
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
instructions • communicate at all levels about technical issues related to patterns and specifications • reading and numeracy is required to the level of interpreting workplace documents and technical information
Required knowledge
• architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches • connections used in structural steel construction • the difference between design and detail drawing processes • drawing office procedures • fabrication processes and procedures • the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing • characteristics of portal frame construction especially the behaviour of the frame under load and points of high stress

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	•
Critical aspects of for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge to: • identify and interpret architect and engineer design specifications for structural steel constructions including design information for steel to steel and steel to non-steel connections • relate design information to structural steel detailing processes for connections • establish efficient administrative arrangements for liaison with designers including arrangements for formal requests for further information • establish drawing and document control procedures • identify standard components and connections from industry publications, manufacturers' catalogues and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	Australian or other relevant standards
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment Resource implications for this unit include: • access to real or appropriately simulated detailing of structural steel connections including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers' catalogues or websites • access to relevant standards through either hard copy or internet access. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Connections	All connections are steel to steel unless specifically noted
Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists and written instructions and computer files
Standard connections	Standard connections are those specified in the Australian Steel Institute's publication *'Standardised Structural Connections'*

Connection type	• Connections may be standard flexible or rigid connections
	• Flexible connections may include:
	  • angle seats
	  • bearing pads
	  • flexible end plates

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• angle cleats • web side plates • Rigid connections may include: • fully welded end plates • bolted moment end plates
Standard detailing parameters	Standard detailing parameters are connections suitable to be detailed using the standard bolting and welding specifications contained in the Australian Steel Institute's publication 'Standardised *Structural Connections'*. These details include: • size of fillet welds • electrode and MIG welding wire specification • bolt type and size • arrangement of holes for bolts • back gauge dimensions and minimum edge distances • distance from beam top to the first row of bolts • detailing parameters for components such as cleat plates, gussets, end plates, base plates and angle plates
Components	Components may include cleat plates, gussets, end plates, base plates and angle plates
Standard welding symbols	Standard welding symbols as described in AS 1101 Part 3
Non-steel connections	Non-steel connections are those between steel members and concrete, timber, glass or plastic or other building or fabricated component required to be shown on a structural steel detail drawing. The connection may be for structural or decorative purposes. An example would be steel supports for a timber deck
Haunch specifications	Haunches are special connections used in portal frame buildings. Haunch specifications supplied by designers will normally include: • roof slope • details of haunch location and size sufficient to ensure design requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• end plate specification • bolting information • location and sizes of welds • fly bracing requirements
Fixings	Fixings may include standard bolts, dynabolts, chemsets, female internal thread tube bolts, and other specialist steel to non-steel fixings
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise. Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.

MSATCS502A Detail structural steel members

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to detail structural steel members in steel framed constructions. These members can include beams, girders, columns, trusses, rafters, rakers, tie beams and temporary and permanent braces.

Application of the Unit

Application of the unit	This unit applies to a structural steel detailer who has to detail structural steel members used in steel constructions. These members can include beams, girders, columns, trusses and braces. Only the most common structural members are considered in this unit. However, the detailing principles and skills covered in this unit can usually be applied to any non standard members specified by designers. In this unit the term beam is interchangeable with the term girder and only 'beam' or 'beams' are used. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining fabrication and construction projects. The detailing may be done manually or by using CAD and/or proprietary steel detailing software. The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, etc. is already held. Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities. This unit requires the application of skills associated with

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1. Detail beams	1.1. Location and number of beams are identified from design information 1.2. Beam direction marks are inserted according to industry practice or specific project needs 1.3. Beam dimensions are obtained from design information and inserted into shop drawings 1.4. Beam section designation and cut length are inserted into elevation detail and material list along with any general notes 1.5. Beam levels and beam erection marks and erection clearances are inserted 1.6. Any surface treatment notes are inserted as per design information
2. Detail columns	2.1. Timing and process for detailing of columns is discussed with fabricator to ensure suitability for fabrication schedules 2.2. Column design information is analysed to identify all column connections 2.3. Vertical or horizontal detailing position and viewing direction is elected to suit client requirements and drawing office practice 2.4. Dimensions for columns are inserted from design information 2.5. Sectional views for splices are drawn as per design information 2.6. Plan views for intermediate sections are drawn to illustrate required connections 2.7. Direction and level marks as well as shim and lifting hitches are inserted as required according to design information
3. Detail beam and column splices	3.1. Welded and bolted splices are identified from design information 3.2. Splices to be field welded are identified and checked with fabricator 3.3. Access for welder and electrode is considered for field welded splices 3.4. Column or beam splice is detailed according to design information
4. Detail trusses	4.1. Working points and bevels are established from design information 4.2. Layouts for joints are drawn using appropriate scale

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.3. Opportunities for symmetry and rotation are noted and used in layouts with approval of fabricator 4.4. Trusses are dimensioned including placement of working dimensions, intermediate panel points, other reference points and camber allowances for cambered trusses 4.5. Bolted gussets for node points are set out using design information and fabricator preferences 4.6. Node points for welded trusses are detailed including set back of member ends and landing for welds using design information and fabricator preferences
5. Detail bracing	5.1. Layout and size of bracing are determined from design information 5.2. Setting out points and distances between setting out points are determined 5.3. Braces are detailed including bracing connections, allowances for clearances and draw if any
6. Detail purlins, girts and eaves struts	6.1. Layout and type of purlins, girts and eave struts to be used is determined from design information, manufacturers' catalogues and fabricator preferences 6.2. Bridging for purlins and girts is determined from design information 6.3. Purlins, girts and eaves are detailed consistent with design information

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- assess design information for adequacy of information needed for structural steel detailing
- liaise with architects and engineers
- assess scope of structural steel detailing tasks and priorities

EVIDENCE GUIDE	
	performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists, written instructions or computer files
Direction marks	Direction marks are indicated on the shop drawings and on the beam or girder by the words 'North' or 'West' as applicable. Industry standard practice is to determine the placement of these marks by viewing and numbering the beams and girders from the bottom or right hand edge of the floor plan. Variations from this practice may occur on specific projects and should be noted on the erection plan
Beam dimensions	Beam dimensions are obtained from design information in conjunction with Design Capacity Tables (see below) and manufacturers' catalogues. Beam dimensions to be inserted into shop drawings should include: • longitudinal dimensions • centre to centre distance between supports

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• overall length of the beam • overall cut length of the beam • dimensions of holing and other details occurring along the length of the beam. The method of showing hole dimensions may be centre to centre, consecutively from end to end of beam or as running dimensions according to the needs of the fabricator • longitudinal dimensions to groups of holes in the web or flange • vertical dimensions to top most holes for end connection elements Additional dimensions and symbols may be required for non-proprietary welded plate girders. These dimensions and symbols would be specified by the designer and would normally include web and flange dimensions, web stiffener locations and welding symbols
Working points	Working points for trusses may also be referred to as setting out points or intersection points
Design Capacity Tables	Design Capacity Tables refers to the publication 'Design *Capacity Tables for Structural Steel*, *Volume 1*: *Open* Sections' published by the Australian Steel Institute
Connections	All connections are steel to steel unless specifically noted
Standard connections	Standard connections are those specified in the Australian Steel Institute's publication 'Standardised *Structural* Connections'

Connection type	• Connections may be standard flexible or rigid connections
	• Flexible connections may include:
	  • angle seats
	  • bearing pads
	  • flexible end plates
	  • angle cleats
	  • web side plates
	• Rigid connections may include:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
	• fully welded end plates • bolted moment end plates
Standard detailing parameters	Standard detailing parameters are connections suitable to be detailed using the standard bolting and welding specifications contained in the Australian Steel Institute's publication 'Standardised *Structural Connections'*. These details include: • size of fillet welds • electrode and MIG welding wire specification • bolt type and size • arrangement of holes for bolts • back gauge dimensions and minimum edge distances • distance from beam top to the first row of bolts • detailing parameters for components such as cleat plates, gussets, end plates, base plates and angle plates
Components	Components may include cleat plates, gussets, end plates, base plates and angle plates
Standard welding symbols	Standard welding symbols as described in AS 1101 Part 3
Non-steel connections	Non-steel connections are those between steel members and concrete, timber, glass or plastic or other building or fabricated component required to be shown on a structural steel detail drawing. The connection may be for structural or decorative purposes. An example would be steel supports for a timber deck
Fixings	Fixings may include standard bolts, dynabolts, chemsets, female internal thread tube bolts, and other specialist steel to non-steel fixings
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise. Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper

MSATCS503A Incorporate structural steel detailing into fabrication and construction project management

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to undertake structural steel detailing in a manner consistent with procedures and timelines for fabrication and construction projects. The unit requires knowledge of the roles of architects, engineers, builders and fabricators and the skill to interpret project schedules and timelines and their implications for structural steel detailing.

Application of the Unit

Application of the unit	This unit applies to structural steel detailers who are required to liaise with architects, consulting engineers, builders and fabricators at the commencement of a project to establish structural steel detailing arrangements that are consistent with the policies, procedures and timelines of fabrication or construction projects. The unit may apply to structural steel detailing carried out for residential, commercial, industrial or mining projects. Work is conducted according to defined procedures. Work may be conducted in small to large scale enterprises and may involve individual and team activities. This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate knowledge of steel construction and fabrication processes and roles	1.1. Steel construction stages of design, detailing, fabrication and erection are understood 1.2. Major codes and standards relevant to steel construction activities can be identified 1.3. Roles and responsibilities of architects, engineers, draftspersons and detailers, fabricators and builders can be explained
2. Determine client requirements for structural steel detailing	2.1. Client for structural steel detailing is determined 2.2. Contacts for architect, consulting engineer, builder and fabricator are obtained 2.3. Project timeline and schedules are obtained and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	delivery dates for detail drawings determined 2.4. Procedures for making requests for further information (RFIs) from designers are agreed 2.5. Requirements for attendance at team meetings and site visits are determined 2.6. Client requirements in relation to format, number and type of shop and erection drawings and other required detailing information is determined
3. Obtain design information for project	3.1. Design information is obtained from architect and consulting engineer 3.2. Design information and project schedules are used to assess the scope and complexity of detailing tasks
4. Establish structural steel detailing arrangements for project	4.1. Details of structural steel detailing team are communicated to client 4.2. Document control procedures including numbering, access, filing and revision and updating approval procedures are established according to enterprise procedures and client requirements 4.3. Steel detailing tasks and deadlines are established and checked against construction project schedules 4.4. Capabilities of proprietary CAD and steel detailing software for project is assessed and decision is made to use computer based or manual structural detailing methods

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate own and team capabilities
- negotiate with clients
- assess scope of structural steel detailing tasks and priorities
- use Gannt charts and other project management scheduling tools
- assess suitability of specialist software for particular steel detailing projects
- work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
instructions • communicate at all levels about technical issues related to patterns and specifications • reading and numeracy is required to the level of interpreting workplace documents and technical information
Required knowledge
• roles and responsibilities of owners, architects, engineers, fabricators, builders and structural steel detailers in construction projects • construction and fabrication project management practices including use of Gannt charts and other scheduling tools • difference between design and detail drawing processes • drawing office procedures • proprietary and non-proprietary CAD and specialist steel detailing programs

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge to: • identify client and design requirements for a structural steel detailing project • establish structural steel detailing task schedule and timelines and integrate them into the broader project plan and timelines • establish efficient administrative arrangements for liaison with clients and designers • establish drawing and document control procedures
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment Resource implications for this unit include: • access to real or appropriately simulated detailing of structural steelwork constructions including provision of suitable design information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• access to real or simulated fabrication and construction schedules • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers catalogues or web sites • access to relevant standards through either hard copy or internet access. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
Client	The term client in this unit refers to the organisation commissioning the production of structural steel detail drawings and will normally be the fabricator of structural steel elements of a construction project. However, depending on the project the client may vary and could be the consulting engineer, or in the case of mining projects, it could be the mining company. The client may commission structural steel detail drawing from either internal or external structural steel detailers
Schedules	Schedules may include Gannt charts, contract schedules, lists of contractors, contracted suppliers and any other lists or diagrams relevant to determining the required delivery dates for structural steel detail drawings
Client requirements	Client requirements may include: • shop detail drawings, erection diagrams and material schedules and lists • program and format for CAD files and models • downloading by the structural steel detailer of files direct to client computers and CNC machines • size and number of hard copy drawings • specification of programs and requirements for word processed documents, spreadsheets, presentations, invoices and so on

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT	
Design information	Design information is the information provided to the detailer and fabricator by the architects and consulting engineers for a project. For some projects the design information may only be provided by an engineer. The design information will usually be in the form of design drawings or sketches but may also be via material lists and written instructions.
Work environment	Detailing may be undertaken in a variety of work environments including commercial, home office or fabrication or construction enterprise. Work may be performed individually on a contracting/project basis or as part of a project team and in response to combinations of paper based and electronic instructions.

MSATCS504A Detail ancillary steelwork

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to detail steelwork ancillary to, or separate from, the main structural elements and their connections in a steel framed building or industrial construction.

Application of the Unit

Application of the unit	This unit applies to a structural steel detailer who has to detail ancillary structural steelwork including steelwork used in stairways, ladders, landings, platforms for personnel and machinery, and other ancillary steel structures such as cages, lift guide rails and crane rails. The unit can also apply to the detailing of stand alone steel constructions that are not part of or attached to plant or buildings, and which do not require additional specialist knowledge. Examples include: • steel tankage rolled plates • chimney flumes • exhaust pipe flumes • pipe supports • conveyor structures. The unit assumes that knowledge of basic technical drawing conventions and procedures such as view, dimensioning, drawing layout, and so on is already held. Work is conducted according to defined procedures. The detailing covered by this unit may be done manually or by using CAD and/or proprietary steel detailing software. Work may be conducted in small to large scale enterprises and may involve individual and team activities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	This unit requires the application of skills associated with planning and organising to complete structural steel detail drawings. Communication and numeracy skills are used to refer to patterns and specifications and complete and label sketches. Self management skills are used to ensure conformance of own work to quality standards.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	*MEM09002B*	*Interpret technical drawing*
	MSATCS301A	*Interpret architectural and engineering design specifications for structural steel detailing*

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1. Detail stairways, platforms, ladders and landings	1.1. Scheduling of detail drawings for stairways, platforms, ladders and landings are discussed with fabricator 1.2. Design information is checked and any requests for further information (RFIs) are made 1.3. Large scale set-out or 3D model of stairway is prepared and setting out points established 1.4. Stairway is dimensioned and detailed consistent with design information and the Building Code of Australia and AS 1657 1.5. Holding down bolt layout and base plate details are prepared for ground floor supports or plinths
2. Detail other ancillary steel structures	2.1. Design information is received from client and fabrication schedule and requirements including allocation of components for shop and site fabrication confirmed 2.2. Size limitations of any sections requiring corrosion treatment or other surface finishing processes are determined 2.3. Transport limitations, erection procedures and limitations, and any relevant codes and regulations are determined 2.4. Rough large scale layout and 3D model is combined with trial assembly if required 2.5. Design information is used to directly insert or calculate and insert all dimensions, clearances, bolt layouts, weld types and dimensions, direction marks and surface finishes on shop drawings and erection diagrams 2.6. Detail drawings are sent for approval by designer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• assess design information for adequacy of information needed for structural steel detailing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• liaise with architects and engineers • assess scope of structural steel detailing tasks and priorities • interpret design drawings, sketches and schedules • produce shop detail drawings and erection drawings • research and obtain relevant Australian Standards, codes and regulations • work according to OHS practices of the enterprise and workplace which may include requirements prescribed by legislation, awards, agreements and conditions of employment, standard operating procedures, or oral, written or visual instructions • communicate at all levels about technical issues related to patterns and specifications • reading and numeracy is required to the level of interpreting workplace documents and technical information
Required knowledge
• architectural and engineering design drawings including standard symbols, terms, abbreviations and sketches • structural members used in steel constructions • the difference between design and detail drawing processes • drawing office procedures • fabrication processes and procedures • the Australian steel structures limit state design code's (AS4100) requirements in so far as they impact on steel detailing

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Demonstrates skills and knowledge to: • identify and interpret architect and engineer design specifications for structural steel components of ancillary steelwork including members and connections • relate design information to structural steel detailing processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	• establish efficient administrative arrangements for liaison with designers • establish drawing and document control procedures • identify standard sizes and specifications of structural members and components from industry publications, manufacturers' catalogues and Australian or other relevant standards
Context of and specific resources for assessment	Assessment may occur on the job or in an appropriately simulated environment Resource implications for this unit include: • access to real or appropriately simulated detailing of ancillary structural steelwork including provision of suitable design information • computer with suitable CAD software or manual drafting equipment and material including work areas, materials and equipment • access to steel and component manufacturers catalogues or web sites • access to relevant standards through either hard copy or internet access. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed assessment guidelines of the Manufacturing Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency where structural steel detailing is involved
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements
